ing games of dice, because the person purchasing the tickets knows full well that the money with which he purchased the ticket will not return to him. Rather, it will be transferred, via an agent, to the bank account of the lottery company. It is therefore clear that he is making an outright gift of the money to the company. His hopes of winning remain a separate issue, independent of his agreement to pay the cost of the ticket, much like any other person who invests in a business and hopes to earn a profit from his investment. Subsequent disappointment does not suffice to transform the investment to theft. In addition, he makes the point that “we need to be aware of a major principle, that we mustn’t question a practice of the entire Jewish People. Heaven forfend that we say the entire Jewish people have fallen pray to a sin.” Furthermore, many sources indicate that Jews customarily purchase lottery tickets, and the great rabbis of Israel, even if they viewed such purchases as indicating weak faith in God, did not suggest that the practice involved the least hint of theft.

The Law in the State of Israel

Articles 224–235 of the 1977 Penal Code deal with gambling. According to the law, a “forbidden game” is one in which “a person is supposed to win money, goods, or benefits based on the outcome of a game, and that outcome depends on luck more than on understanding or ability.” The law imposes prison sentences on anyone participating in forbidden games, and larger punishments on those who organize such games. There is likewise a prohibition against operating or maintaining premises in which such games are played, and the police are authorized to close them down.

At the same time, when games are earmarked for a specific group of people, are not played in a place where forbidden games are played, and their purpose is entertainment alone and not profit, the law does not forbid them. The Finance Minister likewise has the authority to permit certain games, and the National Lottery is allowed to operate in accordance with a special license received from the minister.

The Supreme Court of the State of Israel relied on the stance of Jewish Law regarding games of chance in the “Ninety Balls Incident” (C.A. 4436/02 Ninety Balls v. the Haifa Municipality, PD 58 (3) 782), vis-à-vis the underlying reasoning for the negative approach to gambling. The Court (Justice Asher Grunis) quoted from R. Menahem Meiri (Bet ha-Beirah, Sanhedrin, ad loc.). Meiri explains that two reasons stand behind this negative relationship. The first involves the fact that, just as gamblers are accustomed to lying during their gambling, they will not consider lying a shameful act in their other activities. According to the second explanation, just as gamblers take a cavalier attitude to their own money where gambling is concerned, so are they liable to take a cavalier attitude to the money of others. Hence, they will not consider what it means for someone to lose money as a result of their own false testimony.

GAMES

Jews, like all other peoples, have played games from earliest times. There are ample references to games in the Bible. Guessing games were played in biblical days (Judg. 14: 12ff.; 1 Kings 10:1–3). Jews were also acquainted with sports and military games such as horseback riding, racing, and archery (1 Sam. 20:20–21; Jer. 12:5; Ps. 19:6). Twelve young men from Benjamin waged a fencing contest with twelve of David’s followers (1 Sam. 21:14ff.). Children played at home and in the streets (Zech. 8:5). During the Second Temple period, games of Babylonian, Persian, Greek, and Roman origin were introduced into Israel. Jews rarely originated games, usually adopting them from their neighbors. There are many reports on the mass games held on the nights of Sukkot during the Feast of Water Drawing. The leaders of the people, such as Hillel the Elder and Simeon b. Gamaliel, took an active part in the proceedings. The levites played and danced on the steps, and platforms were erected from which the people could view the scene. Here men and women mixed together, although in later times they were separated at social functions. The national leaders set the tone by engaging in acrobatic exercises, in dancing and juggling with eight burning torches, knives, or eggs (Suk. 5:1–4; Tosef. Suk. 4:1–5). The custom of holding youth festivals in the vineyards was observed as late as the Second Temple period (Tan. 4:8). Traces of it are still found in the traditions observed by some communities, such as Caucaasia and Yemen, on the conclusion of the Day of Atonement.

The paraphernalia of games in ancient times included nuts, fruits, eggs, balls, bones, and stones. The Jerusalem Talmud (Tan. 4:8, 69a) states “Tur-Shimon <t? was destroyed because its inhabitants played ball” (on the Sabbath, see Korban ha-Edah, ad loc.). Certain games with nuts and apples were played by women on the Sabbath (Er. 104a). Other games mentioned in the Talmud are akin to modern dominoes, checkers, and chess. There was betting (on pigeon races, called “Mafrihei Yonim”) and “gambling with dice. Persons who engaged in these pursuits were not regarded as trustworthy wit-
nesses (San. 3:3). Weddings were another occasion for joyous play. To fulfill the commandment of helping the bridal pair to rejoice, the sages would leave their studies and perform juggling tricks, pour oil and wine, and dance with the bride on their shoulders (Ket. 17a). Holding live fowl in their hands, they would dance before the bride or clap their hands and stamp their feet (Git. 57a). The tradition of merrymaking in honor of the bride and groom developed further in the Middle Ages with the Marshalek, a professional comedian who would amuse the wedding party by telling jokes, extemporaneously composing songs, and putting on various acts. Weddings were a time for the abandonment of restraint, when public entertainment was permitted. A “guard” of men wearing extravagant uniforms, some of them mounted on horses, accompanied the bridal parade, dancing women beat cymbals, and children raced along with burning torches. Bearded old men danced and clapped their hands, or sang songs and prayers.

Under the new medieval environment in which the Jews found themselves, the form of entertainment likewise changed. The carnival made its way into the Jewish quarter, and on Purim especially there would be masquerades, death dances, stage shows, and street parades. Purim was the only season of the year during which Jewish communities, in all times and places, observed unlimited rejoicing. The period of merrymaking began on the first of Adar, when wandering musicians appeared in the Jewish quarter. People donned Purim costumes and danced in the streets, and stage shows were performed with the story of Esther and Ahaseurus as their theme. Young men on horseback amused the public by trying to push one another off their mounts. Children made stuffed dolls and burnt Haman in effigy. Shots were fired, and the sound of the “grager” (noisemaker) filled the air. Jews in Italy held sports tournaments in which boys fought on foot throwing nuts, while their fathers rode on horses, and, amidst a background of horns and bugles blowing, attacked a model of Haman with wooden staves, later burning it on a mock funeral pyre. In some communities, such as Hebron, Yemen, and Baghdad, Hanukkah was observed in a similar manner, though on a smaller scale, as was Simhat Torah and the second day of Shavuot. In the yeshivot, the great occasion for play was Purim. Preparations would start right after Hanukkah, and the usual theme for the play was “The Sale of Joseph” or “David and Goliath.” Young artisans would also put on Purim plays, their favorite theme being the Esther story. In Sephardi communities, the play would be a parody based on the life of Esther, Haman’s wedding to Zeresh, Haman’s funeral, etc. In Iraq and other communities, a Haman figure would be put up on Purim to serve as a target for young and old alike. The games played at home were *cards, *chess, dominoes, and checkers. Card playing was sharply condemned, and the rabbis often excluded card players from religious functions and social life. Yet the habit persisted. The 14th century *Kalonymus b. Kalonymus in his Even Bohan sharply criticized those card players who reduced their opponents to utter despair. Maimonides compared such persons who gamble to robbers (Yad, Gezelah ve-Avedah 6:7). A synod in Forli, Italy, enacted a ruling in 1416 that the Jewish community must refrain from playing dice, cards, and other games of chance, except on fast days and in time of illness, in order to relieve the distress. Similar measures were taken in Bologna and Hamburg. The numerical value of the letters making up karten (Yid. for cards) was found to be the same as that of “Satan,” and hence a pious Jew should keep away from them. The 17th century Ravvot Yair of Jair Hayyim *Bacharach permitted card playing without money on Hanukkah, Purim, and hol ha-moled (p. 126). On Christmas eve, playing for money was tolerated. Leone Modena was plagued by his obsessive love for card playing. The rabbis of Venice issued a ruling in 1628 ex-communicating any member of a congregation who played cards, and there were many instances of oaths taken by individuals who wanted to avoid all games of chance. In the course of time, Yiddish terms were introduced into the card games: a six became a “vover” (the letter “vov” having the numerical value of six), a seven a “tsayner,” a nine a “teser”; hearts became “lev” and trumps were “yom tov” (holiday). The card deck was called the small “Shas” (the Talmud) or the “Tillim” (the Book of Psalms), etc. Chess, on the other hand, was a respected pastime, although some rabbis disapproved of the game. There was a legend ascribing its invention to King Solomon. Rashi observed that chess drives boredom away and causes the player to contemplate (Ket. 61b). Poets and philosophers set down the rules of the game, and R. Abraham *Ibn Ezra composed a poem on it, as did Bonsenior ibn Yahia in the 15th century (both translated into Latin by Thomas Hyde in De Ludis Orientalium, Oxford, 1694). There were rabbis who excelled in the game of chess. One legend has it that R. Simeon, the chief rabbi of Mainz (11th century), played chess with the pope and recognized in him his long lost son. The Magen Avraham of Abraham Abele b. Hayyim ha-Levi *Gombiner (17th century) tells of people who had special silver chess sets for use on the Sabbath. Here, too, Yiddish and Hebrew terms were introduced into the game. Checkers was also a popular game. Yeshivah students would draw a checkerboard on the blank inside cover of the Talmud volume and make their own black and white pieces of wood. Rabbi Nahum of Stefanesti found in the game an allegory of life: you take one step in order to gain two. You must not take two steps at once. You may only go up; once you have reached the top, you may go wherever you like (A.Y. Sperling, T"amei ha-Minhagim (1957), 367).

The world of children in both Ashkenazi and Sephardi communities was a world of games. For every holiday the Jewish child prepared special toys, made from whatever material was available, with the assistance of the rabbi in the heder or of older children. The Jewish child was said to be a jack-of-all-trades: on Passover he makes holes in the mazzot, on Shavuot he becomes a gardener, on Lag ba-Omer he is a soldier, on Sukkot a builder, on Hanukkah he pours lead, on Purim he is a gunsmith, and for Rosh Ha-Shanah he trains as a trumpeter (to blow the shofar). For Hanukkah the boys would prepare a “dreydel” (a four-sided top), either carving...
it out of wood or pouring lead into a form. This game is still popular and has also been adopted by Yemeni and Sephardi children. It came upon the Jewish scene in the early Middle Ages, and the four sides of the dreidel were marked with the Hebrew letters Nun, Gimel, He, Shin (standing for Yiddish words Nimm, Gib, Halb, Shell meaning take, give, half, and put). Soon, however, the letters were interpreted as standing for the Hebrew words Nes Gadol Hayah Sham ("a great miracle happened there"). In modern Israel the last word was changed to Po, so as to read "a great miracle happened here." Dreidel spinning was one form of Hanukkah gambling. Older children made their own Yiddish cards known as "Lamed-Alef-niks" or "Kvitlakh." For Purim, noise-making toys, "gragers" or boxes, to drown the sound of Haman’s name in the synagogue reading of the Book of Esther, masks, costumes, and Haman dolls were made by young folk. Passover games were played with walnuts. For Lag ba-Omer the equipment was bows and arrows, and the children spent the day in the woods, engaging in various warlike operations under the command of the "Lag ba-Omer general." On Shavuot girls decorated the windows with paper roses, and the boys brought field flowers and ivy from the forest and adorned the doors, windows, and lamps. There was also a custom of piercing eggs, emptying them of their contents, drawing a string through the empty shells, gluing feathers to them, and hanging them up in the open to swing in the wind like birds. On the eve of the Ninth of Av children armed themselves with wooden swords and played as soldiers fighting the Turks for possession of Erez Israel. The "Rabbi" game in which boys mimicked their teachers was popular between the 17th of Tammuz and the Ninth of Av, when children were free from punishment. Even adults enjoyed this game on Purim. Throughout the year in their spare time children played war games (often based on biblical themes), cops and robbers, hide-and-go-seek, "Simple Simon," etc. More sedate games were played with buttons, pocketknives, heads or tails, folding paper cutouts, and drawing on walls.

Concerning adults, there are records of Jews dueling. In Spain, some enjoyed wearing arms, considering themselves knights, and using stately names. In Provence, Jews used trained falcons in hawking while riding horses. Occasionally, they joined Christian friends in hunting, although they could not eat the game killed that way because of the "dietary laws (see Cruelty to *Animals and *Hunting). All ages enjoyed a variety of word games, often based on biblical verses. A "samekh-pe" game, relating to finding open or closed lines in the Pentateuch, was popular. The "Moses" game was played by children who would turn to pages of the Bible and compete with each other to be the first to locate the Hebrew letters of Moses’ name among the last letters on the page. Letter games with *Gematria, i.e., in which corresponding words and phrases were searched for with each having the same numerical value, were enjoyed, e.g., the identical numerical value of the Hebrew phrases for "blessed is Mordecai" and "cursed be Haman." Riddles were a form of amusement, and early examples were found in the series of moral riddles in the 13th chapter of Proverbs. "Ehad mi Yode'a, a song from the Passover *seder, is an illustration. Hebrew "acrostics were popular, combined with arithmetical puzzles. Abraham Ibn Ezra wrote several of these, some expressly for Hanukkah. Judah Halevi also composed poetic riddles. In the 13th century riddles about general folk legends like "Solomon and Marcom" were also known to Jews. Yet at this time the most common games involving words were table riddles, such as found abundantly in the Hebrew romances of Al-Harizi and Joseph Zabara. The Talmud reported an example of such a riddle from Adda the fisherman: "Broil the fish with his brother (salt), plunge it into its father (water), eat it with its son (sauce), and drink after it its father (water)" (MK 11a). Jewish gatherings in later times were often enlivened by witty puzzles. Kabbalists had a part in such wordplay, as when children would direct some invocation to the angel Sandalfon at the start of their games. There were formal occasions for performances by teenagers at the end of the school term or the conclusion of a tractate of the Talmud (see *Siyum) on the 15th of Shvat, etc. In Ashkenazi communities, Shabbat Nahamu (the Sabbath following the Ninth of Av) would be marked by a festive meal and children’s show. Sephardi children in the old city of Jerusalem, Hebron, Baghdad, etc., would mark the last day of Hanukkah with a play, "Miranda di Hanukkah." In Tripoli, Tunis, and Salonika, on the sixth or seventh day of Hanukkah, a celebration would be held for girls who had reached the age of twelve. Also on Hanukkah, Sephardi children would play "Caricas di Sol" ("Face of Salt"), or act as soldiers fighting the Greeks. This was also the custom among the children of Yemen, who wore blue clothes for the occasion. Jewish children in Persia marked Hanukkah by playing various games of chance known as "Kab," "Kemar," and "Tachte-ner" (a kind of checkers, known as "Shesh-Besh" in Arabic). Yemeni children played with fruit stones (now played in Israel with apricot stones). Their Hanukkah top ("Duame") was made of nutshells; the Purim "grager" was called "Khityre." Other games were "Omei" (blindman’s buff), "Kee Almakez" ("horses," or jumping over one another’s bent backs), etc. In Tripoli the young men had the custom of holding donkey races on the Ninth of Av, for on that day the Messiah was expected to come, riding on a donkey. On Shavuot they would pour water on the passers-by (also customary in other eastern communities).

The last day of Passover was the occasion for a “Maimuna” carnival, when young and old would pelt one another with flowers and vegetable leaves. In all communities, girls had their own games, such as playing ball, dolls, “cat-and-mouse,” “golden bridges,” etc. They also played an elaborate form of “bride-and-groom,” accompanied by songs. Rarely did boys and girls join in games together, although girls would also engage in games usually reserved for boys. After World War I, various forms of modern sports and gymnastics were introduced into the Jewish communities, taking the place of the traditional forms of entertainment. Some of the old games, however, still survive and are handed down by children from one generation to the next.
GAMES, ABRAM (1914–1996), British graphic designer. Born in Whitechapel, London, to Moshe Joseph Gamse, a photographer from Dvinsk, Latvia, and Sarah Rosenberg from Semyatitz, Russo-Poland, Games achieved early recognition for his poster designs before being conscripted in 1940. Subsequently he was posted to the War Office and awarded the unique title “Official War Poster Artist,” in which position he created some 100 posters until his demobilization in 1946, many of which became recognized classics.

Games was responsible for creating many iconic posters and numerous emblems, including those for the Festival of Britain and the Queen’s Award to Industry. His stamp designs led to his appointment to the Advisory Committee of the Council of Industrial Design and his giving a course for designers of the Israel Philatelic Services. He did much work for Jewish organizations. In addition, Games was a lecturer at the Royal College of Art and was later made an honorary fellow, and was an active painter, product designer (including the famous Cona coffee maker), and inventor. He was awarded the Queen’s OBE in 1957 and appointed Royal Designer for Industry in 1959. His book Over My Shoulder was published by Studio Books in 1960 and he later summarized his work through a traveling exhibition called “60 Years of Design.”

In 1968 the United Nations Industrial Development Organization appointed Games as consultant on Graphic Design at the Bezalel School of Art in Jerusalem. He was the designer of the original motif and cover for the first edition of the Encyclopaedia Judaica, an exceptional concept combining Hebrew and English calligraphy of text from the Book of Isaiah in the form of a menorah.

[Naomi Games (2nd ed.)]

GAMORAN, EMANUEL (1895–1962), U.S. educator. Born in Belz, Russia, he was taken to the U.S. in 1907. From 1917 to 1921 Gamoran was associated with the New York Bureau of Jewish Education, becoming in 1923 the educational director of the Commission of Jewish Education of the Union of American Hebrew Congregations, a post he held until his death. He was also president of the National Council for Jewish Education in 1927–28. Under Gamoran’s direction, the Reform Commission on Jewish Education produced numerous textbooks and curricula for its affiliated schools, and pioneered the use of audiovisual aids in Jewish education. Gamoran wrote Changing Conceptions in Jewish Education (1924) as well as graded textbooks for Jewish schools and many articles on Jewish education.

[Leon H. Spotts]

GAMORAN, MAMIE GOLDSMITH (1900–1984), U.S. writer. Born in Jersey City, N.J. to Nathan and Mamie Aronson Goldsmith, Gamoran was a prolific author of Jewish children’s textbooks and fiction. Raised in a non-observant home, she received no formal Jewish education as a child. Her interest in Judaism was stimulated by her involvement in a Jewish girls club, the Bronx chapter of the Association of Jewish High School Girls (which later merged with a parallel boys club and became the League of Jewish Youth). The club was created by Dr. Samson “Benderly, director of the New York Bureau of Jewish Education and a revolutionary force in Jewish education in the early 20th century. Her exposure to Benderly’s educational approach was intensified when she came to work at the Bureau as Benderly’s personal secretary. There she also became acquainted with the so-called “Benderly Boys,” the group Benderly was grooming for leadership positions in Jewish education. These included her future husband, Emanuel Gamoran. Mamie also studied at the Jewish Theological Seminary, and was a member of the first graduating class of the Israel Friedlaender extension school (1922).

After their marriage in 1922 the Gamarons moved to Cincinnati, Ohio, where Emanuel became education director of the Union of American Hebrew Congregations, the lay arm of the Reform movement. There, Mamie taught in area supplementary schools and served for two years as principal of the Conservative affiliated Adath Israel religious school. A central facet of her husband’s work included commissioning and editing religious school textbooks. Always in need of writers, he encouraged Mamie’s literary aspirations. Among her best-known books was Hillel’s Happy Holidays (1939), one of the earliest Jewish holiday primers for young children, and a three-volume Jewish history series for junior high school students, The New Jewish History (1953–57).

Gamoran co-edited her husband’s biography following his death, Emanuel Gamoran: His Life and His Work (1979), and wrote a memoir, A Family History (1985), published by her son, Rabbi Nathaniel Hillel Gamoran, after her death.

[Jonathan Krasner (2nd ed.)]

GAMUS GALLEGOS, PAULINA, Venezuelan lawyer and politician. Gamus Gallegos was born in Caracas and attended the Moral y Luces Herzl Bialik High School there. She obtained her law degree from the Universidad Central de Venezuela in 1959. After working as a lawyer for two years, she served in various capacities in public administration. In 1974 she became...
adjunct legal adviser to the president of the country and executive secretary of the Women’s Advisory Commission of the president. She served as director of information of the Ministry of Education from 1975 to 1977 and in the latter year was vice minister of information and tourism.

In 1977 she was also chosen by presidential candidate Luis Pinera Ordaz as his campaign public relations director. Gamus Gallegos was elected councilor representing the Democratic Action Party for the Federal District in 1977, becoming head of that faction in 1981. She chaired the Committee on Environment and was a member of the Permanent Committee for Culture and Town Planning. In December 1983 she was elected principal delegate of the Democratic Action Party in the Federal District and in January 1984 became the co-director of the parliamentary faction. She belonged to the Legislative Commission, to the bicameral commission for a new employment law, to the bicameral commission for the reform of municipal government, and was chairman of a number of special committees. In January 1986 she was appointed a minister in the government, Ministra de Estado-Presidenta del Consejo Nacional de la Cultura (CONAC).

Gamus Gallegos was a journalist from 1969 with a column in the daily newspaper El Nacional and from 1981 with a column in the daily newspaper of Caracas. She has also contributed to the magazines Resumen and De Frente. In addition, she has represented Venezuela at numerous international meetings.

GAMZON, ROBERT (1905–1961), French Jewish leader. In 1923 he helped to found the Eclaireurs Israélites de France (EIF), which was to become the most popular Jewish youth movement in France and in North Africa. Gamzon gave a broad interest to the EIF movement which attracted Jews from a wide range of backgrounds and ideologies.

During World War II Gamzon served as a communications officer in the Fourth French Army from 1939 to 1940. After the armistice of June 1940, he reestablished the EIF framework in the towns in southern France where Jewish refugees had gathered. In Algeria he worked to open homes for children, handicraft centers, and rural work camps in order to provide an educational framework for Jewish youth. In 1942 Gamzon created “La Sixième,” a clandestine escape network manufacturing false identity papers and taking children and teenagers to safety in Spain or Switzerland by illegal means. In December 1943 he set up a Jewish underground movement in the Tarn area with youth from rural work camps and veteran members of EIF and played a major role in the unification of Jewish resistance groups in France. In June 1944 his group, now a full-fledged military unit, was incorporated in the Free French Army as the Marc Haguenuan Company. As area commandant, Gamzon received and assisted Allied specialists in sabotage who parachuted into his zone and set up ambushes against German convoys. On August 19, 1944, the EIF company seized a whole armored convoy and two days later liberated the towns of Castres and Mazamet.

After the war, in 1947, he established a school for community workers in a Parisian suburb. In 1949, he immigrated to Israel at the head of a group of 50 EIF veterans. In Israel Gamzon, an electro-acoustical engineer by profession, worked as laboratory head at the Weizmann Institute where he invented an isophase loudspeaker used by manufacturers of high fidelity musical instruments. He met his death by accidental drowning.

GAMZON, ROBERT

GAMZU, HAYYIM (1910–1982), Israeli drama and art critic. Born in Chernigov, Russia, he went to Palestine with his parents in 1923, and later left to study art and philosophy at the Sorbonne and the University of Vienna. The director of the Tel Aviv Museum, from 1962 he taught at the Ramat Gan School of Drama, and wrote regularly on painting, sculpture, and the theater, mainly for the daily Haaretz. His criticism was erudite and often harsh and could make or break an exhibition or production. Insisting that Hebrew drama must maintain European standards, he often expressed dissatisfaction with its achievements. His books, consisting of reproductions of works of art and accompanying text, include Hannah Orloff (1949), Ziyur u-Fissul be-Yisrael ve-ha-Yezirah ha-Omannutit be-Erez Yisrael ba-Hamishim Shanan ha-Aharonit (“Painting and Sculpture in Israel and Artistic Creation in the Land of Israel in the Past 50 Years,” 1957); Zeev Ben-Zvi (1955); Ommanut ha-Pissul be-Yisrael (“The Art of Sculpture in Israel,” 1957). The Tel Aviv Museum’s prize for the advancement of the arts is named for him.

GAMZU, HAYYIM

GANCHOFF, MOSES (Maurice [Moshe] (1905–1997), hazzan. Ganchoff was born in Odessa but came to the United States as a child. During his formative years he studied with Simon Zemachson and later came under the influence of the creative talents of Mendel Shapiro and Aryeh Leib Rutman. Even at that tender age, he was already a skilled interpreter of the many recitatives of the most important composer of hazzanut of that generation, Jacob *Rappaport. After serving in a number of congregations, in 1958 he was appointed cantor to the synagogue in Grossinger’s Resort in New York’s Catskill Mountain Borscht Belt, remaining there until 1978. In 1963 he was invited by the Government of Israel to participate in the Israeli Music Festival. He was lecturer in hazzanut in the faculty of hazzanut of Hebrew Union College. Ganchoff was one of the last of the great classical East European hazzanim and the title of “Hazzan’s Hazzan,” by which Ganchoff is known, was apt and well deserved. A number of publications by the Cantors’ Assembly and Tara Publications include Ganchoff’s: Mincha and Ma’ariv for Weekdays, “Tefillot Moshe,” and Favorite Recitatives, all skillfully transcribed and notated by Noah Schall. Barry Serota, record collector and publisher of “Mu-
sique Internationale,” has issued an entire series of cassettes devoted to the cantorial art of Ganchoff. They are based on standard recordings, radio broadcasts, and live concerts and services that Ganchoff participated in through the course of his long active career as a performing hazzan.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

GANDELSONAS, MARIO (1938– ), architect. Gandelsonas was born in Buenos Aires and received his degree in architecture from the University of Buenos Aires. In 1977, he and his wife, Diana *Agrest, designed a group of apartment buildings in Buenos Aires. In 1980, they formed the firm of A&G Development Consultants, Inc. Subsequently, Gandelsonas taught at Yale, Harvard, the University of Illinois, and the University of Southern California, later becoming professor of architecture at Princeton University and director of international programs there. Under Gandelsonas' direction, a group of 20 students from Hong Kong University and Tongji University in Shanghai together with Princeton students worked to redesign Hangzhou’s Wulin Square, including plans for a new cultural center. The city was once the capital of the Southern Song dynasty and today is a tourist center for the 17 million people who come to visit the nearby West Lake. Gandelsonas believes that globalization is making a powerful impact on architecture and his work has inspired other international student projects. The students choose the projects and exchange cultural studies and visits to the sites. The Melrose Community Center (2000) in the Bronx is a good example of the work of A&G, Inc. Set amid high-rise apartment buildings, the center serves about 3,000 young people. With its curved exterior of silver and red, the building beckons young people to use, among other facilities, its basketball court, darkroom, restaurant-size kitchen, and computer lab. The interior is also decorated in silver and red. Gandelsonas received high praise for his Vision Plan (1990–92), a design for central Des Moines. Known for home and apartment design as well as urban planning, he is the author of The Urban Text (1991) and X-Urbanism (1999), both showing the influence of his studies in Paris with Roland Barthes and also the theories of Sigmund Freud.

[Betty R. Rubenstein (2nd ed.)]

"GANDHI, MOHANDAS KARAMCHAND (1869–1948), Indian political leader. Gandhi had several Jewish friends resulting from his 21-year stay in South Africa (1893–1914). This was a period of formative influence in which he formulated and first put into practice his conception of satyagraha (non-violent resistance) and crystallized most of the elements of his ethos and lifestyle. The most intimate of his non-Indian colleagues and confidants in South Africa were Jews, notably H.S.L. (Henry) Polak and Hermann *Kallenbach. However, while evincing sympathy for the Jews as the historic underdog of Western society, Gandhi was less sympathetic to the Jewish religion. Neither Polak nor Kallenbach could authentically interpret Judaism for him since they were both alienated from the Jewish religion and community. Gandhi's formative perception of Judaism derived less from his Hinduism than from the particular circumstances of his exposure, as a Hindu, to Christian influence. While he had reservations about Christianity, he at least understood it on its own terms, whereas Judaism was perceived by him through Christian-tinted glasses. Thus he regarded Jesus as "the finest flower of Judaism" and identified Judaism wholly with the Old Testament which he did not like much. This attitude was reinforced by his contact with the Calvinist Boers of South Africa in whom he saw the products of Old Testament influence.

Gandhi's distorted view of Judaism also prejudiced his perception of Zionism. Thus he insisted that Zion was not geographical but "lies in the heart." It therefore could be realized by Jews anywhere and ought not to mean "the reoccupation of Palestine." Moreover, his overriding striving for Muslim-Hindu amity in an undivided India influenced him to support the Muslim-Arab case against that of Zionism. In March 1921 he made a statement supporting the demand of the Indian Muslim Khilafat (Caliphate) movement that Muslim control be retained over Palestine. He argued on moral grounds but the partiality of his stand is evident in his dismissal of Jewish religious sentiment regarding Palestine, in contrast to his uncritical affirmation of Muslim religious sentiment. Concerned by the increasing hostility to Zionism in India, Moshe Sher- tok urged Kallenbach, who had meanwhile become a Zionist in South Africa, to visit India with a view to gaining Gandhi's sympathy for the Zionist cause. Kallenbach visited him in May 1937 and succeeded in making the Mahatma more sympathetic to Zionism. Gandhi permitted him to deliver a private statement to the Zionist leadership accepting, in principle, the validity of the Jewish aspiration to found a home in Palestine, but rejecting any reliance on British power, and insisting that fulfillment of Zionist goals be dependent on Arab approval. However, constrained by his solidarity with Muslim feelings in India, Gandhi never gave public expression to such private sentiments. At the same time, not wishing to harm either Jews or Arabs, Gandhi was reluctant to make public statements on the Arab-Jewish conflict. Yet, urged by Kallenbach and others to make his voice heard in the light of Nazi persecution of the Jews, he finally did so in November 1938. But in this statement he again averred that Palestine belonged to the Arabs and advised the Jews to cultivate a spiritual rather than a geographical Zion. He unreservedly condemned Hitler's wanton persecution of the Jews but recommended that the Jews of Germany observe organized satyagraha in response to Nazi atrocities and not leave Germany.

Martin Buber and Judah Magnes, both admirers of Gandhi, wrote open letters to him in response to this statement. But they remained unanswered. It is not clear whether Gandhi actually received them. However, he did publicly answer..."
another open letter from Hayyim Greenberg, in which he reiterated his views and denied that they were motivated by the desire to win Muslim friendship. It would appear that the nature of Nazi treatment of the Jews lay utterly beyond his comprehension. He remained convinced that “the stonest German heart will melt” if only the Jews would adopt “active non-violence.”

After World War II, Gandhi again expressed some sympathy for the Zionist cause in private conversations with the Anglo-Jewish M.P. Sidney Silverman and with his American Jewish biographer, Louis Fischer. But when publicity was given to these sentiments, he reiterated his reservations and condemned violence. His public statements thus remained consistently unsympathetic to Zionism.

As far as the Jews of India are concerned, it appears that they have had a positive view of Gandhi. According to their oral accounts, in 1931 Gandhi met with a number of “Bene Israel to discuss the possible participation of Indian Jews in the nationalist movement and suggested that they join hands with Indian nationalists in the event of their victory but not get involved in wider politics before that time, as they represented such a small minority that they should be concerned chiefly with their own safety.

[Gi. Sh. / Yulia Egorova (2nd ed.)]

**GANDZ, SOLOMON** (1887–1954), Semitics scholar and historian of mathematics. Gandz was born in Austria. He studied mathematics, Semitics, and rabbinics in Vienna and taught at a Viennese high school from 1915 to 1923. He emigrated to the United States in 1924 and was librarian and instructor in medieval Hebrew and Arabic at the Rabbi Isaac Elchanan Theological Seminary until 1935. From 1942 until his death he taught the history of Semitic civilization at Dropsie College. Gandz’s particular field of study was ancient Oriental mathematics, astronomy, and science and Jewish study of these specialties in the Middle Ages. Among his works in this field is a translation of Mishnat ha-Middot (in Quellen und Studien zur Geschichte der Mathematik, Astronomie und Physik, Abteilung A, 2, 1932), a second-century Hebrew geometry and its ninth-century Arabic version. A selection of his many essays was collected in Studies in Hebrew Astronomy and Mathematics (1970). In Semitics, he contributed an annotated German translation of Imru’ al-Qays’ sixth-century poems, “Die Mu’allaqa des Imrulqais” (in Sitzungsbericht der Kaiserlichen Akademie der Wissenschaften in Wien, 170, Abhandlung 4, 1931). He was associate editor of the international periodical *Osisr*, devoted to the history of science, to which he contributed “The Dawn of Literature” (7 (1939), 261–522). He also contributed the section on public law to the second volume of Monumenta Talmudica (Ger., 1933). For the Yale Judaica Series English edition of Maimonides’ Mishneh Torah, Gandz did the translation of Book 3, Book of Seasons (1961; with Hyman Klein) and of Book 3, Treatise 8, published separately as Treatise on the Sanctification of the New Moon (1956).

**GAN HAYYIM** (Heb. הגן חיים), moshav in central Israel in the southern Sharon near ‘Kefar Sava, affiliated with Tenu’at ha-Moshavim. It was founded in 1935 by veteran farm workers from Russia and other East European countries. The moshav expanded in 1949 when settlers from Romania joined it. Citriculture constituted a prominent farm branch. The population in 1968 was 220, rising to 350 in the mid-1990s and 607 in 2002 after expansion. The moshav is named after Chaim *Weizmann.*

[Shaked Gilboa (2nd ed.)]

**GANNEI TIKVAH** (Heb. גַנֵּי תִּקְוָה), town in central Israel. In 1949 a settlement called Shikunin ha-Yovel was set up by the Jewish Agency on the outskirts of *Petah Tikva*. The new settlement absorbed immigrants from Romania, Poland, Yemen, and Morocco and was only connected to the water system in 1950 and to the electricity grid in 1952. In 1954 its name was changed to Gannei Tikva and it received municipal status. In 2002 its population was 11,500, with a land area of 0.75 sq. mi. (1.9 sq. km.). The town has many green areas, where sculptures of well-known artists are on display, and in 2002 Merkaz ha-Bamah, a culture center, was opened. The center has a theater group which performs original plays as well as the standard repertoire.

[Shaked Gilboa (2nd ed.)]

**GANNEI YEHUDAH** (Heb. עֲנֶיְיַיִדְוָה), moshav with municipal council status in the Judean coastal plain near Petah Tikva, affiliated with Ha-Ihud ha-Ḥalaklā, founded in 1950. The founding settlers were mainly immigrants from South Africa and engaged principally in citrus culture. In 1968 Gannei Yehudah had 580 inhabitants, rising to 731 in 2002. In 2004 it was united with the nearby municipal council of Savyon.

[Shaked Gilboa (2nd ed.)]

**GANS, BIRD STEIN** (1868–1944), U.S. educator. Gans was born in Allegheny City, Pennsylvania. In 1896 she became director of the Society for the Study of Child Nature in New York, the first organization in the U.S. engaged in the field of parent education. With the growth of similar societies in other cities, the organization changed its name to the Federation for Child Study in 1898 and Bird Gans was elected its first president. In 1924 the organization became the Child Study Association of America. Gans organized similar groups in Japan (1924) and England (1929). By 1941 the association was conducting extensive experiments and research in child psychology and providing its results to approximately 100 groups.
throughout the country. Gans was president of the organization until 1933 and honorary president for the next six years. She served on the National Board of Review and the film censorship organization, and she was associated with several organizations devoted to the investigation and solution of youth welfare problems.

GANS, DAVID BEN SOLOMON (1541–1613), chronicler, astronomer, and mathematician. Born in Lippstadt, Westphalia, Gans studied rabbincs with Reuben Fulda in Bonn; Eliezer Treves in Frankfurt; Moses Isserles in Cracow; and Judah Loew (the Maharal) in Prague. Encouraged, so it is said, by Isserles, he devoted himself to the study of mathematics and astronomy. In the house of his first father-in-law Gans apparently found a Hebrew translation of Euclid by Moses ibn Tibbon; his second father-in-law was the physician Samuel Rofe who had become famous for his mercury cures of syphilis. Gans was one of the few German Jews of his time, when rabbincs ruled supreme, to undertake serious secular studies for which he found and quoted older Jewish authorities. In Prague he corresponded with the astronomer Johann Mueller (Regiomontanus) and was in friendly contact with Johann Kepler and Tycho Brahe, for whom he translated the Alфонsine Tables from Hebrew into German.

Gans’s main astronomical (and also geographical) work was Nehmād ve-Naʾim ("Delightful and Pleasant," Jesnitz, 1743; shortened version Magen David, Prague, 1612) in which he rejects the new Copernican system in favor of Ptolemy’s, the former going back (according to Gans) to the Pythagorean system. Astronomy (and mathematics) – he held – was first studied by Jews from whom the Egyptians had learned the science, passing it on to the Greeks. Ptolemy had studied with Alexandrian Jewish scholars. The study of astronomy was important not only for the Jewish calendar but as proof for the cultural achievements of the Jewish people. Other works by Gans on mathematics, the calendar, and the geography of Erez Israel remained unpublished.

Gans wrote his chronicle Zemah David ("Offspring of David," Prague, 1592) in two parts, one dealing with Jewish history to the date of publication, the other with general history. He had written it for "householders like myself and of my worth," while justifying the inclusion of general history by the fact that it contained ethical teachings of emperors, which ordinary people would accept coming from such illustrious mouths. The first part of the work summarizes that of his predecessors, such as Ibn *Daud and *Zacuto, but he dissociates himself from the untraditional approach of Azariah dei *Rossi. For the second part his sources are contemporary German chroniclers like Cyriak Spangenberg and Laurentius Faustus, though in his introduction he expresses doubts as to their reliability. Gans shows an interest in economics; his description of historical events and situations reflects the spirit and taste of the 16th-century Jewish “householder” in Bohemia and Poland. The Zemah David remained a standard work up to the Haskalah period. The second edition by David b. Moses of Reindorf (Frankfurt, 1692) brings the chronicle up to the date of publication, also giving a long poetical description of the *Fettmilch riots of 1614. It was translated into Latin by W.H. Vorst (Leyden, 1692), into Yiddish by Solomon Hanau (Frankfurt, 1698); and parts of it into German by G. Klemperer (ed. Moritz Gruenwald, 1890). The Warsaw edition of 1849, also brought up to date, was reproduced in 1966 with introductions in Hebrew and English and an index.

GANS, EDUARD (1789–1839), jurist and historian in Berlin. From 1816 to 1819 he studied law and philosophy in the universities of Berlin and Heidelberg; at Heidelberg he was influenced by *Hegel and his system and became one of the philosopher’s closest students. In 1820 Gans was appointed lecturer at the University of Berlin where he became celebrated for his inspiring lectures. In contrast with Hegel and Kant, Gans argued that Judaism should be seen as one of the major sources of Western culture and the origin of its notion of religion and morals. He considered Rabbinic Judaism to be a vital development of prophetic Biblical Judaism and a dynamic response to the surrounding cultures of the time. Nevertheless, throughout the centuries and owing to Christian anti-Jewish pressure traditional Judaism degenerated. Contemporary Judaism must adjust itself to the values and cultural level in order to regain its vitality and to overcome its isolationist tendency. As an expression of this notion he founded in 1819, in conjunction with Leopold *Zunz and Moses *Moscr, the *Verein fuer Kultur und Wissenschaft der Juden (Society for Culture and Science of the Jews), the objective of which was to establish a scientific modern study of Judaism, to bring general education to Jewish youth by expanding their cultural horizons, and the reform of traditional Jewish thinking. The society, which proved to be the first step towards the development of Wissenschaft des Judentums, was dissolved in 1824. In this period not much was done in terms of actual research but major programmatic formulations – not the least by Gans himself – laid the ground for the further work done in the next generations. Gans’ inclination to *assimilation, and the government’s objection to the appointment of a Jew to a permanent academic position, led Gans to become an apostate to Christianity at the end of 1825. In 1826 he was appointed associate professor at Berlin University, and in 1829 a full professor. In his lectures on jurisprudence, which attracted an enormous audience, Gans developed the Hegelian philosophical system rejecting the historical system of Savigny. On history, he elaborated the concept of the Prussian state and its sovereignty; and the central role of the ruler as the incarnation of the concept of the state. He saw the French Revolution as a new and crucial factor in European history, and explained the historical concept...
of "Europe" as a synthesis of different peoples incorporating the best in the cultures of Israel, Greece, Roman, Christianity, and the West in its development; Gans was opposed to nationalism and the romantic glorification of the Middle Ages and its Christian culture.

His works include (on law) Scholien zum Gaius (1821); System des roemischen Civilrechts im Grundriess (1827); Uber die Grundlage des Besitzes (1839); Beitrage zur Revision der preussischen Gesetzgebung (1830–32); Das Erbrecht in weltgeschichtlicher Entwicklung (4 vol., 1824–35; repr.), a fundamental work on comparative law; and a historical work, Vorlesungen uber die Geschichte der letzten fuenzig Jahre (1833–34). He also edited Hegel's lectures on the philosophy of history (vols. 8 and 9 of G.W.F. Hegel's Werke, 1833–37). In 1827 he founded the Jahrbiicher fuer wissenschaftliche Kritik. An essay on the principles of the law of inheritance in the Pentateuch and Talmud, a chapter from his work Das Erbrecht in weltgeschichtlicher Entwicklung, appeared in the Zietschrift fuer die Wissenschaft des Judentums (vol. 1 (1822–23), 419–71), which also published his study of the Roman legislation concerning the Jews ("Gesetzgebung uber Juden in Rom"). The reports of the society, including several of his addresses, are preserved in manuscript in the Zunz archives in Jerusalem.

[Gan Shelomo]

GANS, MOZES HEIMAN (1917–1987), Dutch author, journalist, and jeweler. Gans grew up in the building of the "Joodse Invaliden." This was the institute for poor Jewish invalids, an outstanding example of modern Jewish charity of which the controversial Rebbe Meijer de Hond (1882–1943) was the spiritual father and Gans' own father, Isaac Gans, the founder and director.

In 1943 Max Gans managed to escape to Switzerland, where he founded the Joodse Coördinatie Commissie in Genève, which acted as much as possible on behalf of the Dutch Jews under Nazi occupation. Upon his return to Amsterdam he took over the jeweler's shop of his father-in-law (who had been deported to his death), Premelsa & Hamburger, specializing in silverware. Later he would write a standard work on antique silver.

At the same time he was active in Jewish affairs, becoming the head of the Central Committee for Jewish Education of the Netherlands Ashkenazi Congregation (NIK) and in 1950 assistant editor and then, from 1956 to 1966, the editor of the Dutch Jewish Weekly Nieuw Israëlitisch Weekblad (NIW). As the (assistant) editor of the NIW he criticized what he saw as the short Dutch national memory of the persecution of the Dutch Jews, the apologetical attitude towards the Jewish Council by the Jewish author and lawyer Abel Hersberg (1893–1989), and the opportunistic way in which the German Widergutmachungs money was handled by the Dutch authorities.

A private collector of Judaica, Gans published in 1971 his monumental Memorbuck, A Pictorial History of Dutch Jewry from the Middle Ages to 1940, with some 1,100 illustrations, which in 1987 went into its sixth printing, with an English translation published in 1977. In addition, he published three smaller albums on the Amsterdam Jewish quarter before 1940 and after – all of which were also translated into English. In 1976–77 he held the appointment of professor extraordinary in Dutch Jewish history at the University of Leiden.

GAN SHELOMO (Heb. שלמה גן; previously known as Kevuzat Schiller), kibbutz near Rehovot, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. It was founded in 1927 by a pioneer group of former students from Galicia. Affiliated with Hever ha-Kevuzot (of Mapai orientation), the settlers nevertheless preserved their political ties with Ha-Oved ha-Ziyoni (Independent Liberals). Citriculture, field crops, orchards, poultry and dairy cattle constituted principal farm branches, and the kibbutz also had a textile factory. Gan Shelomo is named in memory of Solomon Schiller. In 1968 its population was 265, rising to 413 in 2002.

[Efraim Orni]

GAN SHEMU’EL (Heb. שלמה גן-שמואל), kibbutz in central Israel near Hadera, affiliated with Kibbutz Arzi ha-Shomer ha-Zair. Members of Odessa’s Hovevei Zion first settled there in 1884, laying out plantations of etrogim ("citrons"). They named the place “Samuel’s Garden” after Samuel Mohilever. In 1912 a laborers’ group settled there temporarily; and in 1921 settlers from Eastern Europe took over. In 1968 Gan Shemu’el had 700 inhabitants, and in 2002 a total of 827. The kibbutz’s economy has been based on intensive farming (fieldcrops, orchards, dairy cattle, fishery, turkeys, and ducks) and a food preserves factory.

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7
GAN SHOMRON (Heb. שלום), moshav in central Israel, northeast of *Hadera, founded in 1934 by middle-class settlers from Germany and unaffiliated with any moshav association. It expanded after 1945, when World War II veterans and new immigrants settled there. Its economy was based on intensive farming (especially citrus culture). The name Gan Shomron refers to the location of the village near the Samaria Hills. In 1969 its population was 322, rising to 599 in 2002.

[Efraim Orni]

GANZFRIED, SOLOMON BEN JOSEPH (1804–1886), rabbi and author. Ganzfried was born in Ungvar, Hungary, where he also died. Orphaned in his childhood, he was brought up in the house of the local rabbi Zevi Hirsch Heller, one of the outstanding scholars of his time. From 1830 to 1849 Ganzfried served as rabbi of Brezewicz and subsequently as head of the *bet din of Ungvar. He was one of the chief speakers for orthodox Jewry at the Jewish congress which took place in Budapest in 1869. He also published a polemic against the Reform movement. His first published work, Keset-ha-Sofer (1835; 1871; with additions by the author), was on the laws of writing a Sefer Torah, and was highly recommended by Moses *Sofer as a necessary textbook for scribes of Torah scrolls, tefillin, and mezuzot. Ganzfried’s fame, however, rests mainly upon his Kizzur Shulhan Arukh ("Abridged Shulhan Arukh," 1864); it achieved great popularity and widespread circulation and was accepted as the main handbook for Ashkenazi Jewry. It encompassed all the laws relating to the mode of life of the ordinary Jew living outside Erez Israel (including such subjects as etiquette, hygiene, etc.), but omitting such details as were common knowledge and practice at that time (see his introduction to ch. 80) or that were not essential knowledge for the ordinary man (see especially the laws of matrimony, ch. 145). The Kizzur Shulhan Arukh is based upon the Shulhan Arukh of Joseph *Caro with the glosses of Moses *Isserles. It is written in simple, popular language, with a lively style, and interest is sustained by the ethical maxims with which it is interlaced. Unlike his predecessor Abraham *Danzig, author of the Hayyei Adam, Ganzfried does not detail and explain the different views but usually gives his decision without the reason. The book had already achieved 14 editions during its author’s lifetime, and since then it has gone through scores of editions, displacing all previous abridgments of the Shulhan Arukh. It also became a basic work to which many scholars added marginal notes and novellae.

The important editions of the work are Lublin, 1888, with the commentaries, "Peit ha-Shulhan" by the author himself, Ammudei ha-Shulhan by Benjamin Isaiah b. Jeroham Fishel ha-Kohen, and Misgeret Zabub by Moses Israel; Leipzig, 1924, with source references (Mezudat Ziyyon), supplements (Mezudat David) and with illustrations, edited by D. Feldman; Jerusalem, 1940, a vocalized edition with the addition of the laws and customs applying in Erez Israel at the present day, edited by J.M. Tykocinski, and one with the additions Misgeret ha-Shulhan and Lehem ha-Panim of Hayyim Isaiah ha-Kohen Halbersberg and a summary of those precepts connected with the land of Israel in accordance with the rulings of Abraham Isaiah *Karelitz, edited by K. Kahana (Jerusalem, 1954).

The book was also translated into many languages (English by H.E. Goldin (1928)). Ganzfried’s other published works are a commentary on the prayer book with notes and supplements to the prayer-book commentary Derekh ha-Hayyim of Jacob Lorbeerbaum (first published in the prayer book printed in Vienna in 1839); Penin Shelomo (1845), novellae to Bava Batra; Torat Zevah (1849), on the laws of shelitah; Lehem ve-Simlah (1861), on the laws of menstruation and ritual immersion; Appiryon (1864; with the author’s additions in 1876), homilies...
on the Pentateuch and on some aggadot; Oholei Shem (1878), on the laws of names in bills of divorce and on the writing of deeds; and Shem Shelomo (1908), on talmudic themes. There have remained in manuscript Leshon ha-Zahav, on Hebrew grammar; Penei Adam, notes to the Hayyei Adam; Kela'im be-Hokhmot ha-Emet, a commentary on the Zohar; and his responsa.

[ Jacob S. Levinger ]

GAON (pl. Geonim), formal title of the heads of the academies of Sura and Pumbedita in Babylonia. The geonim were recognized by the Jews as the highest authority of instruction from the end of the sixth century or somewhat later to the middle of the 11th. In the 10th and 11th centuries this title was also used by the heads of academies in Erez Israel. In the 12th and 13th centuries – after the geonic period in the exact sense of the term – the title gaon was also used by the heads of academies in Baghdad, Damascus, and Egypt. It eventually became an honorific title for any rabbi or anyone who had a great knowledge of Torah. Apparently, the term gaon was shortened from rosh yeshivat ge'on Yakov (cf. “the pride of Jacob,” Ps. 47:4). Other explanations of the origin of the term offered by modern scholars are not acceptable.

The Geonim of Sura and Pumbedita

The exact time when the title of gaon came into use cannot be established. Sherira and later rabbis automatically designated as gaon the heads of the two academies from the year 900 according to the Seleucid calendar (589 C.E.), when the academies renewed their normal activity. But Sherira also mentions a tradition that Ravai, of Pumbedita (c. 540–560), was already gaon. However, some hold that this title and the special privileges of the academies were not granted until after the Arab conquest of Babylonia (657 C.E.), Sura receiving them first and later Pumbedita. Together with the title gaon they also used the titles resh metivta or rosh yeshivah (“head of the academy”) as was customary in the talmudic period, and the title rosh yeshivah shel ha-golah (“head of the academy of the exile”), which is not found in the Talmud. According to a tradition that originated in the Sura academy (Neubauer, Chronicles, 2 (1895), 78), only the heads at Sura were called gaon and not their counterparts in Pumbedita. This was accepted by some historians but is contradicted by R. Sherira’s account and other sources. The existence of separate traditions, one in Sura that enumerates “the qualities in which Sura is superior to Pumbedita” (ibid.), and that of Pumbedita which emphasizes that “the rabbis of Pumbedita are the leaders of the Diaspora from the time of the Second Temple” (Iggeret Rav Sherira Gaon, ed. B.M. Lewin (1921), 82), emphasizes the competition between the two. Hints of tension and even open quarrels are found in other sources. Nevertheless, Sura and Pumbedita dominated the intellectual landscape of the period to the extent that little or nothing is known about other scholars or academies.

In the talmudic period the heads of the academies were chosen by the scholars of the academies (bb 12b) while in the geonic period they were appointed by the exilarchs. Geonim usually (although not always) rose through the hierarchy of positions in the academies until they attained this highest office. Persons of average ability therefore also attained the gaonate, and in the entire period of 400 years only a few geonim were outstanding men who made a lasting impact on Judaism. These included *Yehudai, *Amram, *Saadiah, Sherira, *Samuel b. Hophani, and *Hai. At times the exilarchs misused their authority and appointed geonim whom they expected to be subservient to them and who were not outstanding scholars. For example, it is related that an exilarch rejected *Aha of Shabha, author of the She’iltot, and appointed his disciple Na’atronai Kahana to the gaonate in Pumbedita (Ibn Daud, Sefer ha-Kabbalah, 47–49). Thus, the academy in Sura was generally disturbed by the interference of the exilarchs. Sherira (Iggeret Sherira Gaon, 105) argues that because of the interference of the exilarchs he could not exactly record the names of the geonim of Sura until the year 1000 of the Seleucid calendar (689 C.E.). After the authority of the exilarchs had weakened under *David b. Judah (ibid. 93) in the times of the caliph al-Ma’mun, from 825, the influence of the group of scholars on the appointment of the gaon increased, especially in Pumbedita. Traditionally, the gaon had multiple roles. First and foremost, the gaon was the head of the academy, teaching privately and publicly, especially during the kallah months (see below). In addition, he served as judge and the head of the equivalent of a supreme court. He also was empowered to administer the courts and appoint judges. The leading geonim also wrote numerous responsa, i.e., correspondence answering halakhic questions from near and from far. As an arbiter of Halakhah, the gaon was also responsible for legal innovation when the situation warranted it. Numerous geonim were authors of commentaries, legal codes, and works of theology (see *Geonic Literature). Finally, some of the geonim were involved in politics beyond the Jewish community. They represented the community to the local and state Muslim governments.

There were cases when the exilarch and the group of scholars could not agree on the appointment of the gaon and each side appointed its own candidate. If the two sides did not reach a compromise as a result of the pressure of public opinion, the quarrel might last until the death of one of the candidates. Generally, assistants to the heads of academies were appointed gaon and were called dayyanai de-bava or av (abbreviation of av bet din). Distinguished geonim, such as Sherira, Samuel b. Hophani, and Hai had first served as av bet din; a deviation from this practice was considered derogatory. Because only those who already possessed such honorific titles as *aluf and *resh kallah and who had formerly served as scribes or assistants to heads of yeshivot, were appointed to the gaonate, the choice often fell on old men who could fill the position for only a few years.
In this period the academies in Babylonia served as the cultural center for world Jewry, and not only Babylonian-Persian Jewry as was the case in talmudic times. Hence, the influence of the *geonim* was now all-important. The *geonim* viewed themselves as the heirs to the Babylonian talmudic tradition. They continued the work of the Babylonian *amoraim* as passed on by the *savoraim*. This in turn was the source of their supreme authority in matters of *halakhah*. During the geonic period the Babylonian Talmud existed as both oral law and as written texts. Indeed, the *geonim* always quoted the oral tradition before citing the written texts. Since their knowledge of the Talmud was the result of an unbroken tradition, the text had a certain fluidity. The *gaon* would often quote from different oral versions of the Talmud, even without determining the "correct" version. The *geonim* had a three-fold responsibility regarding the Talmud: (a) They were part of the chain of tradition, transmitting the Talmud to the next generation. (b) They endeavored to provide the correct interpretation of the Talmud. (c) They actively facilitated the practice of Judaism according to the Talmud. Until the second half of the 10th century, very few of their interpretations were written down. They were simply taught in the academies. Since the *geonim* spoke an Aramaic dialect very similar to that of the Babylonian *amoraim*, they had an added advantage of correctly understanding the Talmud. They clearly were intimately aware of the spirit of talmudic discourse and enjoyed a sensitivity to its literary nature. This profoundly influenced their interpretations in general and greatly affected the practical application of the Talmud text. The *geonim* became skilled at utilizing the advanced communication and travel technologies developed by the Muslim Empire to get their message to far-flung Jewish communities in North Africa and in Spain.

The *geonim* made the academies a supreme court and source of instruction for all Jewry. Thousands of persons, occupied with their personal affairs for most of the year, would assemble in the academies in the *kallah* months of Elul and Adar to hear lectures on *halakhah*. During those months, three types of study took place: (a) A specific tractate of Talmud was studied in depth; (b) individual students were tested to see if they were worthy of the stipend; and (c) the assembly would discuss questions in *halakhah*, many of which were sent from throughout the Diaspora. The floor was open to all scholars. However the *gaon* made the final decision. The academies were actually filled with students only during the *kallah* months. Throughout the rest of the year, only a small group of serious students remained. These students received stipends from the academies.

While the Talmud and Talmud study were the center of the geonic universe, the *geonim* engaged in other areas of Jewish study. One such area is biblical exegesis. The innovator was Saadiah Gaon. Other geonim followed Saadiah's lead in writing biblical commentary; the most important of them was Samuel ben Hopni. Saadiah was the first *gaon* to write monographs on specific topics, a number of which he devoted to biblical translation and commentary. Saadiah translated the entire Pentateuch, as well as the books of Isaiah, Proverbs, Psalms, Job, and Daniel. He wrote commentaries on all of these books, with the exception of the latter half of the Pentateuch. Samuel ben Hopni translated and wrote commentaries on three of the five books of the Pentateuch. Each monograph begins with a lengthy and elaborate introduction in which the *gaon* describes the biblical text and explains the methodology of his commentary. On the whole, the commentaries emphasize the linguistic components of the text, the conflict between the literal and metaphoric meaning of the text, and theological and polemical concerns. The *geonim* commented on the non-legal portions of the Bible, leaving the legal sections to be dealt with in their halakhic works. At the same time, their commentaries are more disciplined and far less imaginative than earlier rabbinc exegesis. Samuel ben Hopni's commentaries do include homilies but they are not based on a specific text. Rather, they derive from the overall thrust of the whole portion of the text.

There were two major courts in Sura and two in Pumbedita. In each academy there was the *gaon's* court and that of the *av bet din*. In addition, the *gaon* had jurisdiction over the organization of the courts in all the districts of Babylonia. However, the judges were appointed by the exilarch with the assent of the *geonim*. Only under Hai *Gaon* did the supreme court (*bet din ha-gadol*) of Pumbedita appoint the judges (Neubauer, Chronicles, 2 (1887), 85; Teshuvot ha-Ge'onim, ed. Harkavy, no. 180). The *geonim* were not satisfied with halakhic conclusions derived from the Talmud; they also made new regulations regarding contemporary needs. Their *takkanot* ("ordinances") had legal validity because the *geonim* considered themselves presidents of the Sanhedrin of their generation. The halakhic decisions of the *geonim* were not made without influence from the general, non-Jewish legal environment. It has been demonstrated that a number of geonic customs had their origins in Islamic practice. For example, the question arose as to how a widow who lost her *ketubbah* would receive payment. Zemah Gaon suggested that the determination should be made by consulting the ketubbah of her relatives. Both Sherirah and Hai disagreed with this ruling because it had no basis in the Talmud. However, a similar practice existed in Islamic law. Interestingly, the custom was accepted by later authorities, including Solomon *Duran*, Solomon *Aderet* and *Asher ben Jehiel*.

All these tasks required a large establishment; therefore, the academies employed scribes, directors of the *kallah* assemblies, and other officials. Their expenditure was covered by taxes levied on districts, which were directly subject to their authority. In addition, the communities which addressed their questions to the *geonim* sent them contributions. In isolated instances the *geonim* would turn to the communities in the Diaspora with a request for financial support and usually their request was answered. Real estate also served as a source of income for the academies. The requests for support of the academies increased, especially, toward the end of the geonic period. Thus, the candidates for the office of head of the acad-
emies had to be not only learned, but they also had to possess administrative talents. Descent was also a factor; six or seven families provided most of the geonim of Sura and Pumbedita. Three of these were priestly, while Sherira traced his ancestry to King David (Iggeret Sherira Ga'on, 92). His family produced several geonim, many assistant heads of academies, and other important officials in Pumbedita. In Sura positions were held for 200 years by three families. The geonim Jacob, Ivomai, Moses, and *Kohen Zadek (b. Ivomai) belonged to one priestly family; another such family produced the geonim *Hilai (788), *Natronai b. Hilai (853), Jacob, and Joseph (942), while a third priestly family produced the geonim Kohen Zadek of Pumbedita, his son *Nehemiah, Samuel b. Hopni grandson of Kohen Zadek, his son *Israel, and his grandson Azariah of Sura. The geonim Zadok, Kimoi, *Nahshon, *Zemah b. Hayyim, and Hai b. Nahshon were members of one family. However, the position of gaon was not hereditary. Although Hai attained the gaonate immediately after his father Sherira, Nahshon did not become gaon until 53 years after the death of his father Zadok, seven members of other families serving as geonim in the interim. The difference in time between the death of Hilai and the appointment of his son Natronai was similar. *Dosa did not attain the gaonate until 71 years after the death of his father Saadia and when he was more than 80 years old.

On the appointment of a new gaon a festive ceremony was held, in which participated the scholars of the two academies and the dignitaries of all the communities in Babylonia, headed by the exilarch. According to *Nathan ben Isaac ha-Bavli (Neubauer, Chronicles 2 (1895), 86), the ceremony resembled the installation of the exilarch and the people honored the geonim royally. Following the method of talmudic references to heads of academies, Sherira throughout used the word “malakh” (“reigned”) to designate the term of service of the gaon.

The geonim were considered the intellectual leaders of the entire Diaspora and their decisions and responsa had absolute legal validity in most Jewish communities. It cannot be assumed that they attained their influence without a struggle and conflict with other centers, especially Erez Israel, Ben Baboi (see *Pirkoi Ben Baboi) the pupil of Yehudai Gaon, attested to the intervention of the geonim in the affairs of Erez Israel, “and he wrote to Erez Israel regarding… all the mitzvot which are not observed properly according to the halakhah but according to practice in times of persecution and they did not accept his intervention and they replied to him: ‘a custom suspends a halakhah’” (Ginzberg, Ginzei Schechter, 2 (1929), 559). Baboi attacked practices of Erez Israel (Tarbiz, 2 (1931), 396–7). He claimed that only the Babylonian customs and practices were valid. To follow the customs of Erez Israel was a sin. Seventy years later, Amram polemized against those who followed the customs of the westerners who deviated from the right path. The aim of the Babylonian geonim was to impose the Babylonian Talmud and the doctrines of their academies also in Erez Israel and in this way to lessen the attachment of the Diaspora to Erez Israel.

The gaonate had a specific political, communal function at the side of the exilarch. The recognition of the gaonate as a political representation of the Jewish community is attested by the fact that on the death of the exilarch his income was given to the gaon of Sura until the appointment of a new exilarch. The geonim also attempted to influence the policy of the government toward the Jews via Baghdad Jewry, who had representatives in the court of the caliphs. However, the particular achievement of the geonim was their success in giving legal validity to the laws of the Talmud and spreading the knowledge of the Talmud among the thousands of people who came to Babylonia from all parts of the world. Their writings in the fields of commentary and halakhah made an impact on the entire period which is named after them. Their great importance to Jewry is attested by the paragraph in the “Kaddish where the geonim are mentioned together with the exilarch (Gedenkbuch… D. Kaufmann (1900), Hebrew section, 52 ff.; Ginzei Kedem, 2 (1923), 46; 3 (1925), 54). They and other high officials in the academies are also mentioned with the exilarch in the prayer Yekum Purkan. R. *Zemah b. Hayyim, the gaon of Sura, expressed this feeling of authority in his responsa to the community in Kairouan: “And when Eldad said that they pray for the scholars of Babylonia and then for those in the Diaspora, they are right. For the major scholars and prophets were exiled to Babylonia, and they established the academy on the Euphrates under Jehoachin, king of Judah until this day, and they were the dynasty of wisdom and prophecy and the source of Torah for the entire people…” (Eldad ha-Dani, ed. by Abraham Epstein (1891), 8).

Even though the leading geonim were those of the later generations, the gaonate already had declined as the cultural, religious center of Judaism far before it had ceased to exist. This was as a result of a combination of internal and external causes. A sign of its public decline was that from the late ninth century most geonim no longer lived in the cities of the two academies. They lived in Baghdad, the center of the authorities and the residence of the exilarch. On the one hand, the decline of the academies in the eyes of the Diaspora was caused by the competition between Sura and Pumbedita and the quarrels in the academies regarding the appointment of the gaon. On the other hand, the essence of the fulfillment of the mission of the geonim – the spread of the Talmud – lessened its importance. With the emergence of new centers for talmudic studies and the appearance of great scholars throughout the Diaspora, its dependence on the two academies and on the geonim ceased and its attachment to them weakened. Independent-minded scholars stopped sending questions to the academies and their geonim, and even important geonim such as Sherira and Hai expressed their anger at the weakening of the links with North Africa and with Spain (Mann, Texts, 1 (1931), 109, 120–1). *Hanokh b. Moses of Cordoba did not even answer the letters of *Sherira. The scholars of Spain found encouragement from the authorities in their tendency to break their dependence on the geonim of Babylonia. The Umayyad caliphs in Cordoba did not approve the
Jewish attachment to the academies in Babylonia which were under the Abbasids (cf. Abraham ibn Daud’s statement, “The king was delighted by the fact that the Jews in his domain no longer had need of the people of Babylon,” Ibn Daud, Sefer ha-Kabbalah, 66).

The decline of the Baghdad caliphate, the impoverishment of Babylonian Jewry which caused the academies to depend completely on contributions from abroad, the greatness and the independent intellectual development of the Diaspora, and the persecutions by the Abbasid and Seljuk rulers put an end to the institution of the gaonate in about 1040.

List of the Geonim of Sura and Pumbedita
Because of the dearth of sources the exact chronology of the geonim cannot be established. The letter of R. Sherira serves as the basis for the list but it contains contradictions and many variant versions. (See Table: Chronological List of Geonim in Sura and Pumbedita.) The list of Abraham *Ibn Daud in the Sefer ha-Kabbalah does not clarify these contradictions. Nonetheless, the letter of Sherira remains the major source for the chronology of the Babylonian geonim. But there is much material on the history of their period, both in Babylonia and in other countries, in the collections of the responsa of the geonim (see bibliography).

### Geonic Responsa

The collecting of scattered material in the anthologies of geonic responsa, both printed and in manuscript, and in their editing, according to the order of the tractates of the Babylonian Talmud, was begun by B.M. Lewin in *Ozar ha-Ge'onim*, which he published in 12 volumes to *Bava Kamma* (1928–43). The 13th volume was published posthumously to part of which he published in 12 volumes to *Bava Kamma* (1928–43). Henceforth, nothing is known about the fate of the Baghdad academy in the Middle Ages.

### The Gaonate in Erez Israel

Little information on the beginnings of the gaonate in Erez Israel is available. Sources increase only in the beginning of the 10th century as a result of the dispute between Saadiah Gaon and his opponent, Maimonides. The first known Baghdad gaon was Isaac b. Moses b. Sakri who came to the East from Spain in about 1070 after he failed to receive recognition in his native country. There is no information on the academy of Babylon, except for the period of 1140–50 when its head was Eli ha-Levi, the rabbi of David *Alroy. The names of the geonim who followed him are known from letters and responsa. The most famous was *Samuel b. Ali ha-Levi* who opposed *Maimonides; he is praised by the travelers *Benjamin of Tudela and *Pethahiah of Regensburg*. Judah *Al-Harizi* found that the liturgical poet *Isaac b. Israel* ibn Shuwaykh was the head of the Baghdad academy. He was also known because of his connections with Abraham *Maimuni. In 1258 Baghdad Jewry was threatened by the attack of the Mongols and with the decline of Babylonian Jewry the position of gaonate declined as well. In 1288 the head of the Baghdad academy was Samuel b. Abi al-Rabia ha-Kohen. This is known from his letter concerning the Maimonidean controversy (published by Halberstam in J. Kobak's *jeschurun*, vol. 7, pp. 76–80). Henceforward, nothing is known about the fate of the Baghdad academy in the Middle Ages.
and Aaron *Ben Meir and the bitter polemic between Rabbanites and Karaites. However, even here there is no reliable information on the gaonate in Erez Israel, as was the case with the letter of R. Sherira regarding Babylonia, and was similarly true concerning the chronology of the *geonim in Erez Israel as given by Ben Meir. In any case it is clear that the title of gaon was not used in Erez Israel until the academy of Tiberias moved to Jerusalem, which was several generations after its use in Babylonia. One may assume that the Babylonian *geonim did not recognize the right of the heads of academies in Erez Israel to use this title which they called rosh havurah or rosh yeshivah. Since the Jerusalem academy was considered the successor to that of Tiberias, its leaders were sometimes called “geon Teveryah.” The scholars in Erez Israel could not compete in Talmud interpretation and halakhah with the scholars of Babylonia. A crucial turning point in the relationship between the gaonate in Babylonia and that of Erez Israel was the dispute between Aaron Ben Meir and Saadiah Gaon. Ben Meir announced a new calendar computation that resulted in Passover beginning on a Sunday as opposed to the Babylonian calendar that determined the beginning of the holiday on a Tuesday. Six months later, by New Year 922 the debate was over, Saadiah had won and the Babylonian calendar was again used universally. The leadership of the academy of Erez Israel was held by a group of seven scholars, often called “Sanhedrin Gedolah,” and at its head was ha-shelishi ba-havurah (“the third of the group of scholars”), the gaon and the av bet din or his substitute. The rest of the five members were called ha-revi‘i ba-havurah (“the fourth of the group of scholars”), etc., or briefly, ha-shelishi, etc. The appointment to positions was done according to a fixed hierarchy. After the death of the gaon, his position reverted generally to the av bet din and the rest of the leadership was promoted according to the hierarchy of positions. It is possible, however, that this order began only after the death of Ben Meir. Contrary to the Babylonian practice, the position of the gaon in Erez Israel was hereditary. Sometimes the father would serve as gaon, one of his sons as av bet din, and the second son would be shelishi or revi‘i in the havurah; there is no doubt that this practice negatively influenced the matters of study in the academy of Erez Israel.

The *geonim of Erez Israel in the 10th and 11th centuries were mainly from the family of Ben Meir, which claimed relation to *Judah ha-Nasi and thus to King David, and two families of kohanim, one of which was the family of *Abiaathar and was related to *Eleazar b. Azariah. However, S. Abramson concludes that the family of kohanim that claimed relation to the House of David stemmed from the academy in Erez Israel in one family. Abramson discovered in the Genizah fragments of an unknown document, which contained a list of the heads of academies for several generations. From this document it is apparent that one family of kohanim was merely a branch of the Ben Meir family. Thus, the gaonate of Erez Israel was held by one family and its different branches for perhaps 200 years. *Solomon b. Judah, a native of Fez, next to Ben Meir the most famous of the *geonim in Erez Israel and whose family is not known, and his successor *Daniel b. Azariah, a descendant of one of the families of the exilarchate in Babylonia, were heads of academies and were not descendants of the *geonim of Erez Israel. Daniel was known as a strong leader, was esteemed by his contemporaries, and was a friend of Samuel ha-Nagid (Ibn Nagrela).

Besides managing the academy, the work of the gaon included all Jewish affairs in Erez Israel. The designation of powers among the heads of academies and exilarchs, as was practiced in Babylonia, was not known in Erez Israel. The *geonim ordained the haverim, appointed the dayyanim in Erez Israel and Syria, and managed the economic affairs of the Jewish community in Erez Israel. They were recognized by the foreign ruler as the representatives of the Jewish community in Erez Israel. After Erez Israel was politically allied with Baghdad and later with Egypt, the *geonim corresponded with highly influential Jewish dignitaries in the two capitals. In these cases of emergency they were accustomed to travel there personally to negotiate in the court of the rulers. The halakhic and literary activity of the *geonim is attested by some responsa. Hundreds of letters asking the *geonim to aid the Jewish community and the academies were discovered in the Cairo Genizah. The *geonim of Erez Israel were not as learned as the *geonim in Babylonia. Their major achievement was the maintenance of the continuity of the tradition of the academies in Erez Israel under difficult political conditions.

Abrahamson assumes that Zemah, who served as head of the academy from about 884–915, was a fourth-generation descendant of *Anan b. David, the founder of the Karaites, and he was a nasi and a gaon. Aaron Ben Meir succeeded in deposing Anan’s family only after a bitter struggle in which he was assisted by the scholars and heads of the Baghdad community.

The Geonim of Ereẓ Israel in Damascus, and the Geonim of Egypt

The occupation of Jerusalem by the Seljuks in 1071 completely destroyed the city’s Jewish community. The gaon *Elijah b. Solomon moved the academy to Tyre, which was subject to Fatimid rule. Elijah’s son Abiathar headed the Tyre academy until the conquest of the city by the crusaders. Afterward he moved to Tripoli, Syria, where he died before 1110. His brother Solomon, who served as an *av bet din, fled in 1093 to Hadrak (near Damascus) because of the decrees of David b. Daniel b. Azariah, head of Egyptian Jewry. In Hadrak he assembled the survivors of the Ereẓ Israel academy which apparently included his brother’s son Elijah b. Abiathar. Later his position was given to his son Mazliah, who went to Egypt in 1127 where he received the title of gaon. The academy of Ereẓ Israel was moved from Hadrak to Damascus and still existed during the 12th century when *Benjamin of Tudela reported that it was subject to the rule of the Babylonian gaonate (Baghdad). The names of two geonim who were descendants of the Abiathar family, Abraham b. Mazhir and his son Ezra, are known. The latter was ordained by Samuel b. Ali of Baghdad. In his time or shortly afterward the continuity of the geonim of Ereẓ Israel was broken. It is possible that he was followed by Zadok, who was dismissed from his position (Tahkemoni, ed. by A. Kaminke (1899), 354).

In Fostat, Egypt, the academy existed in the time of Elhanan, the father of Shemariah, who is known from the story of the “Four Captives.” His title “chief rabbi” and his position were inherited by his son and then his grandson Elhanan who called himself rosh ha-seder or “rosh ha-seder of all Israel.” Shemariah and Elhanan, both of whom had previously studied in the Pumbedita academy, corresponded with Sherira and Hai. Only after the decline of the Babylonian and Palestinian academies did the large communities in Egypt request the establishment of their own gaonate. David b. Daniel (1083–89) was the first who attempted to do this. Like his strict father, he hoped to become nasi and gaon and to exert his power even over the head of the Tyre academy and on the communities in the coastal cities of Ereẓ Israel. However, the nagid Mevorakh, who supported him at first, later rejected him. In 1127 Mazliah b. Solomon, the aged head of the Ereẓ Israel academy, moved from Hadrak to Fostat and called himself rosh yeshivat ge'on Yulação. Several of his documents and letters are extant. After his death in 1138, his position was apparently given to Moses ha-Levi b. Nethanel; however, it is possible that Samuel b. Hananiah, who met Judah Halevi when he traveled from Egypt to Ereẓ Israel, was given the position. After Moses, his son Nethanel was gaon (1160–70) and was followed on his death by his brother Sar Shalom who was appointed gaon at Fostat. Sar Shalom, who was perhaps of Palestinian geonic descent, sometimes called himself rosh yeshivat Ereẓ ha-Zevi, as if his activities were a continuation of the academies of Ereẓ Israel not only in Damascus but also in Fostat. With his death the gaonate in Egypt ceased to exist. Maimonides, who lived at that time in Egypt, did not possess the title of gaon.

The Title of Gaon in Other Countries

The title of gaon was also used by great scholars in other countries. Maimonides writes in his introduction to the Mishneh Torah, “the geonim of Spain and France.” The geonim of Africa, Lotharingia (Lorraine), Mainz, and Narbonne are mentioned in the literature of the early posekim. Thus, the title was given to well-known individuals from the early rabbinic period, such as R. *Hananel, R. *Nissim, R. *Moses b. Hanokh and his son *Hanokh, R. *Joseph b. Abitur, R. Kalonymus of Lucca and his son R. Meshullam, and others.

[Bibl.: Simha Assaf / David Derovan (2nd ed.)]

**BIBLIOGRAPHY:**

**GAON, MOSES DAVID** (1889–1958), Israel educator, journalist, and writer. Gaon was born in Travnik, then under Austro-Hungarian administration (now in Yugoslavia), and studied in the University of Vienna. He emigrated to Ereẓ Israel in 1909. He taught Hebrew and was principal of elementary schools in Jerusalem, Smyrna, and Buenos Aires. In his last years he was an official of the Jerusalem municipality and was active in the Committee of the Sephardi Community. He co-founded the Mizrahi Pioneers’ Federation. For several decades Gaon contributed articles to the Hebrew press on Oriental Jewry and its relation to the Holy Land, which was also the subject of his book Yeheudei ha-Mizraḥ be-Ereẓ Yisrael (2 vols., 1928–37). He also wrote a study of a popular Ladino moralistic work, Maskiyot Le-vav on *Me-Am Loéz* (1933), Ba-Mishol (1936) on the history of the Hebrew press in Palestine up to 1914, etc. He edited the jubilee volume in honor of Jacob *Meir Zikhron Me’ir* (1936) with M. Laniado; Sefer ha-Zikhronot (1938) by Ben-Zion Cuenca; and a volume on the Jerusalem family Azriel (1950). He compiled a bibliography of the Ladino press in Ha-Ittornut be-Ladino – Bibliografyah (1965). The Gaon Center for Ladino Culture at Ben-Gurion University is named for him. His son Yehoram *Gaon, a popular Israeli entertainer, often included Sephardi music in his repertoire. He also appeared in several films and on the musical stage, notably in the Israeli musical Kazablan.

[Bibl.: Tidhar, 1 (1947), 500; 10 (1959), 3648.]

[Getzel Kressel]
GAON, NESSIM DAVID (1922– ), philanthropist and communal worker. Gaon’s family originated in Turkey but moved to Egypt. His father was a political officer with the Sudanese government in Khartoum, where he was born. He graduated from the Comboni College in that city. During World War II he joined the British army in Cairo and was subsequently commissioned as a lieutenant, seeing active service in Syria, Iraq, Iran, Italy, and North Africa. After his discharge in 1946 with the rank of captain, he joined the family business in the Sudan. In 1957 Gaon moved to Geneva where he built up a world-wide business corporation in import-export, investment, and real estate, including one of Geneva’s biggest hotels, the Noga Hilton.

Gaon is prominent in Jewish communal affairs. In Khartoum he served as secretary and vice president of the Jewish community and succeeded in uniting the Ashkenazi and Sephardi congregations in Geneva, becoming president of the United Community in 1966.

Gaon’s main communal activity has been with regard to the Sephardi community and in the academic world, in addition to his munificent contributions to Israel. He has served as president of the “World Sephardi Federation since 1971; he was a vice president of the World Jewish Congress.

In 1971 he became a member of the Board of Governors of Bar-Ilan University and two years later of Ben-Gurion University in Beersheba of which he was appointed chairman of the Board of Governors.

GAON, SOLOMON (1912–1994), English Sephardi rabbi. Born in Travnik (Yugoslavia), Gaon studied for the rabbinate at Jews’ College, London. After acting as senior hazzan, he was in 1949 appointed haham of the Spanish and Portuguese Jews’ Congregations in the British Commonwealth. On retiring as haham of the Spanish and Portuguese congregation of London in 1977 Gaon was appointed haham of the Association of Sephardi Congregations with the object of converting that organization into the effective center of leadership and rabbinical administration of the increasingly diversified Sephardi component of Anglo-Jewry. In view of its failure to expedite the setting-up of a centralized bet din he resigned in 1980. He also acted for some time as visiting minister to the She’erit Israel Sephardi Congregation of New York. He published Influence of Alfonso Tostado on the Pentateuch Commentary of Abravanel (1943).

GAON, YEHORAM (1939– ), Israeli pop singer, actor, television personality. Gaon is possibly the nearest thing the Israeli entertainment world has to a Mr. Consensus. Gaon was born in Jerusalem to a family steeped in Ladino traditions. As a high school student he considered an academic career in Eastern Studies but, on his recruitment to the IDF, tried out successfully for the Nahal entertainment troupe. Initially, he was accepted for his acting talents, and it was not until 1959, two years after he joined the band, that he was given his first chance to demonstrate his vocal abilities. From then on there was nothing to stop him.

Shortly after he was demobilized, Gaon joined The Roosters which included promising young singers such as Hanan Goldblat, Gavri Banai, Israel Poliakov (Banai and Poliakov later made up two-thirds of renowned comedy trio “Ha-Gashash ha-Hiver), and Lior Yeini. The Roosters were a smash hit and turned out several hit songs before disbanding in 1963. Gaon left the group in 1961 to further his acting career. He joined the Cameri Theater and appeared in productions such as Kinneret Kinneret (1961), Torah (1963), and French Fries with Everything (1964).

In 1964 Gaon’s musical career took off when he formed the highly successful Yarkon Bridge Trio, along with Arik “Einstein and Benny Amdursky. However, he left the band after just one year to pursue a solo career, releasing his debut solo album, Kol ha-Ir Merakhelet Aleinu ("The Whole Town’s Talking about Us"), in 1965. The record spawned several successful singles, such as Eyfo Hen ha-Bakhurot ha-Hen (“Where Are Those Girls”) and Az Arik La (“Then I’ll Show Her”).

In 1966 Gaon left for the United States to study theater acting and television directing but, at the end of the year, returned to Israel to audition for the musical Kazablan. He got the lead role and the show was an enormous success, and only ended when Gaon decided he had had enough.

Gaon’s superstar status was cemented when he won the first two places in the 1969 Israeli Song Festival and put out a string of hit singles and albums throughout the 1970s, including Rosa and Mediterranean Love. During this period he also maintained his theater and cinema interests, playing star roles in such movies as Kol Mamzer Melekh (“Every Bastard’s A King”) and Mivza Yonatan (Entebbe: Operation Thunderbolt). Later he starred in a popular TV series called “Neighbors. Neighbors.”

His musical career tailed off in the 1990s but in 2003 he became a popular TV personality when he began to present a musical talk show called Gaon on Friday. In 2004 Gaon received the ultimate accolade when he was awarded the prestigious Israeli Prize for his services to Israeli popular music.

[Barry Davis (2nd ed.)]

GAPONOV, BORIS (Dov; 1934–1972), translator from Georgian and Russian into Hebrew, lexicographer of Hebrew. Gaponov was born in Eupatoria, Crimea, but grew up in Kutaisi, Georgia, where his family moved during World War II. As a youth he acquired a basic knowledge of Hebrew from his grandfather, afterwards continuing to study the language on his own. For a short period of time he studied Persian at the Oriental Languages Institute of Moscow University but had to give it up because of financial difficulties. He also worked as a reporter for the newspaper of the Kutaisi automobile plant. In the 1960s he turned to literary translation, translating both Russian and Georgian prose and poetry into Hebrew.

In 1969 his translation of the greatest masterpiece of Georgian medieval literature, The Man in the Panther’s Skin
(12th century) by Shot’ha Rust’haveli, was published in Israel. This monumental work, executed with brilliance and faithful to the form and spirit of the original, testified to Gaponov’s great poetic talent and immediately became a classic among poetic translations into Hebrew. In 1970 Gaponov was awarded the Tchernichowsky Prize for this work.

In 1971 he came to Israel and in the same year published his translation of A Hero of Our Time by Lermontov, which was also highly praised by the critics. In 1972 he received the Shazar Prize for refugee repatriate writers, but died shortly after. A. *Shlonsky played a prominent role in the literary fate of Gaponov. Their correspondence began when Gaponov was still living in the U.S.S.R. and continued for many years. Among Gaponov’s unpublished works are a dictionary of Hebrew phrases, a work of considerable merit on which he had been working for 15 years, as well as numerous translations of poems by Lermontov, articles on the Rust’haveli epic, and poems in Russian on Jewish themes.

[Michael Zand]

GARBZUZ, YAIR (1945– ), Israeli artist. Garbuz studied painting under Rafi Lavi between 1962 and 1967 as well as at the Avni Institute in Tel Aviv. He began to exhibit in 1967, participating in group and individual exhibitions in Israel and abroad. Garbuz also taught from 1973 at the Hamidrashah School of Art, serving as its director from 1997, at the Avni Institution, Tel Hai College, and the Bezalel Art Academy. In addition, he wrote and lectured widely on art, and was an editor of the satirical newspaper Davar Aher. He appeared as a media critic on the Tik Tikshoret TV talk show. In 2004 he was awarded the emet Prize by the Ministry of Education and Culture.

In his art, Garbuz moved from abstraction to the use of collages incorporating photographs, texts, and various materials, all serving to produce personal and social/cultural narratives.

[Shaked Gilboa (2nd ed.)]

GARDEN OF EDEN (Heb. יָדֶן), a garden planted by the Lord which was the first dwelling place of “Adam and Eve (Gen. 2–3). It is also referred to as the “garden in Eden” (Gen. 2:8, 10; 4:16), the “garden of YHWH” (Gen. 13:10; Isa. 51:3), and the “garden of God” (Ezek. 2:8:13; 31:8–9). It is referred to by Ben Sira 40:17 as “Eden of blessing.” There existed in early times an Israelite tradition of a “garden of God” (i.e., a mythical garden in which God dwelt) that underlies the story of the Garden of Eden in Genesis 2–3. Ezekiel (28:11–19; 31:8–9, 16–18) in his description introduces new and variant details not present in the Genesis narrative of the Garden of Eden. Thus, in Genesis there is no trace of the “holy mountain” of Ezekiel 28:14 and no mention of the “stones of fire” of Ezekiel 28:14, 16. While Genesis speaks only in general terms about the trees in the garden (2:9), Ezekiel describes them in detail (31:8–9, 18). The term “garden of YHWH” occurs in literary figures in a number of other passages in the Bible (Gen. 13:10; note Isa. 51:3: “He will make her wilderness (midbar) like Eden and her desert (arabah) like the garden of YHWH,” Joel 2:3). The name Eden has been connected with Akkadian edinu. But this word, extremely rare in Akkadian, is borrowed from the Sumerian eden and means “plain,” “steppe,” “desert.” In fact, one Akkadian synonym list equates edinu with šēru, semantically equivalent to Hebrew midbar, “desert.” More likely is the connection with the Hebrew root ‘dn, attested in such words as mēdanim, “dainties,” “luxury items” (Gen. 49:20; Lam. 4:5) ‘cdnah, “pleasure,” (Gen. 18:12), ‘adinah, “panpered woman” (Isa. 47:8); and in Old Aramaic m’dhn “provider of abundance,” which would be a transparent etymology for the name of a divine garden. The Septuagint apparently derived Eden from ‘dn, translating gan ‘eden (Gen. 3:23–4) by ho paradeisos tēs truphēs, “the park of luxuries,” whence English “paradise.” Akkadian provides a semantic parallel in kiri nuhši, “garden of plenty” (McCarter apud Stager). Several references (Gen. 2:8 (“in Eden”), 10 (“from Eden”), 4:16 (“east of Eden”), indicate that Eden was a geographical designation. According to 4:10 a single river flowed out of Eden, watered the garden and then diverged into four rivers whose courses are described and themselves named. This datum encouraged scholars ancient (see below) and modern to attempt to locate the site of the garden of Eden intended by the author.

[S. David Sperling (2nd ed.)]

In the Aggadah

The Garden of Eden appears in the aggadah in contradistinction to Gehinnom – “hell” (e.g., BT Sotah 22a). However, talmudic and midrashic sources know of two Gardens of Eden: the terrestrial, of abundant fertility and vegetation, and the celestial, which serves as the habitation of souls of the righteous. The location of the earthly Eden is traced by the boundaries delineated in Genesis 2:11–14. Resh Lakish declared, “If paradise is in the land of Israel, its gate is Beth-Shean; if it is in Arabia, its gate is Bet Gerem, and if it is between the rivers, its gate is Dusmaskanin” (Er. 19a). In Tamid (32b) its location is given as the center of Africa. It is related that Alexander of Macedon finally located the door to the Garden, but he was not permitted to enter. The Midrash ha-Gadol (to Gen. 2:8) simply states that “Eden is a unique place on earth, but no creature is permitted to know its exact location. In the future, during the messianic period God will reveal to Israel the path to Eden.” According to the Talmud, “Egypt is 400 parasangs by 400, and it is one-sixtieth of the size of Ethiopia; Ethiopia is one-sixtieth of the world, and the world is one-sixtieth of the Garden, and the Garden is one-sixtieth of Eden ...” (Taan. 10a). The rabbis thus make a clear distinction between Eden and the Garden. Commenting upon the verse “Eye hath not seen, O God, beside Thee,” R. Samuel b. Nahamani states, “This is Eden, which has never been seen by the eye of any creature.” Adam dwelt only in the Garden (Ber. 34b, cf., Isa. 64:3). The word le-ovedah (“to dress it”; Gen. 2:15) is taken to refer to spiritual, not physical, toil, and is interpreted to mean that Adam had to devote himself to the study of the Torah and
the fulfillment of the commandments (Sif. Deut. 41). Although the eating of meat was forbidden him (Gen. 1:29), it is stated nevertheless that the angels brought him meat and wine and waited on him (Sanh. 59b; ARN 1, 5).

The boundary line between the earthly and heavenly Garden of Eden is barely discernible in rabbinic literature. In fact, "The Garden of Eden and heaven were created by one word [of God], and the chambers of the Garden of Eden are constructed as those of heaven. Just as heaven is lined with rows of stars so the Garden of Eden is lined with rows of the righteous who shine like the stars" (Ag. Song 13:55).

GARDOSH, KARIEL (Charles, “Dosh”; 1921–2000), Israeli cartoonist. He created the figure of "Little Israel," a young boy who became the popular symbol of the State and its people. "Dosh," as he signed himself, was born in Budapest and educated there and in Paris. He immigrated to Israel in 1948 and five years later joined the staff of the afternoon paper Ma'ariv as editor-to-cartoon. His drawings were marked by comic irony which won him a wide following. They were regularly reprinted in the Jerusalem Post, in the Tel Aviv Hungarian daily Uj Kelet, and in many newspapers abroad. Gardosh illustrated books, wrote short stories and one-act plays, and held exhibitions in Israel and other countries. He published several collections of cartoons, including Selihah she-Nizzahnit (1967); So Sorry We Won!, (1967) and Oi la-Menazhehím (1969; Woe to the Victors, 1969) with text by Ephraim ‘Kishon, dealing with the Six-Day War and after.

BIBLIOGRAPHY: Tidhar, 8 (1957), 304.

GARFIELD, JOHN (Julius Garfunkel; 1913–1952), U.S. actor. Born in New York, Garfield, deeply disturbed by the death of his mother, was a chronic truant, but was persuaded by a child psychologist to study acting. He attended drama school and later joined the Group Theater Company, where he won acclaim for his role in Awake and Sing. He first played on Broadway in Elmer Rice’s Counselor-at-Law (1931) and then took the lead in Clifford Odets’ Golden Boy (1937) and in its revival in 1952. His other Broadway performances include Johnny Johnson (1936–37). Having a Wonderful Time (1937–38), Heavenly Express (1940), Skipper Next to God (1948), The Big Knife (1949), and Peer Gynt (1951).

Embittered over being passed over for the lead (the part went to William Holden) in the 1939 film version of Golden Boy, which was written for him, he signed a contract with Warner Brothers and won enormous praise for the role of the cynical Mickey Borden in the film Four Daughters (1938). Although he began his film career typed as a “tough,” he played the lover in Saturday’s Children (1940) and the role of Danny in John Steinbeck’s Tortilla Flat (1942). In 1947 he had the opportunity to put on the boxing gloves once again when he starred as the prizefighter in Body and Soul. Other films of his include They Made Me a Criminal (1939), Pride of the Marines (1945), The Postman Always Rings Twice (1946), Nobody Lives Forever (1946), Humoresque (1946), Gentleman’s Agreement (1947), Force of Evil (1948), We Were Strangers (1949), Under My Skin (1950), The Breaking Point (1950), and He Ran All the Way (1951).

Active in liberal political and social causes, he found himself caught up in the Communist scare of the late 1940s. Although he testified before Congress that he was never a Communist, his opportunities to secure acting roles decreased. When John Garfield died of a heart attack at age 39, his funeral was attended by thousands of fans, the largest turnout for an actor since the death of silent film idol Rudolph Valentino.

GARFUNKEL, ART (1941– ), U.S. singer and actor. Born in Forest Hills, New York, Garfunkel met singer/songwriter Paul Simon while they were both in their early teens. Garfunkel received his B.A. in art history (1965) and his M.A. in mathematics from Columbia University (1967). He and Paul Simon formed the duo Simon & Garfunkel and began recording Simon’s songs together in 1960 (“Hey, Schoolgirl”). In 1964, Simon and Garfunkel signed a one-album contract with Columbia Records and released Wednesday Morning, 3 A.M. It failed to generate interest, and Garfunkel left the music business to teach mathematics. The sudden and unexpected success of a single song culled from the album (“The Sounds of Silence”) brought Garfunkel back with Simon, and together they recorded a long string of hit songs that include “Homeward Bound,” “I Am a Rock,” “A Hazy Shade of Winter,” “The Dangling Conversation,” “The 59th St. Bridge Song,” “Mrs. Robinson,” “The Boxer,” “Fakin’ It,” and “Bridge over Troubled Water.”

In 1989, Garfunkel published a book of prose poems entitled Still Water. He was inducted into the Rock and Roll Hall of Fame (as a member of Simon & Garfunkel) in 1990.
the September 11, 2001, terrorist attacks on New York and Washington, Garfunkel contributed generously toward helping the survivors and the victims’ families. He continued to give concert tours and in 2003 released the album *Everybody Wants to Be Noticed*. In 2003, he reunited with Paul Simon for the first time in 20 years on a nostalgia tour.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

**GARIH, ÜZEYIR** (1929–2001), Turkish industrialist. Garih graduated in 1951 as a mechanical engineer from the Istanbul Technical University. In 1954 he established together with Ishak 'Alaton the Alarko Company. Alarko became a major holding company engaged in tourism and leisure-time activities as well as being a large-scale contractor for infrastructure projects like the construction of airports, dams, and roads, operating in both Turkey and the new Turkish republics of the former Soviet Union. Garih was a regular contributor to various Turkish newspapers on business and management and was particularly concerned with the education of youth. In 1984 he was granted the title of honorary doctor by the Istanbul Technical University. From 1990 he was the honorary consul of the Philippine Republic. He was murdered during a robbery.

[Rifat Bali (2nd ed.)]

**GARLIC** (Heb. דָּרִיס, *shum*), plant mentioned once in the Bible among the vegetables which the Israelites ate in Egypt and for which they longed when wandering in the wilderness (Num 11:5). Garlic (*Allium sativum*) is a condiment which was extremely popular among the peoples of the East from very early times. Herodotus states that an inscription on the pyramid of the pharaoh Cheops refers to the large sum spent on garlic as food for the men who worked on the pyramids. The ancients attributed to garlic aphrodisiac qualities (Pliny, *Historia Naturalis*, 20:23), and an enactment ascribed to Ezra decrees that it is to be eaten on Friday evenings since “it promotes love and arouses desire” (T. Meg. 4:1, 75a). Because it was their custom to eat garlic, the Jews referred to themselves as “garlic eaters” (Ned. 3:10). The fastidious loathed the smell, and it is related of Judah ha-Nasi that he asked those who had eaten garlic to leave the bet midrash (Sanh. 11a). In this he may have been influenced by the Roman aristocracy’s objections to garlic eating, the emperor Marcus Aurelius having criticized Jews for exuding its smell (Ammianus Marcellinus, *Res gestae*, 22:5). Garlic was regarded as a remedy for intestinal worms (BK 82a), a view also held by Dioscorides (De *Materia Medica*, 2:181). It belongs to the genus *Allium*, to which belong also the *onion and the *leek (חָזִיר, to be distinguished from its usual sense of grass: *fodder*), which are mentioned together with garlic in the Bible (Num. 11:5). Many species of the genus *Allium* grow wild in Israel, and are picked and eaten by the local population.

**GARLOCK, JOHN HENRY** (1896–1965), U.S. surgeon. Born and educated in New York City, Garlock was assistant attending surgeon at the New York Hospital and instructor in surgery at the Cornell Medical College from 1924 to 1937. He was then appointed chief of surgery at New York’s Mount Sinai Hospital and clinical professor of surgery at Columbia University. He was consultant in surgery to many hospitals and held membership in numerous professional societies. Among his many contributions to medical literature are several chapters in standard textbooks of surgery. His book, *Garlock’s Surgery of the Alimentary Tract* (1967), was published posthumously by his colleagues. Garlock was chairman of the American Jewish Physicians Committee, which raised money to start the Hebrew University Faculty of Medicine.

[Fred Rosner]

**GARMENT, LEONARD** (1924— ), U.S. lawyer and counsel to President Richard M. *Nixon. Garment was born to immigrant parents in Brooklyn, New York. After graduating from Brooklyn College and Brooklyn Law School, he was admitted to the bar of New York in 1949, and later to the bar of the District of Columbia (1967). Garment was a brilliant law student, graduating first in his class (summa cum laude). He financed part of his education by playing tenor saxophone and clarinet with a leading popular jazz band of the time in the company of such artists as Billie Holiday and Woody Herman.

He joined the prestigious law firm later known as Nixon, Mudge, Rose, Guthrie, and Alexander, becoming a partner in 1957 and head of its litigation department. In this capacity, he worked closely with Nixon, handling the trial work on his cases. Nixon admired his ability, and in 1969, as president, appointed him as his special consultant concentrating on civil and human rights, voluntary action, and the arts. In this role, he termed himself Nixon’s “odds and ends man.” As a result of the Watergate scandal, Nixon appointed him as his counsel, replacing John Dean, to represent the administration in matters relating to the congressional Watergate investigation.

Garment, a Democrat by political affiliation, was regarded as one of the “liberals” in the Nixon administration. After Nixon’s resignation, Garment continued to move in Washington legal and political circles. He served as assistant to President Ford in 1974. Ford named him U.S. representative to the United Nations Human Rights Commission, where he served until 1977. He was also counselor to the U.S. delegation to the United Nations (1975–76).

Garment was a frequent contributor to the *New York Times* op-ed page. He wrote his autobiography, *Crazy Rhythm: My Journey from Brooklyn, Jazz, and Wall Street to Nixon’s White House, Watergate, and Beyond* (1997), and the highly

[Julius J. Marcke / Ruth Beloff (2nd ed.)]

GARMISON, SAMUEL (17th century), scholar and prolific author. Born in Salonica, Samuel immigrated to Jerusalem. In about 1647 he traveled as an emissary of Jerusalem apparently to Italy but was taken captive during the journey by Maltese pirates, from whom he was ransomed by a society for the redemption of captives centered in Venice. He was rabbi in Malta until c. 1660. Subsequently he seems to have officiated in Jerusalem. In 1666 he attacked Shabbetai Zevi in a sermon which is included in his Imrei No' am. Only one of his works has been published: Mishpetei Zedek (1945), responsa on the Shulhan Arukh, Arba'ah Turim and Beit Yosef. Among others still in manuscript are Kevod Hakhamim, sermons on the Bible; Imrei No’am, sermons on the Pentateuch; Imrei Tevu- nah ve-Imrei Kodesh, on the Talmud and codes; a commentary on the Mishnah; novellae to the tractates Hullin, Bekhorot, Zera'im, Tohorot, and Berakhot; works on the tractates Be'ah, Kiddushin, and Hullin.

[Simon Marcus]

“GARSTANG, JOHN (1876–1956), British archaeologist; professor of archaeology at the University of Liverpool from 1907 to 1941. From 1909 to 1914 he worked at ancient Meroë in Sudan uncovering important remains of the Roman-Nubian culture. After the British conquest of Palestine, Garstang was director of the British School of Archaeology in Jerusalem (1919–26). At the same time he served in the British Mandatory government as the first director of its Department of Antiquities, organizing the department and excavating at Ashkelon. In 1930–36 he resumed work in Palestine at Jericho, his findings there attracting wide attention at the time, although some of his conclusions were not borne out by subsequent investigations. By dating Jericho’s double wall to the Late Bronze Age ca. 1400 B.C.E., Garstang found confirmation of the fall of the city to Joshua (Joshua 6), which fits the then-popular 15th century date assigned to the exodus. Kaethe Kenyon’s subsequent excavations showed that the fallen walls dated to Early Bronze and that Late Bronze remains were few; there was no wall as depicted in Joshua. After resigning from the University of Liverpool, Garstang continued working in Asia Minor (at Mersin, etc.) on behalf of the British Institute of Archaeology at Ankara. His publications, all characterized by a conservative trend, include studies in Hittite history, historical topography of Palestine and the Bible, and numerous excavation reports. During the controversy aroused by the 1939 White Paper, Garstang adopted an anti-Zionist position and was active in British public affairs on behalf of the Arabs. He was the author of Hittite Empire (1929), Joshua, Judges (1931), and Heritage of Solomon (1934).

[Michael Avi-Yonah]

GARTNER, LLOYD P. (1927– ). American-Israeli historian. Educated in the United States, Gartner was a professor at the City University of New York and the Jewish Theological Seminary before becoming professor of history at Tel Aviv University. He is probably best-known for his work The Jewish Immigrant in England, 1870–1914 (1960), a pioneering work on Anglo-Jewish history which was among the earliest to study the post-1881 “New Diaspora” in Great Britain. Gartner has also written or edited a number of works on American Jewish history, including Jewish Education in the United States: A Documentary History (1969) and co-authored histories of the Jewish community in Los Angeles, Milwaukee, and Cleveland. In 2000 Gartner produced a comprehensive History of the Jews in Modern Times.

[William D. Rubinstein (2nd ed.)]

GARY, “The Steel City,” founded in 1906 by the United States Steel Corporation; situated on the southern tip of Lake Michigan; the second largest city in Indiana. Gary has a population of approximately 120,000, less than 1,000 of them Jewish. Jewish families made their way into Gary’s sand dunes and swamps along with the earliest pioneers, and in September 1908 the first Orthodox Jewish house of worship was dedicated. Subsequent years brought a series of ever larger structures, and in 1955 the modern Temple Israel was completed. The Reform Congregation was incorporated in 1910, and services are now conducted in the large, fifty-year-old Temple Israel in the Miller Section of Gary.

Gary’s Jewish community is active in government, business, civic, and philanthropic circles. During most of the time from 1964 to 1968 the mayor, city attorney, superintendent of schools, health commissioner, and municipal judge were Jewish. There was little overt antisemitism, but Jews were excluded from the all-white Gary Country Club and the University Club. The Gary Jewish community continues to be involved in social justice issues but with the change in demographics it is not as involved politically as it once was. The Gary Jewish Welfare Federation was formed in 1941. Enlarged in 1958–59 to include East Chicago and Hammond, the name was changed to the Northwest Indiana Jewish Welfare Federation. This Federation possesses archives which include historical material on the Jewish communities in the area.

[Ida Kay Sacks / Stanley Halpern (2nd ed.)]

GARY (originally Kacew), ROMAIN (1914–1980), French novelist. Gary, who was of mixed parentage, “part Cossack and Tartar, part Jew” to use his own phrase, was born in Vilna. When he was seven, his family moved to Poland and finally, in 1926, to Nice. He was a fighter pilot in the French Air Force at...
the outbreak of World War II, and then joined De Gaulle's Free French in England in 1940. After the liberation, he entered the French diplomatic service. His final appointment was that of consul-general in Los Angeles (1956–60).

Gary’s first novel *Education européenne* (1945; *Forest of Anger*, 1944, reissued as *A European Education*, 1960) includes many elements of Jewish interest, notably the description of a clandestine Friday evening service held by Jewish underground fighters. His other novels include *Tulipe* (1946); *Le grand vestiaire* (1948; *The Company of Men*, 1950); *Les Racines du ciel* (1956; *The Roots of Heaven*, 1958), an adventure story about a group of idealists bent on saving a herd of elephants from hunters, which won the Prix Goncourt; *La Promesse de l’aube* (1960; *Promise at Dawn*, 1961), memories of the author’s Jewish mother; and *Le Mangeur d’étoiles* (1966; *The Talent Scout*, 1961). Two works which first appeared in English are *Lady L.* (1958), a social satire, and *The Ski Bum* (1965). Jewish characters constantly make an appearance in Gary’s novels, but they were mostly viewed from the outside until the writer’s traumatic experience in a Warsaw war museum savagely wakened him to reality. *La Danse de Genghis Cohn* (1967; *The Dance of Genghis Cohn*, 1969), the title of which sardonically reflects Gary’s own ancestry and predicament, tells with cruel humor the story of a Jewish comedian shot by the Nazis, who relentlessly haunts his executioner. He also wrote *La Tête Coupable* (1968; *The Guilty Head*, 1969).

[Moshe Catane]

**GASCONY,** a duchy under English rule from 1152 to 1453, and later (with Guyenne) a province of the kingdom of France. There have been Jews in Gascony from at least the fourth century, especially in *Bordeaux*. From 1242 or earlier the English ruler appointed special judges over the Jews, who were particularly numerous in *Agen* and its vicinity. A first expulsion order was issued in 1289, even before the expulsion from England itself. Debts owing to the Jews were confiscated and collected at half their value for the king’s treasury. Royal agents were appointed to seize the Jews and their belongings. However, the expulsion order was not vigorously enforced or rapidly became obsolete, for in 1292 there were again Jews in Gascony; the king ordered their expulsion once more. In 1305 they returned and must this time have obtained official authorization since in 1308 a judge was again in charge of Jewish affairs. A further expulsion order followed in 1310, which was repeated in 1313 and 1316. However, there were Jews in Gascony in 1320, when they were massacred by the *Pastoureaux*. Some Jews were still found in Bordeaux until at least 1362. Jews bearing the surname of Gascon may have originated from there. Marrano refugees from Spain took refuge in this region from the close of the 15th century. Through them the Bordeaux community later became important again.

[Bernhard Blumenkranz]

**GASKELL, SONJA** (1904–1974), Dutch dancer, choreographer, and ballet director. Gaskell was born in Villakiviskis, Lithuania. She studied in Paris and danced there in Diaghilev’s Ballets Russes. In 1939 she followed her Dutch husband to Amsterdam, where she taught ballet dancers Russian technique. After World War II she founded her own groups, Ballet Studio ’45 (1945) and Ballet Recital (1949–51), became the artistic director of Het National Ballet of Amsterdam, and established the first Netherlands academy of ballet in the Hague, where she was director of the Het Nederlands Ballet. As a choreographer, she created several ballets. From 1968 she worked as a member of the board of the dance department of UNESCO before taking over the Amsterdam company in 1961. In 1966 Gaskell was named officer of the Orde van Oranje-Nassau.

[Marcia B. Siegel / Amnon Shiloah (2nd ed.)]

**GASSER, HERBERT SPENCER** (1888–1963), U.S. neurophysiologist and Nobel Prize winner. Gasser was born in Platteville, Wisconsin. He collaborated with Joseph *Erlanger in investigating the electrical properties of nerve fibers. Utilizing a cathode-ray oscilloscope and a sensitive amplification system they recorded the electrical impulses passing over isolated nerve fibers. The measurements of the potential cycles of different nerve fibers revealed three distinct patterns indicating that there were three major types of fibers. It was also shown that the rate of conduction varied directly with the thickness of the fiber. These studies were the foundation of the modern knowledge of action currents in nerves and were of great importance toward an understanding of the complexities of nerve impulse transmission. As a result of this work Gasser and Erlanger shared the 1944 Nobel Prize for medicine. Working with Erlanger and others, Gasser also contributed much to the understanding of the differences between sensory and motor nerves. He also dealt with problems involving the perception of pain and the contraction of muscle as well as the coagulation of blood.

[Norman Levin]
**GASSING**, extermination of Jews and others during the *Holocaust* in installations specially constructed for mass-killing by gas, mostly in specific *camps*. The idea of systematic and organized extinction of inoffensive human beings emanated from the conception which abolished the basic belief in the sanctity of human life and substituted the postulated predominance of the Aryan race whose superior value and whose purity had to be secured. As Hitler said in *Mein Kampf*: "A corrective measure in favor of the better quality must intervene" (Eng. transl. (1939), 248.)

Racial-biological "eugenics" were at first not applied to the Jews but to the elements in the German people itself. The "Law for the Prevention of Progeny with Hereditary Disease" was proclaimed already on July 14, 1933. The problem was further dealt with at the Nazi Party convention on Sept. 1, 1933, where the director of the "Racial-Policy Office" called compassion for people suffering from hereditary disease "false humanity" and a "sin against the Creator's own laws of life."

The implementation of the "Euthanasia Program" was prepared as from July 1939, together with the war. It was a top secret program carried through and supervised by the staff of Hitler's private chancellery. The action included the concentration of the mental patients chosen for the "merciful death" and their transportation from there to the nearest euthanasia station, short "medical" investigation of each patient, mainly in order to decide on the most plausible fictitious "cause of death" and then gassing of 20–30 people at one time in hermetically shut chambers disguised as shower rooms, cremation in the crematorium-annex after gold teeth had been broken off and some of the brains secured for "medical research."

Between January 1940 and August 1941, 70,273 German people were killed in five euthanasia institutions by this *Sonderbehandlung* (special treatment). The carbon monoxide gas was provided compressed in steel containers and released through pipes into the gas chamber. People were dead after 6–7 minutes. The first experiment was done by Kriminal-Kommissar Christian Wirth; later a specially trained chemist, Dr. Kallmeyer, became responsible for the whole gassing process. In August 1941 Hitler called the program officially off following the evolving unrest in the population, legal complications, and mounting protests, especially by the Churches. In fact, the institutions continued to function until 1944 but death was administered partly by gas, partly by injections, and partly by gradual starvation. Also put to death were the prisoners of war, children from mixed marriages, and others "unworthy of life."

When in October 1941 the mass-shooting of Jews by the *Einsatzgruppen* became problematic (see *Holocaust*), the three experts of the killing operation came together and decided on the use of gas: Erhard Wetzel, director of the Racial-Policy Office of the Nazi Party and the consultant on Jewish affairs of the Reich Minister for the Occupied Eastern Territories Alfred *Rosenberg; Victor Brack, deputy director of the Chancellery of the Fuehrer, the man mainly responsible for the implementation of the euthanasia program; and Adolf *Eichmann* (Source: NO-997). Since the euthanasia program had just been officially discontinued it must have seemed reasonable to use the experience for the new project. The two technical experts, Christian *Wirth and Dr. Kallmeyer, were sent to the East to make the necessary installations. Physicians who had conducted the euthanasia program were also transferred. In the meantime gas had been employed in the fight against partisans in Yugoslavia. Here vans were used into which the exhaust fumes of their diesel engines were channeled. This method was now applied to the first killing center at *Chelmno*. Then *Globocnik seized the idea and used it for the installation at *Belzec* and *Treblinka.* "Gerstein met Wirth there as the chief operator. Wirth now used the exhaust fumes the way the carbon monoxide gas had been handled in the euthanasia operation installing the whole process with the shower-room camouflage and securing gold teeth and other valuables. *Hoess brought the system to perfection in *Auschwitz.* He went back to the easier use of chemical gas but chose hydrogen cyanide, the so-called Zyklon B crystals, instead of the carbon monoxide, apparently because it could easily be provided in great quantities. He also developed the crematorium scheme which had been in use in the euthanasia installations. Following the semantics of the previous stages the working teams were now called *Sonderkommando.* Zyklon B was also used in minor scale in Majdanek and in the concentration camp Gross-Rosen which was used for the extermination of concentration camp inmates in Germany. The gas chambers in Dachau and Theresienstadt were never put into action.

[Leni Yahil]

**GASSNER, JOHN** (1903–1967), U.S. author, critic, and anthropologist. He was playreader in the 1930s for Theater Guild, and in 1940 established the playwriting seminar of Erwin Piscator’s Dramatic Workshop. Gassner also functioned as dramatic critic for various publications. He was professor of playwriting and dramatic literature at Yale from 1956. He was one of two members of the drama jury of the Pulitzer Prize who resigned in 1963 when the trustees rejected the verdict for Edward Albee’s *Who’s Afraid of Virginia Woolf?* and made no award. His writings include (with B. Mantle) *Treasury of the Theater* (3 vols., 1935), *Masters of the Drama* (1940), *The Theater in Our Times* (1954), *Heritage of World Literature* (1946, vol. 7 of Literature, ed. by E.A. Cross), and *Best American Plays* 1918–1958 (1961).
GASTER, MOSES (1856–1939), rabbi, scholar, and Zionist leader. Gaster was born in Bucharest and studied at the University of Breslau and the Jewish Theological Seminary of Breslau, where he was ordained in 1881. He taught Romanian language and literature in the University of Bucharest, 1881–85, published a popular history of Romanian literature, *Literatura Populară Română* (1883), and began his great chrestomathy of Romanian literature *Chrestomatie Română* (2 vols., 1891). In 1885, because of his protests against the treatment of the Jews, he was expelled from Romania. He settled in England where he was appointed to teach Slavonic literature at Oxford University in 1886. In 1887 he was appointed haham of the English Sephardi community.

Gaster’s abilities as a scholar and an orator gave him an outstanding position both in the Anglo-Jewish community and in those areas of intellectual life in which he became a recognized authority, e.g., folklore and Samaritan literature. However, Gaster had a stubborn and combative personality, and this led to an unwillingness to retreat from a position once taken, which did not enhance his reputation. When he was principal of Judith Montefiore College, Ramsgate (1891–96), he endeavored to make it an institution for training rabbis, but the attempt failed. In 1918, after disagreements with his congregation, Gaster retired from the office of haham.

Gaster was active in Hibbat Zion and later in the Zionist movement. He accompanied L. *Oliphant on his visits to Romania, Constantinople, and Erez Israel, and also played a considerable part in the establishment of Zikhron Ya’akov and Rosh Pinnah in Palestine, the first colonies settled by Romanian Jews. He became one of Herzl’s early supporters but opposed him on the *Uganda Scheme, and this also brought him into conflict with the leaders of the English Zionist Federation, of which he was president in 1907. Throughout these years Gaster was a prominent figure at Zionist Congresses, being elected a vice president at the first four. It was to Gaster that Herbert *Samuel, then in the British Cabinet, turned when he wished to establish contact with the Zionists. The conference held at Gaster’s home in February 1917 between the Zionist leaders and Sir Mark Sykes of the British Foreign Office was an important stage in the events leading to the *Balfour Declaration. After World War I he returned to his disassociation from official Zionist policy; this was partly the result of his failure to satisfy his ambition of becoming the official leader of the organization.

Gaster’s writings covered many branches of learning, including Romanian literature, comparative and Jewish folklore, Samaritan history and literature, rabbinic scholarship, liturgy, Anglo-Jewish history, and biblical studies. A selection of Gaster’s scattered essays appeared under the title *Studies and Texts in Folklore, Magic, Medieval Romance, Hebrew Apocrypha…* (3 vols., 1925–28). Other publications are listed in the bibliographies below. Gaster assembled a magnificent library, including many manuscripts, most of which he sold to the British Museum in 1925, but he continued his literary work, despite almost total blindness.

**BIBLIOGRAPHY:** B. Schindler (ed.), *Occident and Orient… Gaster Anniversary Volume* (1936), includes bibliography; idem, *Gaster Centenary Publication* (1958), contains revised bibliography; C. Roth, in: *JHSET, 14* (1940), 247–52; *DNB, supplements* 5 (1949), 309–10.

[Cecil Roth]

GASTON-MARIN (Grossman), GHEORGHE (1919– ), Romanian Communist politician and engineer. Born in Padereni, (Arad county), Transylvania, Gaston-Marin completed secondary school at Petroșani (1937) and was active in Zionist circles in his youth. He went to Paris and studied mathematics and physics at the Sorbonne (1937–38), afterwards at the Polytechnical Institute of Grenoble (1934–40), where he qualified as an electrical engineer and was a member of the French Resistance during World War II. After the war he returned to Romania (1945), joined the Communist Party, and was made minister of electrical energy in 1949. In 1954 he became first vice chairman of the State Planning Commission and from 1962 to 1969 was head of the Romanian industrialization program with the rank of deputy-premier; from 1969 to 1982 he was president of the State Council for Prices; from 1952 to 1985 he was a member of the Romanian Parliament and from 1964 to 1982 Romanian representative to international economic organizations.

[Lucian-Zeev Herscovici (2nd ed.)]

GAT (Heb. גת) kibbutz in southern Israel, N.E. of *Kiryat Gat, affiliated with Kibbutz Arzi ha-Shomer ha-Za‘ir, founded by East European settlers in 1942, as one of the first outposts established in the framework of the program to extend the settlement network to the south and northern Negev. The kibbutz economy was based on highly intensive farming (field crops, citrus groves, poultry, and dairy cattle), recreation facilities, a juice factory in partnership with Kibbutz Bet Nir, and a factory for wood products. The kibbutz name was chosen due to its proximity to the tell, then identified with biblical *Gath*. In 1968 there were 435 inhabitants. The population rose to 560 in the mid-1990s but then dropped to 392 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]
GATESHEAD ON Tyne, industrial town in N.E. England. The first known Jew to settle in Gateshead was Zachariah Bernstone in the 1890s, a Russian immigrant who rebelled and broke away from the lesser observant congregation of adjoining “Newcastle-upon-Tyne. With his protégé E. Adler and their families from Eastern Europe, he attempted to establish a community at the beginning of the 20th century. On the initiative of a group of scholars, including shoḥet David Dryan, David Baddiel, and Moshe David Freed (son-in-law of Z. Bernstone), a yeshivah, now world-famous with some 250 pupils, was opened in 1929 under the direction of Rabbi N. Landynski and his assistant, L. Kahan. It represented the realization of a dream of those scholars who had seen their own yeshivah in Europe destroyed in pogroms. The first students from the U.K. were joined in the 1930s by refugees fleeing Nazi Germany and later by students from all over the world. Rabbi N. Shakowitzky, formerly of Lithuania, became community leader in the 1930s, up to when the community and its houses of learning were of a strictly Russian-Polish character.

When refugees from Nazi Germany came to England, only the strictly observant were attracted to Gateshead. A college for advanced talmudical students (kolel), the first of its kind in Britain, was founded by E.G. *Dessler. German Jews who came to Gateshead after the war established further institutions of learning – a teachers’ training college for girls, founded by A. Kohn, and a boarding school founded by M.L. Bamberger, 1944. Other institutions include a Jewish primary school, a kindergarten, and a bader. The first scientific *shaatnez bureau in Britain was established in Gateshead. In 1966 the Gateshead Foundation for Torah was established to further the publication of Jewish literature. The community numbered 350 in 1970. In the mid-1990s the Jewish population numbered approximately 430, and according to the 2001 British census, the Jewish population of Gateshead had risen to 1,564. It had a range of strictly Orthodox institutions unknown in Britain outside of London and Manchester and its yeshivah and kolel were internationally known.

GATH (Heb. גת), name of several Canaanite cities often appearing with a toponymic addition to differentiate them (e.g., Gath-*Hepher, Gath-*Rimmon, Gath-*Gittaim, etc.). Four cities called Gath are listed among the conquests of Thutmose III and several Gath (or Gintis) are mentioned in the *El-Amarna letters: Ginti, Ginti-Kirmel, and Giti-Paddala. The last, which also appears in the city list of Pharaoh Shishak, is identified with the Arab village of Jatt in the Sharon. *Pliny* mentions a Gitta north of Mt. Carmel (*Natural History* 5:75); it was the home town of the famous sorcerer Simon Magus (Justinus Martyr, *Apologia* 1:26, 5–6). *Eusebius* locates a Gath between Antipatris and Jamnia (Jabneḥ; *Onom.* 72:2) and it is similarly situated on the Madjia Map. This is probably Gath-Gittaim, which Jewish tradition identifies with Ramleh and for which B. Mazar proposes the site of Ras Abu Ḫumayd (or Ḫamid), east of Ramleh.

The best known Gath is “Gath of the Philistines.” It was originally inhabited by Anakim (“giants”; *Josh.* 11:22; 1 *Chron.* 20:6, 8; 11 *Sam.* 21:20, 22) and later by one of the five Philistine lords (*Josh.* 13:3; etc.). It was one of the cities to which the Ark was brought after its capture (1 *Sam.* 5:8). The Philistines fled from Gath after the defeat of Goliath (ibid. 17:52). Persecuted by Saul, David escaped to take refuge with Achish king of Gath (ibid. 21:11) from whom he received Ziklag in the Negev, a fact which indicates the extent of the territory ruled by Gath in the south. When Israel again became strong and united under David, Gath is mentioned in connection with his victory over the Philistines (1 *Chron.* 8:13); the parallel account in 11 *Samuel* 8:1, however, contains the enigmatic “Metheg-Ammah” instead of Gath. The people of Gath were subdued and Ittai the Gittite became one of the captains of David’s guard and remained faithful to him when Absalom rebelled (11 *Samuel* 15:19–22; 18:2). A descendant of Achish, however, continued to rule Gath at the beginning of Solomon’s reign (1 *Kings* 2:39ff.); thus the Gath fortified by Rehoboam cannot be Gath of the Philistines and is possibly Moresheth-Gath, as proposed by Y. Aharoni. In his campaign of c. 815–814 B.C.E., Hazael of Aram-Damascus advanced as far as Gath (11 *Kings* 12:18); his destruction of the city may be that alluded to by Amos (6:2). Gath was conquered by Uzziah, king of Judah (11 *Chron.* 26:6) and Sargon mentions the capture of Gath (Ginti) during his campaign against Ashdod in 711 B.C.E. It is doubtful, however, whether these two references are to Gath of the Philistines or to the more northern Gatt-Gittaim. In later times *Eusebius* mentions a village called Gath, five Roman miles from Eleutheropolis on the road to Diospolis-Lydda (*Onom.* 68:4ff.); it is also mentioned by *Jerome* (*Epistulae* 108:14).

The identification of Gath is a much debated problem. *Albright* proposed to locate it at Tell al-Urayna, west of Bet Guvrin (Eleutheropolis) but six seasons of excavations by S. Yeivin have shown that most of the site contained no Iron Age (Philistine) remains. Only on the upper mound were remains from that period found, but its small size (3–4 acres) precludes an identification with Gath. A subsequent proposal to identify Gath with Tell al-Najilla has also been disproved so far by excavations; in two seasons of excavations a large Middle Bronze Age city was found but almost no Iron Age remains. The current proposal returns to its old identification with Tell al-Šāli (as suggested by *Elliger*, *Galling*, and later, Aharoni). This large mound, excavated in 1899/1900, has produced large quantities of Philistine pottery.

[Michael Avi-Yonah]
GATH-HEPHER (Heb. חֵפֶר)', a town on the border of the territory of *Zebulun, between *Japhia and Eth-Kazin (Josh. 19:13). It is referred to as the birthplace of the prophet *Jonah (II Kings 14:25). The biblical site has been identified with Khirbat al-Zurra (now called Tel Gath Hephter), near the Arab village of Mashhad, 2½ mi. (4 km.) southeast of *Sephoris. An examination of the tell has revealed Iron Age pottery on its surface. A tomb in the village traditionally that of Jonah (al-Nabi Yunus) attests the existence of a local tradition which was already noted by Jerome in the preface to his Latin commentary on the Book of Jonah.

**BIBLIOGRAPHY:** Albright, in: *BASOR*, 35 (1929), 8; EM, S.V. (includes bibliography); QDAP, 4

GATH-RIMMON (Heb. גַּת רִמְמִן)

(1) Levitical city in the territory of Dan (Josh. 21:24; 1 Chron. 6:54). It is located in the vicinity of Jehud, Bene-Berak, and Me-Jarkon ("the waters of Yarkon") in Joshua 19:45 and it is possibly mentioned in the list of conquests of Thutmose III in c. 1469 B.C.E. (line 63) in the same general area, between Jaffa and Lydda. In the opinion of some scholars, the Giti-rimunima in the "El-Amarna letters (ed. by Knudtzon, 250) refers to this locality. Gath-Rimmon is commonly identified with Tell Jarisha, which was excavated from 1934. The finds included remains of a Hyksos wall and glacis of the Middle Bronze II Age, a Late Bronze Age tomb, and evidence of a settlement up to the ninth century B.C.E.

(2) Levitical city of the tribe of Manasseh west of the Jordan (Josh. 21:25). Some scholars consider it identical with the Giti-rimunima of the el-Amarna letters mentioned above, and as evidence that a second Gath-Rimmon existed in the region, they cite the worship of Hadadrimmon in the Jezreel Valley (Zech. 12:11). In the parallel text of levitical cities in 1 Chronicles 6, however, Bileam (Ibleam) appears instead of Gath-Rimmon, and the mention of the latter twice in Joshua 21 may have been due to an error.

**BIBLIOGRAPHY:** EM, S.V. (includes bibliography); QDAP, 4 (1935), 208–9; 6 (1938), 225; 10 (1944), 55ff., 198–9, excavation reports of Salonika in 1875. He died in 1895. He was the author of a comprehensive title *Makar Yeranna* (ibid., 1786), glosses to Maimonides' *Mishneh Torah*. Eliahim's son, ISAAC, was the author of: *Beit Yizhak* (ibid., 1792), also glosses to the *Mishneh Torah*; *Beit Moed* (ibid., 1839), novelae to the tractates *Moed* Katan and *Makkot* with additions by his pupil Hayyim *Palache*, who also wrote an introduction to the work; and *Mi-Yagon le-Simhah* (ibid., 1795), a commentary on the laws of mourning (nos. 1–32) of *Meir of Rothenburg*. Among the rabbis of this family who served in Salonika during the 18th and 19th centuries are: Hayyim Abraham Benveniste, a pupil of Solomon *Amarillo*, and the author of the responsa *Mishneh Torah*. These were published by *Benveniste* (Mercado), son of Hayyim Abraham, with an introduction and additions. Benveniste was the author of a halakhic work, *Terumat ha-Kesef*, which, together with a work by his son Abraham, *Elef Kesef*, was published with the comprehensive title *Mazref le-Kesef* (1867). Abraham Ben Benveniste Gattigno was elected *halham bashi* ("chief rabbi") of Salonika in 1875. He died in 1895. He was the author of the responsa *Zel ha-Kesef* (1872) to which are appended ten homilies. Abraham was the founder of the first modern Jewish school in the town. Benveniste Ben Moses was the author of homilies on the Torah which were published together with additions by his son Judah under the title, *Meahshakim Kesef* (1839). Judah's son Samuel (d. 1885) was a *dayyan* in Salonika.

Yehoshua Horowitz

GAUNSE, JOACHIM (d. 1619), mining engineer; member of the Gans family of Prague. In 1581 he was in England, where he reorganized the copper mining at Keswick in Cumberland, and later at Neath, Wales. He was arrested in Bris-
Gawler, George

ToL (1596) for indiscreet remarks during a theological dispute and declared himself a Jew. He was sent to London for trial before the Privy Council and presumably was expelled from England. He is probably identical to the Zalman b. Zeligman Gans whose tombstone in Prague (S. Hock, Die Familien Prags, 1892, no. 997) describes him as having endangered his life to wreak vengeance among the gentiles. Gaunse has one remarkable distinction: In 1584 he was recruited by Sir Walter Raleigh to join the first Virginia Company's expedition to the New World and served as supervisor of mining on the ill-fated Roanoke Expedition of 1595. Gaunse was thus the first known Jew to set foot in North America, at least in the area ruled by England.

[Cecil Roth / William D. Rubinstein (2nd ed.)]

Gavison (or Gavishon), Spanish family. In the 14th century the Gavison family were among the most respected Jews of Seville, but they were forced to flee to Granada during the persecutions of 1391. There, in the 15th century, almost all the Gavisons were murdered; only Jacob and Abraham, the sons of Joseph Gavison, escaped in 1492 to Tlemcen, Algeria. Jacob ben Joseph was a physician and the author of Derkha ha-Sekhel, a work directed against the opponents of Maimonides, no longer extant. Poems in praise of this work were written by Solomon al-Malaki, Jacob Berab, and Abraham (27) Gavison. One of Joseph Gavison's descendants was Abraham ben Jacob (d. 1578) of Tlemcen, a physician, who lived for some time in Algiers, author of Omer ha-Shikkhah (unfinished). His son Jacob edited the poetical portion of this work and added poems written by himself and his own son Abraham (1586–1605), a gifted young man who died of the plague (see Omer ha-Shikkkah, 127–128a, and Abraham's poems, 120b). Moses (d. 1696), a merchant of Algiers, belongs to the same branch of the family; he also died of the plague.

The same fate overtook in 1745 the two sons of Abraham (4), who in 1748 published his ancestor's Omer ha-Shikkhah in Leghorn. Meir and Solomon were contemporaries of R. Jacob de Castro in Egypt in the second half of the 16th century. Meir Gavison, originally from Damascus, went to Egypt as a merchant and later joined the academy of the dayyan Hayyim Kaposi; his response were seen in manuscript by H.Y.D. *Azulai. Solomon Gavison, also a halakhic authority (see responsa of Solomon ha-Kohen (Maharshak) 111, Salonika, 1594), was sharply attacked by Castro (responsa Oholei Yaakov, no. 33), because he delivered a halakhic opinion favorable to the Karaites. In the second half of the 19th century Vidal served as a rabbi in Gibraltar.

BIBLIOGRAPHY: A. Gavison, Omer ha-Shikkhah (1746), preface and supplement; A. Cahen, Juifs dans l'afrique septentrionale (1867), 104ff.; M. Mendez-Bejarano, Histoire de la juiverie de Séville (1922), 125; Rosanes, Togarmah, 3 (1938), 246, 247, 250ff.; Hirschberg, Afrikah, 2 (1965), 46–47.

[Jefim (Hayyim) Schirmann]

Gavison, Ruth (1945– ). Israeli jurist. Gavison was born in Jerusalem and spent her childhood years in Haifa. In 1969 she received her LL.B. with distinction and in 1970 she graduated in philosophy and economics, both degrees from the Hebrew University of Jerusalem. From 1969 she taught in the Faculty of Law of the Hebrew University. In 1970 she clerked under Justice B. Halevi of the Israel Supreme Court and in 1971 she was admitted to the Israeli bar. In the same year she finished her LL.M. with distinction at the Hebrew University and in 1975 she received her Ph.D. in legal philosophy from Oxford University. In 1984 she was named to the H. Cohn Chair for Human Rights at the Hebrew University and in 1990 she became full professor. In addition to her academic career, Gavison was active in the Association for Civil Rights in Israel, serving as its president from 1996 to 1999. In 1997 she joined the International Commission of Jurists and the Israel Democracy Institute. She also served as a member of several public committees, such as the Kahan Committee on Privacy in 1976, a public committee on Orthodox-secular relations in Israel from 1987 to 1990, and the Shamgar Committee on the Appointment of the Attorney-General and Related Issues in 1997–98. Gavison is a familiar public figure in Israel owing to her participation in numerous media debates on legal issues. She received the Zeltner Prize for Legal Research in 1997 and the EMET prize in 2003. Her fields of interest are philosophy of law and legal theories and processes. She published numerous books and articles, among them Discretion in Law Enforcement: The Power of the Attorney General to Stay Criminal Proceedings (1991); Human Rights in Israel (1995); The Constitutional Revolution: A Reality or a Self-Fulfilling Prophecy? (1998); Israel: A Jewish and Democratic State (1999); and The Role of the Supreme Court in Israeli Society (with M. Kremnitzer and Y. Dotan, 2000). In 2000 she published together with Rabbi Yaakov Madan a document defining secular-religious relations in Israel. Gavison is identified with the right wing and has criticized Supreme Court decisions. She called for a curbing of the legal activism spearheaded by Supreme Court President Aharon *Barak. She believes that the Supreme Court cannot act as the highest moral authority of the state, but should respect the political system and its decisions and the Jewish character of the state. In 2005 her name came up as a candidate for the Supreme Court, which led to much heated debate.

[Shaked Gilboa (2nd ed.)]

“Gawler, George (1796–1869), English Christian who propagated the idea of Jewish settlement of Erez Israel. Gawler took part in the Battle of Waterloo as a senior commander and was the first governor of the newly established colony of South Australia (1838–41). On his return to England he took up the cause of the agricultural settlement of Erez Israel by Jews and persisted in the propagation of this idea until the end of his life. He sought to provide a solution both to the permanent
unrest in the Middle East and to the Jewish problem in Europe and proposed that his plan should be executed by the British. He first introduced his ideas in a pamphlet entitled *Tranquilization of Syria and the East: Observations and Practical Suggestions in Furtherance of the Establishment of Jewish Colonies in Palestine ... the Most Sober and Sensible Remedy for the Miseries of Asiatic Turkey* (London, 1845), and followed this up with a series of pamphlets in which he discussed other plans, including *Emancipation of the Jews Indispensable for the Maintenance of the Protestant Profession of the Empire; and Most Entitled to the Support of the British Nation* (1847). His experience in Australia led him to believe that it was possible to settle an uninhabited land within a few years. He accompanied Sir Moses *Montefiore on the latter's third trip to Erez Israel (1849)* and seems to have been the one who persuaded Montefiore to initiate agricultural settlement in the country, in spite of the opposition of large sections of the Jewish population to the idea. Over the course of the years, Gawler contributed numerous articles to the Jewish press in Britain (*Voice of Jacob, Jewish Chronicle*); in one of these articles he stated: “I should be truly rejoiced to see in Palestine a strong guard of Jews established in flourishing agricultural settlements and ready to hold their own upon the mountains of Israel against all aggressors, I can wish for nothing more glorious in this life than to have my share in helping them do so” (1C, Aug. 10, 1860). The only result of his plans was Montefiore’s acquisition of an orange grove near Jaffa on his fourth trip to the Holy Land (1855), where Jewish workers were employed (now known as the Montefiore Quarter in Tel Aviv).

His son, John Cox Gawler, took up his father’s cause and in 1874 published a detailed plan for the settlement of Erez Israel by Jews on businesses and technological principles. He also sought to gain Montefiore's interest in the plan. The plan aroused great interest in Jerusalem, and a Hebrew translation of it by I.D. *Frumkin was published in Havaazzelet*. By publishing the plan, Frumkin encouraged certain groups of the population to the idea. Over the course of the years, Gawler contributed numerous articles to the Jewish press in Britain (*Voice of Jacob, Jewish Chronicle*); in one of these articles he stated: “I should be truly rejoiced to see in Palestine a strong guard of Jews established in flourishing agricultural settlements and ready to hold their own upon the mountains of Israel against all aggressors, I can wish for nothing more glorious in this life than to have my share in helping them do so” (1C, Aug. 10, 1860). **GAYLORD, MITCHELL** (1961– ), U.S. gymnast, winner of four medals at the 1984 Olympics. Born in Los Angeles, California, Gaylord was named the city’s high school athlete of the year in 1979. He attended UCLA, and saw his first international competition at the 11th Maccabiah Games in 1981, winning six gold medals and one silver – coming in second to his brother, Chuck. The seven medals tie him for the most won by an individual athlete at a single Maccabiah Games. Gaylord earned a 10 on the high-bar at the 1982 U.S.A. Championships, resulting in a gold medal, won the all-around championship at the 1982 National Sports Festival, and was the No. 1-ranked gymnast in 1983 and 1984. Gaylord invented two skills now named internationally after him – the Gaylord Flip and the Gaylord Two, considered two of the most difficult feats in gymnastics. Gaylord won the U.S. national championship in 1983 and 1984, when his 117.85 set an American record, and the all-around title representing UCLA at the 1984 NCAA championship with a score of 116.95.

At the 1984 Olympic Games in Los Angeles, Gaylord won a gold medal in the team event, a silver in vaulting, and bronze medals in both rings and parallel bars. His score of 59.45 in the team competition is a U.S. record, and he was the first American gymnast in history to receive a perfect “10.” President Ronald Reagan thereafter appointed him to the President’s Council for Physical Fitness. Gaylord is co-author with his brother of *Working Out Without Weights* (1987).

[Ellie Wohlgelernter (2nd ed.)]

**GAZA** (Heb. גַּזַּה, Azzah), city on the southern coastal plain of Erez Israel. From earliest times it served as the base of Egyptian operations in Canaan. Unlike the neighboring sites of Tell el-Ajjul and Tell Ali Muntar, Gaza itself did not have much strategic and economic importance during the third and second millennia B.C.E. An important Middle Bronze II settlement, however, has been discovered at al-Moghraqa in the area of Wadi Gaza. Gaza was apparently held by Thutmose III (c. 1469 B.C.E.) and in his inscriptions it has the title of “that-which-the-ruler-seized” signifying its role as the chief Egyptian base in Canaan. In the reliefs of Seti I (c. 1300 B.C.E.) it is called “the [town of] Canaan.” It is also mentioned in the Tell el-Amarna and Taanach tablets as an Egyptian administrative center. According to biblical tradition its original in-
hhabitants were the Avvites (Deut. 2:23; Josh. 13:3). At the time of the Israelite conquest it was allotted to the tribe of Judah (Josh. 15:47; Judg. 11:18) but it remained in the possession of the Canaanites until the beginning of the 12th century B.C.E. when it was occupied by the Philistines – possibly at first as an Egyptian garrison. It became the southernmost city of the Philistine Pentapolis (Josh. 13:3; I Sam. 6:17; Jer. 25:20). At Gaza Samson performed some of his famous deeds and there too he perished in the temple of Dagon in the great slaughter of his enemies (Judg. 16). With the weakening of Egyptian support, the Philistines finally submitted to David (11 Sam. 5:25). In 734 B.C.E. Tiglath-Pileser III of Assyria took Gaza but it remained a Philistine city and the short conquest of Hezekiah (11 Kings 18:8) did not alter its status. Pharaoh Necho II occupied Gaza briefly in 609 B.C.E. Under the Persians (after a siege in 529 B.C.E. by Cambyses) Gaza became an important royal fortress called Kadytis by Herodotus (2:159). In 332 B.C.E. it was the only city in Erez Israel to oppose Alexander, who besieged it and sold its people into slavery. In the Hellenistic period Gaza was the outpost of the Ptolemies until its capture by Antiochus III in 198 B.C.E. Its commercial importance increased in Persian and Hellenistic times when it served as the Mediterranean outlet of the Nabatean caravan trade and as the gateway for Greek penetration into southern Erez Israel. The city was attacked by Jonathan the Hasmonean in 145 B.C.E. (1 Macc. 11:51–62) but was taken only by Alexander Yannai in 96 B.C.E. after a long siege. It was restored by Pompey and rebuilt by Gabinius in 57 B.C.E. It was held by Herod for a short time. Gaza prospered under Roman rule and contained a famous school of rhetoric. It was fanatically devoted to its Cre- tian god Marnas, even under Christian rule; only in the fifth century was its temple destroyed and Christianity made the ruling religion. Although Jews were settled there in the talmudic period, the city was regarded as being outside the halakhic boundaries of the Holy Land. Gaza is shown as a large city on the Madaba Map – "splendid, delicious" are the words of the traveler Antoninus – with colonnaded streets crossing its center and a large basilica in the middle, probably the church erected on the temple of Marnas. A depiction of the city of Gaza also appears in a mosaic floor uncovered at Ummer-Rasas in Jordan. In antiquity Gaza controlled an extensive territory, including the areas of Anthedon and its harbor, Maiumas. The sources mention an "Old Gaza." This was probably at Beth-Eglaim – Tell al-Ajul (the tell at the city proper however contains evidence of settlement from the Bronze Age onward). "Gaza the desert" in the New Testament (Acts 8:26), which is the city proper, was so called because of its devastation by Alexander Yannai. The "New City" (Neapolis) was the harbor; a synagogue was found there paved with mosaics and dated 508/9. In 1665 a mosaic floor was uncovered on the seashore of Gaza’s harbor. Its figures include one of King David as Orpheus, dressed in Byzantine royal garments and playing the lyre. The name "David" in Hebrew letters appears above it. A Greek inscription at the center of the floor, which mentions the names of the two donors (Menahem and Jesse) of the mosaic to the “holy place,” and the name "David," testify to the fact that a synagogue stood there. The synagogue was cleared by A. Ovadiah in 1967/68. Evidence of a considerable Jewish population during the talmudic period in Gaza is provided also by a relief of a menorah, a shofar, a lulav, and an etrog, which appear on a pillar of the Great Mosque of Gaza; and various Hebrew and Greek inscriptions. According to the Karaite Sahl b. Mazliyah, Gaza, Tiberias, and Zoar were the three centers of pilgrimages in Erez Israel during the Byzantine period. Gaza was situated 3 mi. (5 km.) from the sea in a fertile plain rich in wheat, vineyards, and fruits. Its fair (panegyris) was one of the three main fairs in Roman Palestine.

In a great battle fought near Gaza in 635, the Arabs vanquished the Byzantines; the city itself fell soon afterward. It remained the seat of the governor of the Negev, as is known from the Nessana Papyri. The Jewish and Samaritan communities flourished under Arab rule; in the eighth century, R. Moses, one of the masorists, lived there. In the 11th century R. Ephraim of Gaza was head of the community of Fostat (old Cairo). King Baldwin I of Jerusalem occupied the city which was known in Crusader times as Gadres; from the time of Baldwin II (1152) it was a Templar stronghold. In 1170 it fell to Saladin. Under Mamluk rule Gaza was the capital of a district (mamlaka) embracing the whole coastal plain up to Athlit. After the destruction of Gaza by the Crusaders the Jewish community ceased to exist. Nothing more was heard of it until the 14th century. Meshullam of Volterra in 1481 found 60 Jewish householders there and four Samaritans. All the wine of Gaza was produced by the Jews (A.M. Luncz, in Yerushalayim, 1918). Obadiah of Bertinoro records that when he was there in 1488, Gaza’s rabbi was a certain Moses of Prague who had come from Jerusalem (Zwei Briefe, ed. by A. Neubauer (1865), 19). Gaza flourished under Ottoman rule; the Jewish community was very numerous in the 16th and 17th centuries. The Karaite Samuel b. David found a Rabbanite synagogue there in 1641 (Ginzei Yesra’el be-St. Petersburg, ed. by J. Gurland (1865), 11). In the 16th century there were a bet din and a yeshivah in Gaza, and some of its rabbis wrote scholarly works. Farm-owners were obliged to observe the laws of terumah ("priestly tithe"), maaserot ("tithes"), and the sabbatical year. At the end of the 16th century the Najara family supplied some of its rabbis; Israel Najara, son of the Damascus rabbi Moses Najara, author of the "Zemirot Yesra’el," was chief rabbi of Gaza and president of the bet din in the mid-17th century. In 1665, on the occasion of Shabbetai Zevi’s visit to Gaza, the city became a center of his messianic movement, and one of his principal disciples was "Nathan of Gaza. The city was occupied by Napoleon for a short time in 1799. In the 19th century, the city declined. The Jews concentrated there were mainly barley merchants; they bartered with the Bedouins for barley which they exported to the beer breweries in Europe. It was a Turkish stronghold in World War I; two British attacks made on Gaza in 1916–17 failed and it was finally taken by a flanking movement of Allenby. Under Mandatory rule Gaza
developed slowly; the last Jews left the town as a result of the anti-Jewish Arab disturbances in 1929.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

In 1946 Gaza’s population was estimated at 19,500, all Muslim except for 720 Christians. In the Israel *War of Independence, the invading Egyptian army occupied Gaza (May 1948). The town, together with the newly formed *Gaza Strip, was put under Egyptian administration by the armistice agreement of 1949. The influx of Arab refugees from the areas which became part of Israel swelled the city’s population at least fourfold. The 1967 census showed that 87,791 inhabitants lived in the city proper, while 30,479 lived in the refugee camp within municipal boundaries. Of these, 1,649 were Christian and the rest Muslim. In the *Sinai Campaign (1956), Gaza was occupied by the Israeli army (November 2, 1956) and evacuated in March 1957. The Egyptian army reinstalled itself in the Strip, but in the Six-Day War (1967), Israeli forces captured the town on June 6, and an Israeli military government was set up in the town. From 1969, there were frequent acts of terrorism and sabotage in the town, which remained the center of activity in the Gaza Strip. (For political developments see *Gaza Strip.)

It appears that in the historic past Gaza’s built-up area alternately expanded and decreased in size, particularly in the area between the city core and the seashore about 2 mi. (3 km.) distant. This expanse of dunes lay waste in the 20th century, until the British Mandate authorities allocated land for a nominal fee to anyone promising to build his house there within five years of signing a contract. Gaza’s principal east-west artery now runs through this area, up to the shore. From the 1940s the city also expanded eastward. In the northwest Gaza gradually links up with Jabalya and Nazala. Within the municipal area, there are orchards, fields, and kitchen gardens. Farming and sea fishing retain a place with small commerce and industries in the city economy, while pottery constitutes a prominent branch. After 1967, larger manufacturing plants (food, textiles, and other branches) were established there.

GAZA STRIP (Heb. גַּזָּה; Ar. غْزّة جُزَّة; Fasad al-Ghuzzah), an area located on the coastal plain between Israel and Egypt, covering around 140 sq. miles (362 sq. km.), and between 3 and 4.5 miles (5–7 km.) wide and 28 miles (45 km.) long. The Gaza Strip is not a separate geographical unit, but rather a political one that emerged after the Arab-Israeli War of 1948, when the territory of Palestine, a British Mandate from 1920 to 1948, was divided into three major entities: the independent State of Israel, inhabited predominantly by Jews, and the two Palestinian Arab “territories” of the West Bank (ruled by Jordan at that time) and the Gaza Strip (ruled by Egypt).

**Gaza Strip under Egyptian Rule**

The Armistice Agreement of February 1949 between Israel and Egypt established the borders of the Gaza Strip according to the ceasefire boundaries, although the districts of Beit Ḥanūn and Abasān were given to Egypt by Israel. This agreement proved to be fragile. From the early 1950s, Palestinian Fidaiyyūn (lit. those who are ready to sacrifice their lives for their cause) launched attacks from the Gaza Strip on Israeli military and civilian targets. Taking the view that Egypt had initiated these attacks, Israel carried out several raids in the Strip. In 1956, as part of the *Sinai Campaign, Israel occupied the Strip and held it between November 2, 1956, and March 8, 1957. The subsequent period of Egyptian control that followed was relatively quiet, until the outbreak of the Six-Day War in June 1967, when Egypt lost the Strip to Israel (and Jordan lost the West Bank to Israel).

Demographic change was much more radical in the Strip during the 1948 War than in the West Bank, and had significant economic and social consequences. Some estimates sug-
gest that during the 1948 War the population of the Strip multiplied by 4.5 times (from 80,000 to 360,000) due to the influx of Palestinians from Arab villages in Israel pouring into the Strip in search of protection from the Egyptian army. Eight refugee camps were set up and administered by the newly created United Nations Relief and Works Agency (UNRWA) where their residents obtained food, basic housing, medical care, and schooling. Unemployment was high because there were not enough jobs in the local economy, largely based on agriculture and small businesses; employment outside the Strip was not permitted until 1952, when Egypt opened its border to allow workers to enter. Yet even then job opportunities were limited. At least half of the labor force remained unemployed, and those who found work earned very little.

In 1957, after regaining control of the Strip, Egypt took some measures to relieve the situation, which included improving the seaport of *Gaza and encouraging exports. Although this had a positive effect for some Palestinians, it did not bring about fundamental structural change, and “national output” from the Strip did not significantly increase; in the last full year of Egyptian control over the Strip, per capita GNP stood at only US$80 (about 1,500 NIS in 2005 prices).

From Direct Control to Disengagement: Israel and the Gaza Strip

At the end of the Six-Day War in June 1967, Israel seemed very determined to hold on to the Strip. Prime Minister Levi *Eshkol declared that “Israel intends to keep the former part of Jerusalem and the Gaza Strip” and his defense minister, Moshe *Dayan, declared that “the Gaza Strip is Israel’s and steps will be taken to make it part of this country.” Even so, a full annexation did not follow these declarations. Although small settlements of Israeli Jews were established in the Gaza Strip, it was only in stages that the notion of annexation was replaced by that of separation.

In the Camp David Accords between Israel and Egypt in 1978, Israel signed “a framework for peace in the Middle East” which called for the implementation of an autonomy plan for the West Bank and Gaza Strip, but left open the question of sovereignty over these territories. In 1994–95, in the Oslo Accords between Israel and the Palestine Liberation Organization (PLO), a timetable was drawn up for the withdrawal of Israeli forces from the Gaza Strip and the West Bank, and for the formation of a self-governing Palestinian entity, leading to the establishment of a Palestinian state. The so-called permanent status issues such as the fate of Palestinian refugees, the future of Israeli settlements in the West Bank and Gaza, and agreed borders between Israel and a Palestinian entity, were deliberately excluded from the Accords and left for future negotiations. Subsequently, the Palestinian Authority (PA) was established as the new governing regime in the Strip. Israel handed over some areas in which both civilian and security authority were transferred to the PA. However, violence and violations on both sides have held back progress in accordance with the Oslo Accords timetable. Nevertheless, the process of separation has been ongoing.

In September 2005, Israel withdrew its troops and all Jewish settlers from the Gaza Strip and relinquished control of certain areas of the northern West Bank, in accordance with its unilateral Disengagement Plan, and the PA took control of the Strip. Israel, however, was to continue to control the Strip’s borders and gateways, although the southern border – the “Philadelphi Road” – was to be guarded by Egypt. While the Israeli government expressed its hope that existing economic relations with the PA would be maintained, the Hamas victory in the Palestinian parliamentary elections in January 2006 threw future relations into doubt.

[Amos Nadan (2nd ed.)]

Nationalism, Politics, and Violence

The history of Gaza since 1967 should be seen within the context of the reemergence of Palestinian nationalism, Islamic political revival in Palestinian politics that began in the 1970s, and attempts to settle the Israeli-Palestinian and Arab conflict, especially since the outbreak of the Intifada in 1987; Regarding the ebb and flow of politics and violence within Gaza itself, it was highly volatile in the first years of Israeli rule, quiescent and peaceful between 1972 and the early 1980s, and after the eruption of the Intifada in December 1987, became steeped in almost perpetual violent struggle against Israeli rule. Gaza also became the scene to the most extreme forms of internecine political contention and violence, mostly between Fatah, the largest nationalist faction within the PLO, and the Hamas, the major Islamic movement.

Why violent opposition to Israeli rule was greater in Gaza than in the West Bank during the first years of Israel’s rule had to do with Egyptian policy before the Six-Day War. Unlike Hashemite Jordan, which went to great efforts to stifle Palestinian identity and curtail PLO political activity, Egypt, the former ruler, had been engaged since 1959 in actively promoting a Palestinian identity and institutions in Gaza as part of its political offensive against Israel. After 1964, this included the PLO and its military arm, the Palestinian Liberation Army; their performance against the Israel Defense Forces (IDF) in the Six-Day War won high marks from Israeli military analysts.

It was these former officers and soldiers in the PLA who served as the nucleus of violent opposition to Israeli rule that began in 1968 and reached its zenith in 1970–early 1971 when 17 Israelis were killed in Gaza as a result of terrorist activity emanating from there. Terrorist activity was virtually stamped out by Israeli forces under General Ariel Sharon, Head of Southern Command, who employed techniques such as specialized anti-terror units acting in disguise and the employment of armored military craft in urban warfare, which later became better known in subsequent more intense rounds of Israeli-Palestinian violence under increasing media scrutiny.

Yet Israel’s response in itself was hardly sufficient to wipe out terrorism. Israel, after initial hesitation, opened its labor
market during these years to a job-hungry population (see below) while an additional ten percent of the workforce was directly linked to providing transportation for these commuters. Employment in Israel was the major factor in the vast improvement in the standard of living. It also had its limitations – the Israeli market offered blue collar work only – a form of employment that became a growing source of frustration for an increasingly educated Palestinian workforce. Nevertheless, prosperity brought tranquility until the early 1980s.

Calm gave way to increasing tension as the PLO, principally Fatah and the Islamic Brotherhood, began forming “front” social and political institutions that not only provided social services but had the added advantage of employing the new augmented ranks of high school and university students. There was also political friction, focused mainly around Gaza University, established in 1978, between student blocs affiliated to Fatah, Islamic Jihad, formed in 1983, and the local Muslim Brotherhood, which in early 1988, after the outbreak of the Intifada, became known as the Hamas.

These organizations became recruiting grounds for the “military” wing of these political forces in Gaza with the result that even before the outbreak of the Intifada, Gaza became the stage of increasing acts of terror, the most dramatic of which was the clash in October 1987 between three al-Jihad al-Islami members who had escaped detention and Israeli General Security agents, leading to the death of an Israeli agent. The incident had a dramatic effect; for the first time since 1971, “the resistance,” as it was known in Palestinian society, had succeeded in killing a member of an elite security unit of almost mythic proportions.

The trend of increasing violence paled in comparison to the mass violence that broke out on December 8, 1987, in Jabaliyya Refugee Camp and elsewhere over rumors that an Israeli had deliberately crashed into a vehicle killing four Palestinians. Thousands took to the streets in massive daily confrontations against a small hard-pressed Israeli military presence in Gaza. If political forces were not responsible for the outbreak of Intifada, they were crucial in assuring its persistence; the Unified National Command of the West Bank and Gaza, consisting of members of the four major factions under the PLO umbrella, Fatah, the Popular Front for the Liberation of Palestine, the Democratic Front for the Liberation of Palestine, and the Palestinian Communist Party, organized activity directly and through a series of leaflets; the Hamas and Islamic Jihad did much the same through its own separate organizations and leaflets.

Soon mass activities and violence, characterized by stone throwing and use of incendiary bombs, gave way to increasing terrorist activity by a professional “salaried” hard core; the establishment of the ‘Izz al-Din al-Qassam Brigades in Gaza, Hamas’ military wing in 1989, and its kidnapping and killing of an Israeli soldier in that year were, in retrospect, the most significant actions. This ushered in a series of killings culminating in the expulsion to Lebanon of nearly 413 Hamas and Jihad activists in December 1992. Their expulsion and even more so their subsequent repatriation, was an egregious mistake; in Lebanon they perfected their skills to use explosives, under the aegis of Hizbollah, leading to the introduction of suicide-bombing, a new and more lethal mode of terrorism. The first suicide bombing, by a member of the al-Jihad al-Islami, took place in April 1993 in the Jordan Valley. Nevertheless, Fatah was still the major political and military force, even in Gaza, when the Palestinian Authority as part of the Oslo peace process was created.

For a brief period in Palestinian politics between the establishment of the PA in July 1994 and the entry of the PA into the six major towns of the West Bank in January 1996, Gaza held the limelight as Yasser Arafat set up headquarters in the city of Gaza. Even afterwards, Arafat, realizing the popularity of the two major Islamic organizations native to Gaza, spent much of his time, if not most, in Gaza to assure his control in the area. Most of the other formerly Tunis-based Palestinian politicians and organizations preferred, however, Ramallah and even though sessions of the Palestinian Legislative Council, elected in January 1996, took place in both, increasing government business was transacted in the latter.

Arafat’s political instincts were correct. For the PA and Arafat, Gaza became a major source of opposition; in November 1994, PA security forces gunned down 12 mostly Hamas activists coming out of mosque in the city of Gaza to quell a continuation of mass protests against the PA for arresting and harassing its members; the three suicide bombings in early March 1996 in the city of Gaza were all planned, organized, and carried out in Gaza by the Hamas. Israel reacted to suicide-bombing by curtailing work permits and targeting Hamas and Islamic Jihad terrorists.

Nevertheless, there was some room for hope and prosperity. An airport in Dahaniya in Gaza was opened, the Erez industrial park in the north rapidly expanded, and another industrial park was established in Karni, but none of these developments could make up for restricted and much reduced access to the Israeli labor market and led to a 40 percent decline in the average income level since the Oslo peace process in 1993.

Access to the Israeli labor market terminated almost completely with the outbreak of armed conflict between the PA and the Palestinian factions in September 2000; Gaza became the stage of mass armed demonstrations and protests and soon thereafter of recurring armed assaults and suicide attacks against the Israeli military and civilian presence there, including 18 settlements established since 1971. Unlike Judea and Samaria, where two massive IDF military offensives in 2002 and the partial reoccupation of its towns brought about a significant reduction of terrorism and armed attacks, in Gaza terrorism and guerrilla activity increased from 2002 to 2005 reaching levels of violence unparalleled in Judea and Samaria, which even in the assassination of Ahmad Yasin, the founder and leader of Hamas in March 2004, and one month afterwards of his successor, ‘Abd al-‘Aziz al-Rantisi, only temporarily reduced.

[Hillel Frisch (2nd ed.)]
Socioeconomic Features under Israeli Rule

The Israeli occupation of the Gaza Strip in 1967 brought immediate economic relief to Gaza’s residents, as Israel opened its labor market to Palestinians. In 1968, according to Israeli statistics, about 82.5% of the Strip’s laborers were employed. In 1973 this figure reached 99.1%, with about one-third (32.7%) of these workers finding their main employment in Israel. The level of employment in Israel continued to increase. In 1979 it stood at 42.4% and in 1986 at almost half of the total (46.1%); in Israel, the Palestinian workers from Gaza were engaged in labor-intensive jobs, but their wages were far lower by 59% than those of the Israeli workforce. From 1968 to 1986 the average annual population growth in the Strip stood at 2.2%, with an annual growth of 2.5% in per capita GDP (from 3,508 NIS to 5,964 NIS in 2005 prices); yet this deteriorated between 1979 and 1985 (from 6,593 NIS to 5,346 NIS). These trends were significantly different from the more economically viable West Bank: in 1968 per capita GDP in the Gaza Strip was 18% less than in the West Bank, but by 1986 it was lower by 55%.

The Intifada (“uprising”) of 1987 was the first Palestinian national revolt since the Israeli occupation 20 years earlier. The socioeconomic roots and consequences of this Intifada were significant. At its onset, the 1987 Intifada was a spontaneous disturbance, not directed by a recognized national leadership; it also started in the poorest region – the Gaza Strip – and spilled over into the West Bank. The group of rebels who initiated the revolt was essentially people who used to work in Israel, who felt poor and discriminated against, and hoped for change. To some extent, the Intifada of 1987 acted as a labor-separator between the Strip and Israel. By 1993, the level of Gazan workers employed in Israel and in Israeli settlements had dropped to 26.5%. Moreover, several suicide attacks by Palestinians in Israel in 1994 and 1995, and the border “closure policy” of the Israeli government, brought a further reduction of Gazans employed in Israel: in 1995 only 3.3% of Gazans were employed who had found work in Israel. However, this gradually changed, and by 1998 the number had risen to 16.2%.

The Intifada of 2000, the second revolt against Israeli occupation, was supported and sustained from the outset by the PA, as well as by the Islamic opposition groups in Gaza. While per capita GDP figures suggest that the economic crisis of the first Intifada was not particularly serious, the socioeconomic consequences of the 2000 Intifada were undoubtedly much more severe. There was an average annual decline of more than 14% in GNP in Gaza between 1999 and 2002, and the average level of Gazan employment in Israel fell to below 1%, compared to 19.2% in October 2000 and mid-2004.

[Amos Nadan (2nd ed.)]

GAZELLE (Heb. גֶּזֶל, zevi). The gazelle is included among the seven wild animals permitted as food (Deut. 14:5; 12:15), and is the only one among them that has survived in Israel. Though it was almost extinct in the early 1940s, there has been a considerable increase in the number since the passing of the Wild Life Protection Law by the State of Israel, which made hunting the gazelle an offense, and today hundreds of them are to be found in the Judean hills and in the Negev. There are two species of gazelle in Israel; the more common is the GAZELLA gazella, which is grayish-brown in color, 55 inches (140 cm.) in length, and up to 27½ inches (70 cm.) in height. The other species, GAZELLA dorcas, which is found in the Negev, is light-brown in color, has large ears and diverging horns, and stands only 23½ inches (60 cm.) high. The gazelle’s delicate appearance, its slender legs, narrow body, and beautiful eyes, makes it a symbol of grace and beauty (Song 2:9; 4:5; 7:4). It was hunted extensively for its delicious meat (Isa. 13:14; Prov. 6:5). Its light-footedness became a symbol of speed (11 Sam. 2:18). In Song of Songs (2:7; 3:5) there twice occurs the adjuration “by the gazelles and by the hinds of the field,” the reference being to the habit of the males and females of living apart during most of the year and meeting again at the mating season. Perhaps the maiden here intimates that her beloved will surely return to her. Because the gazelle is not found in Europe, the translators of the Bible there identified the zevi with the “deer” (Heb. לְבִי), which abounds there. Whereas, however, the horns of the deer are branched and solid (“antlers”), the Talmud clearly states that those of the zevi are unbranched (Hul. 59b) and hollow (TJ, Er. 1:17, 19b). “Gazelle” and not “deer” is also the meaning of the Aramaic and Arabic cognates of zevi. The halakhah refers to the prohibition of crossbreeding the gazelle with the goat, which it resembles (Kil. 1:6), the progeny of such crossbreeding being, according to some, the animal known as the koi (Hul. 32a).

[Jehuda Feliks]
cattle, dairy cattle, and poultry along with plastics, rubber, and furniture factories. Its population was 415 in 1968 and 581 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

GDANSK (Ger. Danzig), major commercial port in Poland, situated at the estuary of the Vistula on the Baltic. In 1308 the city passed to the Teutonic Order, which prohibited Jewish settlement there. During the first half of the 15th century Jews from Poland and Lithuania frequently visited the town but this tolerance was limited in 1438. Around 1440 a “Judengasse” (“Jewish Lane”) existed on the bank of the Motława. Toward the end of the 15th century, after the town had been incorporated in Poland, it became the wealthiest city of Poland, and the entrepôt for the large commerce in grain and goods between Western and Eastern Europe. This created many commercial possibilities for Jews. However, their activities were restricted by the autonomous status of Gdansk, which enabled the city to discriminate against them. In 1476 the Polish king recommended the city council to permit two Jews to enjoy equal rights with the other merchants.

A Jewish settlement grew up in Gdansk after 1454, but owing to the opposition of the merchants in 1520 the Jews had to move to the Schottland suburb which was not under municipal jurisdiction. Subsequently Jews also settled in other places outside the jurisdiction of the city. On the intervention of King Sigismund I in 1531, the council withdrew the regulation prohibiting Jews from trading at the fair, but a resolution of the Sejmik (small parliament) of Prussia prohibited the extension of further rights to the Jews. In retaliation, the Jews of Lithuania boycotted the Gdansk banking house in Kaunas (Kovno) which had to be liquidated, and ousted the merchants of Gdansk from the Lithuanian salt trade. In 1577 an agreement was concluded between King Stephen Báthory and Gdansk approving the existing restrictions. The citizens also demanded that Jewish residence and trade in the city should be entirely prohibited. Jews were not allowed to hold religious services there, and in 1595 the city council permitted them to stay in Gdansk during fair days only. In 1616 the Gdansk authorities had to pay large indemnities for their arbitrary exclusion of Jewish merchants coming from Polish cities; subsequently Jews were allowed to stay six days in Gdansk against payment of a high poll tax.

Around 1616 about 400 to 500 Jews were living in Gdansk in addition to those settled in lands owned by the gentry or clergy. In 1620 the king permitted Jewish residence in Gdansk. They were permitted to trade in grain and timber in the commercial sector and Langengarten which belonged to the port area, and after these quarters were incorporated into Gdansk in 1626 these rights were extended to the whole of the city. However, the Polish-Swedish wars of the 17th century interrupted the trading activities of the Gdansk Jews. In the middle of the 17th century about 50 Jews became apostates to Christianity. One of them, Johann Salama, a teacher in the seminary of Gdansk, carried on missionary activity among Jews. Cramer, the pastor of Gdansk, in a sermon published in 1664, Der verstockte Jude, describes the martyrdom of a Jew who refuses to accept Christianity. During the 18th century, the main opposition to the Jews in Gdansk came from the representatives of small trades and crafts. The third Northern War, strengthening the position of Catholicism in Gdansk, aggravated the hostility to the Jews, and they were moved away from some of their quarters. However, a hevra kaddishu and bikkur holim were founded in the old Jewish quarter in Schottland (Stary Schottland) in 1724. The Jews who had been expelled returned in 1748, although according to a regulation endorsed by the king in 1750 they could only stay temporarily in Gdansk. There were about 1,098 Jews living in Gdansk in the areas outside the city jurisdiction in 1765, of whom 504 were living in Schottland and Hoppenbruch, 230 in Langfuhr, and 364 in Weinberg. In 1773, 50 families received the rights of citizenship in Gdansk and 160 Jews were permitted to reside there.

After Gdansk was incorporated into Prussia upon the second partition of Poland in 1793, the restrictions on the Jews remained in force. In 1813 Langfuhr and Schottland were destroyed, and the Jews there moved within the city. Between 1807 and 1814 Gdansk was a Free City, and after its renewed occupation by Prussia the Jews there obtained rights of citizenship by the Prussian liberation decree. There were anti-Jewish incidents during the “Hep! Hep!” riots in September 1819 and again in August 1821. Thirty-three Jews were received into the merchants’ guild, but by then the city’s commercial importance had declined. Jews were permitted to engage in crafts, and in 1823 the Society for the Promotion of Crafts Among the Jewish Population was founded.

Some Hebrew printing was done there in the 16th century in connection with Phillip Wolff’s Spiegel der Juden. In 1843 the printing house of Rathke and Schroth issued the Mishnah with the Tiferet Yisrael commentary by Israel Lipschuetz, who was rabbi at Danzig. They also published some works of Zevi Hirsch Edelmann from 1844 to 1845, including an edition of his Passover Haggadah, Leil Shimmurim. Abraham Stein, an adherent of Reform and later preacher in Prague, was rabbi of Schottland from 1850 to 1864. In 1888 the communities of Schottland, Langfuhr, Weinberg, Mattenbunden, and Breitegasse were amalgamated. The Jewish population numbered 3,798 in 1816, 2,716 in 1880 (2.4% of the total), 2,390 in 1910 (1.4%), and 4,678 in 1924.

In 1920 Gdansk was again declared a Free City, having a population of approximately 356,000. There were 7,292 Jews living in the territory of the Free City in 1923, and 9,230 in 1924, of whom 53.4% lived in Gdansk itself. A large number of Jewish emigrants passed through the port on their way to the United States and received assistance from the American Jewish Joint Distribution Committee and *Hias. The community had four synagogues and various Jewish organizations. The “Jung-Juedischer Bund-Danzig” was founded in 1920. A communal organ, Juedisches Wochenblatt, was published from 1929 to 1938. The Jews in Gdansk engaged in commerce and the liberal professions; more than 150 Jews were employed in
Adjoining Sopot was a popular summer and sea resort for many Polish Jews between the two world wars. It also attracted a number of Jewish émigrés from Soviet Russia. Despite large Nazi gains in the elections of 1933 and 1935, civil and economic order was upheld by Hermann Rauschning, president of the senate, until 1937, when the "minority rights provided for under the League of Nations lapsed. Albert Forster, the Nazi gauleiter, dismissed almost all Jews from practice in the liberal professions. In October 1937 a full-scale pogrom was initiated. Half of the Jews left Gdansk within a year, the Polish government offering them no protection. Between Nov. 12 and 14, 1938, two synagogues were burned down and two others were desecrated. Shops and homes were looted. The Jewish community decided to organize emigration and many left. By September 1939 barely 1,700 remained, mostly elderly persons, and by early 1941, just 600. The last group to leave sailed for Palestine on the ill-fated *Patria*, which was sunk by the British in Haifa port. Of those who remained, 395 were deported during February and March 1941 to Warsaw and 200 from the Jewish old age home were sent to Theresienstadt. Twenty-two Jewish partners of mixed marriages who remained in Gdansk survived the war. After the city reverted to Poland in 1945, a number of Jews settled there. Few remained by the end of the 1960s.

**Geba** (Heb. גֵּבָה, "hill"), common name of inhabited places in Erez Israel from biblical times onward; its Arabic form (*Jaba*) has survived in the names of several Arab villages. Important places bearing this name include:

(1) A city of *Benjamin*, near the northern border of the tribe, the present-day *Jaba*, a Muslim village some 5½ mi. (9 km.) north of *Jerusalem* and 2 mi. (3 km.) east of al-Rama, situated on an ancient tell containing Iron Age remains. Because of the similarity between the names *Geba*, *Gibeah*, and other places in the area, it is sometimes difficult to determine exactly which place the Bible refers to, especially since there are also interchanges and probable errors in the text (e.g., in Judg. 20:10 *Gibeah* is meant and in 11 Sam. 25 *Gideon*, according to the parallel verse in 1 Chron. 14:16). It is therefore not certain whether *Geba* of the Benjaminite cities (Josh. 18:24) is the one under discussion or a more northerly city known to Eusebius, 5 Roman miles north of *Gophnah* (Onom. 74:2). *Geba* is one of the levitical cities (Josh. 21:17; 1 Chron. 6:45) and was apparently the seat of the family of *Ehud*, the son of *Gera* (Judg. 3:13; 1 Chron. 6:8), and was also established that this reference is not to *Gibeath ha-Elamin*, which was the site of the Philistine garrison (1 Sam. 10:5), is identical with the *Geba* being discussed, and this indicates that a "high place" existed there during the time of Saul.

Asa fortified *Geba* with stones taken from nearby *Ramah* (1 Kings 15:22; 11 Chron. 16:6); excavations at *Geba* have also established that this reference is not to *Gibeah*, as some scholars have claimed. *Geba’s* strategic position on the eastern branch of the northern highroad is described by Isaiah (10:29) and it is logical that this is the same city which is mentioned on the border of the kingdom of *Judah* in the latter days of the *First Temple* (11 Kings 23:8; Zech. 14:10; Neh. 11:31). From the statement that "*Josiah* brought the priests to Jerusalem "from *Geba* to Beer-Sheba" (11 Kings 23:8) it seems likely that up to his time a sanctuary was located in the city (especially after the discovery of an *Israelite* temple of this period at *Arad* on the southeastern border of the kingdom). *Geba*’s destruction came about with the fall of the First Temple and it was rebuilt in the post-Exilic period; the exiles who returned to it are listed together with those from neighboring *Ramah* (Ezra 2:26; Neh. 7:30; and see Neh. 12:29).

[Yohanan Aharoni]

(2) *Geba-Parashim* (Gr. *Geba Hippeon*, "Geba of the Horsemen"), city in Lower Galilee near the Jezreel Valley founded by *Herod* who settled demobilized cavalrymen there (Jos., Ant., 15:294; Wars, 3:36). It served as a *Herodian* and Roman administrative center in the valley and enjoyed several urban privileges, including the right to mint city-coins. During the *Jewish War* (66–70/73) fighting between the Romans and the Galilean rebels under the command of Josephus took place near *Geba* (Jos., Life, 115). The city was in existence until the fourth century C.E. and was the seat of a Christian bishop. Most scholars identify it with *Khirbat Harithiya* near a key road at the entrance of the Jezreel Plain. Another suggestion is that *Hellenistic* *Geba* corresponds to the *Geba* mentioned in the list of Thutmose III’s conquests (No. 41, *Geba-Shemen*) which has been identified with Tell al-Amr in the same neighborhood.
(3) Geba, a place mentioned in the Mishnah (Kelim 17:5) and Tosefta (Kelim; BM 6:10) as being inhabited by Kutim (Cutheans). This city has been identified with the Arab village of Jaba, 3 3/4 mi. (6 km.) north of Samaria. It is also mentioned in the Samaria ostraca from the eighth century B.C.E.

GEBIHA OF BE-KATIL (first half of the fifth century), Babylonian amorah. Gebiha headed the academy of Pumbedita during the years 419–33 (Iggeret Sherira Ga’on (1921), 96) and lectured on halakhah at the bet ha-midrash adjoining the house of the *exilarch. His younger contemporaries *Amemar and *Ashi discussed the meaning of his pronouncements (Bezah 23a). Gebiha, who spanned a number of generations of amoraim, mentions the rulings of Abbaye (Ḥul. 64b; Me’i. 10a), transmits cases that came before Rava (Av. Zar. 22a), and is also frequently found debating halakhic topics with Ashi (Ḥul. 26b; et al.).

GEBIN (first century), Temple crier of the Second Temple (Shekalim 5:1). His role was to rouse those on duty to the performance of the Temple rites. According to the *baraita his cry was, “Priests, bestir yourselves to your service, levites to your platform (for song), Israelites to your posts” (“Ma’amad; Yoma 20b; T. Shek. 5:2, 48d). The Mishnah states that his voice could even be heard as far as Jericho (Tam. 5:8). His stentorian voice became legendary. The *baraita adds that King Agrippa heard his voice at a distance of three (another version, eight) parasangs, and sent him a gift in admiration. It is believed that the name became an eponym for all subsequent Temple criers.

GEDALGIE, ANDRE (1856–1926), music theorist, teacher, and composer. Born in Paris, Gédalge studied composition with Guiraud at the Paris Conservatory, where he later became a professor of counterpoint and fugue (1905). In 1885 he won the second Prix de Rome (1885) for his cantata La Vision de Saul. He became famous as a teacher, and his Traité de la fugue (1901) is still considered one of the best books on the subject. He also wrote two volumes on ear training (1921–23). His experience, as an inspector of provincial conservatories (1901), led him to write his L’enseignement de la musique par l’éducation méthodique de l’oreille (Paris, 1920). Gédalge composed four symphonies; chamber music such as String Quartet (1892) and two violin sonatas (op. 12 in 1897; op. 19 in 1900); the ballet Phoebé (1900); pieces for piano such as Préludes et fugues, op. 2 and three préludes de concert, op. 23 (1903); an opéra-comique, Pris au piège (1895); a drame lyrique, Hélène (1893), which won the Prix Cerescent in 1895; and songs. He remained uninfluenced by the developments of impressionism and continued to follow the tradition of Saint-Saëns and worldwide; and new collections of his work have continued to appear: e.g. Mayn Fayfele: Umbakante Lider (“My Little Pipe: Unknown Songs,” 1997) prints 80 songs hitherto unknown (ed. N. Gross, with Y. Luden’s Yiddish translation of Gross’s Hebrew introduction).

[M. Rav / Leonard Prager (2nd ed.)]

GECKO, reptile of the order Lacertilia. Six genera belonging to the Gekkonidae family are to be found in Israel. The most common is the house gecko, Hemidactylus turcicus, a nocturnal lizard up to about 4 1/2 inches (12 cm.) in length, with a soft speckled hide and prehensile feet which enable it to climb walls. Two animals referred to in the Bible are likely to be identical with the gecko. The anakah is included among the unclean swarming things (Lev. 11:30) and has, according to the Mishnah (Ḥul. 9:2), a soft hide. The word anakah means “groan,” and the gecko does in fact emit a sound reminiscent of the groan of a sick person. The Book of Proverbs, in its enumeration of the “things which are little upon the earth, but... are exceeding wise” (30:24), mentions the semanimit, which “taketh hold with her hands, and is in kings’ palaces” (ibid., 28). This description fits the ubiquitous gecko which climbs on walls with feet that resemble hands. Although many other identifications have been suggested for the anakah and the semanimit, the gecko fits them best.

[Jehuda Feliks]
Lalo. However, his main contribution to French music was through his influence on composers such as Florent Schmitt, Ravel, Milhaud, and Honegger, who were his pupils.

[Israel Stein (2nd ed.)]

GEDALIAH (Heb. גְּדַלְיָה), son of Ahikam. Gedaliah was appointed by the Babylonians as governor of Judah after the capture of Jerusalem in 586 B.C.E.; members of his family had held important posts during the last decades of the kingdom of Judah. His grandfather 'Shaphan and his father 'Ahikam supported Josiah during the latter's reforms (11 Kings 22:3ff., 12ff.). Ahikam held an important post during the reign of Jehoiakim and was able to save Jeremiah from the anger of the people after his speech at the Temple gate (Jer. 26:24). Evidently this family followed a line of moderation and submission to Babylon, which explains the choice of one of its members to govern the remnant in Judah (see also *Elasah, *Jaazaniah). Gedaliah may even have been a man of influence and status before this time (11 Kings 25:22; Jer. 40:5). He has been identified with the official of the same name, who was “in charge of the house”; the identification was made by means of a seal impression reading *lgdlyhw ʾsr ʾl hbyt, which was found at the town gate of *Lachish, a town burned and destroyed in the last days of the kingdom of Judah.

Gedaliah resided at *Mizpah in the territory of Benjamin. The remaining people of Judah who gathered around him included army officers who had escaped capture and deportation by the Babylonians. May and other critics claim that Gedaliah served as the representative of the exiled *Jehoiachin who was still considered king of Judah, but there is no real basis for this assumption. The center at Mizpah was not long lived and Gedaliah, together with the Judahites and Babylonians stationed at Mizpah, was murdered by *Ishmael b. Nethaniah, who was in contact with *Baalis, king of the Ammonites. The assassination was instigated apparently with the hope of overthrowing Babylonian rule. Those who were spared, including several army officers, fled to Egypt, taking Jeremiah with them, out of fear that the Babylonians might consider them responsible for the murder of Gedaliah (11 Kings 25:25–26; Jer. 41:1ff.).

Several scholars have suggested that the Babylonian Exile from Judah in the 23rd year of Nebuchadnezzar’s reign (Jer. 52:30) is connected with the murder of Gedaliah (cf. Jos., Ant. 10:181), but this assumption requires the dating of the murder in 582/1 B.C.E., whereas according to the biblical record, Gedaliah governed only for a short time, either until the seventh month of the year of destruction (587/6) or the seventh month of the following year (586/5). The day of Gedaliah’s death was observed as a fast day, and is called “the fast of the seventh month” in the Bible (Zech. 7:5; 8:19) and, at a later date, the Fast of Gedaliah (see *Fasts and Fasting). According to tradition it is observed on the third of Tishri (RH 18b).

**GEDALIAH HA-LEVI**

GEDALIAH, (Don) JUDEA (d. c. 1526), Hebrew printer. Gedaliah, who was born in Lisbon, worked there at Eliezer *Toledano’s Hebrew press (1489–95) until the expulsion from Portugal (1497). He settled in Salonika, establishing the first Hebrew printing press there using fine type fonts he had brought from Lisbon. Between 1515 and 1535 he, his daughter, and his sons (who continued the firm after his death) carefully edited and printed about 30 Hebrew books including the first edition of *Ein Yâkover of R. Jacob ibn Habib (1516–22). The latter, in his introduction, highly praised Gedaliah for his efforts in spreading the knowledge of Torah among the other Iberian refugees in Salonika.

**BIBLIOGRAPHY:** A. Freimann, in: ZHB, 11 (1907), 52–53; J. Bloch, Early Hebrew Printing in Spain and Portugal (1938), 34–54; H.D. Friedberg, Toledot ha-Defus ha-Ivri bi-Medinat伊talyah... (1956), 130ff.

[Israel Liver]

GEDALIAH, JUDAH BEN MOSES (16th century), scholar in Salonika. Nothing is known of his life, but his important works remain. They are Maseoret Talmud Yerushalmi, indexes of parallels to the Jerusalem Talmud (Constantinople, 1573); notes on the Midrash Rabbah and the Five Scrolls (Salonica, 1593/94). In this latter work Gedaliah reveals a sound critical aptitude and extensive philological knowledge. He explains most of the difficulties found in the Midrash, and is extensively quoted by later commentators. His notes on the Zohar Hadash (Salonika, 1596/97) also reveal his critical insight. In the Bodleian Library there are preserved a few volumes of the Bombberg edition of the Babylonian Talmud with his notes in manuscript.

[Jacob Hirsch Haberman]

GEDALIAH HA-LEVI (d. after 1610), kabbalist and rabbi in Safed, Ereẓ Israel. Gedaliah, the brother-in-law of Ḥayyim *Vital, was one of the “initiates” of Isaac *Luria, i.e., one of his important and early disciples. His signature appears on the writ of association of Luria’s disciples (1575). He edited and arranged according to Luria’s instructions the Derushet ha-Melakhim she-Metu, which appeared in Kol ba-Ramah (Korets, 1785) and exists in several unsigned manuscripts. Solomon Shlomel Dresnitz, author of Shivhei ha-Ari, heard tales about Luria directly from Gedaliah.

[Itzhak Alfassi]
GEDALIAH OF SIEMIATYCZE

GEDALIAH OF SIEMIATYCZE (early 18th century), Jerusalem emissary. Gedaliah, followed by his brother R. Moses of Siemiatycze, arrived in Jerusalem on Oct. 14, 1700, in the group headed by R. *Judah HaSag. For most of the immigrants, including Gedaliah, the objective of this aliyah was to hasten the redemption by ethical conduct, repentance, prayer, fasting, and self-mortification. Gedaliah was sent later on, as the emissary of the Ashkenazi community of Jerusalem, to Western Europe where he published his work on the virtues of Ereẓ Israel, Sha‘alu Shelom Torahalayim (“Pray for the Peace of Jerusalem,” Berlin, 1716). In it Gedaliah describes the aliyah of R. Judah Hasid and his group; the arrival of the group in Jerusalem and the death of their leader soon after; the arrangements of the “courtyard” which they acquired; the oppression of the authorities who extorted a great sum of money from them in the form of taxes and bribery; and the methods of collecting the poll tax. He also depicts Jerusalem life in general: the food, the fruits and vegetables, the methods of baking and cooking, the water supply, clothing, the means of travel, the means of transport, the feeding of cattle, and the means of travel. An account is also given of the decrees issued by the government and the unrest during the first years after the arrival of the group.

His brother, R. Moses of Siemiatycze, was accepted in 1702 as one of the teachers in the yeshivah founded by Abraham *Rovigo in Jerusalem; about 1711, he visited Metz as the emissary of the Ashkenazi community of Jerusalem. He died after 1716.

[Avraham Yaari]

“GEDDES, ALEXANDER” (1737–1802), Catholic Bible scholar. Born in Scotland, he studied in Paris, learning Hebrew at the Sorbonne. After ordination he served as priest in various places in Scotland in the years 1764–80. In 1781 he was dismissed by his bishop for his liberal views. He moved to London, where under the patronage of a wealthy Catholic he was able to devote himself to biblical studies. A versatile scholar and prolific writer, Geddes published after many preparatory works The Holy Bible … translated from the corrected Text of the Original; with various readings, explanatory notes, and critical remarks (2 vols., 1792–97; embracing only the historical books). Already in conflict with the Church, Geddes was suspended from exercising his priestly functions on account of the critical attitude contained in his Critical Remarks on the Hebrew Scriptures, Corresponding with a New Translation of the Bible; Containing Remarks on the Pentateuch (1800). He disputed Moses’ divine inspiration, explained the miracles in a natural way, and saw in the Pentateuch an assemblage of numerous and mostly post-Mosaic fragments. He thus established the “fragments” hypothesis, which was accepted and developed by J.S. Vater, and one of whose outstanding exponents was W.M.L. de Wette.

GEDERAH, GEDEROTH

GEDERAH (Heb. גְּדֵרָה), moshavah with municipal council status (since 1949), in the Coastal Plain of Israel, 8 mi. (13 km.) S.W. of Rehovot. It was founded in 1884 by young members of the *Bilu movement from Russia. Gederah was for a long time the southernmost Jewish settlement in the country and also the only veteran moshavah independent of Baron Edmond de Rothschild’s aid and administration. Initially, grapes and grain constituted Gederah’s principal farm branches; later citrus orchards, cotton, and other intensive field crops were added. In the 1930s a number of rest houses, among them sanatoriums for respiratory ailments, were established there. The moshavah had a few small industrial enterprises in food and other branches. Its municipal boundaries included Uriel, a village for the blind who were employed in certain branches of agriculture and handicrafts, and Kannot, a *Youth Aliyah children’s village. In 1970 its population was 5,200. By the mid-1990s the population had risen to approximately 9,650, and by the end of 2002 it was 11,700, occupying an area of 5.6 sq. mi. (14.5 sq. km.). The town served as an urban center for its rural neighbors. Residents earned their living in agriculture, industry, commerce, and services.

Gederah’s name is derived from the neighboring Arab village Qatra – abandoned since 1948. Most scholars assume Qatra to be identical to the town of *Gederah belonging to the tribe of Judah (Josh. 15:36), and, with greater certainty, to the town Kedron mentioned in 1 Maccabees (15:39; 16:9) as the scene of one of Judah’s victories over Syrian forces. The Greek form of the name has been preserved by moshav Kidron founded north of Gederah in 1949.

[Avraham Yaari]

[David Tamar]
GEDUD HA-AVODAH (Heb. “The [Yosef Trumpeldor] Labor Legion”), first countrywide commune of Jewish workers in Palestine. The Gedud was founded in the autumn of 1920 by 80 pioneers of the Third Aliyah, disciples of Yosef "Trumpeldor. In the winter of 1920 the Gedud contracted to build part of the Tiberias–Tabgha road in Galilee. The members decided to establish a permanent form of communal life at their camp near Migdal, with a common treasury. In the spring of 1921 some of the members were sent to Rosh ha-Ayn to lay the branch railroad to Petah Tikvah and at the same time to serve as the nucleus of a second Gedud, which soon grew to 300 members. In early summer representatives of the groups met at Migdal and defined the Gedud’s aim as “the building of the land by the creation of a general commune of the workers of the Land of Israel.” The members were to be organized in disciplined groups, which would be at the disposition of the *Histadrut for labor and defense. In the course of time it was intended that the Gedud would encompass all workers and merge with the Histadrut. Among its leaders were M. Elkind and Y. Kopelowitz (*Almog); Yizhak *Sadeh was an active member. As road work diminished, “companies” of the Gedud went to the Jezreel Valley, where they founded *Ein Harod (1921) and *Tel Yosef (1923), forming a single farming unit. A large group went to Jerusalem to work in building and quarrying and to strengthen the armed defenses of the *Yishuv there. Others worked in agriculture and building and provided services at British army camps. At its zenith the Gedud had some 700 members. In July 1923 the Tel Yosef–Ein Harod group split over a minority demand for economic autonomy, about one-third of the members settling in Ein Harod and the majority in Tel Yosef. A minority attempt to turn the Gedud into a political party, with syndicalist and pro-Communist tendencies, resulted in another split, in 1926, into right-wing and left-wing factions. The left wing soon disintegrated, as some of its members, including Elkind, went to the Soviet Union. They set up a communal farm in the Crimea, Via Nova, which was disbanded in 1931–32. The Gedud was seriously weakened, and in December 1929 the three surviving groups – Tel Yosef, Kefar Giladi, and Ramat Rahel – joined *Ha-Kibbutz ha-Me’uhad. At its peak the Gedud played an important pioneering role in settlement, defense, and labor. Over 2,000 pioneers passed through its ranks, and its influence was out of proportion to its membership. It published a periodical, Me-Hayyenu and maintained a dramatic studio, Massad (“Foundation”).

[Michael Avi-Yonah]
highly successful career based on protest and uncompromising social comment. As a conscientious objector he controversially refused to serve in the Israeli army.

As the son of writer, lyricist, satirist Yehonatan Geffen, the young Geffen was exposed to the music and entertainment industry as a child. He recorded his first single, "Haver" ("Friend"), when he was just 17. Although the song did not meet with success Geffen immediately set about recording his debut album, Zeh Rak Or ha-Yare'ah ("It's Only the Moonlight") with his band Ha-Ta'uyyot ("The Mistakes"). He began to tour the country intensively and gradually built up a faithful and enthusiastic following, particularly among teenagers. His lyrics largely addressed burning issues of the day, such as the Middle East conflict, violence, drug and alcohol abuse, and parent-child relationships.

Other artists began discovering Geffen's songwriting talents, and popular singers such as Nurit Galron and Dafna Armoni recorded his material. Geffen received the ultimate accolade for a young Israeli songwriter when iconic singer Arik "Einstein recorded his song 'Livkot Lekha' ("Crying For You").

Geffen's second album, Akhshav Me'unan ("It's Cloudy Now"), released in 1993, sold well and reflected Geffen's musical influences from the 1960s, including the likes of the Beatles and Pink Floyd. Geffen was now a superstar and played to a hysterical audience at that year's Arad Festival. His one-of-a-kind image was also enhanced by the use of heavy make-up on stage. In particular, Geffen's mid-song shout of the song title "AnaHenu Dor Mezuyan," which translates "we're a screwed-up generation," got a wild response from the festival audience and aroused the ire of the country's educators.

In 1995 Geffen found himself drawn into mainstream Israeli culture when he was the last artist to perform at the peace rally at which Prime Minister Yitzhak *Rabin was assassinated. Eight days later, in the same place, he performed "Livkot Lekha," which became something of an anthem for Israeli youth. In subsequent years Geffen toned down his stage persona and devoted much of his time to developing an international career. In November 2003 he released a single entitled "Hello" together with British artist Steven Wilson and the duo's album, Blackfield, came out the following year.

[Barry Davis (2nd ed.)]

GEFFEN, DAVID (1944– ), U.S. record producer. Born in New York, Geffen began his career in the mailroom of the William Morris Agency, moved up the ladder to a position as agent, and then founded his own agency with Elliot Roberts in 1968. Taking such stars as Joni Mitchell and Neil Young under his managerial wing, Geffen founded the now major recording label Asylum Records (1970). He picked up recording artists such as Jackson Browne and built his company up to the point where it merged with long-established Electra Records, with Geffen installed as president (1973–76). In 1975 he was made vice chairman of Warner Brothers Pictures and in 1977 became executive assistant to the chairman of Warner Communications. In 1980 Geffen founded a new record label under his own name and signed John Lennon and Yoko Ono, as well as Bob Dylan, Elton John, and Donna Summer. The Lennon-Ono Double Fantasy (1980) album was the first released on Geffen Records. Geffen's original signings continued to bring his company success through the 1980s and into the 1990s, when Guns N'Roses proved one of the most successful groups in rock history. His ability to recognize talent was instrumental in helping to launch or develop the careers of such entertainers as Crosby, Stills, Nash & Young, the Eagles, and Tom Cruise.

In 1981 he branched out into producing Broadway musicals and had success with Dreamgirls and Cats, which became the longest-running musical in Broadway history. Geffen's incursions into stage as well as film production (Personal Best; Risky Business; Interview with the Vampire) netted him millions of dollars. By 1996 he was a billionaire. He sold Geffen records to MCA, receiving stock valued at $545 million in exchange, and received a further $710 million when the Matsushita Corporation bought MCA a few months later. In 1994 he launched the DreamWorks film studio project in partnership with Steven *Spielberg and Jeffrey *Katzenberg.

Geffen taught at Yale and UCLA. In 2002 he donated $200 million to the UCLA medical school, the largest single donation to a U.S. medical school in history. The school is named the David Geffen School of Medicine. The campus already includes the Geffen Playhouse, which was named for him when he donated $5 million. Geffen has also contributed generously to the Democratic National Party; Los Angeles's AIDS Project; New York's Gay Men's Health Crisis; and AIDS Action in Washington, D.C.

[Jonathan Licht / Rohan Saxena and Ruth Beloff (2nd ed.)]

GEFFEN, JOEL (1902–1988), U.S. Conservative rabbi. Born into a distinguished rabbinic family (his father was Tobias *Geffen) in Kovno, Lithuania, Geffen came to the United States when he was a year old, where he was raised in Atlanta. He graduated from Emory University in 1944 and was ordained by the Jewish Theological Seminary four years later. His first pulpit was in Harrisburg, Pennsylvania, where he organized the congregation of 200 families. In 1929 he moved to Temple Beth El in Troy, New York, where he again built the congregation and organized a community talmud torah along with adult education and youth groups. He joined the Jewish Theological Seminary in 1944 as director of the Department of Field Activities and Communities Education, a position that he served in for four decades until his retirement. He was involved in the establishment of Leadership Training Fellowship, an elite training program for Conservative youngsters, and also in the establishment of Camp Ramah in Wingdale, New York. For four decades he was the unpaid but exceedingly dedicated spiritual adviser of the National Federation of Jew-
ish Men's Clubs during years of significant growth. For a dozen years he also directed the Metropolitan New York region of United Synagogue, the congregational arm of the Conservative movement and edited with, Milton Berger and M. David Hoffman, Roads to Jewish Survival (1967). He also contributed to the American Jewish Historical Quarterly.

[Michael Berenbaum (2nd ed.]]

GEFFEN, TOBIAS (1870–1970), Lithuanian-born U.S. rabbi, community leader, and activist. Born in Kovno, Lithuania, to Kuna Real Strauss and Yosef Geffen, Geffen studied privately in Kovno, Slobodka, and Grodno. After marrying Sara Hene Rabinowitz in August 1898, he entered the Kovno Kollel, and his wife operated a paper store to support them. In 1903, a month after the Kishinev pogrom, Geffen left Kovno for the United States with his wife, two children, and his wife's siblings. A few weeks before they left he received semikhah from Rabbi Moshe Danishevsky of Slobodka and the Kovner Rav Shapiro.

After part-time work at a family sweatshop in New York City, Geffen became rabbi of the Beet Knesset Ahavat Tzedek Bnai Lebedove in 1904. Several months later Geffen attended the Agudat ha-Rabbonim convention where he first met his colleagues. In a major authentication initiative, the famous Ridbaz ordained rabbis at the convention. Geffen received his third semikhah from the Ridbaz in July 1904. While soliciting funds for the Kovno Kollel, Geffen spent a Shabbat in Canton, Ohio. Invited to be the rabbi there, he moved his family, now four children, to Canton in 1907.

After a visit to the Shearith Israel Congregation in Atlanta, Geffen was chosen as rabbi. He served the congregation from 1910 until his death in 1970. As the rabbi of the smaller orthodox synagogue in the city, Geffen, nevertheless, took quick action by creating a religious school, which would try to eliminate all the "melammedim." Most important, he introduced a daily class in Talmud, which soon became occasions to present hadranim at conclusions of different treatises of the Talmud. The earliest ones delivered in Atlanta were published in the Ha-Meassef halakhic journal in Jerusalem. Later Geffen published his hadranim, his derashot, and a few responsa in the eight books, which he published from 1924 to 1962.

The public highlights of Geffen's career were varied. In 1913, he visited Leo Frank, who had been convicted unjustly of the murder of Mary Phagan, and instituted regular prayers for Frank for the two years of his incarceration. Upon Frank's lynching in 1915, Geffen urged his congregants to remain calm but vigilant and not to leave Atlanta. In the early 1920s Geffen led a campaign calling upon the U.S. Congress not to adopt the new immigration law because it was discriminatory against Jewish refugees. In 1933 he and his son, attorney Samuel Geffen, successfully lobbied the governor for the release of a "Yankee Jew" from a Georgia chain gang prison.

His most famous act involved the drink Coca-Cola, whose home is in Atlanta, Georgia. After rabbis throughout the northeast and midwest gave their hekhsher to Coca-Cola for use on Passover and the entire year without any knowledge of the ingredients, Geffen was requested by the Agudat ha-Rabbonim to see what he could ascertain. Permitted to have access to the highly secret formula, Geffen analyzed the soft drink with the assistance of his daughter Helen Geffen, a food chemist. In a responsum published in 1935, he showed that Coca-Cola was non-kosher and not kosher for Passover. However, since "so many people do drink this product," Geffen identified two substances which could be substituted for the problematic ones in the drink. In 1935 the change was made by the company, and that year for Passover (in Atlanta only), Geffen's hekhsher written by him in Hebrew appeared on the Coca-Cola bottle cap.

Geffen's papers are found in the archival collections of the American Jewish Historical Society.

[David Geffen (2nd ed.)]

GEHAZI (Heb. גֶּחֲזִי, גֶּחֲזַי), servant of 'Elisha. In the story of the wealthy Shunammite woman (1 Kings 4:8–37), Gehazi is portrayed as Elisha's faithful messenger and loyal protector (4:27). In the story of Naaman (1 Kings 5), he is portrayed as a greedy character who, contrary to the instructions of Elisha, cunningly solicited a reward from the Syrian general and then tried to practice deception on his master, the prophet Elisha. In punishment, Elisha cursed Gehazi and his descendants forever with the "leprosy" of Naaman (biblical sar'at is not true leprosy, i.e., Hansen's disease, but more likely psoriasis). In the Bible sar'at is punishment for disloyalty and challenge to authority (Zakovitch). The third time that Gehazi appears is in connection with the woman from Shunem and the king of Israel (11 Kings 8:1–6). In this story Gehazi reported to the king on the great deeds which Elisha had performed. These three stories, so it would appear, did not occur in the chronological order in which they are now arranged in Kings, since it is unlikely that Gehazi would have stood before the king recounting Elisha's great deeds after he had been cursed with leprosy. It is reasonable to assume that they reflect two separate traditions. The first and third stories, which are related in content, constitute one tradition, while that of Naaman stems from a different circle.

[Isaac Avishur]

In the Aggadah

Gehazi is one who set his eyes upon that which was not proper with the result that he was not granted that which he sought, and lost whatever he possessed (Sot. 9b). Although learned, he was jealous of Elisha's learning, sensual (in his actions toward the Shunamite), and did not believe in the resurrection of the dead. Instead of obeying Elisha's order not to greet anyone on his way to the Shunamite's son (11 Kings 4:29), he made sport of his mission and deliberately asked everyone he met whether they really believed that Elisha's staff, which he was carrying, could restore the dead to life (pārē 37).
Gehazi was punished with “leprosy” because Elisha had been studying the law of the eight unclean creeping things when Naaman first consulted him. When Elisha accused Gehazi of taking eight things from Naaman (11 Kings 5:26), he implied that he would be punished as would one who caught any of the eight creeping things – with “leprosy” (adon 9). According to another tradition, Gehazi was thus punished because he showed disrespect by calling his master by name (cf. 11 Kings 8:5; Sanh. 100a). Gehazi never repented. Instead, he sinned further either by hanging a magnet over Jeroboam’s idol and suspending it between heaven and earth in order to deceive people, or by engraving the name of God on it, so that it spoke the first two commandments (Sanh. 107b). When Elisha met him in Damascus and exhorted him to repent, he replied: “Thus have I learnt from thee. He who sins and causes the multitude to sin, is not afforded the means of repentance” (ibid.). Elisha, however, is criticized for “thrusting Gehazi away with both hands,” instead of using only one for that purpose, and the other for drawing him toward himself (Sot. 47a). Gehazi is one of the four commoners who have no share in the world to come (Sanh. 10:2). He was even undervesting of speaking the praises of God and His servant Eli-
sha.

**GEHINNOM** (Heb. יָהִי הִנֹּם, יָהִי בֶּן הִנֹּם, יָהִי בֶּן הִנֹּם יָהִי בִּנְי הִנֹּם, יָהִי בָּנֵי הִנֹּם, יָהִי בֶּן הִנֹּם בְּנֵי הִנֹּם, יָהִי בָּנֵי הִנֹּם, יָהִי בֶּן הִנֹּם בְּנֵי הִנֹּם), a valley south of Jerusalem on one of the borders between the territories of Judah and Benjamin, between the Valley of *Rephaim* and *En-Rogel* (Josh. 15:8; 18:16). It is identified with Wadi er-Rabab.

During the time of the Monarchy, Gehinnom, at a place called Topheth, was the site of a cult which involved the burning of children (11 Kings 23:10; Jer. 7:31; 32:35 et al.; see *Moloch)*. Jeremiah repeatedly condemned this cult and predicted that on its account Topheth and the Valley of the Son of Hinnom would be called the Valley of the “Slaughter” (Jer. 19:5–6).

In Judaism the name Gehinnom is generally used as an appellation of the place of torment reserved for the wicked after death. The New Testament used the Greek form Gehenna in the same sense.

**GEHRY, FRANK OWEN** (Ephraim Goldberg; 1929– ), U.S. architect. Gehry was responsible for some of the most creative architecture of the 20th century with 30 existing buildings, public and private, in America, Europe, and Asia. He was born in Toronto, Canada. After moving to the United States in 1947, he received his degree in architecture from the University of Southern California and then served in the U.S. military during the Korean War. After the war, he went to Harvard Graduate School to study city planning. In 1962, Gehry Partners was launched. From his earliest work, he was opposed to the straight line and flat surfaces of most modern and postmodern designs. His use of chain link fencing on his home in Santa Monica aroused the wrath of his neighbors and the bewilderment of professional architects. Gehry simply explained that he was using ordinary materials in a different way. At first, Gehry was skeptical of the computer, but his engineer, Jim Gymph, convinced him that the best way to transform his creative drawings into economically practical applications was through the computer. In addition, much research went into finding the particular materials Gehry wanted to use to accentuate the play of light and color on the surface of his buildings. The Guggenheim Museum in Bilbao, Spain, the Rock Music “Temple” (EMP) in Seattle, Washington, and the Los Angeles Walt Disney Concert Hall are handsome and startlingly different from the boxlike structures of his predecessors. Gehry’s forms are fluid, organic, and colorful, growing out of his flowing sketches. In the case of the Guggenheim Museum, he finally found a special formula for titanium that would reflect the changing light of the sun, clouds, and sky. For the rock-‘n’-roll building (known as the EMP – Experience Music Project) in Seattle, non-fading auto body paint in red, blue, even gold, silver, and purple mark different sections of this 140,000-square-foot building. The shapes and surfaces of Gehry’s buildings develop out of deeply ingrained images in his consciousness. He recounts that he was fascinated by the forms of the live fish his grandmother used to bring home from the market. He used to play with them in the bathtub before they were cooked. His Fishdance Restaurant in Kobe, Japan (1987), is unmistakably the shape of a large fish. The scalelike surfaces of the Guggenheim Museum and the EMP exemplify the same influence. Gehry won an invited design competition in 1987 for the Walt Disney Concert Hall in Los Angeles. Begun before the Bilbao museum, 16 years went by before completion. Gehry received a long list of awards including the Pritzker Prize for architecture in 1989, the most prestigious award given to an architect, and more than 100 awards from the American Institute of Architects to honor outstanding architectural design. On March 2, 2005, representatives of the City of Las Vegas, Nevada, announced that Gehry would be the architect for the Alzheimer’s Research Center, one of the projects that will make up the 61-acre downtown urban village. The mayor of Las Vegas said Gehry’s building “will be a piece of artwork that will draw people from around the world who will marvel at its beauty.”

[Betty R. Rubenstein (2nd ed.)]

**GEIGER, ABRAHAM** (1810–1874), pioneer of the *Wissenschaft des Judentums and founder of *Reform Judaism. Gei-
ger was born in Frankfurt am Main to an Orthodox family and received a traditional religious education. Already in his childhood, he began studying classical history, which gave rise to doubts concerning biblical claims to divine authority. At the age of 17, Geiger began writing a study of the Mishnah,
differentiating its legal style from biblical and talmudic law, and a dictionary of Mishnaic Hebrew.

With funding from friends, Geiger began university studies at the University of Heidelberg in April 1829, to the dismay of his family. He concentrated on philology, Syriac, Hebrew, and classics, but also attended lectures in Old Testament, philosophy, and archaeology. After one semester, he moved to the University of Bonn, where he joined a group of Jewish students, many of whom were preparing for careers in the rabbinate, that included Samson Raphael *Hirsch, Solomon *Munk, Joseph *Derenbourg, and other future scholars of Judaism.

At Bonn, Geiger's studies focused on Oriental languages, philosophy, and theology, but he was offended by some of his professors' ignorance of Judaism and occasional antisemitic comments. He began an intense study of Arabic and the Koran under the distinguished Orientalist Georg Freytag, winning a prize for his essay "Was hat Mohammed aus dem Judenthume aufgenommen?" The essay, which earned Geiger a doctorate at the University of Marburg, demonstrated the influence of rabbinic literature on the text of the Koran. Published as a book in 1833, it won great acclaim as opening a new avenue for Islamic scholarship, and was the first step in Geiger's larger intellectual project, demonstrating Judaism's central influence on Christianity and Islam. Neither possessed religious originality, but simply carried the Jewish message of monotheism to the pagan world.

Since no university professorships were available in Germany to Jews, Geiger took a position as rabbi to the Jewish community of Wiesbaden from 1832 to 1837 and continued his academic publications primarily through the scholarly journals he founded and edited, *Wissenschaftliche Zeitschrift fuer juedische Theologie* (1835–39) and *Juedische Zeitschrift fuer Wissenschaft und Leben* (1862–75). His journals became an important vehicle in its day for publishing Jewish scholarship, and they included historical and theological studies as well as discussions of contemporary Jewish affairs.

While in Wiesbaden, Geiger introduced some synagogue reforms, abolishing the recitation of medieval Hebrew poems of lamentation for the destruction of the Second Temple, and other prayers he felt were religiously inappropriate. In 1837 Geiger convened a meeting of reform-minded rabbis in Wiesbaden, and he continued to be a driving force behind subsequent synods of liberal rabbis, held in Braunschweig in June 1844, Frankfurt in July 1845, and Breslau in 1846.

In 1838 Geiger became a finalist for a rabbinic post in Breslau, but divisions between conservative and liberal factions within the Jewish community led to heated opposition to his appointment. His religious commitments were under suspicion by conservative factions, who accused him of being a Karaite or Sadducee. Geiger replied that rabbinic Judaism meant "not to be slaves to the letter of the Bible." As a result of the opposition, he was not able to take up a position as assistant rabbi until 1840, and only with the death of Breslau's Orthodox rabbi Solomon Tiktin in 1843 did Geiger become chief rabbi. That appointment led to the secession of the Orthodox faction, under the rabbinic leadership of Gedaliah Tiktin. In Breslau Geiger established a school for religious studies and a group for the study of Hebrew philology. Geiger was one of the most active participants in the synods held by the Reform rabbis in Frankfurt am Main (1845) and Breslau (1846).

The tensions in Breslau continued throughout his tenure, and when the Juedisch-Theologisches Seminar was founded there in 1854, thanks in part to Geiger's efforts, he was not appointed to its faculty, though he had long been at the forefront of attempts to establish a faculty of Jewish theology. His exclusion from the Breslau seminary resulted from pressures by conservative Jews who considered his theological position too liberal. In 1863 Geiger left Breslau to serve as rabbi of the Reform congregation in his hometown of Frankfurt am Main, and in 1870 became rabbi in the Berlin community. Ultimately, in 1871, he was appointed to the faculty of the newly founded Reform rabbinical college in Berlin, Hochschule fuer die Wissenschaft des Judentums, where he spent his final years.

Geiger's rejection of Orthodox Judaism in favor of a more liberal approach developed, he tells us in his diaries, during his adolescence, and began to flourish in his university days. Judaism was distinguished for Geiger by its monotheism and ethics. Whereas the Greek genius had introduced philosophy to Western civilization, the Jews were possessed of a "religious genius," and it is the latter, according to Geiger, that gives morality a firm basis in society. However, Judaism's ethical imperative had been lost in the rigidity of talmudic legalism, developed over centuries of ghettoization inflicted by Christian intolerance. In the Middle Ages, Jews were better off in Islamic countries than under Christian rule, he argued; Geiger praised Islamic tolerance and the Jews in Islamic Spain as "heroes of Wissenschaft," producing poets and philosophers who contributed their work to the general culture by writing in Arabic, not Hebrew. There was a pure Judaism, he argued: monotheistic, based on divine revelation, but without the constraints and narrowness of Jewish life within medieval Christendom.

While Reform Judaism initially developed as lay Jews simply lost interest in the strict observances required of Orthodoxy, with many seeking shorter services, more frequent sermons, and organ music, modeled after Protestant churches, Geiger sought a more coherent ideological framework to justify innovations in the liturgy and religious practice. In his view, Reform Judaism was not a rejection of earlier Judaism, but a recovery of the Pharisaic halakhic tradition. Geiger's magnum opus, *Urschrift und Uebersetzungen der Bibel* (1857), argued that the Pharisees and early rabbis of the Mishnah had sought a liberalization and democratization of Jewish law, in opposition to the conservative, aristocratic Sadducees, who controlled the priesthood and Temple as the central religious institutions of Jewish life. Drawing on methods developed by F.C. Baur and the Tuebingen School, Geiger uncovered the religious and political tendencies in Greek, Aramaic, and Syriac biblical translations, as well as apocryphal and pseudepigraphical literature, to formulate a picture of Second Temple Juda-
is in tension between progressive and reactionary proclivities: the Sadducees “were joined by everything which counted itself as part of the aristocracy… they had administration and judicial functions. The Pharisees consisted of the citizenry which had national and religious inclinations, and constituted the opposition to the aristocracy, whom they eventually overcame. The differences are based more on political and partisan viewpoints than on diverging religious principles; gradually they became different religious sects.” The theological principle of Pharisaic tradition, according to Geiger, “is nothing other than the principle of continual further development in accord with the times, the principle of not being slaves to the letter of the Bible, but rather to witness over and over its spirit and its authentic faith-consciousness.”

In his subsequent survey of Jewish history, Das Judentum und seine Geschichte, a series of lectures he delivered in Frankfurt and Berlin, Geiger depicted the eras of Jewish engagement with the surrounding culture as ideal. The Pharisees, who sought to liberalize and democratize Jewish practice and supplant the Temple priesthood with a priesthood of all believers, represented authentic Judaism. Jesus was a liberal Pharisee who “walked in the way of Hillel…. [and] did not utter a new thought.” Christianity began when Paul carried Jesus’ Jewish message to the Greco-Roman world and distorted Jewish monotheism with Hellenistic paganism. The Pharisaism of both Jesus and the early rabbis was lost in the Middle Ages, Geiger argued, when Christian persecution forced Judaism to retreat from the liberalizing tendencies of the Mishnah and turn the Talmud into a petrified system of legal restrictions. Jesus failed to gain many Jewish disciples in Judea because his teachings were not original, but the common beliefs of the Pharisees. Following the destruction of the Temple in 70 C.E., Geiger argued, the Sadducees joined the early Jesus movement and expressed their long-standing opposition to the Pharisees in various New Testament passages, such as Matthew 23.

Geiger’s position within the Reform movement was moderate, mediating between the more radical efforts of Samuel *Holdheim and Kaufmann *Kohler, and the conservative, proto-nationalist factions represented by Zacharias *Frankel and Heinrich *Graetz. Geiger preferred German as the language of Jewish liturgy: “If Hebrew were to be represented as an essential element of Judaism, then Judaism would be pictured as a national religion.” Similarly, Geiger felt that the dietary laws were “inané, thereby so very damaging to social life, and, indeed, the inward brotherhood among people nonetheless transcends the renewal of a separatist, bleached-out and very dubious religious feeling.” At the same time, while he considered circumcision a “barbaric, bloody act,” he opposed the call of the radical Frankfurt Reformverein to abolish it.

Geiger became a major liturgist of the Reform movement, editing prayer books in 1854 and 1870 that became influential models for Reform Jews worldwide. In accord with other liberal Jews of his day, he eliminated the hope for a return to Zion in the messianic era from the prayer book, and while retaining the Hebrew original, changed the German translation of certain phrases; for example, “reviver of the dead” became “source of eternal life.” Geiger himself remained an observant Jew throughout his life, but permitted certain liberalizations of religious practice. He relaxed some Sabbath restrictions and allowed organ music in the synagogue, and shortened the prayer services, but he opposed the abolition of circumcision and shifting Sabbath observance to Sundays.

Although criticized sharply for his opposition to Jewish national identity, notably in his refusal to intervene on behalf of the Jews of Damascus accused of ritual murder in 1840, Geiger sought to instill a deep sense of pride in Jews. He argued that Jews deserve credit for giving birth to the three major monotheistic traditions of the West, and also for those principles of religious tolerance and freedom of belief that constitute the basis of modern society.

**Writings**

Geiger’s most significant writings include his doctoral dissertation Was hat Mohammed aus dem Judenthume aufgenommen (1833) and Urschrift und Uebersetzungen der Bibel in ihrer Abhaengigkeit von der innern Entwicklung des Judenthums (Breslau: Julius Heinauer, 1857); the second edition was published with an introduction by Paul Kahle, a postcript by Na-chum Czortkowski, and a Hebrew essay by Geiger, reprinted from Ozar Nehmad, 3 (1860), 1–15, 115–21, 125–28 (Frankfurt am Main: Verlag Madda, 1928); in Hebrew translation with an introduction by Joseph Klausner, Ha-Mikra ve-Targumav (Jerusalem: Bialik Foundation, 1949; reprinted 1972). See also Geiger’s Sadducéer und Pharisier (Breslau: Schletersche Buchhandlung, 1863), reprinted from IZWJ, 2:31–54. The two journals he edited contain numerous articles of scholarly and theological significance: Wissenschaftliche Zeitschrift fuer juedische Theologie (1835–39) and Juedische Zeitschrift fuer Wissenschaft und Leben (1862–75). Das Judentum und seine Geschichte (3 vols., 1865–71) appeared in English as Judaism and Its History (1865, 1911). Also important are Geiger’s Lehr- und Lesebuch zur Sprache der Mischnah (1845) and Parschandatha; die nordfranzösische Exegetenschule (1855). Other writings include a study of Maimonides (1850); an edition of the Divan of Judah Halevi (1851); a study of Ibn Gabirol (1867); translations of a number of their poems in German verse; a treatise on the Karaite Isaac b. Abraham Troki (1853); and a study on Leon Modena (1856). He published several valuable manuscripts (collected in Melo Chofnajim, 1840). Geiger contributed regularly to the Zeitschrift der Deutschen Morgenländischen Gesellschaft, the leading journal in the fields of Oriental studies, Semitics, philology, and Islamic studies.

Geiger’s son, Ludwig Geiger, wrote the most comprehensive biography to date in the introduction to Abraham Geiger: Leben und Lebenswerk (Berlin: Georg Reimer, 1910), which also contains a superb collection of studies about Geiger’s work by leading scholars. Ludwig Geiger also edited five volumes of Geiger’s articles and correspondence, with biographical in-

[Susannah Heschel (2nd ed.)]

GEIGER, BERNHARD (1881–1964), Austrian philologist.

Geiger, born in Bielitz (Bielsko), Upper Silesia, attended the universities of Vienna, Bonn, and Heidelberg. Originally his field of study was Hebrew, but one of his teachers in Vienna aroused his interest in Iranian and Sanskrit, and it was in those languages that he made his principal contributions to scholarship. From 1909 to 1938 he taught at the University of Vienna, being forced to leave that position by the Nazis. In 1938 he immigrated to the United States and from 1938 to 1951 was professor of Indo-Iranian philology at the Tibetan-Institute (later the Asia Institute), New York. In 1951–56 he taught Indo-Iranian at Columbia University. In 1949 the shah of Iran conferred upon him the Order of Humayoun.

Geiger’s publications include Die Amoša Spontas (1916); Die Religion der Iranier (1929); and Middle Iranian Texts (1956; repr. from The Excavations at Dura-Europos, Final Report, 7 pt. 1 (1956), 283–317). Geiger was one of the contributors to the volume of Additamenta to A. Kohut’s Aruch Completum (1937), being mainly responsible for the detailed philological study of talmudic words of Iranian origin.

GEIGER, LAZARUS (Eliezer Solomon; 1829–1870), German philosopher and philologist. Geiger, who was born in Frankfurt, was a nephew of Abraham “Geiger. He studied classical philology at the Universities of Marburg, Heidelberg, and Bonn. Unlike his uncle, he belonged to the Orthodox religious group of German Jewry. From 1861 until his death he was a teacher at the Jewish educational institute Philanthropin in Frankfurt. He saw in language the source of human reason. Language, according to Geiger, was formed from meaningless expressions – the reactions of early man to his visual impressions. These expressions became fixed and stabilized into permanent concepts. Geiger’s research won a certain amount of contemporary approval, but his conclusions were rejected by subsequent scholarship. His main works are Ursprung und Entwicklung der menschlichen Sprache und Ver- runft (2 vols., 1868–72; the second volume was published after his death by his brother Alfred Geiger) and Der Ursprung der Sprache (1864).

GEIGER, LUDWIG (1848–1919), German literary historian; a fervent adherent of the symbiosis of Judaism and German-ness. Son of Abraham “Geiger, he studied philology and history in Heidelberg, Goettingen, and Berlin and concluded his academic studies in 1873 with a dissertation, presented to Leopold von Ranke on the attitude of Greek and Roman authors to Judaism and Jews. In 1880 he was appointed extraordinary professor of the history of literature at Friedrich Wilhelm University, Berlin. Later he additionally became a lecturer at the Lehranstalt fuer die Wissenschaft des Judentums. Geiger was a versatile scholar, editor, and translator. His major contributions were to Renaissance, Humanism, and Reformation studies, German-Jewish history, and research on Goethe and other writers of the 19th century. Even when treating the first and last subjects he remained particularly conscious of the Jewish aspect. Appreciation of Geiger’s work on the Renaissance led the Swiss historian, Jacob Burckhardt – a notorious antisemite – to appoint him editor of all future editions of his Die Cultur der Renaissance in Italien (“Civilization of the Renaissance in Italy”). Geiger’s major work in this subject was Renaissance und Humanismus in Italien und Deutschland (1882). He published the letters of Johann “Reuchlin (1875) and the latter’s biography, Johann Reuchlin, sein Leben und seine Werke (1871). Founder and editor of Zeitschrift fuer die Geschichte der Juden in Deutschland (1887–92), he also wrote Geschichte der Juden in Berlin (2 vols., 1871), Die deutsche Literatur und die Juden (1910), and numerous articles on German Jewish history: The Goethe Jahrbuch was founded by him in 1880; he continued to edit it until 1913, when he had to leave in the aftermath of an acrimonious dispute. His major works on Goethe were Goethe und die Seinen (1908) and Goethe, sein Leben und Schaffen dem deutschen Volke erzählt (1910); he also wrote on Goethe’s relationship to Jews and Judaism. Geiger edited his father’s Nachgelassene Schriften (5 vols., 1875–78) and other works; he also...
wrote a biography of his father, Abraham Geiger, Leben und Lebenswerk (with others, 1910).

Geiger was a vigorous exponent of liberalism and Reform Judaism and an opponent of political Zionism and Orthodox Judaism. In 1911, in his birthday letter to the kaiser, he courageously protested against the social discrimination to which German Jews were subjected. From 1909 he edited the leading Jewish newspaper, Allgemeine Zeitung des Judentums. His unpublished works include a projected edition of the correspondence of Leopold *Zunz.

---

GEIGER, MORITZ (1860–1937), philosopher. Moritz Geiger, a nephew of Abraham *Geiger, was born in Frankfurt and became professor in Munich and Goettingen. After the rise of the Nazis in 1933 he moved to the U.S. and was professor at Vassar College. Geiger was first a disciple of Th. Lipps, then a fellow student of *Husserl, and the first to apply the objective "eidetic" method developed in Husserl's Logische Untersuchungen in aesthetics. Geiger did not accept the "transcendental-subjective" method that was already Husserl's main concern. Geiger saw the aesthetic values of the object as based, not on its real characteristics, but on its phenomenal ones. From this he concluded that a student of aesthetics is obliged to investigate its objects from the point of view of their phenomenal characteristics. In this way Geiger brought about a change toward the objectivity of aesthetics, which was adopted by many in the teaching of art and beauty, and became the basis for interpreting "aesthetic pleasure" in the school of phenomenalism. Other studies led Geiger to an analysis of the unconscious. He showed that the laws of psychological reality are not to be understood as laws of consciousness. Additional studies were devoted to philosophical problems of mathematics and physics, the theory of relativity and axiomatic geometry. His work on essential relations and essential meaning in aesthetics induced him to turn to metaphysics; the philosophy of ontology and the question of the division of the sciences caused him to reconsider the problem of "the ultimate existence, the unattached existing within itself," and "independent metaphysics." He wrote Bemerkungen zur Psychologie der Gefüselemente und Gefüseverbindungen (1904), Die philosophische Bedenken der Relativitaetstheorie (1921), Systematische Axiomatik der euklidischen Geometrie (1924), Aesthetik (1921), and Die Wirklichkeit der Wissenschaften und die Metaphysik (1930).

**BIBLIOGRAPHY:** Zelker, in: Zeitschrift fuer philosophische Forschung, 14 (1960), 452–66.

---

GEIGER, SOLOMON ZALMAN (ben Abraham, d. 1775), community notable of Frankfurt on the Main. In 1738 he published a philosophic-kabbalistic homiletical commentary Kerem Shelomo which was at first well received. However, in 1742 the rabbis of Frankfurt withdrew his right to be chosen as gabbai, interdicted him from serving as precentor in the Great Synagogue for nine years, and apparently made a public declaration against his book, the official reason being that Geiger had not comported himself correctly in the community meetinghouse. Geiger compiled an anthology of writings of medieval Jewish philosophers (unpublished).

---

GEIRINGER, KARL (1899–1989), musicologist. Born in Vienna, Geiringer studied with Guido *Adler and Curt *Sachs, and earned his doctorate at the University of Vienna in 1922 for a dissertation on musical instruments in Renaissance painting. In 1929 he was appointed to the commission of the Denkmäler Tonkunst in Oesterreich and a year later became custodian of the museum and library of the Gesellschaft der Musikfreunde, Vienna. Following the Nazi invasion of Austria in 1938, he went to London, where he worked for the BBC, wrote articles for the fourth edition of the Grove's Dictionary, and taught at the Royal College of Music. In 1941 he was appointed professor of history and theory of music at Boston University, where he remained for 21 years. He was elected a fellow of the American Academy of Arts and Sciences in 1959 and was an honorary member of the American chapter of the Neue Bach-Gesellschaft and of the Oesterreichische Gesellschaft fuer Musikwissenschaft. In 1962 Geiringer was appointed professor of music at the University of California, Santa Barbara, where he retired in 1971. Geiringer's writings include Musical Instruments: Their History in Western Culture (1943), Haydn: a Creative Life in Music (1946), Brahms: His Life and Work (1936), The Bach Family (1954), A Thematic Catalog of Haydn's Settings of Folk Songs from the British Isles (1953), Johann Sebastian Bach: The Cullmination of an Era (1966). He edited Antonio Caldara: Ein Madrigal und achtzehn Kanons, Cw, xxx (1933), Music of the Bach Family: An Anthology (1953), Joseph Haydn: 100 schottische Lieder (Munich, 1961); and J. Haydn: Symphony No. 103 in E-Flat Major (New York, 1974).

GEKHT, SEMEN GRIGOREVICH (1903–1965), Russian writer. Gekht was born in Odessa and from the mid-1920s lived in Moscow where he worked on the newspaper Gudok. With his first prose work, the novella Chelovek, kotoryj zabyl svoyu zhizn' ("The Person Who Forgot His Life," 1927) Gekht appeared as a representative of Russian-Jewish literature. The
basic theme of his books (including the novel *Pouchitel’ naya istoriya* ("An Instructive Story," 1939); stories for children; *Syn sapozhnika* ("Son of the Cobbler," 1931); *Efim Kalyuzhny iz Smidovichey* ("Efim Kalyuzhny from Smidovichi," 1931), etc., is the transformation of Jewish life in the post-revolutionary period and the participation of Jewish youth from the shetl in the struggle for the industrialization of the country. In his major novel *Parokhod idet v Yaffu i obratno* ("The Steamship Goes to Jaffa and Back," 1936), set in Palestine of the first third of the 20th century. Gekht describes positively the daily life of the *kalatziim*, accurately depicts the bloody attacks of the Arabs in Jerusalem and Jaffa, and reproduces at length passionate speeches of Zionists about assimilation and antisemitism. Some Soviet critics accused the novel of manifesting “camouflaged Zionism.”

During World War II Gekht was military correspondent for the newspaper *Guadok*. At the end of the 1940s his works were suppressed but he was rehabilitated in 1956.

Gekht maintained his Jewish themes throughout his career (see *Budka soloy’ya* ("Nightingale Booth," 1957), or *Dolgi serdisa* ("Debts of the Heart," 1963)). His heroes are Jews whose lives are ruined by the war. Even his works in which the characters are non-Jews contain tragic motifs concerning the destruction of Ukrainian Jewry, with references to Babi Yar, the tractor factory in Kharkov (the site of another massacre of Ukrainian Jews), and so on. In 1960 Gekht wrote memoirs about E. Bagritsky, I. *Ill*, and others. He translated from Yiddish works by Sholem *Asch*, Shalom *Aleichem*, and M. *Daniel*.

[Mark Kipnis / *The Shorter Jewish Encylopaedia in Russian*]

“GELASIUS I, pope, 492–6. A council convened in Rome by Gelasius in 494 established the Catholic canon of biblical texts. On a personal level, Gelasius was not hostile to the Jews; among his favorites was a Jew, Telesinus, who won the pope’s trust to the extent that in 495 Gelasius recommended Telesinus’ nephew, the Jew Antius or Antonius, to the bishop Quinis- gesius. In 496, when the pope was apprised that the slave of a Jew had claimed that, although he had been a Christian from childhood, his Jewish master had forced him to be circumcised, Gelasius ordered the investigators to act with scrupulous justice so that religious interests should not be wronged nor the slave unfairly removed from his master’s authority.

[Bernhard Blumenkranz]

GELB, ARTHUR (1924– ), U.S. journalist and author. Born in New York, the son of immigrants from Ukraine, Gelb was educated at the City College of New York and at New York University. He was hired by *The New York Times* as a copyboy, the lowest newsroom job, in 1944 and made a mark by founding an in-house newsletter, *Timesweek*, which brought him to the attention of people who could promote him. He became a general assignment reporter and then gravitated to the drama department, where he became assistant drama critic in 1958, working under Brooks Atkinson, the paper’s chief critic, and hoped to succeed him. Instead, he became chief cultural correspondent, serving from 1961 to 1963. In addition to reviewing Broadway and Off Broadway theater, Gelb wrote stories on little-known performers like Woody *Allen*, Barbra *Streisand*, and others. At the same time, Gelb began working with his wife, Barbara, the stepdaughter of the playwright S.N. *Behrman*, on the first definitive biography of the American playwright Eugene O’Neill. The book, published in 1962, and called simply *O’Neill*, became a bestseller. It had taken the Gelbs six years to research and write the book.

When Gelb’s close friend A.M.* Rosenthal was named metropolitan editor of *The Times*, Gelb was installed as his deputy. In 1967 he succeeded Rosenthal and then rose to assistant managing editor, deputy managing, and finally managing editor from 1986 as Rosenthal moved up to executive editor of *The Times*. Their professional closeness reached a crescendo with their coverage of the killing of Kitty Genovese, a young woman in Kew Garden, Queens, whose final screams were heard by 38 people who chose not to call the police. Gelb also helped expose a local member of the American Nazi Party, who was, in fact, Jewish. When his background was made known, the man, Daniel Burros, committed suicide.

During his tenure as metropolitan editor, Gelb was a fount of ideas, nurtured the careers of countless *Times* reporters and editors, and passionately presided over the coverage of dozens of important stories, from the New York City fiscal crisis of the mid-1970s through political campaigns, a major exposure of police corruption in New York, and disasters such as airplane crashes. Along the way Gelb and Rosenthal wrote and edited several travel books. After his tenure as managing editor, Gelb became president of *The New York Times* Foundation and dispensed thousands of dollars each year to cultural organizations, educational groups, and organizations dealing with disadvantaged youth. He also founded a *Times* scholarship program for high school students and headed it until he was past 80 years of age.

Thirty-five years after the O’Neill biography was published, the Gelbs decided to revisit O’Neill and write a new biography. The first of three volumes, *O’Neill: Life with Monte Cristo*, was published in 2000. The Gelbs were also working with the documentary filmmaker Ric Burns on an O’Neill series for public television. In 2003, *City Room*, a memoir, recalled Gelb’s career and key decisions in the news room of *The Times*. In 2005, one of his two sons, Peter, was named general manager of the Metropolitan Opera in New York.

[Stewart Kampel (2nd ed.)]

GELB, IGNACE JAY (1907–1985), U.S. Assyriologist. Born in Tarnow, Poland, Gelb studied in Rome with the Sumerologist, Anton Deimel. In 1929 he went to the Oriental Institute at the University of Chicago, with which he remained associated. After serving in the armed forces in World War II, he returned to the Institute as professor of Assyriology in 1947 and began
the reorganization and replanning of the monumental multi-volume dictionary of the Akkadian language entitled Assyrian Dictionary of the Oriental Institute of the University of Chicago (= CAD, 1956ff.; almost complete by 2005) a project which had been begun in 1921. He served as editor of the dictionary from 1947 to 1955. He was also the editor and chief contributor of the auxiliary project, Materials for the Assyrian Dictionary (from 1951). His contributions to the field of Assyriology are centered on the ethno-linguistic foundations of the Ancient Near East. Among his works on this subject are Hurrians and Subarians (1944); Nuzu Personal Names (with M. Purys and A.A. MacRae, 1943); La lingua degli Amoriti (1958); “The Early History of the West Semitic Peoples” (in: Journal of Cuneiform Studies, 15 (1961), 27ff.). Of fundamental importance are his penetrating studies of the Old Akkadian dialect: Sargonic Texts from the Diyala Region (1952), Old Akkadian Writing and Grammar (1952, 1961?), Glossary of Old Akkadian (1957), and A Sequential Reconstruction of the Proto-Akkadian (1969). He published a popular scientific work, A Study of Writing (1952, 1965?). After Gelb's death his personal library and his papers and unfinished manuscripts became the basis of the Gelb Memorial Library of the University of California.

---

**GELB, MAX** (1907–1987), U.S. rabb. Born in Austria, Gelb immigrated to New York City with his parents at the age of seven. He was educated at Yeshiva Rabbi Chaim Berlin and Yeshiva Yitzhak Elchanan, earned his B.A. from City College in 1929, and was ordained by the Jewish Theological Seminary in 1932. His first pulpit was in Harrisburg, PA (1933–39), a congregation that was undergoing financial difficulties as well as problems of morale in post-depression America. He strengthened the education and youth activities of his congregation, thereby gaining the support of their parents. He left that congregation in significantly better condition than when he had assumed the pulpit. He moved to White Plains, NY, where he was rabbi of Temple Israel, a suburban congregation before the onset of suburbanization. Within a decade membership had grown fourfold. He fought for strong Jewish programming within his congregation at a time when other rabbis were seeking to attract young people without regard to the content of what happened once they entered the building. He became a leader in Westchester Jewish communal life. An ardent Zionist, he was president of the White Plains Region of the Zionist Organization of America and president of the West Council of Rabbis. He helped establish with Orthodox colleagues the first day school in Westchester County and then broke with the school to establish in 1965 the Solomon Schechter School, more akin to his own brand of Conservative Judaism. Among his achievements was finding the compromise language by which the Conservative liturgy rewrote the morning blessing, recited by men praising God for not making them a woman and women praising God for making them according to His will. His solution was as elegant as it was simple. Both men and women praise God for creating them in the Divine image.

He edited Understanding Conservative Judaism, essays by Robert Gordis, which were part of a Rabbinical Assembly series on Conservative Jewish Thought. Upon his death, he was still working on the English translation of Abraham Joshua Heschel's Torah Min Shamayim, a project that was brought to conclusion by his successor at Temple Israel, Rabbi Gordon Tucker, and published as Heavenly Torah: As Refracted by the Generations (2005).

---

**GELBER**, Canadian family. **MOSES GELBER** (1876–1940), born in Brzezany, Galicia, settled in Toronto in 1892, where he established a wool importing business. He was a founder of Jewish education in Toronto, serving as first president of the Toronto Hebrew Free School (later the Associated Hebrew Schools). A vice president of the Zionist Organization of Canada, Gelber was among the first supporters of the project to reclaim the Sharon Valley in Palestine. His son **EDWARD ELI-SHA** (1903–1971) was born in Toronto. He studied at Columbia and the Jewish Theological Seminary, and was admitted to the Ontario bar (1934) and the Palestine bar (1937). Gelber played a leading role in Jewish education in Toronto; in the Canadian Jewish Congress; and in the Zionist Organization of Canada, of which he was national president in 1950–52. In 1954 he moved to Jerusalem where he served as chairman of the executive of the Hebrew University, and vice chairman of Yad Vashem.

**LOUIS GELBER** (1878–1968) brother of Moses, was born in Brzezany, Galicia, and in 1896 went to Canada where he was associated in business with his brother Moses. He was a founder of the Toronto Hebrew Free Loan Association. His son **LIONEL MORRIS** (1907–1989), born in Toronto, was a writer on international affairs. Lionel Gelber was a Rhodes scholar and studied at Oxford. He wrote Rise of Anglo-American Friendship (1938), Peace by Power (1942), Reprieve from War (1950), American Anarchy (1953), and Alliance of Necessity (1966). He served as special assistant to Canadian Prime Minister John Diefenbaker during 1960–61. Louis’ daughter **SYLVIA** (1910–2003) was born in Toronto. During 1934–37 she was a social worker in Jerusalem and became probation officer in the Magistrate's Court, appointed to the department of labor of the Palestine government in 1942. She joined the Department of National Health and Welfare in Ottawa in 1950, and in 1969 was appointed head of the women’s bureau of the Canadian Department of Labour. Her brother **MARVIN** (1912–1990), also born in Toronto, was a student of economics and politics. He wrote for various journals and was a Liberal member of parliament for York South (1963–65). He was national president...
of the United Nations Association of Canada; head of the Canadian delegation to the U.N. Economic and Social Council (1967); and delegate to the U.N. General Assembly (1968). He was closely associated with Zionist and Jewish community activity. Another brother ARTHUR E. (1915–1998), born in Toronto, was a Jewish community leader. He was president of the United Jewish Welfare Fund of Toronto and active in the United Jewish Appeal, Canadian Jewish Congress, and United Jewish Refugee Agencies. He took a leading role in settling Jewish refugees in Canada in the post-World War II period. Prominent in cultural activities in Canada, he was president of the Canadian Conference of the Arts and the National Ballet. A fourth brother SHOLEMO MICHAEL (1918– ), born in Toronto, served in the RCAF during World War II. He then worked for the Joint Distribution Committee in postwar Europe. He served as dean of the Academy for Higher Jewish Religion in New York, and then in 1966 began teaching at New York University in the department of religion. He wrote Failure of the American Rabbi (1961).

**Bibliography:** A.D. Hart (ed.), *Jew in Canada* (1926), 133, 319; *Who’s Who in Canadian Jewry* (1965), 310, 387; *Juedisches Lexikon* (printed in Amsterdam, c. 1759) and with contributions from public and private charity chests, he set off on another journey, calling himself “an emissary from the Holy Land.” With a new sense of purpose, he published numerous articles, books, and translations into Hebrew. Among them are Rabbi Jehuda Harnassi and die Redaktion der Mishnayoth (1876), Die Mittelhochdeutsche Dichtung in ihrer Beziehung zur biblisch-rabinischen Literatur (3 vols., 1889–93), Esra und seine reformatorischen Bestrebungen (1903), Religiose Stroemungen in Judaeas wahrend und nach der Zeit des babylonischen Exils (1912), and Die Metaphysik der Ethik Spinozas im Quellenlicht der Kabbala (1917).

GELBRUN, ARTUR (1913–1985), composer and conductor. Born in Warsaw and educated in his native city and in Italy, Gelbrun settled in Israel in 1949 and became a teacher at the Rubin Academy of Music, Tel Aviv. He regularly conducted most of the orchestras in Israel as well as in Europe. His compositions include two symphonies, chamber music, ballets, orchestral suites, and songs with orchestra.

**Bibliography:** Jehoash Hirshberg (2nd ed.)

GELDERN, SIMON VON (1720–1788), German adventurer and traveler. Von Geldern, who was born in Duesseldorf into a family of Court Jews (see Van *Geldern*), studied at yeshivot, and also acquired a secular education. He went wandering through many countries and eventually reached Palestine where he spent six months studying the Kabbalah in Safed. Armed with letters of recommendation from Safed scholars headed with the words *Kitvei Kodesh u-Melizot Hakhamei Yisrael* (printed in Amsterdam, c. 1759) and with contributions from public and private charity chests, he set off on another journey, calling himself “an emissary from the Holy Land.” Von Geldern engaged in the book trade, mainly selling copies of the “Zohar. Assuming the title of “Chevalier von Geldern” and posing as an Oriental sage, he led a life of adventure,
gambling, and the pursuit of amorous affairs in Christian society and among royalty. His grandnephew, Heinrich *Heine, speaks admiringly of his exploits in North Africa. Von Geldern was the first person to mention the Cairo Genizah. He made an English adaptation, entitled The Israelites on Mount Horeb (1773), of a French oratorio by the Abbé de Voisinon, which in its turn was based on the Italian original by a fellow adventurer, Giacomo Casanova. Von Geldern also published a Hebrew version of the Book of Judith. He spent the last ten years of his life in the service of the grand duke of Hesse-Darmstadt. He provided Abbé *Gregoire with the material for his Essai sur la regénération physique, morale et politique des Juifs (1789).

Von Geldern’s travel diaries (facsimile of Ms. (original probably lost) in Schocken Library, Jerusalem) and his personal papers, including a family tree, have survived.

[Anat Feinberg (2nd ed.)]
a fortune in trade. During WWI he lived in Berlin and busied himself supplying the German army. He tried to get the German Foreign Office to support the Russian revolutionary parties and helped transfer German funds to them. He tried to return to Russia after the October 1917 Revolution, but was prevented from doing so by Lenin, who was afraid that Gel-fond’s financial transactions would be discovered. In 1918 he tried to settle in Switzerland, but was sent back to Germany and ceased his political activity. After his death he was accused by Lenin and Gorky of being “immoral, chauvinistic, and an adventurer in politics.”

[Shmuel Spector (2nd ed.)]

GELLIL YAM (Heb. גֵּלִיל יָם), kibbutz in central Israel near Herzliyyah, affiliated with Ha-Kibbutz ha-Me’uhad. It was founded in 1943 by a group which had maintained a transitory camp near Tel Aviv for over a decade, while working as hired laborers in the Tel Aviv port and on the railways. The founding settlers from Russia and Poland were later joined by immigrants from different countries. Its economy was based on a concrete plant and a factory producing household faucets. Its population was 310 in 1968 and 320 in 2002. The kibbutz stopped receiving new members due to privatization processes. It was located on one of the most highly valued tracts of land in Israel, with the city of Herzliyyah expanding around it over the years. Gelil Yam’s name is based on the Arabic denomination of the site, Jallil.

[Efraim Orn / Shaked Gilboa (2nd ed.)]

GELLÉRI, ANDOR ENDRE (1907–1945). Hungarian novelist. Gelléri, who was born in Budapest, worked as a dyer and as a locksmith. His literary talents were first discovered in a short-story competition run by the evening newspaper Az Est. His prize enabled him to complete his education in Germany. Gelléri’s first novel, Nagymosoda (“The Laundry,” 1931), combined reality with dreams and visions. His characters were wretched slum dwellers, some of them Jews. His other works include Szomjas inasok (“Thirsty Apprentices,” 1933); a book of short stories, Hold utca (“Hold Street,” 1934); Kikötő (“The Harbor,” 1935); and Villám és esti tüz (“Lightning and Evening Fire,” 1940). Following the Nazi occupation of Hungary he was sent to the Mauthausen concentration camp at the end of 1944 and died at the Wells camp in Germany, a victim of typhus, two days after the liberation in May 1945. Gelléri’s autobiography, Egy önrészét története (“The Story of One Man’s Self-Respect”), appeared posthumously in 1957.

[Baruch Yaron]

GELLMAN, LEON (1887–1973), U.S. Zionist journalist and leader. Gellman, who was born in Yampol, Russia, immigrated to the U.S. at the age of 23. He settled in St. Louis where he worked as a principal of various Hebrew schools (1911–17), and later as editor (1918–35) and publisher (1923–35) of the Yiddish St. Louis Jewish Record, in which he advocated the creation of a great religious Zionist movement. An organizer of the U.S. Mizrachi movement, he subsequently served as its executive secretary (1914–17), national vice president (1930–35), and president (1935–39). Moving to New York, he was editor of Mizrachi publications from 1935 to 1949, including Der Mizrachi Weg (1936–49) and (with Pinkhos Churgin) the Mizra chi Jubilee Publication (1936).

Gellman moved to Israel in 1949 and became chairman of the World Mizrachi Organization in that year, later becoming honorary chairman. From 1948 to 1953 he was a deputy member of the Executive of the Jewish Agency. He was a frequent contributor to Ha-Zofeh, the Israeli national religious daily, and to New York Yiddish newspapers. A prevalent theme in Gellman’s writing is that the survival of Israel is contingent upon adherence to traditional Jewish faith and values. Among his numerous books, primarily collections of essays, are: Eynem Kampf far der Yidishe Medine (1948), Ha-Yahadut be-Ma’avorah (1956), Nezah ha-Ummah (1958), Bi-Shevilei ha-Yahadut (1967), and Be-Darkhei No’am (1969).

GELL-MANN, MURRAY (1929– ), U.S. theoretical physicist. Born in New York City and educated at Yale, which he entered at the age of 15 (B.S. 1948), and Massachusetts Institute of Technology (Ph.D. 1951), Gell-Mann studied physics rather than the languages and archaeology he originally preferred, because his father, who ran a language school, warned him that he would never be able to make a living. Gell-Mann taught at the Institute for Nuclear Studies of the University of Chicago from 1952 to 1955, while studying under Enrico Fermi, and at California Institute of Technology from 1955 until his retirement as Robert Millikan Professor of Theoretical Physics, Emeritus, in 1993. He held numerous visiting professorships at American and European universities, was made a member of the National Academy of Sciences, a fellow of the American Physical Society and other academic institutions, and served on a number of official bodies including the President’s Science Advisory Committee (1969–72), the Board of Regents of the Smithsonian Institution (1974–88), and the President’s Committee of Advisors on Science and Technology (1994–2001). He was later a distinguished fellow at the Santa Fe Institute, a research foundation which he helped to found in 1982 in Santa Fe, New Mexico. He also taught part of the year at the University of New Mexico in Albuquerque.

Gell-Mann was awarded the Nobel Prize for physics in 1969 for his revolutionary work in particle physics, a field in which he was preeminent for over 20 years. The explanatory
theory he formulated in 1963 accounted for the presence of the many particles discovered in atomic nuclei and posited that all such particles are composed of basic units that Gell-Mann named “quarks” (a word taken from one of his favorite books, James Joyce’s Finnegans Wake), which his own and others’ research indicated were one of three fundamental, irreducible building blocks of matter (the others are leptons and intermediate vector bosons). The existence of quarks, and the accuracy of Gell-Mann’s theoretical prediction that there were likely six types, was confirmed by experimentation with particle accelerators in the 1980s and 1990s. Gell-Mann’s work led to the development of the field theory of quantum chromodynamics, which describes the interactions of subatomic particles.

From the 1980s Gell-Mann, who had a well-deserved reputation as a polymath (he described his interests as including “natural history, historical linguistics, archaeology, history, depth psychology, and creative thinking, all subjects connected with biological evolution, cultural evolution, and learning and thinking”), tried to develop a theory of complex adaptive systems that would reflect his concerns about the environment: “restraint in population growth, sustainable economic development, and stability of the world political system.” His 1994 book The Quark and the Jaguar, written for general readers rather than fellow scientists, had its origins in this concern. At the Santa Fe Institute he also headed the Evolution of Human Languages Program, which seeks to establish the historical relationships among human languages, on the assumption that all of them may belong to “superfamilies” derived from an original “proto-language” whose characteristics may be discovered.

**GELLNER, FRANTIŠEK** (1881–1914), Czech writer, poet, and cartoonist, and the outstanding satirist of his time. Born in Mladá Boleslav, Bohemia, into a poor family, Gellner studied painting first in Munich and then in Paris, where he published his early cartoons in Rire, Cri de Paris, and other French periodicals. He soon found, however, that he could express his anarchist creed better through the medium of verse, and his three books of poetry, modeled on the style of François Villon, contain some of the best satirical verse ever written in Czech. They are Po nás at přijde potopa (After us the Deluge, 1901), Radosti života (Pleasures of Life, 1903), and Nové verše (New Poems, 1919). In 1911 he joined the leading Czech newspaper Lidové Noviny, as a cartoonist and feature editor, and then began writing prose: his only novel, Potulný národ (Nation Errant, 1912), Cesta do hor a jiné povídky (Trip to the Mountains and Other Stories, 1914), and Povídky a satyri (Stories and Satires), which appeared in 1920 after his death. Because in many of his articles and short stories Gellner did not hesitate to subject Jewish weaknesses to the merciless lash of his satire, he has been criticized as an anti-Jewish writer. He disappeared while serving on the Russian front early in World War I. New editions of his works appeared in 1952, 1964, and in the 1990s.

[Avigdor Dagan / Milos Pojar (2nd ed.)]

**GELMAN, JUAN** (1930– ). Argentinean poet. He was born in Buenos Aires into a family of immigrants from the Ukraine. His political involvement with the left since his youth went together with an active critical dissent, which made him break with the Communist Party in 1964 and with the Montonero Peronist Movement in 1979. In the 1960s he became a journalist in leading magazines and newspapers. He went into exile in Mexico in 1975. In 1976 his son and pregnant daughter-in-law were abducted and murdered by the military government; in 2000 he was able to locate his granddaughter in Montevideo. His poetry expresses his worldview and the tragedies of Argentina through a personal blend of social involvement and pure aesthetics. High poetic language intertwines with colloquial expressions, love poems alternate with protest texts, history and ideology with tiny events of daily life and common people. The poems of dibaux (“Beneath,” 1994) are written in Ladino, in which he saw a means of connecting his Spanish-speaking culture with Jewish identity. Com/posiciones (“Com/positions,” 1984) includes his translations-rewritings of poems by Judah Halevi. Among his main books are Violín y otras cuestiones (“Violin and Other Matters,” 1956); Gotán (“Tango,” 1962); Cólera bucy (“Ox-like Anger,” 1963 and 1971); Si dulcemente (“IF Sweetly,” 1980); Salarios del impío (“Wages of the Godless,” 1992); Tantear la noche (“Feeling Up the Night,” 2000); Incompletamente (“Incompletely,” 1997); and Debi decir te amo (Antología personal) (“I Should Have Said I Love You,” personal anthology, 1997). Considered a leading poet of the Spanish-speaking world, among the many awards he received are the Argentine National Poetry Prize (1997), the Mexican López Velarde Award (2004), the Iberoamerican Pablo Neruda Prize (2005), and the Queen Sofia Poetry Award in Spain (2005). His work has been translated into ten languages, including Hebrew.

GELMANN, Manuel (1910–1993), Australian educator. Born in London, Gelman was taken to Australia as an infant. From 1946 to 1964 he was a lecturer in methods of modern languages at Melbourne University's Faculty of Education. From 1950 he headed the department of languages at the Secondary Teachers' College. From 1961 to 1964 Gelman was president of the Modern Languages Teachers' Associations of Victoria and founded the Australian Federation of Modern Language Teachers' Associations. His activities within the Jewish community included membership in the Board of Governors of Mount Scopus College, Melbourne (1959–61) and chairmanship of its Education Committee.

[Harry Freedman]

GELNHAUSEN, town in Germany. The Gelnhausen Jews paid their annual tax to the imperial treasury jointly with the Frankfurt community in 1241. In 1347 Emperor Louis IV offered the revenues from Gelnhausen Jewry as security on a loan. The community was annihilated during the *Black Death persecutions (1349) and the burghers were released from their debts to the Jews. By 1360 Jews had again settled in the town. In the late 17th century they were active as moneylenders, despite restrictions and threats of expulsion. A burial society was founded in 1711 and in 1734 the synagogue was rebuilt. The community then numbered 33 families. It remained approximately the same size in the 19th century (some 200 persons) and until the Nazi advent to power. The last Jew left Gelnhausen on Oct. 1, 1938. After World War II several Jews returned to the region but no organized community was formed. They numbered 27 in 1960.

GELSENKIRCHEN, city in North Rhine-Westphalia, Germany. A community was established there in 1874 and a synagogue built in 1885. There were 120 Jews living in Gelsenkirchen in 1880, 1,171 in 1905, and 1,600 in 1933. The community maintained an elementary school which in 1906 had 121 pupils. Siegfried Galliner officiated as rabbi before World War II. In Gelsenkirchen, as in most Westphalian congregations, Reform Judaism was dominant but an Orthodox congregation was established with its own synagogue and institutions. For some time from 1922 the rabbi of the Association for the Safeguarding of Traditional Judaism in Westphalia (founded 1896) had his seat in Gelsenkirchen. Under the Nazi regime two-thirds of the Jews left. The synagogue was destroyed on Kristallnacht, Nov. 9, 1938. On January 27, 1942, 350 of the remaining 500 Jews were deported to the Riga ghetto. The last Jews were deported to Warsaw and Theresienstadt. By June 17, 1939, only 720 Jews remained. On Sept. 9, 1939, the men were deported to the *Sachsenhausen concentration camp. Their families followed in 1942. There were 69 Jews in Gelsenkirchen in 1946. In 1958, a synagogue and communal center was built for the newly established Kultusgemeinde. The community numbered 110 in 1967 – mostly new residents – and had its own cantor and teacher. In 2005 the Jewish population was around 450, with a new synagogue under construction.

GEMARA (Aram. מָר, lit. “completion” or “tradition”), a word popularly applied to the Talmud as a whole, or more particularly to the discussions and elaborations by the *amoraim on the Mishnah. The word appears (abbreviated) in the printed editions of the Babylonian Talmud to indicate the beginning of that discussion and it has been adopted in the Vilna (Romm) edition of the Jerusalem Talmud. There is a Gemara to both the Babylonian and the Jerusalem Talmuds, though not to all or to the same tractates.

For a fuller discussion of the precise meaning of the word see *Talmud.

GEMARIAH (Heb. יָתָּהוּ, יֶהוָּלָ מ; “Yahu has accomplished”), two biblical figures.

(1) Gemariah son of Hilkiah was one of Zedekiah's emissaries to Nebuchadnezzar, who brought the letter written by Jeremiah to the elders in exile (Jer. 39:3). He is mentioned nowhere else. Although Jeremiah's father was also named Hilkiah that is probably coincidental.

(2) Gemariah son of Shaphan was a high official in the time of Jehoiakim (Jer. 36:10). He was a member of one of the influential pro-Babylonian families in the last days of Judah (see *Shaphan), and was also one of the royal officers on friendly terms with Jeremiah. Baruch read Jeremiah's scroll in Gemariah's chamber (Jer. 36:10–12). The latter's son Mic- aiah reported this to Jehoiakim, who ordered the scroll destroyed after it was read to him. Gemariah was among the officials who tried to dissuade him. The mention of Gemariah's chamber in the Temple is interesting, yet the reason for his having one is not entirely clear. Such chambers were commonly intended for priests and levites (Neh. 10:38–39; 13:4–9; 1 Chron. 9:26, 33) and also for high officials of the king (11 Kings 23:11; Jer. 35:4), but the purpose of these chambers is unknown (cf. 1 Sam. 9:22; Neh. 13:4–9). A bulla (stamp-seal impression) reading İgmryhw [b]lN špn, “belonging to Gemariahu [so]n of Shaphan,” was found in excavations in Jerusalem.

The name Gemariahu son of Hizzilahu occurs in *Lachish Ostraca.

GEMATRIA (from Gr. γεωμετρία), one of the aggadic hermeneutical rules for interpreting the Torah ("Baraita of 32 Rules, no. 29"). It consists of explaining a word or group of words according to the numerical value of the letters, or of substituting other letters of the alphabet for them in accordance with a set system. Whereas the word is normally employed in this sense of manipulating according to the numerical value, it is sometimes found with the meaning of "calculations" (Avot 3:18). Similarly where the reading in present editions of the Talmud is that Johanan b. Zackai knew "the heavenly revolutions and gematriot," in a parallel source the reading is "the heavenly revolutions and calculations" (Suk. 28a; BB 134a; Ch. Albeck, Shishah Sidrei Mishnah, 4 (1959), 497).

The use of letters to signify numbers was known to the Babylonians and the Greeks. The first use of gematria occurs in an inscription of Sargon II (727–707 B.C.E.) which states that the king built the wall of Khorsabad 16,283 cubits long to correspond with the numerical value of his name. The use of gematria (τὸ ἴσοψήφον) was widespread in the literature of the Magi and among interpreters of dreams in the Hellenistic world. The "Gnostics equated the two holy names Abraxas (Ἄβραξας) and Mithras (Μίθρας) on the basis of the equivalent numerical value of their letters (365, corresponding to the days of the solar year). Its use was apparently introduced in Israel during the time of the Second Temple, even in the Temple itself, Greek letters being used to indicate numbers (Shek. 3:2).

In rabbinic literature numerical gematria first appears in statements by tannaim of the second century. It is used as supporting evidence and as a mnemonic by R. Nathan. He states that the phrase Elleh ha-devarim ("These are the words") occurring in Exodus 35:1 hints at the 39 categories of work forbidden on the Sabbath, since the plural devarim indicates two, the additional article a third, while the numerical equivalent of elleh is 36, making a total of 39 (Shab. 70a). R. Judah inferred from the verse, "From the fowl of the heavens until the beast are fled and gone" (Jer. 9:9), that for 52 years no traveler passed through Judea, since the numerical value of behemah ("beast") is 52. The Baraita of 32 Rules cites as an example of gematria the interpretation that the 318 men referred to in Genesis 14:14 were in fact only Eliezer the servant of Abraham, the numerical value of his name being 318. This interpretation, which occurs elsewhere (Ned. 32a; Gen. R. 43:2) in the name of "Bar Kappara, may also be a reply to the Christian interpretation in the Epistle of Barnabas that wishes to find in the Greek letters τη, whose numerical value is 318, a reference to the cross and to the first two letters of Jesus' name, through which Abraham achieved his victory; the Jewish homilist used the same method to refute the Christian interpretation. These gematriot are based on the first of four methods of calculating the numeral value of the letters of the Hebrew alphabet. Known as Mispar Hekhrehi, absolute or normative value, each letter is given a specific numerical equivalent. Alef equals 1, bet equals 2, gimmel equals 3, and so on until yod, the tenth letter, which equals 10. The next letter, kaf, equals 20, then lamed, which equals 30, and so on until kuf, which equals 100. The last three letters, resh, shin, taf, equal 200, 300, and 400, respectively. The final forms of the letters, kaf, mem, nun, pei, and zadi, used when these letters appear at the very end of a word, are often given the same numerical equivalent as the standard form of the letter. Sometimes, they are given the values 500, 600, 700, 800, and 900, respectively. This brings the numerical equivalencies of the Hebrew alphabet to 1,000, for the alef, the first letter, can also symbolize 1,000. The word alef can also be read as alef, meaning 1,000.

The next two methods of gematria calculation are Mispar Sidduri, ordinal value, where each of the 22 letters of the Hebrew alphabet are given a number between 1 and 22, and Mispar Katan, reduced value, where every letter is equal to a single digit number. This is accomplished by removing the value of 10 or 100. Thus, the alef equals 1, but so do the yod and the kuf, which equal 10 and 100 in the absolute or normative value system. In these last two systems, the five letters that have final forms are usually given the same value as the standard form of the letter. At times, they are assigned special value.

The fourth method, Mispar Katan Mispari, integral reduced value, reduces the total value of the word to a single digit number. If the sum exceeds nine, then the integer values of the total are added together again and again until a single digit number is received. For example, the word hesed (lovingkindness) has an absolute or normative value of 72. The ket equals 8, the samakh equals 60, and the dalet equals 4. The numbers of the sum of 72 are then added together (7 plus 2) to equal 9. It should be pointed out that the integral reduced value of the ordinal value and the reduced value of hesed also add up to 9.

In Kabbalah, an additional system of gematria is used. The absolute or normative value of a word is calculated by treating each letter as a word and then adding up all of the numerical equivalencies of these letter-words. This system is called milu’i or milu’im. Since some letters can be spelled differently as words, different numerical equivalencies can be achieved for a single word. Thus, the Tetragrammaton, yod, he, vav, and hei, has the values of 72, 63, 45, or 52, each of which has vital significance in Kabbalah.

The form of gematria which consists of changing the letters of the alphabet according to atbash, i.e., the last letter is substituted for the first, the penultimate for the second, etc., already occurs in Scripture: Sheshach (Jer. 25:26: 51:41) corresponding to Bavel ("Babylon"). The Baraita of 32 Rules draws attention to a second example: lev kamai (Jer. 51:1) being identical, according to this system, with Kasdim. Another alphabet gematria is formed by the atbash system, i.e., the following is substituted for the first, the second, etc., and is called "the alphabet of Hiyya" (Suk. 52b). Rav, the pupil of Hiyya, explained that Belshazzar and his men could not read the cryptic writing because it was written in gematria, i.e., according to atbash (Sanh. 22a; cf. Shab. 104a).
Gematria has little significance in halakhah. Where it does occur, it is only as a hint or a mnemonic. The rule that when a man takes a nazirite vow for an unspecified period, it is regarded as being for 30 days, is derived from the word yi-hyeh (“he shall be”) in Numbers 6:5, whose numerical value is 30 (Naz. 5a). Even in the aggadah, at least among the early amoraim, gematria is not used as a source of ideas and homilies but merely to express them in the most concise manner. The statements that Noah was delivered not for his own sake but for the sake of Moses (Gen. R. 26:6), that Rebekah was worthy to have given birth to 12 tribes (ibid. 65:6), and that Jacob’s ladder symbolizes the revelation at Sinai (ibid. 68:12), do not depend on the gematriot given there. These homilies are derived from other considerations and it is certain that they preceded the gematriot.

Gematriot, however, do occupy an important place in those Midrashim whose chief purpose is the interpretation of letters, such as the Midrash Haseerot vi-Yeterot, and also in the late aggadic Midrashim (particularly in those authors made use of the work of *Moses b. Isaac ha-Darshan), including Numbers Rabbah (in Midrash Aggadah, published by S. Buber, 1894) and Bereshit Rabbati (published by H. Albeck, 1940; see introduction, 11–20). Rashi also cites gematriot that “were established by Moses ha-Darshan” (Num. 7:18) and some of the gematriot given by him came from this source even if he does not explicitly mention it (Gen. 32:5, e.g., “I have sojourned with Laban” – the gematria value of “I have sojourned” is 613, i.e., “I sojourned with the wicked Laban but observed the 613 precepts,” is the interpretation of Moses ha-Darshan, Bereshit Rabbati, 145). Joseph *Bekhor Shor, one of the great French exegetes of the Torah, made extensive use of gematriot, and nearly all the tosafists followed him in this respect in their Torah commentaries (S. Poznański, Mavo al Ḥakhamei Zarefat Meفارש ה-מקרא, 75). A wealth of gematriot occur in Panéelah Raza, the commentary of Isaac b. Judah ha-Levi (end of 13th century), and in the Bâdî ha-Turim, the biblical commentary of *Jacob b. Asher. The Kabbalah of the *Hasidei Ashkenaz also caused gematriot to enter the halakhah. In his Ha-Rokèâh, *Eleazar of Worms uses gematriot to find many hints and supports for existing laws and customs; with him the gematria at times embraces whole sentences. Thus he establishes by gematria from Exodus 23:15 that work which can be deferred until after the festival may not be performed during the intermediate days (Ha-Rokèâh, no 307). Gematriot of the Hasidei Ashkenaz occupy a prominent place in their commentaries on the liturgy and on piyyutim. Abraham b. Azriel incorporated the teachings of Judah he-Hasid and Eleazar Roke’ah in his Arugat ha-Bosem, and followed their lead. These gematriot, which were part of the Kabbalah of the Hasidei Ashkenaz, established the definitive text of the prayers, which came to be regarded as sacrosanct. Some authorities forbade it to be changed even when the text did not conform with the rules of grammar. *Nahmanides, on the other hand, tried to limit the arbitrary use of gematriot and laid down a rule that “no one may calculate a gematria in order to deduce from it something that occurs to him. Our rabbis, the holy sages of the Talmud, had a tradition that definite gematriot were transmitted to Moses to serve as a mnemonic for something that had been handed down orally with the rest of the Oral Law… just as was the case with the gezerah shavah [see “Hermeneutics” of which they said that no man may establish a gezerah shavah of his own accord” (Sefer ha-Ge’ullah ed. by J.M. Aronson (1959), She’ar 4; see his commentary to Deut. 4:25).

Despite *Nahmanides’ attempt to limit its use, gematria found its way into biblical commentary. The Panéelah Raza by Isaac ben Judah ha-Levi (late 13th century) and Bādî ha-Turim by Jacob ben Asher (c. 1270 to 1340) both make frequent use of gematria. Indeed, gematria became a staple element in kabbalistic literature. For example, the 17th-century work, Megalleh Amukkot, by Nathan Nata ben Solomon Spira, uses gematria extensively. The followers of *Shabbetai Zevi used gematria as proof of his messianism.

Gematria is still used to this very day. Indeed a search on the “Google” internet search engine reveals over 106,000 references to gematria on the World Wide Web, a great number of these sites deal with Christianity, witchcraft, and general (non-Jewish) mysticism. Numerous contemporary Jewish books have been published about gematria as well as assisting the reader to find his own gematria equivalences. For instance, one such book, Sefer Gematrikon (Jerusalem, 1990) provides gematria equivalents for the numbers 1 to 1,000.

[Encyclopaedia Hebraica / David Derovan (2nd ed.)]

In Kabbalah

The use of gematria was developed especially by the Hasidei Ashkenaz and circles close to them in the 12th and 13th centuries. It is possible that traditions of gematriot of Holy Names and angels are from an earlier date, but they were collected and considerably elaborated only in the aforesaid period. Even among the mystics gematria is not generally a system for the discovery of new thoughts: almost always the idea precedes the invention of the gematria, which serves as “an allusion *’asmakhah.” An exception is the gematria on the Holy Names, which are in themselves incomprehensible, or that on the names of angels whose meaning and special aspect the German Hasidim sought to determine via gematria. Often gematria served as a mnemonic device. The classic works of gematria in this circle are the writings of *Eleazar of Worms, whose gematriot are based – at any rate partially – on the tradition of his teachers. Eleazar discovered through gematria the mystical meditations on prayers which can be evoked during the actual repetition of the words. His commentaries on books of the Bible are based for the most part on this system, including some which connect the midrashic legends with words of the biblical verses via gematria, and some which reveal the mysteries of the world of the *Merkabah (“fiery chariot”) and the angels, in this way. In this interpretation the gematria of entire biblical verses or parts of verses occupies a more outstanding place than the gematria based on a count of single words. For
example, the numerical value of the sum of the letters of the entire verse “I have gone down into the nut garden” (Songs 6:11), in gematria is equivalent to the verse: “This is the depth of the chariot” (merkavah). Several extensive works of interpretation by means of gematria by the disciples of Eleazar of Worms are preserved in manuscript.

In the beginnings of Sephardi Kabbalah gematria occupied a very limited place. The disciples of *Abraham b. Isaac of Narbome and the kabbalists of Gerona hardly used it and its impact was not considerable on the greater part of the Zohar and on the Hebrew writings of *Moses b. Shem Tov de Leon. Only those currents influenced by the tradition of the Hasidei Ashkenaz brought the gematria into the kabbalistic literature of the second half of the 13th century, mainly in the work of *Jacob b. Jacob ha-Kohen and Abraham *Abulafia and their disciples. The works of Abulafia are based on the extensive and extreme use of gematria. His books require deciphering before all the associations of the gematriot in them can be understood. He recommended the system of developing power of association in gematria to discover new truths, and these methods were developed by those who succeeded him. A summary of his system is found in Sullam ha-Aliyah by Judah *Albini, who lived a generation after the Spanish expulsion (Kurjath Sefer, 22 (1945–46), 161–71). A disciple of Abulafia, Joseph *Gikatilla, used gematria extensively as one of the foundations of the Kabbalah in Ginnat Egoz (Hanau, 1615); the letters gimmel, nun, tav of Ginnat are the initials of gematria notarikon, and temerah – the interchange of letters according to certain systematic rules). This work influenced considerably the later Zohar literature, Ra‘aya Meheimna and Tikkunei Zohar.

Two schools emerged as the Kabbalah developed: one of those who favored gematria, and another of those who used it less frequently. In general, it may be stated that new ideas always developed outside the realm of gematria; however, there were always scholars who found proofs and wide-ranging connections through gematria, and undoubtedly attributed to their findings a positive value higher than that of a mere allusion. Moses *Cordovero presented his entire system without recourse to gematria, and explained matters of gematria only toward the end of his basic work on Kabbalah (Pardei Rimmonim). A revival of the use of gematria is found in the Lurianic Kabbalah, but it is more widespread in the kabbalistic works of Israel *Sarug and his disciples (mainly Menahem Azariah of *Fano and Nahaptali *Bacharach, author of Emeq ha-Melekh) than in the works of Isaac *Luria and Hayyim *Vital. The classic work using gematria as a means of thought and a development of commentative ideas in the Kabbalah in the 17th century is Megalleh Amukkot by Nathan Natana Solomon Spira, which served as the model for an entire literature, especially in Poland. At first only the part on Deut. 3:23ff. was published (Cracow, 1637) which explains these passages in 252 different ways. His commentary on the whole Torah (also called Megalleh Amukkot) was published in Lemberg in 1795. Apparently Nathan possessed a highly developed sense for numbers, which found its expression in complex structures of gematria. In later kabbalistic literature (in the 18th and 19th centuries) the importance of the methods of commentary via gematria is well-known and many works were written whose major content is gematria, e.g., Igeret Yisrael by Israel Harif of Satanov (Lemberg, 1865), Berit Kehunat Olam by Isaac Eisik ha-Kohen (Lemberg, 1796; complete edition with commentary of gematria, 1950), and all the works of Abraham b. Jehiel Michal ha-Kohen of Lask (late 18th century).

In the Shabbatean movement, gematriot occupied a place of considerable prominence as proofs of the messianism of *Shabbetai Zevi. Abraham *Yakhini wrote a great work of Shabbatean gematriot on one single verse of the Torah (Vavei ha-Ammudim, Ms. Oxford), and the major work of the Shabbatean prophet Heshel “Zoref of Vilna and Cracow, Sefer ha-Zoref, is based entirely on an elaboration of gematriot surrounding the verse Shema Yisrael” (“Hear O Israel”); Deut. 6:4.). In hasidic literature gematria appeared at first only as a by-product, but later there were several hasidic rabbis, the bulk of whose works are gematria, e.g., Igra de-Khalilah by Zevi Elimelekh Shapiro of *Dynow (1868), Magen Avraham by Abraham the Maggid of Turisk (1886), and Sefer Inrei No'am by Meir Horowitz of Dzikow (1877).

The systems of gematria became complicated in the course of time. In addition to the numerical value of a word, different methods of gematria were used. In Ms. Oxford 1,822, one article lists 75 different forms of gematriot. Moses Cordovero (Pardei Rimmonim, part 30, ch. 8) lists nine different types of gematriot. The important ones are the following:

1. The numerical value of one word (equaling the sum of the numerical value of all its letters) is equal to that of another word (e.g., בָּרִיב (gevurah) = 216 = אָנָן (aryeh)).
2. A small or round number which does not take into account tens or hundreds (4 = י, 2 = ה).
3. The squared number in which the letters of the word are calculated according to their numerical value squared. The Tetragrammaton, יְהֹוָה = 10^2 + 5^2 + 6^2 + 5^2 = 186 = מְמוֹקָא (“Place”), another name for God.
4. The adding up of the value of all of the preceding letters in an arithmetical series (1 (dalet) = 1 + 2 + 3 + 4 = 10). This type of calculation is important in complicated gematria that reaches into the thousands.
5. The “filling” (Heb. millui); the numerical value of each letter itself is not calculated but the numerical values of all the letters that make up the names of the letter are calculated (לְבָנָה = 412; לְדָרוּ = 434; לְדֶה = 20). The letters ה and י have different “fillings” — ה = י, ו, ב, א, ו, י, י, י; millui de-alefin (alef “filling”), millui de-he’in (he “filling”), or millui de-yudin (yod “filling”), respectively. These are important in Kabbalah with regard to the numerical value of the Name of God (לְדָרוּ), the Tetragrammaton, which varies according to the four different “fillings” ק, ק, ק, ק = 45, in gematria דָּרוּ (Adam), symbolizing the 45-letter Name of God; לו, ו, ו, ב, א, ו, י, י, י (52, in gematria וְי, representing the Holy Name of 52 letters); ו, ו, ו, ב, א, ו, י, י (63, in gematria וְי, the 63-letter Name);
Other calculations in gematria involve a “filling” of the “filling,” or a second “filling.” The gematria of the word itself is called ikkar or shorash, while the rest of the word (the “fillings”) is called the nêcem ("hidden part"). The nêcem of the letter ה is נ = 10; the nêcem of ו is ו, and נ = 500.

(6) There is also a “great number” that counts the final letters of the alphabet as a continuation of the alphabet (500 = מ; 600 = נ; 700 = ק; 800 = ר; 900 = ש). However, there is a calculation according to the usual order of the alphabet whereby the numerical values of the final letters are as follows: ק = 500, 500 = מ, נ = 600, ק = 700, etc.

(7) The addition of the number of letters in the word to the numerical value of the word itself, or the addition of the number “one” to the total numerical value of the word.

Criticism of the use of gematria as a justified means of commentary was first voiced by Abraham *Ibn Ezra (in his commentary on Gen. 14:14) and later by the opponents of the Kabbalah (in *Nehemiah, ch. 10). But even several kabbalists (e.g., Nahmanides) warned against exaggerated use of gematria. Joseph Solomon *Delmedigo speaks of false gematriot in order to abolish the value of that system. When the believers in Shabbetai Tzevi began to widely apply gematriot to his name (shaddai (God) and its “filling” = 814), those who denied him used mock gematriot (ruiahek sheker = “false spirit”) = 814). In spite of this, the use of gematria was widespread in many circles and among preachers not only in Poland but also among the Sephardim. To this day the homiletical and allegorical literature according to the method of *Pardes (the four levels of meaning of a text), especially of the North African rabbis, is full of gematria.

[Sources]

According to the findings of Stephen Lieberman, a variety of techniques similar to gematria are found already in Mesopotamia. Among the Hasidei Ashkenaz books devoted to the gematria ot found in the Bible are known, as is the case with R. Judah ha-Hasid, and his descendant R. Eleazar ha-Darshan (Ms. Munchen 221). An interesting example of wide-ranging gematria in most of its varieties is found in the manuscript writings of a contemporary of Eleazar of Worms, R. Nehemiah ben Solomon the Prophet, which reflect the centrality of this technique outside the circle of Kalonymide esotericism in Worms. One of the most famous gematriot, Elohim = teva = 86, presumably had an influence on Spinoza’s philosophy.

[Moshe Idel (2nd ed.)]

GEMEN, town in Westphalia, Germany. Jews are known to have lived there from the mid-16th century. After 1771 they came under the jurisdiction of the rabbi of *Muenster. The community numbered 28 persons in 1809; 49 in 1911; and 52 in 1933. The synagogue (erected in 1912) was destroyed in November 1938, and shortly afterward the congregation ceased to exist.

GEMILUT HASADIM (Heb. גמִילוּת חָסָדִים, lit., “the bestowal of lovingkindness”), the most comprehensive and fundamental of all Jewish social virtues, which encompasses the whole range of the duties of sympathetic consideration toward one’s fellow man. The earliest individual rabbinic statement in the Talmud, the maxim of “Simeon the Just, mentions it as one of the three pillars of Judaism ("Torah, the Temple service, and gemilut hasadim”) upon which the [continued] existence of the world depends” (Avot 1:2). The first Mishnah of Peah enumerates it both among the things “which have no fixed measure” and among those that “man enjoys the fruits thereof in this world, while the stock remains for him in the world to come,” i.e., its practice affords satisfaction in this world while it is accounted a virtue for him on the Day of Judgment. This, incidentally, is an exception to the general rule that pleasure in this world is at the expense of one’s spiritual assets. With regard to the former, the Jerusalem Talmud (Peah 1:1, 15b) differentiates between gemilut hasadim expressed in personal service (“with his body”) and with one’s material goods. It maintains that only the former is unlimited in its scope, whereas the latter is limited by the general rule that one should not “squander” more than five of one’s possessions on good works. With regard to the latter, the text of the Mishnah mentions only “honoring one’s parents, gemilut hasadim, and bringing

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7 427
about peace between man and his fellow.” The prayer book version adds, inter alia, “hospitality to wayfarers, visiting the sick, dowering the bride, attending the dead to the grave.” These additions, culled from various beraitot and other passages, are actually redundant since they are merely aspects of the comprehensive virtue of gemilut hasidim which embraces them and many other expressions of human sympathy and kindness (cf. Maim., Yad, Evel 141).

Gemilut hasidim encompasses a wider range of human kindness than does *charity: “Charity can be given only with one’s money; gemilut hasidim, both by personal service and with money. Charity can be given only to the poor; gemilut hasidim, both to rich and poor. Charity can be given only to the living; gemilut hasidim, both to the living and the dead” (Suk. 49b). Thus, helping a lame man over a stile is an act of gemilut hasidim, though not of charity; a gift given with a scowl to a poor man may be charity; the same amount given with a smile and a word of good cheer raises it to the level of gemilut hasidim. Almost humorously the rabbis point out that the only provable example of genuine altruistic gemilut hasidim is paying respect to the dead, for in it there is not the unspoken thought that the recipient may one day reciprocate (Tamh., Va-Yehi 3; cf. Rashi to Gen. 47:29).

Gemilut hasidim is regarded as one of the three outstanding, distinguishing characteristics of the Jew, to the extent that “whosoever denies the duty of gemilut hasidim denies the fundamental of Judaism” (Eccles. R. 7:1); he is even suspected of being of non-Jewish descent. Only he who practices it is fit to be a member of the Jewish people (Yev. 79a), for the Jews are not only practicers of gemilut hasidim but “the scions of those who practice it” (Ket. 8b). That gemilut hasidim is essentially a rabbinic ethical conception, is explicitly stated by Maimonides (loc. cit.).

During the Middle Ages the grand conception of gemilut hasidim as embracing every aspect of benevolence and consideration to one’s fellow both in attitude and in deed became severely limited to the single aspect of giving loans without interest to those in need. It is not unlikely that this limitation was due to the fact that the main source of economic existence for the Jew was moneylending (to non-Jews), with the result that in lending money without interest he was depriving himself of his essential stock in trade. It is to this connotation of gemilut hasidim that the free-loan gemilut hasidim societies refer.

[Louis Isaac Rabinowitz]

Modern Period
Burial societies in the communities of Central and Eastern Europe in the 18th century were known as *hevra kadisha or kabranim with the added appellation gemilut hasidim. They were also called gomelei hesed shel emet (Gen. 47:29). This application came to signify the acts of lovingkindness connected with burial and consolation of the bereaved. The Prague community in 1792 had an association with triple functions: the provision of gemilut hasidim, of burial duties, and of sandakim at circumcisions. In Koenigsberg and many other communi-

ties the local bikkur holim was also called gemilut hasidim. The Hambro Synagogue in London in 1795 had a ladies’ auxiliary, hevra kaddisha u-gemilut hasidim mi-nashim. In the United States hesed shel emet societies have specialized in burial of the poor. Such an association, founded in 1888 in St. Louis, Missouri, amassed considerable wealth from its large cemetery holdings and was able to support local, national, and overseas charities from its considerable income. GENEALOGY.

In the Bible
Genealogical lists in the Bible are of two main types:

(1) those which are simply lists of historical, ethnographic, and even legendary traditions, and which constitute most of the lists in Genesis that are called “generations” or “books of generations” (Gen. 5:1; 6:9; 10:1; et al.);

(2) those which are tribal genealogies or lists reflecting clan traditions, the census lists in Numbers, and the genealogical accounts in Chronicles.

A third type consists of detailed lists giving the genealogical background of individual families, usually where that family played an important historical role, such as in the case of the house of David (1 Chron. 2:10–15; 3:1–24), the house of Zadok (1 Chron. 5:28–41; et al.), and the house of Saul (1 Chron. 8:33ff.; et al.). Sometimes, less important families (1 Chron. 2:31–41; 5:14; et al.), and also individuals (1 Kings 22:3; Jer. 36:14), are represented in the same way as in the third type of list. The Bible does not distinguish these different types from each other, and the historico-ethnographic and tribal genealogies are all based on the view (common also among the Arabs) that nations, tribes, and clans all develop in the same way: every human grouping is descended from a single father. Nor is it always easy to classify a genealogy as belonging to one or another type.

It is not known when the tradition of recording genealogies became established in Israel, but it is undoubtedly an ancient one, as only by proving connection with some family or clan could an individual claim the privileges of citizen status. The important role of the genealogy is indicative of a society based on a tribal, patriarchal tradition. Consequently, certain family groups or individuals from among the local population or from closely related tribes, who joined the Israelites during the period of the Conquest or in the early monarchy, were included in the genealogical framework of the tribe as one way of truly incorporating them into the community. In like manner artisans, wise men, and poets, whose profession was customarily hereditary, were generally linked with some ancient ancestor (cf. 1 Chron. 2:35; 4:21, 23), and
whoever joined such a group was as a matter of course attached to it genealogically even though he did not actually stem from its line.

Such written lists were definitely family and clan genealogies and not those of individuals; in part they were composed for official purposes, such as for a national census, military service, or the levying of taxes. Genealogical lists in Israel are known from the time of the First Temple, from what is related in Ezra 2:62 of priestly families who on returning to Zion sought proof of their pedigree but could not find it. Nehemiah (7:5) also mentions the “book of the genealogy of those who came up at first.” It seems that the institution of genealogical lists is the background of certain figurative expressions in the Bible (cf. Ex. 32:32; Ezek. 13:9; Ps. 139:16; et al.). Apparently genealogies of individual families were based on oral traditions passed down among the families concerned, or even on national traditions. Some think that the list of Aaron’s priestly descendants (1 Chron. 6:1–6) goes back to a text in which many generations were missing, and that the editors filled some of the gaps by repeating some of the names.

In the period of the return to Zion the question of genealogy acquired a special significance. Of primary importance was the lineage of the priests and the levites, for without proving their priestly descent they could not qualify for service in the Temple; but the other returning families were no less keen to prove their descent in order to claim family property. Consequently, a special interest developed in the ancient genealogical lists, some of which are reproduced in the opening chapters of Chronicles and presumably were written toward the end of the Persian period. Similarly, in the short historical stories of Esther, Judith, and Tobit, also written at the end of the Persian period, the lineage of the main hero of the story is given in detail, e.g., those of Mordecai (Esth. 2:5; cf. 1 Sam. 9:1), Tobit (1:1; cf. Gen. 46:24), and Judith (8:1; cf. Num. 1:6). It is hard to suppose that these are authentic genealogies, yet each of these books claims to relate an event that happened long before the time of composition.

In the genealogical lists, particularly those of 1 Chronicles, there are three main elements which are usually combined. One represents the relationship of clans through lines of descent from father to son; another sees it in the names of settlements (usually so-and-so, the “father” of the settlement); and a third, in the names of families (e.g., the Tirthites (1 Chron. 2:55)). The line of Caleb’s descendants (1 Chron. 2:42–49) illustrates the mixture.

Various scholars have sought to find in the genealogical schemes of the Bible a conventional way of handing down ethnographic records and information concerning regional history and the pattern of settlement of local clans and families. These scholars have even attempted to establish rules to interpret the various genealogical schemes. Thus, the fusing of two ethnic groups or tribes can be expressed by an account of a marriage; and the integration of a newly settled tribe in the indigenous population can be indicated by the head of the tribe marrying one of the native women, or taking one as a concubine. Daughters generally represent settlements subject to a larger urban center, and sons naturally represent the strongest and oldest of these. Individuals from outside the
“family” circle who appear in a genealogy usually symbolize weak families who joined a stronger tribe and so on.

Though such rules cannot provide the sole interpretation of the genealogical lists, they are an aid to the unraveling of the complicated process of Israelite settlement. One, of course, must bear in mind that several of the stories and traditions concerned derive from a combination of schematic descriptions, as regards the historic reality, together with legends and folktales.

It frequently happens that a given name – of a nation, tribe, or family – occurs in different genealogical contexts, or even in a compound list, once as father, once as son, uncle, or brother. For example, Aram is listed in Genesis 10:23 as the father of Uz, whereas in Genesis 22:20–21 Uz is a son of Nahor and an uncle of Aram. In Genesis 36:5, 14 Korah is a son of Esau, but in Genesis 36:16 the clan of Korah is descended from Esau’s son Eliphaz. In 1 Chronicles 2:9 Ram is a son of Hezron and brother of Jerahmeel, yet in the same chapter, verse 27, Ram is the eldest son of Jerahmeel. Sometimes one name can be included in several genealogical lists in association with different ethnic or tribal units. For instance, Zerah, Korah, and Kenaz, who are included in the Edomite list in Genesis 36, are also found on the list of families in the tribe of Judah in 1 Chronicles 2 and 4. Beriah appears as one of the sons of Ephraim (1 Chron. 7:23), and also as one of the sons of Asher (Gen. 46:17); and Hezron is listed as the son of Reuben (Gen. 46:9), and also as one of the sons of Perez son of Judah (Gen. 46:12). At times it may seem plausible that two entirely separate ethnic groups bore the same name, but generally such duplication is caused by uncertainty concerning genealogical attribution or the existence of parallel traditions. These may have had various causes; sometimes they reflect changes in historical circumstances – the power relations between tribes, families and clans; the migration of several tribes or clans from one region to another; or a mingling of various ethnic elements.

The editors of the genealogical lists in the Bible, particularly those of 1 Chronicles, were confronted with conflicting lists and traditions, often mutually contradictory. The combination of the various lists, without altering their different, individual character, was possible because the editors of the comprehensive lists regarded them as genealogies of individuals, the progenitors of families and tribes. Thus, the repeated recurrence of the same name provided no difficulty. They did not regard such recurrences as conflicting data concerning families and clans, but merely as showing that the same name kept recurring among individuals related to one another.

In the Second Temple Period

Purity of descent played an important role in the Second Temple period. It concerned mainly the kohanim (“priests”) and those Israelite families who laid claim to the eligibility of their daughters to marry kohanim. Other families, who had no record of their descent but on the other hand were not suspected of impure lineage, were referred to as issah (“dough”). The kohanim, in order to preserve their pure status, were restricted to marital ties with families whose purity of descent was not in doubt, and were therefore required to know in detail their own genealogy and that of the families whose daughters they married. Families laying claim to purity of blood kept ancestral lists, which served as evidence of their seniority and legitimacy, for the very possession of such lists enhanced their standing. For the kohanim, a general genealogical list was maintained in the Temple, which recorded genealogical information on all priestly families; even the kohanim who lived in the Diaspora provided this genealogical center in Jerusalem with full details of their marriages (cf. Jos., Apion, 1:7).

A priestly tribunal, which convened in a special room in the Temple, was responsible for the upkeep of the genealogical lists and the verification of genealogical data. They functioned in accordance with established rules, and also based their findings on the evidence of witnesses and genealogical documents. One such rule followed in the Second Temple period was that families who traditionally performed certain functions were beyond suspicion and their purity of descent required no further examination: priestly families who served in the Temple “from the altar and upward” and “from the dukhan [the place from which the kohanim blessed the people] and upward,” and members of the “Sanhedrin and other families who performed certain official functions (Kid. 4:4–5; Sanh. 4:2; Ar. 2:4). Other duties, such as participation in the priestly blessing or partaking in the terumah (the contribution made to kohanim), did not in themselves put the priestly family in question beyond the need for further proof. It should be pointed out that the various offices in the Temple service passed from father to son.

It is important to note that the sages did not owe their positions of leadership to their descent from prominent families. Some of the sages, it is true, were of noble lineage (such as *Judah ha-Nasi), but others came from families with no genealogical record and there were even a few who were the descendants of proselytes. In their society, the rabbi took the place of the father, and the tradition of the academies (the yeshivot) took precedence over the tradition of the family. Talmudic legends went so far as to “invent” a gentile origin for some sages, including some of the greatest (*Akiva, *Meir, and others); some sages were even said to have been descended from infamous and evil gentiles (Sisera, Sennacherib, Haman, Nero) who had repented of their ways and had become Jews. The evident purpose of such legends was to demonstrate that the acquisition of Torah learning and piety was not dependent upon noble descent.

Purity of blood did, however, play a role in the struggle for secular power among the prominent families, and even the royal houses had to resort to genealogical proofs in order to strengthen their position. Thus the *Hasmoneans, who had to defend themselves against the contention that only Davidic descendants could lay claim to kingship, in turn questioned the purity of David’s blood, in view of his descent from Ruth.
the Moabite. *Herod, who also had to face a challenge to the legitimacy of his rule, forged for himself a pedigree going back to David, after first destroying the genealogical records maintained in the Temple (according to the third-century Christian historian Africanus). Later sources reflect the great danger inherent in any attempt to probe the purity of leading families, for the latter would not hesitate to use force against anyone casting doubt upon their pure descent (Kid. 71a). *Johanan b. Zakkai therefore decreed (apparently on the eve of the destruction of the Temple) that no rabbinical court would deal with matters concerning genealogy (Eduy. 8:3). A similar consideration led to an early rejection of Sefer Yahasim, which seems to have been a Midrash on Chronicles (Pes. 62b).

After the destruction of the Temple, when the kohanim lost their function, they prized even more their purity of descent, for it was the only symbol left to them of their exalted status. This emphasis on descent continued up to the end of the era of the amoraim (sixth century), in both Erez Israel and Babylon. One result was that a man who wished to ensure the continued purity of his family would marry only his sister’s daughter (Yev. 62b, et al.); many of the great sages followed this practice. The Damascus Sect (see Book of the Covenant of *Damascus) disapproved of it. It is doubtful whether the rabbis of the tannaic and talmudic era had real knowledge of their own—and contemporary—genealogy. Numerous families are mentioned in the Mishnah and the Gemara, and some of these are described as being of traceable descent (Tosef., Pe’ah 4:11; Yev. 16b; Tân. 45, etc.). The list in the Mishnah Ta’anit 4:5 originates from the Persian period. Some of the genealogies ascribed to these families are undoubtedly of a legendary character, while the rest are disputed by scholars. A special problem is posed by the later genealogy of the house of David, a subject which also concerned the early Christians (Matt. 1:1–17, Luke 3:23–38).

The Mishnah (Kid. 4:1) lists ten social groups who returned from the Babylonian exile, in the order of their genealogical precedence. The first three—kohanim, levites, and Israelites—are of equal status, except that the kohanim are restricted in their choice of wives; the halalim are the sons of the marriages of disqualified kohanim and are themselves disqualified from service in the Temple and marital ties with kohanim; next are gerim (converts to Judaism) who are equal to Israelites in most respects, except that they may enter certain marriages which are prohibited to an Israeliite by descent; the sixth group are the harzerim, manumitted slaves; the seventh are the *mamzerim, i.e., bastards, the children of one of the unions prohibited on pain of death or *karet; next are the nethinim, the descendants of the Gibeonites who were circumcised at the time of Joshua and were not regarded as full Jews because their ancestors’ conversion was incomplete; the ninth group are the shetukim (“the silent ones”) who do not know the identity of their father; and the tenth, and lowest, group are the asufim (“foundlings”) who know neither mother nor father. A chapter in the Talmud (Kid. 4) is devoted to the relationships between these groups, i.e., the rules applying to intermarriage between one group and another. Not included in the scale are gentiles and slaves; these have no genealogical status at all, and when they convert or are set free achieve their own “descent” and are legally free to marry even their closest relatives. This genealogical scale applied to marriage and honorific matters; it was not deemed relevant in respect of Torah learning and piety, and the Mishnah states clearly that “a learned bastard takes precedence over an uneducated high priest” (Hor. 3:8).

Babylonian Jewry considered that the purity of its descent was of a higher order than that of Erez Israel, basing its claim on the tradition that all those whose purity was in doubt had returned to Erez Israel with Ezra. In the course of time, however, Babylonian amoraim declared the population of entire areas as Jews who were not fit “to enter the assembly of God” (i.e., for marriage with other Jews; Kid. 70b). The rabbis of Erez Israel made several attempts to change the existing rule which regarded Babylonian lineage as superior but failed in their attempt; this was a result of the general reluctance to take up genealogical questions prevailing in Erez Israel, as well as the rising importance of Babylonian Jewry at this time (beginning of third century). Babylonian Jews continued to claim greater purity, and the Talmud (Kid. 71b) tells of an impostor who feigned a Babylonian accent to claim Babylonian descent.

This development testifies to the degeneration of the concept of genealogy which, with the destruction of the Temple, ceased to have practical significance and merely became a symbol of social status. The Talmud makes frequent references to honorable families and individuals who quarreled with one another about their lineage, even stating: “When men quarrel among themselves, they quarrel over birth” (Kid. 76a). The amoraim tackled the problem from two angles: on the one hand they decided that “anyone with a family stigma stigmatizes others and never praises anyone” (according to the correct reading in DER 1), and Samuel added that “he stigmatizes with his own stigma” (Kid. 70b). It is also related in this same spirit of the people of Erez Israel: “When two people quarrel they see which becomes silent first and say to him ‘This one is of superior birth’” (ibid. 71b); on the other hand they included within their homilies abundant praise of birth, such as “When the Holy One causes His divine Presence to rest, it is only upon Israelite families of pure birth” (Kid. 70b); “The Holy One is reluctant to uproot a name from its place in a genealogical tree” (Gen. R. 82:11; cf. TJ, Suk. 5:8). The sages also protested against “anyone who takes a wife not fit (i.e., with a stigma) for him” (Kid. 70a) because he disregards the importance of birth. The sages included among their homilies sayings in the style of prophecies of comfort that God will purify Israel’s genealogy in time to come. They stressed, however, that for the time being one can only act carefully and be guided by the rule that “a family once mixed up remains so” (Kid. 70b) – an important rule which they regarded as “a charity shown by God to Israel” since it is likely to abolish the obstacles of genealogical stigmas: one should not reveal the truth
concerning families that have become mixed up and whose stigma has been forgotten (see also *Family).

The Talmud records the Davidic descent of the patriarchs of the Ereẓ Israel community in the talmudic era, and of the Babylonian *exilarchs. Similarly, in the post-talmudic era the exilarchs were regarded as descending from the house of David. The same claim was made about some of the *geonim (such as *Hai Gaon). In the Middle Ages, Da-
idic lineage was claimed for some great scholars, e.g., *Rashi, and in consequence his grandsons Jacob b. Meir *Tam and *Samuel b. Meir were said to have descended from *Johanan ha-Sandlar, who in turn was regarded as being of Davidic descent.

**In the Modern Period**

From the 12th century onward, the term *yihus (birth) assumed additionally a new and positive meaning among the Jews of Central and Eastern Europe. Dynastic connection not only ensured the family concerned against any suspicion of impure birth, but also provided it with family privileges (zekhut avot) applicable in many matters. These dynastic genealogies stemmed from superiority of their pious and scholarly forefathers, the founders of the family, and its main importance was in connection with arranging marriages. Many families possessed genealogical trees – whether of substance or otherwise – which they took great pains to preserve. Some of these lists were published in order to add further luster to the family name. Many rabbis strongly criticized this custom and stressed the value of a man creating his own good name. In *Ḥasidism, descent from the *zaddik was endowed with special significance, rooted in the belief that the *zaddik transmitted some of his sanctity to his descendants. With the development of dynasties of *zaddikim the term *yihus acquired also great formal institutional value. In 19th-century Germany the study of genealogy held an important place in Jewish public affairs, because of the aspiration to prove that the Jewish community was deeply rooted in the locality. Scientific journals dealing with this topic were founded and much scientific and archival material published.

**Genealogical Research**

**Introduction.** Jewish genealogy is a popular and even scholarly pursuit in many parts of the world today. Since Judaism is not only a community of faith but a people that claims descent from common ancestry, there has always been an interest in tracing and validating descent. To this day there are Jews who trace their descent from the ancient priests (*kohanim) and leviites (*leviim) of the biblical period and who receive special recognition as such in the synagogue service. *Sephardim are particularly scrupulous in maintaining family genealogical records in order to demonstrate that they are indeed “pure” Sephardim (*sefardi tahor).

**Rabbinic Genealogy.** Because of the importance attached to Torah learning in the Jewish tradition, genealogical records of rabbis and ḥasidic leaders (*rebbes) are relatively abundant and carefully recorded. Genealogical research is facilitated by the frequency with which these families intermarried.

Rabbinic genealogical information may be found in biographical works, rabbinic manuscripts, scholarly works and responsa literature. *Yizkor books on the *shtetls of Eastern Europe contain stories about the town rabbis and their families. Because rabbis and scholars held positions of esteem in the Jewish world, their writings were preserved and their *yahrzeits observed. Therefore it may be possible to trace farther back into time if one is of rabbinic descent even if the family did not maintain records.

Amongst the problems in creating a rabbinic family genealogy is the fact that despite large numbers of children born into rabbinic families, only those sons who were rabbis and daughters who married rabbis were usually recorded.

Research has been complicated by the changing of family names. A son-in-law might take the name of a scholar or father-in-law or that of a beloved mother-in-law in place of the patronym. Adding to the confusion is the usage of the Hebrew word *ḥatan, which refers to both son-in-law, father-in-law, and husband. Encyclopedic works may record rabbis according to first names. Since words in rabbinic literature are used sparingly, rabbis were often known by *rashe tevot (first letter abbreviations) or by the names of books they authored (see B. Friedberg, *Bet Eked Sefarim). The use of the title “Reb” as sign of respect for a non-rabbi also leads to misunderstandings. Publication of a rabbi’s writings often contained bibliographies of the author and *yahrzeit dates for members of the family. Introductory *haskamot (approbations) by rabbis who read the manuscript included their own biographical notes about the author and his family, recording the names of other scholars in the family. *She’elot and *teshuvot (rabbinic responsa) also may contain genealogical references.

**What is Genealogy Today?** In contrast to the traditional view of genealogy as simply a compilation of ancestors’ names and dates in a chronological order from the past to the present, genealogy today differs both in direction and in scope. Starting with the present, the researcher works back into history, recording personal characteristics and history as well as names and dates. Since the search has a personal motivation, which is self-understanding, the term genealogy is being used interchangeably with family history or personal history. Genealogy previously had been primarily an activity of the elderly. The “new” genealogy has attracted a much younger constituency.

It is not unusual to hear that a genealogist has been researching his ancestry for 30 years. Starting with two parents, four grandparents, eight great-grandparents, continually increasing their number, we find that, within ten generations, if successful, a person will have 1,024 direct ancestors. The number grows proportionally as we add brothers, sisters and their spouses and children at each generational level.

Key elements in genealogy are names, dates, places, and relationships. These records have been recorded on many ar-
tic charts and trees. Information can be collected and stored in albums or books, on tapes, maps, and slides. Today, with a computer, people with large genealogies produce computerized copies of their ancestry.

Starting with oneself, the genealogist poses the following questions. What were the personal, historic, economic, religious, and social reasons that brought my ancestors to uproot themselves and move from one country to another? How have my parents’ and ancestors’ decisions, beliefs, and needs affected my environment and my life? A family tree is only the framework for family history. Stories, legends, and events in the life of members of the family give drama and meaning to the genealogy. Often a family maintains that it is descended from the Ba’al Shem Tov, the Vilna Gaon, the Maharal of Prague, Rashi, and other famous personalities. These traditions add excitement and encouragement for the genealogist.

An explosion of interest in genealogy across the United States of America was sparked by the bicentennial celebration of American independence in 1976 and ignited by the television screening of Alex Haley’s bestseller Roots in 1977. These events carried a strong message of encouragement to all Americans to take pride in their ethnic origins. Along with other ethnic groups Jews have joined the “Back to Roots” movement.

In 1977, Dan Rottenberg published Finding Our Fathers: A Guidebook To Jewish Genealogy which provided a major resource for Jewish genealogists. In 1979 there were three Jewish genealogical societies in North America and by 1984 there were 17, located in New York, Washington, Los Angeles, Chicago, Philadelphia, Cleveland, St. Louis, Pittsburgh, Tidewater (Virginia), Orange County, San Diego, San Francisco, Detroit, Boston, southern Florida, Cincinnati, and Montreal. These organizations function as a support system for the researcher and a forum for sharing discoveries, methods, and sources of research, and genealogical skills and techniques.

In 1977 the first American journal of Jewish genealogy, Toledot: The Journal of Jewish Genealogy, was published in New York, followed by Roots Key from Los Angeles, Philadelphia’s Newsletter, Mishpacha from Washington, and Search from Chicago.

In 1981, the First National Summer Seminar on Jewish Genealogy took place in New York City. Subsequently, national seminars were held in Washington in 1982, Los Angeles in 1983, and Chicago in 1984. The First International Seminar, sponsored by the Jewish Genealogy Society of Greater Washington, was held in Jerusalem in 1984. These seminars provide participants with the opportunity to visit local archives, libraries, and cemeteries, to meet other genealogists from different cities and countries, and to attend educational workshops.

The shock of the Holocaust was a significant factor in stimulating Jewish genealogy. Jewish attention was turned back to Eastern Europe. Jews were tormented by questions of what and who had been lost. Questions about ancestral roots were reawakened. Grieving family losses created a hunger for the reuniting of families and a fierce desire to know who survived. In response agencies were created that are important resources for genealogists: the International Tracing Service (ITS) in Arolsen, West Germany, and the Search Bureau for Missing Relatives in Jerusalem.

The ITS, administered by the International Red Cross, maintains a master index on an alphabetic Soundex System. Among the holdings of the ITS are indexes and name lists of concentration camp victims, deportation lists of Jews, and lists of children separated from families. Postwar holdings include lists of inhabitants of the displaced person camps. The staff of the ITS can respond to queries in most languages.

In 1945 the Jewish Agency for Palestine established the Search Bureau for Missing Relatives. The office published The Register of Jewish Survivors, listing 88,000 persons. Now they have computerized their list of World War II survivors. Also, the Agency maintains a computerized family finder for Israeli residents indexed by surname, country, and town.

Post-Holocaust Archives. At this time also archives were established to gather, save, and preserve what remained of Jewish records from before the Holocaust and those concerning that period. *Yad Vashem was founded in Israel in 1945. The Leo Baeck Institute, an important archive for German Jewish records, was established in Israel in 1955; its New York Archive has valuable genealogical materials.

Yad Vashem became a major center for the collection of oral, photographed, and written testimonies of Holocaust survivors. It has a copy of the ITS holdings; however, it is not equipped to deal with queries or research. There is at Yad Vashem a plan to create a separate file on those who gave testimony and a computer series in Hebrew and English characters listing the victims and significant information about them.

Motivated by a need to remember and record life in their native villages and towns now destroyed by Nazis, the landsmannschaft organizations began to produce *yizkor bikher (“memorial books”). These *yizkor bikher now number over 500 and are an indispensable source of information on the destroyed Jewish communities of Eastern Europe. They include lists of local residents, photographs, stories about personalities who lived in the town, and history of the town itself. Many books have hand-drawn maps of the town which outline the main streets of the *shittel, cemeteries, synagogues, and details not normally found on a map. These books are written mostly in Yiddish and Hebrew, with some English. Most Jewish libraries carry some of the volumes. The most complete selection is at Yad Vashem in Jerusalem and YIVO in New York City. The most recent listing of these volumes can be found in Appendix I by Zachary M. Baker in A Ruined Garden (see Bibliography).
Yad Vashem also has put online names and information for more than three million victims of the Holocaust gathered over the past half century. The names of those murdered are a prominent feature of the new museum exhibition with the Hall of Names and are now accessible for all to search. In 2005, it signed an exchange agreement with the United States Holocaust Memorial Museum for the exchange of names of victims taken from lists of deportee and concentration camp records, which will join the affidavits of those murdered that Yad Vashem has painstakingly gathered. Yad Vashem will also have access to the Ben and Vladka Meed National Registry of Jewish Holocaust Survivors collected by the *American Gathering of Jewish Holocaust Survivors since 1981. The more than 50,000 pre-interview questionnaires of the Survivors of the Shoah Visual History Foundation, under the auspices of the University of Southern California, also contain an extensive list of Holocaust victims as well as survivors; the material was not yet accessible online in late 2005. In addition, the Jewish Historical Institute in Warsaw is the home of a genealogical search for records of Jews in Poland. Yale Reisner developed the project with major financial assistance from the Ronald S. Lauder Foundation.

**General Methodology.**

1. Interview family, starting with the oldest in each branch of the family. Record and tape everything carefully. The most valuable sources are the oldest living members of the family. Their memories of events and recollection of family experiences cannot be replaced. fortunate is the researcher who has a relative from the immigrant generation, for this person may remember those who remained behind and were lost in the Holocaust.

2. Locate all relatives; interview or contact by letter or phone. Record dates of all contacts.

3. Search for diaries, biographies, family papers and letters, diplomas, journals and newspaper clippings, photographs, passports, vital records, *jahrzeit* records, and inscriptions in Bibles and prayer books.

5. Contact or visit Yad Vashem to see if your relatives are recorded in the pages of testimony filed there. These pages list the name and address of the testifier who is often a family member.

6. Search for death records at home, in cemeteries, at funeral parlors, and in synagogues, *hevra kaddisha* records, society and landsmannschaft records, vital statistics departments of the government, newspaper or journal obituaries and notices.

7. Search for birth records at home, in maternity clinics, in government health record centers, and in physicians' files, circumcision records, and vital records in government and state archives.

8. Obtain immigration and naturalization records. In the U.S. petitions for naturalization, “first papers,” are particularly valuable since they may record the name of the ship, date, and port of arrival, and destination in the new country. They may have the immigrant's birthplace.

9. Search for steamship passenger manifests. Write for steamship passenger arrival lists, to American and Canadian ports, using the original family names prior to immigration. Ship manifests are available in the National Archives and Record Service (NARS) in Washington D.C., at the archive of the Genealogy Society of Utah, at YIVO Institute for Jewish Research in New York, and at HIAS (Hebrew Immigrant Aid Society; see 15: 1539) in New York. HIAS holds steamship ticket records for 1907–10, and passenger lists for 1884, 1886, 1887, 1891–95, 1898, 1901, 1912, 1913. The State Archive in Hamburg holds passenger lists from their heavily used port. Hamburg passenger lists from 1850–1914 may also be found at the Museum of Hamburg, Historic Emigration Office, Holstenwall 24, 2000 Hamburg 36 (there is a users' fee). Some of these archives also hold passenger arrival records from Dutch ports of Amsterdam and Rotterdam; Antwerp, Belgium from years 1854–1855; Trieste, Naples, and Le Havre. The Bremen passenger lists were lost in World War II.

10. Search in old telephone and city directories in larger libraries for addresses of relatives. Census and military records are based on address and ward in large cities. An uncommon name can sometimes be used to find relatives. Old city directories may include occupation and wife’s names. The N.Y. Public Library Annex has some pre-Holocaust books from cities in Austria, Poland, Yugoslavia, and Czechoslovakia, and post-Holocaust ones which help to locate family.

11. For the U.S., obtain U.S. census records taken every ten years; currently available are those from 1790 through 1910. They may provide date of immigration and birth date and place. The National Archives of the United States houses the United States federal census records. The records are filed geographically and by Soundex. These records may be obtained on interlibrary loan or through a regional branch of the Federal Archives. Pamphlets on “How to Get Census and Other Records” are available from the United States Government Printing Office, Washington D.C. 20402. In other countries turn to state archives for census records.

12. Examine court and probate records, pension and social security records, land and tax records, military and draft registration records, business employment records, adoption and divorce records.

13. Visit the local branch of Mormon Genealogical Library. Use gazetteer to find the province where towns are located. Examine town records for Jewish holdings. Order birth, marriage, or death records, census records, and ships' passenger lists.

14. Visit Jewish historical societies, Jewish libraries, large public libraries with genealogy departments, and Jewish archives.
(15) Request to see synagogue records and bulletins, old-age home records, landsmannshaft and other society records.

(16) Examine yizkor books of the towns from which the family came.

(17) For the U.S., obtain information from HIAS records concerning ships’ passenger lists, steamship records, and passage order books. HIAS records can be obtained from YIVO in New York or from a branch of the Genealogical Society of Utah. Also, HIAS processes inquiries for missing persons through a Search and Location Department in New York City.

(19) For Canada, write to the Public Archives of Canada (395 Wellington, Ottawa K1A ON3, Canada) for a booklet called “Tracing your Ancestors in Canada.”

(20) In Holland, two organizations of assistance in research of Sephardi genealogies are the Netherlands Joods Familienarchief at Amsteldijk 67, Amsterdam and the Centraal Bureau voor Genealogie, POB 11755, 2502 AT, The Hague.

GEOGRAPHICAL INDEX

MORMON GENEALOGICAL ARCHIVES. The Mormon Church of the Latter Day Saints (LDS), established in 1830, has the largest holdings of microfilmed genealogical data in the world. These are stored in six disaster-proof storage vaults in Granite Mountain in Salt Lake City, Utah. Daniel Schlyter is archivist of Jewish records and has provided valuable assistance for Jewish genealogical research. Over 400 branch libraries throughout the world maintain microfilm indices of their holdings which the public may view, and from which it may order specific films for a minimal fee. The LDS fund this program as a religious duty, since a believer who can document his ancestors can bring them posthumously into the Church. The records consist of annual records of births, marriage, and death documents written in archaic foreign script, mainly from 1826 to 1865. Jewish records (approx. 2,500 films) from Poland and Hungary and 220 rolls of film on Jewish records from Alsace-Lorraine have been purchased through the efforts of Dr. Isaac Halbrecht. They are not yet available to researchers. “A Translation Guide to 19th-Century Polish Language Civil-Registration Documents,” written by Judith R. Frazin (published by the Jewish Genealogical Society of Illinois, 1984), was prepared specifically for these documents.

Most people assume that because of the destruction of life and property during the Holocaust, no Jewish records remain in Europe. Though Nazi Germany destroyed Jews they did not deliberately destroy Jewish records. In fact they maintained scrupulous records of the destruction itself.

Only recently, with the publicity about the Jewish records of the Genealogical Society of Utah (Mormons) we have become aware that much remains to research. To the surprise of many Jewish genealogists, despite the many losses of records due to fires, pogroms, frequent moves, lack of or careless record keeping, documents remain, even in Eastern Europe. It has recently become known that the governments main-
tained vital and census records in the countries where Jews settled and lived.

By 1826 in Poland and Hungary and by 1865 in Germany, there were uniform vital records of the Jewish communities in official archives. Archives of some small towns were included among those of the larger nearby towns, often mixed with Catholic or general records. Thus far, records have been released for microfilming from c. 1740 to c. 1870 enabling genealogists to examine 124 years of Jewish records.

Wherever and whenever possible, Jews avoided creating records. They had valid reasons to fear placing census and birth records in government hands, since these would be used to draft Jewish men and boys for the army or to collect taxes. Jewish congregations though they did not ordinarily record births and marriages often kept burial records, if they maintained a burial ground or cemetery.

In the late 1960s the Mormon Church filmed 100-year-old vital records in the towns and cities of West Germany, Poland, Hungary, Lithuania, and France. We find the following relevant birth, marriage, and death records among the Mormon microfilms:

1. Hungarian records of cities and towns within the former borders of Hungary, which include areas now in the former Soviet Union, Romania, Austria, Yugoslavia, and Czechoslovakia from the early to middle 1800s to 1895, were filmed in the Budapest Archive. Also, there is a Jewish census from some old Hungarian counties in the year 1848. Hungarian Jewish Registers from 1840 are complete within modern borders. There were uniform vital Jewish records in Hungary from 1826.

2. German records of the German empire, which is now Germany, the former Soviet Union, France, and Poland from 1800 to 1895. East German Jewish records are being withheld at this time.

3. French civil records for Jews exist since 1792, many of which have not yet been filmed. Nineteenth-century Jewish records are in the Consistoire, and in the Alliance Israélite Universelle in France. Civil records for Jews are also in State Archives of Alsace and Lorraine.

4. Polish records: Russian and German areas of Poland had separate civil registers for Jews from 1826. Polish records in the Austrian territory of Galicia, except for Cracow and Tarnow, have not yet been filmed at the Polish State Archives. In most cases, Polish records which have been filmed provide records up to 1870.

5. Czechoslovakian Jewish records were centralized in Prague during World War II. Slovakian records were gathered in Bratislava. The records from Prague have been microfilmed and are also in the Archives of the History of the Jewish People in Jerusalem. The Czechoslovakian Embassy in Washington has a user’s fee for genealogical research.

6. Soviet records have not been microfilmed. Government records are not made available to the researcher. However, there exist Jewish census records in Russia from 1794, 1811, 1815, 1833, 1850, and 1887. Jewish records are held in the Central State Archives in Minsk; Warsaw and Vilna Archives in Poland hold some pre-1917 Russian census records which are costly to obtain but are available. Russian-Polish vital records from Suwalki have been filmed.

There are some pre-Holocaust Russian records in the Archives of the History of the Jewish People in Jerusalem, including birth, death, and marriage records in Hebrew and Russian from c. 1857 to 1878.

Russian Consular Records from 1860 to the 1920s, left behind in Washington, D.C. by the Czarist government, have been discovered recently in storage in the National Records Center in Suitland, Maryland. Many files exist on Canadian and American Jews of Russian origins. Efforts are being made to index, catalogue, and translate these records from Russian to English. The Canadian Public Archives in Ottawa hold the Vancouver and Montreal files. They contain valuable genealogical materials. These files may be useful to Polish, Galician, Ukrainian, and other nationals who lived within the borders of Imperial Russia.

The Mormon Church is now microfilming records from 1840 in Yugoslavia, which was under Austrian rule at that time.

Genealogy and Education. Currently, genealogy is being used in schools as a method of personalizing Jewish history. Examining one’s own family history leads to a more significant understanding of the total Jewish experience. History teachers are assigning students the task of preparing a chart and a map of family migrations in order to lead them into a study of the world of their direct forebears. An awareness of genealogical connectedness helps a group to maintain its distinctiveness. Genealogy binds individuals to the family and to their history.

Genealogists write of their deepened interest in Jewish history, geography, and religion as a result of their genealogical research. They express a desire to study Yiddish and Hebrew in which so much Jewish family history is recorded.

It is rare that a Jewish genealogist does not find that the family suffered grievous losses during the Holocaust. Forty years after the Holocaust, Jewish genealogists, as a result of their research, are finding for the first time that members of their families were among the six million. This discovery leads to a search for names and information about the deceased. The genealogist adds these names to records and charts, ensuring that the victims are memorialized and remembered within the embrace of the family. This personalizing of the Holocaust is a major concern of Jewish educators today.
Surname changes, both of a voluntary and involuntary nature, create problems for the genealogist. Most East and Central European Jews used patronymics (e.g., Moshe ben Amram). Surnames were rare, unless the family was in commerce, and traveling between cities. Around 1800, the governments in Central Europe began to demand surnames for the Jews. By 1844, Russia and Poland mandated that surnames be registered. However, even these names underwent a metamorphosis when they passed through the immigration gates of America. Hardly able to understand the heavily accented pronunciation of names, immigration officials wrote down phonetic sounds as they heard them. They would anglicize, change, or shorten names, as the mood struck them. Without a family record it is exceedingly difficult to trace families earlier than the 18th century. With marriage, women's maiden names were dispensed with and lost. Federal census records list the head of the household and occasionally the number of family members. Jewish tombstones usually refer to a person's father, and rarely the mother.

Problems in genealogical research. (1) Because of war and change of borders, it is often hard to know in which country to do your research.

(2) Frequently, Jews were married in Europe by religious ceremony (huppah and kiddushin) but not with a civil license. Anti-Jewish legislation often forbade Jewish marriages, so couples often married secretly. Children of these marriages were not recognized by civil authorities as legitimate. Therefore, children took their mothers' surnames. Only sons were not conscripted by the Russian army. Additional sons were placed with families without sons and took that family's name.

(3) Record keeping in Eastern Europe was careless. Control of fires was poor in small villages and records were irreparably lost.

(4) Children were born at home and not in hospitals. Parents remembered the time of year (“around” which holiday) at which they were born but not the exact date.

(5) Russian records since the end of World War I are not available to the public.

(6) The pronunciation of town names varies greatly from their conventional spelling. There can be as many as 50 towns with similar sounding names all located within the same country.

(7) Documents and genealogical material may be in Yiddish, Hebrew, Russian, Polish, or other official languages.

Computer and genealogy. A major problem in genealogy is information storage. The ongoing growth of genealogical information requires a constant revision of charts. For this reason many genealogists with very large inclusive family histories, resort to holding material in notebook form with sections assigned to each branch of the family. The computer with its various programs designed especially for genealogical study has become a very important tool.

In 1982 the Jewish Genealogical Society, Inc. (New York) published the first computerized Family Finder. The purpose is to enable members of all Jewish genealogical societies to list names and towns being researched in one central location. This aims at reducing the duplication of research. Entered into the computer are the name and address of the researcher along with family surnames, and the names of towns, cities, and countries being researched. (The computer service for this project is Data Universal, Teaneck, New Jersey.) The printout is updated regularly, with the inclusion of new researchers' data, and sent to Jewish genealogy societies throughout the United States so that their members can utilize the information.

Two Jewish books have been published by the Computer Center for Genealogy by Dr. Neil Rosenstein (The Margolis Family and Latter Day Leaders). This appears to be the wave of the future.

Beth Hatefutsot, the Museum of the Diaspora, in Tel Aviv has a computer department that holds information about Jewish names, cities, and towns and stores genealogical information. Famous published genealogies are being computerized.

In Latin America

The Asociación de Genealogía Judía de Argentina – AGJA (Association of Jewish Genealogy of Argentina) – was founded in 1996 and is affiliated to the *International Association of Jewish Genealogical Societies – IAJGS. AGJA undertook voluntary work in documentation and digitalization of vital records, creating the database of the Jewish cemeteries in Argentina (with more than 215,000 names), and promoted similar work in Chile, Uruguay, and Peru. It digitized lists of settlers in the agricultural colonies of the Jewish Colonization Association (ICA) and is working on the lists of weddings and bar mitzvahs celebrated in synagogues in Buenos Aires.

AGJA also promoted educational activities, conferences, and courses in Buenos Aires and in other communities for adults and students. It publishes the journal Toldot and has published the Diccionario de apellidos judíos (“Dictionary of Jewish Surnames,” 2003) by Benjamin Edelstein.

[Efraim Zadoff (2nd ed.)]

For additional information see *International Association of Jewish Genealogical Societies.

GÉNÉBRARD, GILBERT (1577–1597). French theologian and Hebraist. Born in Riom, Auvergne, Générard, a pupil of the Provençal convert Abraham de Lunel, who is said to have reverted to Judaism in his latter years, was a polymath, specializing in biblical exegesis, theology, patristics, liturgy, chronology, and rabbinics. Unlike many of his contemporaries, he was in general opposed to the Kabbalah. From 1569 Génébrard was professor of Hebrew and Bible at the Collège de France and from 1593 he was archbishop of Aix-en-Provence. His outstanding support for the Catholic League – which opposed Henry of Navarre, a Protestant – incurred official wrath after the latter’s accession (as Henry IV). Générard died in disgrace. As a Hebraist, he was considered an expert on the correct pronunciation of the “holy tongue.” He was a prolific writer, translator, and editor. Steinacher lists about two dozen of his publications.

His works include Commemoratio divorum et ritus nuptiarum, e libro Mahzor (published with Symbolum fidei); Eldad Danius … De Judaeis clausis (Paris, 1563), a Latin version of the Travels of *Eldad ha-Dani; De metris Hebraeorum ex libro R. David Johoenia… (Paris, 1562–63), an edition of the Shabat bi-Melechet ha-Shir of R. David b. Solomon *Ibn Yahya; EISEGOGITH rabbinica ad legenda et intelligenda Hebraeorum Rabbinorum Commentaria sine punctis scripta… (Paris, 1563); Alphabetum Hebraicum (Paris, 1564); and Symbolum fidei Judaearum… Precationes… (Dux, 1578).
ulitmis More Nebuchim (Paris, 1569), based on *Maimonides. Génébrard also published Chronologia Hebraorum Major (Paris, 1578), a Latin version of the Seder Olam of *Yose b. Ḥalafta, a shortened version of which, Hebraorum breue Chronicon usque ad 1112, had appeared earlier (Paris, 1573); there are various later editions of this book. Two other works by Génébrard are Jakob Salomonis cap. Chelek (published with the Chronicon), a Latin edition of the commentary by Jacob b. Solomon Habib on a chapter of the tractate Sanhedrin (of the Babylonian Talmud) much studied by Renaissance Christian Hebraists and kabbalists; and an edition of the Song of Songs with three rabbinical commentaries (Paris, 1570). Gilbert Génébrard's pupils included the French diplomat and kabbalist, Blaise de *Vigenère.

[Godfrey Edmond Silverman]

**GENERAL ZIONISTS,** Zionist and Israeli party. The General Zionists were originally a loose political group within the Zionist movement, made up of those Zionists who were neither socialists nor religious and who at first did not draw up a program of their own. Their number at the Zionist Congresses kept dwindling from one Congress to the next. In Erez Israel the General Zionists began to organize in 1922, the first meetings being attended by *Ahad Ha-Am, Meir *Dizengoff, B. *Mossinson, *Ze‘ev *Gluskin, and others.

The first world conference of the representatives of these “civilian circles,” as they were called, occurred in 1929, in the course of the Zionist Congress that took place in Zurich. The moving force behind this organization was Isaac Ignacy *Schwarzbart. In 1931 the World Union of General Zionists held its founding conference, adopting the following principles: (1) Erez Israel and the Jewish people take priority over class and sectarian interests; (2) labor and property should unite to serve the people; (3) in addition to the support afforded by the national funds for the activities of the pioneers, encouragement should be given to private enterprise and the settlement of individuals with limited means; (4) partisan control over all educational, health, and welfare institutions should be abolished. These principles remained the basis of the General Zionist program throughout the years.

Among the founders of the World Union were Leo *Motzkin, Stephen S. *Wise, Louis *Lipsky, Kurt *Blumenfeld, Menahem *Ussishkin, Benzion *Mossinson, Moshe *Gluecksohn, Yehoshua *Suprasky, Peretz *Bernstein, Emil Schmorak, and Schwarzbart. Though operating most of the time on his own, Chaim *Weizmann was also associated with the new movement.

The World Union did not survive as a unified organization for long, and the General Zionists formed numerous factions, the main ones being General Zionists A, headed by Weizmann, which was closer to the Labor movement, and General Zionists B, headed by Ussishkin. The reasons for the frequent splits varied, and combined elements of personal rivalry and ideological issues on the political, economic, and social levels.

As was common among the other Zionist parties and groupings, the General Zionists had their own youth movements from the 1920s, especially in Eastern Europe. These movements bore names such as Ha-No’ar ha-Ivri, Ha-Shomer ha-Tahor, Ha-No’ar ha-Ziyyyoni, and Akiva. Some of them advocated pioneering and formed the General Zionist He-Halutz.

The first group of General Zionist youth, made up of members of Ha-No’ar ha-Ivri in Galicia, settled in Erez Israel in 1930 and established the first General Zionist kibbutz, near Petaḥ Tikvah. They were followed by others, from various countries, constituting the core group of a General Zionist labor movement. In the initial stage, they all joined the “Histadrut, though they objected to the Histadrut’s socialist ideology, advocating a syndicalist approach. In 1934 an independent General Zionist workers organization was established by some of the General Zionist workers, though others remained in the Histadrut as the Oved ha-Ziyyyoni faction. However, most of the General Zionists in Erez Israel belonged to the middle class rather than the working class. In Erez Israel, as in the Diaspora, splits also took place within the ranks of the General Zionists, especially over the question of whether to fight for their views from within the “Va’ad Le’ummi (and later the Government of Israel) or as an external opposition.

In the early 1940s the various factions reunited, under Moshe *Sneh. In 1946 the General Zionist workers’ organization rejoined the Histadrut, and became a separate faction in it, side by side with Ha-Oved ha-Ziyyyoni.

The reunion of the General Zionists did not survive, and prior to the establishment of the State in 1948, they entered the political scene as two separate parties, one by the name of the General Zionist Party and the other, which also included members of Aliyah Hadashah, which had been formed in 1942 by immigrants from Central Europe, by the name of the Progressive Party. Both parties participated in the Provisional Government, but while the Progressive Party also joined the first regular government formed by David *Ben-Gurion after the elections to the First Knesset, and joined most of the governments formed in subsequent years, the General Zionists remained in opposition, except for the years 1952–55. Both parties opposed the over-politicization of the labor-dominated system that controlled the employment agencies and public health system, and fought against the separate trends in education. Both also supported a liberal approach to economic policy.

The General Zionists ran independently in elections to the First to Fourth Knessets, receiving 7 seats in the First Knesset, 20 seats in the Second (which grew to 23 when the Sephardi and Yemenite parliamentary groups joined it), 13 seats in the Third, and 8 seats in the Fourth.

In 1961 the General Zionist Party and the Progressive Party united and established the Liberal Party. Four years later,
in 1965, the general council of the Liberal Party voted in favor of the establishment of a joint bloc with the *Herut movement for elections to the Sixth Knesset and the local authorities (see *Ga'ah). It was finally mostly the former General Zionists who joined the new bloc, while most of the former Progressives broke away to form the *Independent Liberal Party.

In the Zionist Organization, both parties belonged to the World Union of General Zionists and participated in its work, but by the late 1960s the Independent Liberals became an independent group on the Zionist scene as well.

[Susan Hattis Rolef (2nd ed.)]

**GENESIS, BOOK OF**, the first book of the Pentateuch. The English title refers to the opening theme of the book and is derived, via the Latin transliteration, from the tradition of the Septuagint Greek: *genesis*, "origin"). The book describes not only the origin of what would later be called the universe, but the origins of the people Israel and some of its specific practices including the Sabbath and circumcision. Genesis includes numerous etiologies for, among others, labor pains and fruitless labor. The Joseph story, which concludes the book, provides the background for Israel's descent into Egypt, and accordingly, for the enslavement, exodus, and arrival at the border of the promised land to which the next four books of the Pentateuch are devoted. The popular Hebrew name (Heb. לֶחֶם הָנָפָל) is based on the initial word (cf. *TJ*, Meg. 31b, 74a; *TJ*, Sot. 1:10, 17c; Gen. R. 3:5; 64:8). Some medieval Hebrew manuscripts also use the titles "First Book" (*Sefer Rishon*) and the "Book of the Creation of the World" (*Sefer Beri'at ha-Olam*). Another title occasionally in use was the "Book of the Upright" (*Sefer ha-Yashar*), referring to the patriarchal narratives (cf. *Av. Zarah* 2:3a; *TJ*, Sot. 1:10, 17c).

The book is traditionally divided into 12 *parashiyot*, "annual pericopes," and 43 (in some Mss. 45) *sedarim*, "triennial pericopes." There are 43 *petudot*, "open sections," and 48 *se'udot*, "closed sections." Printed Hebrew Bibles, based upon the Vulgate system, divide the book into 50 chapters containing 1,534 verses in all.

**The Contents**

Genesis is a narrative account of the span of time from the creation of the world to the death of Joseph. (See Table: Book of Genesis- Contents.) It divides naturally into two main parts, the first dealing with the universal history of early humankind (chapters 1–11), the rest being devoted to the story of the patriarchs and their families (chapters 12–50). The time span purportedly covered by the book is 2,307 (or 2,309 cf. 11:10) years according to the accepted received Hebrew text. This may be calculated by combining the sum of the ages of the fathers of mankind at the birth of their respective successors (1,946 or 1,948 years; Table 1: The time span from Adam to Abraham's birth) with the years that elapsed between the birth of Abraham and the death of Joseph (361; Table 2: The time span from Abraham's birth to the death of Joseph). Great imbalance in the presentation of the material is evident, for the first 11 chapters deal with a time span of over 2,000 years while the other 39 are devoted to only one eighth of the period treated. Moreover, the only themes elaborated in detail in the universal history are Creation, the Flood, and the ethnic division of mankind. This disproportion may be taken as indicative of the aims and purposes of Scripture. It is less interested in recording history for its own sake than in the utilization of events as vehicles for the demonstration, objectification, and transmission of the verities of biblical faith.

**Composition – The Critical View**

Genesis itself contains no information about its authorship, nor can any biblical passage be cited in support of a tradition concerning it. Based on expansive readings of such passages as "Moses wrote this Torah" (Deut. 31:9) post-biblical Judaism, followed by classical Christianity, accepted the unitary origin of the entire Pentateuch as the divinely inspired work of Moses, so that Genesis in its present form is regarded as being a homogeneous composition, the product of Mosaic authorship. (For the traditional view see *Pentateuch: Traditional View.*) Serious biblical study of the past few centuries has shown that there is no basis for the claim of Mosaic authorship. The presence of anachronisms, the use of different Hebrew names for God, diversity of style and vocabulary, and the existence of duplicate and sometimes varying and even contradictory accounts of the same event all serve as the criteria for literary analysis that leads to the conclusion that Genesis is really a composite work put together from different documents deriving from varying periods. For example, the sanctity of Jerusalem and its priesthood in the period of David and Solomon is justified by Abr(ah)am's actions in Gen. 14. Jacob's vow to build a temple at Beth-el (Gen. 28:22) would seem to be directed to a tenth-century audience as a justification for the construction of the Beth-el temple by Jeroboam (1 Kings 12). The table of nations in Gen. 10 knows of the kingdoms of Babylonia and Assyria but not of Persia, an unlikelyhood after the rise of that empire in the sixth century B.C.E. The flood story, although going back to third millennium tales, cannot have reached its present form before the early first millennium when *Ararat* (Gen. 8:14) replaced the former name for what would later be called Armenia. Genesis 1, which emphasizes the goodness of the creation in direct opposition to Isa. 45: 7 (Weinfeld) is a Jewish adaptation of the Zoroastrian "good creation" by Ahuramazda (Sperling 1999).

**ANACHRONISMS.** Abraham’s native city is called “Ur of the Chaldeans” (11:28; 31; 15:7) although the people known by that name did not penetrate southern Mesopotamia before the end of the second millennium B.C.E., long after the period in which the patriarchal narratives are set. Genesis 12:6 relates that “the Canaanite was then in the land,” while 13:7 states that “the Canaanites and Perizzites were then dwelling in the land,” implying that neither people existed at the time of the writer, whereas both survived as late as Solomon’s time (1 Kings 9:16, 20; cf. Josh. 16:10; Judg. 1:27–33; 11 Sam. 14:27). The reference to Dan (Gen. 14:14; see Kimhi a.l.) is irreconcilable with later history (Josh. 19:47; Judg. 18:29). The mention of Philistines (Gen. 21:32, 34; 26:1, 8, 14, 15, 18; cf. 10:14) presents a similar problem since that particular ethnic group did not settle on the Canaanite coast before the end of the 12th century B.C.E. The city of Beersheba (Gen. 26:33) was not settled until the 11th century. A phrase like “committing an outrage in Israel” (34:7) is difficult as a direct quotation from Jacob’s time (though not in the time of Moses) but seems rather to be of a proverbial nature (cf. Judg. 20:6, 10; Jer. 29:23) deriving from a period when “Israel” was already designated as an established ethnic or cultic community. The list of eight Edomite kings (Gen. 36:31–39) would cover about 150 years of history. Since the Edomites were not settled in Transjordan before the 11th century B.C.E. (LEVY). This conclusion is buttressed by the phrase “before any king reigned over the Israelites” (16:31) which would set the passage in the time of the Israelite monarchy, as was seen by Yizhaki apud Ibn Ezra. **DUPICATIONS.** There are two irreconcilable accounts of Creation. In the one (1:26–28), man and woman are created simultaneously as the climax of creation after the birds and animals; in the other (2:7, 18, 19, 22), the order is man, animals, birds, then woman. The Flood story presents similar contradictions. One passage demands a single pair of each species of beast, bird, and creeping things to be taken into the ark (6:19–20), while another has orders to Noah to take aboard seven pairs of clean animals and birds and one pair of unclean (7:2–3), and still a third passage reports that Noah took two of each species irrespective of their clean or unclean status (7:8–9). One account refers to 40 days of rain and a further 14 days until
The waters had finally subsided (7:4, 12, 17; 8:6–11); another speaks of a duration of 150 days (7:11; 7:24–28; 8:3–4) and an entire year and ten days before Noah was able to emerge from the ark (7:11; 8:13–14). Sarah was twice taken from her husband, once by Pharaoh (12:11–20) and once by Abimelech (20:1–18). A similar story is related about Rebeckah and Abimelech (26:6–11). In all three accounts the wife is passed off by the spouse as his sister for his own protection. Hagar twice leaves her mistress in flight to the wilderness (16:6–14; 21:9–19). Both narratives have in common the presence of a well, an angelic visitation, and divine assurances of greatness for Ishmael. Two accounts of the origin of the name Beer-Sheba in the days of Abimelech are given, one concerning Abraham (21:22–32) and the other concerning Isaac (26:26–33). The story of Isaac’s expectation of imminent death (27:1–2) does not seem to be compatible with his still being alive at least 20 years later (35:28). The names of Esau’s wives given in 26:34 and 28:9 do not correspond with those recorded in 36:2–3. There are duplicate etiologies for the names Bethel (28:17–19; 35:14–15) and Israel (32:29; 35:10). Rachel’s death (35:19) seems not to be in consonance with Jacob’s reaction to Joseph’s dream 17 years later (37:10), and the birth of Benjamin near Bethlehem (35:16–17) makes difficult his inclusion in the list of Jacob’s sons born in Paddan-Aram (35:23–26). Finally there seem to be two separate traditions about the identity of those who bought and sold Joseph; they are variously called Midianites (37:28a, 36) and Ishmaelites (37:27, 28b; 39:1).

The Divine Names. The foregoing material has to be supplemented by the variant use of divine names. Genesis employs ʾYHWH about 150 times whether in direct quotation (cf. 4:1; 14:22; 15:2, 7, 8 and so about 30 times), or in the narrative (over 100 times). The patriarchs built altars to ʾYHWH (12:7, 8; 13:18, cf. 8:20) and invoked His name (12:8; 13:4; 21:33; 26:25; cf. 4:3; 25:21, 22). According to 4:26 this practice began as early as the days of Enosh. It is clear, however, from Exodus 3:14 and 6:2–3 that another tradition existed which ascribed the initial revelation of the name ʾYHWH to the time of Moses. Indeed, large sections of Genesis do not use that divine appellative at all, employing Elohim or some other name instead.

On the basis of all the phenomena just described, critical scholars have attempted to reconstruct the literary history of Genesis. The classical critical position is that there once existed a Judahite history which began with the creation of the world and which preserved the tradition of the early use of the name ʾYHWH ( yönt source). Later on, a parallel Ephraimite history appeared which commenced with Abraham and which, preserving the tradition of a later origin of ʾYHWH, used Elohim (ʾe source) exclusively in the patriarchal narratives. A redactor (ʾr) fused the two accounts into a single narrative (ʾje). Still another source, this time of priestly origin (ʾp), which had the same tradition about ʾYHWH as did ʾe, was interwoven with ʾje, so that the present Genesis is a composite of ʾjep with admixtures of ʾr. Each source, it is claimed, betrays its own peculiarities of literary style and phraseology and displays its own distinctive religious and theological outlook.

The basic distribution of Genesis according to the classical three-source hypothesis of the Graf-Wellhausen school appears in the table: Book of Genesis – Analysis of the Book of Genesis.

It should be noted that chapter 14 cannot be fitted into any of the sources. In some instances such as chapters 31 and 45:1–28, the ʾj and ʾe sources have been so interwoven that disentanglement of the strands is precarious.

In the course of time the inadequacies of the original Graf-Wellhausen hypothesis have led to an expansion of the three sources through the continuous subdividing of each document and by the isolation of still other sources. Some time ago O. Eissfeldt claimed to identify an ʾl (lay) document which, he claimed, is the oldest narrative strand. More recently, claims have also been made for a separate “Promises” writer. Recent scholarship questions the very existence of ʾe as a separate source. Some scholars have effectively revived the fragmentary theory of the early 19th century arguing that there are no continuous sources in the Pentateuch but rather redactional notes. Others have revived the supplementary hypothesis according to which an original narrative has been supplemented by later authors (On these matters see Carr, Hendel, Houtman, Jenkins in Bibliography, and *Pentateuch). Despite the diversity of contemporary critical opinion there is no returning to the pre-critical position of Mosaic authorship.

The Distinctiveness of Genesis within the Pentateuch
Despite the contradictions and duplications, and what seems sometimes like a collection of collages, the book has a character all its own, distinguished by numerous features not shared by the other four. It is almost entirely narrative, and in the number and variety of its stories it is unparalleled. Because of its setting in the pre-Israelite period, Genesis, unlike the rest of the Torah, contains the biographies of individuals, not an account of the fortunes of the nation.

The patriarchal sagas have preserved certain social institutions that are unknown elsewhere in the Bible, although they are now documented in extra-biblical sources of the second and first pre-Christian millennia. Among these are brother-sister marriage (Gen. 20:12); concubinage and surrogate motherhood as a remedy for childlessness (16:2; 30:2–3), (perhaps) the role of the household gods in inheritance (Gen. 31:19) and the transference of the birthright (see below).

The book is peculiar, too, in its onomasticon (naming-stock). Of the 38 personal names connected with the patriarchal family, 27 never recur in the Bible. Nowhere else is there mention of the place-name Paddan-Aram used here so frequently (25:20; 28:2, 5, 6, 7), or is Hebron referred to as Mamre (13:18; 14:13, 18; 23:17, 19; 25:9; 35:27; 49:30; 50:13).

Genesis is further differentiated by some stylistic characteristics. It employs the phrase “These are the generations of” (הַנִּקָּחָהוֹן הָנִּקָּחָהוֹן (וֹ)) ten times (2:4; 6:9; 10:1; 11:10, 27; 25:12, 19; 36:1, 9; 37:2; cf. 5:1; 10:32; 25:13), which occurs only once in the

### GENESIS, BOOK OF

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7

Page 443
rest of the Torah (Num. 3:3; cf. Ruth 4:18). It has God speaking in the first person plural (Gen. 1:26; 3:22; 11:7; otherwise only Isa. 6:8) which is unusual, and combines the divine names YHWH- Elohim, "Lord God," nearly 22 times in two chapters (2–3), such a conjunction appearing otherwise only once in the Pentateuch (Ex. 9:30).

The patriarchal narratives contain much material at variance with the legislation of the Torah. Deuteronomy 21:15–17 explicitly interdicts the transference of the birthright in contrast to what takes place in the case of Jacob and Esau (Gen. 25:23, 30–34; 27:1–33), Reuben (49:3–4; cf. 1 Chron. 5:1–2) and Ephraim and Manasseh (Gen. 48:13–20). Abraham entered into marriage with his paternal half-sister (20:12), something repeatedly forbidden in the Torah code (Lev. 18:9, 11; 20:17; Deut. 27:22). Jacob was simultaneously married to two sisters (Gen. 29:23, 28, 30), a state of affairs to which Leviticus 18:18 is opposed. Judah had a relationship with his daughter-in-law (and the offspring was not thereby delegitimized; Gen. 38:16; cf. Ruth 4:18). This contrasts strongly with pentateuchal law (Lev. 18:15).

Turning to the area of the cult, the same anomalous situation is apparent. Abraham planted a sacred tree in connection with worship (Gen. 21:33; cf. 12:6–7; 13:18 and see Josh. 24:26), a practice abhorred in the legislation (Deut. 16:21; cf. Ex. 34:13; Deut. 12:3). Jacob set up sacred stone pillars at Bethel (Gen. 28:18, 22; 31:13; 35:14) and Gilead (31:44–53), cultic paraphernalia otherwise outlawed by the Torah (Deut. 16:22; cf. Ex. 23:24; 34:13; Lev. 26:1; Deut. 7:5; 12:3).

The religious situation is further distinguished by other extraordinary features. The war on idolatry is unknown and there is no religious tension between the patriarchs and their neighbors. The appellation “the God of my (your/his) father” (Gen. 26:24; 28:13; et al.) is peculiarly characteristic of the book as is also the employment of numerous Divine Names, several of them unique: El-Elyon (14:18, 22), El-Roi (16:13), El-Olam (21:33), El-Bet-El (16:21), El-Shaddai (17:1; 28:3; et al.), Pahad Yishq (31:42), Abir Yisrael (49:24). Another peculiarity, though not unique to Genesis, is the frequent appearance of angels, which are encountered by Hagar (16:7ff.; 21:17), Abraham (18:1ff.; cf. 22:11,15; 24:7, 40), Lot (19:1, 15), and Jacob (28:12; 31:11; 32:12; cf. 48:16).

The Age of the Material

The Wellhausen School had maintained that Genesis contained no creditable records dating to the second pre-Christian millennium, and that therefore, we can only extract reliable information about the time in which individual narratives were composed. Thus, an eighth-century narrative about Abraham, for example, could be employed only to illuminate the circumstances of the eighth-century writer and his audience. Crucial to Wellhausen's conclusions was his assumption that writing was unknown in Syria-Palestine of the second millennium, rendering impossible the preservation of accurate ancient traditions. In a similar vein, Wellhausen asserted that the proper names of Israel's ancestors were simply retrospections of tribal names of the first millennium. Beginning in the 1920s, continuing archaeological discoveries in the Middle East brought the second millennium into the light of history. It became clear that Wellhausen's assertions about writing were unfounded and that such ancestral names as Benjamin, Israel, Ishmael, and Jacob were genuine second millennium names. Legal procedures and documents from the second millennium provided “parallels” that seemed to demonstrate that the traditions behind Genesis were ultimately of great antiquity. The “biblical archaeology” movement, particularly associated with the name of W.F. Albright, which employed archaeological evidence to demonstrate the “general accuracy” of Genesis' portrayal of the patriarchal period, was especially influential among Christian and Jewish religious moderates in the United States and Israel for several decades. But the pendulum has swung back. Thanks to the refinement of archaeological technique, the critical re-evaluation of reading the Bible archaeologically, especially by Thompson, and van Seters (1975), and the opening of “biblical Israel” and the Sinai to Israeli excavation following the 1967 war, opinion began to shift in the mid-1970s, i.e., shortly after the present Encyclopaedia Judaica entry appeared in its original form. For example, a celebrated claim had been made by E.A. Speiser that the thrice-told wife-sister story (Gen. 12, 20, 26) was an attempt by Hebrew writers to account for an ancient form of marriage known in second millennium Mesopotamia but forgotten in the course of time. Ingeniously, Speiser argued that the multiple accounts demonstrated that the writers of Genesis preserved truly ancient traditions even when they no longer understood them. Subsequent studies showed that Speiser had completely misunderstood the Nuzi documents and, indeed, misrepresented them. In other cases, true parallels, such as surrogacy as a solution for childlessness, were shown not to be confined to the second millennium and therefore irrelevant for dating the narratives of Genesis. Equally irrelevant to dating is the argument from patriarchal deviance from laws from (allegedly) later legislation. The fact that the patriarchs entered into marriages prohibited elsewhere in the Torah (see above) does not demonstrate that the patriarchal traditions are old. Rather, the prohibitions demonstrate that such marriages were common enough to elicit prohibition. The same can be said for the prohibition against alienating a birthright. Rachel's theft of the household gods has been adduced as a distant mirror of the practice known from Nuzi (in eastern Iraq) of the second millennium in which a female heir might serve the household gods. On that basis Rachel would have stolen the gods to ensure her rights to Laban's property. But the service of the gods by Nuzi women does not itself mean that the gods are the property of the women. Nor is there evidence that receipt of the gods conveyed property rights to Laban. Similarly inconclusive is the evidence of female cultic service from Syrian Emir (Huehnegard). Strong evidence for a first millennium background, or at the earliest, a late second millennium background, is the Aramean connection of the patriarchs. Abraham (then Abram) left Aramean Haran,
his homeland (Gen. 12:1; 24:7, 10) for Canaan (The tradition of migration from Ur of the Chaldees (11:28; 15:7) originated later among Babylonian Jews.) Abraham's slave came to Haran to find a wife for Isaac (Gen. 24:4 ff.); Jacob fled to Haran from the wrath of Esau (Gen. 28:2, 10) and spent a good deal of his life there. All the tribes, with the exception of Benjamin, originated in this area. Jacob's uncle Laban utters the only Aramaic phrase in the Torah (Gen. 31:47). All of this is consistent with the stories in 1 and 11 Kings of the ninth-century Hebrew prophets Elijah and Elisha healing Arameans and prophesying to them; with the “wandering/fugitive Aramean” ancestry attributed to Israelites in Deuteronomy 26:5; with the Jacob traditions known to Hosea (Hos. 12:5) in the eighth century; and if it is not anachronistic, with the David-Absalom connection to Aramaean Geshur (11 Sam. 15:8). This conclusion receives independent support from the fact that the personal names of the patriarchal ancestry are often identical with place-names in the vicinity of Haran. This is true of Terah, Abraham's father (11:24–32), of Nahor, the name of his grandfather (11:22–25) and of his brother (11:26–27, 29), of Serug, Terah's grandfather (11:20–23) and of Peleg, the grandfather of Serug (10:25; 11:6–19). In addition to allusions to the period of David and Solomon and Jeroboam noted above, the absence of any reference to Baal would point to the composition of narratives in a period between that god's fall from grace in the pre-monarchical period (Judg. 6) and his restoration under Ahab in the ninth century. Some preservation of ancient memory is indicated by the contrast between the known historic realities of the post-settlement period and the traditions about Jacob's sons. Thus, Reuben is depicted as Jacob's firstborn son (29:32; 49:3), and his name always takes pride of place in the tribal lists (35:23; 46:8) even though he lost the birthright (49:3–4; cf. 1 Chron. 5:1–2). Nevertheless, Reuben enjoyed no tribal supremacy in the recorded post-patriarchal history of Israel (cf. Deut. 33:6; Judg. 5:15–16). The identical situation exists in respect of Manasseh, firstborn of Joseph (Gen. 41:31; 48:14, 18–19) who likewise lost the birthright (48:1–20). The tribe was wholly eclipsed by Ephraim in later times. The image of Levi in Genesis is of a warlike and ruthless adversary (34:1–31; 49:5–7). This is at variance with the priestly and cultic functions of the tribe which played no role in the wars of conquest. Simeon is depicted as the partner of Levi in its act of violence (34:1–31), but in Joshua's campaigns Simeon was allied with Judah (Josh. 19:9; Judg. 1:3). The organization of the tribes according to matriarchs does not correspond to the post-conquest reality. Maternally related tribes did not enjoy any special political associations and their tribal territories were not always contiguous. All this makes it likely that some Genesis narratives have preserved some authentic reminiscences of early tribal history.

Abraham and Isaac enter into pacts with various peoples (14:13; 21:22–32; 26:28–31); Jacob's sons Judah and Simeon intermarry with Canaanites (38:2; 46:10); the Arameans and the Patriarchs are portrayed as being consanguineous (22:21; 24:24; 38; 25:20).

The Major Themes and Teachings

The distinctive nature of Genesis within the pentateuchal complex does not mean that it can be understood apart from the other books. On the contrary, it is the indispensable prologue to the drama that unfolds in Exodus. It provides the ideological and historical background for the relationship between God and Israel as it found expression in the events connected with the national servitude and the liberation. Its unique concept of God, of humanity, of the nature of the world, and of their interrelationships is essential to the understanding of those events.

The God of Creation. The external points of contact between the Genesis creation account and the ancient Near Eastern cosmologies are sufficiently numerous and detailed as to leave no doubt about the influence of the latter on the former. The Genesis creation narrative, like the Egyptian Memphite Theology (cos 1:21–3), presupposes a single creator god Ptah, but in contrast to Elohim, Ptah himself creates other gods, who themselves are objects of worship. The Genesis creation stories contrast with other ancient Near Eastern myths that regularly depict creation as the aftermath of the creator god's victory over the forces of chaos, a motif found in poetic biblical texts as well (e.g. Isa. 27:1; Ps. 89:10–11; 93; Job 26:11–13). Creation by divine fiat (Gen. 1:3, 6, 9, 11, 14, 20, 24) emphasizes the concept of the omnipotent, transcendent God whose will is unchallengeable. In this connection, the external literary form in which the account of cosmogony has been cast is highly instructive (See Table 3: The process of Creation (Gen. 1:1–23)). The creative process is divided into two groups of three days each, the first of which represents the stage of preparation or creation of the elements, the second the stage of completion or creation of those who are to make use of them. Each three-day group embraces the same number of creative acts, and in each case the first day witnesses a single deed, the second a bipartite act, and the third two distinct creations. The products of the middle days in the two groups are chaotically arranged. The seventh day is climactic and pertains to God alone. (The human institution of the Sabbath is not mentioned.) This symmetrically arranged literary pattern serves to underscore the fundamental idea that the world came into being as the free, deliberate, and meaningful expression of divine will.

Humanity. Another basic teaching is that the creation of humans is the culmination of the cosmogonic process. (This situation contrasts strongly with the Babylonian myth of Astar-Hasis, which like Genesis moves from creation to the great flood (cos 1:450–53]), in which humans are created to do all the work that the minor deities rebelled against doing.) Only here is the divine act preceded by an announcement of intention (1:26). Only humans are created “in the image of God” (1:26, 27), and to them alone is the custody and exploitation of nature’s resources entrusted (1:26, 28, 29). In the second account of the creation of humans, their unique position is emphasized by the fact that their appearance constitutes the sole exception to creation by divine fiat and requires, as it
were, a special and personal effort by God, from whom they directly receive the breath of life (2:7). At the same time, the exceptional mention of the material out of which the human was formed (2:7) is suggestive of the limitation of humanity’s God-like qualities.

EVIL. The sevenfold affirmation of the goodness of God’s creative acts (1:4, 10, 12, 18, 21, 25, 31) is singular in the Bible and indicates the influence of Zoroastrian theology whereby the creator-god effected a good creation. The Jewish writers of Genesis I who lived in the post-exilic period adapted the Persian notion to the needs of Jewish monotheism.

THE MORAL LAW. The divine punishment of Cain for fratricide (4:3–16) and the visitations upon the generation of the Flood for its corruption (6:9–8:22) and upon Sodom and Gomorrah for their wickedness (chapters 18–19) all presuppose the existence of a divinely ordained order of universal application, for the infraction of which humans are ultimately and inevitably brought to account.

THE UNITY OF HUMANKIND. The idea of the derivation of all mankind from one common stock is manifested through the divine creation of a single pair of humans as ancestors to all humanity. It is reinforced by the genealogical lists that illustrate the process of development from generation to generation. This concept of the family of humanity and its essential unity receives its consummate expression in the “Table of Nations” (chapter 10), in which the totality of ethnic entities is schematized in the form of a family genealogical tree deriving from the three sons of Noah and their wives, the only human survivors of the Flood.

DIVINE ELECTION. The universal focus in Genesis is gradually narrowed through a process of divine selectivity. Noah is singled out for salvation from the rest of humankind (6:8). Of his sons, Shem is especially blessed (9:26), and his line receives outstanding attention (10:21–31; 11:10–32). His genealogy is continued to the birth of Abraham (11:26) who becomes the elect of God and founder of a new nation (cf. 18:19). Again, of Abraham’s two sons, Ishmael is rejected and Isaac chosen (17:7–8; 19, 21; 21:14; 25:6; 26:3–4), and the selective process is repeated in respect of his offspring (35:9–12). The divine blessing of Jacob is the final stage, since at this point the patriarchal period ends and the national era begins. Nevertheless, the universal interest is not neglected entirely for the divine promises involve Israel in the international community (12:1–3; 18:18; 22:18; 26:14; 28:14).

THE COVENANT AND THE PROMISES. One of the most extraordinary features of Genesis is its conception of the relationship between God and humankind in terms of a covenant by which, as an act of grace, God commits Himself unconditionally to the welfare of humankind. This is first explicated in the case of Noah (6:18; 9:8–17; cf. 1:28–29). With the advent of Abraham, the covenant becomes the dominant theme of the entire book, to which all else is preparatory and which itself becomes prologue to the rest of the Bible. The oft-repeated promises to the Patriarchs consist basically of two parts – a future national existence and the possession of national territory. Abraham is to father a great people destined to inherit the land of Canaan (12:2–3; 13:14–17; 15:4–5; 18–21; 17:2, 4–8; 22:17–18). The same is reaffirmed to Isaac (26:3–4) and Jacob (28:13–14; 35:10–12; cf. 46:2–4; 48:3–4). In fact, most subsequent scriptural references to the three Patriarchs are in connection with these promises, and the measure of their paramount importance may be gauged both by the frequency of their repetition and by the fact that the book closes on this very theme (50:24).

The promissory covenant in Genesis lacks mutuality. It is a unilateral obligation freely assumed by God. The solemnity and immutable nature of the act of divine will is conveyed through a dramatic covenant ceremonial (chapter 15). Abraham’s worthiness is indeed stressed (18:19; 22:12, 16; 26:5), and his offspring to come, throughout the ages, are to observe the rite of circumcision as the symbol of the covenant (17:9–14). It should be noted, though, that the idea of a national covenant on Sinai with all its implications for the religion of Israel is beyond the horizon of Genesis, which sees in the promises to the Patriarchs the guarantee of God’s eternal grace to Israel and the assurance of eventual deliverance from Egypt (cf. 15:14; 50:24; Ex. 6:4–5).

GOD AND HISTORY. The concepts of God and the covenant in Genesis inevitably mean that the presence of God is to be felt on the human scene. History is thus endowed with meaning. A literary characteristic of the Genesis narratives is the employment of schematized chronology, the featuring of neatly balanced periods of time and the use of symbolic numbers to give prominence to this idea.

The ten generations from Adam to Noah are paralleled by a like number separating Noah from Abraham. The birth of each personality represents, from the biblical point of view, the arrival of an epochal stage in history. It is not accidental that the arts of civilization appear precisely in the seventh generation after Adam (Gen. 4:20–22), through the sons of Lamech who himself lived 777 years (5:31). See Table 1.

Turning to the period of the Patriarchs, it is significant that Abraham lived 75 years in the home of his father and the same number of years in the lifetime of his son Isaac, that he was 100 years of age when Isaac was born, and sojourned 100 years in Canaan (12:4; 21:5; 25:7). Jacob lived 17 years with Joseph in Canaan and 17 years with him in Egypt (37:2; 47:9, 28). See Table 2.

The Patriarchs resided a total of 250 years in Canaan (21:5; 25:26; 47:9), which is exactly half the duration of their descendants’ stay in Egypt (Ex. 12:40; according to the Greek and Samaritan versions the correspondence is exact). The important events in their lives are recorded in terms of a combination of the decimal and sexagenary systems with the occasional addition of seven (See Table 4: Important events in the lives of the Patriarchs). The idea is clearly projected that what is happening is the stage by stage unfolding of the divine plan of history.

[Nahum M. Sarna / S. David Sperling (2nd ed.)]
GENESIS RABBAH (Heb. רב Chíת ראבּ), aggadic Midrash on the Book of Genesis, the product of Palestinian amora'aim.

Title
The earlier title of the Midrash was apparently Bereshit de-Rabbi Oshaya Rabbah (Genesis of R. Oshaya Rabbah) so named after its opening sentence, “R. Oshaya Rabbah took up the text…” (Gen. R. 1:1), this being later abbreviated to Genesis Rabbah. This explanation is superior to the suggestion that it was so called in order to distinguish it from the biblical Book of Genesis of which it is an expansion (rabbah means “great”).

Structure
Genesis Rabbah is an exegetical Midrash which gives a consecutive exposition of the Book of Genesis, chapter by chapter, verse by verse, and often even word for word. It is a compilation of varying expositions, assembled by the editor of the Midrash. The work is divided into 101 sections (according to the superior Vatican 30 manuscript; other manuscripts and the printed versions have minor variations in the number of sections). Often the division into sections was fixed according to the open and closed paragraphs of the Torah (see *Maseh*, and at times according to the triennial cycle of the weekly readings of the Torah in Erez Israel which had been customary in earlier times. All of the sections, with seven exceptions, are introduced by one or several proems, one section having as many as nine. The total for the entire work is 246. The proems are of the classical type common to amoraic Midrashim, opening with an extraneous verse which is then connected with the verse expounded at the beginning of the section. Most (199) of the proems in Genesis Rabbah are based on verses from the Hagiographa (principally Psalms and Proverbs), only a small number being from the Prophets (37) and the Pentateuch (10). The proems are largely anonymous and in most instances commence without any of the conventional introductory formulae or *termini technici*. Those that are ascribed to authors are mostly amoraic, only two being tannaitic. Generally, the sections have no formal ending, but some conclude with the verse with which the following section begins, thus providing a transition. On rare occasions the ending carries a message of consolation. Characteristic of Genesis Rabbah, as of the other early amoraic Midrashim, tannaitic literature, and the two Talmuds, are its repetitions. An exposition or story is often transferred in the Midrash where an expression appears in more than one context.

Language
The language of Genesis Rabbah closely resembles that of the Jerusalem Talmud. It is mostly written in mishnaic Hebrew with some Galilean Aramaic. The latter is used especially for the stories and parables, in which many Greek terms and expressions are also interspersed.

The Redaction of the Midrash
In the early Middle Ages, some scholars ascribed the work to the author of the opening proem of the Midrash, Oshaya, of the first generation of Palestinian amora'aim. The fact, however, that Genesis Rabbah mentions the last group of Palestinian amora'aim who flourished in the second half of the fourth century c.e. (about 150 years after Oshaya) shows this ascription to be erroneous.

The editor used early Aramaic and Greek translations of the Bible (the translation of *Aquila* is quoted three times in the Midrash), but was unacquainted with Targum *Onkelos* on the Pentateuch, which was used in a Babylonian milieu. While he clearly used the *Mishnah*, some scholars have assumed that he did not make use of our *Tosefta*, or of the extant *Midreshei Halakhah* (Albeck, Mavo), though this issue needs further investigation. They also conclude that he made no use of *Avot de-Rabbi Nathan*, a relatively late aggadic compilation, or even of the much earlier *Seder Olam Rabbah*. Since there are many parallel passages in Genesis Rabbah and the Jerusalem *Talmud*, scholars have understandably devoted considerable attention to the complex question of their relation to each other. Recently H. Becker devoted an entire study to a reexamination of this issue. In an extended review of this work, C. Milikowsky criticizes the author for not drawing a clear distinction between the question of literary dependence between individual passages found in these two works, and the larger question of literary dependence between these compositions as complete and fully redacted literary works. Milikowsky, however, falls prey to this very confusion when he writes (concerning Lev. R. and Pes. deRav Kahana) “if we succeed in reconstructing which text used the other, then we have the rare opportunity of seeing exactly what a rabbinic redactor does with the material he is revising” (528). Milikowsky rightly draws our attention here to what may be the only matter of substance in this entire scholarly debate. Nevertheless, the question of “exactly what a rabbinic redactor does with the material he is revising” can be determined only on the level of individual passages, and it is more than likely that in some cases the redactor of Genesis Rabbah reworked an earlier literary tradition which is preserved in a more original form in the Jerusalem Talmud, whereas in other cases the opposite may be the case. This can be explained by positing that some of the aggadot and halakhot which occur in both Genesis Rabbah and the Jerusalem Talmud were derived from earlier common sources (perhaps from oral traditions). Alternatively, both Genesis Rabbah and the Jerusalem Talmud may have undergone successive revisions (as did the Babylonian Talmud), even after they took on a fairly distinct and identifiable literary form as redactional wholes, such that either one of them could have drawn upon a version of the other which differs in some respects from the works which we possess today. Therefore the artificial linking of the important issue of the nature of rabbinic redactional revision of earlier literary sources to the broader (and far less significant) question of possible literary dependence of one or the other of these two finished and complete literary works on the other only leads to methodological and conceptual confusion.
On the basis of its language, of the names of sages mentioned in it (most of whom were Palestinian amora'im), and of various historical allusions, it is clear that the work was edited in Ereẓ Israel, probably in the beginning of the fifth century c.e. *Genesis Rabbah* is thus the earliest amoraic aggadic Midrash extant; it is also the largest and the most important. The other amoraic aggadic Midrashim, including *Leviticus Rabbah* and *Lamentations Rabbah*, already made use of it. The first explicit reference to the work, however, occurs in *Halakhot Gedolot*.

The editor drew upon both written and oral sources. *Ben Sira* is mentioned four times in *Genesis Rabbah*, on one occasion being introduced by the phrase, “As it is written in the book of Ben Sira” (Gen. R. 91:4). *Genesis Rabbah* contains many *aggadot* which also occur in the other Apocrypha, the Pseudepigrapha, and in the works of *Philo* and *Josephus*. No conclusions, however, are to be drawn from this regarding any relation between *Genesis Rabbah* and these works, it being highly probable that they drew upon a common source or early oral traditions. In addition, *aggadot* and ideas from Jewish-Hellenistic literature often reached the sages through indirect channels. In addition to amoraic statements, *Genesis Rabbah* naturally contains much tannaitic aggadic material. Having assembled all of this material, the editor arranged it according to the order of the verses in the Book of Genesis, abbreviating, or modifying as he saw fit.

**Later Additions**

In *Genesis Rabbah* there are several parts (in 75, 84, 88, 91, 93, 95ff.) whose language, style, and exegetical character do not form an integral part of the original Midrash but are later additions. In most manuscripts the original expositions on the end of the pentateuchal portion of *Va-Yigash* and the beginning of that of *Va-Yehi* are omitted and replaced by others of later origin and which belong to a type of *Tanhuma Yelammedenu* Midrash.

**Editions**

*Genesis Rabbah* was first published in Constantinople in 1512 together with four other Midrashim on the other books of the Pentateuch, though these latter have nothing in common, as regards style and date of editing, with *Genesis Rabbah*. This edition and Midrashim on the five scrolls (which were previously published separately) were reprinted in Venice in 1545 and reissued several times.

*Genesis Rabbah* has appeared in a scholarly, critical edition based on manuscripts and containing variant textual readings and comprehensive commentary. This edition is one of the finest such works of modern rabbinic scholarship. It was begun by J. *Theodor in 1903 and completed in 1936 by H. *Albeck, who also wrote the introduction. From the numerous manuscripts at his disposal, Theodor chose the London manuscript, written about the middle of the 12th century. Careful examination of the manuscripts by Albeck, however, established the manuscript Vatican 30, copied in the 11th century, as superior. The London manuscript is probably a later formulation of the same tradition recorded in the Vatican manuscript. This conclusion has been subsequently confirmed by Y. *Kutscher's linguistic studies of the Vatican 30 manuscript which have shown it to represent an accurate archetype of Galilean Aramaic. A facsimile edition of the Vatican 30 manuscript was published in 1971 with an introduction by M. Sokoloff, and in the following year a facsimile edition of a previously unknown manuscript of *Genesis Rabbah* (Vatican 60), which was at first thought to be equal in importance or perhaps even superior to the Vatican 30 manuscript, but after a detailed analysis of this manuscript by M. Kahana, this has proven not to be the case. *Genesis Rabbah* was translated into English in the Soncino series by M. Friedman (1939) and again more recently by J. Neusner (1985).

fact "the large Genesis Rabbah" was not the work of Moses ha-Darshan, but of an anthologist who used some of Moses’ work. Ḥ. Albeck accepted the view of Epstein concerning the relationship between Genesis Rabbati and "the large Genesis Rabbah." He reinforced his view by a comparison between the Midrash Aggadah published by Buber (which is based upon the Midrash of Moses ha-Darshan) and with Numbers Rabbah to the portions Ba-Midbar and Nasso (chapters 1–15), which is also based, as he succeeded in proving, upon the Midrash of Moses ha-Darshan (an opinion already expressed by S.D. Luzzatto in his notes to Numbers Rabbah).

Genesis Rabbati is based upon the classical sources of the halakkhah, viz., the two Talmuds, the targumim, Sefer Yeẓirah, and all the known Midrashim, but reveals an especially wide knowledge of variant readings in the Midrashim. In the main, however, it is based upon Genesis Rabbah (of which it also gives variant readings). The unique quality of Genesis Rabbati lies in its quotations from the Apocrypha and Pseudepigrapha, and particularly from the Testaments of the Twelve Patriarchs, quoting it either directly or from the Midrash Tadshe, which is to a considerable extent dependent upon these works. Epstein even maintains that Midrash Tadshe is the work of Moses ha-Darshan. Quotations from the latter are mostly cited in the name of *Phinehas b. Jair to whom the Midrash Tadshe is attributed because of its opening words. Similarly, in quoting from other Midrashim which were attributed to definite authors, Epstein attributes such statements to their presumed author. Genesis Rabbati does not quote its sources verbatim but adapts them (as is the case with the other Midrashim based upon the Midrash of Moses ha-Darshan). Moses was accustomed to combine sources, to change one source in order to equate it with another, to explain one by means of the other, etc. He also added his own explanations and made great use of *gematria. His treatment of the sources and his additions, while having a precedent in the early Midrashim, clearly indicate his desire to create a new Midrash which would however reflect the biblical exegesis of the rabbis of the Midrash, and this aim is equally evident in the additions. The importance of this Midrash lies not only in its quoting of the sources but also in its biblical exegesis and in its exposition of the Ashkenazi *piyyut which came into being at about this time. There are no clear proofs of the direct use of Genesis Rabbati by authors of this period, though certain references by authors to Genesis Rabbati, which do not occur there, may refer in fact to Genesis Rabbati.

**GENETIC ANCESTRY, JEWISH.**

**Background.** The human genome refers to approximately three billion chemical letters (nucleotides) comprising the sequence of de-oxyribonucleic acid (DNA) in almost every cell of each human being. There are four different nucleotides (adenine, guanine, cytosine, thymidine), such that each of the approximately three billion sites of the human DNA sequence comprising the human genome is occupied by one of these four nucleotide chemical letters. Human genome analysis has revealed that on the face of the planet, on average, any two individuals differ from each other at fewer than merely 0.1% (1 out of 1000) of these sites. These differences among individuals arise from inaccuracies during the process wherein DNA is replicated and transmitted from generation to generation. Furthermore, the pattern of variable sites is not randomly scattered across the 3 billion-nucleotide genome. Rather, certain combinations of variable sites are often transmitted in blocks known as haplotypes.

DNA sequence variants are detected by genotyping or DNA sequencing methods. In the minority of cases, such variable sites may predispose to disease (disease-predisposing mutations), but for the most part they simply serve as “neutral DNA markers.” In addition to medical and forensic applications, DNA sequence variation markers are convenient for tracing shared ancestries, family relations, genealogic networks, migratory patterns, and geographic origins of individuals, communities, and populations. This discipline is called DNA sequence-based phylogenetics or phylogeography.

While analysis of the genome provides important insights with respect to population history, including Jewish origins and history – for both scientific and ethical reasons, such analysis does not provide an appropriate tool for establishing Jewish or any other religious or ethnic identity at an individual or community level. Scientifically, the variation in DNA sequence identity among Jews is too broad, and overlaps that of non-Jews sufficiently, so as to negate the concept of unique or characteristic genomic markers for Jews. Furthermore, Jewish identity is a concept based on tradition, law, culture, and custom, rather than on physical considerations, including DNA sequence. Attempts to use any biological markers to establish Jewish identity in individuals have been fraught with unwanted and tragic consequences in the past. Therefore, inferences regarding patterns of DNA sequence variation should be interpreted with great caution, with regard to both scientific and societal considerations.

DNA markers are distributed across all of the various distinct regions of the genome, which in humans consists of 22 pairs of autosomal chromosomes, the sex chromosomes (XX in females and XY in males), and mitochondrial DNA. Most of the genome is diploid, meaning that there is representation of each nucleotide site from both parents. However, the Y-chromosome of the genome in males, and mitochondrial DNA in both males and females are haploid, meaning that there is only representation from one parent (uniparental). In the case of the Y-chromosome, the DNA sequence including its variable site markers is transmitted only from fathers to their sons. In the case of mitochondrial DNA, the DNA sequence including its variable site markers is transmitted only from mothers to
both their male and female offspring. Furthermore, at these uniparentally inherited haploid regions the genome is free of a process called recombination, which does occur at the diploid regions of the genome. Recombination shuffles markers between the two parental copies at corresponding genomic regions. For most of the length of the Y-chromosome (the non-recombining or NRY region) and for the entire mitochondrial DNA, no recombination occurs. Thus, analysis of DNA markers on the NRY region of the Y-chromosome and mitochondrial DNA has emerged as a powerful tool in phylogenetics of male and female lineages respectively. Markers outside of these haploid regions have also been used in genome based phylogeographic analysis. However, the dual inheritance, with biparental presentation together with recombination, renders the interpretation of shared ancestry and phylogenetics more complex and often ambiguous. It should be noted, that when DNA sequence variants anywhere in the genome are disease-predisposing mutations, differences in their frequency among Jewish communities in comparison with non-Jews can contribute to certain health and disease epidemiologic patterns (see *Genetic Diseases in Jews*). The current entry will be divided into a description of genomic analysis of Jewish populations along male and female lineages, followed by an integrated overview.

**Application of Phylogenetics to Jewish Populations**

The molecular principles described above have been usefully applied to the evolutionary studies of humankind as a whole, as well as to the phylogenetics of various populations of interest. These studies address questions related to geographic origins, ancestry, history, migration, and demography of populations. Likewise, it is possible to phrase similar questions with regard to the parental ancestry of contemporary Jews. To do so, it is necessary, first, to delineate accepted nomenclatures and classifications for Jewish communities and second, to clarify how the use of different classes of genetic markers enables distinct questions of interest to be addressed. To this end, contemporary Jews can be considered as descending from two large population groups which had somewhat separate demographic histories during the past approximately two millennia. These are the Ashkenazi and non-Ashkenazi groups, which in turn are comprised of numerous different communities. It is clear that this division oversimplifies the relations and hierarchy between the various Jewish communities. Thus the Ashkenazi population of Europe, which refers to Jews whose recent ancestry traces to Central and Eastern Europe, is, often regarded as one population subgroup, despite clearly being composed of multiple communities. This classification has emerged because of shared adherence to similar religious rituals, liturgical style, and the shared use of the Yiddish language, and geographic location in Central and Eastern Europe. Of relevance to phylogenetics was the practice of a high level of endogamy, wherein Ashkenazi Jews married within the population subgroup. The non-Ashkenazi population subgroup is a much more culturally and geographically diverse population.

The majority of the non-Ashkenazi population is composed of communities that resided in the Near and Middle East, North Africa, and geographic locations to which the Jews fled following the Iberian expulsions, beginning in 1492 C.E. These communities share similar religious rituals, most probably due to their presumed common historical origin from a gradual movement of Babylonian Jews, and are sometimes collectively referred to as the “Sephardi (Spanish)” or “Mizrahi (Eastern)” Jews. In the current entry, we shall adhere to this convention though, where appropriate, based on available information, the term “Spanish exile” will refer to members of Jewish communities descended from the Iberian expulsions, and shall use the term “non-Ashkenazi” when the detailed geographic origin does not permit a more precise description. Moreover, neither the term “Sephardi” nor “Mizrahi” takes into account some additional Jewish communities such as some of the Italian, Georgian, Yemenite, and Indian communities.

Following the foregoing definitions, two complementary sets of questions arise. First, what is the overall pattern of the contemporary NRY and mitochondrial DNA sequence variation at the level of the entire Jewish population in comparison to non-Jews, and of individual population subgroups or communities? More specifically this set of questions relates to our overall ability to trace recent or contemporary Jewish communities to a particular geographic origin such as the Near East, and allows analysis of parameters such as admixture and gene flow with Diaspora host populations. Second, DNA marker analysis enables clarification of micro-evolutionary mechanisms and events that have shaped the population history of each of the Jewish communities. These include the actual number of founding ancestors, their rate of expansion, their most likely geographic origin, and the level of identity between the various Jewish founding ancestors in different Jewish communities. The answers to both sets of questions are addressed separately for paternal and maternal population history, using the NRY-region of the Y-chromosome and mitochondrial DNA respectively, and in some cases these are expected to yield different patterns.

To gain a clearer understanding of the way in which these questions can be addressed, it is important to clarify the different kinds of DNA sequence variation markers that are available for analysis, and the ways in which they can be combined to generate phylogenetic trees, with different levels of temporal resolution. Haplogroups are generally defined by a series of hierarchically arranged stable variations or polymorphisms in DNA sequence (usually at a single nucleotide site and hence termed single nucleotide polymorphisms or SNPS) that have usually occurred only once in the course of human evolution. These are binary or bi-allelic, since there are only two variants in the human population, rather than multiple different variants. Numerous such binary sites are located throughout the NRY, and when combined they define major haplogroups. Individuals belonging to the same NRY haplogroup share common paternal ancestry at a level of resolution and timeframe that is a function of the number and choice of such binary
sites. In the case of mitochondrial DNA, these binary sites are usually located in the portion of the circular mitochondrial DNA genome that is termed the coding region, and these define maternal haplogroups. Haplogroups enable the most basic level of phylogenetic assignment of humans into populations on the basis of shared paternal or maternal ancestry and hence phylogeographic origin. Such haplogroup analysis has been used to trace African origins and subsequent major migration routes for all anatomically modern humans on the planet. In the case of paternal haplogroups, defined by binary markers on the NRY, these have been given designations of major haplogroups A through R, based on the use of a few dozen binary markers, and each such haplogroup can be further refined and subdivided into a hierarchical tree of subhaplogroups, using many additional binary markers. These subhaplogroups are given additional lower case letter and number designations. As an example, NRY haplogroups A and B are dominant in Africa and absent in the Americas. Of relevance to the origin of Jewish populations, the Near East as a whole is populated by a varied mix of major haplogroups among which the most frequent are E and J. Similarly the mitochondrial major haplogroups are designated by letters A through Z, and then again further subdivided using numbers and lower case letters, using additional coding region binary markers. In the case of mitochondrial DNA haplogroups, the major L haplogroup is dominant in Africa and absent in the Americas. Of relevance to Jewish population origins, and as is the case for the Y-chromosome, the Near East is populated with a long list of major mitochondrial haplogroups, among which H, J, T, U, and K are frequent. It is important to emphasize that the most common major haplogroups can be found across very large geographic expanses, and in turn comprise numerous lineages that usually coalesced many thousand years ago. Lineages refer to branches within a given haplogroup or subhaplogroup which can be related to each other by additional classes of DNA sequence variation markers. Many such additional classes of markers exist, and together they are distinguished from haplogroup-defining binary markers in several ways. First, there may be more than two variants – such as in the case of simple tandem repeat markers (STRs) on the NRY. Also, they represent DNA sequence mutation events which may occur at a much more rapid rate compared to haplogroup defining binary markers, and as such may also have occurred at a given site repeatedly many times in human history, as occurs in the D-loop or control region of mitochondrial DNA. Such repeat markers are often said to define haplotypes within haplogroups, or lineages. Thus a phylogenetically defined lineage represents a cluster of related evolving haplotypes within a haplogroup. As noted, a haplogroup at any level of binary marker resolution is composed of numerous such coalescing lineages, whose relatedness can be determined using analysis of haplotype-defining repeat markers. Thus, while documentation or comparison of haplogroup frequencies within or among populations of interest provides important information regarding large but specific geographic origins, this does not effectively allow determination of the real number of ancestral parental lineages that gave rise to the present-day diversity in a population. This can be likened to the hands on a clock, in which haplogroups are like the hour hand, and haplotypes are like the minute hand, and a lineage represents a given number of minutes within the interval defined by the hour hand. There is a slight difference in the way haplotypes are measured and determined for the NRY and for mitochondrial DNA, with a greater emphasis on the use of STRs in the case of the NRY, and use of D-loop sequence variants in the case of mitochondrial DNA. The advantage of using haplotype-defining repeat markers is invaluable in the study of the genomic structure of population groups, since they evolve quickly enough to trace recent historical events from DNA samples of extant living individuals. It is this genomic tool which has provided several important insights regarding Jewish populations, whose demographics and histories had previously been described on the basis of oral tradition, archival records, linguistic and liturgical analysis. Analysis of the genome has provided a complementary tool to these more classical approaches, and yielded additional insights.

**Jewish Paternal Ancestry – View from the NRY Markers of the Y-Chromosome**

The first recorded studies at the level of the genomic DNA sequence variation appeared in 1993, and compared Sephardi and Ashkenazi Jews in comparison to non-Jewish Czech males. These reported that the two Jewish population subgroups show a great similarity of NRY DNA marker frequencies, and appear to show very little evidence for admixture with host non-Jewish neighbors. Of interest, comparison with Lebanese non-Jews supported the notion of a shared Near East origin for both Ashkenazi and Sephardi Jewish population subgroups examined. Studies over the subsequent decade utilized progressively larger and more diverse sample sets, and a greater number of DNA sequence markers. Taken together this decade of work on the NRY markers strongly supports the hypothesis that the paternal gene pool of Jewish communities from Europe, North Africa, and the Middle East descended from a common Near Eastern ancestral population, and suggest that most Jewish communities have remained relatively isolated from neighboring non-Jewish communities during and after the Diaspora. The two most prevalent major NRY haplogroup affiliations shared among all Jewish communities are those denoted J and E. Further research based on haplogroup markers has shown that, with some notable rare exceptions, the NRY chromosome pool of both Ashkenazi Jews and non-Ashkenazi Jews originates as an integral part of the genetic landscape of the Near East. Further analysis at the haplotype level suggested that the pattern of haplotype differentiation within these shared haplogroups differs between the Jewish population and non-Jewish Near Eastern populations. This is entirely consistent with a shared remote Near East origin but subsequent separation of the ancestors of contemporary Jews from their non-Jewish Near East shared
ancestral population. Such separation involved the establish-
ment of a separate ethnic identity and restriction in marital
admixture. The separation would have been accentuated by
migration of the Jewish population from the Near East and
into other parts of the world, during the Diasporas. In oth-
ers words, the biological events leading to the emergence of
the major haplogroups observed in Jews and non-Jews with
whom they share common Near East ancestry are much older
than the populations in which these haplogroups are found.
While the similar and shared Near Eastern background at the
haplogroup level predates the ethnogenesis in the region, the
haplotype structure is more recent and has evolved after the
establishment of the Jews as a population group. To date, the
Ashkenazi subpopulation of the Jews has been studied in the
greatest detail, though there is a steadily increasing accumu-
lation of comparably detailed genomic information for non-
Ashkenazi communities. In the most detailed paternal phyl-
ogenetic study of the Ashkenazi to date by Behar and Skorecki
in collaboration with an international team of scientific col-
leagues, a detailed resolution of the haplogroup structure ac-
gording to the Y Chromosome Consortium recommendations
was obtained. Based on the genotyping results, the Ashkenazi
haplogroups were divided into the following three categories:
 major founder haplogroups, minor founder haplogroups, and
shared haplogroups. The first two categories included those
haplogroups likely to be present in the founding Ashkenazi
population (and that now occur at high and low frequency re-
spectively). The latter category is comprised of haplogroups
that either entered the Ashkenazi Jewish gene pool recently as
the result of introgression from European host populations,
and/or that were present in both European and Jewish popu-
lations before the dispersal of the ancestral Ashkenazi popu-
lation through Europe.

Haplogroup E-M35 and haplogroup J-12f2a fit the cri-
teria for major Ashkenazi Jewish founding subhaplogroups,
because they are widespread both in Ashkenazi Jewish com-
unities and in Near Eastern populations, and occur at much
lower frequencies in European non-Jewish populations. Sub-
haplogroups G-M201 and Q-P36 show a similar pattern, but
are found at lower frequency, and are therefore considered to
have been part of the founding paternal Ashkenazi Y-chro-
mosome pool. It has not yet been established if these minor
subhaplogroups are shared with non-Ashkenazi Jews. The
best candidates for subhaplogroups that entered the Ashke-
nazi Jewish population more recently via admixture from the
neighboring European populations include I-P19, R-P25, and
R-M17. Taken together these results confirmed that the major-
ity of NRY haplogroups found among contemporary Ashke-
nazi Jews originated in the Near East, with an approximately
8% introgression from non-Jewish European populations. Two
vents of interest seem to have made very specific indepen-
dent contributions to this minor degree of introgression, and
these will be described in the subsequent section. However,
overall genomic analysis provides definitive evidence refuting
a major contribution to the Ashkenazi Y-chromosome pool of
any large scale entry into the population from the Caucasus,
the putative geographic location of the Khazar Kingdom,
or from any other European or Eurasian source population.
While a study of this detail in non-Ashkenazi communities is
still to be done, multiple lines of evidence from the genomic
literature strongly support a common Near Eastern paternal
origin for all Jewish communities, with low levels of introgres-
sion from neighboring non-Jews in the Diasporas. These find-
ings also provided the backdrop for detailed analysis of lin-
eages to clarify demographic patterns and microevolutionary
forces that have shaped the detailed population structure of dif-
f erent Jewish communities and Jewish population subgroups.
A number of illustrative examples are provided herein.
lineages. Indeed, several research studies beginning in 1997, and carried out over many years and across several continents, reveal a statistically significant greater degree of similarity of such NRY markers among contemporary Jewish priests compared to other groups tested. This similarity applied equally when tested across Ashkenazi and non-Ashkenazi communities. This finding has been durable and has withstood the test of a decade of verification. Utilization of NRY STR markers, whose rate of change occurs at a surmised rapid pace, enabled the tracing of lineages and also determination of lineage coalescence times, in order to bracket an approximate timeframe for the establishment of this patrilineal Jewish priestly dynasty. Thus for example, using a set of six STR markers (DYS19, DYS388, DYS390, DYS391, DYS392, and DYS393), a single haplotype, termed the Cohen Modal Haplotype, was found to be the most frequent, and to be shared among priests from both the non-Ashkenazi and Ashkenazi communities. The scores (corresponding to the number of repeats in each named STR marker respectively) for this six-STR haplotype are 14, 16, 23, 10, 11, and 12 and are now known to belong to NRY haplogroup J, which, as noted above, is the most frequent haplogroup in the Near East and among Jews in particular. In a 1998 study, the modal haplotype frequencies were found to be 0.449 and 0.561 for the Ashkenazi and Sephardi kohanim, respectively. The corresponding modal frequencies for the Ashkenazi and Sephardi Israelites in this same study were found to be 0.132 and 0.098, respectively. This lower frequency highlights the difference in criteria for overall Jewish affiliation compared to affiliation with the Jewish priesthood. Overall Jewish identity, since at least talmudic times (100 B.C.E.–500 C.E.) has traditionally been acquired either by descent from a Jewish woman, or alternatively by rabbinically authorized conversion, without the need to establish descent from a common male (or female) ancestor. In contrast as noted above, affiliation to the Jewish priesthood was restricted along patrilineal lines of descent. The use of one-step mutation haplotypes, termed the Cohen Modal Cluster, allowed the calculation of the coalescence to the most common recent ancestor by standard accepted mutation rates. This calculation gave an estimate of approximately 106 generations, which for a generation time of 25 years gives an estimated range which brackets a mean of 2,650 years before the present. These results establish the common origin of the Jewish priesthood caste in the Near East, coinciding with a timeframe beginning at approximately the biblically attributed date of the exodus from Egypt and extending to the Temple period. However, it should be noted that such dating estimates are based on numerous inherent assumptions and carry with them a wide error margin. The availability of more binary as well as STR markers for the NRY is now enabling further refinement at both the hapl ogroup and haplotype levels, and these numerical estimates may change based on future genome analysis. Furthermore, the discovery of a modal haplotype and cluster is based on statistical analysis, and does not permit specific validation of priestly status for a given individual. The latter depends upon cultural, religious, and social considerations which are not related to genome analysis for a given individual.

Of interest, the same studies in 1997 and 1998 found high frequencies of multiple haplogroups in the levites, indicating that no single recent origin could be inferred for the majority of this group, despite an oral tradition of a patrilineal descent similar to that of the kohanim (with some exceptions outlined in talmudic tractate *Behorot*). This led to a more detailed NRY analysis of the levites. In particular, given the importance of the paternally defined levite caste in Jewish history, together with multiple theories of the ethnogenesis of the Ashkenazi Jewish community, and a suggestion that Yiddish is a re-lexified Slavic tongue, Behar and Skorecki, together with an international team of scientific collaborators, reported in 2003 a detailed investigation of the paternal genetic history of Ashkenazi levites. They compared the results with matching data from neighboring populations among which the Ashkenazi community lived during its formation and subsequent demographic expansion. The finding clearly demonstrated among the Ashkenazi levites, a major tightly clustered lineage within NRY haplogroup R-M17, which comprises 74% of Ashkenazi levites within this haplogroup and 52% of Ashkenazi levites overall. The presence of the R-M17 haplogroup within Ashkenazi levites is striking for several reasons. Firstly, this haplogroup is found at high frequency in the Ashkenazi levites but not in Sephardi levites, nor any other geographically or religiously designated Jewish grouping examined to date. This means that a large and closely related subgroup of the Ashkenazi levites and the Sephardi levites differ in paternal ancestry. This is a very different pattern from that observed among the kohanim. Second, the STR marker-based haplotypes within this Ashkenazi levite haplogroup form an exceedingly tight phylogenetic cluster, indicative of a very recent origin from a single common ancestor. Coalescence calculation following the same principles used for the Cohen Modal Haplotype point to a founding event that occurred approximately 1,000 years before the present, with the same caveats regarding time estimates based on genomic analysis as were pointed out above. Third, the haplogroup is extremely rare in other Jewish groups and in non-Jewish groups of Near Eastern origin, but is found at high frequency in populations of East European origin. This contrasts with the Cohen Modal Haplotype, which belongs to a haplogroup that is abundant in the Near East. For the reasons stated above, it is likely that the event leading to a high frequency of R-M17 Y-chromosomes within the Ashkenazi levites involved very few, and possibly only one, founding paternal ancestor. The question then arises regarding the possible origins of the founder(s). Haplogroup R-M17 is found at very low frequency in other Jewish groups. It is possible, therefore, that this haplogroup was also present at very low frequency among the levites present within the Ashkenazi founding community, followed by exceeding reproductive success, rendering the descendants of one such Levite, with this rare haplogroup, more numerous. Likewise, the haplogroup is also found at very low frequency within...
some populations of Near Eastern origin. It is therefore also possible that a conversion event prior to the establishment of the Ashkenazi founding population led to the founding of this haplogroup and its subsequent emergence at high frequency within the Ashkenazi levites. While it is not possible to formally refute either of these two possible explanations, it would be a remarkable coincidence that the geographic origins and demographic expansion of the Ashkenazi levites are within northern and eastern Europe and that this haplogroup is found at very high frequency within neighboring non-Jewish populations of European origin, but not at high frequency elsewhere. An alternative explanation, therefore, would postulate a founder(s) of non-Jewish European ancestry, whose descendents were able to assume levite status. While neither the NRY haplogroup composition of the majority of Ashkenazi Jews nor the STR haplotype composition of the R-M17 haplogroup within Ashkenazi levites is consistent with a major Khazar or other European origin for the Ashkenazi community, as has been speculated by some scholars, one cannot rule out the important contribution of a single or a very few individual male founders from the Khazar or another Eurasian population group among contemporary Ashkenazi levites. A similar study focusing on non-Ashkenazi levites is yet to be carried out, and will no doubt shed additional light on the detailed paternal lineages comprising contemporary levites.

**Dutch Jews and Lemba.** Two additional illustrative examples of geographic rather than caste designation can be given wherein genomic analysis of NRY marker variation has provided insights of relevance to Jewish population history. NRY analysis of Ashkenazi Dutch Jewish males has shown that approximately 25% of their NRY chromosomes belong to the most prevalent haplogroup in Western Europe and one that is rare in the Near East, R-P25. Therefore, when various indices of genetic distances are measured between this Ashkenazi community and the non-Jewish host population, greater similarities are observed, reflecting more substantial male-origin gene flow from the host population to the Ashkenazi Dutch community. This is consistent with greater religious tolerance which may have characterized Dutch society. Interestingly, the pattern of this possible introgression is different from that observed for the R-M17 haplogroup described for the levites. The genetic distances between the haplotypes comprising haplogroup R-P25 in contemporary Ashkenazi Dutch Jews coalesce prior to the migration of Jews to Europe and therefore are likely explained by repetitive introgression events (admixture) of European non-Jewish males into this community. Another group of interest has been the *Lemba tribes of Southern Africa. While not identified as Jews in religious or halakhic terms, these individuals relate an oral tradition of descending from a group of men who migrated via the Hadramout from the ancient kingdom of Judea in the Near East. Following their eventual settlement in their current villages, located in modern-day South Africa, Mozambique, and Zimbabwe, the Lemba founders are said to have intermarried with local Bantu-speaking women, and to have adopted the language and many cultural practices of their neighbors. However, they also maintained some traditions, reminiscent of a Near East and Jewish origin. Genomic analysis of NRY markers at the haplogroup and haplotype level indeed confirmed a pattern of admixture, with clear-cut evidence of Y-chromosomes of Near East origin in a substantial number of Lemba males, with frequencies approaching those found in some Ashkenazi and Sephardi Diaspora Jewish communities, with a strikingly high frequency of Lemba males with the Cohen Modal Haplotype. These are virtually absent among the non-Lemba neighboring populations. More detailed STR-based lineage and coalescence analysis with a large number of markers could provide additional insights of historical interest.

Additional studies have been done, and are continuing to focus on the mechanisms that shaped the population genomic structure of the remaining majority of Jewish groups and communities. Questions of special interest amenable to this type of analysis include these: how limited is the number of founders which gave rise to the contemporary global Jewish population? Do Ashkenazi and various non-Ashkenazi Jewish populations share overlapping or distinct founding lineages? Can geographic origins for each of the Jewish haplogroups be determined with greater accuracy? Studies carried out between 2002 and 2004 have provided some initial information in this regard. By focusing initially on the Ashkenazi population and investigating the STR marker variation within each of the founding haplogroups, Behar and Skorecki, together with an international group of scientific collaborators, confirmed previous findings that Ashkenazi Jews show high levels of haplogroup diversity compared with their non-Jewish counterparts. However, a vastly reduced number of haplotypes within Ashkenazi Jewish haplogroups, as well as reduced haplotype variance within haplogroups, was clearly observed. What do these contrasting patterns tell us about the possible role of a bottleneck in the Ashkenazi population? Despite the fact that Ashkenazi Jews represent a recently founded population in Europe, they appear to derive from a large and diverse ancestral source population in the Near East, a population that may have been larger than the source population from which European non-Jews derived. This is consistent with the finding that contemporary Ashkenazi Jews display higher levels of haplogroup diversity than European non-Jewish populations. The reduced haplotype diversity within Ashkenazi Jewish haplogroups compared to non-Jewish populations may be the signature of a founder event/population bottleneck in the Ashkenazi population history. Indeed, the extremely low STR-based haplotype diversity of some of the less frequent founding haplogroups (e.g., NRY haplogroups R-M17, Q-P36) suggest a single male lineage expansion comprising most or all of these and other haplogroups in Ashkenazi Jews. Comparable analyses have yet to be carried out for the many non-Ashkenazi communities. In addition, the study demonstrated that the many different Ashkenazi communities in Central and
Eastern Europe cannot be readily distinguished from each other either at the haplogroup or haplotype level, based on genetic markers at both the haplogroup and haplotype levels. This can be attributed to a common origin from a shared ancestral deme and due to continuous migration among the Ashkenazi communities, and is entirely consistent with non-genetic disciplines identifying all Ashkenazi communities as a relatively homogeneous population.

**Jewish Maternal Ancestry: View from Mitochondrial DNA**

The available data on the maternally inherited mitochondrial DNA in Jewish communities is still scant, but is being collected at a rapid rate as DNA sequencing and genotyping technology improves, and is also fueled by the interest of the public in genealogic questions. An initial study, which focused only on a region of the D-loop of mitochondrial DNA known as hyper-variable sequence 1 (HVS-1), demonstrated greatly reduced mitochondrial DNA diversity in the Jewish populations in comparison with the host populations, together with a wide range of different modal haplotypes specific to each of the different communities. The results indicated specific founding events in the Jewish populations. A simple explanation for this exceptional pattern of mitochondrial variation across Jewish populations was that each of the different Jewish communities is composed of descendants of a small group of maternal founders. After the establishment of these communities, inward gene flow from the host populations must have been very limited. As the study focused on haplotype diversity and did not include deep haplogroup analysis, a putative origin of each of the founding lineages was not suggested. A subsequent study conducted by Behar and Skorecki, together with an international group of scientific collaborators, focused in greater detail on the Ashkenazi population using a large set of samples from descendents of numerous communities across Europe, and utilized markers which permitted deep phylogeographic analysis at the mitochondrial haplogroup and haplotype levels. The analysis of Ashkenazi mitochondrial sequence variation portrays a pattern of highly reduced diversity, with an unusually large proportion of haplotypes that are unique to the Ashkenazi gene pool, and a reduction in frequency of rare haplotypes and singleton sites compared with both European and Near Eastern populations. At the haplogroup level, the Ashkenazi mitochondrial DNA variation was found to have a number of peculiarities. For example, in two separate studies nearly ten years apart, haplogroup K appears as the most common haplogroup, with its frequency almost an order of magnitude greater than among European or Near Eastern non-Jewish populations. More detailed sequence analysis enabled the construction of mitochondrial DNA-based phylogenetic networks, which resolved the haplogroup K samples into three separate lineages, whose phylogeographic origins are thought to antedate by far the founding of the Ashkenazi population. Furthermore, mitochondrial DNA haplogroup N1b, rare in most European populations, was found to comprise nearly 10% of the Ashkenazi mitochondrial DNA pool, and strikingly, haplotype analysis of this N1b haplogroup in Ashkenazi Jews revealed only a single lineage. These Ashkenazi mitochondrial DNA lineages were virtually absent from surrounding non-Jewish populations, and therefore provide a genetic signature of the Ashkenazi maternal gene pool, and bear witness to the strong effects of genetic drift acting on this population. Similar to the observation for male ancestry based on Y-chromosome analysis in the Ashkenazi population, the mitochondrial DNA results also show that the various Ashkenazi communities throughout Central and Eastern Europe cannot be readily distinguished from each other, likely reflecting shared recent origins from a common small ancestral deme, followed by continuous migration among the Ashkenazi communities.

**Micro-Evolutionary Mechanisms that Have Shaped Mitochondrial DNA Sequence Variation in Jewish Communities**

Based on the foregoing, and with the development of advanced technological approaches to facilitate DNA sequence analysis, the highest possible level of maternal phylogeographic resolution can be obtained from complete sequencing of the entire approximately 16,500 nucleotides of mitochondrial DNA from samples of interest. Recent studies by Behar and Skorecki and their international scientific collaborators, as well as other research groups, are utilizing such an approach in an attempt to shed light on the absolute number of individual women who gave rise to the lineages among Ashkenazi Jews, to shed light on their putative origin. Based on the complete sequencing analysis in Ashkenazi Jews and existing complete sequences from non-Jews, the exact phylogenetic branches in which the Ashkenazi lineages could be traced were identified. The new information was used to screen a global set of haplogroup K samples to include or exclude them from these Ashkenazi lineages. The results showed that the Ashkenazi lineages were virtually absent in other populations, with the important exception of low frequencies among non-Ashkenazi Jews. These results indicate that the three Ashkenazi haplogroup K lineages are virtually restricted to this population, and are likely to be of Near Eastern rather than European origin. The same approach was followed for mitochondrial DNA haplogroup N1b, and concluded that for this haplogroup all samples belong to one expanding lineage. Taken together, these four lineages indicate that four individual women gave rise to fully 40% of contemporary Ashkenazi Jews, or approximately 3.5 million people. The coalescence times for the expansion of these four lineages coincide well with the historical timeframe of less than 2,000 years for Ashkenazi population expansion from a small founding deme, providing the most powerful and detailed information about the maternal Ashkenazi population founding event. Similar studies in non-Ashkenazi Jewish communities remain to be carried out, and should provide comparable information regarding absolute numbers of founding maternal lineages, as well as their approximate founding dates and possible ancestral locations.
Integration of the Paternal and Maternal Genetic History

Taken together, the data available from Y-chromosome and mitochondrial DNA phylogenetic analysis of Jewish populations has been very informative in uncovering patterns and mechanisms that complement information gleaned from more conventional historical, linguistic, archival, liturgical, and archeological approaches. Furthermore, NRY and mitochondrial DNA markers continue to be used to seek possible Near East origins for communities which claim shared remote ancestry with the majority of Jewish population groups (so-called "Lost Tribes"). At the population level it seems that the genetic histories of the maternal and paternal ancestors tell different stories about population genomic structure of the Jews. Y-chromosome genomic analysis strongly points to a common origin in the Near East while the genetic data from the mitochondrial DNA point to separate local events with a putative geographic origin that might or might not be in the Near East. Y-chromosome and mitochondrial DNA analyses are congruent in suggesting that a limited number of founding ancestors gave rise to the various Jewish communities, with remarkably low levels of introgression from the host populations. It is also clear that many questions remain unanswered and the scope of future studies is potentially very large. Data on the non-Ashkenazi population is needed to answer more accurately questions pertaining to the mechanisms that have shaped each of the communities and the possible connection among them and with the Ashkenazi and host populations. It is important to note that information gleaned from the study of the haploid regions of the genome provide information that is of relevance to population level genomic effects. Population level effects, such as founder and bottleneck events, influence overall patterns of DNA sequence variation across the genome as a whole. Thus a founder effect, followed by population expansion, may lead to the drift to high frequencies of specific disease-predisposing or phenotype-modifying sequence variants at other parts of the genome. However, they do not substitute for direct analysis at these diploid and autosomal regions of the genome in ascertaining mutations. Furthermore, recombination, which characterizes the pattern of inheritance at the diploid regions of the genome, accounts for the influence of even small degrees of admixture of Jews with their non-Jewish neighbors on diverse traits or phenotypes that are determined by DNA sequence variation throughout the genome. This partly explains some of the differences in physical features that may be noted among Jewish communities, despite common ancestral origins, and high levels of intra-community endogamy. Interestingly, recently it has been shown that in other parts of the genome as well, there may be regions of limited recombination, or regions in which DNA sequence variation markers are inherited in a block like pattern. This finding may open up the ability to utilize such diploid regions to enhance our understanding of population genomic history, especially with respect to disease predisposition. The potential implication of findings such as paucity of ancestors and their possible effect on other parts of the genome, especially those relevant for diseases prevalent among Jews, remains an important continuing frontier for study with respect to genomic analysis of Jewish populations. These questions are particularly important for the Ashkenazi community in which the reasons for the well-documented excess of rare recessive disorders have been repeatedly discussed without a definitive resolution. It is anticipated that future studies integrating analysis of the haploid genomic regions and other genomic regions such as the X-chromosome and the autosomes will be complementary and shed additional light of historical and population health importance. The future holds great promise in clarifying these important chapters in the history of the Jewish people.

GENETIC DISEASES IN JEWS.

The abnormal genes and DNA sequences underlying most inherited genetic diseases in Jews have been identified. This progress has helped to understand the nature of these diseases, to increase the prospects for treatment, to facilitate genetic counseling, and to elucidate the population genetics underlying the segregation of these diseases in Jewish communities. Classically, genetic disorders are classified according to their mode of inheritance. Individuals inheriting one abnormal dominant gene or two abnormal recessive genes develop disease. In contrast, individuals who inherit one copy of a recessive gene do not develop disease but are carriers at risk of transmitting the disease. However, progress has revealed further complexities. Diseases formerly attributed to a single abnormal gene are often associated with different or multiple abnormal genes. There is also an imperfect correlation between inheriting an abnormal gene and the clinical features and severity of the resulting disease. Increased recognition of mild forms of classical disease has forced a reevaluation of disease prevalence in Jewish as in other populations. Furthermore, although mutation in identifiable genes is responsible for most genetic diseases, interaction with other genes and with environmental factors often determines disease susceptibility and expression.

Genetic diseases with a high prevalence in Jews are mostly recessive. In general, over 1,000 recessive diseases have been discovered. Most are rare but the prevalence of some of these diseases is increased 100-fold or more in Jewish as in other isolated ethnic groups with predominant inbreeding. This increased prevalence is usually but not invariably confined to individual Jewish ethnic groups ("edot Israel") and not found in Jews in general. Most are severe and often lead to early death. In some diseases genetic analysis has identified the first appearance of an abnormal "founder" gene originating in a small number of individuals within a Jewish group. This creates a genetic bottleneck whereby the prevalence of a recessive genetic disease is maintained at a high level by subsequent inbreeding.

These principles and the practical issues are illustrated by examples of the most common genetic diseases. Ashkenazim are a relatively homogeneous group despite their settlement in different European countries for centuries. The high prevalence of some 20 “Ashkenazi diseases” in this group dates from founder effects and bottlenecks in the era after 75 C.E. and between 1100 and 1400 C.E. The most common of these diseases are the neurodegenerative Tay-Sachs disease and Gaucher type 1 disease, which has more widespread clinical features. These “lysosomal storage” diseases result from enzyme deficiencies. Familial dysautonomia affects peripheral nerves and predominantly affects certain Ashkenazi groups. The carrier rate in Ashkenazim in Israel of Polish descent is 1 in 18 compared with 1 in 99 in those of non-Polish descent.

Ashkenazi women with a family history of breast cancer are at increased risk of developing this disease, especially of early onset, due to the high (2.5%) prevalence of BRCA1 and BRCA2 gene mutations in this population. They also have a high incidence of ovarian cancer of which a large percentage, estimated at up to 41%, are attributable to “founder” mutations in these genes. Approximately 1 in 25 Ashkenazim are carriers for one of these disorders, resulting in the birth of one affected child in approximately every 3,000 Ashkenazim live births for each condition. Screening is essential at least in those with a family history. The gene mutations responsible for other less common diseases with a high prevalence in the Ashkenazi population have also been identified allowing accurate diagnosis in at risk families. Prevention programs have already reduced the number of affected children born to these families by over 90%.

In contrast, genetic analysis in cystic fibrosis is more problematical. This disorder has many clinical features in addition to the characteristic lung and pancreatic involvement. There is a high carrier rate (1 in 23) in Ashkenazi Jews but it is similar in the general northern European population. Over 900 genetic abnormalities have been associated with cystic fibrosis and there is a poor correlation between these abnormalities and disease features and severity.

Sephardi Jews are genetically much more heterogeneous than Ashkenazi Jews and genetic diseases in high prevalence in Sephardi communities reflect their country of origin such as Iraq, Yemen, and Morocco. Some genetic disorders characteristic of the Mediterranean region are relatively common in all Sephardi and in non-Jewish communities, marking constant migration. Genetic screening for the abnormal hemoglobin responsible for thalassemia is well established. Familial Mediterranean fever (FMF) is an intermittent febrile illness, often difficult to diagnose. Five variants of abnormal sequence have been detected in the defective gene associated with FMF which give important insights into disease severity and its occurrence in different communities. However, genetic analysis has not solved the diagnostic problems. See also *Sickness.

[Edward Farhud (2nd ed.)]

GENEVA, capital of Geneva canton, Switzerland. Jews apparently first settled there after their expulsion from France
by *Philip Augustus in 1182, receiving protection from the local bishop. The first mention of a Jew in an official document dates from the end of the 13th century. At first Jews were not authorized to settle in Geneva itself but only in the vicinity. They engaged in moneylending and moneychanging as well as in commerce on a partnership basis with Christian merchants. There were also some physicians among them. Jews having to pass through Geneva on business paid a poll tax of four denarii (pregnant women paid a double tax). In 1348, at the time of the "Black Death, the Jews were accused of having poisoned the wells and many were put to death. From the early 15th century, the merchants and the municipal council restricted the Jewish activities, and from 1428 Jewish residence was confined to a separate quarter (near the present Rue des Granges). The relations between the Jews and the Christian merchants were strained and the Jewish quarter was frequently attacked by the populace. The most serious attack occurred at Easter 1461. The duke's representatives admonished the city authorities but the situation of the Jews continued to deteriorate. In 1488, Jewish physicians were forbidden to practice there and in 1490 the Jews were expelled from the city. Subsequently no Jews lived in Geneva for 300 years. A proposal to allow a group from Germany to settle if they undertook to pay a high tax and perform military service obligations was rejected by the municipal council in 1582. In 1780 Jewish residence was permitted in the nearby town of Carouge, which was then under the jurisdiction of the dukes of Savoy. After the French Revolution, Geneva was annexed by France and remained under French rule until 1814. During this period, the Jews enjoyed equal rights of citizenship. However, in 1815 Geneva became a canton within the Swiss confederation, and subsequently their position deteriorated. The acquisition of real estate by Jews throughout the territory of the canton was now prohibited. The Jews in Geneva were not granted civic rights until 1841, and freedom of religious worship until 1843. The Jewish community was recognized as a private corporation in 1853 and a synagogue was inaugurated in 1859. The first rabbi of Geneva was Joseph Wertheimer (1859–1908), who also lectured at the University of Geneva. At the turn of the century, Geneva University attracted many Jewish students from Russia. Chaim *Weizmann lectured there in organic chemistry in 1900–04. As early as 1925 there existed a Sephardi fraternal group which in 1965 merged with the Communauté Israelite.

Hebrew Printing

From the 16th to the 19th centuries, non-Jewish printers issued a considerable number of Hebrew books in Geneva, mostly Bibles or individual books of the Bible with the Greek or Latin versions, or Hebrew grammars, primers, and dictionaries using Hebrew type. Thus Robert Estienne printed a Hebrew Bible with Latin translation in 1556, and a year later a Hebrew-Chaldee-Greek lexicon. Calvin's commentaries on Daniel (1561) and Psalms (1564) were printed in Geneva with the Hebrew text. J.H. Otho's Lexicon rabinico-philologicum ... of 1675 included the Mishnah tractate Shekalim in the original with a Latin translation. The 18-volume duodecimo edition of the Hebrew Bible (1617–20) is usually ascribed to Geneva, and so is the volume of Proverbs, with interlinear Latin translation of 1616 by the same printer (אהלמך יִּשְׁמַע). The possibility that the Hebrew transcription יְנַעְדָּה should be read as Genoa cannot be excluded.

GENIZAH (Heb. פּוּקִית, literally “storing”), a place for storing books or ritual objects which have become unusable. The genizah was usually a room attached to the synagogue where books and ritual objects containing the name of God—which cannot be destroyed according to Jewish law—were buried when they wore out and could no longer be used in the normal ritual. As a result, ancient synagogues can preserve books or sections thereof of great antiquity. The word is derived from the root הָנָה from the Persian ginzaḥ (“treasury”), the root meanings of which are to “conceal,” “hide,” or “preserve.” Eventually it became a noun designating a place of concealment. In Scripture there occur ginzei ha-melekh (“the king’s treasuries”; Esth. 3:9; 4:7; and beiṭ ginzaḥayyā (Ezra 5:17; 6:1; 7:20) with the sense of a “treasury” or “archive.” In talmudic and midrashic literature, however, it is used as a nomen actio- nis (Shab. 161; Lev. R. 21:12; Meg. 26b), as a place for the putting away of all kinds of sacred articles, such as sacred books no longer usable, as well as the books of Sadducees and heretics, and other writings of which the sages disapproved but which were not required to be burned (Mid. 1:6; Shab. 116a); whence the expression sefarim genuzim (“books to be hidden away”). The expression beiṭ genizah (“storeroom,” Pes. 118a) means a treasury “powerfully and strongly guarded” (Rash- bam, ad loc.). There was an ancient custom of honoring a dead man by putting holy books next to his coffin (Bk 17a; see also Meg. 26b; mgw1, 74 (1930), 165). In times of war and forced conversion, Jews used to hide their books in caves or tombs in order to preserve them. The letter of Ḥisdai ibn Shaprut to the king of the Khazars relates, in the name of the elders (yehishhei ha-dor), that during a period of forced conversion “the scrolls of the law and holy books” were hidden in a cave. In 1947 certain scriptural scrolls, books, and fragments were discovered in a cave at ‘Ayn al-Fashkha in the Judean wilderness and later in other caves in that vicinity. It is probable that the sectarians who lived there hid the books when compelled to leave (see *Dead Sea Scrolls). There were also genizah sites between the stone courses of sacred buildings (Shab. 115a), under the foundation stones of synagogues (as in Mainz), and attics and special cupboards kept in synagogues. When the cupboards and attics could take no more, the tattered pages, which, because they contained the Divine Name, were known as shemot (“names,” i.e., of God), were buried in the cemen- tery. The day on which the shemot were conveyed from the genizah for burial in “one of the caves on the slope of Mount Zion” was celebrated in a festive way in Jerusalem, even during the modern period. The participants in the ceremony would play musical instruments, sing, dance, and play games “facing one another with drawn swords in order to magnify the joyousness of the affair” (Yerushalayim (ed. Lunz), 1 (1882), 15–16). There is evidence that a similar custom prevailed in other areas.

Such genizot existed in a great number of both Eastern and Western communities. Although they usually contained only the worn-out remnants of books in daily use such as the Pentateuch and the prayer book, rare or historically important books and documents were sometimes hidden among them. In the majority of cases the material of the genizot was so damaged by dampness and mildew that the collections were of no value for the purposes of historical research.

For the Cairo Genizah, see following entry.

[Abraham Meir Habermann]
was the case with the genizah, or bet genizah, of the ancient synagogue of Fustat.

The term "genizah" (pl. genizot) should be used and understood as a generic term. There was more than one genizah. In Cairo alone there was apparently more than one such storage, or deposit place, for old, outworn writings, mostly, but not exclusively, in Hebrew script. An important genizah was at a Karaite synagogue, which was the source of much of the material that came to be known as the Firkovitch Collection, housed in the National Russian Library in St. Petersburg. There were additional such institutions in other communities of the east as analyzed by Y. Khalifon-Stillman and M. Cohen.

Therefore, any genizah is not an organized comprehensive archive or deposit library. Furthermore, genizot are not representative of the daily or spiritual life of their users. Yet, they are more representative than any private archive or collection of books. In the absence of comprehensive archives and deposit libraries the importance of the genizot lies in their randomness. It is this randomness which makes the contents of genizot so varied and rich, and which kept for us organized family archives of such families who were not immortalized in “classical” sources together with haphazardly preserved documents, official documents relating to communities or persons or properties that were no longer extant and were of no interest to anybody. The same randomness also preserved for posterity complete or fragmentary literary works that at some point of time seem to have lost their attraction or importance for their owners in particular, or for the reading public at large, or for book collectors and dealers. The common denominator of almost all texts found in Cairo genizot is the Hebrew letter; not necessarily the language. The Hebrew letter was regarded holy since it was studied in the context of religious life; it was taught in order to participate in the public synagogue ceremonies and prayers, expecting children to present what they had learnt in class. The less the Hebrew language was understood the more it became holy since the sign became a symbol and reminder to the elementary studies of the language. Hence any remnants of it were regarded holy and kept in the most respectable way discards could be kept. No wonder therefore that the genizot contain all signs of documented life, even the most secular ones like bankers’ accounts, merchants’ lists, children’s jottings, and even transliterations of other religious texts as the Koran or the New Testament or any scientific text.

A large section of the material relevant both to history, i.e., documents, and religious thought, as in fact many other areas of knowledge and learning, is in Judeo-Arabic. Hebrew translations to Arabic and Judeo-Arabic works, started mainly in the second half of the 12th century, are rather rare among the genizot.

During *Fatimid rule in Egypt (969–1171) the newly-founded city of Cairo mainly served as the political and administrative center of the country and the realm. The great metropolis of Egypt was Fustat, a few miles to the south, and the majority of the Jewish population lived there. This community had a tripartite religious complexion: aside from the sectarian Karaite Jews, there were two groups of Rabbanites—the one showing allegiance to the Jewish academies of Babylonia; and the other group, the “Palestinians,” whose allegiance was to the Palestinian academy. These groups had many differing customs and legal regulations; they consequently possessed separate synagogues in each of which a different custom prevailed. The one which has survived until today and from which the Cairo Genizah fragments come, was not the one of the Karaites (as a number of writers formerly thought) but that of the Palestinian Rabbanite Jews. This synagogue is still standing in Old Cairo after its renovation by the World Jewish Congress in the 1980s, almost a century after the previous community renovations of the site that might have led to the discovery of the Genizah.

Many documents have been discovered during the years which throw light on the history of the synagogues of Fustat and Cairo and on the basis of them scholars traced with some exactness the important changes through which the communities passed, including the status of the waqf, or property holdings, of the several synagogues during the reign of al-Hākim. It seems most likely that due to this series of acts there is relatively little documentary material of the preceding age among the Genizah papers.

Collections of Genizah Documents

The largest and most usable collection of the Ben-Ezra synagogue’s Genizah manuscripts is at University Library, Cambridge, where the individual fragments were set, at the beginning, either under glass or in bound volumes, or, in the case of some thousands, were placed loosely in large shelves-boxes. Holdings are dispersed: Cambridge University Library Taylor-Schechter Genizah Collection, containing some 135,000–150,000 “fragments.” This Genizah collection accounts apparently for about 60% of all Genizah fragments known and available today; New York – The Library, Jewish Theological Seminary of America (JTSA), has about 30,000 “fragments.” Other more modest collections are scattered all over the world.

Writing materials of the Genizah texts. University Library, Cambridge, possesses fragments of a papyrus scroll found in the Genizah and containing old liturgical poetry (t-s. 6). A few papyrus documents, perhaps emanating from the Genizah, are also located in the Erzherzog-Rainer Papyrus-Sammlung in Vienna and in Heidelberg. All other texts from the Genizah, however, are written either on vellum, parchment, or paper, with the preponderance of texts being written on paper. The vellum and parchment texts are either fragments of Scripture used for worship purposes (which by halakhic precept had to be written on skin) as well as for ceremonial purposes or, more importantly, old texts (10th–11th centuries) of either a literary or documentary nature. A few are written in a palimpsest way, namely, rewritten on deleted elder text. The few very old documents emanating from non-Islamic
countries are written on these materials. Texts written on pa-
per seem to have come largely into vogue during the 11th cen-
tury. The paper of 11th–13th-century texts is of a heavy weight, and as a rule brown in color, whereas Genizah papers of later periods tend to be thinner and more lightly colored.

History of Genizah Discoveries

Knowledge of the existence of the Cairo Genizah spread slowly to the West. The first traveler who appears to have been there in modern times was Simon van ’Geldern, a grand-uncle of Heinrich Heine, who in 1752 visited Egypt and recorded in his diary that he had been to the “synagogue of Elijah” and made a search through the Genizah, situated within it. Moshe Haim Capsutto met an Italian scholar and traveler who visited the synagogue and gave a generous description of the site and re-
lying on this source some reconstruction of the site was sug-
gested. Capsutto, however, did not refer to the chamber and its content. Abraham ’Firkovitch, the Russian Karaite who on his trips to the East collected great numbers of rare, valuable, and ancient manuscripts, visited Egypt in September/October 1864 (to wit, the second half of Elul 5624) during his second visit to the Middle East (1863–65). He gave explicit and detailed de-
scriptions about its findings and whereabouts during his visit. His main and first interest in Egypt was the Karaite genizot of Cairo, and indeed he took back with him to Crimea a sub-
stantial amount of Mss that were sold to the Russian National Library in 1876, two years after his death. The Firkovitch Col-
lection is by far the world’s largest and most important collec-
tion of Judeo-Arabic manuscripts, containing over 10,000 Ju-
deo-Arabic manuscripts ranging in size from a single page to
800 folios. And indeed, the way Firkovitch described his work in the genizot (before arriving to Egypt and in Egypt likewise)
points to a very selective method – he would choose the best of
manuscripts and leave the others in order to avoid un-needed
investment both in time, money, and loads. While dedicat-
ing almost all of his time to the Karaite genizah, ’Firkovitch
visited Ben-Ezra synagogue, accompanied by the chief rabbi,
R. Elijah Israel Shirizly, and claimed to be requested to take with him also the treasures of Ben-Ezra and of the Rabbanite
synagogue of Alexandria. Firkovitch described in his letter to his son-in-law, Gabriel, in Russia that he saw the Ben-Ezra
Genizah and planned to take care of it likewise. Shortage of
money and length of his stay in the region may have accompa-
nied his desire/haste to share his findings from this second
visit with colleagues and scholars and brought him to leave the Middle East without emptying, or even taking, the Ben-
Ezra hoard. According to his letters and tentative catalogues
the material brought from Egypt (named by him Gfen Mitz-
rayim after the verse in Psalms 80:9 and also pinkas kadmoni-
yot shel genizot Mitzrayim) was from the Karaite genizah and
Basatin cemetery, and indeed it consists of dominant Karaite
material. Some important rabbinical works are testified to be
owned by prominent Karaite scholars and affluent members of
that community. A major question remains however whether
some of the material sold to the Russian National Library came
from the Ben-Ezra room, since in a few cases other parts of
the same copies can be found in western libraries thought to
brought from Ben-Ezra. At the same time it might as well be
the case that fragments left by Firkovitch, that were originally
part of the books he took with him, were brought by others
to these libraries mistakenly referred to as Ben-Ezra. At this
time of writing (October 2005) not all Firkovitch and other
related archives have been searched and new data may clar-
ify this point.

In the same summer of 1864 the traveler Jacob ’Saphir
attempted to see the manuscripts hidden in Ben-Ezra syna-
gogue, but he was not as fortunate as Firkovitch had been. The
beadle was reluctant to allow him entrance into the chamber,
which he claimed to be an abode of snakes and demons; once
inside, he could not get to many of the manuscripts, for the
entire collection had been buried under debris that had been
deposited there by workmen some years previously. He had
to content himself with a few worthless scraps, but later re-
marked in his travel diary, “Yet who knows what else is to be
found underneath?”

Toward the end of the 19th century local dealers in an-
tiquities began the clandestine task of removing certain frag-
dments from their old hiding place. Cyrus ’Adler visited Egypt
in 1891 and was able to purchase a small collection of manu-
scripts, which he brought back with him to the United States
and later bequeathed to *Dropsie College, now the Center of
Advanced Jewish Studies of the University of Pennsylvania.
Oxford’s *Bodleian Library also acquired about 2,600 frag-
ments in the same way, mainly through the periodic pur-
chases of Greville Chester and A.H. Sayce. In 1896 Elkan N.
’Adler made a trip to Egypt, and while in Cairo was permit-
ted by the Jewish communal authorities to take a sack full of
Genizah documents with him; using an old Torah-mantle
which they gave him for that purpose, he stuffed in as many
of the documents as he safely could and took them back with
him to England. These manuscripts later found their way to
the U.S. and became the nucleus of the collection of the *Jew-
ish Theological Seminary of America. By this time the fame
of the Genizah, induced partly by the reports of the above-
mentioned travelers and partly by publications in the early
1890s of Genizah studies by Rabbi S.A. *Wertheimer (who
also sold fragments to the Bodleian Library), had begun to
spread. In May 1896 Mrs. A.S. Lewis and Mrs. M.D. Gibson
of England brought manuscripts which they had purchased
to Cambridge and showed them to Solomon *Schechter. He was
able to identify one of the leaves as part of the original Hebrew
text of *Ben Sira (Ecclesiasticus). Thereafter, Schechter sent
word of his discovery to Adolph *Neubauer at Oxford, who
soon announced that he had discovered nine leaves of this
same long-forgotten text among the Genizah manuscripts of
the Bodleian Library. Schechter at once proposed that a trip
be made to Cairo to ascertain the possibilities of bringing the
Genizah treasures to England. Money was secured for this
purpose from Charles Taylor, the master of St. John’s College;
in December 1896 Schechter sailed for Egypt, and once there
proceeded immediately with his task of securing the documents. The communal authorities consented to allow him to take practically that entire precious "hoard of Hebrew manuscripts" back to England.

With Schechter’s return to Cambridge the first period of activity involved in making the new manuscript sources available to the world came to an end. The old Ben-Ezra synagogue of Fustat had been almost completely emptied of its contents, which were scattered throughout the length and breadth of Europe, and had also reached the U.S. During the years, many public and private libraries – in London, Cambridge, Oxford, Manchester, Paris, Strasburg, Breslau, Frankfurt, Vienna, Budapest, St. Petersburg (then Leningrad), Kiev, Moscow, New York, Washington, D.C., Philadelphia, Toronto, Tel Aviv, and Jerusalem University Library – managed to acquire Genizah fragments in smaller or larger quantities, with Cambridge in the foremost place. Soon after Schechter’s return to Cambridge, the time came to explore the texts themselves. The discovery among the Genizah manuscripts of fragments of Ben Sira immediately set off a search for still further remnants of this old work, and for other ancient texts which were (rightly) assumed to be hidden either among the hundreds of thousands of leaves brought back by Firkovitch and by Schechter, or in the other collections. Due to past Soviet policy which prevented access of western scholars to the Firkovitch collections, these manuscripts have been largely unknown to scholars. The vast majority of the works contained in the manuscripts are not known from other sources. Study of these manuscripts and publication of their contents is expected to revolutionize the knowledge of Judeo-Arabic culture and to be a major contribution to the study of Jewish history overall. This collection was photographed due to an agreement between the Russian National Library and the Jewish National and University Library in Jerusalem. Scholars had access in the last decade of the 20th century to the treasures of the Firkovitch collection and a great deal of attention has been given to its deciphering and cataloguing.

Luckier were most other collections. A new period in the history of Jewish studies opens after the arrival of the fragments from Cairo to Western libraries. As scholars began their explorations ancient texts came to light – not only Hebrew sources, but Greek and Syriac ones as well. Among the Greek fragments brought to light were portions of the Jews translation made by Aquila. This translation, which differed from that of the Septuagint in being far more literal and meticulous, yet considerably less comprehensible, constituted one of the columns of the multi-versed Jews, the Hexapla, edited by Origen in the first part of the third century. It was employed mainly by Jews in the synagogueal service, but fell into disuse when Greek declined in reading and speaking by the people after the Islamic conquests. In the case of these fragments and of texts containing parts of the Palestinian Syriac version of the Jews and of the Hexapla, the original writing, while still legible, was partially effaced through long and constant use, and a later scribe had employed the parchments to copy down some Hebrew liturgical hymns which to the men of that age were undoubtedly of much greater worth than the incomprehensible words written beneath. Another fact of interest is related to a statement of Origen, to the effect that "in the more exact [biblical] versions, the Name [of God] is written in Hebrew characters – not the modern [Aramaic square] Hebrew, but the ancient [Canaanite] kind." Tallying exactly with the description given by Origen, the Greek fragments of Aquila were found to employ consistently the old Canaanite letters rather than the square characters or the Greek word for God [Kyrios] when mentioning the Tetagrammaton.

While these discoveries were in progress Schechter worked on important sectarian manuscripts. One of these turned out to be fragments of the Aramaic law book of Anan ben David (eighth century); when added to the previously published parts of Anan’s law book (edited by the Russian Jewish scholar Albert Harkavy in 1897–98), it considerably increased understanding of the methods of this schismatic. Another short document created a sensation when finally published by Schechter in 1910. At about the turn of the century he uncovered fragments of a text containing laws and quasi-historical statements of an unknown Jewish sect; a study of the text brought him to the conclusion that the represented schismatic group was related to the "saddukkiyya" especially mentioned by the Karaite writer al-“Kirkisānī as being a Jewish sect of pre-Exilic times. Since the views of this sect did not conform to those of the historical Sadducees, but in a few important respects did correspond to certain doctrines of al-Qirquisānī’s "saddukkiyya," Schechter judged the leaves to be fragments of a work written by “Zadokites,” i.e., people belonging to the sect mentioned by al-Kirkisānī, or to a closely similar one; thus, while the text was copied down in medieval times, the document itself went back to Second Temple times. An extensive controversy over the age and importance of this text followed its publication. The discovery in 1947 and following years of the first Dead Sea Scrolls – some of which proved to be closely related in phraseology and ideas to the Cambridge document – made it evident that Schechter had been correct in his intuition that this text had been conceived perhaps 21 centuries previously. It is not known how it came into the Genizah in fragments of two medieval copies.

Another of Schechter’s early discoveries was the remains of an extensive literary epistle concerning the kingdom of the Khazars. The ruler of this Caspian kingdom, and along with him many of his subjects, accepted Judaism before the ninth century. Some correspondence between the Khazar king Joseph and Hisdai ibn Shaprut had been published at the end of the 16th century and much later (in 1879) by Harkavy who used material brought from Cairo to Russia; the Cambridge document considerably increased the knowledge of the conversion and of subsequent Khazar history, and supplied many useful geographical details as well. In recent years still another Cambridge Genizah manuscript pertaining to the Khazars was discovered by N. Golb.

GENIZAH, CAIRO
Information about the “*Four Captives*” – Shemariah, Ḥushi'el, Moses, and Ḥanokh – who were thought to have come from Babylonia or Southern Italy in the tenth century, been captured by pirates, and subsequently sold out of captivity, and later to have founded the new seats of learning in Egypt, North Africa, and Spain, also came to light in the Cambridge documents. In this case some of the legendary stories surrounding these figures were seen as suspicious; as it could be shown from a letter of Ḥushi'el's (written by his son Hannanel/Elhannan) that he had settled in Kairouan (now *Tunisia*), after a trip there from some Christian country, probably Italy. Shemariah, on the other hand, turned out to be a native of Egypt. Thus, the whole story of the capture by pirates, as told, at least of these two sages was evidently a fabrication.

A personality which emerged most clearly from the Genizah was that of *Saadiah ben Joseph al-Fayyumi, the gaon of Sura*. It became clear from Genizah texts that it was Saadiah who was chiefly responsible for conducting the struggle over the calendric authority of the Babylonian academy which had been initiated by Aaron ben Meir, the head of the rival Palestinian school (922), and that he initiated a bitter quarrel with the exilarch, who had appointed him gaon (928), and with the latter's followers. Other polemics of his also came to light with the publication of treatises against the heretic Hiwi al-Balkhi, the masoretic scholar Aaron ben Asher, and Anan ben David and various later Karaites, many of whom fought Saadiah with equal vigor. Another side of the *gaon*’s personality was revealed in some of his letters which were discovered during the early years of the 20th century. Many fragments of his Arabic commentary on the Jews were found, especially by Hartwig Hirschfeld, and parts of his grammatical treatises – probably the first systematic works on Hebrew grammar to be composed – were edited years afterward by S.L. Skoss, although a beginning had been made by Harkavy. Fragments of his legal (by M. Ben-Sasson and R. Brody) and philosophical (by H. Ben-Shammai and S. Stroumsa) writings were also discovered, and one manuscript emanating from his children gave the exact date of his birth (882) and the approximate time of his emigration from Egypt to Palestine, Syria, and finally Babylonia. Indeed, if all the Saadiah fragments that were discovered in the Genizah had not been found, it is unlikely that H. Malter's richly documented study of the *gaon* would have been possible. Much important research on the Saadiah fragments, and on the polemic literature of that age, was carried out by Moshe Zucker, Yehuda Ratzaby, Eliezer Schlossberg, and Haggai Ben-Shammai, especially on Saadiah's biblical translations and commentaries. Saadiah's poetry was enriched and studied through the reconstruction of his Siddur (S. Assaf, I. Joel, I. Davidson, E. Fleischer, R. Brody, and I. Tobi).

The search for lost writings of the *gaon* of Sura also led to the discovery of numerous legal responsa of the other *geonim* of Babylonia; many of the Hebrew ones were first edited by A. Harkavy, S. Assaf, and L. Ginzberg and later also those in Judeo-Arabic by Sh. Abramson, R. Brody, and M.A. Fried-
were highly instructive, for they supported the view of scholars such as Geiger and Zunz that there were earlier substrata in the official Aramaic translations (Targum Onkelos to the Torah and Targum Jonathan to the Prophets). To a large extent these were preserved in Genizah manuscripts of the so-called Palestinian Targum, the author(s) of which version not only interpreted some passages differently but also added homiletic remarks. The standard Targum Onkelos itself was then able to be subjected to renewed scrutiny, as collections in the Genizah collections of fragments of this Targum were found that had been written and vocalized in Babylonia many centuries previously. This field enjoyed two more generations of scholars focusing their works on it – E.J. Revel, Y. Yahalom, I. Yevin, and I. Eldar.

The Genizah also supplied specimens of the Mishnah text vocalized in the Babylonian manner. There is, of course, no traditional Tiberian vocalization of the Mishnah, the pronunciation having been handed down orally from generation to generation. This Babylonian tradition of the pronunciation of mishnaic Hebrew, which differs considerably from that employed by Jews of the West, is corroborated to a very high degree by the living Yemenite tradition of pronouncing post-biblical Hebrew – a fact demonstrated later by H. Yalon and S. Morag.

Thus, even during the first few decades of Genizah research, outstanding discoveries were made in many fields of Jewish learning. The job of sorting out the Leningrad Fragments has been at the core of the work of several scholars over the last century, among them Harkavy, Strack, Kahle, Fenton, Sklare, Beit Arie, Glazer, Almagor, Ben-Shammai, Stroumsa, and Ben-Sasson, but it is still far from being completed. A large part of the Cambridge fragments was studied by Schechter, E.J. Worman (a librarian at Cambridge), and Hartwig Hirschfeld who published a considerable number of manuscripts. Not only the Hebrew fragments but thousands of Arabic documents were placed in their respective places in boxes, bound volumes, or – in the case of exceptionally valuable and fragile pieces – under glass. In the last decades the management of the Cambridge Genizah Research Unit has been allocating substantial attention and resources with the goal of intensive cataloguing of its collection according to subjects and fields. In Oxford, Neubauer and A. Cowley issued a catalog of the fragments deposited there; the same was accomplished at the British Museum by Margoliouth, and was eventually also done for the Adler collection at Dropsie College and the Freer Collection of Detroit (later removed to Washington). The collection given by the Russian archimandrite of Jerusalem, Antonin Kapustin, was fully described by Harkavy, who was in charge of the Hebrew collections at the Russian Imperial Library in St. Petersburg and was later published by A.I. Katsh.

The publication of important fragments from the Cairo Genizah, covering many aspects of Judaism, has continued. Many manuscripts and fragments in the various libraries of the world, particularly in the Russian National Library of St. Petersburg [= Leningrad], the Schechter-Taylor collection in Cambridge and the Jewish Theological Seminary of New York (N. Danzig catalogue), have been catalogued and edited by different scholars. As a result of these, it has become possible to reconstruct the position of the Jews in Erez Israel and the Middle East in the religious, cultural, and economic spheres from the 10th to the 13th centuries. On the other hand, a large number of texts and thousands of fragments remain un-catalogued, and it is estimated that there are no less than 250,000 Genizah items, of which about 50,000 deal with biblical exegesis, language, Jewish law, Talmud, and piyyut.

Liturgy and Poetry

The poetic literature of the Genizah was especially prominent and its discoveries enabled new understanding of the history of Jewish worship as well as of the diversity of Jewish literature in the late Byzantine and Muslim periods. A new field of research emerged which is credited to the discoveries of Cairo genizot – the study of the Erez-Israeli [known also as Palestinian] rite of prayers and synagogue life. At an early date Kahle realized the value of the Palestinian liturgical fragments for the history of Hebrew vocalization, but the literary significance of these texts, in the minds of many scholars, was far greater. While it is quite frequently difficult to make sense of the hints and allusions of the early liturgists (paytanim), and to comprehend their poetic vocabulary, it is also true that what can be understood is often poetry of supreme beauty and fine religious feeling.

The first paytanic texts were published in facsimile at the end of the 19th century – but only for the Greek and Syriac writing which they contained underneath. Israel Davidson recognized in the later script five compositions of the early Palestinian poet Yannai, of whose writings only a single poem was known during the previous centuries. Davidson’s publication (1919) marked the beginning of systematic investigations in the field of paytanic literature. Kahle’s students took a considerable part in this work, as did Davidson himself. At the same time the most important step was taken with the founding, in 1930, of the Schocken Research Institute for Hebrew Poetry, which began its activities in Berlin and transferred to Jerusalem a short time after the rise of Nazism. In the first few years of its existence the Schocken Institute collected several thousand photographs of Genizah manuscripts, including many in Leningrad. Among them were scores of fragments containing the piyyutim of Yannai, on the basis of which Menahem Zulay published in 1938 a collection of over 800 compositions by this poet.

The scholars of the institute – H. Brody, J. Schirmann, A.M. Habermann, and Zulay – were chiefly responsible for knowledge of literary activities of the paytanim, and of the religious and secular poets of Spain. Brody discovered many religious poems and encomiums of Hai Gaon, Moses ibn Gikatilla, and Abraham Ibn Ezra among the Genizah fragments. A score of contemporary poems by Moses Ibn Ezra were described by Schirmann, whose success in this research
was greatly aided by *Genizah* manuscripts. Schirmann was the first to systematically explore the poetic fragments in the libraries of England, and he catalogued these and had them photostatted for the institute. Zulay demonstrated that the paytanic literature was of a class seldom equaled in the poetic literature of the Jews. He not only discovered the writings of many of the unknown early Palestinian poets but also added immensely to the knowledge of those already known – Yannai, Kalilir, and Solomon al-Sanjari. He also proved that the country which in the time of Zunz had been regarded as barren of all creative production during the early Middle Ages was in reality a center, if not the center, of paytanic activity that continued unabated until the Crusades. These poems, far from artificial, could not be considered as only a subterfuge by which the Jews sought to avoid the consequences of Justinian's decrees prohibiting the deuterosis (or study of the rabbinic exposition of Scripture). Zulay showed – on the basis of the *Genizah* texts – that the Jews of Palestine constantly had to add to the set prayers of the day, and inspire them with new vigor. Much important work on these texts was conducted by Ezra *Fleischer* of Jerusalem through the second half of the 20th century. Fleischer represents the demand to publish broad scholarly works based on the *genizot* in contradiction to previous generations' work of publishing fragments and small pieces of information reflecting the excitement of the very early meeting with new material. His broad works consist of extensive reconstruction of complicated oevres of the time and their analysis in the broadest cultural and historical contexts. Among his works one may find an intensive analysis of the Palestinian rites based on earlier publications (J. Mann, N. Wieder, and N. Fried), correcting their partial pictures and drawing a fresh new representation of that forgotten rite; the profile of old-new poets like Sa'id Ben Babshad, Solomon the Babylonian, and even R. Judah Halevi. A group of students of Schirmann, Fleischer, and S. Spiegel of the ITS has continued the research and opened new venues: Y. Yahalom, Y. Tobi, R. Scheindlin, Sh. Elizur and T. Beeri. In this discipline, as in any other of the *Genizah* research, typical publications of the fourth generation consist of two aspects – publication of extensive new material and the drawing up of a broad analysis of a substantial part of a scholarly field.

**Historical Discoveries**

In 1915 Jacob Mann began to search through the British collections. During 1915–20 he studied the fragmentary documents of the *Genizah*, gathering data for a history of the Egyptian and Palestinian Jews from the 10th to the 12th centuries. There were extant remnants of the copies of letters of the Jewish community of Cairo-Fustat, once one of the leading centers of Jewish population. On the basis of these fragments it was possible to reconstruct the personalities of the people and the significant events in their collective history.

The task that Mann first set out to accomplish was twofold: that of establishing a chronological sequence from the mass of data, and of describing the important religious and communal authorities of Egypt and Palestine during the period involved. These are the chief characteristics of his study, *The Jews in Egypt and in Palestine under the Fatimid Caliphs* (2 vols., 1920–22). Later, when professor of history at Hebrew Union College, he was able to supplement this material in two additional volumes entitled *Texts and Studies in Jewish History and Literature*. Such outstanding figures as Solomon b. Judah and Ephraim b. Shemariah, leading dignitaries of Egyptian Jewry, were first fully revealed by Mann. It became clear from his work in what towns of Palestine and Egypt the Jews had chiefly settled. There was much that he elucidated about the communal ban (herem), the ransoming of captives, the functions of the head of the Jews (= the *nagid*), and the Palestinian custom of completing a Torah cycle only once every three years (to this latter subject he devoted his final book, *The Bible as Read and Preached in the Old Synagogue*, which is also based chiefly on *Genizah* material). Mann described the whole complicated story of the relations between the Rabbanites and Karaites – especially those in Jerusalem – and cast new light on the writings and activities of such Karaita notables as Daniel al-Qumisi, Sahl b. Mazliah, and Salomon b. Jeroham. Ḥisdai ibn Shaprut was revealed as a statesman of the first rank, to whom appeals were sent from other lands, and who corresponded with Helena the empress of Byzantium. Mann also uncovered the story of the Norman proselyte to Judaism, Obadiah ha-Ger. His historical research in the *Genizah* treasures provided a scientific foundation which could be built upon and elaborated by later scholars.

The first scholars who explored the *Genizah* manuscripts pursued their own particular interests in studying the documents. They turned, in so doing, mainly to the documents written in Hebrew and Aramaic, languages which were prominent in the *Genizah* finds. Only a few researchers gave their attention to the mass of documents written in Arabic, which for hundreds of years had been the vernacular of the Jews of Egypt and the Near East. The score or more of Judeo-Arabic fragments which Hartwig Hirschfeld published were mainly of literary interest: remnants of the writings of Saadiah Gaon, some texts pertaining to the polemics between Karaites and Rabbanites, a few autograph fragments of *Maimonides*, and some short documents pertaining to *Muhammad* and the Jews of Khaybar. Samuel Poznański used some Judeo-Arabic fragments (some from the Russian *genizot* collections) for his own researches on the Karaites and leading rabbinic figures of the Middle Ages; and other scholars – I. *Goldziher*, W. Baecher, and G. Margoliouth – also made contributions. This work, however, was sporadic in nature, and gave few clues to the value of the Judeo-Arabic fragments. Even Mann relied mainly on Hebrew documents in producing his works; however, his appreciation of the Arabic texts grew in time, and considerably more of them were used in his *Texts and Studies* than in his first work. All agreed that the fragments were important, but little was done to make their contents known.

In the early 1930s the *Genizah* papers became a subject of interest in Jerusalem, mainly as a result of Mann's inves-
tigations and the establishment of the Institutes of Jewish Studies and Oriental Studies at the Hebrew University, Jerusalem. There it was possible to study the way of life of numerous communities from Arabic-speaking lands and to become intimately acquainted with their language. Some of the scholars in Jerusalem thus developed a close familiarity with the cultures of the Middle East, and under these conditions it was possible to make considerable advances in Genizah research.

D.H. Baneth did the most important work in establishing Arabic Genizah research on a sound philological basis. Philological correctness and exactitude were essential to the proper understanding of these texts; sometimes scholars who preceded Baneth had been led into making blunders in understanding the vernacular used in the manuscripts (which quite often differed considerably from the literary language). In conjunction with S. Assaf, Baneth published a series of Genizah studies which rank as exemplary specimens of such writing. The historical information he elucidated from them was also of value; he discovered in one document that it had been a prevalent custom among the Egyptian Jews to determine, through witnesses, whether a couple who planned to marry were of the same social and economic status (Heb. hagunim).

Assaf was mainly interested in the Genizah papers for the information they contained about the legal, social, and cultural history of the Jews. He found numerous documents about the Jews in Palestine from the time of its conquest by Omar until the period of the Crusades, and afterward as well. It was learned from a tradition represented in one document which he discovered that when the Arabs conquered Jerusalem, Omar allowed them to build or occupy only 70 homes (although they had asked for 200); they chose the southern part of the city as their quarter, and the first Jews to resettle there were some families from Tiberias. Other texts which Assaf published and elaborated upon provided information about the slave trade, in which he thought to confirm that the Jews of that time engaged in it (although they could not take Muslims as slaves); new information was derived about Jewish trade in the Mediterranean, as well as the main centers of learning in Palestine and elsewhere. Other texts of importance pertaining to Palestine were published by Braslavski, among them a “tourist guide” to Jews who came in pilgrimage to the holy city, mentioning local sites of interest. E. Strauss (later Ashtor), the historian of Jewish life during the Mamluk period, published a letter in 1940 which was written in Aden and addressed by the sender to a business associate in Fustat; it mentions Jews traveling to India on their own ships, taking various goods with them to sell in Malabar. Other texts, when finally deciphered and interpreted, revealed the economic and social life of the Jews of Egypt and neighboring lands in great detail, and, incidentally, matters pertaining to general Islamic history and economic development. Ashtor’s later publications, including his History of the Jews of Muslim Spain, numerous articles on economic and social life, and his book-length study of prices and salaries in the medieval Near East (Histoire des prix et des salaires dans l’Orient médiéval, 1969), rely heavily on Genizah manuscripts.

However, with all the real importance of Mann’s works as pioneering ones, which guided generations of historians, and his awareness of the uniqueness of these materials in comparison to whatever sources of Jewish history that had been known previously, and with his enthusiasm to publish this wealth of materials, he saw this history mainly as a rather formal history of texts, and not of concrete human and social actualities and processes, the like of Ashtor’s works based on these documents.

The most important accomplishment, or achievement, in the field of history is no doubt the monumental oeuvre of S.D. “Goitein. Goitein was initially educated within this unusual combination of deep rooted Jewish tradition and 19th-century German humanism. He was then trained as a philologist and developed it in the years he worked at the Hebrew University, Jerusalem, in the rigorous methods so typical of German universities. He later turned his attention to Islamic historical sources, and still later made another turn, to Genizah studies, mainly on the documentary material. In his works the extent to which the Genizah has shaped the picture of the medieval history of Jewish communities in the East came to its fullest manifestation. The uniqueness of his works is imaginable only as a result of the uniqueness of the material, namely the fact that here we have at our disposal direct sources that shed light not only on the actions and the views of the leaders of the communities, but also, and mainly, of many ordinary individuals that made up the rank and file of these communities. Already in his early Genizah studies Goitein paid special attention to the light shed on the social structure of the communities in the Genizah documents. He focused his attention on individuals whose personalities and activities could not have been known from the formal, literary sources. Such was his study of Ibn ‘Awkal, a noble North African Jewish merchant who settled in Cairo in the early 11th century, conducted from there his international commercial ventures, and became a prominent figure in the local community. Already in the early stages of Goitein’s work on the Genizah documents he also encouraged his students to work on individual personalities from the Genizah. At that stage it already became clear that certain segments of the Genizah documents were not just randomly disposed off by their owners, but constituted entire family “archives,” or at least parts of such archives, while others were parts of court archives, mainly from Fustat. This recognition led Goitein and his students to pursue the remains of such archives. The first such archive that served as a subject of a Ph.D. thesis by Murad Michael was that of Nahray b. Nissim, another North African Jewish merchant who settled in Cairo in the middle of the 11th century. From there he directed his merchant banker activities that stretched virtually over three continents, from Spain, through North Africa and Egypt, to the Fertile Crescent and further through Yemen as far as India. When Michael finished his work on the archive over 30 years ago, he was able to trace about 260 documents.
Since then over 100 additional documents from that archive have come to light through Goitein, Uдович, and Gil, and enabled us to draw a fascinating picture of commercial and postal connections, banking practices of the High Middle Ages, transportation routes in the Mediterranean Basin, variations and prices of a very wide range of commodities, communal and family ties of the Cairene merchant banker and his agents who were stationed in many important ports and commercial centers, as well as in some important communal centers such as Jerusalem.

In the late 1940s S.D. Goitein began his researches in the field of Genizah manuscripts. He soon became convinced that they were of inestimable value for both general and Jewish history. He found eyewitness accounts of the crusaders’ attack on Jerusalem: from one letter it was learned that the story of the massacre of the inhabitants, so widely accepted by students of the Crusades period, was really somewhat exaggerated – it had been a savage attack, but many lives were spared, evidently so that those taken prisoners could be ransomed for a handsome sum of money. Another letter made it evident that, contrary to the contention of many scholars, the crusaders, for in it mention was made of the “cursed ones who are called Ashkenazim.” Other letters emanating from Palestine made it clear that the crusaders’ attack on Beirut in February 1110 was a surprise attack, and that the Jews were driven out of Jerusalem during the second occupation by the crusaders, under the command of Frederick of Hohenstaufen. Goitein also found further fragments pertaining to Obadiah the Proselyte, from which it was learned that he was not a crusader, as had been contended by Mann and others, but a man of some learning who converted because his religious studies convinced him of the truth of Judaism and who was saved from Christian persecution by some fellow Jews who brought him to “Aleppo. One of the most unusual discoveries made by Goitein consisted of fragments from Cambridge and the Jewish Theological Seminary which turned out to be letters sent by Judah Halevi to his friend Halfon b. Natanel al-Dimyati of Cairo, an affluent trader who engaged in large business with India. Three of the letters deal mainly with Judah Halevi’s endeavors to raise the dinars necessary for the ransom of a Jewish woman kept in prison by the ruling authorities, while in a fourth he expresses the fond wish to travel to the East, as he indeed did some years later.

Goitein also gathered over 400 letters on the Mediterranean trade with India. This commerce, which went by way of Egypt, East Africa, and South Arabia, was the chief economic factor in the status quo of the countries of the Middle East. Not only did Goitein discover complete itineraries of the journey to India, descriptions of the dangerous voyage through the Indian Ocean, and the names and prices of numerous goods which made up that trade, but he also found eyewitness accounts of events barely known from the writings of the Arabic historians. One such account, in a letter from Aden to Egypt, gives a detailed description of the number of soldiers, the types of boats, and even the military tactics used by the rulers of the island of Kish (in the Persian Gulf) when they tried to extend their control over the sea route to India by conquering Aden.

Goitein collected all of the documents from the Cairo genizot that pertain to trade between India and the Mediterranean, and was preparing them for publication, translating the Judeo-Arabic documents and adding notes. Goitein did not finish preparing his work on Indian trade (referred to by him as the “India Book”), when he passed away. One of his leading students, M.A. Friedman, agreed to complete the work. The final book (scheduled for publication in 2006 by the Ben-Zvi Institute) will be the product of work by both scholars. The book, which contains more than 400 texts from the genizot in the original language, generally Judeo-Arabic and in Hebrew translation, is a remarkable source of information on the contacts – commercial, social, and cultural – between India and the Middle East in the Middle Ages. Because of the great interest in these matters in the scholarly world and among the educated public, the book will be published in both Hebrew and English versions.

Goitein published over 250 articles based on Genizah documents. This work was climaxed by his magisterial study, A Mediterranean Society: The Jewish Communities of the Arab World as Portrayed in the Documents of the Cairo Genizah, in five volumes enabling the description of a society and its daily life as well as its beliefs and views, based on their own writings – the documentary genizot.

Goitein’s approach paved the way towards comprehensive historical studies that were focused on specific sections of the material, such as geographical ones (the most important one to date is by Moshe Gil on Palestine), or social ones (such as the studies of Menahem Ben-Sasson on the beginnings of communal organization in North Africa in the ninth century), or social and halakhic ones (the most important to date are M.A. Friedman’s studies on marriage documents and practices). Such works resulted from a synthesis between the unique primary Genizah material and well-known literary materials from a wealth of Jewish and non-Jewish sources. On the solid basis of Goitein’s approach and oeuvre, it is possible to conduct many and diversified cross sections, which can shed light on every imaginable aspect of Jewish life and culture in the Middle Ages, such as Joel Kraemer’s projects on women’s letters from the Genizah, the several projects dedicated to Maimonides and his descendants by P.B. Fenton, M.A. Friedman, and M. Ben-Sasson, and a new comprehensive collection of Maimonides’ letters by J. Kraemer. In fact Goitein’s first published book on the Genizah was a study on education. Goitein’s final, concluding work in the field was the multi-volume A Mediterranean Society in five volumes. When Goitein started this work he had already been well into the studies of economic, social, and cultural history. This fact had a decisive impact on the structure and plan of this gigantic opus. It is basically planned along social lines – its five volumes corresponding to five social levels:
1: Economic Foundations; II: The Community; III: The Family; IV: Daily Life; V: The Individual (see below).

Goitein inspired many researchers, such as N. A. Stillman, Y. Kuhfannon-Stillman, M. Gil, M. A. Friedman, and M. R. Cohen.

The Genizah manuscripts also aided in the study of post-Inquisition Jewish history. Already S. Schechter, S. Assaf, and J. Mann published documents and other literary texts having to do with this period. A major contribution was made by Meir Benayahu who found on trips to England and the U.S. approximately 2,000 documents relating to the Jews of the Mediterranean after 1492. On the basis of photostats of these manuscripts in the possession of the Ben-Zvi Institute in Jerusalem, Benayahu made an extensive study of the Jewish communities during the 15th–18th centuries. He found that even at this late period the Jews were enterprising merchants, traveling to such places as India, North Africa, Spain, and Italy, carrying on an extensive trade in pepper and skins. During this period there was considerable migration to Palestine, and many talmudic academies were founded there; in some documents there are descriptions of the dormitories which the yeshivah students occupied, and in one dating from the 15th century there is an account of the rebellion staged by a group of students against their academy for having allowed poor living conditions to prevail in the dormitories. A most important document gives a detailed history of the Hebron community. Moreover, Judeo-German and Judeo-Spanish texts are included among these relatively late manuscripts, which have been studied by several scholars in recent decades. The work on the post-expulsion generations has been continued by I. Tishbi, J. Hacker, A. David, and E. Guttith (the latter extended the research to texts written in Judeo-Spanish).

There is rich information in the Genizah about many aspects of life, such as the role of women in society, loans and interest, the communal organization, the Jews as ahl al-dhimma (people of the covenant, or tolerated minority), their actual place in Muslim society, etc. Information on the following salient topics, inter alia, may be found in the Genizah texts: the Jews of Alexandria; Babylonian Jews; letters of Byzantine Jews; begging letters; book lists and letters about books; communal records and affairs; dated letters; diseases; Fustat and Cairo; geographical data; houses and housing; Jerusalem; Karaites; Maimonides; medicine – practice and theory; relations with Muslims and Christians; occupations; plagues; police; prisoners; letters of recommendation; seafaring and warfare; Sephardim, i.e., Spanish Jews; synagogues; Syria, including Ereẓ Israel; tenth-century documents.

Many additional topics are included, such as individual personalities of the time, place-names of Egyptian-Jewish settlements, artifacts, etc. On the other hand, a few topics deserve special treatment:

1. Documents of European Provenience, or Containing Information about European History. The first to publish such fragments and documents were D. S. Schechter, L. Ginsberg, J. Mann, and S. Assaf – some enlightening events and phenomena back in the early ninth and tenth centuries. After a long pause in such publications it was N. Golb who drew attention to the Genizah’s importance for the reconstruction of the history of these communities. He published an article (Sefunot, 8 (1964), 87–104) based on the U.L. Cambridge manuscript 10801, no. 115, in which he shows that the document is a letter of recommendation sent from a certain Samuel b. Isaac the Spaniard in Jerusalem to Shemariah b. Elhanan in Fustat at the beginning of the 11th century (more precisely c. 1006), and that it concerns a Jewish proselyte from a prominent Christian family who fled his homeland, arrived in Damascus, thereafter made a pilgrimage to Jerusalem, and from there, because of persecution by the Christian community in Jerusalem, decided to go on to Egypt, where, we may assume, he finally settled. On the basis of internal evidence, it appears that the proselyte is probably the Slovenian cleric Wecelinus (cf. Albertus Metensis, De diversitate temporum, 1,7; 11, 22, 23), who converted to Judaism in 1005 C.E. This proselyte, who fled to Egypt, is the earliest of the 11th century converts to Judaism described in the Genizah fragments, and the manuscript in question furnishes additional evidence pointing to the phenomenon – already brought to light in prior Genizah publications – of conversion to Judaism on the part of prominent European Christians in the 11th century, who subsequent to their conversion left their homelands to settle in non-Christian countries. Other such proselytes of the 11th century were Andreas, the archbishop of Bari, who converted about 1070; an anonymous proselyte of the last half of the 11th century; an anonymous proselyte from a wealthy family who first settled in France during the same period; and finally, Obadiah the Norman proselyte, who had been demonstrated by N. Golb and A. Scheiber to be the scribe of a musical manuscript (Adler 4096b). Documents of actual European provenience include a Cambridge manuscript (T. S. 16.100), evidently from the town of Monieux, Provence (Golb, in: Proceedings of the American Philosophical Society, 113 (1969), 67–94); and a British Museum manuscript (Or. 5544, Vol. 1), evidently written in Arles and concerning a wealthy Jew of Rouen.

2. Illuminated Genizah Fragments. Still almost totally unutilized, and lying undisturbed among Genizah manuscripts of Cambridge, Oxford, and the British Museum, are approximately 60 illuminated fragments of the Fatimid and Ayyubid periods which, taken collectively, characterize both the quality and the content of the Judeo-Arabic culture during the period of its highest development. In addition, among the Genizah fragments one should count also around a dozen wood pieces engraved in the same period; fragments that testify to the history of the Ben-Ezra Synagogue and the Maimonidean circles (Ben-Sasson, Synagogue and Fortress). Artistic remains of any kind from the Fatimid period are rare; besides architectural subjects, all that have been previously known are illuminated Korans, some wood carvings, linens and decorated bowls, and a certain number of items of glass and metal. The addition to this material of a body of 60 illuminated fragments may therefore stimulate research not
only in the field of medieval Jewish art (students of which have heretofore had no knowledge whatsoever of these manuscripts) but also in the general area of Islamic art and culture. The illuminated fragments, mostly at Cambridge, may be classified as follows:

(A) Marriage contracts, approx. 20 items; (b) Children’s readers and school books, approx. 10 items; (c) Bible leaves and prayer book leaves, approx. 20 items; (d) Miscellaneous fragments, as follows: (1) Architectural plan of Ezekiel’s temple, 1 page; (2) Leaf from an early materia medica, 2 folios; (3) Illustrations from a book of magic, 2 folios; (4) Child’s drawing of a boat, 1 page; (5) Two warriors engaged in combat, margin of 1 page; (6) Painting of two water birds, standing on either side of a tree (of life?) within a decorative border, 1 page. The richness of this material is all the more surprising in view of the previously held opinion that for the entire Fatimid period only a single illuminated fragment had survived, namely, the Bodleian ketubbah of the 11th century.

(3) Historical Geography. E. Ashtor and N. Golb have studied the work of the historical geography of the Jews in medieval Egypt. The main purpose of this research has been to clarify the problem of the continuity, or lack of continuity, of Jewish life in Egypt between the Hellenistic period and the Middle Ages. The salient result of their study of Genizah fragments bearing upon this problem (in: Journal of Near Eastern Studies, Summer 1965) is the conclusion that the Jewish community of medieval Egypt represents not a new phenomenon but the continuation of an ethnic and cultural pattern which stretched far back in time, and that in this respect it is very difficult to accept the view that the small number of Hebrew documents of the Byzantine period, “extending over 300 years, may serve as a good indication of the gradually declining importance of Egyptian Jewry in the Byzantine period” (Corpus Papyrorum Judaicarum, ed. V. Tcherikover et al., 3 (1964), 88).

Just the contrary may be claimed – that there was a continuous, if necessarily irregular, line of development from ancient times through and despite cultural reorientation, political upheavals, and the assimilation of a fair proportion of the people. This is made especially manifest by the comparison of the known places of settlement of Egyptian Jews in antiquity with their more than one hundred communal settlements in the Middle Ages, which stretched from the very border of Egypt far up the river to Elephantine-Aswan.

It is thus apparent how valuable these preponderantly Arabic papers and the hundreds of others like them are for purposes of historical research. If studied together with the response and historiographic literature of that age, unparalleled source material can be found among them for this still obscure period in medieval life; and it may therefore be concluded that when all the material has been systematically edited and the texts brought into proper relationship with one another, there will be an integrative account of the Jewish community of medieval Egypt, and a reliable record of the general social and economic conditions prevailing at that time in Egypt and the Middle East.

Genizah Research, 1960s–1980s

The following survey reviews in more detail some of the specific work that has been done from the 1960s to the 1980s in fields of scholarship which rely extensively on Genizah sources. Only books and monographs have been taken into account, since the inclusion of periodical publications would have swelled the survey beyond permissible bounds. A complete list of publications relating to the Genizah can be found in Published Material from the Cambridge Genizah Collections: A Bibliography, produced by the Taylor-Schechter Genizah Research Unit under the direction of Dr. Stefan Reif, published by Cambridge University Press for the University Library’s Genizah Series. It should also be noted that G. Khan of the Taylor-Schechter Genizah Research Unit is now preparing a more comprehensive description of publications relating to the Genizah, including both books and periodicals. Bibliographical details on the books discussed in the present survey can be found in the bibliography accompanying this article.

Documents. The private and legal documents of the Genizah have provided the primary source material for several studies in the socio-economic history of the medieval Near East. S.D. Goitein in Volume I of A Mediterranean Society made a synthesis of information gleaned from hundreds of Genizah documents in order to build up a comprehensive portrait of the economic foundations of the Jewish communities in the Arab world during the High Middle Ages. The bulk of this study concentrates on commerce and finance with special attention to overseas trade. This latter area of economic activity is particularly well documented in the many commercial letters that have been preserved in the Genizah. Such correspondence indicates that trade was conducted for the most part on the basis of mutual trust and personal friendship rather than formal agreements. Goitein also published a collection of 80 letters of medieval Jewish traders which reflect this personal aspect of overseas commerce. These letters show how a man’s piety and fear of God were invoked when he was urged to adhere to good business practices. Moreover, although distant trade involved interaction between people of different social classes, it seems that the long months spent together in foreign parts or on perilous voyages brought people close together. Two of Goitein’s research students, M. Michael and N.A. Stillman, have made a specialized study of Genizah letters which relate to specific Jewish traders. Michael’s dissertation deals with the correspondence of the medieval businessman and community leader Nahray ben Nissim and includes an edition of many of his letters together with those of his son Nathan. Stillman analyzes and edits documents relating to Joseph ibn ’Awqal, who likewise was both a trader and a leader of the community. The business correspondence of both Nahray and ibn ’Awqal reveals the great diversity of goods which were handled by the traders of their time and gives a detailed picture of the organization of medieval business houses.

Ashtor in his Histoire des Prix et des Salaires dans l’Orient Médiéval made extensive use of Genizah documents as a ba‐
sis for a detailed analysis of the standard of living in medieval Egypt. The documentary portion of the *Genizah* furnishes a unique source for such a study, for it contains many specific references to contemporary prices. By contrast most Muslim sources for the period are literary texts that are often tendentious and prone to adapting figures that suit their purpose. The *Genizah* papers also give firsthand evidence of changes in currency. They demonstrate, for instance, that there was a shift from gold to silver during the Ayyubid period. The Egyptian scholar Hassanein Rabie has used *Genizah* sources for a large portion of his work on the financial system of Egypt between 1164 and 1341. He relied for the most part on Cambridge University Library’s T-S Schechter documents which are written in Arabic script (viz. T-S Ar. 38–42) as opposed to those in Hebrew script. Rabie has shown that the *Genizah* gives us valuable information on the poll tax (jawali) and the mawārith hašriyya, i.e., the law determining that property without heirs was to be confiscated by the state.

Volume I of Goitein’s monumental *Genizah* synthesis, *A Mediterranean Society*, deals with the social and communal life of the Jewish minority in Egypt between the 11th and 14th centuries, with the most abundant information being provided for the earlier part of this period. The topics discussed include the communal authorities at the national, regional, and local levels. He not only brings a great deal of new material to bear on the nature of these institutions, their historical development, and their relations with the politically dominant Muslim authorities but, in the case of the nagid, has totally and conclusively revised the accepted view of the origin of this office. The description of the organization and operation of the local communities is particularly valuable, since the unmediated character of the *Genizah* documents makes them a unique source for information about everyday life and ordinary people. Goitein portrays the medieval Egyptian Jewish community as a “religious democracy” in which there was a balance between authority and communal sanction. The loosely structured and highly mobile Islamic society in which the community was situated also influenced its structure. There is, for instance, no reference in the *Genizah* to enactments restricting the entry of strangers into the community analogous to the heqem ha-yi-shuv of the communities in medieval Christian Europe.

M.R. Cohen in his book *Jewish Self-Governance in Medieval Egypt* develops Goitein’s thesis with regard to the origin of the office of the Egyptian nagid. Goitein first showed by means of a wide selection of *Genizah* documents, that, contrary to the opinion of earlier scholars, the nagidate was not instituted by decree of the Fatimid caliph. Rather it evolved within the Jewish community in the second half of the 11th century. Cohen emphasized that the nagidate evolved in response to the political and spiritual vacuum created by the decline of the Palestinian yeshivah, to which a large portion of Egyptian Jewry had given allegiance.

A number of Goitein’s research students have worked on *Genizah* documents relating to the communal life of the Egyptian Jewish community. The general format of these doctoral dissertations is similar to those of Michael and Stillman, in that considerable space is devoted to editing the documents which constituted their source material. G. Weiss has edited 255 legal documents written by the court scribe Hafnon ben Manasseh during the period 1100 to 1138. A large proportion of the legal documents which are preserved in the *Genizah* were written by this scribe. Apart from providing ample material for research on legal formulae, the study demonstrates the value of working on a corpus of documents written by the same hand. For instance, undated fragments can be more easily dated and a greater accuracy of reading achieved. A.L. Motzkin has made a study of Judge Elijah ben Zechariah (first half of 13th century) and his family on the basis of their correspondence which has been found in the *Genizah*. *Genizah* documents have been employed by M. Gil as a source for a detailed examination of the medieval Jewish institution of the kodesh or “pious foundation” which was essentially equivalent to the Moslem waqf. Although these Jewish foundations flourished during the Fatimid period there is no evidence of their existence under the Ayyubid dynasty. The chief motivation for the Jews to dedicate property to a pious cause was apparently religious, charity being one of the most important precepts of Jewish law. The institution was, however, also exploited to circumvent Islamic legislation, especially the mawārith hašriyya (see above).

Volume III of Goitein’s *A Mediterranean Society* is concerned with the family. The body of the book deals with the nuclear family and marriage, the main source for which are the many medieval ketubbah (see *Ketubbah*) which have been preserved in the *Genizah*. From an examination of over 600 of these Goitein has illuminated the manifold economic and social aspects of marriage. He shows that divorce was common and that 45% of brides whose marriages are recorded were marrying for the second time. From the itemization of the dowry in the ketubbah of the High Middle Ages Goitein concludes that prices were remarkably stable during this period. The mobility of the population often disrupted family life; this especially applied to the long business trips which were undertaken by many members of the community. In general, the *Genizah* portrays a male-oriented society. Private letters and genealogical lists usually mention only sons. Nevertheless many women played an active role in economic life. They owned properties, took charge of them, and also made or took loans.

Since the Middle Ages the marriage contracts of all known Jewish communities have followed the basic model of the Babylonian geonim. Scholars assumed that the ketubbah formulary had remained uniform since early Talmudic times. M. Friedman, however, has discovered in the *Genizah* a substantial number of fragments of medieval marriage contracts, mostly emanating from Palestine, which reveal traditions of formulating the ketubbah distinct from that of the Babylonian geonim. He has made a thoroughgoing study of these Palestinian-style ketubbah in his book *Jewish Marriage in Pales-
tine. They contain many distinctive features. For instance, the woman is granted the right to initiate divorce proceedings and the husband is obliged to bury his wife, should she predecease him, or to care for her if she becomes insane. Friedman also shows that the Palestinian formulary influenced the marriage contracts of several Jewish communities along the northern shores of the Mediterranean and North Africa.

Y. Stillman, in her doctoral thesis, examines the female attire of medieval Egypt as portrayed in the trousseau lists of the Genizah ketubbot. These lists contain the names and details of many previously unknown garments and fabrics. Moreover, on the basis of the prices which are given for each item Stillman has been able to establish a relative scale of quality between many varieties of textiles. J. Sada, in a similar manner, has made extensive use of Genizah trousseau lists in order to study household furniture in the medieval Near East. These two aspects of material culture, viz. clothing and furniture, are dealt with in Vol. IV of Goitein's A Mediterranean Society.

Several scholars have used Genizah documents as a basis for studies in the socio-economic history of medieval Palestine. Gil has studied many aspects of life in Palestine during this period on which the Genizah has shed considerable light. These include the institution of the Palestinian yeshivah together with the personalities who headed it and its relations with Jewish communities in Egypt, Syria, and the Byzantine Empire; the relationship between Karaites and Rabbanites; Jewish life in Jerusalem and in many other localities in Palestine; problems of taxation; pilgrimage and immigration, etc. Goitein has published a collection of studies on Genizah texts pertaining to the history of Palestine, in particular its Jewish population, in the century preceding the Crusades and during the Crusader period itself. The documents show that life in Palestine returned to normal relatively quickly after the Crusader conquest. Several documents refer to the activities of Moses Maimonides in the ransoming of prisoners captured by the Franks when King Amalric I took Bilbays, Lower Egypt, in November 1168. Goitein suggests that Maimonides' meteoric rise to the leadership of Egyptian Jewry, only a few years after his arrival in the Nile country, is partly to be attributed to his initiative in the ransoming of these captives.

In connection with the history of Palestine we should mention two works under the editorship of J. Prawer: The History of Eretz-Israel under Moslem and Christian Rule (634–1291), some of whose contributions employ Genizah documents as source material, and Sefer Ha-Yishuv. The latter work presents a wide variety of source material, much of it from the Genizah, relating to the Jewish community in Palestine during the period from the Crusader domination until the Ottoman conquest at the beginning of the 16th century.

In the course of Gil's research on the history of Palestine he published a short study on the Tustari family which had considerable influence on Palestinian Jewry. The information about this family is pieced together largely from Genizah documents. Its two most illustrious members were the two sons of Sahl, Abū Naṣr Fadl (Hesed) and Abū Saʿd Ibrāhīm (Abraham). They engaged in trade and banking and involved themselves in the political affairs of both the Fatimid court and the Jewish community. Gil attributes the Tustaris’ influence on Palestinian Jewry to the fact that Hesed was secretary to a Fatimid general much involved in Palestinian affairs. He also argues that the Tustaris belonged to a distinct Karaite sect known as Tustarians or Dastarians.

The documentary portion of the Genizah has also furnished sources for the history of Jewish communities outside the Mediterranean area. Goitein has published a collection of articles about the Jews of Yemen, several of which had previously appeared in a variety of periodicals. The section on medieval Yemenite Jewry is based almost entirely on Genizah sources. These documents show that the Yemenite Jews enjoyed considerable prosperity in the High Middle Ages, since they formed the link between the Mediterranean and the India trade, and that they remained in close contact with the Jewish academies of Iraq and Palestine.

N. Golb and O. Pritsak have made a contribution to the history of the Jewish *Khazars in their book Khazarian Hebrew Documents of the Tenth Century. This work contains an edition and detailed analysis of a recently discovered Genizah document relating to the Khazars together with a re-edition and reassessment of the Genizah letter from a Khazar Jew to the Spanish dignitary Ḥisdai ibn Shaprut which was published by Schechter in 1912. All the sources which refer to the conversion of the Khazars to Judaism are reexamined with special attention to the extent to which they reflect the historical and geographical background of Khazaria in the Crimea. The newly discovered document (T–S 12.122) is the autograph of a letter of recommendation written by Khazaric Jews residing in Kiev in the first half of the tenth century. It is signed by Jews with Khazaric names and contains a remark in the Khazaric language written in runic Turkic script. This document proves conclusively that the Judaization of the Khazars is a fact and not a forgery or romance, a view which has been canvassed by many scholars. Golb and Pritsak also show that the text which was edited by Schechter could have been written only by a Jew of Khazaria who had firsthand acquaintance with the historical and geographical circumstances of his country during the first half of the tenth century.

We must also include Volume III of Ashtor's History of the Jews in Egypt and Syria under the Rule of the Mamluks, published in 1970 (the first volume appeared in 1944). This final volume contains the texts of the Genizah documents referred to in the preceding volumes. Finally, the sources for Ashtor's A Social and Economic History of the Near East in the Middle Ages and Stillman's The Jews of Arab Lands include Genizah documents, principally in sections which deal with the socio-economic realities of the Southern Mediterranean in the High Middle Ages.

The focus of M. Ben-Sasson's research has been the social and intellectual history of medieval Jewry in Muslim lands from the 7th to the 14th centuries; based on work integrating legal, historical, and literary Genizah fragments. In exami-
ing social structures of Jewish public life from the perspectives of both the central leadership and the local community, each in its special locations and each with its special expression, institutional form, intellectual achievements, and self-consciousness, he pointed to the shift of power from the Eastern centers to the Maghreb, the building of the local Jewish community through a reconstruction of the *Genizah* corpus related to the community of Kairouan. He also found that the Maghrebi-Jewish immigrants became involved in the central Jewish leadership in the East starting in the second half of the tenth century. Their involvement signified the beginning of a process of building a regional and local functional leadership. In this venue he published sources on the history of the Jews of Sicily. The analysis of the Babylonian-Iraqi center was done by means of research on the activities and personality of Saadiah Gaon. With Prof. R. Brody (Dept. of Talmud, The Hebrew University) he prepared a critical edition of the first halakhic book written in Judeo-Arabic. It is the “lost” Book of Deeds and Decrees of Saadiah Gaon, compiled in the year 926. They reconstructed the book almost in toto, on the basis of more than 100 *Genizah* pieces scattered over 25 libraries in the East and in the West. This book was written according to the order and with the terminology of Islamic legal works. Like many of Saadiah’s books, this had great influence on most of the Jewish legal monographs and on the practical life of world medieval Jewry in its formative years.

Then Ben-Sasson turned to a *Genizah* study of the Maimonidean dynasty that headed the Jewish communities of the East from the 12th to the early 15th centuries.

**Biblical Commentary.** The commentary of Isaac ibn Ghayyat to the Book of Ecclesiastes was published from fragments in Cambridge and New York and the commentary of Samuel ben Hophni Gaon to the Pentateuch was published by Aaron Greenberg in Jerusalem (1979).

Texts from the Talmud provide readings that approximate more closely those of Rashi and Alfasi than the printed version. Scores of *ketubbah* include an undertaking by the bridegroom not to take a second wife, even though legally he was permitted to do so. When an additional wife was taken, a detailed agreement was made binding the husband to treat all his wives equally.

An example of the wealth of new material in this sphere is seen in the recent publication of tractsates *Ketubbot* and *Sotah* by the Institute for the Complete Israel Talmud (see “Talmud, Recent Research”). Altogether 150 pages or fragments of the tractate *Ketubbot* from the *Genizah* were collated (pp. 75–91) for this purpose. *Genizah Fragments of Rabbinical Literature; Mishnah, Talmud and Midrash* (1973), edited by N. Aloni, contains no less than 219 facsimile pages of 60 *Genizah* manuscripts in the various libraries. This collection is of special importance in that it includes rabbinical texts with the Palestinian system of vocalization. *Genizah Bible Fragments with Babylonian Masorah and Vocalization* (5 vols., 1973), edited by Y. Yeivin, provides the scholar with all the ancient sources with the Babylonian vocalization.

**Midrash.** Of particular interest is *Ginze Midrash* by Z.M. Rabinowitz (1977). The author deals with the early form and style of the Midrash as revealed in the texts, which are written in the early Palestinian script and belong to the 11th and 12th centuries. The copists later changed the text – both the Hebrew and Aramaic – to conform with the Babylonian usage. Although the majority of the fragments are from well-known Midrashim, they also include a few hitherto unknown ones.

**The Geonic Period.** S. Abramson’s *Inyanot be-Sifrut ha-Geonom* (1973) includes an appendix (pp. 319–89) on the text of the *She’iltot* of *Aha of Shabha* and deals with the *variae lectiones* therein. The *Genizah* fragments have vastly increased the knowledge of the development of the halakhah in Ereẓ Israel after the completion of the Jerusalem Talmud. The publication of *Hilkhot Ereẓ Israel min ha-Genizah* by M. Margaliot, set up for publication by I. Ta-Shema (1973), disproves the theory that the geonate in Ereẓ Israel was reestablished in the 10th and 11th centuries in order to fight against Karaimism. There was an unbroken chain of authority and heads of yeshivot until the end of the geonic period, and it seems that there was a separate halakhic tradition in Ereẓ Israel, deriving from the Jerusalem Talmud and differing from the Babylonian tradition. Various fragments of this tradition have now been published (cf. *Sefer ha-Ma’asim li-Benei Ereẓ Israel*). The *Hilkhot Ereẓ Israel* includes an appendix on another Ereẓ Israel work, *Perek Zera‘im*, edited by J. Feliks, which is the most complete work on agricultural products and nature found in ancient Jewish literature. M.A. Friedman was the latest to publish additional fragments of *Sefer ha-Ma’asim*.

Other items on the geonic period, also published by M.A. Friedman, are (1) Additional material on Pirkoi Ben *Baboi. (2) Fragments of a large collection of geonic responsa which include the following: the intervention of the authorities in Kairouan in the case of the divorce of a betrothed woman; the
concluding portion of a responsum dealing with the complaint of a woman whose marriage settlement had been sold by her husband, or lost. It provides data on the custom of Kairouan with regard to a moredet (a wife who "rebels" against her husband), and on the community and the relationship between the civil authorities and the Jewish leader. There have also been found fragments from the Sidduir of R. Amram Gaon, providing details of the compilation of the work. 3. Fragments of geonic commentaries to tractate Shabbat which are ascribed to Sherira Gaon and Hai Gaon.

Maimonides. 1. Fragments of the Mishneh Torah written by Maimonides himself. It has been shown that these fragments are from a first text of the Mishneh Torah, whereas all later editions were based on a second edition which he wrote. The differences between this holograph and the printed are considerable, including the order of the books and the chapters, and sometimes even the order of the individual laws in the chapter, and there are also differences in language. 2. A commentary by Maimonides on the Laws of Tefillin from the Sefer ha-Menahah of Manoah of Narbonne. M.A. Friedman and Sh. Abramson added new findings from the genizot reflecting students' shorthand writings in Maimonides' school as well as the school's traditions.

Rishonim. 1. Fragments from the novellae of Yom Tov b. Abraham Ishibli (the *Ribta) to tractate Bezah. 2. New fragments from the commentary of Ḥananel b. Ḥushiel on Bible and Talmud. They consist of many pages, partly fragments of complete works and partly fragments of commentaries on individual chapters. They include commentaries on tractates Berakhot, Kiddushin, Sotah, Bava Kamma, Bava Batra, and Sanhedrin, as well as portions of his commentary to tractate Zevahim. 3. A complement to a commentary of a pupil of Nahmanides to tractate Pesaḥim.

Liturgy. Following the publication of "An Unknown Blessing on the Reading of the Chapter Bameh Madlikin (Shabbat 2) from the Genizah," N. Wieder has come to the conclusion that the inclusion of this chapter in the liturgy was the result of the controversy between the Rabbanites and the Karaites. This blessing, which has been completely forgotten, was in the nature of a public declaration of faith in the authority of the rabbis and the continuation of tradition, and of the authority for kindling lights for the Sabbath which was forbidden by the Karaites. N. Wieder deals with the formula of the 'Amidah in early Babylonian usage and shows that the words "Possessor of heaven and earth" were included in the formula of both Israel and Babylon.

Poetry. The last two decades have seen the publication of many critical editions of early pīyyutim and of medieval religious and secular poetry, the majority of which draw to a greater or lesser extent on Genizah sources. The Genizah has preserved not only many previously unknown poems of the famous poets but also a substantial number of the works of forgotten or little-known poets.

J. Schirmann published an anthology of Hebrew poems discovered in the Genizah. This collection includes secular and religious poetry from the Jewish communities of the East and from Spain, North Africa, Italy, and Byzantium. Especially worthy of note are the oldest example of a Hebrew poem in praise of a beautiful youth; the full text of a muwassath (muwashshah, see 13: 684) of Samuel ha-Nagid, of which previously only a few lines were known; three secular poems of Judah Halevi which are not known from other sources; several muwassathot of Abraham Ibn Ezra including one which describes his flight from Spain; and Hebrew maqāmat (see *Maqāma) including a section of maqāmat Yamima, an allegorical love story, of which Israel Davidson published some fragments in the 1920s. This new fragment enabled Schirmann to identify the author of this work as Joseph bar Judah ben Simeon, the famous pupil of Maimonides. Also noteworthy are a number of rhymed proverbs, many of which show that their authors must have been familiar with the Hebrew version of Ben Sira.

Several scholars have collected the works of various paytanim which have been preserved in the Genizah. A. Mirsky used Genizah sources extensively in his edition of the pīyyutim of the early paytan Yose ben Yose. These pīyyutim show that Yose ben Yose was one of the first Hebrew poets to make the oral law a basis of his works. Wallenstein published and analyzed a number of Ḥozerot by Samuel ha-Shelishi (10th–11th century), discovered in the Genizah, to which Ezra Fleischer and Joseph Yahalom dedicated substantial scholarly work. E. Fleischer has critically edited 580 short liturgical compositions from the Genizah which were all written by the same anonymous author (called "Anonymous" by Zulay). These poems (called pizmonim by the copyist of the Genizah manuscript) were composed in the late tenth century and were intended to serve as choral additions to several pieces of a cycle of ke-dushatot written by R. Simeon ha-Kohen b. R. Megan, an early Palestinian paytan who was active in the seventh century. They reflect the increase in the participation of the choir in synagogue worship towards the end of the first millennium C.E. Fleischer has also used Genizah sources in his edition of the pīyyutim of the tenth-century Italian paytan Solomon ha-Bavli, who was one of the first Hebrew poets to write in Europe. His works molded the Italian Ashkenazi school of paytanim. The Genizah has also preserved many of the poems of his pupil Elya bar Shemaya, which have been edited by Y. David.

Owing to the ties between the Andalusian and Egyptian Jewish communities, manuscripts of religious and secular poems written in Spain found their way into the Genizah. Consequently scholars who have collected the works of the Spanish medieval Hebrew poets have found abundant source material among the Genizah papers. This applies to the following collections: the liturgical poems of Solomon ibn Gabirol, the religious poems of Judah Halevi and the Diwan of Samuel ha-Nagid by Jarden; the collections of the secular poems of Ibn Gabirol by Allony and Jarden and by Brody and Schirmann; the religious poems of Abraham Ibn Ezra by Levin; the poems...
of Isaac ben Abraham Ibn Ezra by Schmelzer; the poems of Levi Ibn al-Tabban by Pagis, and the poems of Joseph Bensuli by David. Mirsky has published a collection of poems by Isaac Ibn Khalfūn (10th–11th century), almost all of which were recovered from the Genizah. These poems show that Ibn Khalfūn played an innovative role in the development of Hebrew verse in that he was one of the first to compose secular poems and introduce elements of personal experience into his poetry. D. Jarden published an anthology of medieval Hebrew verse Zefunei Shirah. This includes several poems of little-known or anonymous authors which have been discovered in the Genizah: 1. A list of secular poems by Solomon ibn Gabirol hitherto unknown from any other source. 2. A kerovah of the liturgical poet *Yannai to the portion Ha’aizinu (Deut. 32). 3. Piyyutim to the Avodah on the Day of Atonement. They include a “bibliographical” piyyut giving a detailed list of the titles of ten such orders of service. 4. Early Yemenite piyyutim and Selihot for the Day of Atonement.

HISTORICAL. S.D. Goitein devoted himself particularly to the economic life of the Jews as revealed in the Genizah documents and fragments. He points out that as a result of the economic changes which took place in the Middle East as a whole, in which trade superseded agriculture as the basis of the economy, Jews tended to abandon agriculture and engage in skilled occupations and trade. In one text a Jewish girl writes to her widowed mother urging her to see that her brother, in addition to studying Torah, also learn a trade, adding “if he will have a trade, he will be a man.”

Other published material includes (1) Documents appertaining to the life of the Jewish community of Egypt. (2) M. Gil’s Documents of the Jewish Pious Foundations from the Cairo Genizah (1976) gives the religious and sociological motivation behind them, the halakhic, income and expenditure, etc. (3) Horoscopes from the Genizah (1977). (4) A letter from the community of al-Mahdiya in Tunis to Fustat in Egypt in the 11th century reflects the commercial movements between the ports on the Mediterranean Sea in which Jews played a prominent role. The letter was addressed to Nahray b. Nissim, originally of Kairouan, who later settled in Egypt, and reflects the golden period of the Fatimids in the first half of the 11th century. (5) There has been discovered the earliest document emanating from *Salonika, a letter from an Egyptian scholar who immigrated there, dated approximately 1090. (6) Three documents from the beginning of the Crusades, consisting of letters from Tyre and Tripoli in Lebanon and Arqa in northern Syria which reflect the need of the Jews for mutual assistance in the difficult circumstances which prevailed at the end of the 11th century, and lastly, evidence of the connection between the Jews of *Yemen and the Babylonian communities. (7) Additional material concerning the Jews in Erez Israel and the role of the ketubbah is to be found in a book by M.A. Friedman, Jewish Marriage in Palestine: A Cairo Genizah Study in two volumes (1980/81), Vol. 1, Ketubbah Tradition in Erez Israel; Vol. 2, Texts.

ALIYAH TO EREZ ISRAEL. In A. Kupfer’s Konteros Erez Israel (1968) are included pages from a work written by a sage desirous of immigrating to the Land of Israel, for which purpose he composed a pamphlet to serve as a guide for those contemplating immigration. A. David published new documents from the “late” Genizah illuminating life in Erez Israel and its vicinity after the Spanish expulsion.

[Yehoshua Horowitz / Menahem Ben-Sasson (2nd ed.)]
maintain that the Palestinian system reflects an earlier stage of Hebrew than the Tiberian. In his more recent book, *Biblical Texts with Palestinian Pointing and their Accents*, Revell lists all known Biblical manuscripts with Palestinian pointing, including several new fragments discovered in the Taylor-Schechter Additional Series, and studies the use of their accent signs. He contradicts P. Kahle, who claimed that Palestinian accent signs did not mark stress. According to Revell, it is quite reasonable to hold that they indicate stress if it is assumed that stress in Palestinian Biblical Hebrew frequently fell on the penultima rather than on the ultima.

B. Chiesa has made a comprehensive study of fragments of biblical texts with Palestinian vocalization. His work includes a summary of previous studies on Palestinian vocalization as well as a catalogue of all the Palestinian Bible fragments which were known to him before the Taylor-Schechter Additional Series became available. He discusses the historical position of the Palestinian system and its cultural milieu and concludes that it was molded by provincial Jewish communities which lacked strong scholarly leadership. Chiesa also collects the variant readings which the Palestinian texts exhibit in comparison with Ben Ḥayyim's Bible as edited by van der Hooght in 1705. These variant readings show that the text of the Palestinian Bible fragments belongs to a textual family which is distinct from that of the Tiberian and Babylonian traditions. It is close to the lost Hebrew tradition whose remains are now to be found in the Greek and related variants.

N. Allony has published facsimiles of 60 *Genizah* fragments of Talmud and *Halakhah* with Palestinian vocalization. None of these fragments is later than the 11th century; they thus invalidate the generally accepted view that vocalized Mishnah texts did not exist before the 14th century (the date of the Kaufmann manuscript).

In his book *Manuscritos hebreos y arameos de la Biblia*, H. Diez Macho discusses the work which has been done on the various vocalization systems and attempts to elucidate many of the problems which these involve. Chapters are devoted to Babylonian, Palestinian, and Tiberian vocalization and also to what he calls “Pseudo Ben-Naphtali” vocalization, i.e., the mixed system of Tiberian and Palestinian vowel signs which Kahle erroneously called Ben-Naphtali. Apart from the standard Tiberian systems, most of our knowledge of these types of vocalization is derived from *Genizah* fragments. The work also includes a catalogue of *Genizah* Bible fragments with “Pseudo Ben-Naphtali” vocalization, which supplements the list published previously by Diez Macho (*Hebrew and Semitic Studies Presented to G.R. Driver*, 1963, pp. 16–52). This new catalogue shows that there are more Bible manuscripts of this type in the *Genizah* than was formerly thought.

**Grammar and Lexicography.** Allony has reconstructed Saadiah Gaon's lexicographical work *Ha-Egron* from *Genizah* manuscript fragments and published it in a critical edition. Until the discovery of the *Genizah* this work was known by name only from Abraham Ibn Ezra's introduction to linguistics, *Sefer M znayim*. The work was designed as a handbook for poets, the entries being arranged both according to their initial letter to assist the writing of acrostics and also according to their final letter in order to help poets find a rhyming word. Allony has also published, in the form of a monograph, *Genizah* fragments of the Kitāb al-ʿKāmil by the Spanish grammarian Jacob ben Eleazar. Previously this work was only known from citations in medieval grammatical treatises and Bible commentaries. The fragments of the original work show that the Kitāb al-ʿKāmil formed the apex of the Spanish school of Hebrew philology. The book was a comprehensive and systematic exposition of grammar, which was more clearly organized than the compendious *Sefer ha-Rikmah* of his illustrious forbear Ibn Janāḥ.

S. Abramson has used *Genizah* sources extensively to reconstruct the Kitāb al-Ṭajnīs (Book of Homonyms) of Judah ibn Bālam. This is a lexicographical work which lists words with two or more different meanings. *Genizah* fragments have also been used by A. Dotan in his edition of the Sefer Dīdkū’ī ha-Tīmim of Aaron ben Asher and by Halkin in his edition of the Kitāb al-Muḥādara wa-ḥl-Mudhakara of Moses Ibn Ezra. The very beginning of the mediaeval linguistic learned works, *Kutub al-Lughah* by Saadya Gaon was reconstructed and edited by A. Dotan.

**Targum and Versions.** M. Klein has published all the primary sources of the so-called Fragment Targums to the Pentateuch, two of which are *Genizah* manuscripts from the Jewish Theological Seminary of America and the British Museum. The Fragment Targums are not complete verse-by-verse renderings of the Hebrew text but contain only a selection of isolated verses or parts of verses. The two *Genizah* texts are both of Palestinian provenance and are the earliest of the fragment Targum manuscripts (11th–13th century). S. Lund and S.A. Foster have made a study of the Targum traditions as represented in the codex Neofiti 1, which was discovered by Diez Macho in 1956. The codex Neofiti 1 contains the complete text of the Palestinian Targum to the Pentateuch. This text belongs to the same tradition as the *Genizah* fragments of the Palestinian Targum which were published by Kahle in 1930 and also to the same as is represented by the Fragment Targums. The codex also includes a large number of interlinear and marginal notations which constitute two variant Targumic versions of the main text. Lund and Foster correlate these two margin texts with the Palestinian Targum as found in the *Genizah* manuscripts and with the Fragment Targums. They conclude that one of the margin texts is derived from the same tradition as the *Genizah* and Fragment Targums whereas the other belongs to a different tradition, which has certain affinities to the Pseudo-Jonathan Targum to the Pentateuch.

M. Goshen-Gottstein reconstructed parts of the Old Testament in the “Syro-Palestinian” version on the basis of all the known sources. This version was written in Christian Palestinian Aramaic and was used by the Melchite Christian community in Palestine in the first half of the first millen-
nium C.E. The bulk of the source material for this version is provided by palimpsests which have been discovered in the Genizah. These contain Hebrew overscripts and Syro-Palestinian underscripts.

MISCELLANEOUS. The Genizah has furnished sources for the edition of two important Jewish mystical works. M. Margalioth has reconstructed Sefer ha-Razim almost entirely from fragments which were preserved in the Genizah. The general contents of this work have long been known, especially from extracts scattered in Sefer Raziel. It is only now, however, that we have the text of the original. Sefer ha-Razim is an exposition of the names and functions of the angels in the six heavens which precede the supreme heaven, together with an assortment of magic formulae for suppliants of various types. The recently recovered original text shows that the work was heavily indebted to the Greek Gnostic literature of Hellenistic Egypt. It contains many Greek magic terms and even has a prayer to the sun-god Helios. P. Fenton has edited the Treatise of the Pool (al-Maqāla al-Hawdiyya) by Obadiah Maimonides (1228–1265), the grandson of Moses Maimonides, from Genizah fragments and from a manuscript in the Bodleian Library, Oxford. This mystical work is a manual for the spiritual wayfarer along the path to godliness. A man's heart is compared to a cistern or "pool" which is to be filled with pure water. Obadiah's work is permeated by a philosophical mysticism that owes much to the influence of Islamic Sufism. It is therefore an eloquent testimony to the close relationship between Muslim and Jewish mystics in the 13th century. Fenton added more substantial editions of Maimonidean mystical traditions based on sources found in Karaite and Rabbanite genizot: Moreh Derekh ha-Perishut of David the 2nd Maimuni and several works of earlier generations of this dynasty.

An important contribution to the history of Hebrew printing has been made by H. Dimitrovsky, who has published Genizah fragments of incunabula of the Babylonian Talmud from Spain and Portugal. These fragments are valuable because the Expulsion from Spain (1492) and Portugal (1497) and the Christian Inquisition led to the almost complete destruction of Jewish printed books, so that very few examples of early Jewish printing in these countries have come down to us. Moreover the text of the Talmud which these fragments preserve has many particular features which distinguish it from other known texts of the same work. Apparently old texts of the Talmud, which were not preserved elsewhere, reached Spain from Babylonia in early times.

The Genizah has preserved the oldest Yiddish work which has so far been attested (14th century). It was first published by Fuks in 1957 and has been critically edited more recently by H.J. Hakkarainen. Hava Turniyanski published a series of letters written in Yiddish.

Scholars of Hebrew paleography have been furnished with abundant source material from the Genizah. S.A. Birnbaum and M. Beit-Arié, for instance, have used Genizah fragments as representatives of the medieval and, to a lesser extent, post-medieval Oriental and Sephardi scripts. Beit-Arié's work Hebrew Codicology, which reports the preliminary conclusions of the Hebrew paleography project of the Israel Academy of Sciences and Humanities, is particularly important. Owing to the mobility of the medieval Jewish population in the Mediterranean area, the form of script used by a manuscript scribe is not by itself a reliable guide to its provenance since the scribe may have had his training in another country. Consequently Beit-Arié has taken into account a wide variety of physical and graphical characteristics of medieval Hebrew manuscripts, which were cumulatively less sensitive to population fluctuations, and established a typology of general codicology. This typology will enable scholars to identify the date and provenance of medieval Hebrew manuscripts with greater accuracy. Edna Engel continues this work and formed types and schools of Genizah writers intended to characterize cultural traditions of Oriental communities and to set the basis for future matching projects of fragments from different libraries.

[Geoffrey Khan / Menahem Ben-Sasson (2nd ed.)]

Genizah Material at Cambridge University Library

OLD AND NEW SERIES. At the beginning of the 20th century, a few years after the presentation of the Collection to Cambridge University by Charles Taylor and Solomon Schechter in 1898, a total of some 31,000 fragments had been examined and sorted in a classification series which became known as the Taylor-Schechter Old Series. The fragments were conserved in various ways. Over 2,000 were sealed between glass, almost 7,000 were bound up in volumes, and about 22,000 were individually preserved in paper folders and stored in boxes. The remaining pieces, now known to number approximately 109,000, were left in crates, being considered for the most part of lesser value. It was not until 1955 that their importance was acknowledged and that work began to sort and classify them under the direction of the university librarian, H.R. Creswick. A new classification was adopted for them and they came to be known as the Taylor-Schechter New Series. The sorting of the fragments for the New Series was, however, unsystematic. The bulk of the work was done by visiting scholars who, in the absence of a well-coordinated program, tended to make selections, each according to his own interests, in a rather piecemeal fashion. One reason for this was that, until the appointment of H. Knopf in 1965, no member of the library staff had specific responsibilities for the Genizah Collection. The fragments that had been assigned classmarks were stored in boxes like the majority of the Old Series.

Shortly after the initiation of the New Series a program began to microfilm all the classified fragments of the Collection and so enable them to be studied by scholars in academic institutions other than Cambridge. In the late 1960s, on the initiative of the university librarian, Eric Ceadel, a conservationist was appointed to treat the New Series material. The most up-to-date methods were used to ensure that the maximum protection was given to the priceless fragments. They were cleaned, flattened, and repaired. Moreover their storage
in boxes was considered unsatisfactory, since they could easily be damaged or misplaced when removed for consultation. Consequently they were placed in a transparent polyester film known as Melinex, sewn onto uniform-sized sheets, and placed in looseleaf binders.

TAYLOR-SCHECHTER GENIZAH RESEARCH UNIT. In 1974 the Taylor-Schechter Genizah Research Unit was established under the directorship of S.C. Reif. A ten-year project was initiated, the aims of which were the increase of personnel engaged in work on the Collection, the conservation of the material and its being made available to scholars, the compilation of bibliographical aids for users of the Collection, the initiation of an organized research program in the Genizah field, and the publication of material for both the scholarly world and the informed public. Part of the cost of this project was met by Cambridge University Library and the remainder was to be in the form of grants and donations from outside sources. A steering committee was set up for the unit consisting of representatives of the University Library and the Faculty of Oriental Studies, and has ensured the close involvement of the Faculty in the Unit's work.

SORTING. The New Series was terminated after it had come to contain about 42,000 fragments. The material still remaining in 32 crates was sorted in 1974 by a team of scholars in a joint project with the Israel National Academy of Sciences and Humanities. The result of this work was entitled the Taylor-Schechter Additional Series. Since the sorting was coordinated and completed in a short space of time the classification of the fragments in this series was more systematic than that of the New Series. The Additional Series contains about 67,000 fragments and so the total number of pieces in the Collection can now be calculated to be in the region of 140,000, well in excess of Schechter's original estimate of 100,000.

CONSERVATION. A team of full-time conservationists was appointed to deal with the Taylor-Schechter Collection. They continued, with a number of improvements, the modern methods which had been initiated for the treatment of the New Series. After the New Series was completed they treated the newly sorted Additional Series fragments and placed them under Melinex in small manageable binders. Subsequently the Old Series fragments received the same treatment. Finally the other Genizah fragments which had been acquired by Cambridge University Library before and after Schechter's expedition to Cairo, including the Or. 1080–81 material, were given the same protection as the Taylor-Schechter Collection.

This conservation work was completed in 1981 and now all the material of the Cambridge Genizah Collection is fully accessible to scholars and may be freely consulted without any risk of damage.

RESEARCH AND PUBLICATIONS. From 1974 a systematic cataloguing program was established in Cambridge. As a result, the first comprehensive catalogues of Cambridge Genizah material in a variety of scholarly fields are now making their appearance. The following numbers in the Series have already been published: No. 2. Hebrew Bible Manuscripts in the Cambridge Genizah Collections: Volume 1: Taylor-Schechter Old Series and Other Genizah Collections in Cambridge University Library, by M.C. Davis, incorporating material compiled by H. Knopf (1978). Volume 2: Taylor-Schechter New Series and Westminster College Cambridge Collection, by M.C. Davis (1980).

No. 6. Published Material from the Cambridge Genizah Collections: A Bibliography (three volumes).

The Bibliographies of publications relating to the Cambridge Genizah Collections covers all published material up to 2005. Genizah publications are scattered in a wide range of periodicals and books, some of them unavailable in most libraries. Consequently, a scholar who is interested in a fragment is very often unable to trace what has previously been written about it. Each reference to a fragment was checked against the original manuscript and, if necessary, corrected before it was entered into the Bibliography.

MICROFILM. The Taylor-Schechter Unit has completed the microfilming of all the fragments in the Cambridge Genizah Collections on 320 reels. It has made whole sets of the films available to several institutions around the world including the Hebrew University of Jerusalem, Tel Aviv University, the Jewish Theological Seminary of America, and Yeshiva University in New York. Over the last few years Cambridge University Library has itself acquired microfilms of Genizah material held elsewhere. Consequently Cambridge is now a major center for the study of material from all the Genizah Collections.

[Stefan C. Reif / Geoffrey Khan / Stuart E. Rosenberg (2nd ed.)]

The Friedberg Genizah Project

The Friedberg Genizah Project was conceived and initiated by Albert D. Friedberg of Toronto, Canada, in 1998 and started to operate in 1999. Mr. Friedberg foresaw the possibilities of harnessing modern technology and international scholarly cooperation in order to advance research into the riches of the Cairo Genizah and facilitate the exploitation of these resources within the matrix of both traditional and academic Jewish studies. The Genizah contains hundreds of thousands of pages of treatises and documents of all sorts—texts of the Bible and commentaries, biblical and rabbinic dictionaries, halakhic works, poetry and prayer, philosophical and polemic treatises, deeds, documents, official and personal let-
ters, in Hebrew, Aramaic, Judeo-Arabic and Arabic, Judeo-Persian and Yiddish, dating from before the eighth century until the 15th and even later on. The project that resulted from Mr. Friedberg's initiative was made possible by a grant from the Buckingham Foundation of Toronto, Canada.

Specifically, the project's purpose was threefold: (a) to produce a union catalogue of all Cairo Genizah fragments, which will eventually be made available online to all interested scholars; (b) to commission transcriptions of as many of those fragments as practicable; and (c) to encourage scholarship on the Genizah.

The projected union catalogue will for the first time provide a complete accounting of all Genizah fragments from collections all over the world, thus making the rich treasures of the Cairo Genizah accessible to all those interested in the history of Jewish texts and contexts from late antiquity to the early modern period. Included in this database will be a flexible search engine that will enable scholars to collate scattered fragments and conduct research on them, as well as a wide variety of searches in all the languages of the Genizah. While more than 60% of the Genizah has been catalogued in one way or another in the last century, since its discovery and export to libraries all over the world, much remains to be done, and FGP was established in order to bring this task to completion.

Equally important is the effort to produce transcriptions of as many of these fragments as possible. These transcriptions, used in conjunction with the catalogue, will make it possible for those interested in particular subjects to investigate and integrate all relevant texts into their work.

The Project was intended to restore awareness of the importance of the Genizah to the general and Jewish scholarly worlds, and, not least important, to attract junior potential scholars to specialize in or utilize this important source for Jewish and general history.

FGP is involved in the continuous efforts of cataloguing at Cambridge University Taylor-Schechter Genizah Research Unit. All already-published catalogues of cUL entries are part of FGP database. FGP has contacted libraries with smaller collections than those at Cambridge or the Jewish Theological Seminary. The John Rylands University Library (JrUL), The University of Manchester, and several other libraries have signaled their willingness to cooperate in the accomplishment of FGP’s cataloguing goals. Among these are the British Library, the Bibliothèque Nationale et Universitaire de Strasbourg, the Oestereichische Nationalbibliothek, the National Library of Russia, and the AUL collection in Paris. By its end FGP estimates that the cataloguing of over 170,000 fragments will be completed and the results made available in a union catalogue; it is expected that the remaining 43,000 fragments will be catalogued by the libraries housing these fragments, with the encouragement of the FGP.

In pursuit of its second goal, FGP has set up several units to work on specific areas of Genizah transcription, and, when appropriate as in the case of Judeo-Arabic texts, translations. These include units devoted to the entire Talmudic corpus (Mishnah, Tosefta, Babylonian Talmud, Jewish Talmud, rif), Midrash Halakhah, Midrash Aggadah, Judeo-Arabic halakhic compendia, Judeo-Arabic grammatical and lexical texts, Judeo-Arabic philosophical and polemic texts, liturgical texts, court and economic documents, Geonic responsa. These units are located at Hebrew University, Makhon Ben Zvi, Ben-Gurion University, Tel Aviv University, Bar-Ilan University in Israel, and Princeton University.

FGP also aims at publishing in print the results of its work, catalogues as well as texts. FGP has so far published Professor Menahem Kahana’s first volume on The Genizah Fragments of the Halakhic Midrashim (Magnes Press, 2005). FGP also participated in the publication of a volume of Genizah texts of Maimonides’ Commentary on the Mishnah by Dr. Simon Hopkins, a volume of book-lists from the Genizah compiled by N. Allony, and further support for other volumes is planned.

The process of transcription has begun to bear substantial fruit and numerous texts have been prepared for eventual distribution, or are in the process of being prepared. Especially significant are important rabbinic fragments and numerous Judeo-Arabic texts that are being transcribed and translated, with the hope of soon being able to make them available to the wider public in a variety of formats. As the Project continues to develop, the scope and significance of this component of its work can be expected to continue to increase, so that a virtual treasure trove of new texts will be available. Coupled with the extensive cataloguing and bibliographical efforts the Project is involved in, we can be assured of opening the Genizah’s still unclaimed treasures for academic and religious scholarship.

With all this progress, as well as the opportunity given to many graduate students and others to actually work with Genizah texts, a greater interest on the part of students and scholars in researching these texts can already be detected, and thus the third goal of the Project – the further development of the field by encouraging young scholars to enter it – is on the way to fulfillment.

BIBLIOGRAPHY AND CATALOGuing. The Project’s Unit of Cataloguing and Bibliography, as its name indicates, has two main roles: one is the preparation of a hand-list as stated in the Project’s goals; the second role includes systematic combining of published literature since the discovery of the Genizah material, for the purpose of recording the bibliographic references to and cataloguing of fragments from all Genizah collections. The focus around which the references are assembled is a unique fragment identifier, while all its varied, old, and erroneous identities in shelf marks, locations, and catalogue numbers are noted as added alternative fields, so as to eliminate as much as possible the confusion that accompanies a researcher’s attempt in locating a desired fragment. The bibliographic recording notes the presence of a facsimile or whether a fragment is mentioned, transcribed, translated or fully described, in which case one also includes in the bibliographic
records any physical description and cataloguing information that appear in the publication.

1. The Jewish National and University Library has completed the digitizing of JNUL Genizah collection and prepared the hand-list for this collection in electronic version.

2. Taylor-Schechter Genizah Research Unit, Cambridge University Cataloguing of T-s Collections: The projects currently receiving full or partial support from FGP are as follows: (a) the preparation of catalogues of the Arabic and Judeo-Arabic items in the New Series and Additional Series of the Cambridge Genizah Collections; (b) the compilation of a third volume of bibliography of published items from the Cambridge Genizah Collections, covering the years 1980–97.

**Ginzei Qedem.** Ginzei Qedem is an annual publication devoted to Genizah texts and studies. Ginzei Qedem is part of the Friedberg Genizah Project, whose aim is to contribute to increased scholarly discussion of genizot worldwide, in the hope that the fruits of this discussion will eventually enrich both traditional and academic Jewish studies. The purpose of Ginzei Qedem is to provide a specialized venue for scholarly publications in this area. Younger scholars are particularly encouraged to participate alongside their more established colleagues.

In terms of the subject matter to be covered, the rubric "Genizah texts and studies" is to be understood in the broadest possible sense to include publications of fragments of literary works and documents from genizot in Cairo and elsewhere, as well as studies based on such fragments. Articles may deal with any of the relevant disciplines, including but not limited to bibliographical studies and exegesis, history, literature (including piyyut), Talmud and rabbinics, theology, philosophy, linguistics, science, medicine, and magic.

Contributions may be in Hebrew, English, or other major European languages. Any substantial quotations in a language other than that in which the article is written must be accompanied by a translation.

**The Center for the Study of Judeo-Arabic Culture and Literature at the Ben-Zvi Institute (Jerusalem).** The Center currently conducts three projects in conjunction with the Friedberg Genizah Project: (1) Judeo-Arabic halakhic literature, (2) Judeo-Arabic biblical exegesis, and (3) Judeo-Arabic philosophical, theological, and polemical works. In addition to these projects, the Friedberg Genizah Project is participating in the institute's ongoing project to catalogue the Judeo-Arabic manuscripts in the Firkovich Collection.

**Judeo-Arabic Halakhic Literature Project.** The aim of this project is to reconstruct works relating to halakhic or talmudic topics written in Judeo-Arabic from the geonic period through the 15th century. After reconstruction, these works will be published with an annotated Hebrew translation and introductions. The books concerned include halakhic monographs, works of talmudic methodology and legal theory, talmudic commentaries, commentaries on Maimonides' Mishneh Torah, Books of Commandments, and so on. While work on specific books is currently based on lists of identification made by various scholars, a systematic re-examination and cataloguing of the relevant Genizah fragments has also begun.

**Judeo-Arabic Biblical Exegesis Project.** The goal of this project is similar to that of the halakhah project: to reconstruct Judeo-Arabic works of biblical exegesis. In the case of biblical exegesis, however, it has not been possible to begin with a corpus of identified fragments. Further, the number of exegetical fragments is much larger than in the case of the halakhic material. The institute therefore began with a systematic survey of Genizah collections, cataloguing the Judeo-Arabic exegetical fragments, surveying the collections of the Bodleian Library and the British Library, the Mosseri collection, and a large part of the Cambridge collections. It is hoped that a detailed description of each fragment’s physical, paleographic, codicological details, as well as its content, will eventually enable one to put together fragments of a single manuscript or composition. An attempt at identification of each fragment is already made at this stage. In addition, a start was made to transcribe and translate selected fragments, which from their paleographical, codicological, or orthographic characteristics appear to be relatively early, perhaps pre-Saadianic. As a pilot publication of a reconstructed text Prof. Ben-Shammai is now working on a critical edition of the Judeo-Arabic commentary of Saadiah Gaon on the first part of Exodus (ch. 1–20), based on a large number of fragments in various collections, with annotated Hebrew translation.

**Philosophy, Theology, and Polemics.** This project is dedicating renewed, concentrated attention to the philosophical, theological, and polemical material in the Genizah, mostly in Judeo-Arabic. The intention is to identify, catalogue, and publish works belonging to these branches of thought, in all the Genizah collections. Fragments of works that have already
been edited are catalogued, and the significant variant readings are noted. These lists will be published independently and used in conjunction with the editions, or will prepare the way for the eventual publication of new, comprehensive critical editions (if the material examined indicates the need for such an undertaking). Fragments that are still unpublished are catalogued, identified, or described in detail in order to facilitate future identification. Several collections have already been catalogued in this way: the Mosseri and AIU collections in Paris, the Kaufman Collection in Budapest, and the collections in Philadelphia and in Oxford, as well as significant parts of the larger collections in the Jewish Theological Seminary (New York) and in Cambridge.

Princeton University Project on Medieval Documents in Judeo-Arabic (Conducted by Prof. Mark Cohen). Under Friedberg funding Princeton will computerize about 4,000 transcriptions of historical documents from the Cairo *Genizah* documents. These documents, mostly unpublished, were originally transcribed by S.D. Goitein and copies of his transcriptions are found in the "S.D. Goitein *Genizah Research Lab at Princeton" (the original "Lab" is located at the Institute of Microfilmed Hebrew Manuscripts at the Jewish National and University Library in Jerusalem). The Princeton project keyboards Goitein's typed texts, edits them, and provides them with brief catalogue-headers.

Judeo-Arabic Documents and Response (Project Conducted by Prof. Mordechai A. Friedman, Tel Aviv University). This group has undertaken the decipherment, translation, and brief annotation of the *Genizah* Judeo-Arabic responsa literature from the geonic period and the classical *Genizah* period (the manuscripts from the latter period will include a few Hebrew responses) as well as other legal texts: Judeo-Arabic responsa dealing with commercial law, documents and some responsa associated with engagement and betrothal, responsa of Abraham Maimonides and his contemporaries.

Philological Texts, Primarily in Judeo-Arabic (Project Conducted by Prof. A. Maman, Hebrew University). The group working on philology (grammars, dictionaries, and glossaries) which includes among others *Genizah* fragments from Radak's *Sefer Ha-Shorashim* (such as T-S K7/82; T-S AS 141.76b), from Ibn Janah's *Sefer Ha-Shorashim* (Ms. Heb d.33.69; Ms. Heb d.33.70v; TS Ar 32.35, TS Ar. 46.36), fragments from Hebrew-Arabic Biblical Glossaries (TS Ar. 5/51; T-S AS 141.44d; T-S AS 141.68b; T-S K7/45), and fragments from Hebrew-Arabic Mishnaic Glossaries (T-S K7/11).

Genizah Cataloguing at JNUL (by Dr. Ezra Chwat, JNUL). This group completed an updated catalogue of the *Genizah* fragments of rabbinc manuscripts in Oxford’s Bodleian Library and, for the Oriental Department of the Hungarian Academy of Sciences, a catalogue of the David Kaufman collection in Budapest.

Documents from the Late Middle Ages (by Dr. Avraham David, JNUL). This group completed Cairo *Genizah* documents of the Late Middle Ages (from the second half of the 15th century to the first half of the 17th century).

Aggadic Midrashim (by Prof. Chaim Milikovsky, Bar-Ilan University). A group focusing on *Genizah* texts relating to Midrash Aggadah. This group will have two primary goals: (1) the preparation of a database/catalogue of *Genizah* fragments of Midrash Aggadah; and (2) the transcription of fragments of Midrash Aggadah from all collections of *Genizah* material.

In the beginning of 2006 an interim estimate displays an order of magnitude. The figures, especially in cataloguing, represent records, not necessarily fragments, because of joints and splits. Cataloging (or identifying) records 68,900. About 25 teams (including individual scholars): 42,300 records, in addition to 10 Cambridge computerized catalogues: 24,400 records and 6 additional computerized catalogs: 2,200 records. 6,800 transcriptions; 800 new translations; 23,000 bibliographical items; 4,000 (in process of adding 20,000 jts) digitized images; 167,000 computerized lists of shelf-marks. These are in the process of being loaded into FIST [= FGP Information Storehouse]. FGP has already had an effect on *Genizah*-related activities, certainly in Israel, but also abroad. The number of researchers, and in particular the number of graduate students (both M.A. and Ph.D. students) involved in *Genizah* research today, either cataloguing, transcribing, translating, or in general conducting research on specific topics related to the *Genizah* world is considerably greater than several years ago. Many of these graduate students are now researchers on their own, working in the *Genizah* field. The various teams of researchers in four universities in Israel as well as in the Jerusalem National and University Library, in the Institute for Manuscript Microfilms, and at the Ben-Zvi Institute have created an awareness and induced a flurry of activity very beneficial in itself to the promotion of *Genizah*-related research. Some successful examples are the special session on the FGP at the 14th International Congress of Jewish Studies in Jerusalem (2005), and the publication of the first issue of *Genizah Kedem*. The same can be said about the awareness and activities in many *Genizah* centers such as Cambridge, Manchester, Princeton, Pennsylvania, and the Jewish Theological Seminary in New York. From this perspective, one of the principal long-term aims of the project is thus being fulfilled.

[Menahem Ben-Sasson (2nd ed.)]

GENOVA, seaport in N. Italy. There were Jews living in Genoa before 511, since in that year Theodoric the Ostrogoth confirmed through his minister Cassiodorus the Jewish privilege of restoring, but not enlarging, the synagogue, which had been destroyed by Christian fanatics. From 1134 Jews who came to Genoa had to pay toward the illumination of the cathedral – this obviously discouraging their settlement. *Benjamin of Tudela (c. 1165) found only two Jews (brothers) in Genoa, dyers from North Africa. Notarial documents of 1250–74 show a number of Jews established there or in transit. In 1492 refugees from Spain arriving in Genoa in overcrowded ships were allowed to land for three days, but on Jan. 31, 1493, this concession was withdrawn through fear that the Jews had introduced the plague. In following years some well-to-do Jews were allowed to stay in Genoa under the supervision of an “Office of the Jews.”

The policy of the Genoese doges and senate toward the Jews subsequently varied, alternately influenced by fear of competition and the need to exploit Jewish experience in overseas trade. The Jews were expelled from the city in 1515, readmitted a year later, and again expelled in 1550. In 1567 the expulsion was extended to the whole territory of the republic. However, between 1570 and 1586, permission to engage in moneylending and to open shops in Genoa was granted four times to the Jews. In 1598 a further decree of expulsion was issued, but many Jews succeeded in evading it. In 1660 the 200 Jews living in Genoa were confined to a ghetto, although two years later many were still living outside it. What is possibly the first polyglot Bible (or part of it) was published here in 1516: the Psalter in the Hebrew original, with the Greek Septuagint, the Latin Vulgate, the Aramaic Targum and its Latin translation, and an Arabic version together with some notes by Bishop Agostino Giustiniani, to whose scholarly initiative this magnificent edition was due. The last decree of expulsion was issued in 1737 but was not rigorously enforced. Finally, in 1752 a more liberal statute was issued, but owing to the uncertain conditions the Jewish population remained small, numbering only 70 in 1765. The number increased during the 19th century, after Genoa’s development as Italy’s major port, especially after full equality was granted to the Jews in 1848. The community numbered about 1,000 in the middle of the 19th century.

[Attilio Milano]

Holocaust Period
Because of its location and its large and active port, Genoa was an important center for the assistance of Jews in Italy. Until the very last minute, some Jews managed to find boats and escape from the city.

One hundred fifty-three Jews were arrested and deported from the Province of Genoa during the German occupation of Italy. They included many refugees who had fled from Italian-occupied southeastern France at the time of the Italian armistice with the Allies on September 8, 1943, on their way to Switzerland or to the regions of Italy under the Allies.

GENNAZANO, ELIJAH HAYYIM BEN BENJAMIN OF (second half of 15th century), writer and disciple of R. Benjamin of Montalcino. Gennazano wrote (1) *Iggeret Hamadut*, on the Kabbalah, dedicated to David b. Benjamin of Montalcino, whom he wished to instruct in Kabbalah (ed. A.W. Greenup, 1912); (2) a poem about women, in which Gennazano arbitrates between Abraham of Sarteano, who published a poem against women, and Avigdor of Fano who composed a poem in their defense (all three ed. by Neubauer in *Israelitische Literbode*, 10 (1884–85), 97–105); (3) two anti-Christian parodies of the "Yigdal" hymn (A. Marx, in *IQO*, 9 (1918–19), 306–7 and *Freidus Memorial Volume*, 1 (1929), 276ff.); and (4) a polemic against Christianity, a compilation of the arguments he used in a disputation with the monk Francesco da Aquapendente in Orvieto (Ms.).

BIBLIOGRAPHY: HB, 10 (1870), 104; 21 (1881), 21; D. Kaufmann, in: *REFI*, 34 (1897), 309–11; I. Davidson, *Parody in Jewish Literature* (1907), 32.

[Umberto (Moses David) Cassuto]
Many Jewish refugees gathered in Genoa because the city was the headquarters of the Delegation of Assistance Emigrants Ebrei (DELASEM), which coordinated assistance and rescue programs. The Genovese office of DELASEM was headed initially by Lelelio Vittorio Valobra, who later fled to Switzerland and continued to work from there, with Raffaele “Cantoni, to support the organization’s activities. Massimo Teglio, a particularly courageous Genovese Jew, remained on the scene and had a central role in helping both Italian and foreign Jews in danger of arrest. Teglio worked closely with Cardinal Pietro Boetto (1871–1946), the archbishop of Genoa, and his secretary, Don Francesco Repetto. Don Repetto recruited local priests and also created a regional rescue network, with help from the archbishop of Turin and priests from other northern Italian cities.

The hunt for Jews began on November 2, 1943, when two German police agents entered the offices of the Jewish community and forced the custodians, Linda and Bino Polacco, to turn over membership lists and summon members to a meeting at the synagogue the following morning. Many members had already left the city, but a majority of those arrested in Genoa were seized at this time. Only a few members who received the summons were able to escape, thanks to a warning received from Teglio. Rabbi Riccardo Pacifici, who until the last moment tried to help refugee Jews, was captured in the Galleria Mazzini, also on November 3. He died at Auschwitz, probably gassed upon arrival on December 11.

[Alberto Cavaglion (2nd ed.)]

Contemporary Period

At the end of World War II, 1,108 Jews were left in Genoa. Subsequently, the Jewish population maintained its size, notwithstanding a constant outnumbering of deaths over births, and in 1965 it numbered 1,036 persons out of a total of 840,000 inhabitants. The port of Genoa was the transit center for various groups of Jewish emigrants who came mainly from Eastern Europe and were heading for Israel. In early 2000s the community numbered a few hundred, operating a synagogue and a Jewish school. The review La Fiamma (“The Flame”) was published monthly.

[Sergio DellaPergola]

GENOCIDE CONVENTION

The Genocide Convention for the prevention of genocide and the punishment of the organizers of genocide arose out of a general reaction to the Nazi crimes against the Jewish people. Though several mass liquidations had already previously occurred in the history of mankind, none of these had reached the proportions and planning of the slaughter of European Jewry by the Third Reich. After World War II, a movement developed demanding that such acts be condemned as an international crime, and their perpetrators be punished. This convention was to be upheld by the coordinated activity of all civilized nations. The term "genocide" was coined by the Polish-Jewish lawyer Raphael Lemkin in his book Axis Rule in Europe (1944), 79–95. It was also due to a large extent to his personal efforts over the years that the Convention was later ratified.

The Genocide Convention was directly connected with the trials of the major Nazi war criminals at the International
Military Tribunal at Nuremberg, where the Nazi plan to exterminate Jews wherever possible was publicly revealed in all its brutality. The “United Nations, which in the preamble to its Charter had renewed the affirmation of basic human rights and the recognition of the value of human life, could not ignore what had happened in this sphere. Consequently, at its first session on Dec. 11, 1945, after it had confirmed Resolution No. 95 (i) on the principles of international law which had been introduced by the legislation of the Nuremberg tribunal, the General Assembly adopted Resolution No. 96 (i), condemning genocide as a crime in international law, and determining that all nations have an interest in punishing such cases. After two years of preparation the text of the Convention was unanimously adopted by the General Assembly of the U.N. (Dec. 8, 1948). By January 1969, 67 countries had ratified it, some with important reservations. As of 2000, 152 countries were party to the Genocide Convention.

The Convention outlaws not only mass murder but also several other actions of a less extreme nature, taken against groups of individuals. It does not give a legal definition of the term “genocide.” The characteristic trend of all the actions which can be defined as genocide is their inherent intention to destroy, wholly or partially, a national, ethnic, racial, or religious group per se. The following actions are classified as genocide: the killing of persons belonging to the group; the causing of grievous bodily or spiritual harm to members of the group; deliberately enforcing on the group living conditions which could lead to its complete or partial extermination; the enforcement of measures designed to prevent birth among the group; the forcible removal of children from one group to another.

Since the Convention aims at the prevention as well as the punishment of genocidal action, it determines that not only those who carry out such actions are liable to punishment, but also those who take certain measures liable to bring about genocide, such as a plot to carry out genocide; direct and public incitement to genocide; an attempt at genocide; participation in such action. This list clearly shows that the activities included within the framework of genocide are related only to the biological and physical existence of the group in question.

One of the main achievements of the Convention is its application to every criminal, regardless of his status, i.e., it applies equally to rulers who bear the legislative responsibility for the act, on public functionaries, and on private individuals. This directive overrules the argument of an “act of state,” which contends that leaders of the state are free of responsibility, performing their action not in their own name but in the name of the state. Although the convention does not deal explicitly with the plea of “superior order,” it is clear that this plea is invalid unless it refers to instances in which the intent to murder a group cannot be attributed to the accused. The Convention provided for national implementation (by local courts), for international implementation (by an international penal court, not yet in existence), and for prevention and suppression of genocide by the General Assembly which may be called upon to do so.

The effectiveness of the Convention had in the first 20 years of its existence not been put to the test. Claims of genocide being committed were made, inter alia, in regard to blacks in Southern Sudan, to Kurds in Iraq, to Nagas in India, and to communists, Chinese in Indonesia, and the Ibos in the Biafran War in Nigeria, but no attempt was made to “seize” the General Assembly with these claims.

[Nehemiah Robinson]

GENTILE, non-Jew. It was only during the later Second Temple period that a sharp distinction and a barrier of separation was erected between the Jew and the gentile. The prohibition of marriage, which in the Bible was limited to the seven Canaanite nations (Deut. 7:1–4), was extended, following the reforms of Ezra, to include all non-Jews; the acceptance of monotheism was made the distinguishing mark of the Jew (Meg. 13a, Esth. R. 6:2); the Jews were regarded as having completely discarded “idolatry which was, however, uniformly characteristic of the non-Jew. In addition to the low moral, social, and ethical standards of the surrounding gentiles were continuously emphasized, and social contact with them was regarded as being a pernicious social and moral influence. As a result, during this period the world was regarded as divided, insofar as peoples were concerned, into the Jewish people and the “nations of the world,” and insofar as individuals were concerned, into “the Jew” and the idolater (“oved kokhavim u-mazzalot," usually abbreviated to “akkum," literally “a worshiper of stars and planets” but applied to all idolaters). Only considerations of humanity, such as relief of their poor, visiting their sick, affording them last rites (Git. 61a), and discretion (“one greets a gentile on their festivals for the sake of peace” – Tosef. Av. Zar. 1:3) were reasons for breaking the otherwise impenetrable barrier. As a result, the conception of and the attitude toward the non-Jew from the Talmudic period onward are strikingly different from that during the biblical period.

For the biblical period see *Stranger.

In the Talmud

Since talmudic literature spans over half a millennium, covering a wide geographic area, attitudes toward gentiles expressed in it vary considerably. In fact, it reveals a whole spectrum of opinions from the extreme antipathy of the tormented Jew of Hadrian’s time – e.g., Simeon b. Yoḥai’s statement: The best of gentiles should be killed (τ to the moderate
views expressed in the more friendly atmosphere of early Sassanid Babylon – witness Samuel’s making no distinction between Israel and the nations on the Day of Judgment (TJ, Nid 13b, 57a). Thus all such statements must be seen in their specific geographical-historical context. Nevertheless, in general it may be said that the Jew’s attitude toward the gentile was largely conditioned by the gentile’s attitude toward him (see Esth. R. 2:3), so that a gentile’s friendship to a Jew would be warmly and uninhibitedly reciprocated (see BK 38a, and witness the relationships between Meir and Avnimos ha-Gardi, Judah ha-Nasi and Antoninus, Samuel and Sapor, etc.).

Jewish antipathy to the gentle in talmudic times stemmed from a number of causes and functioned on several levels. Thus, gentiles were condemned for their cruelty to Jews (see BK 117a; Av. Zar. 25b, etc.), their morals were considered reprehensible (Yev. 98a; Av. Zar. 22b; Song R. 6:8, etc.), and throughout the period one finds reiterated the (theological) accusation that though they were offered the Torah, they rejected it (Av. Zar. 2b; Tanh. B., Deut. 54, etc.). Thus, the Jewish antipathy to the gentile was not due to the fact that he was of non-Jewish stock, i.e., it was not a racial prejudice, but rather motivated by their idolatry, moral laxity, and other such faults (see Av. Zar. 17a–b). Those that were righteous (by Jewish standards), however, were fully entitled to the rewards of the world-to-come (Tosef., Sanh. 13:2; BB 10b), and a further distinction was made by Johanan who declared that gentiles outside Palestine were not really idolaters, but only blind followers of their ancestral customs (Hul. 13b).

Terms
In rabbinic literature the distinction between gentile (goi, akkum) and Christian (nozeri) has frequently been obscured by textual alterations necessitated by the vigilance of censors. Thus ”Egyptian,” ”Amalekite,” ”Zadokite” (= Sadducee) and kuti (Samaritan) often stand in place of the original nozeri, as well as goi, akkum, etc. (see Pahad Yizhak, s.v. Goi). Probably when Resh Lakish stated that a gentile (akkum etc., in existing texts) who observed the Sabbath is punishable by death (Sanh. 58b), he had in mind Christians (see A. Weiss, in Bar Ilan, 1 (1963), 143–8, xxxi–ii). The same be so in the case of R. Ammi who ruled that one may not teach a gentile Torah (Hag. 13a; cf. Sanh. 59a). Numerous anti-Christian polemic passages only make real sense after nozeri has been restored in place of the spurious kuti or zedoki, etc.

In Law
The gentile figures very widely in talmudic law, in various legal categories, such as laws of personal status, marriage and inheritance, proselytization, laws of accession, contract, agency, evidence and damages, purity and impurity, laws concerning the types of property, and offerings he may present to the Temple, to name but a few. The basic assumption is that all non-Jews are subject to certain universal laws, religious, moral, and social (called the seven ”Noachide laws): (1) institution of courts of justice; (2) idolatry; (3) blasphemy; (4) incest; (5) homicide; (6) robbery; (7) eating the limb of a living animal, and according to other opinions, castration, mixing of breeds, witchcraft, etc. (Sanh. 56a–b, et al.).

Thus the gentle is a legal personality in Jewish law, and though sometimes discriminated against, is generally treated equitably. Thus, the Talmud relates that once the Roman government sent two officials to learn the Jewish law. After careful study, they said: ”We have scrutinized all your laws and found them just (emet), except for the following instance. You say that if a Jew’s ox gores that of a gentile, the owner is free from damages, while if a gentile’s ox gores that of a Jew, he is obliged to pay damages. But if, as you say, ’neighbor’ (in Ex. 21:35) excludes the gentile, then he should be free even when his ox gores that of a Jew. And if, on the other hand ’neighbor’ includes the gentile, then the Jew should have to pay damages when his ox gores that of a gentile …” (BK 38a).

Where there is legal discrimination against a gentile, it is usually based on objective reasoning, such as the fact that he does not subscribe to the Jewish ”social contract” (non-reciprocity). Thus, the Talmud rules that the commandment to restore lost property to its owner (Deut. 22:1–3) does not apply when the gentile is the owner (BK 113b). This is because gentiles do not act reciprocally in such cases. Similarly, a gentile cannot act as witness (BK 15a) because (according to one opinion) he is dishonest and unreliable (cf. Bek. 13b). Here it should be noted that Jews suspected of the same faults were liable to identical discrimination. Other apparently discriminating rulings were intended to discourage intimacy with the non-Jew, or, in other words, primarily to guard the Jews from the dangers of assimilation, such as the interdict against non-Jewish wines and cooked foods, etc. In practice discrimination against gentiles was frowned upon and even forbidden as it might jeopardize friendly relations (mi-penei darkhei shalom, Git. 5:8–9; mi-penei eivah, Av. Zar. 26a) and bring about a profanation of the Divine Name (hillul ha-Shem, BK 113b) – so much so, that the Talmud enjoins that gentile poor be supported with charity like Jewish poor (Git. 61a) and does not even tolerate the charging of interest to gentiles (BM 70b).

[Daniel Sperber]

In the Middle Ages
The talmudic laws, referred to above, whose purpose was to minimize contacts between Jews and idolaters ran counter to the social and economic realities of Jewish life in the Middle Ages. Unlike the talmudic period, Jews no longer lived in compact, economically self-sufficient communities. (This historical explanation for lifting many of the talmudic restrictions on Jewish-gentile relationships was already put forth by the Tosafists; see Tos. to Av. Zar. 15a, beg. Eimor.) Economic – and, as a result, a measure of social – contact with non-Jews was an inevitable necessity. Hence, in daily life, many of the talmudic restrictions in this area simply became dead letters. Taking this fact into cognizance, R. Menahem Meiri could write: ”In our times, no one observes these practices, neither gaon, rabbi, sage, pietist, nor pseudo-pietist” (Bet ha-Beḥirah, Av. Zar. in-
trod.). Under the circumstances, the halakhists of the period were confronted with the problem of reconciling talmudic law with common practice that patently ignored it. Among the tosafists, this was accomplished by a process of dialectically reinterpreting the talmudic sources. Each specific law was re-interpreted so as to make it conform to the current practice. For example, the talmudic law prohibiting business dealings with gentiles on their festivals was construed as in consonance with doing business with Christians on Sundays (Tos. to Av. Zar. 2a, beg. Asur). Rashi (quoted in Or Zarua, Sanh. 2a) declares that such dealings are forbidden only on Christmas and Easter. A similar attitude is taken by the tosafist R. Elhanan in the matter of renting to a Christian a house owned by a Jew (Tos. to Av. Zar. 21a beg. Af; see also Tos. to Av. Zar 13a beg. Kal va-homer). Occasionally the discrepancy between law and practice was overcome by drawing a distinction between idolaters referred to in the Talmud and Christians who reside outside the land of Israel (Maharam of Rothenburg, Resp., ed. Berlin, no. 386). While the tosafists declare that “we are certain that the Christians do not worship idols” (Tos. to Av. Zar. 2a beg. Asur), an attitude already adumbrated by R. Gershom, they fail to apply the principle categorically. The hesitation of the medieval halakhists to fully accept the implications of an absolute distinction between a Christian and an idolater is apparent in their legal discussions. The prominent tosafist R. Isaac of Dampierre held that since Christians could not be regarded as strict monotheists, according to the halakhah they come under the category of Noachides who are not enjoined against trinitarian belief (Tos. to San. 65b beg. Asur; Tos. to Bek. 2b beg. Shema). Confronted by the exigencies of daily life, the medieval halakhists tended toward leniency in such talmudic prohibitions as the use of gentile bread, butter, and wine. R. Menahem Meiri constitutes the single significant exception to the attitude of the halakhists. Strongly influenced by the rationalistic philosophy of his time, he drew a basic distinction between idolaters and between Christians and Muslims. The latter, he writes, are “peoples disciplined by religion” and, on principle, are to be regarded as Jews insofar as economic and social relations with them are concerned. In these matters, no invidious distinctions are to be made between Jews and Christians (Bet ha-Behirah, bk 113b; ibid., Av. Zar. 20a). He hesitates however in his practical decisions to waive all the ancient restrictions lest their total abolition lead to a loss of Jewish identity. Maimonides in his role as halakhist offers a position that is at odds both with that of the medieval decisors and with that of R. Menahem Meiri. He flatly states (Yad, Akum 9:4) – deleted by censors in the ordinary editions – that the talmudic limitations on Jewish-pagan relations are applicable in his own time. Moralistic literature of the period, notably, Sefer Hasidim, displays a marked ambivalence. In a number of instances, it goes far beyond talmudic law in warning against any contact with Christianity and its ritual objects. Thus, while the tosafists broadly qualify and virtually abolish the prohibition against dealing in the ritual objects of an alien faith, Sefer Hasidim makes the prohibition absolute. Yet, in its moral teachings, the book exhorts to an ethical scrupulosity in dealings with a gentile who observes the seven Noachide commandments. Such a person, it is averred, should be more honored than a Jew who does not engage in the study of Torah. However, such moral promptings were frequently motivated by considerations of expediency. Nevertheless, in a significant passage (no. 58), the book holds up a noble act performed by a Christian as one most worthy of emulation by Jews. A motive frequently invoked in warning against unethical acts committed by Jews toward Christians is that of hillul ha-Shem (desecration of God’s name; no. 1080). Despite a social atmosphere saturated with Christian contempt, repression, and persecution of Jews, R. Moses of Coucy could write: “We have already explained concerning the remnant of Israel that they are not to deceive any one whether Christian or Muslim. Thus, the Holy One, Blessed be He, scatters Israel among the nations so that proselytes shall be gathered unto them; so long as they behave deceitfully toward them (non-Jews), who will cleave to them? Jews should not lie either to a Jew or to a gentile, nor mislead them in any matter” (Semag Assayim no. 82).

GENTILI (Hefer), family in northern Italy, particularly in Gorizia, Trieste, Verona, and Venice. The name Gentili was rendered in Hebrew as Hefer, and it is the latter name which appears in the Hebrew writings of the members of this family.

Moses Ben Gershom (1663–1711), rabbinical scholar. Born in Trieste, Moses was active in Venice. He was a pupil of Solomon b. Isaac Nizza, who was active in Venice around 1700, and supported himself by being a private tutor. He dealt with philosophy, mathematics, and the natural sciences. He composed poems, one of which, written when he was 15, can be found in the Venice edition of the Bible (1675–78). His main work was a homiletical-philosophical commentary on the Pentateuch (Melekhet Mahashevet, Venice, 1710, with tables and a portrait of the author; second edition, Koenigsberg, 1819, with super-commentary, Mahashevet Hoshev; by Judah Leib Jaffe). Moses also wrote Hanukkat ha-Bayit, dealing with the construction of the Second Temple (Venice, 1696, with plan). On the occasion of his wedding, the poet Yomtov Valvasson composed a poem (Venice, 1682), and a dirge on his death was published (Ghirondi-Neppi, 241). The beginning of an address by Moses is found in an Oxford manuscript (Neubauer, Cat. 1123).
GERSHOM BEN MOSES (1683–1700), son of Moses b. Gershom. Gershom wrote Yad HaRazim, a Hebrew rhyme-lexicon containing an introduction, 12 rules for Hebrew usage in poetry and rhyme scheme, and an appendix devoted to a poetical version of the 613 commandments (azharot), according to Maimonides’ enumeration. After Gershom’s untimely death at the age of 17, the work was published by his father who added an introduction containing his son’s biography. A eulogy by Solomon b. Isaac Nizza, Gershom’s teacher, appears as an appendix to the work (Venice, 1700; second edition, without the azharot and the eulogy, but with additional notes by Simhah *Calimani, Venice, 1738–45). Moses Gentili quotes some of his son’s interpretations in his Melakhet Mahasevet.

GEOGRAPHY

In the Bible

The geographic horizon in the early biblical period was the *l’uah ha-amim*, a table of 70 nations listed in Genesis 10. The identification of the names and the location of the countries are the subject of differences of opinion among scholars. It is clear however that included are all of Arabia, Syria, Asia Minor as far as the Caucasus, all the lands of the Tigris and Euphrates, the western part of the highlands of Iran, the regions of the middle and lower Nile including the desert extending to their west, and Greece and its islands (see The Seventy "Nations").

In the Talmud

Scattered throughout the Talmuds, the Targums, and the Midrashim are various geographic references connected with the halakhah and with expositions and homilies on the Bible and Midrash. Most of these references are associated with Ereẓ Israel: with laws about “commandments applying to Ereẓ Israel,” which are to be observed only in Ereẓ Israel, with praise of the country, and with the identification of biblical place-names.

The *mitzvot* dependent on Ereẓ Israel have full application only within “the territories occupied by those who came back from Babylonia” (Ereẓ Israel); have partial application within the borders of those who came up from Egypt; and refer only marginally to that territory which lies within the wider borders promised to the patriarchs but outside the area of those who came up from Egypt – territory conquered by David on his own responsibility and known in the Talmud as Syria. Within the obligatory territories were exempted enclaves, such as Caesarea in the Sharon, Susita (Hippos) in the Golan, Ashkelon in the Judean coastal lowland, and within the exempted territories obligatory enclaves such as Kefar Zemaḥ on the southeastern shore of Lake Kinneret. The boundaries of these areas and also of the enclaves are laid down in the halakhah (Shev. 6:1; Tosef., Shev. 6:6–11; Tosef., Oho. 18:14; Sif. Deut. 51; TJ, Shev. 6:1, 36b). In connection with the laws of usucapion, Ereẓ Israel was divided into three districts: Judea, Transjordan, and Galilee (BB 3:2). Concerning the laws for the removal of fruit from the house in the sabbatical year when they had stopped growing in the field, each of the three districts was subdivided into three regions: mountain, valley, and lowland. The phytogeographical features of these were: for mountains the Cillin pine, for valleys the palm, and for lowlands the sycamore (*Ficus sycomora*) (Tosef., Shev. 7:11; cf. Shev. 9:2). The area between Judea and Galilee was called “the country of the Cutheans” or contemptuously “the Cuthean Strip” (*Matlit shel Kutim*; Lam. R. 3:7). The question also arose as to whether the law applicable to levitically unclean heathen countries applied also to the country of the Cutheans. The sages decided that the law was applicable in those cities which had been surrounded by a wall since the time of Joshua and in which Megillat Esther is read on Adar 15 th (Ar. 9:6; Ar. 32a; Meg. 48a; TJ, Meg. 1:1, 70a).

Many identifications of geographic and ethnographic names in the Bible are in the nature of expositions. Onkelos contented himself with a few which he considered to be beyond doubt. Targum Pseudo-Jonathan and the Palestinian Targum frequently identified places solely on the basis of the similarity of names without regard to any geographic considerations. Among the identifications of the table of nations, given in the Midrashim and Targums, none includes all the nations and countries known to the sages. These identifications are frequently inconsistent and contradictory. The equation of Rome with biblical Edom which was apparently intended at first to allow for open criticism of the Roman authorities was later accepted as fact and hence the former and latter halves of the verse: “Behold, of the fat places of the earth shall be thy dwelling, and of the dew of heaven from above” (Gen. 27:39) were interpreted in the Midrash (Gen. R. 67:6) as referring respectively to Italy (Rashi, ad loc., adds “of Greece,” i.e., Magna Graecia, southern Italy) and to Bet Guvrin. On the identification of Kenites, Kenizzites, and Kadmonites, who are mentioned in the covenant with Abraham (Gen. 15:19), and who were not conquered by those who came up from Egypt, there are divergent opinions: in a plausible interpretation R. Judah held that they were Arab tribes on the border of the land of the seven nations which the Israelites inherited, whereas R. Eliezer contended that they refer to Asia Minor, Thrace, and Carthage (Gen. R. 44:23, end; BB 56a). The identification of places in Ereẓ Israel, particularly in Galilee, is mostly realistic and is of aid in a scientific study of the historical topography of the country (TJ, Meg. 11:1, 70a; b; TB, Meg 5b).

The sages thought that geographic and hydrological factors exerted a great influence on man’s physical and spiritual being. On Moses’ instructions to the spies: “And see the land, what it is; and the people that dwell therein, whether they are strong or weak” (Num. 13:18), the Tanhuma (Sheelah Lekha, 6) comments: “There is a country that raises strong men, and there is a country that raises weak men.” A similar view is expressed in the midrashic statement: “Some springs
raise strong, others weak men, some handsome, others ugly men, some modest, others dissolve men." The spring of Shit-tim (Num. 25:1), which was a place of licentiousness, watered Sodom (Num. R. 20:22).

From the statements of the sages one can reconstruct the geographic concept of the world current in talmudic times. The earth with its seas was seen as a circle ringed around by the ocean (Okyanos) with the center of the circle being the "even shetiyyah ("foundation stone") in the Holy of Holies, which was thought to be in the middle of the earth (tabbur ha-arez), not only in a geometrical sense. This was thought to be the beginning of creation. Around the center are concentric circles in order of importance: the Holy of Holies, the Temple, Jerusalem, Erez Israel, and the world (Tanh. Kodoshim, 6); this particular idea was devised by a man who had never seen Jerusalem. The idea of the centricity of the Holy Land occurs first in the Apocrypha, influenced by the Greek concept of omphalos, which is that the center of Earth is at Delphi. The sages based the idea that the start of creation is with the even shetiyyah on biblical passages (Tosef., Yom ha-Kippurim 3:6; Yoma 54b), but not the centrality of Jerusalem, which was not of such great significance to Jews as to Christians who transferred the center to the cross of Jesus, a concept which the Church Fathers based on biblical verses (Ezek. 5:5; 38:12; Ps. 74:12). Thus the center of circular medieval maps is Jerusalem with the cross. The view that Erez Israel is higher than all countries, Jerusalem than the whole of Erez Israel, and the Temple Mount than all Jerusalem (Sif. Deut. 152 and 37; Sanh. 87a) is a literal homiletic interpretation of the verse: "Then shalt thou arise, and get thee up unto the place which the Lord thy God shall choose" (Deut. 17:8). The sages were however not unaware of the fact that the spring of Etam, from which water flowed to the Temple, was higher than the Temple Mount.

An estimate of the size of the "world" ranged between the extremes of 6,000 and 1,440,000 parasangs. But a still more exaggerated view held that the earth was only 1/12,900,000 part of Gehinnom (TJ, Ber. 1:1, 2c; Pes. 94a). On the area of the inhabited world (oikoumuven) there were divergent opinions:

1) a third is inhabited, the remaining two-thirds being sea and desert;
2) the whole inhabited world is situated under one star;
3) the inhabited world is located between the Wain and Scorpio, that is, about 80° from north to south (54° north of the equator and 26° south of it);
4) it extends from east to west, a distance of one hour of the sun's course, that is 15° (Pes. 94a).

Even those sages who were aware that the earth is round did not deal with the problem of the date line. Alexander the Great during his campaigns is said to have risen upward until he saw the earth like a globe partially submerged in an enormous bowl of water, that is, the ocean (TJ, Av. Zar. 31, 42c; Num. R. 13:14). The Zohar (Lev., s.v. ve-im zevah shelamim (31), Soncino ed., 346) states that according to the Book of R. Hamnuna the Elder the earth is a revolving globe, that when it is day on one side, it is night on the other, that there is a place where there is no day and opposite it a place where there is no night. The comprehension of this is said to be the secret of the mystics and not of geographers. How this individual view came to be included in the Zohar is not clear.

The problem of the density of the earth occupied the aggadists. There was a widespread view that the circle of the earth is like a dish that floats on the face of the deep, namely, the water, and that below the deep are mountains, so that the whole rests on a solid base. Another view holds that the earth rests on pillars which apparently reach down to those mountains. Views on the thickness of the earth range from a thousand cubits (about 500 m. = 547 yds.) to a 50-year journey. There was a generally accepted view that the "water of the deep" is close to the surface of the ground which accounts for the origin of springs and the moistening of the ground: to a handbreadth of rain the deep responds with two handbreadths (Taan. 25b). Some thought that these springs originated in the Euphrates. The four rivers that went out of the Garden of Eden were higher than all the rivers in the world, the highest of them being the Euphrates, and hence R. Judah in the name of Rav prohibited all the water in the world to anyone who took a vow not to drink from the Euphrates (Bek. 55a). Hot springs have their origin in the deep, and pass over the entrance to Gehinnom (Shab. 39a). "All the rivers run into the sea, yet the sea is not full … they return (to their source)" (Eccles. 1:7). How do they return? There are three views:

1) through the channels of the deep;
2) through vapors that rise from the sea and form clouds, the desalination of the seawater taking place in the deep or in the clouds;
3) that river water disappears in the ocean because the latter has water which "absorbs water" even if brought up in a barrel on to dry land (a view which is apparently not an exposition of the passage in Ecclesiastes). The phenomenon of how such absorption takes place is not explained (Taan. 9b; Gen. R. 13:9; et al.).

The Jordan flows from the Dead Sea to the ocean below the earth (Bek. 55a). The idea that the ocean is higher than the land is apparently based on the homiletic interpretation of biblical verses (Jer. 5:22; Amos 9:6); the sand on the seashore prevents the flooding of the land, which happened twice, once in the generation of Enosh, when the flood reached Calabria, and once in the generation that witnessed the confusion of the tongues when the flood stretched as far as the ends of Barbaria (TJ, Shek. 6:2, 50a; Gen. R. 23:7, end). In the sea there are riverlike currents and waves whose height reaches 300 parasangs which is also the distance between one wave and another. Among the big waves there are small ones (BB 73a).

The sages distinguished between floral zones in Erez Israel on the basis of differences in altitude and hence in temperature. But there are other universal reasons for such diversity, viz. the distinctive features of water and of soil. Koheleth-Solomon planted in his gardens and parks "trees … of all kinds of fruit" (Eccles. 2:5), which means, according to the aggadah,
literally all the kinds in the world. That they might flourish he sent demons, over whom he had dominion, to irrigate each tree by bringing water from its country of origin. Another view held that arteries spread out from the center of the earth through the entire world, and Solomon, knowing how to distinguish them, planted on each artery the appropriate trees, even those from Africa and India (Eccles. R. 2:5, no. 1).

From the praise of Erez Israel contained in the aggadah it is possible to put together an aggadic geography of the country before its destruction. The love of the Holy Land, the anguish at its impoverishment and at the depletion of its children, and the expectation of its future glory engendered exaggerations that are logically incomprehensible. Erez Israel’s situation in the center of the world and its altitude did not change even after the destruction of the Second Temple, nor did the weight of its stones, which was greater than those of the neighboring countries (pārē 13). The aggadah is responsible for the extension of the western boundary up to the Atlantic Ocean, this being, for the aggadist, the interpretation of “the Great Sea” in the verse: “And for the western border, ye shall have the Great Sea for a border” (Num. 34:6). Extravagant conclusions were reached by Targum Pseudo-Jonathan. All the countries on the continent as well as the islands opposite Erez Israel within the limits assigned to the patriarchs (from the Brook of Egypt to Taurus Amanus) up to the “primeval waters” at the furthermost extremity of the world and even the ships sailing the sea are all included in the Promised Land (ibid.). It was said that after the destruction of the Second Temple Erez Israel “drew together,” i.e., diminished inside. Alexander Yannai had 60 myriad “cities” in the King’s Mountain and in each of them were 60 myriad people, except for three in which there were twice as many. To feed this population the country produced enormous crops of excellent quality. By the fourth century, the country had deteriorated to such an extent that it did not produce even a large number of reeds (Tiq., Meg. 1:1, 170a; Tj., Tāan. 4:8, 69a; Git. 57a). In the days of Simeon b. Shetah rain fell at the right time, the grains of wheat were as large as kiddush stones, the Sabbath river, which rages and hurls stones at its extremity of the world and even the ships sailing the sea are all included in the Promised Land (ibid.). It was said that after the destruction of the Second Temple Erez Israel “drew together,” i.e., diminished inside. Alexander Yannai had 60 myriad “cities” in the King’s Mountain and in each of them were 60 myriad people, except for three in which there were twice as many. To feed this population the country produced enormous crops of excellent quality. By the fourth century, the country had deteriorated to such an extent that it did not produce even a large number of reeds (Tiq., Meg. 1:1, 170a; Tj., Tāan. 4:8, 69a; Git. 57a). In the days of Simeon b. Shetah rain fell at the right time, the grains of wheat were as large as kiddush stones, the Sabbath river, which rages and hurls stones into climatic regions, together with a list of the countries in each region, was Sefer Zurat ha-Arez (“The Book of the Shape of the Earth” (late 11th or beginning of the 12th century)), by Abraham b. Haiya. His system, like that of his Muslim teachers, is that of Ptolemy, the Alexandrian (c. 150 C.E.). According to Abraham b. Haiya, the earth, with the seas upon it, is a globe. The western or lower half of the globe is entirely water. The eastern half is mostly dry land (except for seas such as the Mediterranean and the Red Sea), but there is no human settlement except in seven regions. North of latitude 66° there is no settlement because of the cold. In the far south (there are those who say from the equator to the southernmost point) there is no settlement because of the heat, which increases as one progresses in a southerly direction. Zurat ha-Arez was published with a Latin translation by D. Schreckenfuchs and notes by Sebastian Muenster (Basle, 1546).

The fate of the Lost Ten Tribes has stirred the imagination of Jews from the days of the Second Temple to our times. A miraculous existence was invented for them in distant and unknown lands, the legend of the tribes being connected with those of the river “Sambatyon and the Mountains of Darkness. Thus the Ten Tribes were exiled across the Sambatyon, Ζαβσατέων, the Sabbath river, which rages and hurls stones on six days of the week but rests on the Sabbath, thus proving through nature the holiness of the Sabbath (Sanh. 65b; Gen R. 115, 73:6); Josephus describes it as a river in Syria which flows on one day and rests on six days of the week (Jos., Wars, 7:96–99); the origin of the legend being apparently to be found in rhythmically intermittent springs, such as Ein Farah in the Judean desert.

MEDIEVAL JEWISH GEOGRAPHY

Knowledge of the spherical form of the earth, derived from observing the height of the stars in different latitudes, reached Jewish scholars in Islamic countries through Arab astronomy. The first Jew to consider the earth as a sphere was the Cordovan rabbi, Ḥasan b. Mar Ḥasan ha-Dayyān, in his book on intercalation (end of the tenth cent.). At approximately the same time in Baghdad Ẓehera b. Hanina Gaon, followed by his son Ẓei Gaon, rejected the opinion that the heavens are like a cap over a flat earth. Only fragments remain of the stories of Abraham b. Jacob who traveled in Germany and the Slavic countries in the 950s. The two letters from Joseph b. Aaron, king of the Khazars, to R. Ẓeḥai ibn Shaprut, which comprise not only historical, but also geographical material, were transmitted by Jewish merchants from Germany (about 950). The books of medieval travelers frequently contained material of geographic interest (see Travelers).

By the 11th century the spherical form of the earth was accepted among Jewish scholars in Islamic countries, and from there the idea passed to Provence and Italy. Solomon ibn Ẓabirol states in Keter Malkhut: “The terrestrial globe is divided into two, half is dry land and half water.” The first work in Hebrew about the round shape of the earth and its division into climatic regions, together with a list of the countries in each region, was Sefer Zurat ha-Arez (“The Book of the Shape of the Earth” (late 11th or beginning of the 12th century)), by Abraham b. Haiya. His system, like that of his Muslim teachers, is that of Ptolemy, the Alexandrian (c. 150 C.E.). According to Abraham b. Haiya, the earth, with the seas upon it, is a globe. The western or lower half of the globe is entirely water. The eastern half is mostly dry land (except for seas such as the Mediterranean and the Red Sea), but there is no human settlement except in seven regions. North of latitude 66° there is no settlement because of the cold. In the far south (there are those who say from the equator to the southernmost point) there is no settlement because of the heat, which increases as one progresses in a southerly direction. Zurat ha-Arez was published with a Latin translation by D. Schreckenfuchs and notes by Sebastian Muenster (Basle, 1546).

The discoveries at the end of the 15th and the beginning of the 16th century refuted the limitation of the earth’s population to seven regions. Information regarding this refutation was conveyed to readers of Hebrew by Abraham b. Mordecai “Farissol in chapter 13 of his book Iggeret Orhot Olam (“Epistle on the Ways of the World,” 1525), but geographical ideas derived from legends or books are still to be found in
homiletic and hasidic works, and they persisted in "scholarly" books until the 19th century. Still in 1550, Mattathias b. Solomon "Delacrut, in his short treatise Zel ha-Olam ("Shadow of the World"), based on a 13th-century French work, speaks of a quarter of the area of dry land which was not populated and where no human foot trod. As late as the end of the 18th century, Phinehas Elijah *Hurwitz of Vilna in Sefer ha-Berit [ha-Shalem] ("The [Complete] Book of the Covenant," 1797) maintains that most of the globe is water, either surface or underground, that the waters of the oceans are higher than the land, and that sand prevents their flooding the earth. It served as a basic text to those who wished to learn about nature but were apprehensive of the work of the new maskilim who belittled traditional literature. Geographic literature in Hebrew and the part played by Jews in systematic geographic research are slight compared with the Jewish contribution to other branches of science, such as astronomy, mathematics, and medicine.

**Geography Textbooks**

Abraham Farissol's Iggeret Orhot Olam served as a Hebrew geography textbook until the 19th century. Like other 16th-century Jewish and Christian thinkers, Farissol believed in the existence of the Ten Tribes and the river Sambatyon, and devoted much space to them. Approximately 300 years later, Samson ha-Levi *Bloch, a maskil of the Galician school, published She-vilei Olam ("The Paths of the World"; vol. 1, "Asia," 1822; vol. 2, "Africa," 1827), basing himself on German literature. The treatise is in the rhetorical and witty style of the times. Abraham Menahem Mendel *Mohr, still using only German sources, continued the work (1856) after Bloch's death. The information on Jewish communities and Jewish scholars, known to the two authors without having to do any special research, is their original contribution. In the 1870s with the establishment of schools that included secular instruction in the curriculum, special short textbooks began to appear. Reshit Limmudim ("The Beginning of Instruction," first ed. 1796; last ed. 1869), by Baruch Linda, the first such textbook in Hebrew, also has chapters on geography. A geography book, Ha-Kadur ("The Globe," Prague, 1831), by Moses S. Neumann, was written partly in Hebrew and partly in German, though in Hebrew characters. Asher Radin's Geografyah ha-Ketannah ("The Short Geography," Koenigsberg, 1860), is an abridgment of a German textbook. Two works on the principles of geography: Mezukei Erez ("The Foundation of the Earth," 1878), by Nahum *Sokolow, and Gelilot ha-Arez ("The Regions of the Earth," 1880), based on German literature, by Hillel Kahana, an experienced pedagogue who is one of the last of the Galician school, appeared about the same time. As was customary among writers who did not know any Western European language other than German, Kahana transcribed French and English names according to the German pronunciation. An innovation was a colored Hebrew map, and sketches and pictures with Hebrew captions. In this way he educated the Hebrew reader to map study and observation.

Writers of textbooks solved problems in Hebrew geographical terminology and paved the way for the teaching of geography in schools in Ereẓ Israel from the end of the 19th century.

[Abraham J. Brawer]

**Modern Geography**

In modern geography there has been development in the concentration on limited areas and specialization in particular fields of study. One of these limited areas is the city. Die Stadt Bonn, ihre Lage und raumliche Entwicklung (1947), by Alfred *Philippson, a German geographer, is one of the most important works on urban geography. Another significant contribution was made by Norton Sidney *Ginsberg, a U.S. geographer, who at the invitation of the Japanese government studied Tokyo's urban problems and incorporated his findings in "Tokyo Memorandum" (Reports on Tokyo Metropolitan Planning, 1962). Another specialized field is economic geography. Julius *Bien, a U.S. cartographer, not only prepared atlases for a number of major cities but carried out a full-scale survey of intercontinental railways for the U.S. War Department. Saul Bernard *Cohen, who specialized in a number of geographic fields, wrote Store Location Research for the Food Industry (1961), considered a standard guide. In addition, in the sphere of political geography he wrote Geography and Politics in a World Divided (1963).

On physical geography Victor A. *Conrad wrote Fundamentals of Physical Climatology (1942) and Methods in Climatology (1944); the Israeli meteorologist Dov *Ashbel published A Bio-Climatic Atlas of Israel (1950) and Climate of the Great Rift; Arava, Dead Sea, Jordan Valley (1966). Joseph Hefez Gentilli (1912–2000), an Australian geographer, wrote Australian Climates and Resources (1947) and Geography of Climate (1958). In connection with the study of the geography of soils David "Amiran, an Israeli, edited for UNESCO "Land Use in Semi-Arid Mediterranean Climates" (in Arid Zones Research, vol. 26, 1964). Morton Joseph *Rubin, a U.S. meteorologist, did research in oceanography, meteorology, and in glaciology, particularly in connection with his studies on the Antarctic. Another specialized branch of modern geography is biogeography; a monumental work in this field is Studies in Medical Geography (7 vols., 1958–67), by Jacques Meyer May (1896–1976), a French-born American scientist. Nautical geography is another division which has drawn the interest of Jewish geographers, among them the Italian Carlo *Errera, who wrote the pamphlet L’italianità dell’ Adriatico (1914). The modern period has also produced an increasing number of historians of geography. Gustavo Uzielli (1889–1911), an Italian, did extensive research on the explorations of Christopher Columbus, Toscanelli, and Amerigo Vespucci. His best known work is La vita e i tempi di P. Dal Pozzo Toscanelli (1894).

A number of geographers have turned their attention to the history of cartography. Roberto *Almagià, one of Italy's most distinguished geographers, edited Monumenta Italica Geographica (1929) and Monumenta Cartographica Vaticana.

**GEONIC LITERATURE.** This entry includes the basic books of geonic literature, which were compiled during the geonic period – from the year 600 to 1040, approximately. Geonic literature includes several types of works:

1. Commentaries on the Bible
2. Commentaries on the Mishnah and Talmud
3. Books of Halakhah
4. Jewish Thought and Ethics
5. Prayers (prayer-books) and Liturgical Poetry
6. Responsa
7. Documents and Letters
8. Language and Grammar

**Commentaries on the Bible**

**Commentaries on the Pentateuch (torah).** *Saadiah Gaon.* Torah with Arabic translation (Constantinople, 1546); Tafsir al-Torah bi-al-Arabiya (Paris, 1893); Keter Torah, known as Taj (Jerusalem, 1894–1901); Commentary on the Torah, Kafah edition (1963); Torah Commentary on Genesis (Zucker edition 1984).

Samuel ben Hophni Gaon. Commentary on the book of Genesis, A. Greenbaum (ed.), 1978. Selections of his commentary on other parts of the Torah have also been published.

**Commentaries on the Prophets and the Hagiography.** From Saadiah’s translation of biblical books, Tafsir, there remain those of the Pentateuch, Isaiah, Proverbs, Job, the Five Scrolls, and Psalms, all with commentary. They were published from 1546 to 1970, with new sections of his commentaries on Isaiah, Lamentations, and the Book of Esther appearing more recently.

Saadiah’s introduction to his Pitron Shivim Millim was printed in N. Allony’s Studies in Medieval Philosophy and Literature 1: Saadiah Works (1986). Various geonic commentaries on the Bible are scattered throughout the geonic responsa and referred to in geonic essays; they were collected in various anthologies.

**Commentaries on the Mishnah and Talmud**

**Commentaries on the Mishnah.** (1) The only geonic commentary on the Mishnah extant in its entirety is on the order Tohorot (J.N. Epstein edition by E.Z. Melammed, 1982); it is attributed to *Hai Gaon and may be an adaptation of Saadiah’s commentary. (2) Geonic commentaries on the Mishnah collected from various sources appear in Ozar ha-Geonim (”The Treasure of the Geonim,” 13 vols., 1928–62) by Benjamin M. *Lewin. (3) Saadiah’s Millot ha-Mishnah (“Words of the Mishnah”) appeared in various journals.

**Commentaries on the Talmud.** (1) Talmud commentaries of the early geonim were incorporated into the Talmud. For a long time the geonic commentaries were found among those of the French and Spanish commentators. Some of these were thought irretrievably lost, with fragments being rediscovered only during the past 100 years. They were published in various articles, anthologies, and in Lewin’s Ozar ha-Geonim.

(2) Talmud commentaries by *Paltoi Gaon, Sherira Gaon, and Hai Gaon, mentioned in various sources, have not reached us in their entirety. (3) The Talmudic dictionary of the gaon Samuel ben Hophni was published by S. Abramson in A. Even Shoshan (1985), 13–65.

**Introductory Books to the Talmud.** These works include material dealing with methodology as well as with history. (1) Seder Tannaim ve-Amoraim, compiled c. 884–886, was first published in Leghorn in 1796; an edition by Kalman Kahana appeared in 1935. The author’s name is unknown. It contains a summary of the chain of tradition of the oral Law up to the *savoraim, including regulations for passing halakhic judgments. (2) Saadiah Gaon’s Introduction to the Talmud, which has been lost. (3) Samuel ben Hophni’s “Introduction to the Talmud” – selected chapters of this work with the Arabic source and Hebrew translation, accompanied by an introduction and notes, were published by S. Abramson (1990). This volume is the second part of the work Samuel b. Hophni called Mevo li-yedi’at ha-Mishnah ve-ha-Talmud. Extant from the first part are most of the book’s index and several sections from the text (see S. Abramson, in: Sinai 88 (1980), 193). (4) Iggeret Rav Sherira Gaon was published by B.M. Lewin (1921) in both known versions, the so-called “nosah Sefarad” and “nosah Zarefat,” i.e., a “version from Spain” and a “version from France” (in which there is a difference of opinion as to whether the Mishnah was already written down in the time of Rabbi Judah ha-Nasi or merely remembered orally), on the basis of manuscripts and Genizah fragments.

**Books of Halakhah**

(1) She’iltot (Venice, 1566), by *Aha of Shabha (680–752), gaon of Pumbedita. Robert Brody’s The Textual History of the She’iltot (1991) is a study aimed at reconstructing as closely as possible the original text of Sefer ha-She’iltot. This work prepares the way for a new edition of the She’iltot which will contain additional textual vestiges, particularly from the Cairo Genizah. (2) The book Ve-Hizhir, an imitation of She’iltot. (3) Legal decisions by Yehudai *Gaon (head of Sura academy, 757–761), to whom the book Halakhot Pesukot is attributed. He is the first gaon whose responsa have been preserved. (4) Halakhot de-Rab Abba, a student of Yehudai Gaon, excerpts of which were published by J.N. Epstein in Madda’ei ha-Yehadut (1927). (5) Halakhot Gedolot. In addition to the 1548 and 1885 editions, a new edition according to a manuscript in the...
ENCYLOPAEDIA JUDAICA, Second Edition, Volume 7

Ambrosiana Library, Milan, was edited by A. Hildesheimer (grandson of the 1885-edition editor): (a) Seder Moed (1972); (b) Seder Nashim (first three tractates, 1980), part 3, edited by E. Hildesheimer, introduction, 11–26, and Hakdamat Halakhot Gedolot, edited by N.Z. Hildesheimer (1987), 9–52. (See also Halakhot Gedolot-Halakhot Pesukot). (6) *Halakhot Pesukot or Hilkhot Re'u, attributed to the disciples of Yehudai Gaon, published in 1886 and in the Sasson Edition (1951). (7) *Halakhot Keezuvot, published by M. Margaliot in 1942. (8) Books of Halakhah by Saadiah Gaon. Saadiah wrote monographs on various halakhic subjects, but only a small part has reached us in its entirety. A study on Saadiah's Sefer ha-Edut ve-ha-She'ilot by M. Ben-Sasson appeared in the Annual of Jewish Law (1984–86), 135–278. A new edition of Sefer ha-Mitzvot, with commentary by Y.Y.F. Perla, pts. 1–3 appeared 1989. (9) Sherira Gaon who is famous for his Iggeret mentioned above. Approximately half of the geonic responsa in our possession were written by Sherira and his son Hai Gaon. Parts of Sherira’s commentaries on certain Talmudic tractates have also been preserved. (10) Hai Gaon did not compile any book of halakhah on all the Talmudic laws, but devoted a separate composition to each subject, as did Saadiah and Samuel ben Hopnhi. Five additional chapters of Sefer ha-Mekkah ve-ha-Mimkar ("Treatise on Commercial Transactions") were published by S. Abramson in the Joseph Dov Soloveitchik Festschrift, vol. 2 (1984), 1312–1379. There is also mention of a Book of Oaths in verse. Chapters of monetary laws of commerce and chapters of oaths in verse have appeared in part in various collections. (11) *Samuel ben Hopnhi. Of his many works, only a few have reached us. In recent years excerpts have been published of his books from the Genizah. He wrote monographs on halakhah which are still being published. Mention should be made of the following: Chapters on Blessings (in Ozar ha-Geonim, tractate Berakhot, commentaries, pp. 65–77), the Book of Gifts, divorce laws, obligations of religious judges and the Book of Pledge, etc.

Other halakhic essays from the period of the Geonim include (a) Sefer Metivot: a book of laws arranged according to the order of tractates of the Talmud. B.M. Levin collected all the citations from the book which were mentioned in earlier books and arranged them in the Talmudic order in this book Metivot (1934). (b) Sefer Hefez. There are many speculations concerning the authorship and place of origin of this book. Many of the early authorities discussing halakhic matters use Sefer Hefez as their source. Levin is of the opinion that Metivot served as an example for Sefer Hefez. (c) The Book of Mitzvot of Hefetz ben Yatzliah (B. Halper edition 1915): This book includes all the laws of the Torah, and it is "a treasury of halakhah, philology and philosophy as they were in the time of the author.

HALAKHIC LITERATURE IN EREZ ISRAEL IN THE PERIOD OF THE GEONIM. In recent years, there were discovered in the Genizah, Hilkhot Tereifot shel Erez Israel – in the style of Halakhot Pesukot. An important find was remnants of Sefer ha-Ma'asim li-Venei Erez Yisrael, and parts of this book were published by Levin, Epstein, Mann, and Aptowitzer, between the years 1930–1974. It is assumed that Sefer ha-Ma'asim served as a source for the compiler of Halakhot Gedolot, and possibly also for Sefer ha-She'ilot. There is a theory that Sefer ha-Ma'asim is another title for Sefer ha-She'ilot. During the Geonic period, important literary activities were undertaken in Erez Israel, such as the translation of works from Aramaic to Hebrew: Ray Yehudai’s Halakhot Pesukot was translated into Hebrew under the title Hilkhot Re'u, taken from the opening words of the book “Re’u ki Adonai natan lakhem et yom ha-Shabbat....”

RULES, REGULATIONS AND CUSTOMS. The Geonim set down various legal decisions and customs. At the beginning of the Geonic period, an essay was written by a sage in Erez Israel, under the title: “Controversies between Easterners and those who dwell in Erez Israel” (pub. M. Margaliot, 1938). It includes a list of 55 customs upon which Jews in Babylonia disagreed with Jews in Erez Israel, and this book formed the foundations for all subsequent books of customs. “The Book of Change of Customs” (Müller, 1878) and the “Treasury of Differences of Custom between Babylonian and Palestinian Jewries” (ed. Levin, 1942) are also available.

GEONIC EDICTS (TAKKANOT). Geonim sought to issue decrees based on Talmudic conclusions, and to establish regulations to cover all aspects of Jewish life. In the course of time, it became necessary to supplement Talmudic regulations and to introduce new laws according to the requirements of the period. These laws encompass various areas, and in particular deal with laws of personal status, money matters, oaths, and evidence. The sources for these ordinances are the geonic literature and they are collected in H. Tykocinski’s *The Gaonic Ordinances, translation and notes by H. Havazelet (1959). I. Schipansky’s *The Takkanot of Israel, v. 3, Geonic Enactments (1992) contains takkanot by sages from Israel and geonim of Babylonian yeshivot from the close of the Talmud to the period of the rishonim presented in three sections: introduction to geonic takkanot by famous geonim of Sura and Pumbedita, and other takkanot from the same period.

JEWISH THOUGHT AND ETHICS

In this sphere mention must be made of Saadiah Gaon’s *Emunot ve-De’ot, translated from Arabic by Judah Ibn Tibbon (Constantinople, 1562) under the title Sefer ha-Nivhar ve-Emunot ve-De’ot (J. Kappah edition, 1970). Other works are Rhymes on Moral Instruction attributed to R. Hai Gaon (ed. H. Gollancz, 1922); Saadiah’s “Epistle on Ethics to the Jewish Communities of Spain” (in Saadiah’s Bible Commentary, Pt. 2, 1960), and Ethics of the Dayyanim by Hai Gaon. Other works by Saadiah Gaon: Esa Meshali, a rhymed polemic devoted against the teaching of Anan b. David, in: Devir, 1 (1923), 180ff; and a polemic against *Hiwi al-Balkhi, published by I. Davidson, in the introduction to his edition of this work (1915), 11–37.
Prayers and Liturgical Poetry

Of note are two prayerbooks; the *Siddur* of "Amram Gaon, of which a scientific edition by D. Goldschmidt appeared in 1972, and the *Siddur* of Saadiah Gaon, published 1941.

Geonic Responsa

Scores of collections of geonic responsa exist, comprising thousands of answers sent by the geonim to queries received from correspondents throughout the geonic period. A large number of responsa were discovered in the *Genizah* and several excerpts have been published. The first collection of geonic responsa appeared in 1516 in Constantinople. G. Harpnaa's *Teshuvot ha-Geonim she-Heishivu Geonei Sura u-Pumbedita* ("Responsa of Geonim of Sura and Pumbedita," 1992) has the responsa arranged topically and provides cross references.

Documents and Letters

Many documents and letters of the Geonim have reached us. These were written in answer to specific questions which were addressed to them, or which the Geonim wished to make known among Jewish communities outside Erez Israel – especially as regards specific subjects related to religious fundamentals to taking a stand on current matters. In this connection the *Iggeret* ("Epistle") of *Pirkoi ben Baboi* (turn of the ninth century) should be mentioned as it is one of the earliest literary writings from the geonic period and is also the first known instance in the literature advocating the dissemination of the Babylonian Talmud. In this connection, see also the *Iggeret* of Sherira Gaon mentioned above.

Throughout the Geonic period, the Geonim occupied themselves with prayerbooks, establishing the versions of prayers, and dealing with the obligation and value of prayer. *Natanon bar Hilai* (mid-ninth century) compiled a prayer book, *Me'ah Berakhot* ("Prayer Book of the Hundred Benedictions"), and *Israel ben Samuel bar Hophni* (gaon of Sura from about 1017 to 1035) deals with the "obligation to pray." Many liturgical hymns have reached us from the time of the Geonim. Saadiah's *Siddur* contains *bakkashot* (petitions) and *azharot;* "Otiyyot Rav Saadiah" contains rhymes on the letters of the alphabet with annotations by Elijah (Bahur) *Levita at the end of his book* *Maseoret ha-Maseoret* (1538).

Many liturgical hymns of the *geonim* were discovered in the *Genizah* and have appeared in various publications and anthologies.

Language and Grammar

GEORGE, WALTER LIONEL (1882–1926), French-born English author of half-Jewish parentage. He specialized in labor problems and questions of sex and marriage. George’s works include The City of Light (1912), Israel Kalisch (1913), A London Mosaic (1921), and The Story of Woman (1925). He also wrote a study of Anatole France (1915).

GEORGIA (Rus. Gruziya), republic in W. Transcaucasia. There is a tradition among the Jews of Georgia (the “Gurjim”) that they are descended from the Ten Tribes exiled by Shalmaneser, which they support by their claim that there are no kohanim (priestly families) among them.

Georgian historical literature had used the term “Georgian Jews” already in the 11th century, but as a firmly established term referring to a specific community it was used only from the early 19th century after Georgia was incorporated in the Russian Empire. The Jews of Georgia call themselves Ebraeli and use Georgian language as their spoken and written language of communication, without resorting to the Hebrew alphabet. Georgian Jewish traders developed the jargon Qivruli (Jewish), many roots of which originated in Hebrew.

According to the 1897 census 6,407 Jews in the Russian Empire considered Georgian their mother-tongue. According to the 1926 census, the only census where each of the Jewish ethnic and linguistic groups appeared as a separate entity, there were 30,534 Jews in Georgia, among them 20,897 Georgian Jews and 9,637 were Ashkenazim. In the same census 96.6% of the Georgian Jews named Georgian as their mother-tongue, and their literacy rate reached 36.29%. In 1931 the State Planning Committee estimated their number at 31,974. The 1939 census showed 42,300 Jews (Georgian and Ashkenazi), representing 1.2% of the total population. The 1959 census reported 35,673 Jews considered Georgian their mother-tongue. The 1970 census reported 55,382 Jews. About 70% of them left for Israel in the course of the next decade. There were some Georgian Jews who were registered as Georgians and not as Jews but no reliable estimate of their number was available. The Georgian Jews lived mostly in Tbilisi (Tbilissi), capital of Georgia, the other centers being Kutaisi, Kulaishi, Tshinvali, Gori, Oni, and Sachkhere.

One historical tradition speaks of the first Jews coming to the country after the conquest of Jerusalem by Nebuchadnezzar 586 B.C.E. It is possible that this reflects the arrival of Jews from Babylonia in Georgia, the southern part of which was
included in 539 B.C.E. in the ancient Persian state. The Jews presumably spread to the rest of the country from the south. Archaeological evidence supports the traditions by confirming the existence of Jews in Mtskheta, the ancient capital of the East Georgian state of Kartli, in the first centuries C.E. Among the first Christian missionaries in the early 4th century, a Jew is mentioned named Eviatar or Abiatar from Urbnisi, as well as his sister Sidonia. Both were sanctified by the Georgian Orthodox Church. Mention is also made of the Jewess Salomea who wrote the life of Nina from Cappadocia who baptized the Georgians.

Georgian sources refer to the arrival of Jews in Western Georgia in the 6th century, evidently from the Byzantine Empire, and the further migration of 3,000 Jews into Eastern Georgia. This information might indicate a mass flight of Jews from the Western regions of Georgia, ruled by the Byzantine Empire – where they were subjected to severe suppression in the 6th century – to the south-eastern regions of Georgia ruled at the time by Persians who tolerated Jews. Sources also speak of Jewish migrations to Georgia from Armenia and Iran. It is likely that the toponym אפריקי mentioned several times in the Babylonian Talmud (e.g., Sanhedrin 94a, Tamid 32a) is to be read as אפריקה, i.e., Iberika or Iberia which was one of the ancient names of Eastern Georgia, as well as of Georgia as a whole.

After the Arab conquest of considerable territory of Georgia in the second half of the 7th century, it was transformed into a province of the Arab caliphs, although it remained a Christian country. In the late 9th century a Jewish sect emerged in Georgia which denied some laws of halakhah including marriage and kashrut regulations. The founder of the sect, Abu-'Imran Musa (Moshe) al-Za'farani, went to Tbilisi (Tiflis) from the Babylonian Empire and was later known as 'Abu-'Imran al-Tiflisi, and the sect as a whole, which existed at least 300 years, was known as the "Tiflis Sect."

In the 9th century, Georgia was bordered to the east and north by the Khazar kingdom (see *Khazars), the elite of which adopted Judaism. There are no authentic data on contacts between the Khazars and the Jews of Georgia, but it is known that in the middle of the 10th century *Hisdai Ibn Shaprut wanted to send his famous letter to Joseph, the king of the Khazars, through Georgia which Ibn Shaprut called "Armenia" in accordance with Arabic terminology of the time.

In the early Middle Ages Georgian Jewry was connected mainly with Persian Jewry, and through Iran with Baghdad, the religious center of eastern Jewry. From the travel diaries of *Pethahiah of Regensburg, written in the second half of the 12th century, it might be concluded that some of the Jews living in "the Ararat country," i.e., in Trans-Caucasus, had emigrated to other countries. He also noted that during his stay in Baghdad he saw the messengers of the kings of "Meshekh Land," and those messengers related that the "Kings of Meshekh and all their Lands became Jews," and also that there were teachers among the inhabitants of Meshekh "educating their children in Torah and in the Jerusalem Talmud." Under the term "Meshekh" one of the Georgian tribes, the Meskhi, might have been meant. However no support has been found for the theory that this tribe as a whole or partially adopted Judaism. Another Georgian tribe, the Hevsures, have up to the present time preserved historical legends connected with Judaism. Chronologically this would accord with the time of Pethahiah's story.

Jewish communities in Georgian S.S.R. after World War II. From M. Neistadt, Yehudei Cruzyah: Ma’avak al ha-Shivah le-Ẓiyyon, Tel Aviv 1970.
In the 12th century Abraham Ibn Daud (Rabad I) mentioned Georgia among the countries where the Jews adhered to Rabbinical Judaism and not to Karaism. In the synagogue of the small town of Lailashi in northwestern Georgia, there was preserved up to the 1930s, a Pentateuch manuscript of the 11th or 12th century which was revered not only by the Georgian Jews, but also by the Christian population who attributed it to miraculous properties.

When invaded by the Mongols some of the Jews of eastern and southern Georgia moved to western Georgia, which preserved its independence, and founded new communities there. In the 14th century mention is made of the Jewish community of Gagra on the Black Sea Coast, headed by R. Joseph al-Tiflis. At the same time the philologist R. Judah ben Jacob either composed or rewrote a Hebrew grammatical work showing traces of influence of the Karaite school of Hebrew grammar.

The impoverished situation of Georgian Jewry after the Mongol invasion contributed to their becoming serfs. Numerous sources refer to their servitude over a five hundred year period, starting from the end of the 14th century. The process of enslavement accelerated in the 15th–16th centuries when their situation deteriorated as a result of military invasions, first by Timur and then by the armies of Turkey and Persia, and also because of constant inner conflicts. All these events resulted in the disintegrating of the country into three kingdoms and five feudal territories, as from the end of the 15th century. Documents from the early 17th to the mid-19th century attest to the numerous cases of the selling of individual Jews or whole families and groups, or of their changing one owner for another as debt payment or as a gift.

Persistent wars and rebellions devastated entire regions of the country in the late 18th–early 19th century, depriving Jews of their property, and often to escape immediate danger they had to seek the protection of the local feudal lords, but in the final analysis they became enslaved by their protectors. However, one premise of their servitude was always preserved: the owner was obliged not to force them to convert to Christianity.

The Jewish serfs occupied themselves with agriculture or with the traditional Jewish crafts: fabric weaving and dyeing. Some of them were involved in retail trade and other outside jobs, paying their masters a yearly compensation. As late as 1835, several decades after eastern Georgia had been incorporated in the Russian Empire, many Jews still lived on the estates of their feudal lords, and only a small proportion was engaged in outside jobs in towns. Free Jews who could buy their liberation now also lived in the towns. They were mostly affluent merchants or owners of large stores.

Throughout the period of their servitude, migration – forced or voluntary – took place. Thus voluntary migrations to the Crimea occurred in the 15th–16th centuries. Jews in the 19th and 20th centuries were still to be found in the Crimea having family names of Georgian origin. In the 17th–18th centuries a forced migration occurred when Georgian Jews were driven out by Persian invaders to Persia together with tens of thousands of non-Jewish Georgians.

The Jewish serfs lived on their masters’ estates as small groups, separated from each other. Due to their isolation and the absence of a uniting religious and spiritual center, their Jewish knowledge deteriorated. The German traveler Rein-egg who visited Georgia in 1780 wrote about the rural Jews being called “Canaanites” by the urban Jewish merchants and weavers because of the former’s poor knowledge of the religious laws.

Sometimes Jews converted to Christianity to escape their servitude. The Georgian Church favored the conversions: documentary evidence exists of cases where the Church paid for the liberation of serfs who wished to convert. There were also cases when the feudal lords, contrary to their obligations, forced their Jewish serfs to convert to Christianity.

According to the Georgian legislation the Jewish serfs of Georgia were divided into three categories: the King’s serfs, the Feudal serfs and the Church’s serfs. Both groups of Jews, free and enslaved, were not admitted to serve in the army, and instead of military service payed the “army ransom.” When in 1801 eastern Georgia was included in the Russian Empire the category of the King’s serfs became the “Treasury Serfs” obligated to pay taxes to the Russian treasury. In 1864–1871 serfdom in Georgia was abolished, and the former serfs among Georgian Jews moved to towns where the Jews had already settled, and became engaged mainly in retail trade.

A comparatively small share of the Jewish population was engaged in various crafts, mainly in shoe and hat making. Before the revolution of 1917 this share did not exceed 3–5% of the Jewish labor force. Women dealt with weaving and dyeing for home and for sale. Some families also possessed land plots, mostly under grape cultivation.

The structure of the Jewish community finally developed following the liberation of Georgian Jews from servitude and their subsequent urbanization. The liberated serfs coming from the same settlement as a rule moved to the same town where they attempted to establish their own synagogue, settling around it. Usually such a group consisted of a limited number of large families encompassing three or four generations.

Each group elected its *gabbai responsible for all the affairs connected with the synagogue’s activity. The *hakham authorized the religious life of the group combining functions of a rabbi, *hazzan, *shohet, *mohel and teacher of *medreshe (heder). The Georgian Jewish groups from rural settlements lived side by side in a new place of settlement, so the Jewish population concentrated in one part of the town which later turned into the Jewish quarter of the given town.

Open outbursts of antisemitism in Georgia became frequent in the second half of the 19th century. Causes stemmed from the process of urbanization of the Jewish community and the consequent change of occupation by the majority of Jews who now chose trade as their livelihood; from the influence of Russian antisemitism; and from turning the Jew, a
weak outsider, into the object of a xenophobia which could not be released against another stranger – the powerful Russian invader.

In the second half of the 19th century, six blood libels occurred in Georgia which at the time constituted the highest concentration of cases not only in the boundaries of the Russian Empire, but in the whole world. The biggest and best known happened in 1878 in the little town of Sachkhere where nine Jews were accused of the ritual killing of a Christian child in anticipation of Passover. The trial of the nine took place in Kutaisi and became known as the "Kutaisi trial" which drew the attention of the civilized world. Although the accused were not found guilty, the local population remained convinced that the Jews used Christian blood for preparing mazzot. Other blood libels in Georgia took place in 1852, 1881, 1882, 1883, and 1884. In 1895 the Kutaisi Jews suffered from a severe pogrom. In 1913 a gang headed by the deputy governor of Kutaisi systematically extorted money from the Jews, and those refusing to pay were killed.

One of the most important events in Georgian Jewish life in the 19th century was the establishment of contacts with Russian Ashkenazi Jews who began to settle in Georgia after it was joined to the Russian Empire. For decades the relations between the Georgian Jews and the Ashkenazi communities remained strained: the Georgian Jews considered the majority of the Ashkenazi Jews living in Georgia as godless or insufficiently observant, while the Ashkenazim often looked down on the Georgian Jews. Contacts became closer only at the end of the 19th century, but even then their relations were strained.

At the end of the 1890s R. Abraham ha-Levi Khvolees (1857–1931) – a pupil of the famous Lithuanian Rabbi Isaac Elhanan "Spektor – was elected chief rabbi of the town of Tskhinvali. His only language for communicating with his congregation was Hebrew, and as time passed the number of Jews of the town using this language increased considerably. In 1906 Khvolees established the first talmud torah in Georgia where about 400 pupils studied. He was the first in Georgian Jewish life to introduce education for girls, inviting for this purpose a female Hebrew teacher. To accustom the Jews to crafts and skills he brought in experienced teachers who taught boys shoemaking, leather tanning, soap-boiling, and other skills. He sent some of his best students to the Lithuanian yeshivot to continue their education and receive the title of rabbi. In time, such practice became common among the Georgian Jewish communities. Rabbi Khvolees influenced other communities throughout Georgia: for example, in 1902 a school for children was established in Tbilisi where teaching was conducted according to the "Hebrew in Hebrew" system. The teachers for the school came from Vilna.

The Social-Democratic movement which emerged in Georgia at the end of the 19th century had almost no impact on the Jews. One Jewish Social-Democrat, Itzka Rizhinashvili (1885–1906), who became well known, was killed by police in Kutaisi.

From the end of the 19th century Zionist circles sprang up in the Ashkenazi communities, and its members began to propagate Zionist ideas among the Georgian Jews. Rabbi David Baazov, one of the founders of Zionism in the Georgian communities, participated in the Sixth Zionist Congress in 1903. The majority of the Orthodox leaders, the hakhamim, actively struggled against the spreading of Zionist ideas among Georgian Jews. Emissaries of the Habad movement, who arrived in Georgia from 1916, also resisted the penetration of Zionism.

World War I interrupted the process of Georgian aliyah to Palestine which had begun in 1863. By 1916, 439 Georgian Jews were living in Palestine, the majority in Jerusalem where they established their own quarter near the Damascus Gate. They had to leave the quarter after the anti-Jewish Arab riots of 1929 had led to its partial destruction.

Most Georgian Jews going to the Holy Land belonged to the poorest strata of the community and engaged in physical labor. In Jerusalem, many were freight-handlers. Only a small number became prominent in trade. These included the Kokiasvili (Kokia) family which owned a network of shops and large land holdings in Jerusalem. The Dabra family (Davarshvili) traded on a large scale, mostly in Jerusalem. The Hasidov (Khasidoshvili) and the Khakhmashvili families founded banking businesses.

Despite the fact that the main motivation for aliyah was religious, only a small number of hakhamim went to the Holy Land. The well-known hakham Akhaltzikhe, Yosef Dvashvili, arrived in the 1890s; Simon ben Moshe Rizhinashvili published in Jerusalem in 1892 a Hebrew-Georgian textbook and conversation book, Sefer hinukh ha-ne'arim (“The Book for Education of the Youth”), in Hebrew letters; Efraim ben Ya'akov ha-Levi Kokia published in 1877 in Jerusalem the religious and philosophical treatise Talks of Ephraim al ha-Torah im Hamesh Megillot (“Comments by Ephraim on the Torah and the Five Scrolls”); he also wrote Sam Hayyim: likkutim u-musarim tovim (“Elixir of Life: Extracts and Benevolent Morals”).

After the October 1917 Revolution, the Georgian population expressed its strong desire for independence, and in May 1918 a democratic republic was established. In the Georgian Executive Assembly, two places were allocated for representatives of the Georgian Jews, and one for the Ashkenazim. In the process of the elections, a small group of young assimilatory Jews, headed by the brothers Yosef and Mikhail Khanishvili were backed by Social Democrats – Mensheviks who formed the coalition government. This group considered the Georgian Jews as Jewish, not from the ethnic point of view, but as Georgians differing from the rest of the population only by their religion. They fought Zionism in concert with some Georgian Jewish religious leaders, supported by members of the Habad movement which had acquired considerable influence in Kutaisi and in several other towns. Kutaisi became the center of the anti-Zionist movement, whose participants abstained from taking part in the All-Jewish Congress in Tbilisi.
in 1918 where all the Georgian Jewish and Ashkenazi communities of Georgia were represented.

The Association of Zionists of Georgia became the leading group in the congress. The three Jewish representatives elected by the congress to participate in the Executive Assembly were rejected by the Georgian Election Committee which was averse to Zionist representatives and preferred two candidates elected at the Kutaisi congress held at the same time by anti-Zionist groups. The Ashkenazim protested against this action by refusing to elect a new Ashkenazi representative instead of the rejected one.

When the Red Army invaded Georgia in February 1921 the population fled on a mass scale; 1,500–2,000 Jews left Georgia, and about 1,000–1,200 of them arrived in Palestine. The rest settled mainly in Istanbul where a Georgian Jewish community had been in existence from the 1880s. In 1921, there were 1,700 Georgian Jews in Palestine.

At the outset of the Sovietization of Georgia the central Soviet authorities adhered to a policy emphasizing respect of local traditions including religious beliefs. This attitude applied also to Georgian Jewry. The government bodies did not interfere in affairs connected with Jewish religion and synagogues were open as previously. In the early 1920s, Zionist activities also were not impeded. The Zionist school in Tbilisi was reopened in 1921 after a short interruption, being now called the Jewish Labor School No. 102, and Hebrew was taught there as the national language of Georgian Jews. In 1924 a Zionist organ appeared in Georgian called Makabeeli, but only three issues were published. In 1924–25 the semi-legal halutzic youth organization called "Avoda" managed to function and the youth theater company "Kadima" presented plays on Jewish themes in Georgian.

After an anti-Russian and anti-Soviet rebellion in Georgia was suppressed in 1924, Soviet policy changed for the worse. Legal and semi-legal Zionist activities were cut short. The economic regulations resulted in the bankruptcy of many Jewish traders, large and small. The Zionist group, headed by D. Baazov and N. Eliashvili, appealed to the local authorities to allow Jews to occupy themselves with agriculture, but were turned down. The two leaders then suggested that the authorities should allow those Jews who could not be engaged in Georgian agriculture to leave for Palestine. Two hundred families applied to leave, and in October 1925, 18 of them were allowed to emigrate, under the leadership of N. Eliashvili.

In the mid-1920s industrialization and secularization became the Soviet authorities’ main aims for the Jews of Georgia, who were dragged to factories as a working force, or compelled to join craft cooperatives and collective farms.

In 1927–28, OZET (the organization for settling Jewish workers on the land) strengthened its activities, and its Georgian affiliate established branches in many towns. The first Jewish collective farm was formed in 1928 in Tziteli-Gora. By 1933 there were 15 collective farms with a population of 2,314 and land area of 1,540 ha. In 1928 efforts were made to settle some Georgian Jewish communities in “Birobidjan and in certain regions of the Crimea assigned for Jewish agricultural settlement, but these attempts failed. The Jewish collective farms in Georgia contributed to local Jewish welfare, as a means to alleviate their difficult material conditions; moreover they could continue to live according to their religious and communal traditions observing kashrut, Sabbath, Jewish festivals, and so on.

From the outset of the 1930s, however, the authorities decided to break the Jewish traditions by eliminating the ethnic homogeneity of the Jewish collective farms; as a result the Jewish community could no longer function. Thus in 1931 in establishing a collective farm in the small town of Mukhrani the Jewish collective farmers were mixed with the Georgians and Armenians, the collective farm being declared “international.” Toward 1934 the collective farm in Akhalzikhe, established in 1931 as a Jewish undertaking, lost its ethnic homogeneity.

The policy of integrating the Jewish collective farms was conducted against the background of intermittent blood labels occurring in Sachkhere in 1921, in Tbilisi in 1923, and in Akhalzikhe in 1926. Moreover, the ethnically heterogeneous collective farms became a convenient target for anti-religious campaigns, which had become common in Georgian Jewish life from the end of the 1920s.

From 1938 the Jewish collective farms were united with non-Jewish ones, and the Jewish farmers started to leave them on a large scale. Thus the experiment of turning part of Georgian Jewry into agricultural workers ended, with the sole exception of the first Georgian-Jewish collective farm of Tziteli-Gora which continued to exist up to the beginning of the 1970s.

As its main tool to drive Jews to work in industry and to establish producing cooperatives, the Soviet authorities founded “Evkombed” (“All-Georgian Committee for Assisting the Jewish Poor”). The committee was created in 1928 after a fire in the Jewish quarter of Kutaisi which was burnt to the ground: dozens of people perished and about 6,000 lost their homes.

In 1929 a considerable number of Jews were working in the silk factories in Kutaisi and in Tbilisi. In 1931, 1,430 Jews joined the production cooperatives of shoemakers, hat-makers, leather-tanners, and others, half of them in Tbilisi. The majority of those cooperatives served as cover for the private activities of a large family or several closely connected families; the ethnic homogeneity of the productive cooperatives allowed the members to observe Jewish tradition, and in the first period of their existence Sabbath was the rest day.

The efforts of the authorities to eradicate the religious tradition and to mix nationalities within each co-operative was partially successful. The immediate result was the flight of Jews from mixed co-operatives. On the whole the attempt to industrialize Georgian Jewry failed, and by 1935 only 7,000 Jews were involved in the process.

Religion was considered by the authorities the main ideological impediment to their efforts to influence the Jews, and they accordingly tried all means to secularize the com-
munity. From 1927 the authorities established a school network for Georgian Jews with instruction in Georgian. Camps and clubs were created especially for Georgian Jewish youth and in 1933 the "Lavrentii Beria Culture Club" for the working Jews of Georgia was established. All these establishments were conducted in an anti-religious spirit.

For some time the authorities toyed with the idea of creating a Soviet Georgian-Jewish culture, of the same type as the Soviet-Yiddish culture. In 1934 they established a "State History and Ethnography Museum" of the Georgian Jews with the official aim of studying the history and customs of the community and struggling against "survivals of the past in its life." This undertaking attracted a group of young Jewish scholars. About 60 pictures were exhibited in the Museum of Shlomo Koboshvili, an artist of the 1920s, whose pictures depicted Georgian Jewish everyday life and the past of Georgian Jewry. When the museum was closed in the early 1950s, the pictures disappeared. The best-known Georgian author of the 1920s and the 1930s was Herzl *Baazov, novelist and playwright, the subject of whose works was Georgian Jewish life.

In 1937–38 the authorities clamped down on Georgian culture, attacking both Jewish religion and secular Jewish culture. In September 1937 nine *ḥakhams, of whom two were Ashkenazim, were arrested, in Tskhinvali (called Staliniri at the time), and killed in prison without trial. In the beginning of 1938 Herzl Baazov perished in prison.

The only Jewish cultural establishment that continued to exist was the History and Ethnography Museum, but in 1948 its director, Aharon Krikheli, was arrested, and soon after, in the early 1950s, the museum was closed.

Thus, the Soviet authorities finally destroyed the non-religious Georgian-Jewish culture which they had assiduously established in the pre-war years. Only from the end of the 1950s did poems and stories by writers belonging to the community and describing its life begin to reappear.

The Soviet rule was far from successful in its efforts to destroy the religious tradition. Even in the 1960s and in the 1970s most Georgian Jews observed religious traditions: visiting synagogues, observing *kashrut, and conducting their family life according to religious Law. Many of their children studied in illegal *heders. The authorities were aware of these schools but chose not to notice them.

Although statistical data are lacking, it may be presumed that a considerable proportion of Georgian Jewry became adjusted to the economic situation in Georgia after World War II, viz. the flourishing of private enterprise in trade and small stores under the cover of the state trade and industrial establishments, with the silent acquiescence of the local authorities. The latter used these enterprises to boost the economy of the republic and raise their own affluence.

However whenever they had to organize a show trial of "violators of the Soviet economic laws," demanded by the central authorities, the Jews were always chosen as a scapegoat. Jews predominated among those convicted for economic crimes in Georgia, were punished severely, and sometimes sentenced to death. Community life developed amid continuing blood libels: in 1963 in Tskhaltubo, in 1964 in Zestafoni, and in 1965 in Kutaisi.

After the "Six-Day War Georgia was the leading region in the Soviet Union for Jewish demonstrations and petitions demanding the right to leave for Israel. The letter of Aug. 6, 1969, by 18 heads of Georgian families to the United Nations containing an appeal to influence the Soviet government to allow them to leave for Israel, was the first document of the *aliyah movement in the Soviet Union to receive wide publicity in the West. The mass *aliyah of Georgian Jewry began in 1971; by 1981, about 30,000 of them had immigrated to Israel.

[Michael Zand / The Shorter Jewish Encyclopaedia in Russian]

**Participation in Intellectual Life**

Georgian Jews took part in the literary, intellectual, and cultural life of Georgia. Among them were Moshe Danieloshvili, a stage producer who translated S. *An-Ski's play *The Dybbuk into Georgian and produced it at the state theater at Tbilisi; Gyorgi Kokashvili, a poet, playwright, and literary critic, whose play "The Children of the Sea" was performed at the state theater at Tbilisi; Rosa Davidashvili, an ethnologist and author of children's literature of the generation preceding the Revolution; and Shalom Mikhaelashvili, a historian who investigated the history of his native community at Kulashi. Joseph Kotsishvili, wrote an historical novel on the beginning of Jewish settlement in Georgia; he translated Shalom Aleichem into Georgian as well as works by Lion *Feuchtwanger. Other notable Georgian Jews were Herzl Baazov, Nissan *Bablikashvili, Yizhak *Davidashvili, Boris *Gaponov (d. 1972), and Abraham *Mamistabolob.

**Developments in the Georgian Republic**

A CIS republic, Georgia declared its independence in 1991, becoming an arena of military conflict, first between President Zviad Gamsakhurdia and the opposition, and then, after the former was driven out in January 1992, between the government of Eduard Shevardnadze and separatists in Southern Ossetia and Abkhazia. One of Gamsakhurdia's advisors was IsaakGoldstien, a former refusenik who became an anti-Zionist. Most Georgian Jews, however, were reluctant to become involved in the struggles for power.

The Soviet censuses reported 24,800 Jews in 1989; 14,300 of the latter were Georgian Jews who had preserved their ethnic and religious distinctiveness despite speaking the same language as their host nationality. In the mass emigration of Jews that proceeded after the breakup of the Soviet Union, their number dropped to 14,500 in 1993 and under 5,000 in 2000. Approximately 30 Jewish organizations were in operation, including a day school in Tbilisi and supplementary schools in other cities. In February 1993, the first issue of the Jewish newspaper in the Georgian language, *Menora*, was published; the publisher and the editor was Guram Bariashvili.

Georgia

Organized Jewish communities exist in the early 21st century in 15 Georgia cities, the major ones in Atlanta, 85,900; Savannah, 3,000; Augusta, 1,300; Columbus, 750; Macon, 1,000; and Athens, 600. Since the 1960s, the state’s Jewish community has undergone a significant demographic shift, as the Jewish population in small towns has declined. Small town Jewish merchants once prevalent throughout the state, have retired and Jewish-owned stores were broken into in Talbottom. A discriminatory newspaper and the Ku Klux Klan exercised exceptionally bitter during the early 20th century, becoming exceptionally bitter during the Frank case (see Atlanta; Leo *Frank).

Organized Jewish communities exist in the early 21st century in 15 Georgia cities, the major ones in Atlanta, 85,900; Savannah, 3,000; Augusta, 1,300; Columbus, 750; Macon, 1,000; and Athens, 600. Since the 1960s, the state’s Jewish community has undergone a significant demographic shift, as the Jewish population in small towns has declined. Small town Jewish merchants once prevalent throughout the state, have retired or sold out due to pressures from national retailing chains. The generations of Jewish merchants have been replaced by a new generation of Jewish professionals, best seen in the tremen-
dous rise of Jewish Atlanta, which has seen the number of its congregations grow from five in 1968 to 38 in 2005. Jewish life is also growing in college towns like Athens, which elected a Jewish mayor, Heidi Davison, in 2002.

There is a home for the aged in Atlanta, serving the entire state, and Jewish community centers exist in Atlanta, Savannah, and Columbus. Two summer camps, one operated by the Southeastern Region of the Union for Reform Judaism and the other by the Atlanta Jewish Community Center, are located at Cleveland. The William Breman Jewish Heritage Museum was opened in Atlanta in 1996 and preserves and displays the history of Jews in the state. There is a Hillel Foundation at Emory University in Atlanta and at the University of Georgia in Athens, and several Anglo-Jewish newspapers published in Atlanta. Jewish Studies programs are also found at the universities with Emory featuring such scholars as David Blumenthal and Deborah Lipstat.

[Stuart Rockoff (2nd ed.)]

**GERAMA AND GARME** (Aram. גֶּרָם, גֶּרָמִי), terms variously used in the Talmud to describe tortious damage caused indirectly by the tortfeasor’s person. The following acts are examples cited of garma damage: a judge delivering an erroneous decision resulting in damage to another; burning another’s bond – thus preventing him from recovering his debt; a banker giving an erroneous valuation of coins – causing them to be acquired at a loss; damaging mortgaged property held by a creditor – thus reducing the value of his security; informing on another’s property to bandits – thus causing them to take it away. Opinion is divided in the Talmud over the question of liability for this kind of tort (BK 98b; 100a; 117b); some of the sages maintain that liability does exist, while others exclude it. In other cases – similar to those cited above – the damage is termed gerama (BK 48b; 60a; BB 22b), but here liability is excluded. Examples of gerama damage are placing a ladder by a pigeon loft, enabling a weasel to climb up and eat the pigeons; setting a fire by means of the wind resulting in a conflagration; allowing an animal to trespass onto another’s land, where it falls into a well so that its corpse pollutes the water. Other cases which were later interpreted as gerama are bending the stalks of grain in another’s field toward an approaching fire so that they catch fire; placing poison in the path of another’s animal, causing it to eat this and die; sending a burning object through a minor or an idiot, who is irresponsible and thus causes damage; inciting another’s dog to bite a third person; frightening another to the extent that he suffers injury or damage from such fright; leaving a broken vessel on public ground so that the pieces cause injury (BK 24b; 55b–56a). Even the earliest of the post-talmudic commentators found difficulty in explaining the difference between gerama and garme damage, for which the Talmud does not impose any liability, and garme damage, for which talmudic opinion differs as to whether there is liability or not. According to Rashi (to BB 22b, s.v. gerama; see Sh. Ar., ḤM 386:4), there is no difference between the two concepts – and that those sages who exclude liability for garme damage also exclude it in cases of gerama damage, and vice versa. Some of the tosafists maintain (BB 22b, s.v. sot omeret) that, indeed, in strict law there is no distinction and that there is no liability in either case – save that the more common injuries are called garme and that those sages who impose liability for garme damage do so in the sense of fining the tortfeasor for the sake of public order. However, according to the majority of the tosafists, all indirect damage that is an immediate result of the tortfeasor is termed garme whereas all other acts of indirect damage are called gerama – in respect of which the sages are unanimous in excluding liability. There are also further distinctions between gerama and garme damage, which all present difficulties and which are all less acceptable. It appears that the two categories can be distinguished by using gerama to refer to indirect damage that is too remote to have been foreseeable, and garme to refer to indirect damage that should have been foreseeable – but which was caused solely by the independent act of a second person who acted negligently following the first person’s act, while he could have refrained from doing that which resulted in the damage. In the latter situation, some sages maintain that the first person is exempt from liability, even though he could have foreseen that his act would result in the negligent act of the second person – who is held to be solely responsible. On the other hand, others hold the first person liable, just because he should have foreseen that his own act would result in the negligent act of the second person. According to this distinction, therefore, the loss sustained by someone acting on the advice of an expert is garme damage – because he should have realized that other experts should be consulted before he acted on one expert’s advice and he was himself negligent in failing to take such second opinions. If, however, the matter is such that only one suitable expert is available and there is no choice but to rely exclusively on his advice, it is not a case of garme damage, and it is the unanimous opinion that the expert is liable for the consequences of his negligent advice. The halakhah is that a person is liable for garme damage, although it is disputed in the codes whether such liability stems from the strict law or is in the nature of a fine for the sake of public order, as mentioned above. The law applicable in the State of Israel is the Civil Wrongs Ordinance, 1947, which makes a person liable for the natural consequences of his conduct – but not if the decisive cause of the damage is the fault of another. An expert is held liable for giving negligent declarations and opinions.

[Shalom Albeck]

**Compromise When Payment for Damages Cannot Be Imposed under Tort Law**

In recent decisions of rabbinical courts, when damages are of the gerama type, i.e., the tortfeasor is only guilty of causing the
damage indirectly, and as such damage, there are insufficient grounds for the submission of a legal action. Since no action can be filed for damages classified as gerama, no monetary liability can be imposed by the court. Accordingly, the court has on occasion taken the path of compromise in order to effect monetary restitution. This approach has been adopted in other instances as well in which no demand for payment can be imposed under law, such as when there is only liability under Divine law (see *Divine Punishment) or when the damages involve the violation of a negative commandment but do not suffice for the imposition of a monetary liability, such as fraud in the payment of an employee's wages. In such cases, the rabbinical courts, through the use of a compromise settlement, ensure that justice is done when the strict letter of the halakhah itself provides no relief. (See, e.g., decisions of the Rabbinic Court for the Kiryat Arba-Hebron District, vol. 1, 205 and index; Rav. Z.N. Goldberg, "In Praise of Compromise," Mishpetai Erez, 2002 (Heb.); see "Compromise.")

**The Requirement to Terminate the Damage**

Even when the damage is only of the gerama type and no monetary liability can be imposed under law, it is nonetheless incumbent upon the tortfeasor to terminate the damage in the present and to prevent its recurrence in the future. Thus, the *Rema* rules (Sh. Ar., h 386:3) that a ban (see *Herem) should be imposed on the person causing the damage until he terminates the damage, and R. Jehiel Michael Epstein rules similarly: "Whatever measures the tortfeasor is able to take to save him [i.e., the one who sustained the damage from continued or similar damage] from this point on he is obligated to take, and to rectify that which he perverted; and he should be forced to do so with all means of force until he removes the [source of] damage. And this is the law regarding every gerama in the laws of damages" (Arukh ha-Shulhan 386:19).

In the course of adjudicating a suit between spouses regarding the determination of the level of maintenance that a husband was required to pay his wife, the question arose as to whether the fact that she did not rent out the apartment she owned, thereby precluding potential income from rent, should be considered as causing financial damage to her husband (Judgment 325/2/2021, 5 PDR, 279; see "Maintenance"). The Rabbinical Court ruled that the wife cannot be obligated to pay for that damage as it belongs to the category of gerama. Nevertheless, the bet din stated that the husband may delay payment of maintenance until she rents out the apartment, as even in an instance of mere gerama, the person causing the damage is responsible for removing the source of the damage (p. 283 of the ruling).

**Liability According to Divine Law and the Seizure of Property by the Injured Party**

Further on in the above ruling (p. 284), the bet din considered the possibility of permitting the husband to withhold maintenance payment according to the rate of the damage she was causing him by not renting out the apartment, in view of the fact that the husband was actually in possession of the maintenance funds. Despite these being damages of the gerama type, the exemption from liability for payment of damages is only under human law, while liability does exist under Divine Law (*Divine Punishment). In such cases, the halakhic authorities were divided as to whether to permit seizure of the tortfeasor's property by the injured party as an alternative to the payment of damages. According to some authorities, such seizure is invalid (Resp. Ribash §§92, notwithstanding that the court is required to inform the tortfeasor of his liability under Divine Law (Yam shel Shelomo, BK 6:6). Contrary to that opinion, Raan and Rashba consider such seizure valid, and the bet din cannot confiscate the property seized by the injured party (Nimmukei Yosef, BM 28a; Hidushei R. Akiva Eiger, Sh. Ar., h 28:1). The rabbinic court ruled that in the case at hand the seizure is effective, due to the existence of an obligation under Divine Law based on gerama damages. Consequently, the husband may deduct the amount of those damages from the alimony he owes to his wife.

**Distinction Between Gerama and Garme – Considerations of Appropriate Policy.** The distinction between gerama and garme, as well as the implications of that distinction for dealing with the subject today, arose in the case of Mifalei Te'urah of the Postal Authority published a tender for the production of mailboxes. A company that did not win the tender sued the Postal Authority, claiming that it had been prevented from winning the tender owing to flaws in the tender in terms of compliance with the equality requirement under the laws governing tenders. The company sued the Postal Authority for the amount of the anticipated profits that had been denied it by its loss of the tender.

The Jerusalem District Court (Judge Moshe Drori) ruled that under Jewish law compensation is not awarded for this kind of damage, being an instance of gerama: "One who neglects [i.e., blocks profit from] another's purse, he [the injured party] has no claim against him but angry objection" (TJ, BM 5:3). Halakhic authorities explained this exemption as deriving from the classification of the damages as gerama (Piskei ha-Rosh to BK 2:6; Resp. Maharam §821).

Nevertheless, the court ruled that the Postal Authority should in fact be held liable for payment of damages, relying on the view of Rizba (Tosafot, BB 22b, s.v. *zot omeret gerama binzikin asur*, and see above) who declared, regarding damages considered garme, that "Our Sages of blessed memory levied a fine for any damage that is common and occurs frequently." The reason that they levied these fines was so that people would not go and cause deliberate damage to others and rely on their exemption from liability. (See *Fines.*) The court ruled, that since the case involved a public body, as a matter of legal policy it should be declared that the damages in question are "common and occur regularly," thus preclud-
ing the possibility of any branch of government ignoring the laws of equality in public tenders and thereby causing damage to a bidder who would otherwise have won the tender (paragraphs 98–99 of the ruling).

The court relied on comments made by Rabbi Aaron "Lichtenstein regarding the distinction between gerama and garme. In his view, while Maimonides' approach in his treatise on garme is to create widely inclusive distinctions between instances that fall under the definition of gerama, with no liability for payment of damages, and those that we may consider instances of garme, in which there is such liability, the Rizba's approach is fundamentally different. In the Rizba's understanding, one should not look for a distinction in principle between the law of gerama and that of garme other than that in the cases that are considered garme, regarding which there is liability for payment of damages, "the Sages felt there was a specific social need to establish liability," because these were instances in which failure to impose liability for damages payment would have negative socio-economic ramifications. According to this approach, the distinction between gerama and garme is not a "scholarly" distinction originating in the intricacies of talmudic learning, but rather a "practical" distinction from the mundane world, even though it is understood that the decision regarding when to establish liability for payment is based on considerations of values and ethics and not merely on pragmatic convenience (Shi'urei R. Aharon Lichtenstein – Dina de-garme [1999/2000], 198–99).

Using this methodology, the court ruled, as stated, that in a case in which a governmental body treats parties unequally, a legal policy should be established whereby the body is obligated to pay anticipated damages, with the case being treated as one of garme and not of gerama.

The court further cited Rabbi Lichtenstein, who states that in practice, in the modern era, with its economic, scientific, and technological developments, the social need to regard cases of indirect damage as garme and not gerama is constantly growing. Lichtenstein suggests that decisors of Jewish law take the step of enacting a takkanah, in accordance with the needs of the world of modern commerce, economics, and technology, defining many sorts of damages as garme, making the one who inflicts them liable for payment for such damages, in keeping with the Rizba's outlook, and this would also "bring the Torah greater repute" (ibid., 200).

In addition to the aforementioned, the court suggested other ways in which support can be found for imposing liability under the laws of gerama in such cases. One manner of doing so is by invoking the principle that an obligation be imposed upon the public, even when no basis can be found for it in law, in order to uphold the general requirement of "and you shall do that which is right and good" (relying on Resp. Ha'am Sofer, 2, YD 239). Another way would be, as discussed above, to rely on the fact that there is liability under Divine Law and since causing indirect damage is forbidden, this prohibition may be enforced upon the public as opposed to an individual.

It should be noted that, at the end of his ruling, Judge Drori emphasizes that, according to the Foundations of the Law 5740 – 1980, the court is obliged to apply the principles of Jewish law, even if it does not apply all its particular distinctions. In light of this, the court is required to apply Jewish law in a way that brings about desirable results. In the case at hand, this means educating public servants to apply norms of fair governance. Accordingly, we should aspire to subject the public body to a duty of compensation for future damages as well, even when the damage is defined as gerama, in cases in which the authority prevented a person from achieving monetary gain as a result of its failure to comply with the principle of equality (paragraphs 101–194 of the ruling).

Evidentiary Damage and the Law of Garma

The modern legal system recognizes the doctrine of "evidentiary damage," i.e., causing harm by damaging evidence that might be beneficial to the opposing party. Under Israeli law, there may be instances in which causing evidentiary damage shifts the burden of proof to the side that caused that damage, and there may be instances in which one may file direct suit for compensation for evidentiary damages (CA 171/00, Cohen v. Kaplan Hospital, 2 PSM (1962) 298, Judge Neal Hendel). In adjudicating a compensation claim for damages by reason of medical malpractice – viz. the hospital's failure to properly preserve medical records – the Beer Sheva District Court addressed the close similarity between evidentiary damage and the law of garma:

"The talmudic tractate Bava Kamma discusses the case of one who burns a note belonging to another person. In Rav's view, he is not liable to punishment, 'for he said to him, 'It is only paper that I've burned'' (BK 98a). According to this position, it is only paper that has been burned, and the one who did so has no liability beyond that. Maimonides rules against this position: 'One who burns the notes of another is required to pay the entire debt that was represented by that note, for although the physical note is not money, he caused the loss of that sum of money' (Yad, Hilkhot Hovel u-Mazik 7:9). In other words, evidentiary damage is equivalent to actual damage. In the words of R. Joseph b. Haviva, one collects from the person who burned the entire debt attested to by the bond, 'for he caused him to suffer a loss' (see Nimmukei Yosef to Hilkhot ha-Rif, BK, Ch. 9, 35:1)."

The court goes on to cite R. Aharon Lichtenstein (Dina de-Garme, 61–62), who writes that, in practice, the burning of the bond has no effect, positive or negative, regarding the financial obligation to which the certificate itself attests. The only thing that burning it accomplishes is to cause its owner difficulty in proving the existence of that obligation, at the evidentiary level. Thus, one may see a close similarity between the modern doctrine that recognizes evidentiary damage and the principle of garme.

GERAR (Heb. גֶּרֶאר), a city and region in the Negev in which Abraham and Isaac dwelt (Gen. chs. 20, 26). Gerar was located on the way to Egypt and it was mentioned in connection with Kadesh (identified in ancient sources with Petra and now mainly with ‘Ayn Qudayrat) and Shur (the fortifications on the Egyptian frontier). In the north it bordered on the territories of Beersheba and Gaza (Gen. 10:19; 26:1–2; 11 Chron. 14:12–13). Its area included Rehoboth (which some scholars identify with the later Ruheibah, 12½ mi. (20 km.) south of Elusa, Sittah, Eshek, the valley of Gerar, and the royal city of Gerar. Through Abraham’s oath to Abimelech, the land of Gerar was excluded from the territory destined to be conquered by the Israelites (Gen. 21:22–32; cf. Hul. 60b) and it was outside the area of Israelite settlement (Josh. 15). According to the patriarchal tradition, the land of Gerar was inhabited by Philistines originating from Casluhim who lived in Gerar as shepherds ruled by a king; a treaty existed between them and the Hebrew Patriarchs (Gen. 10:14; 21:32–34; 26:1, 15ff.). These references to the Philistines, however, are considered an anachronism. Gerar is again mentioned in the time of Asa king of Judah (c. 908–867 B.C.E.) who pursued Zerah the Ethiopian from Mareshah to Gerar and destroyed all the cities in its vicinity (11 Chron. 14:8–14). If the Septuagint version of 1 Chronicles 4:39–41 is correct (reading Gerar instead of Gedor), the land of Gerar was inhabited in the period of the monarchy by remnants of Ham and by Meunim. The name Gerar survived as a geographical term even after the destruction of the city and designated the territory occupied by the former land of Gerar. The reference to it in 11 Chronicles 14:12 may have already this meaning and it certainly has it in 11 Maccabees 13:24 (cf. 1 Macc. 11:59). The district was later known by its Greek name Geradik (Γεραδίκη, 71, Shev. 61, 36c; Gen. R. 52:6; 64:3) or Geraritike (Eusebius, Onom. 60:6ff.), which was identified with the biblical Gerar. Eusebius (loc. cit.) locates it 25 Roman miles “from Eleutheropolis (Bet Guvrin) toward the south”; it is similarly represented on the Madaba Map southwest of Beersheba. Various scholars have accordingly proposed to identify it with Tell al-Sha’ir, 12 mi. (19 km.) northwest of Beersheba or with Tell Yamma further to the west. Y. Aharoni, however, has suggested a site midway between these two mounds – Tell Abu Hurayra (Tell Haror), the largest tell in the area and containing pottery dating from the Middle Bronze Age and later periods.

**GERASA** (Jarash; Heb. גֶּרֶשׁ; Ar. جِرَشَ), ancient city in Transjordan, north of the Jabbok River. Its ruins are situated 1,870 feet (570 m.) above sea level near the small Circassian village Jarash between Amman and Irbid in a fertile region with extensive fields, remains of forests, and scenic surroundings. Wadi Jarash (called Chrysorrhoas in antiquity) passed through the ancient city. According to pottery finds, the site was inhabited as early as the Neolithic period in the seventh millennium B.C.E. and settlement continued into the Early Bronze Age (Canaanite period). Although the name Gerasa, of Semitic origin, also testifies to its early occupation, the first mention of the city appears in the Hellenistic period when it was called “Antioch on the River Chrysorrhoas” – a name indicating that the Hellenistic settlement was established under the Seleucid dynasty. It was apparently founded by Antiochus IV, although a Greek legend attributes its establishment to Alexander the Great. The city’s jurisdiction extended in the south beyond the Jabbok, in the north beyond Wadi Yabis, in the west as far as Regev (Ragaba, Rajib), and in the east to the desert. During the decline of the Seleucid kingdom, control of Gerasa was seized by Zeno and Theodorus, the rulers of Philadelpheia (Ammân), from whom it was captured by Alexander Yannai. It remained a Hasmonean possession until the time of Pompey after which a Jewish community continued to live in the city and maintained friendly relations with the other inhabitants. Under Roman rule the importance of the autonomous city of Gerasa increased, especially after the conquest of the Nabatean kingdom by Trajan (105 C.E.) and the establishment of the Province of Arabia. The great highway connecting Bozrah (“Basrah”) with Elath and the Red Sea passed through Gerasa making it one of the centers of the caravan trade. During the disturbances leading to the Jewish War the inhabitants of Gerasa sent the Jewish population away unharmed. Under the emperor Hadrian – who visited the city in 119/20 – and his successors, Gerasa reached the peak of its development and possessed several splendid buildings. In the time of Caracalla in the third century, the title of Roman colony was conferred on Gerasa. In the middle of the century a period of decline set in and continued until the mid-fifth century. Subsequently, however, Gerasa experienced renewed prosperity as a Christian city: its temple of Dionysus was converted into a center of Christian worship and during the years 464 to 611, 11 churches were built, one of them on the ruins of a synagogue. Gerasa’s final decline was precipitated by the Muslim conquest (635). In the eighth century the city was destroyed by a series of earthquakes and during the Middle Ages it lay deserted and in ruins until Circassians settled there some time after 1878. The excavation of Gerasa by an Anglo-American expedition began in 1928. It uncovered a triumphal arch, the city wall, a hippodrome, the temple of Zeus, two theaters, the forum (circular marketplace), a columned street 2,624 feet (800 m.) long...
running through the city, a public fountain (nymphaeum), the temple of Artemis with a magnificent entrance connected to the bridge, baths, as well as the ruins of numerous churches containing mosaic pavements, decorated with representations of cities and animal and plant motifs. More than 500 Greek and Latin inscriptions were discovered in the city. The mosaic pavement of a synagogue with a Greco-Jewish inscription recording the names of its donors and representations of animals entering Noah’s Ark, a candelabrum, and various sacred objects, was found under the foundations of a church built in 530–33. R. Joshua, “the Garsi,” a pupil of R. Akiva (Er. 21b; Lam. R. 3:43, no. 9), may have been named after Gerasa. Since 1982 the Jerash Archaeological Project composed of an international team of investigators has been working at the site, excavating in areas on the western side of the city, particularly the Temples of Artemis and Zeus, the hippodrome, tombs, and other remains.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

**GERBER, MAYNARD** (1947– ), cantor. Gerber was born in Chicago where he studied at a talmud torah as a child, then at the Hebrew High School of the Chicago Board of Jewish Education, and De Paul University. He attended the cantorial school of the Jewish Theological Seminary in New York and trained as a mohel (ritual circumciser) in Jerusalem. From 1971 he was a cantor, serving communities in New Jersey, New York, and Connecticut. Since 1975 (except for a two-year stint as the cantor of Kol Ami congregation in Salt Lake City) he has been the chief cantor of the Jewish Community of Stockholm, Sweden, continuing the tenure of the hassan-composer Leo Rosenbluth. Gerber also appears on radio and television and was one of the first cantors to perform behind the Iron Curtain; in January 1986 he led services in the Great Synagogue in Moscow and in 1988 officiated at prayers in Leningrad. Gerber appeared on Russian television in September 1989 and was also in Tallinn, Estonia conducting services. He has written articles on cantorial and Jewish music and has produced cassettes for use in religious schools. He is a member of the American Cantors Assembly.

[Akiva Zimmerman]

**GERCHUNOFF, ALBERTO** (1884–1950), Argentine author, essayist, and journalist born in Proskurov, Russia. Gerchunoff arrived in Argentina as a child when his father became a pioneer settler of Moisés Ville, one of the JCA agricultural colonies financed by Baron Maurice de *Hirsch. Young Gerchunoff settled in Buenos Aires, where he became a journalist. In 1908 he joined the staff of *La Nación*, a leading daily, with which he was associated for over 40 years, part of the time as chief editor. Gerchunoff’s first, and most famous, book was *Los Gauchos Judíos* (1910; *The Jewish Gauchos of the Pampas*, 1955), a collection of stories describing the life of Jewish colonists in Entre Ríos conceived by him as “a new Zion.” This first Spanish account of immigration to the New World remains as the founding work of Jewish Latin American writing, though his intent to show that the return to agriculture was creating a new harmonious Jew who would enjoy full acceptance in Argentina has been strongly criticized by later generations. Gerchunoff also published books of stories such as *Cuentos de ayer* (“Stories of Yesterday,” 1919) and *Historias y proses de amor* (“Stories and Feats of Love,” 1926); the autobiographical *Entre Ríos, mi país* (“Entre Ríos, My Country,” 1950); and collections of essays such as *El pino y la palmera* (“The Pine and the Palm,” 1952) and *La jofaina maravillosa* (“The Wondrous Washbasin,” 1923). Gerchunoff was the founder and first president of the Argentine Writers’ Association and was an active politician. He was detached from Jewish life for many years. Following the rise of Hitler, however, he became involved in activities against world and local antisemitism and a convinced Zionist. From 1945 onward he canvassed the support of Latin-American statesmen and politicians for the establishment of a Jewish state and was instrumental in securing their aid at the United Nations in 1947–48.

[Florinda F. Goldbeg (2nd ed.)]

**GERHARDT, CHARLES FREDERIC** (1816–1856), French chemist. Gerhardt, who was born in Strasbourg, was one of the earliest scientists to bring order into the chaos besetting organic chemistry in the first half of the 19th century. He worked in Paris at the beginning of the 1840s as an assistant to Jean Baptiste Dumas (1800–1884) and with Auguste Laurent (1807–1853), and the three of them were mainly responsible...
for reviving the radical theory of structure. Gerhardt helped Laurent to develop a classification of organic compounds, and it was he who gave the name "phenol" to the acid produced by Laurent from coal tar in 1841. He also produced a detailed exposition of the concept of atoms and molecules. Gerhardt continued to spend much of his time working in Paris after receiving a professorship at the University of Montpellier in 1844, and his appointment was terminated in 1851. He taught chemistry privately in Paris until 1855, when he was appointed professor of chemistry and pharmacy at Strasbourg University. His main works were "Précis de chimie organique" (2 vols., 1844–45) and "Traité de chimie organique" (4 vols., 1853–56). He was also editor of the "Journal chimique."

[Samuel Aaron Miller]

GERI, JACOB (1901–1974), South African Zionist and Israeli industrialist. Born in Lithuania, he was brought up in South Africa where he studied law. In 1934 he immigrated to Palestine and, after a short spell as a worker in an orange grove, joined the law firm of Dov *Joseph. Shortly after, however, he accepted an invitation to join the African Palestine Investments (API), of which he became chairman in 1956, and devoted himself to other South African commercial enterprises in Israel. His most important achievement in the industrial field was the establishment, by the API, of Savyon, the first garden-city in Israel. In 1950, though belonging to no political party, he was invited by Ben-Gurion to join the cabinet as minister of commerce and industry, the only nonparty member. He resigned in 1953 because of disagreement with Ben-Gurion's policies.

[Louis Isaac Rabinowitz]

GERIZIM, MOUNT (Heb. גֶּרְיזִים), mountain in Erez Israel, S. of Shechem. After crossing the Jordan River, the children of Israel were commanded to build a stone altar on Mt. Ebal, to engrave upon it “all the words of this law” (Deut. 27:4–8), and to “set the blessing upon Mt. Gerizim, and the curse upon Mt. Ebal” (ibid. 11:29; 27:12–13). According to Joshua 8:30, this was Joshua’s first act after the conquest of Ai. Har-Gerizzim (as written in the masoretic text: Har Gerizim, according to *Ben-Asher; usually Hargerizim in the traditional Samaritan text of the Pentateuch) is the present-day Jebel al-Tur (shortened from the Samaritan name *Tura Brikha). Mt. Gerizim and Mt. Ebal rise above the city of Shechem (Nablus), in the south and north respectively; Gerizim is approximately 2,600 ft. (881 m.) high and Ebal approximately 2,800 ft. (940 m.). Between them lies the valley of Shechem. Both hills are composed of oolithic limestone, ten springs descending from their slopes to the fertile and well-watered valley. Mt. Ebal has comparatively little vegetation and no water issuing along its southern side, because the slope of the tilted rock is northward; one exception is at the southeast end of Ebal, where a spring makes it possible for the village of Askar to exist. The slopes of Mt. Gerizim, on the other hand, are covered with trees to the very top of the ridge, and the slope of the rock causes the main springs to issue on the side of the valley facing the city of Shechem. The contrast in the amount of water on the two sides of the valley is very marked. A pilgrim’s legend from the Middle Ages, which has often been reprinted, relates that Mt. Gerizim, the blessed mountain (Deut. 11:29), is pleasant and fertile, while Mt. Ebal, cursed by divine decree (ibid.), is desolate and barren.

The identification of the two mountains is made clear in the Bible (Deut. 11:29–30; cf. Gen. 12:6; Judg. 9:7), and this identification is maintained throughout the sources (Sot. 7:5; Jos., Ant., 4:305; 11:340) down to modern times. As a result of an obscure topographical identification in Deuteronomy 11:30 – “Are they not beyond the Jordan, behind the way of the going down of the sun, in the land of the Canaanites that dwell in the Arabah, over against Gilgal, beside the terebinths of Moreh?” – and apparently in the wake of a dispute with the Samaritans, another tradition, ascribed to R. Eliezer, appears in the Talmud, which identifies the two mountains with two mounds which the children of Israel erected for themselves near Gilgal, and not with the two mountains near Shechem (TJ, Sot. 132c; TB, Sot. 33b). This view was later adopted by the fathers of the Christian Church (Eusebius, Onom. 64:1920). On the Madaba Map, both traditions appear: next to Shechem is written Tur Garizin, and next to Jericho Ebal-Gerizim. Apparently, the Bible does not mean to imply that these two mountains are situated in the Arabah near Gilgal, but simply refers to the general direction in order to distinguish between this Arabah and the Arabah associated with the hill-country of the Amorites (Deut. 11:4). Perhaps “behind the way of the going down of the sun” indicates the region west of the road which passes through the northern Arabah (from Jericho to Beth-Shean).

Later Mt. Gerizim is mentioned when the Samaritans erected their temple there about the time of Nehemiah (in the time of Alexander the Great, according to Jos., Ant., 11:310–11, but this is apparently a mistake; cf. Neh. 13:28, according to which a man of priestly stock was cast out by Nehemiah for intermarriage with the Samaritans). From then on, the Samaritans considered this temple to be their most holy spot, and their tradition ascribes nearly all of the biblical account of the patriarchs’ deeds and the places associated with them (the land of Moriah, Beth-El, etc.) to Mt. Gerizim. There are 13 names for Mt. Gerizim, the “Kibla” of the Samaritans, the place toward which they turn in prayer. The fourth of the five articles in the declaration of their creed proclaims its holiness. “Markah dedicated a whole chapter in his Memar to the praise of this mountain (11, 10) in connection with Ex. 15. He enumerates it as one of the choicest things created by God and set apart as divine. The Samaritan text for Deuteronomy 27:4–5 reads: “And it shall be when ye are passed over the Jordan, that ye shall set up these stones, which I command you this day, in Mt. Gerizim” (in place of Mt. Ebal in the masoretic text; cf. Sot. 33b). It is of interest that they even add Mt. Gerizim at the end of the Ten Commandments in both Exodus 20:17 and Deuteronomy 5:21, considering it to be the chosen mountain (Har ha-Mivhar), even from the time of the creation of
the world. (The Samaritans read bahar, “has chosen,” for the masoretic text yibhar, “will choose,” in Deut. 12:14.) The Samaritans gave it the title “mountain of blessing” or “blessed mount” (Tūrbarīk; Samaritan Book of Joshua, ch. 21; Gen. R. 32:10; Song. R. 4:4, no. 5; Tura Bikha; Deut. R. 3:6; Tura Kadisha) and they claimed that the mountain was not submerged at the time of the Flood (ibid.).

Mt. Gerizim became the main point of divergence between the Samaritans and the Jews. (Cf. the end of Kut.: “At what point can the Samaritans be accepted into Judaism? When they reject their belief in Mt. Gerizim.”) In the time of Ptolemy I Soter (323–284 B.C.E.), there was an argument over this point between the Samaritans and the Jews of Alexandria (Jos., Ant., 12:1 ff.). When Antiochus IV Epiphanes passed decrees against the Jews, he converted the Samaritan temple on Mt. Gerizim into a pagan shrine in honor of Zeus Xenios or Hellenios (11 Macc. 5:23; 61; Jos., Ant., 12:235 ff.). This temple was destroyed in 129 B.C.E. by John Hyrcanus (Jos., Ant., 13:255 ff.; cf. Meg. Ta'an. 333). However, it remained a holy site for the Samaritans, and all religious acts were performed “in the name of Mt. Gerizim” (TJ, Yev. 8:1, 9a). Due to the Samaritan belief in the ancient sanctity of the mountain, the Roman procurator Pontius Pilate massacred a large gathering of Samaritans who had assembled to look at vessels which Moses allegedly made for the Tabernacle and which one of the Samaritans claimed he would show them (these vessels had supposedly been concealed on Mt. Gerizim; Jos., Ant., 18:85).

In the war against Rome (66–70), the Samaritans joined the rebellion and assembled on Mt. Gerizim to halt the Romans, in spite of the news they had received that the Jews of Galilee had been defeated. Vespasian sent Cerialis, commander of the fifth legion, against them and he besieged them with 3,000 infantry and 600 cavalry. The Roman troops massacred more than 11,000 of the Samaritans on the 27th of Sivan, 67 C.E. (Jos., Wars, 3:307 ff.). After the war of Bar Kokhba (132–135) the emperor Hadrian erected a pagan shrine to Zeus Hipsistos (or to Serapis) on the top of Mt. Gerizim and placed the bronze gates from the Temple in Jerusalem there. From the time of Antoninus Pius onward, this sanctuary appears on the coins of Neapolis, the city which Titus had built on the site of the village of Ma’abarta, near ancient Shechem. In the time of the emperor *Julian, this sanctuary was destroyed and the Samaritans used the bronze gates as the door of the synagogue (ha-knishah) called Helkat ha-Sadeh, which their priest Akbon built in the city of Neapolis. Another synagogue was erected by Akbon’s predecessor, Baba Rabbah, “near Mt. Gerizim, Beth-El,” “below the mountain” (apparently the site of the present-day Rijl al-ʿAmād), in the time of Theodosius I (379–395 C.E.).

With the predominance of Christianity in the country, the religious status of the Samaritans suffered. Judging from John 4, Gerizim was also a sacred spot for the Christians. After a Samaritan uprising in the time of Zeno (474–491 C.E.), the Samaritans were expelled from the mountain and their synagogue was taken from them by command of the emperor (484 C.E.). The Christians erected a Church of the Virgin Mary there and placed a stone from Calvary in it. Following a Samaritan rebellion in the time of Justinian, the area around the church on Mt. Gerizim was encompassed by a fortified wall.

In the time of the caliph al-Manṣūr (754–755), the Christian church was destroyed, and under al-Mā’mūn (813–833) Justinian’s wall was razed.

Remains of buildings sacred to the Samaritans still stand on the mountain (Khirbat al-Lūza; al-Šākrha (“the rock”); the place of the 12 stones). There are also remains of the Church of the Virgin Mary and Justinian’s wall. The remains of the church were excavated by a German expedition during 1927–28 and by the Department of Antiquities of the British Mandatory government in 1946. It is on Mt. Gerizim that the Samaritans still observe all their festivals and all public holy ceremonies, as the sacrifice of the paschal lamb, and prayers on all their feasts and holidays. The entire congregation dwells on its slopes from the tenth of Nisan until the day after the end of the Mazzot Festival. Today houses have been built to accommodate them instead of the tents of former years. The offering takes place not on the top of the mountain, the holiest spot where their temple once stood, but at a lower place to the west of it, possibly because the holy spot has been defiled by a Muslim cemetery.

[Yehoshua M. Grinitz]

Later Findings

Since 1979 major excavations have been undertaken at the site of Mt. Gerizim under the direction of Yitzhak Magen, in the area of the Samaritan temple and settlement. It is now possible to trace the development of the Samaritan temple, its structure and history, and the cult performed there. Mt. Gerizim served as a religious center which existed parallel to that of the Jerusalem Temple. Various architectural remains, notably carved capitals, date back to the Iron Age. The excavations brought to light substantial portions of the Hellenistic city, with its fortifications, separate quarters, public buildings, and dwellings. On the top of the hill were fortified buildings and a temple esplanade which was approached by a monumental flight of steps. From the Byzantine period are the remains of an enclosure and church from the time of Zeno, and an enclosure from the time of Justinian. About 400 inscriptions, most of a dedicatory character, were brought to light in the recent excavations, written in ancient Hebrew, Aramaic, and Samaritan, with an additional 80 inscriptions in Greek, mostly from the third–fourth centuries B.C.E.

GERMAN LITERATURE

Biblical and Hebraic Influences

Before the Aufklärung (Age of Enlightenment), Jewish influences in German literature were essentially biblical and Hebraic. The medieval miracle or mystery plays, in Germany as in England and France, dramatized Old Testament themes and treated the Hebrew patriarchs with reverence, but the “passion plays” based on the New Testament made the post-biblical Jew a demonic ally of the Devil. For special historical reasons, this latter portrayal came to have serious popular repercussions. The impact of the Bible itself has been traced to the earliest contact of the Germanic tribes with missionary Christianity. In the fourth century the Gothic bishop Ulfilas (or Wulfila) wrote a Teutonic version of the Bible, from which only a few verses are extant, and, early in the 11th century, Job and the Psalms were translated into Old High German by Notker Labeo of St. Gallen (c. 950–1022), whose Psalter alone is extant. A late 11th-century prose version of the Song of Songs (c. 1065) by William familiarized the Germans with its traditional author, King Solomon, whose legendary wisdom, fortified by tales brought back to Europe by the crusaders, soon became a stock literary theme.

Bible Translations. The first printed version of the Bible in High German (1466) has been traced to an anonymous 14th-century translator. Based on the Latin (Vulgate) text and printed in Strasbourg, this was the model for 13 subsequent pre-Lutheran editions. The first printed version of the Bible in Low German appeared in 1477. Both German versions, of course, conformed with Roman Catholic doctrine. By contrast, the German reformer Martin Luther produced a complete translation of the Bible (6 vols., 1534, revised 11 times up to 1545) which was based on the original tongues, notably the Hebrew of the Old Testament. Luther's text injected the thought patterns of the Hebrew Bible into the German language, where the Hebrew simile and metaphor were speedily absorbed. His magnificent version was written in the Saxon dialect, which thus became the principal vehicle of High German language and literature. This was a somewhat curious achievement, since High German was the language of predominantly Catholic south Germany, whereas Low German was spoken in the Protestant north; but the fact that German Catholics found Luther's Bible readily accessible ensured its widespread success. The German Protestant Bible had a greater influence on the language of its readers than any other comparable work except the English Authorized Version. It became the most widely read book in the German tongue, constituted Germany's greatest literary achievement in the 16th century, and was of immeasurable significance in stabilizing the language. Although other German translations were attempted by Luther's contemporaries and successors, it was not until the 20th century that, under Jewish auspices, a comparable version of the Hebrew Bible appeared, published by Martin *Buber and Franz *Rosenzweig.

Biblical drama. Martin Luther and his fellow-reformers fostered the writing of biblical plays in both Latin and German. Sixtus Bürck dramatized not only episodes from the Bible – Zorobabel (1538), Ezechias (1538), and Joseph (1539) – but also the apocryphal tales of Susanna and Judith (both 1532). The Judith story was also dramatized in 1531 by the Nuremberg poet and Meistersinger, Hans Sachs. Sachs’ biblical plays included among others Der Wueteric Herodes (1552) and Tragedia Koenig Sauls (1557), and others on themes such as Esther (1530), Job (1547), Adam and Eve (1548), Cain and Abel (1553), and David (1556). A century later, Christian Weise took all the themes of his religious plays from the Old Testament, believing that the figure of Jesus ought not to appear on the stage. His dramas included Der verfolgte David (1683), Nebukadnezar (1685), Athalia (1687), and Kain und Abel (1704). Weise was followed by the Swiss poet and playwright Johann Jacob Bodmer, who published a German translation of Milton's Paradise Lost in 1732 and later wrote dramatic poems about Joseph (Jacob und Joseph, 1751; Joseph und Zulika, 1753), the Flood (Die Synd-Flut, 1751), Noah (1752), Adam (1763), Solomon (1764), and Abraham (1778). Bodmer's fellow-Swiss, Solomon Gessner, roused interest in the Cain theme with his sentimental prose epic, Der Tod Abels (1758). Its English translation (1761) enjoyed enormous success and is said to have inspired works on the same subject by Coleridge and Byron. Germany's first major modern poet, Friedrich Gottlieb Klopstock, who was influenced by Milton and Bodmer, is best remembered for his epic Der Messias (1749–73). He also wrote the plays Der Tod Adams (1757), Salomo (1764), and David (1772). Another 18th-century Swiss author, Johann Kaspar Lavater, wrote Abraham und Isak (1776). The biblical element in German literature received a valuable stimulus in the late 18th century with the publication by Johann Gottfried *Herder of his two-volume work Vom Geist der Ebraeischen Poesie (1782–83). In his Adrastea (1802) Herder published a German version of the Lekhah Dodi hymn by Solomon Alkabez. Friedrich *Schiller wrote essays on biblical themes and echoed the Bible in...
tragedies such as Die Jungfrau von Orleans (1802), Johann Wolfgang von Goethe drew inspiration from the Bible for his great tragedy, Faust (1808), whose "Prologue in Heaven" is modeled on the early chapters of Job. Other 19th-century playwrights who wrote on biblical themes were Karl Ferdinand Gutzkow (Koenig Saul, 1839), Friedrich Rueckert (Saul und David, 1843; Herodes der Grosse, 1844), and Austria’s leading playwright, Franz Grillparzer (Esther, 1877), while a theme from the Apocrypha was dramatized by Otto Ludwig (Die Makkabaeer, 1854). Gutzkow’s very popular Uriel Acosta (1847) entered the Yiddish as well as the German repertoire. Friedrich Hebbel wrote Judith (1841), about the heroine of the Apocrypha, but his outstanding "Hebraic" drama was Herodes und Mariamne (1850), based on Josephus.

Only a few Jewish writers in 19th-century Germany and Austria dealt with biblical or later historical themes of Jewish interest. Ludwig Robert wrote the drama Die Tochter Je- phthas (1820) and Karl Beck the tragedy Saul (1841). Poems on biblical and post-biblical Jewish subjects were written by Heinrich Heine and Seligmann Heller, whose works include Die letzten Hasmonaeer (1865) and Ahasuer (1868).

THE BIBLE IN 20TH-CENTURY GERMAN LITERATURE. From 1900 onward there was a considerable increase in German works of biblical inspiration. Das Buch Joram (1907) by Rudolf Borchardt, who was of partly Jewish descent, was a pastiche of the Book of Job set in the time of Jesus. Die judische Witwe (1911) by Georg Kaiser, based on the heroic apocryphal tale of Judith and Holofernes, was, unlike so many of these works, a comedy. Jewish writers played an increasingly important role, with Siegfried Lipiner dramatizing the story of Adam (1911), a theme that similarly inspired Arno Nadel (1917). The same subject was dealt with in some post-World War I poems by the Viennese lyricist Josef Weinheber and in the epic Erschaffung der Eva (1941) by the Austrian Franz Karl Ginzkey. The story of Cain prompted a tragedy by another Viennese writer, Anton Wildgans (1920), and that of Noah, Ernst Barlach’s drama, Die Suendflut (1924). Richard Beer-Hofmann wrote a mystical drama, Jakobs Traum (1918).

Thomas Mann’s trilogy, Joseph und Seine Brueder (1933–42; Joseph and His Brothers, 1934–45), was the climax of a vast array of German works based on the story of Joseph, headed by some 26 dramas in the 16th century and by the 17th-century novels of Hans Jakob Christoffel von Grimmelshausen (1667) and Philipp von Zesen (Affenstern, 1670). Hugo von Hofmannsthal’s only biblical work was Die Josephlegende (1914), written for a ballet. The Samson theme was dramatized by Herbert Eulenberg (1910), Frank Wedekind (1914), Hermann Burte (1917), and Karl Roettger (1921). The tragic figure of King Saul attracted Karl Wolfskehl (1905), Paul Heyse (1909), and Beer-Hofmann (Der junge David, 1933). The romance of David and Bathsheba was dramatized by Lion Feuchtwanger in Das Weib des Urias (1905), and another episode in the life of the Psalmist inspired Arnold Zweig’s Abigail und Nabal (1913). Feuchtwanger also wrote a novel on the sacrifice of Jephthah’s daughter (1957), a theme previously dramatized by Ernst Lissauer (1928). The best-known work of Sammy Gronemann is his comedy Der Weise und der Narr: Koenig Salomo und der Schuster (1942).

Other 20th-century writers were drawn to stories from the Prophets and Hagiographa. Jeremiah inspired an anti-war drama by Stefan Zweig (1917) for which Arno Nadel wrote the music, and Job was the subject of a popular novel by Joseph Roth (1930). Esther provided the theme of a drama by Felix Braun (1926), another by Max Brod (1918), and a Purim play by Sammy Gronemann (Hamans Flucht, 1926). Later Jewish historical figures who inspired 20th-century German fiction were Josephus, the hero of a trilogy by Feuchtwanger (1932–42); Rabbi Akiva, in a play by Moritz Heimann (1922); the hero of Max Brod’s novel, Reuben, Faust der Juden (1925); and the Jew of Toledo, who figures in a late novel by Feuchtwanger (Spanische Ballade, 1955). The legend of the golem formed the theme of a novel by Gustav Meyrink (1915) and Jew Suess was the hero of Feuchtwanger’s most famous novel (1925).

Hebrew and Yiddish Influences on the German Language

As with English and French, so in the case of German, certain biblical terms entered the language at a fairly early stage, mainly through the writings of churchmen. Luther’s Bible brought a vastly increased number of words and phrases into general usage. Some have become German idioms, including Kainszeichen (the mark of Cain, Gen. 4:15); Suendenbock (scapegoat, Lev. 16); Salomonisches Urteil (the judgment of Solomon, 1 Kings 3:16ff.); Gott mit uns (Immanuel, Isa. 7:14); Menschensohn (son of man, Ezek. 2:1ff.). Hebrew loanwords also entered German at various periods. These include Abt (abbot < Aramaic abba), Ebenholz (ebony < even), Fratzte (face, mug < parzuf), and Natro (soda < neter). More than any other European language, not excluding English, German is peculiarly rich in other terms and expressions, mainly slang or colloquialisms, which entered everyday speech through *Yiddish and the Juden-Deutsch (West Yiddish) dialect spoken by German Jews. Most of these were, of course, restricted to Jewish circles, including Schabbes, Jonteff, Mischpoche or Muschpoke, Goi, Schickse, Schadchen, meschugge, benschen, daffke, and nebbich (< nicht bei Euch). In the 15th and 16th centuries, however, others entered general use, probably by way of thieves’ slang; acheln, to eat (< akhal), ganfen, to steal (< ganav), Schaute, fool (< shoteh). The 18th century added words like Mackes, blows (< makkot), schmusen, to chat, Chumser, chatterbox (< shemüt), and Stuss, nonsense (< shetut).

In the 19th century a host of other such expressions became familiar, notably Golem, Kaffer, boor (< kefar), koscher, Risch, antisemitism (< rischut), shaechten, to defraud, overreach (< shahat), Schlemihl, schlemiel (< Shelumiel?), and Zores, trouble (< zarat). Despite periodic “purifications” of the German language, a vast number of these Hebraisms and Yiddishisms still occur in German dictionaries and other works of reference. Heine, in his poem “Prinzessin Sabbat” (Roman-
zero, 1851), humorously alluding to Schiller’s “Ode to Joy,” described t cholent as “koscheres Ambrosia”; while Adelbert von Chamisso entitled his world-famous story about the man who lost his shadow Peter Schlemihls wahrsame Geschichte (1814). Conversely, Heine’s pathetic “Jewish” refrain in the poem “Gedächtnisfeier” (in the collection Romanzero), “Nicht gedacht soll seiner werden,” is taken directly from Luther’s translation of Ezek. 21:37.

The Image of the Jew in German Literature
German attitudes toward the Jews, shaped by religious, economic, and social factors, were clearly mirrored in German literature. The earliest recorded Old High German literature, largely written by Christian clerics, depicted Jews as simultaneously God’s chosen people and as the “people accursed.” On the one hand, Jews were kinsmen of the Christian savior and descendants of revered patriarchs and prophets; on the other, they were supposedly guilty of deicide, had fallen from grace, and had been condemned to eternal scorn and wandering (see also the “Wandering Jew”).

The Medieval Stereotype. Medieval German drama, from the primitive mystery plays dealing with the life and death of Jesus to the spectacular passion plays staged at Easter, presented a cruel and abhorrent image of the Jew. In these plays Jews were shown to be far more the people of Judas than of Jesus. The most famous of the passion plays – that of Oberammergau, Bavaria – has been performed roughly once every ten years since 1634. It was banned for a time in the 18th century and, strangely enough, during the Hitler era, the Nazis evidently allowing anti-religious policy to outweigh their hatred of the Jews. In 1969 a few textual modifications were made on the recommendation of the Catholic Church in order to remove offensive anti-Jewish passages. Folktales and folksongs also spread the legend that Jews habitually engaged in the crucifixion of Christian boys to provide blood for the Passover ritual. The stories of “Good Werner” (1286) and Simon of Trent (1475) popularized the “blood libel in Germany and provided a counterpart to the English martyrologies of Hugh of Lincoln and William of Norwich.

Upon the earliest literary image, which had its source in religion, was superimposed another, which had its source in economics: the Jew as usurer. Usury was defined by the Church as the lending of money at interest. Since Christians were forbidden to engage in such moneylending, Jews had a virtual monopoly until the Lombards arrived on the German scene. In the sermons of Berthold von Regensburg (c. 1210–1272), the most popular Franciscan preacher of the mid-13th century, Jew and usurer were synonymous. Easter plays included a comic interlude: the three Marys buying oil to anoint the body of the crucified Jesus from a merchant depicted as a wily, haggling Jew. As an object of ridicule, the Jew also made his entry into the Faustbuch (Shrovetide plays). Hans Foltz (c. 1450–c. 1515), a Meistersinger of Worms and Nuremberg, was a notable exponent of this genre. In one of his plays rabbinic Judaism is unfavorably contrasted with Christianity and the *Adon Olam hymn is sung in a German rhymed adaptation. In another farce, a student seduces a Jewess and then mocks her parents and her religion. The Middle High German stereotype of the grasping Jew passed into early New High German literature. In the first published version of the Faust legend – the anonymous Faustbuch of 1587 – Faust borrows money from a Jew, who accepts one of his legs as security. Faust saws off the leg, but when he comes to redeem his pledge the Jew cannot return it and has to pay compensation. Der Jude von Venetien, a German adaptation by Christoph Bluemel of Shakespeare’s Merchant of Venice performed in the 1660s, stressed the greed and hardheartedness of the Jew who insists on his pound of flesh and finally loses his entire investment.

The dominant literary image of the Jew throughout the 16th and 17th centuries was characterized by hostility and ridicule. Though a spirited defense of Hebrew literature was undertaken by Johann Reuchlin and other German humanists in their struggle against the slanders of the apostate Johannes Pfefferkorn, Martin Luther’s embittered diatribe, Von den Juden und jren Luegen (1543), subsequently reinforced the hostile image of the Jew.

18th-Century Assessments. Not until the 18th century was a major breach made in this portrayal. Gotthold Ephraim Lessing gave the first favorable presentation of Jews in his comedy, Die Juden (1749), and later in his internationally famous Nathan der Weise (1779). The hero of this philosophical drama, a wise and benevolent Jew, was the mouthpiece for the writer’s doctrines of religious tolerance and universal brotherhood. Lessing’s model for Nathan was Moses Mendelssohn, whose mind and character deeply impressed contemporary German intellectuals. “Nathan the Wise” thus became the symbol of the enlightened Jew.

From the late 18th century German Jews and Christians mingled in Berlin salons and influenced each other’s religious, philosophical, and literary expression. Jewish salon hostesses inspired German poets and were mirrored in German novels, creating the image of the educated, dignified, and freethinking Jewess. The Romantic movement, which succeeded the Enlightenment, was also ambivalent in its portrayal of Jews. Some Romantic writers, such as Adelbert von Chamisso, Bettina von Arnim, and Karl August Varnhagen von Ense, treated Jewish themes, characters, and legends in a sympathetic manner. On the other hand, some writers – especially those in the Berlin circle of Bettina’s husband, Achim von Arnim – regarded Jews with enmity and disdain. Arnim himself perpetuated the idea of the Jew’s dual nature as eternal witness and repulsive merchant in his drama, Halle und Jerusalem (1811).

The 19th-Century Portrait. The intensification of German nationalism during the struggle against Napoleon led writers to depict Jews as outsiders and eternal wanderers. It encouraged virulent antisemitism at a time when Jewish in-

During the 19th century Jewish themes increasingly infiltrated German drama and fiction. In her novella Die Judenbuche (1842), Annette von Droste-Hulshoff told a grim tale of the avenging of the murder of a Jew, even inserting a cryptic Hebrew phrase into her story. Franz Grillparzer, Friedrich Hebbel, and Otto Ludwig extolled the Jewish past and presented biblical and Jewish historical characters quite different from the old stereotypes. Grillparzer’s Die Juden von Toledo (1873), based on the tragic romance of Alfonso v11 of Castile and the Jews of Toledo, was the forerunner of many other treatments of this theme. On the other hand, novelists who dealt with the Jewish present continued to portray the Jew as a villain. Gustav Freytag wrote a best-selling novel, SOLL UND HABEN (1854), which reinforced the image of the Jewish usurer, contrasting the noble, loyal, and hardworking Christian apprentice Anton with his rascally Jewish fellow-worker, Veitel Itzig, who comes to a sorry end. In Der Hungerpastor (1864), the best-known novel of Wilhelm Raabe, another Jew follows the wicked example of Veitel Itzig; while Felix Dahn’s novel, Ein Kampf um Rom (1876), extols German racial purity and presents the Jews, Jochem, as cowardly and treacherous.

A somewhat glamorized picture of Jewish life was presented by Leopold “Kompert (Boemische Juden, 1851; NEUE GESCHICHEN AUS DEM GHETTO, 1860) and Karl Emil “Franzos (Die Juden von Barrow, 1877). The setting of Kompert’s tales was Bohemia and that of Franzos, Galicia. Austrian Galicia was also the setting of many novels and stories by the non-Jewish writer, Leopold Ritter von Sacher-Masoeh. Sacher-Masoeh, whose later erotic works gave rise to the term “masochism,” was the son of an Austrian police chief in Letoberg (Lvov), and his early impressions of Jewish life there inspired his Judengeschichten (1878), PÖHNSCHE Ghetto-geschichten (1886), and Jue-

disches Leben in Wort und Bild (1890). His obvious sympathy for the East European Jew’s tenacious adherence to his religion and culture subjected him to considerable abuse. The works of Kompert, Franzos, and Sacher-Masoeh enjoyed quite a vogue as erotic literature, but it was not until Georg “Hermann wrote the novel Jettern Gebe (1906) and its sequel, Henriette Jacoby (1909), that cultured German Jewry received adequate treatment in German fiction.

Later reactions. When Friedrich Nietzsche wrote in 1886 in Jenseits von Gut und Böse that he had never yet met a German who was favorably inclined to Jews, he was undoubtedly exaggerating, but he correctly recognized that in Germany the age-old image of the Jew was an unflattering one. Although his close association with Richard “Wagner had brought him into contact with an outspoken antisemite, Nietzsche himself abhorred antisemitism as the revolt of the rabble against culture, and condemned it in the most violent terms. While Nietzsche foresaw a glorious future for Jews on the world scene, another influential German philosopher, Oswald Spengler, held that Judaism had already completed its historic function and was on the verge of disappearing. In Der Untergang des Abendlandes (1922) he was at pains to stress the intense mutual hatred between Germans and Jews, and the “inexorable conflict” between a vigorous young culture rooted in the soil and a senile, overripe civilization of landless cosmopolitans. Spengler’s vaunted objectivity was soon to supply Nazi ideologists and literary racists with ammunition for their perverted theories.

The late 19th century saw a reaction to German literary antisemitism on the part of a few isolated Jewish writers, notably Max “Nordau and Theodor “Herzl, both of them fathers of the Zionist movement. Nordau’s tragedy, Doktor Kohn (1898), concluded that assimilation was impossible and that a solution to Jewish misery had to be found elsewhere; while Herzl, in his utopian novel Altneuland (1902), projected his answer into an idealized Jewish state. Arthur “Schnitzler, neither a Zionist nor an assimilationist, presented an admirable Jewish physician in his drama Professor Bernhardi (1912), which attacked antisemitism. With few exceptions, the major non-Jewish writers sided with the Jews in their battle for self-preservation. Although Artur Dinter anticipated the Nazis with his hate-filled Die Suende wider das Blut (1917), modern authors of the stature of Gerhart Hauptmann and Thomas Mann remained aloof from the rising tide of nationalism. In his tragedy, Der rote Hahn (1901), and in his drama, Die Finster-nisse (1947), which had to be smuggled out of Nazi Germany, Hauptmann paid tribute to the fruitful liberalism of German Jewry. There were sympathetic Jewish characters in Mann’s works, too, especially in Koenigliche Hoheit (1909) and Der Zauberberg (1924). A certain objectivity characterizes the Jewish portrayals of Ernst Glaeser (Jahrgang 1902, 1928) and Gertrud von Le Fort (Der Papst aus dem Ghetto, 1930).

Prelude to catastrophe. During the first third of the 20th century, the Jewish influence on German literature
reached its climax. The image which Jewish writers incorpo-
rated in their works ranged from the self-hatred of Maximilian  
"Harden, Karl "Kraus, Kurt "Tucholsky, and Otto "Weininger 
to the strong affirmation of national resurgence by Martin Bü-
ber, Richard Beer-Hofmann, Max Brod, and Arnold Zweig.  
Joseph Roth dramatized the conflict between the authentic 
and the assimilated Jew; Walter "Mehring identified the Jews 
with the capitalists responsible for the inflation; and Hans José  
"Rehfisch and Wilhelm Herzog dramatized European anti-
semitism in Die Affaire Dreyfus (1929). Stefan Zweig saw the  
Jew as the precursor of the good European and Ernst "Toller  
fought German racial conceit by espousing cosmopolitanism 
and utopian Socialism.

Aryan mythmakers from Houston Stewart "Chamber-
lain to Alfred "Rosenberg propagated the fiction of blood as 
the determining psychic factor. Nazi writers fed the Germans 
an image of the Jew as an hereditary criminal, and branded 
as a fairy tale the possibility that baptism could emancipate 
the Jew from his criminal tendencies. With the triumph of 
Nazi ideology in 1933, all favorable images of the Jew were 
suppressed by literary, stage, and radio censors. Only in exile 
could Thomas and Heinrich Mann and other writers of non-
Jewish origin present a more balanced image of the Jew. Most 
German émigré writers on Jewish themes were, however, ei-
ther Jews or of Jewish descent. They included Arthur "Koes-
tler, Lion Feuchtwanger, Karl "Wolfskehl, Arnold Zweig, Her-
mann "Kesten, Alfred "Doeblin, and Else "Lasker-Schueler. 
The few courageous voices that were heard from the "Aryan" 
side included those of the baptized half-Jew Carl "Zuckmayer, 
who had shown Jewish faults and virtues to be common to 
all men in such works as his drama Der Hauptmann von Ko-
openick (1930); Wolfgang Langhoff, whose Die Moorsoldaten 
(1935) was the first literary account of Nazi brutality in the 
concentration camps; and Bertolt Brecht, who developed a  
similar theme in Furcht und Elend des Dritten Reiches (1941). 
Like their Jewish fellow-writers, however, Zuckmayer, Lang-
hoff, and Brecht were finally compelled to take refuge abroad, 
and it was not until after World War II that a more dispa-
sonate assessment of the Jewish image in German literature 
could be attempted.

[Sol Liptzin]

The Jewish Contribution to German Literature  
Jews first settled along the Rhine in Roman times and they 
have thus been an integral element in German culture from 
itself earliest beginnings. In the Middle Ages, the Middle High 
German which they spoke became interspersed with Hebrew 
words and, following waves of persecution, was carried east-
ward to become the Yiddish language (i.e., Judisch-Deutsch).  
Those Jews who remained in Germany developed a kindred 
dialect, Judendeutsch, and it was in this more distinctly Ger-
manic tongue that Glueckel of "Hameln wrote her famous 
memoirs at the end of the 17th century. German Jewry can, 
however, lay claim to one authentic Jewish contributor to 
medieval German literature – the Minnesaenger (minstrel) 
Suesskind von "Trimberg, who flourished in the first half of 
the 13th century. The handful of lyrics still extant, notable for 
their Jewish feeling and inspiration, are of perennial interest 
to German literary historians. A century later, in 1336, Sam-
son Pine was one of three German writers who collaborated 
in the translation of a French version of the Parsifal romance.  
The prefatory acknowledgements of his Strasbourg colleagues 
clearly indicate that Pine was a Jew and that he was responsi-
ble for most of the work. In 1516 Johannes "Pauli, a Jew 
turned Franciscan preacher, published his Schimpf un Ernst, 
an important and influential collection of humorous and di-
dactic anecdotes.

THE AGE OF ENLIGHTENMENT. It was not until 250 years 
later, during the late 18th century, that Jewish writers first 
appeared in significant numbers on the German cultural 
scene, utilizing the German language as their literary medium. 
The doctrines of tolerance and human equality propounded 
by the philosophers of the Enlightenment made a profound 
impact on Jewish intellectuals. The Jewish elite wished 
to contribute to the stream of German culture, and at first 
The German elite welcomed them. The finest expression of 
this rapprochement between the two ethnic groups was the 
friendship of Moses Mendelssohn, the Jew from Dessau, 
and Gotthold Lessing, Germany's most influential literary 
critic, who both stressed the common ethical heritage of Ju-
daism and Christianity. A towering figure of both the Ger-
man Enlightenment and the Jewish emancipation, Moses 
Mendelssohn was also the first modern Jewish writer to mas-
ter the German idiom in all its subtleties. His philosophical 
and aesthetic works – notably the Briefe ueber die Empfindun-
gen (1755), Phaedon, oder Uber die Unsterblichkeit der Seele  
(1767), and Morgenstunden (1785) – had an enormous impact 
in Germany itself and abroad. The reputation he came to enjoy 
in the outside world enhanced his standing within German 
Jewry, which thereafter involved itself increasingly in Ger-
man cultural and literary affairs. Mendelssohn also founded 
German Jewry's first newspaper, Kohelet Musar (Berlin, 1750), 
and in 1778 began publishing an original German translation 
of the Bible with a Hebrew commentary. German enlighten-
ment found its finest philosophical formulation in the criti-
cal reasoning of Immanuel "Kant, and it is no accident that 
the first enthusiastic adherents of Kantian philosophy were 
Jews. From Marcus Herz, the friend and physician of Lessing 
and Mendelssohn, Lazarus "Bendavid, Solomon "Maimon, 
and David "Friedlaender to the outstanding neo-Kantians of 
the 20th century – Hermann "Cohen and Ernst "Cassirer –  
Jews played a leading role in the exposition of Kant's phi-
losophy.

Hartwig "Wessely, who died in 1805, was the last of the 
Hebrew lyric poets in Germany, and German steadily re-
placed Hebrew among the Jewish writers of Central Europe. 
Moses Ephraim "Kuh attacked antisemitism in witty German 
epigrams, and the Polish physician Issachar Falkensohn "Behr 
rote Gedichte von einem pohlnischen Juden (1772), which 
were reviewed by Goethe. Michael "Sachs, through his trans-
lations, introduced the religious poetry of medieval Spanish Jewry to the Jews of Germany.

The Age of Romanticism. During the ensuing Romantic era the German theologian Friedrich "Schleiermacher, who wished to see a revival of religion along with the pursuit of poetry and the fine arts, strenuously opposed all attempts to convert Jews to Christianity, since he doubted the sincerity of the converts. Romanticism delayed the process of Jewish emancipation by developing a nationalist philosophy that led to a new form of antisemitism, based not on religious differences, but rather on differences in national origin. This "Teutonism" conditioned hatred of the Jews.

From the 1780s, German Jews and non-Jews had mingled in Berlin salons, where Jewish hostesses of charm, learning, and wit furthered the cultural exchange between statesmen, philosophers, and Romantic artists. The most distinguished salon in Berlin was that of the brilliant Henriette "Herz, wife of the philosopher Marcus Herz and an admirer of Goethe and the Romantics, who fostered the doctrines of the new generation. Other Berlin hostesses were Rahel Varnhagen von Ense (whom Goethe claimed as the first person to understand and recognize him); Moses Mendelssohn's daughter, Dorothea von "Schlegel, who introduced Victor Hugo and Mme. de Staël to the German reader; and Fanny "Lewald, a writer and feminist. Their Viennese counterparts were Fanny, Baroness von "Arnstain; and the von Wertheimsteins, Josephine, her sister Sophie, Baroness Todesco, and her daughter Franziska.

The Age of Liberalism. Romanticism promoted the revival of historical studies and taught that history does not merely interpret the past but affords an understanding of the present and guidance to the future. Preeminent among Jewish historians during the first half of the 19th century was Leopold "Zunz, the originator of the "Wissenschaft des Judentums ("Science of Judaism"). Together with Abraham "Geiger, Moses Moser (1796–1838), and Eduard "Gans, he founded in 1819 the "Verein fuer Kultur und Wissenschaft des Judentums. Heine, who joined this organization, gave a detailed record of its achievements in a eulogy of his friend Ludwig Marcus (1798–1843). The impact of Zunz and of the Verein was felt throughout the 19th century. Geiger wrote his three-volume study, Das Judentum und seine Geschichte (1864–71), from the standpoint of Reform Judaism, but the concept of Jewish history was broadened when the positive historical (Conservative) school emerged with the Monatsschrift fuer Geschichte und Wissenschaft des Judentums, under the editorship of Zacharias "Frankel. The first universal history of the Jewish people in German, Geschichte der Israeliten (1820–47) written by Isaac Markus "Jost, paved the way for Heinrich "Graetz, whose Geschichte der Juden von den aeltesten Zeiten bis auf die Gegenwart (11 vols., 1853–75) is generally considered one of the outstanding works of historical scholarship in the German language.

Prussian and Austrian reactionaries were the most rabid antisemites, and Jews saw in political liberalism a powerful ally in their battle for emancipation. The aim of German liberalism was to develop the capacities of the individual irrespective of race, sex, class, or economic status; it therefore enabled Jews to develop their talents to the fullest extent. Berthold Auerbach, who was for many years the literary spokesman of German-Jewish liberalism, became the outstanding Jewish master of the sentimental novel and short story. However, although Jews finally succeeded in obtaining full legal rights as citizens of the German states, their inner conflict did not abate. Ferdinand Lassalle, the leading German socialist, summoned his "martyr people" to join the revolutionary working classes in the fight against the common oppressor. Jews in general joined the opposition parties, and some became influential contributors to the liberal and socialist press.

Disillusionment. Heinrich Heine, the greatest Jewish poet in the German language, tried to disguise the conflicts arising from his opportunistic conversion to Christianity by satirical irony, but at heart he always remained a Jew. Some of his most Jewish poems (e.g., the "Hebraische Melodien" of his Romanzer) were written years after his baptism. Heine and Ludwig Boerne were the originators of the German feuilleton, a literary genre of great artistic charm in which Jews – from Moritz Gottlieb "Saphir and Daniel Spitzer (1835–1893) to Herzl, Nordau, Peter "Altenberg, Felix "Salten, and Alfred "Polgar – particularly excelled. Some German revolutionary poets such as Karl "Beck and Moritz "Hartmann were Jewish merely by the accident of birth and both converted. It was only when revolutionary ardor gave way to disappointment verging on despair that these writers turned to authentic Jewish subjects. Karl Emil Franzos discovered Halbasiyen ("Semi-Asia," i.e., Galician Jewry) and described the tension between Eastern and Western Jews.

With few exceptions, 19th-century German dramatists suppressed any Jewish feelings they may have had. Ludwig "Robert, the converted brother of Rahel Varnhagen, was always sensitive to the ambiguities of his position; while Michael "Beer, brother of the composer Giacomo "Meyerbeer, wrote a play, Der Paria (1826), which betrays the depressing effect of his Jewish origin. A third playwright, Solomon Hermann von "Mosenthal, in his Deborah (1850), dramatized the story of a Jewess living among Christian peasants.

During the first half century of Jewish emancipation, the dichotomy was resolved for many German Jews by assimilation or conversion. Of the direct descendants of Michael "Creizenach, a scholarly advocate of religious reform, his son Theodor (1818–1877), a poet and authority on Goethe, abandoned Judaism, as did Theodor's son Wilhelm (1851–1919), an eminent literary scholar. Friedrich Wolters (1876–1930), who belonged to the circle of Stefan George, was the non-Jewish grandson of the Odessa-born poet and translator Wilhelm Wolfsohn (1820–1865). Heinrich Stieglitz (1801–1849), a melancholic lyricist, was the son of a baptized banker; and Betty
Paoli (Barbara Elisabeth Glueck, 1815–1894) was a Viennese society poet born of a Hungarian nobleman and a Belgian Jewess.

**THE STRUGGLE BETWEEN THE TWO SOULS.** The novelist Jacob *Wassermann, reviewing his own life in *Mein Weg als Deutscher und Jude* (1921), wrote: “I am a German and a Jew; each as completely as the other; neither can be separated from the other.” This held true for most German-Jewish writers of the late 19th and early 20th centuries, although the proportion between the German and the Jewish ingredients of this amalgam varied. Some wished for total assimilation; others were willing to identify themselves within the German-Jewish group but denied all kinship with East-European Jews, whom they considered foreign and inferior. Jewish history was for this class of writer far more remote than the history of the Germans whom they idealized.

Three writers who appear to have been untouched by the problem were the half-Jewish poet Paul Heyse, who was awarded the Nobel Prize for literature in 1910; and two humorists, Julius Stettenheim (1831–1916) and C. Karlweis (Carl Weiss, 1850–1901), an Austrian railroad inspector who wrote popular comedies and short stories. On the other hand, Arthur Schnitzler, the sensitive, delicate analyst of a dying Viennese society, was a vigorous opponent of antisemitism. Stefan Zweig despaired of the survival of European culture, and the European tragedy finally drove him to suicide. He nevertheless felt that Jewry would endure, but he himself was not primarily of it, despite his awareness of Jewish nobility and martyrdom. Some writers were impelled to stress the positive aspects of the Jewish heritage and identity. They include Jacob Loewenberg (1856–1929), whose verse was collected in *Lieder eines Semiten* (1892) and *Aus juedischer Seele* (1901); and the proselyte Nahida Ruth *Lazarus, noted for her expository works conceived in the spirit of Liberal Judaism. Ludwig *Jacobowski, in his novels Werther der Jude* (1892) and *Loki* (1899), portrayed the struggle between the Jew and his antisemitic surroundings. The pioneer Zionist Samuel *Lublinski emphasized the Jewish thirst for knowledge and truth; another Jewish nationalist, Fritz Mordechai *Kaufmann, became an expert on Yiddish folklore; while Georg Hermann wrote about Berlin’s Jewish society with benevolent satire. Two other writers who took a positive Jewish stand were Moritz *Heimann and Alfred *Kerr.*

By contrast, several leading literary figures of the era revealed themselves to be either unsympathetic to the fate of their own people or even outspokenly hostile. Carl *Sternheim anticipated the Fascists with his attacks on the Jewish middle classes, but Rudolf Borchardt, who tried to disguise his origin by the adoption of reactionary nationalism, only narrowly escaped deportation to Auschwitz concentration camp. The philosophical father of “Jewish self-hatred” was Otto Weininger; his leading disciple was Arthur *Trebitsch, whose pathological detestation of the Jews and Judaism led him to offer his services as an antisemitic propagandist to the Austrian Nazis. Two other writers influenced by Weininger were Karl *Kraus and Kurt *Tucholsky. Somewhat less violent was the ostentatious Catholic convert Ernst *Lothar. Ernst Lissauer, composer of World War I's notorious “Hymn of Hate” against England, also supported the postwar reactionary nationalists. A double irony attaches to Ferdinand Bronner (1867–1948), a naturalistic dramatist who wrote under the pen name Franz Adamus: he was born in the Polish town of Oswiecim (Auschwitz), and in his comedy, *Schmelz, der Nibelunge* (1905), a son denies his Jewish parentage. His own son, Arnolt Bronnen (1895–1959), swung from support of the extreme left to the far right, and held important radio and television posts under the Nazis. After World War II the erstwhile Nazi became a respectable public figure in Austria and at the end of his life was a drama critic in East Berlin.

**THE JEWISH RENAISSANCE.** Under the impact of their military disaster in World War I the Germans experienced a temporary spiritual revulsion against war, brutality, lust for power, and materialism. The literary movement of Expressionism thereafter engaged in a fervent struggle for peace, world brotherhood, and the dignity of man. It included a high proportion of Jewish writers, notably Ernst Toller, Alfred Doeblin, Franz *Werfel, Alfred *Mombert, Albert *Ehrenstein, Alfred *Wolfenstein, Jacob von Hoddis (1887–1942), Ludwig *Rubiner, and the Franco-German poet Yvan *Goll.*

Together with this rebellious movement in the arts, there arose a second movement aiming at the intellectual, moral, and political rebirth of the Jewish people. Martin Buber and Franz Rosenzweig were the outstanding philosophical leaders of this Jewish renaissance. Richard Beer-Hofmann was the major poet of this German-Jewish revival and gave expression to Jewish suffering and glory in a biblical cycle about King David. His *Schlaflied fuer Miriam* (1897) is regarded as the finest philosophical lullaby in the German language. Karl Wolfskehl, who began his career as a member of the Stefan George circle, also found his way to Jewish poetry. Max Brod, whose Zionism led him to settle in Erez Israel in 1939, considered Judaism a rampart against the black void toward which events were pointing, and felt that his “best service to humanity was to work in all humility for the perfection of my own people.” Franz *Kafka and Hermann *Broch broke new ground in German fiction with works on the ultimate goal of human existence. Although their novels never directly touch on Jewish themes, they reflect the Jewish character of their authors. Kafka himself studied Hebrew and even planned to settle in Erez Israel.

Vivid pictures of Jewish life in Germany were painted by the novelists Lion Feuchtwanger (Jud Suess, 1925) and Arnold Zweig. Feuchtwanger also wrote a celebrated trilogy based on the story of Josephus. Zweig, long an ardent Zionist, lived in Haifa for many years before settling in East Germany after 1948. In *Der Gezeichnete* (1936), Jacob *Picard portrayed with affection the Orthodox folklore and traditions of Jews long settled in southwest Germany. Else Lasker-Schuler, regarded
by many as the greatest German poetess after Annette von Droste-Hulshoff, dreamed of an imagined Oriental world, celebrated the "Land of the Hebrews," and ended her days in Jerusalem. Gertrud Kolmar, whose poems, some of them in Hebrew, expressed tragic loneliness, remained in Germany and perished in a death camp. A third important woman poet, Nelly Sachs, was awarded the Nobel Prize for literature in 1966, expressed both the anxiety and the restlessness of her age and her loyalty to the Jewish people and its destiny.

Jewish writers of the 1930s echoed the torment and despair of their era. On the one hand there was a messianic belief in the future of mankind and, on the other, a nihilistic mistrust of any system of values. The Jews who fled Germany from 1933 and Austria from 1938 included some of the most prominent Jewish writers, although there were many who either chose to remain or could not escape. With the onslaught of the Hitler regime on German-speaking Jewry, the cherished dream of a German-Jewish symbiosis abruptly collapsed and the history of German-Jewish literature was, so far as Europe was concerned, at an end.

LITERARY SCHOLARS. The Jews of Germany and Austria also made an important contribution to literary history and research, many of them writing scholarly works that continue to be regarded as classics. Some outstanding literary historians were the convert Emil Kuh (1828–1876), who "discovered" the dramatist Friedrich Hebbel, editing his works (1866–68) and writing his biography (1877); Julius Leopold Klein, the Hungarian-born author of a 13-volume Geschichte des Dramas (1865–76); Richard Moritz Meyer, who wrote his Deutsche Literatur des neunzehnten Jahrhunderts (1900); Friedrich Gundolf, an authority on Shakespeare, Goethe, and Kleist; Alfred Kerr, author of Die Welt im Drama (1917) and Die Welt im Licht (1920); Egon Friedell, the Austrian playwright, who was also a cultural historian and author of a Kulturgeschichte der Neuzeit (3 vols., 1927–31); Hugo Bieber, who wrote Der Kampf um die Tradition (1928) and was an authority on Heine; and Arthur Elessor, author of Die deutsche Literatur vom Barock bis zur Gegenwart (1930–31).

Other scholars in this field include Julius Bab, Albert Bielschowsky (1847–1902), Ernst Heiborn, Rudolf Kayser, Alfred Klar (1848–1927), Victor Klemperer (1881–1960), Samuel Lubinschi, Kurt Pintthus (1886–?), Otto Piower (1859–1932), and Julius Wahle (1861–1940). Two outstanding authorities on Goethe were Michael Bernays (1834–1897), the baptized son of Hakham Isaac Bernays of Hamburg, who was a professor at Munich; and Ludwig Geiger, a son of the German reformer Abraham Geiger, who was a professor in Berlin and wrote Die deutsche Literatur und die Juden (1910). Three other academic scholars were Robert F. Arnold (Robert Frank Levisohn, 1872–1938), who was professor of German literature at Vienna; Jonas Fraenkel, an expert on Swiss-German literature, who held a chair at Berne; and Fritz Strich, who was professor successively at Munich and Berne universities. Georg Witkowski (1863–1941), the baptized brother of Maxilian "Harden, wrote Das deutsche Drama des neunzehnten Jahrhunderts (1923–25) and ended his career as a professor in Leipzig. Eduard Engel (1851–1938) published a Geschichte der deutschen Literatur that reached its 38th edition in 1929; and the Czech anthologist Camill Hoffmann wrote Die deutsche Lyrik aus Oesterreich seit Grillparzer (1912). The literary and dramatic critic Monty Jacobs (1875–1945), who was a coeditor of the Goldene Klassikerbibliothek, had an English father and took refuge in London after the Nazis came to power; while Werner Kraft (1896–1991), a German poet, editor, and critic, eventually settled in Israel. An outstanding scholar, Daniel Sanders, published several authoritative German dictionaries, including a Handwoerterbuch der deutschen Sprache (3 vols., 1859–65).

From the age of Heine onward, German Jews also distinguished themselves as cultural mediators, especially with the English and French. Heine's contemporary, the royal physician David Ferdinand Koreff, was also a writer and did much to promote the interchange of ideas between leading authors through his circle in Paris. Later contributions were made by German-Jewish translators from various languages, notably Julius Elías (Ibsen), Alexander Eliasberg (Dostoyevski, Tolstoy), F. Gundolf (Shakespeare), Siegfried Trebitsch (Shaw), and Stefan Zweig (Verhaeren).

WORKS ON PALESTINE AND ISRAEL. Discounting biblical poems, and plays and novels set in ancient Palestine, most of the literature on the Holy Land written in German was produced by a few German-Jewish authors. One of the very few 19th-century works was Nach Jerusalem (1858–60; The Jews in the East, 1859), travel sketches by the poet and Viennese communal leader, Ludwig August Frankl. The Gesagen aus der Verbanung (1829) by Solomon Ludwig Steinheim anticipated the return to Zion, as did Theodor Herzl's novel, Altneuland (1902), three-quarters of a century later. Moshe Ya'akov Ben-Gavriel (Eugen Hoelfich), who had been an Austrian liaison officer with the Turkish army during World War I, wrote a series of Zionist works based on personal experience, beginning with books such as Der Weg ins Land (1918) and Feuer im Osten (1920). Rudolf Lothar included an account of a visit to Palestine in Zwischen drei Welten (1926), and other German and Austrian Jews – not always Zionists – brought back glowing reports of Jewish pioneering achievements in Erez Israel. They include Alfred Kerr, who has a chapter entitled "Jerusalam" in his Die Welt im Licht (1920); Arthur Holitscher, who wrote Reise durch das juedische Palaestina (1922); Richard Arnold *Bermann, who collaborated with another non-Zionist, Arthur Rudert, in the publication of Palaestina (1923); and Felix Salten (Neue Menschen auf alter Erde, 1925). Else Lasker-Schüler's poetic impressions of the land in which she spent her last years, illustrated with her own quaint drawings, were conveyed in Das Hebraerland (1937). Another refugee, the historical biographer Josef Kasten, wrote many works in Palestine after 1933, including Jerusalem; Die Geschichte eines Landes (1937) and Eine palaestinensische Novelle (1942).
After World War II, Hans José Rehfisch wrote Quelle der Verheissung (1946), a play about German Jews who settled in Erez Israel. Max Brod’s novel, Unamböse (1949), dealt with Israel’s War of Independence, while Aryeh Ludwig Strauss, a refugee poet and literary historian who settled in Palestine and later wrote in Hebrew as well as German, reflected both the Israeli scene and his own intimate experience in the lyrical Heimliche Gegenwart (1952). M.Y. Ben-Gavriel found a new and valuable outlet for his talents in the many books of anecdotes and travel which became best sellers in post-Hitler Germany, such as Kumsitz (1956). His descriptions of life in the State of Israel did much to win sympathy and support for the infant Jewish state in Federal Germany.

[Rudolf Kayser]

The Holocaust and Its Aftermath

The liquidation of Jewish writers of Jewish origin was set in motion almost as soon as the Nazis came to power in 1933. Two early victims were the philosopher Theodor Lessing (murdered at Marienbad in 1933) and the poet and dramatist Erich Mühsam (tortured to death at the Oranienburg concentration camp in 1934). The massacre increased after the outbreak of World War II. Ernst Heilborn died at the hands of the Gestapo in Berlin in 1941, Paul Kornfeld in the Lodz ghetto in 1942, and Gertrud Kolmar somewhere in Eastern Europe in the following year. Writers who perished at Auschwitz include Georg Hermann (1943), Arno Nadel (1943), and Camill Hoffmann (1944). By a grim irony, Herwarth Walden, “Walden, who fled to the U.S.S.R. in 1933, is thought to have been executed during a Soviet purge in 1942. A number of Jewish writers, unable to accept the shattering of their illusions, committed suicide. They include the cultural philosopher and historian Walter Benjamin (Paris, 1940), Egon Friedell (Vienna, 1938), Ludwig Fulda (Berlin, 1939), Ernst Toller (New York, 1939), Kurt Tucholsky (Sweden, 1935), Ernst Weiss (Paris, 1940), Alfred Wolfenstein (Paris, 1945), and Stefan Zweig (Brazil, 1942). In fear of the Nazi invaders, the half-Jewish expressionist poet Walter Hasenclever took his own life at a detention camp in southern France in 1940.

Many other German and Austrian writers of Jewish birth, more fortunate, found refuge abroad. Among those who settled in England were Felix Braun, Kurt Hiller, Alfred Kerr, Arthur Koestler, Theodor Kramer, Robert Neumann, Hans Rehfisch, and Carl Roessler. Karl Wolfskehl died an exile in New Zealand, Nelby Sachs and Peter Weiss settled in Sweden, while Paul Adler survived the Holocaust in hiding in Czechoslovakia. Switzerland provided a haven for Efraim Frisch, Margarete Susman, Siegfried Trebitsch, and the converted half-Jew, Carl Zuckmayer, who spent the war years in the U.S. By far the largest number fled to the United States or Palestine. Those who immigrated to Erez Israel include Max Brod, Martin Buber, M.Y. Ben-Gavriel, Sammy Gronemann, Josef Kastein, Leo Perutz, Else Lasker-Schueler, Aryeh Ludwig Strauss, and Arnold Zweig. The U.S. welcomed scores of refugee writers, among them literary figures such as Julius Bab, Richard Beer-Hofmann, Hugo Bieber, Ferdinand Bruckner, Alfred Doeblin, Lion Feuchtwanger, Manfred George, Hermann Kesten, Ernst Lothar, Ludwig Marcuse, Walter Mehring, Alfred Neumann, Alfred Polgar, Roda Roda (Sandor Rosenfeld, 1872–1945), Felix Salten, Friedrich Torberg, Berthold Vietel, Ernst Waldinger, and Franz Werfel. Refugee writers who returned to Europe after World War II include Braun, Bruckner, Doeblin, Lothar, Marcuse, Rehfisch, Salten, Torberg, and Vietel. Several leftist writers abandoned the West for Iron Curtain countries: from Mexico, Egon Erwin Kisch, “the rushing reporter,” returned to Prague and Anna Seghers to East Germany; Friedrich Wolf moved from the U.S.S.R. to East Berlin and was for a time East Germany’s envoy in Warsaw; while Arnold Zweig, who left Israel in 1948, also settled in East Berlin. Hans Habe, who had fought first with the French and later with the U.S. army, finally made his home in Austria. A postwar playwright, Wolfgang Hildesheimer (1916–), was in Erez Israel during the 1930s and World War II, but eventually settled in Munich.

The Literature of Remorse

After the collapse of Nazi Germany, non-Jewish writers of a new, repentant generation experienced a feeling of revulsion against the mass murder of the Jews. They tended to idealize the figure of the Jew, endowing him with biblical grandeur, immense wisdom, and great moral stature. As the prime victim of the European Holocaust, the Jew continued to trouble and preoccupy the conscience of postwar Germany. The poet and novelist Johannes Bobrowski, who had served on the Russian front during World War II, wrote affectionately of the heterogeneous population and folk world of pre-Nazi East Prussia, and spoke of Germany’s treatment of the Jews as “a long story of misfortune and guilt, for which my people has been to blame ever since the days of the Teutonic Knights.” Similar feelings pervaded the works of postwar novelists such as Heinrich Boell (Wo warst du, Adam?, 1951), Albrecht Goes (Das Brandopfer, 1954), Gunter Grass (Die Blechtrommel, 1959; Hundejahre, 1965), Walter Jens (Der Blinde, 1951), Wolfgang Koeppen, and Felix Lutzendorf. The anti-Nazi refugee novelist Erich Maria Remarque dealt with the fate of German Jews immediately before and during the Holocaust: Arc de triomphe (1946; Arch of Triumph, 1946); Der Funke Leben (1952; Spark of Life, 1952); and Die Nacht von Lissabon (1962); and other novels on the theme of anti-Jewish persecution were written by Stefan Andres (Die Sinnflut, 1949–59), Friedrich Duerrenmatt (Der Verdacht, 1953), Hermann Kасак (Die Stadt hinter dem Strom, 1947), and Rudolf Lorenz (Alles andere als ein Held, 1959).

The fate of the Jews was also presented on the stage in plays by Stefan Andres (Sperrzonen, 1959), Max Frisch (Andorra, 1962), Fritz Hochwaelder (Der Fluchtlings, 1948; Der öffentliche Anklager, 1954), Erwin Sylvanus (Korzak und die Kinder, 1959), and Martin Walser (Eiche und Angora, 1962). The most influential – and controversial – postwar German drama about the Jews in the Nazi era was Rolf Hochhuth’s Der Stellvertreter (1965), which condemned Pope Pius XII as
an accessory to Hitler’s “Final Solution of the Jewish Problem.”

Der Stellvertreter was translated into many languages and was staged in the U.S. as The Deputy and in England as The Representative. In postwar German literature the Jew thus became a symbol of man’s inhumanity to man and an instrument of national self-flagellation. This process was encouraged by the appearance of works in German by Jewish victims of the Hitler era – the moving diary of Anne *Frank; Das unaussprechliche Siegel (1946), a novel by the baptized half-Jewess, Elisabeth Langgässer (1899–1950); Eine Seele aus Holz (1962; A Soul of Wood, 1964), a grim volume of tales about Hitler’s “death doctors” and their victims by Jakob Lind (1927– ); the visionary poems of Paul *Celan (1920–1970), a Romanian-born writer and translator, whose works include Der Sand aus den Urnen (1948) and Mohn und Gedachtnis (1952); and the poems of Nelly *Sachs. Two half-Jews who saw the problem from both sides of the fence were Carl Zuckmayer, in his plays Des Teufels General (1947) and Das kalechte Licht (1955), and Peter Weiss with Die Ermittlung, an oratorio based on the Auschwitz trial held in Frankfurt in 1965 (Eng., The Investigation, 1966).

In contemporary Germany, Polish-born Marcel *Reich-Ranicki has established himself as the country’s leading literary critic. Other German-language writers of note are Elfriede *Jelinek (Nobel Prize, 2004), Wolfgang *Hildesheimer, and Barbara *Honigmann.

**GERMANY,** country in north central Europe. The Talmud and the Midrash use “Germania” (or “Germania”) as a designation for northern European countries, and also refer to the military prowess of these peoples and to the threat they posed to the Roman Empire (Meg. 6b; Gen. R. 75:9; etc.). Medieval Jewish sources first refer to Germany as “Allemannia” or “Lothir” (Lotharingia); later the biblical term “Ashkenaz” came into use, and was retained in Hebrew literature and Jewish vernacular until recent times.

**Middle Ages**

There is no substance to the legends extant in the Middle Ages relating that Jews were present in Germany “before the Crucifixion.” Supposedly the first Jews to reach Germany were merchants who went there in the wake of the Roman legions and settled in the Roman-founded Rhine towns. Archaeological evidence suggests that Jews may have lived in Augusta Raurica (Kaiseraugst) and Augusta Treverorum (*Trier). Imperial decrees regarding the duties of Jewish community officials were sent to Colonia Agrippinensis (*Cologne) in 321 and 331 C.E. (Cod. Theod., 16:8, 3–4; Aronius, Regesten, no. 2). There is, however, no evidence of continuous Jewish settlement in Germany from Late Antiquity to the early days of the German Empire. Jews entered Central Europe in this period from the west and the southwest; Jewish merchants from southern Italy and France were welcomed in Germany, and settled in the towns along the great rivers and trade routes. The *Kalonymos* family from Lucca established itself in *Mainz in the tenth century.* In its early stages German Jewry was closely linked with the Jewish communities of Northern France. A 12th-century Jewish scholar mentions a letter he saw in *Worms*, which Rhine Jews had sent to Erez Israel in 960, asking for verification of the rumor that the Messiah had come (*Rabin., 44 (1902), 238). Ties were also maintained to the academies of Babylonia. Until the end of the 11th century the Jews of Germany engaged in international trade, especially with the East, and were an important element of the urban population. They were concentrated along the west bank of the Rhine, in Lorraine, and in ancient bishopical seats and trade centers, such as Cologne, Mainz, *Speyer, Worms, and Trier,* as well as religious and political centers situated more eastward, such as *Regensburg* and *Prague.* The extant reports of Jewish settlement in Germany are of a haphazard nature, and the dating of such records does not necessarily establish the sequence of settlement. The first mention of Jewish settlement in Germany dates from the 9th century, from Worms and *Regensburg* from 981. Jewish communities in south central Germany (*Bamberg, *Wuerrzburg* and *Thuringia* (*Erfurt* are mentioned in documents from the 11th century. In *Breslau* and *Munich* Jews are mentioned at the beginning of the 13th century, in *Vienna* in the middle...
of that century, and in *Berlin (and other places) at its end. At the end of the tenth century (or the beginning of the 11th), *Gershom b. Judah ("Meor ha-Golah") moved from "Metz to Mainz and that city became noted for Torah learning; the yeshivot of Mainz and Worms became spiritual centers for all the Jews in Central Europe and even attracted students from France, among them the famous *Rashi. For the Jews, the Carolingian Empire, although no longer a political entity, still remained a single social and cultural unit. Their social and legal status was distinct from that of the general population, and, as a small and largely defenseless minority, they required special protection to safeguard their existence. The first reports of persecution of Jews in Germany date from the 11th century (the expulsion of the Jews of Mainz in 1012), and the first written guarantees of rights, granted to them by emperors and bishops, also date from that century. In 1084 the archbishop of Speyer invited them to settle in his enlarged city "in order to enhance a thousandfold the respect accorded to our town" (Aronius, Regesten, 70 no. 168), and granted the Jews far-reaching trading rights and permission to put up a protective wall around their quarters. This evidence of the high value attached to Jews for settlement of a new town and the expansion of its trade precedes by only 12 years the "gezerot tatnav" (1096; see below). In 1090 Emperor *Henry IV issued charters of rights to the Jews of Speyer and Worms (ibid. 71–77 nos. 170–1), and succeeding emperors followed his example. All these writs acknowledged the right of the Jews to be judged "by their peers and no others … according to their law" (from a charter of 1090). In another such document, granted to the Jews of Worms in 1157, the emperor reserves for himself the exclusive right of judging the Jews "for they belong to our treasury." The guarantees of rights were given to the community leaders, who were also the spiritual leaders of the community, and were well-to-do men belonging to respected families. Communities that were accorded guarantees already possessed a synagogue (the Worms synagogue was founded in 1034) and public institutions. No reliable figures on the size of these Jewish communities are available; to judge by figures mentioned in the narratives of their martyrdom, there were communities of 2,000 persons (Mainz), but in general they consisted of several hundred, or several dozen. The community regulations enacted by the Jewish communities in Germany, and the commentaries and pietutim written by their scholars (such as Gershom b. Judah and *Simeon b. Isaac) reveal a strong and simple faith, and readiness to die for it (and see takkanot of the period).

First Crusade. Their faith was put to the supreme test during the first *Crusade, from April to June 1096. The brutal massacres that then took place are remembered in Jewish annals as the gezerot tatnav (i.e., the massacres of 4856 = 1096). The first waves of crusaders turned upon the Jews of the Rhine valley. Although the emperor, the bishops, and Christian neighbors were reluctant to take part in this onslaught and tried to protect the Jews, this defense had small success. Several Hebrew reports written during the first half of the 12th century present a detailed narrative of the indomitable courage and religious devotion of those who chose a martyr’s death ("kiddush ha-Shem"). In Mainz, it is related that "in a single day one thousand and one hundred martyrs were slaughtered and died" (A.M. Habermann (ed.), Gezerot Ashkenaz ve-Zarefat (1945), 32). The martyrdom of Mainz Jewry was preceded by negotiations with the emperor by Kalonymos ben Meshullam; in response, Henry IV published an order in defense of the Jews, but this was of little help. The Jews offered armed resistance and it was only in the final stage that they committed suicide. Similar events took place in many communities on the Rhine and along the crusaders’ route; many Jews chose martyrdom; others managed to save their lives by going into hiding (Speyer, Cologne, Worms, *Xanten, Metz). Some accepted temporary conversion, as in Regensburg, where "all were coerced" (ibid., 56). Later the emperor permitted their return to Judaism. The beginning of the Crusades inaugurated far-reaching changes in the social and economic structure of the Christian peoples in Western Europe and in their general outlook, and as a result also mark a turning point in the history of German Jewry. Henceforth physical attacks on Jews were more frequent and widespread, especially in periods of social or religious ferment. The city guilds forced the Jews out of the trades and the regular channels of commerce; this coincided with the stricter appliance of the church ban on usury in the 12th to 13th centuries. The combination of circumstances made "moneylending and pawnbroking the main occupation of Jews in Germany. They also continued in ordinary trade; as late as the 13th century they dealt in wool, attended the Cologne fairs, and traded with Russia and Hungary; during most of the Middle Ages there were even Jewish *craftsmen and Jews had some contact with *agriculture.

However moneylending, conceived by the Church as usury, became the hallmark of Jewish life in Germany. About 100 to 150 years after usury became the main occupation of Jews in England and France, it became central to the livelihood of Jews in Germany also. Jew hatred and the evil image of the Jew as conceived in the popular imagination were nourished by this economic pattern. Owing to the scarcity of money and lack of firm securities the rate of interest was extremely high. In 1244 the Jews of *Austria were given a bill of rights by Duke *Frederick II based on the assumption that interest was the Jews' main source of income; the bill contained detailed regulations on moneylending, and the rate of interest was fixed at 173½%. This kind of charter for Jews became typical of those granted in central and eastern Germany (and Poland) in the 13th and 14th centuries. Borrowing money from Jews against pawns became usual among the nobility and the townspeople, and enabled rabble-rousers to accuse the Jews of "sucking Christian blood" and of associating with gentle thieves who pawned their loot with the Jewish moneylenders. The Jews insisted on their right to refuse to return pawns unless reimbursed, a right confirmed as early as 1090. After the end of the 11th century the social status of the Jews steadily deteriorated. The *Reichslandfrieden ("Imperial peace
of the land”) issued in 1103 includes the Jews among persons who bear no arms and are therefore to be spared violence and defended. The concepts which had determined the status of the Jews from the beginning of their settlement in Germany were now applied with increasing vigor. The need of the Jews for refuge and protection was now utilized by the urge to oppress and exploit them. A long-drawn-out process of legal and social development was finally summed up in 1236 by Emperor Frederick 11, when he declared all the Jews of Germany Servi camerae nostrae (“servants of our treasury”); Aronius, Regesten, 216 no. 496). This meant that from the legal point of view the Jews and their property were possessions of the emperor and hence entirely at his mercy. However they never fully experienced the severity of this concept as it was never fully applied to them; in a way, their status as servants of the imperial treasury was even welcomed for it assured them of imperial protection, protection which no other German authority was able or willing to afford them. Long after the concept of the servitude of the Jews had been applied in Germany, *Meir b. Baruch of Rothenburg conceived that “the Jews are not glebae [adscripti = bound] to any particular place as gentiles are; for they are regarded as impoverished freemen who have not been sold into slavery; the government attitude is according to this” (Responsa, ed. Prague, no. 1001; cf. Tos. to BK 58a). The concepts that Jewish lives were not inviolable and that the Jews were in servitude to the country’s rulers led to renewed outbreaks of anti-Jewish violence whenever a critical situation arose. The second Crusade (1146) was again accompanied by widespread anti-Jewish agitation and incidents of violent persecution. However the experience of 1096 had taught a lesson both to the Jews and to the authorities: the Jews took refuge in the castles of the nobility, whenever possible having the entire citadel to themselves until the danger passed (see A.M. Habermann, op. cit. 117). The preaching of Bernard of Clairvaux against doing the Jews physical harm also helped to restrain the masses. Thus a repetition of the earlier terrorization and slaughter did not take place. Between the second Crusade and the beginning of the 13th century the Jews were subjected to numerous attacks and libels but relatively few lost their lives as a result.

SPIRITUAL LIFE. The events of 1096 had shaken German Jewry to the core; its response came in the form of tremendous spiritual and social creativity. Succeeding generations glorified the deeds of the martyrs and created a whole doctrine around the sanctification of God by martyrdom (kiddush ha-Shem). The ideas of self-sacrifice, *kedah, of choosing to meet “the Great Light” rather than apostasy, and of standing up to the attacker, were now formulated and transmitted as permanent principles. A special blessing was inserted into the prayer book to be recited by those who were about to be slain. In the 12th and 13th centuries the *Hasidei Ashkenaz (“pious men of Germany”) formulated the principles of perfect piety, observance of “Heavenly Law” (din shamayim) which is above and beyond the “Law of the Torah,” for the latter was given to man taking into account his yezer ha-ra (“evil inclination”). They taught that one should regard property as being held on trust (from God) only, and that one should abstain from lust without retiring from family and public life. The way of life to which this group adhered was established, in the main, by the members of a single family: *Samuel b. Kalonymos the Hasid of Speyer, his son *Judah b. Samuel he-Hasid of Regensburg, and their relative *Eleazar b. Judah (ha-Roke’ah) of Worms. Sefer Hasidim and Sefer ha-Roke’ah, two works written by these men, express the feelings and ideas of the hasidim of Germany on the greatness of God, on man’s conduct in life, on ghosts and spirits, on sexual temptation and how to withstand it, on the true observance of commandments, and on love of learning as a foremost religious value.

SOCIAL LIFE. During this period further consolidation of the Jewish communal leadership in Germany took place. Jews increasingly restricted themselves to the Jewish quarter in the town, which gave them a greater feeling of security and made possible the development of an intense social life. The meliores (leading families) accepted the authority of the most eminent scholars. Torah learning was not interrupted in times of trouble and danger. It even received additional impetus from the need to provide leadership for the Jewish public and guidance to the individual, while the number of outstanding scholars also increased. Even the source of livelihood that was forced upon the Jews – lending money against interest – came to be appreciated as an advantage since it left time to spare for Torah study. Moneymaking also determined the artificial structure of Jewish life; the Jews derived their income mainly from non-Jews, and there was hardly any economic exploitation of one Jew by another. As a result, there was a large measure of social cohesion in the German communities. The average community maintained a synagogue, a cemetery (or, if it was too small, obtained burial rights in a neighboring town), a bathhouse, and a place for weddings and other public festivities. A scholar attracted groups of students who lived in his home and were cared for by the scholar’s wife (A.M. Habermann, op. cit., 165–6). Meir b. Baruch of Rothenburg attests that his house was spacious and included “a bet midrash… a winter house [i.e., the main living quarters]… a courtyard for public use… a cool upper room where I eat in summer and… a room… for each student” (Responsa, ed. Cremona, no. 108). Community institutions developed. The community leaders and scholars – in gatherings on fair-days – issued takkanot regulating many spheres of life which were binding upon individual communities or groups of several communities. In the 13th century, *Eliezer b. Joel ha-Levi of Bonn established the principle that a majority decision also obligated the opposing minority, and unanimity was not required (contradicting the 12th-century French scholar Jacob b. Meir *Tam). Communal offices which had come into existence in the 12th and 13th centuries are listed in a document issued by the Cologne community in 1301: Nos Episcopus, magistratus Judeorum ac universi Judei civitatis Coloniensis (“We the bishop [i.e., the
leader], and officers of the Jews and the entire Jewish community of Cologne; see *Judenschreinsbuch*, 92–93). From 1220 onward, the “Takkanot Shum,” regulations issued by three of the great communities on the Rhine – Speyer, Worms, and Mainz (שו״ם, the initials of the three names) – have been preserved; joint meetings of the leaders of these three communities had a decisive influence on all the Jewish communities in Germany. German Jewry developed an independent leadership with a series of honors and degrees of rank. The intimacy of the small community enabled a person who felt wronged to turn to the public by means of interruption of prayer (see *bittul ha-tamid*) in synagogue until he received redress. Families experienced the usual sorrows and joys, and also had their share of frivolities: “wild young men... who liked gambling” (*Sefer Hasidim*, ed. by J. Wistinetzki (1924), no. 109) and practical jokes at festivities (see also Tos. to Suk. 45a, s.v. Mi-Yad Tinnokot). The main purpose of the takkanot was to strengthen religious life and especially to provide for increased study of the Torah, the observance of sexual purity laws, of the Sabbath, etc. They also introduced innovations designed to strengthen community life: the obligation on the part of each individual to pay his tax assessment and to refrain from false declarations, and the right of the community officers to transfer funds from one purpose to another, when the common good required it. Considerable emphasis was put on strengthening the authority of the community leadership: members of the community were not permitted to accept appointments by the authorities or to ask the authorities for exemption from community taxes; every dispute between Jews had to be brought before Jewish judges; and Jews were not allowed to apply to non-Jewish courts. Excommunication of an individual required the consent of the community, as did the divorce of a wife. Gambling was outlawed and regulations were issued for the preservation of order in the synagogues and law courts and at public celebrations. Lending money to Jews against the payment of interest, and insulting...
anyone in public were also prohibited. In the 12th century the Jews still took part in the defense of the towns in which they lived. Eleazar b. Judah tells of “the siege of Worms by a great host on the Sabbath, when we permitted all the Jews to take up arms... for if they had not helped the townspeople they would have been killed... therefore we permitted it” (Sefer ha-Roke’ah (Cremona, 1557), 23a, Hilkhot Eruvin, no. 197). In this period, Jews also moved with the eastward trend of the population, and new Jewish communities were established in the east and southeast. Those who joined in the movement of the urban population eastward encountered the terrors and problems of new colonists: “When you build houses in the forest you find the inhabitants stricken with plague since the place is haunted by spirits... They asked the sage what they should do; he answered: Take the Ten Commandments and a Torah Scroll and stretch out a cord the length of the ground, and bring the Torah Scroll to the cord... and then at the end say: ‘Before God, before the Torah, and before Israel its guardians, may no demon nor she-demon come to this place from today and for ever’” (Sefer Hasidim (ed. Wistinetzki), no. 371).

13TH CENTURY. The 13th century brought new troubles upon the Jews. The Fourth Lateran Council (1215) decreed that the clergy were to restrict business relations between Christians and Jews, that Jews had to wear signs distinguishing them from the Christians (see *badge), and that they were not to hold any public office. In 1235 the first case of “blood libel occurred in Germany (in Fulda) and in the second half of the 13th century the libel of “Host desecration began to spread in the country. These accusations were to cost many Jewish lives, to cause Jews much anxiety and anguish, and to bring about further deterioration of their image in the eyes of their Christian neighbors, who now came to regard them as corrupt beings, capable of the most abominable crimes. The acceptance of such views of the Jews by the masses occurred at a time when imperial rule was weakening, and the right to the Jews’ “servitude to the treasury” was passed on or transferred in different ways and for differing reasons to various local competencies. Religious fanaticism was rising and caused a social ferment in the cities, where the mob vented their anger on the Jews. In 1241, when the Jews of *Frankfurt on the Main tried to prevent one of their people from converting to Christianity, a Judenschlacht (Jews’ slaughter) took place, in which the entire community was butchered by the Christian mob. In 1259 a synod of the Mainz archdiocese ordered that Jews within its borders should wear the yellow badge. In 1285 the entire Jewish community of *Munich – some 180 persons – was burned to death, victims of a libel that had been spread against them. The Jews also had a heavy tax burden. A partial list of imperial revenue, dating from 1241, reveals that in 25 Jewish communities the Jews paid 857 marks, amounting to 12% of the entire imperial tax revenue for the year (7,127.5 marks) and 20% of the total raised in the German cities. In addition to the regular taxes the Jews also had to make payments in the form of “pre-ents” and bribes, or money was simply extorted from them. In this period – the second half of the 13th century – German Jewry produced great spiritual leaders. Foremost was Meir b. Baruch of Rothenburg, whose responsa and instructions guided several generations of Jews. He attacked manifestations of injustice or high-handedness in communal affairs, and in his threnodies and other writings gave expression to the sufferings of his people. In the end, his own fate symbolized the distress of the Jews: trying to escape overseas, like other persecuted Jews in Germany, he was arrested, handed over to the emperor, and died in jail in 1293.

PERSECUTIONS OF THE 14TH CENTURY. At the end of the 13th century and the first half of the 14th, anti-Jewish excesses by the mob increased in vehemence and frequency, and the authorities were also increasingly oppressive. In 1342 Louis IV of Bavaria decreed that “every male Jew and every Jewish widow, of 12 years and above, is obliged to pay a yearly tax of one gulden.” This poll tax was designed to increase the income that the emperor derived from the Jews, which had declined as the result of their “transfer” to lower authorities, and came in addition to the other taxes exacted from the Jews. In 1356 Emperor *Charles IV transferred his claim over the Jews to the Imperial Electors. Within a period of 50 years the Jews of Germany suffered three devastating blows. In 1298–99, when civil war had broken out in southwest Germany, the Jews were accused of Host desecration, and the Jew-baiter, *Rindfleisch, gathered a mob around him which fell upon the Jews of Franconia, Bavaria, and the surrounding area, destroying no less than 140 communities (including *Rothenburg, Wuerzburg, *Nuremberg, and Bamberg). Many Jews chose a martyr’s death and in many places also offered armed resistance. The period 1356–37 was marked by the catastrophe of the “Armleder massacres, in the course of which 110 communities, from Bavaria to Alsace, were destroyed by rioting peasants. Finally, in the massacres during the “Black Death, in 1348–50, 300 Jewish communities were destroyed in all parts of the country, and the Jews either killed, or driven out as “poisoners of wells.” The greatest Jewish scholar of the time, *Alexander Suslin ha-Kohen, was among those slain in Erfurt, in 1349. As a result of these three onslaughts, the structure of Jewish life in Germany suffered a severe blow. Nevertheless, only a short while later, Jews were again permitted to take up residence in German cities, where there was no one else to fulfill their function in society of moneylenders. Only a few weeks after the slaughter of the Jews of *Augsburg the bishop permitted some to return to the city; between 1352 and 1355 Jews reappeared in Erfurt, Nuremberg, *Ulm, Speyer, Worms, and Trier. Their residence was now based on contracts which contained severe restrictions and imposed numerous payments on them. There was also increased exploitation of the Jews by the emperor; a moratorium on debts, declared by *Wenceslaus iv in 1385 and again in 1390, dealt a severe blow to the economic situation of the Jews. Jewish vitality, however, was able to assert itself even in the adverse conditions that prevailed after the
Black Death massacres. The scholars assured the continuity of Jewish creativity. In 1365, *Meir b. Baruch ha-Levi established a new school in Vienna, based upon the customs and traditions of the Rhine communities, and his disciples – the “Sages of Austria” – became the spiritual leaders of German Jewry. In east and south Germany, with fewer towns and a relatively backward economy, Jews found it easier to earn their livelihood. This was also the route to *Poland, which gradually turned into a refuge for the Jews. Until the Reformation there was no change in the precarious situation of the Jews of Germany. On the one hand, the disintegration of the Empire prevented large-scale countrywide expulsions; when the Jews were driven out of one locality they were able to bide their time in a neighboring place, and after a short while return to their previous homes; on the other hand, the lack of a central authority put the Jews at the mercy of local rulers. In general, the emperor, the princes, and the leading classes in the towns gave their protection to the Jews; yet a single fanatic anti-Jewish preacher, John of *Capistrano, found it possible to inflame the masses against the Jews and to initiate a new wave of persecutions (1450–59) which culminated in the expulsion of the Jews from Breslau.

15TH CENTURY. The 15th century was generally marked by libels against Jews and their expulsion from certain areas and most major cities: in 1400 the Jews were expelled from Prague; in 1420, 1438, 1462, and 1473 there were successive expulsions from Mainz; in 1420–21 from Austria; in 1424 from Cologne; in 1440 from Augsburg; in 1475 the blood libel was raised in *Trent, resulting in anti-Jewish agitation and riots all over Germany, and the expulsion of the Jews from *Tyrol; in 1492 a Host desecration libel led to the expulsion of the Jews from *Mecklenburg; in 1493 they were driven out of *Magdeburg, and in the period 1450–1500, out of many towns in Bavaria, Franconia, and Swabia; in 1499 from Nuremberg; in 1510 there was another Host desecration libel and expulsion from *Brandenburg; in the same year expulsion from Alsace; and in 1519 from Regensburg. Of the more important cities in Germany, only Frankfurt and Worms still had major Jewish communities after that date. Nevertheless, in the course of the 15th century, amid these tribulations, Jews were also able to branch out into occupations other than moneylending. In the south German communities, there were Jewish wine merchants and petty traders. Jews also began to play a role in the expanding commercial life, acting as intermediaries between the large agricultural producer (such as the monasteries) and the rising city merchant; expelled from the cities and forced to live in the small towns and villages, the Jews bought wool, flax, etc., from the large storehouses and sold these commodities to the wholesale merchant. This was the beginning of a process which culminated in Poland in the 16th and 17th centuries with the Jews entering the service of the nobility as managers of their estates. Jewish life in the small communities of Germany was frequently marked by great material and spiritual hardship. Yet the Jews did all in their power to fulfill the commandments of their faith. Israel *Isserlein’s Pesakim u-Khetavim (Venice, 1545), para. 52, records a “curious event” in south Germany, when several communities had only a single etrog to share among them on the Sukkot festival; they cut the fruit up and sent a piece to each community, and although shrivelled by the time it reached its destination, the Jews made the prescribed blessing over their slice of etrog on the first day of the festival. Despite their poverty and sufferings, Jews held on to the normal joys of life. Jacob Moses *Moellin permitted “placing tree branches in water on the Sabbath … in order to provide a source of joy for the house” (Jacob b. Moses Moellin, Maharil (Cremona, 1558), 38b); when asked about celebrating a wedding in a community where a local ordinance forbade the participation of musicians, the same rabbi advised that the wedding be moved to another community, where music could be made, rather than have the bride and bridgroom forego the pleasure (ibid., 41b). Even at a time when persecutions were actually taking place, the Jews persisted in their way of life and in study of the Torah. Thus Moses *Mintz, while writing a halakhic decision, records that “the time limit given us by the bishop [of Bamberg] for leaving the town has been reached, for he would not allow us a single additional day or even hour” (Resp. Maharam Mintz, para. 48). The rabbis’ position became widely acknowledged in this period, and they were regarded as “the leaders.” It may be assumed that it was Meir b. Baruch ha-Levi’s school that established the custom of semikhah (rabbinical ordination) and of awarding the title of Morenu (“our teacher”) to a graduate rabbi, a custom which Ashkenazi Jews have still retained. At the same time the rabbis often engaged in bitter quarrels over the question of jurisdiction, and the position of the rabbi. These quarrels largely resulted from the difficulties facing the Jewish spiritual leaders, who tried, in a permanent state of insecurity, to rebuild communities that had been destroyed. The rabbinical leaders of this period – Meir b. Baruch ha-Levi and his disciples, Jacob b. Moses Moellin, Israel Isserlein (author of Terumat ha-Deshen), Moses Mintz, Israel b. Hayyim *Bruna, and others – were dedicated men who did all in their power to establish new yeshivot and spread the study of Torah, but they did not achieve the degree of leadership displayed by their predecessors. An extreme example of a scholar devoted to his yeshivah was that of Jacob b. Moses Moellin “who would live in a house alone with his students, next to the house of his wife the ‘rabbanit,’ while her sons were with her in her house; nor did he enjoy a mite of his wife’s property during their lifetime or eat with her. Only the communal leaders supplied him with sufficient means to support the students of his yeshivah, while he himself earned a livelihood as a marriage broker” (Maharil, 76a). His yeshivah was attended not only by poor scholars, but by “those rich and pampered youths who had tables made for them – when they sat down in their seats they could turn the table in any direction they pleased, and kept many books on them” (Leket Yosher, ed. by J. Freimann (1903), YD 39). The debate with Christianity did not die down in this period, and Yom Tov Lipmann *Muelhausen raised it
to new heights of sharp polemical argument in his Sefer ha-
Nizzahon (see *Disputations).

Emperors resorted to the most extreme measures in or-
der to extort money from the Jews. The most extortionate was
Sigismund who demanded one-third of their property. In 1407,
Rupert of Wittelsbach appointed Israel b. Isaac of Nuremberg
to the office of Hochmeister (chief rabbi), and sought to give
him sole powers of sequestering Jewish property. The com-
nunities, however, refused to acknowledge the authority of a
Jew appointed by gentiles and eventually the king abandoned
his attempt. Sigismund named several “chief rabbis” for the
purpose of improving the collection of the oppressive taxes
that he imposed upon the Jews, including well-known rabbi-
linical leaders. It is not clear, however, to what extent these
appointments were recognized by the communities, and the
responsa literature of the period contains no specific refer-
tences to such appointments. At any rate, a proposal made by
Seligmann Oppenheim Bing (see *Bingen) to convene a con-
ference which would create a chief rabbinate was rejected by
most of his rabbinical colleagues.

In sum, the last few centuries of the Middle Ages were a
period of severe and difficult changes for the Jews of Germany.
The center of gravity, both in population and intellectual ac-
tivity, shifted steadily eastward. From their position as desir-
able traders the Jews were driven by the religious and social
forces which gained ascendancy in the 12th and 13th centuries
into the despised occupation of usury. The 50 years from 1298
to 1348 took a tragic toll on both life and property. Despite the
trials and tribulations of the Middle Ages the Jews of Germany
displayed their own creative powers in halakhic literature and
religious poetry, and in the establishment of communal insti-
tutions. Although they did not disdain the innocent joys of
life, they were exacting in the application of the Law and were
imbued with the spirit of ascetic piety. Kiddush ha-Shem –
martyrdom for the sanctification of God – and their particu-
lar pietism (Hasidut Ashkenaz), in both theory and practice,
were authentic contributions of German Jewry to the realm
of supreme Jewish values.

[Haim Hillel Ben-Sasson]

From the Reformation To World War I

The age of the Reformation was characterized by upheavals in
all spheres of life – political, economic, social, religious, and
cultural. It also produced new attitudes to Jews and Judaism
often of a conflicting nature. When the Middle Ages came to
an end, the Jews had suffered expulsion from most German
cities, as well as from many other localities and areas: *Heil-
bron 1475, *Tuebingen 1477, Bamberg 1478, *Esslingen 1490,
Mecklenburg 1492, Magdeburg 1493, *Reutlingen 1495, Wuer-
temberg and Wuerzburg 1498, Nuremberg and Ulm 1499,
*Noerdlingen 1507, the state of Brandenburg 1510, Regensburg
1519, Rottenburg 1520, and *Saxony 1537. Jews were prohibited
from practicing most occupations. Many now had to earn a
livelihood from hawking haberdashery, peddling, money-lend-
ing, and pawnbroking in the small towns and villages. Inter-
est rates were subject to severe regulations, and wearing of the
humiliating badge was enforced. In various states Jews were
prohibited from building new synagogues and from holding
discussions on religious questions without Church authori-
ization. However, Emperor *Charles V (at assemblies of the
Reichstag in Augsburg 1530, Regensburg 1541, Speyer 1544,
and Augsburg 1548) authorized in full the charters granted to
the Jews by previous emperors.

At the very time that humanism was coming to the fore,
the libels against the Jews, accusing them of using human
blood for ritual purposes and of desecrating the Host, were
continually resuscitated, and resulted in further killings and
expulsions: *Endingen 1470, Regensburg 1476, *Passau 1477,
*Trent 1475, Sternberg (Mecklenburg) 1492, Engen (Swabia)
1495, Berlin 1500, Langendenzlingen 1503, Frankfurt 1504,
Brandenburg 1520. Some humanists acknowledged the reli-
gious and moral values inherent in Judaism, and took up its
defense, but in folk literature and the mystery plays the Jew
was depicted as a usurer and bloodsucker, as the Christ-killer
and reviler of the Virgin Mary, an associate of Satan and ally
of the Turk. Yet the humanist Johann *Reuchlin led a cou-
rageous struggle against the defamation of the Talmud and
called for equal rights for the Jews, as “citizens of the Roman
Empire.” Martin *Luther, after failing to win them, showed ve-
hement hatred for the Jews, and in his writings called upon
the secular rulers to deprive them of their prayer books and
Talmud, to destroy their homes, to put them on forced labor
or expel them from the land. There were, however, other re-
forming movements, especially the Anabaptists, who appreci-
atied the Jewish Bible and Judaism and displayed sympathy
and love for the Jews. The Jews were also caught in the strug-
gle between the emperor, on the one hand, and the princes
and cities, on the other. The emperors, whose power was on
the decline, made efforts to retain their control of the Jews,
to protect them against local potentates, and to remain the
sole beneficiaries of the taxes paid by the Jews. The opposing
forces, bent upon establishing their independence of the
emperor, also tried to extend their supremacy over the Jews and
tax them. When attacking the Jews the princes and city gov-
ernments were not only motivated by the traditional hatred,
but also by their desire to reduce the emperor’s authority and
force the Jews to seek protection from them rather than the
emperor. As a result, the Jews were often forced to pay taxes
to two or even three different authorities. This situation, how-
er, also prevented a general expulsion of the Jews from Ger-
many at a time when this had become the lot of the Jews in
most countries of Western Europe. The Jews also became the
subject of controversy between the local rulers and the Estates
*(Staende) – the nobility, the ruling clergy, and the privileged
townsmen. The latter had the power of levying taxes and tried
to extend their power in various ways, including control of the
Jews. To some degree the persecutions of Jews in the 15th and
16th centuries, which coincided with a rise in the power of the
Estates, were the result of this struggle; thus, the Host desecra-
tion libel against Jews in Brandenburg, in 1510, was also an ex-
pression of the opposition of the Estates to Elector Joachim I, who had given several Jews permission to settle in the country, despite the Estates’ objections. Other internal differences also affected the situation of the Jews, such as the antagonism between the princes and the landed gentry, and the cities. The former would permit Jews who had been expelled from the cities to settle on their lands, thereby gaining additional taxpayers who were also skilled merchants able to compete with the hated townspeople and provide the princes and estate-owners with better and cheaper supplies. The sweeping economic changes that took place in the 16th and 17th centuries also had their effect upon the situation of the Jews. The early manifestations of nascent capitalism caused much suffering among the masses of the people. Failing to grasp the meaning of the social and economic upheaval, they found in the Jew a scapegoat on whom they could blame their troubles, whom they had always been taught to regard as their enemy and exploiter. The demands for equality and justice which emerged from the social unrest in the cities included a call for the expulsion of the Jews “for the devastating harm that their presence brings to the plain people.” The patrician class, which had supported the Jews in the cities, made way to the guilds, who adhered to a narrow social and economic outlook and would not tolerate any competition. They were also opposed to foreigners, especially if these were infidels. The numerous instances of expulsion that occurred in this period were to a large degree the outcome of these new developments in the structure of the economy. An outstanding Jewish personality of this period was Joseph (Joselman) b. Gershon of Rosheim who in the course of his life made tremendous efforts to ease the lot of German Jewry and enable them to withstand the onslaught of the diverse forces arrayed against them.

The Absolutist Principalities. Absolutism, followed by enlightened absolutism, and the mercantile system of economy introduced into kingdoms and principalities, brought far-reaching changes in the situation of the Jews. In its enlightened and mercantilist version, the system that now evolved regarded interests of state as supreme and attached the greatest value to money, commerce, and increase of population; it also came to judge the Jews from the point of view of these interests. The taxes paid by the Jews were highly lucrative, for they were among the few paid directly into the coffers of the ruler, and did not depend upon the consent of the Estates. Rulers welcomed wealthy Jews with capital and economic experience who could make important contributions to internal and international trade and to the development of industry. In Hamburg, Portuguese Jews who had been expelled from their native country founded the Hamburg Bank which promoted commerce with Spain and Portugal and traded in tobacco, wine, textiles, cotton, etc. Saxony invited Jews to the Leipzig Fair in order to forge new trade links with Switzerland, Holland, Italy, and England. Karl Ludwig, the enlightened elector of the Palatinate – a land which had been devastated by the Thirty Years’ War – invited Jews to settle there in order to help restore trade and found industries. In Brandenburg, Frederick William, “the Great Elector,” permitted 50 Jewish families who had been driven out of Austria to settle in Berlin and elsewhere, granting them extensive privileges and unrestricted trade throughout the country (1670/71). Jews were allowed to settle in Frankfurt on the Oder, in order to infuse new life into the fair held in that city; in Cleves, in order to facilitate transit trade with Holland; in Pomerania and East Prussia, in order to attract commerce to the eastern portion of the country; and in Berlin itself, in order to make it the commercial center of Brandenburg and northeast Germany. The regime of the absolutist states instituted a system of supervision of the Jews which both regulated every detail of their lives and exploited them (see Frederick II of Prussia). An unending series of laws and regulations, ordinances, decrees, patents, and privileges, circumscribed the entry and settlement of Jews, the length of their stay, the number of marriages and number of children, matters of inheritance and guardianship, the conduct of business and their moral behavior, their taxes, and even the goods they had to buy, for instance, china – Judenporzellan – in Prussia. Violation of these provisions resulted in severe penalties (and see Austria, *Berlin, *Prussia).

Social and Spiritual Life. In their internal organization, the Jewish communities, up to the 18th century, continued to base themselves in the main upon the pattern established in the Middle Ages. In many of the communities that had re-established themselves after an earlier expulsion, leadership became largely a function of wealth. It was not until after the Chmielnicki massacres of 1648 and the Russian-Polish war (1654–55) that scholars, preachers, and teachers from Poland and Lithuania who took refuge in Germany began to play an important role in Jewish education. At the end of the 17th century the absolutist rulers adopted a policy of interfering in the internal affairs of the communities; as a result, the authority of the autonomous community organs was gradually reduced – a development which corresponded with the abolition of the powers that had previously been vested in the guilds and city councils.

Following upon the Thirty Years’ War, proper conferences of rabbis and community leaders were convened, to which “all the Jewish residents” of the country were invited, in order to decide upon a fair distribution of the tax burden. The powers of these conferences were severely restricted; they could not be held without official permission, and the authorities fought to confine their activities to tax collection. Nevertheless, the conferences in fact became an overall community forum and dealt with all matters that had traditionally been the concern of Jewish autonomous bodies (and see Landjudenschaft). The authority of the rabbis was reduced in the 18th century by both the secular leaders of the communities and by the authorities, and when emancipation was introduced, they were divested of their juridical powers. The ferment and crisis caused by the Shabbateans had a profound effect upon Jewish social and spiritual life in Ger-
many at the end of the 17th century. The two great scholars and spiritual leaders of this period were Jair Ḥayyim *Bacherach and Zevi Hirsch *Ashkenazi. The memoirs of *Glueckel of Hameln reflect the life of well-to-do Jews in the 17th to 18th centuries – their business methods, piety, family life, and ties maintained with neighbors. She gives a vivid description of messianic fervor in Germany with the appearance of Shabbetai Zevi. *Messianism and *Kabbalah remained at the center of Jewish spiritual life in Germany until the middle of the 18th century as a result of the passions aroused by the fierce controversy between Jonathan *Eybeschuetz and Jacob *Emden. At the same time, affluent Jews in urban communities began to adapt their ways of life to that of the Christian burghers. Around 1700 young women took Italian or French language lessons with Christian teachers, and entertained themselves learning how to draw or play a musical instrument. The deficiencies of the Jewish educational system, which took little if any interest in the education of girls and failed to provide a well-founded and consequential curriculum for boys, were decrying by many authors of that time. Towards the close of the early modern era, the social, economic, religious, and cultural profile of German Jewry was highly diversified.

COURT JEWS. A characteristic innovation of the era of absolutism and the mercantile system was the appearance of the *Court Jews. Some of the Court Jews abandoned Jewish tradition and their ties with the Jewish people; others remained faithful and used their wealth and position to help their brethren. In some instances their intervention succeeded in averting anti-Jewish measures; they built synagogues at their expense, published religious books, and founded institutions of learning. Court Jews were instrumental in reestablishing communities that had been destroyed during the Reformation (e.g., in *Dresden, Leipzig, *Kassel, *Brunswick, and *Halle). The precariousness of their position could affect both themselves and the Jewish community; as they were dependent upon the whim of the absolutist ruler, any change in his attitude could mean their downfall, and this was often followed by anti-Jewish measures of a general nature. In fact the Court Jews led a double life, often marked by tragedy – as instanced by such figures as Samuel *Oppenheimer, Samson *Wertheimer, and Joseph Suess *Oppenheimer.

HASKALAH. Toward the end of the 18th century there were significant changes in the situation of German Jewry. Large parts of Poland were incorporated into Prussia and their substantial Jewish population became a reservoir of manpower and spiritual values for German Jewry as a whole. At the same time the growth of the Jewish population in major urban centers – such as Berlin – where the Jewish communities were comparatively new and unencumbered by age-old local tradition and custom furthered the turn toward assimilation in German society. The background to this development was the Haskalah (enlightenment) movement, which was met in its aspirations by the claims of enlightened gentiles for the “moral and social betterment” of the Jews and the abolishment of all social and legal discrimination (see also C.W. von *Dohm; W. von *Humboldt; *Joseph II; G.E. *Lessing). These developments gave rise to considerable ferment in German Jewry. Moses *Mendelssohn, who wrote and published in Hebrew and German, and whose works made major contributions to pre-Kantian German philosophy as well as to Jewish spiritual life, was widely esteemed as the representative figure of German Jewry in the enlightenment period. Rabbis of the period, such as David Tevele *Schiff of Lissa and Akiva *Eger, took up the struggle against the “enlightened” and the assimilationists, but the bans and excommunications they issued failed to turn the tide.

EFFECTS OF THE FRENCH REVOLUTION. The emancipation granted to the Jews of France by the *French Revolution was soon carried over into Germany by the revolutionary armies. In the states on the left bank of the Rhine, which were incorporated into the French Republic, the Jews became French citizens. When more German states were conquered by *Napoleon, and the Confederation of the Rhine was created, these states, upon French insistence, also declared equal rights for the Jews and granted them freedom to engage in commerce on the same basis as all other citizens (e.g., in Wuerttemberg and the grand duchy of *Berg). Napoleon’s “infamous decree” of 1808, which imposed restrictions on Jewish trade and commerce and limited the freedom of movement, was a serious setback to Jewish emancipation in the areas under French domination but was not reinforced in 1812. In Frankfurt and in the Hanseatic cities emancipation was announced in 1811. In 1808 the Jews of *Baden were declared “free citizens of the state for all time” and in 1809 a “Supreme Israelite Council” was formed in that state, which had the task of reforming Jewish education so that the Jews should reach the same cultural and spiritual standards as their environment and eventually achieve full equality. In Prussia, emancipation of the Jews was part of the reforms introduced by H.F.K. von Stein and K.A. *Hardenberg after the defeat suffered by the kingdom in 1806/07. This was followed by the edict of 1812 granting equal rights and privileges to the Jews, and the abolition of the special taxes imposed on them. In Bavaria, the edict of 1813 declared the Jews full citizens of the state but severely restricted their freedom of residence. These regulations, aimed at limiting and, if possible, reducing the number of Jews, were a main factor behind the massive emigration of young Jews from Bavaria to the United States in the following decades.

POST-NAPOLEONIC REACTION. The fall of Napoleon and the victory of the Holy Alliance resulted, almost everywhere, in the restoration of the previous state of affairs and the withdrawal of the equality that the Jews had achieved. Although the Congress of *Vienna had decided that the rights granted to the Jews in the various German states should be retained, the newly restored governments interpreted this decision as not applicable to the rights given to the Jews by the French or by the governments appointed by Napoleon. The “Jewish statutes,” enacted by the Prussian provincial governments,
repealed the 1812 emancipation edict in fact, although the edict as such was not canceled. Anti-Jewish feelings revived in the post-Napoleonic period, not only because the political and economic emancipation of the Jews was regarded as one of the Napoleonic reforms that had to be removed, but also as part of a spiritual and cultural reaction, an expression of a Christian-Teutonic, romantic and nationalist Weltanschauung. The new conservatism sought to replace the ideals of equality of the French Revolution with the harsh tradition of the past, and regarded the patriarchal state and feudal institutions as the natural political way of life for the German people. This view of state and society was accompanied by an emotional religious revival, and the concept of a "Christian-Teutonic" or "German-Christian" state came into being. In the effort to forge a German national identity the Jews, as "strangers within," were often portrayed as the negative counterpart of the Germans. A sharp literary debate was waged over the Jewish problem and the place of the Jews in the German state and society. Opinions on the preconditions, the pace, and the range of further emancipatory steps varied greatly, and the more vehement advocates of a "German-Christian" state rejected such steps altogether unless the Jews would renounce Judaism. The clash between the rationalist and romantic concept of society largely marked the relations between Germans and Jews in the period from 1815 to 1848. Anti-Jewish agitation was especially intense in the years after the Congress of Vienna, and in 1819 the "Hep-Hep riots spread across large parts of Germany and even Denmark.

ASSIMILATION AND REFORM. At the beginning of the 19th century, the social, economic, and legal conditions as well as the religious and cultural horizons of Jewish life were more diverse than ever before in German-Jewish history. The cultural and intellectual reorientation of the Jewish minority was closely linked with its struggle for equal rights and social acceptance. While earlier generations had used solely the Yiddish and Hebrew languages among themselves, and few had possessed even a limited reading ability in German, the use of Yiddish was now gradually abandoned, and Hebrew was by and large reduced to liturgical usage. Elementary schooling was made mandatory for Jewish children – in Baden in 1809, in Prussia in 1824 – and remaining Jewish educational institutions were put under the surveillance of state authorities. The juridical competence of the Rabbinate, already weakened in the era of Absolutism in most German states, was further reduced, as was Jewish communal autonomy in general. While the need for profound changes and an adaptation of Jewish life and Judaism to the circumstances and necessities of the modern era was widely acknowledged, opinions on the nature, the direction, and the extent of such changes differed greatly. Jewish intellectuals like Rachel *Varnhagen, Henriette *Hertz, Eduard *Gans, Friedrich Julius *Stahl, August *Neander, Ludwig *Boerne, and Heinrich *Heine converted to Christianity, but the overall importance of baptism, and the numerical loss it inflicted on German Jewry in this era, have often been overstated. Others sought to preserve what they regarded as the essence of Judaism. They initiated *Reform in Jewish religion, to ease the burden of the precepts which prevented Jews from establishing close relations with the people among whom they lived, and to stress and develop in Judaism spiritual and ethical concepts of faith and life. This was the attitude of the "Society for the Culture and Science of Judaism," among whose founders were Isaac Levin *Auerbach, E. Gans, H. Heine, Isaac Marcus *Jost, Moses *Moser, and Leo-pold *Zunz. The desire to employ the criteria and methods of modern scholarship in the field of traditional Jewish learning gave rise to the "Wissenschaft des Judentums," which soon made Germany the center of scientific study of Jewish history and culture. The actual reformers – Abraham *Geiger, Samuel *Holdheim, and their associates, sought to reshape the Jewish faith so as to make it compatible with the spirit and culture of the time and facilitate the achievement of equal rights and creation of close relations with Christians. These reformers were violently opposed by the leaders of traditional Judaism of the time, and bitter strife ensued. Other trends emerged which attempted to find a compromise between the two extremes – the "historical-positive" school of Zacharias *Frankel, and "Neo-Orthodoxy," founded by Samson Raphael *Hirsch and Azriel (Israel) *Hildesheimer. In several places the Neo-Orthodox, who were unwilling to retain organizational ties with their Reform brethren, founded separate communities. In 1876 Prussia adopted the Austrittsgesetz ("Law on Withdrawal from the Jewish Community") under which Jews were permitted to dissociate from the existing Jewish community for religious reasons, and yet be recognized as Jews. By this act the compulsory membership of the community, provided for in a law adopted in 1847, was abolished; the "separatist" Orthodox communities (Austrittsgemeinde) were legalized and at the same time individual Jews were enabled to leave the organized Jewish community without having to go through formal conversion.

ECONOMIC AND SOCIAL LIFE. From the political and sociological aspect, the history of German Jewry in the first half of the 19th century is marked by their economic and social rise, and by the struggle for emancipation. (See Table: Socio-Economic Structure – Jews.) The political reaction of the "Holy Alliance" period, while succeeding in depriving the Jews of most of their political achievements, had little effect upon their rights in economic and commercial matters. Jews entered all branches of economy in the cities, contributing to the development of industry and capitalism and benefiting from it. At the end of the 18th century most of the German Jews still lived in small towns, their communities rarely exceeding a few dozen families; even in the "large" communities such as Hamburg or Frankfurt they numbered no more than several hundred families (1,000 to 2,000 persons). In the course of the 19th century many Jews left the small towns for the large centers of commerce. Augmented also by the influx of Jews from the east, the communities expanded rapidly, and by the end of the
century most of the Jews of Germany lived in the large cities – Breslau, Leipzig, Cologne, in addition to Hamburg and Frankfurt, and particularly in Berlin, which eventually comprised one-third of German Jewry. The standard of living of many Jewish merchants, industrialists, and bankers equaled that of the German middle and upper classes. A large class of Jews in the liberal professions came into being and Jews took an increasingly active part in cultural life, in literature, and science. This development served to step up the Jewish demand for emancipation. Both Reform and Neo-Orthodox felt that the grant of equal rights should not depend upon any demand for diminution of their Jewish identity according to the conceptions of each trend. In this they encountered opposition even on the part of Christian liberals, such as H.E.G. Paulus and H. von "Treitschke, who held that so long as the Jews clung to their religious practice and maintained their specific communal cohesion they were not entitled to participation in the political life of the country. While these liberals did not demand apostasy, they felt that full rights should not be granted to the Jews unless they abandoned their distinctive practices, such as kashrut, observance of the Sabbath, and even circumcision. The Jews, on the other hand, encouraged by their economic progress and the rise of their educational level, took strong exception to this view, voicing their opinion that equality was a natural right that could not be withheld from them, whatever the pretext. Convinced that their struggle was intimately connected with the full social and political liberation of the German people and the creation of a free, democratic, and liberal German state, they pleaded their cause before the German public in word and print and took an active part in the German movement for national and political liberation. The chief spokesman of the Jewish struggle for emancipation was Gabriel "Riesser; others were Johann *Jacob and Ludwig Boerne.

**Emancipation.** Jews took part in the 1848–49 revolution and there were several Jews among the members of the Frankfurt Parliament (including Gabriel Riesser). The "Basic Laws of the German People" promulgated by this parliament extended equal rights to the Jews by accepting the principle that religious affiliation should in no way influence the full enjoyment of civil and political rights. Ironically, anti-Jewish violence was widespread in many areas during the revolutionary unrest, and often aimed at thwarting further emancipatory steps. The achievements of 1848–49 were curtailed by the reaction that set in during the 1850s, following the collapse of the revolutionary movement; however, the rise of the middle classes, including the Jews, did not come to a halt, and liberal tendencies continued to make headway. Nor did the Jews themselves give up the struggle. In 1869 the North German Confederation abolished the civil and political restrictions that still applied to the members of certain religions; after the 1870 war, the same law was adopted by the south German states and included in the constitution of the newly established German Reich. Many German Jews now felt that the attainment of political and civil equality had also erased their separate Jewish identity, not only in their own estimation but in that of the Germans as well. In the period from 1871 to 1914, German Jews indeed became a part of the German people from the constitutional point of view, and, in a large measure, also from the practical point of view. According to the law, every sphere of German life became open to them, whether economic, cultural, or social, with one exception: they were not permitted to participate in the government of the country. But usually, in spite of the constitutional guarantees, Jews were not appointed to official positions, nor could they become officers in the army. In general, Jews were also barred from appointments as full professors at the universities, although there were large numbers of Jews of lower academic rank. Jews were active in the economy of the country and some became leading bankers, industrialists, and businessmen; there was also a large number of Jews in the liberal professions. Jews were among the founders and leaders of the political parties; the Liberal and Social-Democrat parties usually had a number of Jewish members in the Reichstag. In the sciences and technology, in

3 Estimated number includes displaced persons.
literature, the press, the theater and the arts the share of Jews was disproportionately high.

The Jewish population in Germany numbered 512,158 in 1871 (1.25% of the total), 592,612 in 1880 (1.24%), 567,884 in 1890 (1.15%), 586,833 in 1900 (1.04%), and 615,021 in 1910 (0.95%). (See Table: Jewish Population in Germany.) Demographically, German Jewry shared many of the general characteristics of a largely urbanized population element and was among the first communities to feel the effects of the practice of birth control. At the beginning of the 20th century natural increase among German Jewry came to a complete end. It was the steady influx from the east which enabled German Jewry to maintain its numerical strength.

**antisemitism.** In the period following the foundation of the German Reich a shadow fell across the tranquility and prosperity enjoyed by German Jewry which darkened increasingly: the manifestation of anti-Semitism among the German public. Although its virulence varied, it existed throughout this period, and took on the form of political movements. It did not, however, affect the formal legal status of the Jews who therefore regarded anti-Semitism as mainly a social, cultural, and spiritual problem; its potential political strength and danger were not recognized by either Jews or non-Jews.

**internal life.** Despite widespread assimilation, independent Jewish creativity did not come to an end. For a significant part of German Jews, Jewish consciousness retained its strength. The constant influx of Jews from the east (“Ostjuden”) was also an important factor in preventing total assimilation. The presence of these newcomers created a certain amount of tension, both among Germans who resented their successful integration into economic life, and among the “old” Jewish families, who disapproved of the Ostjuden manners and of the way they had of making themselves conspicuous in the community. Zionism had an early start among German Jewry. Although small in numbers, the Zionists were well organized and worked effectively for their cause. German Jews were among the leaders of the World Zionist Movement; two of the presidents of the World Zionist Organization – D. *Wolfsohn and O. *Warburg – were German Jews, as was the founder and organizer of agricultural settlement in Erez Israel, A. *Ruppin. After the death of Theodor Herzl, the headquarters of the Zionist Organization was moved to Germany and remained there even during World War 1. By their high standard of general education and strict separation from Reform Jews, the German Neo-Orthodox exercised a profound influence upon observant Jews in other parts of the world. They had created a new type of Jew, who could be a qualified professional man, highly educated and versed in the manners of the world, and yet at the same time strictly observant of religious practice. It was men of this type who became the leaders of the world movement of *Agudat Israel* after the founding of that organization in 1912. Orthodox chaplains serving in the German forces during World War 1 did a great deal to spread the principles of Agudat Israel among East European Jews. The confrontation with East European Jewish life also had a profound influence on German Jews serving in the forces; they were attracted by the wholesomeness of the life led by the Jewish masses, and many became convinced Zionists.

German Jewish life was well organized. Organizations were established for the consolidation of the communities and for combating antisemitism (see *Centralverein*), for social welfare (the “Hilfsverein”), for research and studies (the rabbinical seminars: the *Breslau Juedisch-theologisches Seminar*, established in 1854; the Berlin *Hochschule fuer die Wissenschaft des Judentums*, founded in 1872; the *Rabbinerseminar fuer das orthodoxe Judentum* in Berlin, also founded in 1872; the *Historical Commission* established in 1885, etc.). All were active and highly efficient. Throughout the second half of the 19th century and the early years of the 20th, German Jewry occupied a highly respected place among world Jewry, exercising a profound influence on Jewish centers in Eastern and Western Europe, in America, and in Erez Israel.

[Samuel Miklos Stern]

1914–1933

The history of German Jewry in the interwar period is sharply divided into two chapters: the period up to 1933, which was a time of great prosperity; and the period which began in 1933, a year which was to mark the beginning of the tragic end of German Jewry.

Over 100,000 Jews had served in the German army during World War 1, and 12,000 Jews fell in battle. At the end of the war, when the monarchy had fallen and a democratic republic was established, it seemed that the Jews had achieved full emancipation. Any restrictions that were still in force were abolished by the Weimar Republic, and Jews could now participate in every sphere of public life. Their share and influence in the political life of the country reached unprecedented proportions. Many of the leaders of the democratic and socialist parties were Jews, as were two of the six “people’s commissioners” which made up the first post-revolutionary German government (O. *Landsberg* and H. *Haase*). In Bavaria, Jews played an even more significant role; the head of the revolutionary government was a Jew, Kurt *Eisner*, and the majority of the prominent representatives of the two Soviet-type governments set up after Eisner’s murder consisted of Jewish intellectuals (Eugen *Leviné*, Gustav *Landauer*, Ernst *Toller*, etc.). The inquiry commission which was to determine the responsibility of the military leadership for Germany’s defeat had among its members Oscar *Cohn*, a Social Democrat and Zionist. The Weimar Constitution was drafted by a Jew, Hugo *Preuss*; another Jew, Walther *Rathenau*, first became minister of reconstruction and later foreign minister: his murder by young extremists was motivated largely by anti-Semitism. Several Jews were appointed to high positions in the civil service, especially in Prussia. The rise of Jews to positions of political power added to their economic and social advance, but also increased hostility among the population. Antisemitic propaganda exploited a series of financial scandals and bankruptcies
in which Jews were involved. The background to these events was the great social and economic crisis which gripped Germany as a result of the terrible inflation after the war. Right-wing circles in Germany, anxious to divert public attention from the real beneficiaries of inflation – the “pure Aryan” industrial and financial barons and their giant enterprises – were more than ready to use the anti-Jewish propaganda for their purposes. The middle class, heavily hit by the economic upheaval, the nobility and the officer class who felt their honor besmirched by the defeat and whose privileges were abolished in the revolution, were all easily swayed by the idea that it was the Jews who were to blame for all of Germany’s misfortunes – that “the Jews had stabbed the undefeated German army in the back,” and thus forced it to surrender; that Capitalism and “Marxism” (i.e., Bolshevism and Socialism) were the result of the machinations of “World Jewry.” In the 1920s, however, the full implications of this antisemitic mood had not yet become apparent, and the situation of the Jews seemed satisfactory. It was not until 1933, when the Nazis came to power and based their program upon the “doctrine of race” – i.e., hatred of Jews – that the role of the “Jewish problem” for the internal historical development of Germany stood fully revealed.

Throughout the Weimar Republic antisemitism did not disappear. Even the assimilationists among the Jews had to acknowledge this fact, and some reacted by over-emphasizing their German nationalism, thereby hoping to set themselves apart from the rest of the Jews. As a result of the large increase of Jewish immigration from Eastern Europe, the old difference between “Eastern” and “Western” Jews became more pronounced and had many practical implications. Jewish organizations did their best to facilitate the absorption of the newcomers and created special institutions for this purpose, such as the Welfare Bureau for Jewish Workers. Among a certain segment of German Jews there was now also deep
admiration of an “authentic” East European culture, as can be seen in the enthusiastic reception of Yiddish and Hebrew theater groups, the popularity of Martin Buber’s hasidic tales, and new cultural creations idealizing East European Jewry, such as Arnold Zweig’s *Das Ojiädische Antlitz* (“The Eastern Jewish Countenance”) with drawings of Hermann Struck. According to the 1925 census, there were 564,379 Jews in Germany, representing 0.9% of the total population. One-third lived in Berlin, another third in the other large cities, while the remaining third lived in 1,800 different places with organized Jewish communities and another 1,200 places where there were no organized communities. (See Map: Germany.) Most of the Jews made their living in commerce and transportation and in the liberal professions; in the large cities, one-third or even more of the lawyers and doctors were Jews; they also played a prominent role in the press, in literature, in the theater, and in other forms of entertainment. In general, the Jews belonged to the middle class and were well off. Although many had lost their savings in the inflation, they recovered from the effects of this crisis, and when the Nazis came to power, there was again a great deal of capital in the hands of individual Jews and the Jewish communities. The absorption of Jews into all spheres of German life was accompanied by record numbers of mixed marriages, and an increasing number of Jews formally “disassociated” themselves from the community.

**Commuunal Organization.** Between the two World Wars, the Jewish communities presented a model of organization. The Weimar Constitution retained official recognition of the Jewish communities as entities recognized by public law and their right to collect dues. In general, a Jewish community had a representative body, elected by the community members, and an executive committee, elected in turn by the representative body and consisting of three to seven members. A point under dispute was the voting rights of Jews of foreign nationality (the Ostjuden), who in some communities amounted to a substantial proportion of the total membership. Although the “foreigners” had equal rights to the religious and social services provided by the community, in some places they had no equal right to vote, or were given that right only after long years of local residence. The fiercest fights for their voting rights were in Saxony, where East European Jews constituted the majority and German Jews insisted on keeping control over the communities by creating separate ballots for the two groups. By the end of the Weimar Republic, however, most communities had given equal voting rights to non-German citizens and women. The longstanding domination of the communities by the Liberals was shattered in a few communities, most notably in Berlin, where in 1926 a coalition of Zionist, Orthodox, and East European Jews received a majority of the votes. In 1930, the Liberals were voted back in. In the various states of which the Reich was made up, there existed “state unions” of Jewish communities. For a long time the need was felt for a national union of Jewish communities, but there were differences of opinion as to the form this should take; some thought that it should be a union of individual communities, others preferred a national union of the state unions, while a third proposal called for a kind of Jewish parliament, elected by direct democratic vote (the last plan was supported by the Zionists). By the time a national union was finally established, shortly before Hitler came to power, the organizational form of the communities, and the tasks they faced, were about to undergo a radical change. Apart from the religious and cultural tasks they performed, the community organizations were most active in social welfare; this was true of the period preceding 1933, and became even more important after that turning point. In 1917 a central welfare bureau for German Jewry was set up, the “Zentralwohlfahrtstelle, whose membership consisted of the communities as well as of many private institutions, trusts, and societies. The bureau cooperated with the main non-Jewish welfare agencies in the country, as well as with the American Jewish *Joint Distribution Committee*, and published its own monthly. It supervised hospitals, clinics, counseling centers, bureaus, and a variety of other public institutions, and had some 2,000 welfare agencies affiliated with it. In the large communities expenditure on welfare amounted to as much as 30% of the total budget. Agencies concerned with youth, and with immigrants passing through Germany on their way overseas, also played an important role. In addition to the organizations based on the communities, there were also a large number of other societies, as well as cultural and scientific institutions. Jewish life in general was marked by the struggle between Jewish nationalism and various degrees of assimilation. Zionism succeeded in revolutionizing the life of the communities, and the councils, in addition to “notables,” now also contained democratically elected members who represented national-Jewish interests.

The following were the main organizations of German Jewry in the period: Centralverein (CV) deutscher Staatsbürger juedischen Glaubens (“Central Organization of German Citizens of the Jewish Faith”); Zionistische Vereinigung fuer Deutschland (ZVFD; “Zionist Organization of Germany”); Hilfsverein der deutschen Juden (“Aid Society of German Jews”); the religious organizations – Agudat Israel, Ahдут, *Vereinigung fuer das liberale Judentum; *B’nai Brith; “Verband national-deutscher Juden (“Union of Jews of German Nationality”); “Reichsbund juedischer Frontsoldaten (“Reich Association of Jewish War Veterans”); the various rabbinical associations, and associations of teachers and cantors; etc. An important role in the cultural life of German Jewry was played by the academic organizations: *Kartell-Convent (kc)* deutscher Studenten juedischen Glaubens (“National Fraternity of German Students of the Jewish Faith”), affiliated to the Centralverein; Bund juedischer Akademiker (BJA, an association of Orthodox academies); Kartell juedischer Verbindunggen, the Zionist student organization. A substantial number of Jewish youth in Germany were members of Jewish youth movements. Some of the youth organizations were sponsored by the Centralverein, and others by the Orthodox; a third type were the Zionist youth organizations. The latter encouraged
pioneer settlement in Ereẓ Israel, maintained training centers, and supplied a small but steady flow of immigrants. The Centralverein was the largest and most important organization, which published its own newspaper. It advocated a synthesis of Judaism and "Germanism," emphasized defense of Jewish civil rights, and regarded German Jewry as an integral part of the German people. Other periodicals were Der *Israelit (published by Agudat Israel); *Juedisch-liberale Zeitung; Der Schild (published by the veterans' organization); Der *Jude, a Zionist monthly, edited by Martin *Buber; and Der Morgen, a monthly published by the Centralverein. The official organ of the Zionist movement, *Juedische Rundschau, a weekly (which in its last years appeared twice a week), eventually became the leading Jewish paper published in Germany.

Despite differences of outlook, there was close cooperation between the various organizations. An outstanding example was the establishment of the *Keren Hayesod in Germany in 1922 which was based on cooperation between Zionists and non-Zionists, and served as a preliminary stage to the enlarged *Jewish Agency (1929). The Zionist Organization included Zionist party organizations (Mizrachi, *Poalei Zion, *Hapoel ha-Zair-Hitahdut, etc.).

**Cultural and Religious Life.** The "Jewish Renaissance," a term coined by Martin Buber in 1900, culminated in the Weimar Republic. This brief period witnessed the creation of a modern Jewish adult education system, literary and artistic creations in the German language, the rise of a Jewish youth movement, and the revival of Jewish schools. While only a minority of German Jews was active in the various forms of Jewish cultural creativity, a counter-movement to the still continuing tendency of assimilation could now be observed. In 1920 Franz *Rosenzweig established the Freies Juedisches Lehrhaus ("Free Institute of Jewish Learning") in Frankfurt, which in its heyday attracted over 1,000 adult students who often were assimilated Jews like Rosenzweig himself. Other cultural institutions were the Juedische Volkshochschule ("Jewish College of Adult Education") in most larger cities; the Toynbee Halls, which also served as centers of social work; and the short-lived Juedisches Volkshaus ("Jewish Social Center") established in Berlin in 1916. There were Jewish elementary schools in several communities and Jewish teachers' seminaries in Wuerzburg and Cologne. New Jewish elementary and secondary schools, originally maintained by Orthodox Jews only but in later years also supported by the Zionists and even parts of the Liberal Jews, were established, some in cities which for decades had seen no Jewish schools. Both the renewed interest in Jewish culture and increasing antisemitism were behind this increase. All religious and political streams of German Jewry founded their own youth organizations. In a few cities, Jewish museums were established, and the Berlin Jewish Museum was opened in its new home only a few weeks after Hitler came to power. Jewish cultural societies, such as the Soncino Bibliophile Society, were established, Jewish music from all corners of the world enjoyed respectable audiences, and Jewish sports societies were now established even beyond the Zionist spectrum. Most larger communities started their own newspapers, some of them developing into respectable cultural journals.

After World War 1, when many Hebrew writers and publishers fled from Russia and took refuge in Germany, the country became a center of Hebrew publishing and Hebrew literature. Some of the greatest Hebrew poets and writers became residents of Germany, and Hebrew and Yiddish publishing houses were established. This was in addition to the many books published in German, on Judaism, Zionism, and Jewish studies. In Berlin and other cities, the Zionist Organization founded schools for the study of modern Hebrew by adults and the youth.

As the economic and political crisis deepened in Germany during the 1920s, a religious revival could be observed in all denominations. Judaism was affected by it as well, as some Jews found refuge in synagogues and study circles. The most prolific Liberal Jewish thinker was Leo *Baeck, who emerged as German Jewry's spiritual leader already in the 1920s. He was careful to keep the balance between radical Reform and Orthodoxy; and thus found a middle ground of moderate Liberal Judaism. It may be symptomatic of the changing times that the new edition of his main prewar work, *Essence of Judaism*, appeared in a revised form in 1922 which gave more weight to mystical and non-rational thought. His younger colleague, Max Wiener, developed the critique of German Jewry's belief in Enlightenment further in his *Judaism in the Time of Emancipation* (1933). Baeck's predecessor as president of the General Rabbinical Association of Germany, the Frankfurt rabbi Anton Nehemias Nobel, reintegrated mystical elements in contemporary Orthodox Jewish thought. Another tendency which became gradually apparent was the rise of women's rights in the synagogue and beyond. While they had fought successfully for their voting rights in most communities, the first synagogue with mixed seating was opened in Berlin in 1929, and in another smaller synagogue service in Berlin a havurah-style egalitarian minyan was adopted around the same time. Women were among the students of the Hochschule fuer die Wissenschaft des Judentums, and in 1935 the first woman rabbi, Regine Jonas, was ordained, although she never served a congregation. Due to the financial strains only a few new synagogues were built, most notably the ones in Plauen (1930) and Hamburg (1931) in the Bauhaus style.

[Robert Weltsch]

**1933–1939**

As a result of the Nazi ascent to power legally through the appointment of Adolf Hitler as chancellor on Jan. 30, 1933, the entire existing structure of Jewish life in Germany collapsed. Personal lives, professional careers, individual freedom, and the very confidence that Germany was their home were thrown into disarray for Jews living in Germany. In response, German Jewry underwent a spiritual awakening and achieved a peak of vitality in Jewish communal life. In the national-socialist racist state, the Jews, branded as an "alien..."
race," were automatically excluded by law from general life. Anti-Jewish measures gradually reduced the Jews to isolation and seclusion; the majority of the Jews were, however, unable unreservedly to sever the ties that had integrated them into German life. The racist decree that "no Jew could be a German" gravely affected the premise for the flourishing life of German Jewry, since the vast majority had considered themselves Germans and were genuinely assimilated in German culture. German was their language, German literature their literature, and German philosophy and values their values.

On April 1, 1933, the first large-scale anti-Jewish demonstration took place, in the form of a boycott of all Jewish-owned shops and offices of Jewish professionals. The yellow "badge was posted on Jewish business concerns and many residences; windows and doors were smeared with antisemitic and indecent cartoons; and SA (storm troop) guards ensured the observance of the boycott. The boycott was abandoned two days later due to sharp reaction from abroad and for fear of potential damage to the economy of the country. Some Germans made it a point of honor to call upon Jewish friends and to patronize Jewish shops. Most were frightened and just stayed away. This demonstration, far from being "a spontaneous eruption of the people's wrath," was organized by the Nazi Party on government orders. In the beginning there were even some signs of resistance among the German public to actions of this sort, until eventually the Nazi Party succeeded in suppressing all opposing political trends and concentrated absolute power in its own hands (see also *SS). This was achieved soon after the Nazi takeover, initiated by a wave of arrests of political opponents, for whose internment concentration *camps were set up. The first victims were political opponents of the regime, or people with whom it had personal accounts to settle, or whom it sought to deprive of their property. On April 7, 1933, the term Nichtarier ("non-Aryan") was adopted as legal designation. Jews were expelled from the civil service, including bureaucrats, judges, physicians, and professors. This facilitated the removal, step by step, of the Jews from various professions. The first to suffer were lawyers, judges, public officials, artists, newspapermen, and doctors. (At the beginning, veterans of World War 1 were not included in the ban, thus dividing the Jewish community.) The Jews were methodically pushed out of their remaining employment.

The adoption of the *Nuremberg Laws on Sept. 15, 1935, marked a new phase. It provided a precise definition of the "Jew" by origin, religion, and family ties; deprived the Jews of their status as citizens of the Reich; and reduced them to "subjects of the state." Intermarriage was prohibited while special provisions were made to deal with already-existing mixed marriages. Sexual intercourse between Jews and non-Jews was branded as Rassenschande ("defiling of the race") liable to severe punishment. In order to stigmatize the Jews further and brand them as a licentious people, the employment of "Aryan" maids under the age of 45 in their households was also forbidden. From time to time, addenda were made to the Nuremberg Laws, further reducing the Jews' status, until July 1, 1943, when the 13th such order was promulgated, declaring Germany judenrein ("clean of Jews"). Several Nazi leaders declared that with the adoption of the Nuremberg Laws the "regulation of the Jewish problem" was completed, and that the government had no intention of ousting the Jews from the economic positions they still held. Antisemitic slogans and graffiti were removed for the 1936 Olympics, and some Jews felt that they had weathered the worst. The pessimists had emigrated or pursued plans to emigrate and the optimists continued to believe that things would get better; the real Germany they knew would soon be manifest. In the period 1935–37, despite all the destructive measures, a large amount of capital still remained in Jewish hands and some Jews continued to run profit-making enterprises. To an extent, the Jews also benefited from the economic prosperity brought about by rearmament. Confiscation of Jewish capital, or enforced sale of Jewish enterprises (Arisierung) did, however, become more and more frequent, along with arrests and other anti-Jewish measures.

The decisive turning point in Nazi policy against the Jews came in March 1938, when Austria was annexed to the Reich. The anti-Jewish excesses that took place in Austria, especially in *Vienna, were far worse than any that had occurred thus far in Germany, and the general population's part in them was much greater. Little could one see that the German expansion into other countries would make the German policy of cleansing the country of Jews impossible. With each expansion more Jews came under German domination. The Jews in the Sudetenland were to undergo similar persecution when the Nazis annexed it on the basis of the October 1938 Munich Conference. The gravest incident in this stage in the entire area of "Greater Germany" occurred on Nov. 9, 1938 (see *Kristallnacht). The pretext for this action was the assassination of a member of the German Embassy in Paris by a Jew, Herschel *Grynszpan. A collective fine of one billion marks was also imposed upon the Jews, who, unlike foreign Jews or Aryans, could not collect insurance to repair their property. They were thus victimized by their loss, by their inability to collect insurance, and by the collective fine imposed on the community. These measures put the Jews of Germany in jeopardy and all subsequent measures only further aggravated their situation, culminating in 1941 with the commencement of systematic deportations to extermination camps.

The April 1, 1933, anti-Jewish demonstration filled many with consternation, but only a few Jews were brought to the brink of despair (resulting in some cases in suicide). In the initial stage, both Jews and some non-Jews protested. The Jews sought to remind the Germans of the contributions they had made to Germany's cultural and economic life, of their loyalty to the country, and of the medals they had earned on the field of battle. They soon learned that their efforts were futile. Gradually, the majority of the Jews understood that their fate was bound up with the Jewish people. Their only defenders were the Jews throughout the world who protested against the ill-treatment to which their brethren in Germany were being exposed. Emigration from Germany was their only hope.
but this too they could not achieve without the aid of international Jewish bodies. Judaism was also their only source of moral comfort. And Jewish institutions within Germany were the one place they were safe from persecution, at least for a while. For some, persecution had an unintended consequence. Instead of internalizing the hatred and loathing they experienced, it aroused in them a sense of pride in being a Jew, which gave them the moral strength to endure.

German Jewry now began to cooperate as a single body because external events erased the differences that had previously divided the assimilationists and those Jews who identified themselves with the Jewish culture and people. The Nazis did not discriminate between pious and secular Jews, between Zionists and assimilated Jews – all were uniformly detested; all were subject to Nazi venom. The anti-Jewish policies were directed against the assimilationist Jews as well, forcing them to recognize that they too were members of the Jewish people. The Nazi doctrine propounded that “blood” determined everything, so even converts and persons of mixed parentage (mischlinge) were labeled Jews. Among the latter were persons who for two or three generations had had no spiritual tie with Judaism. Of these “non-Aryan” Christians, or persons not adhering to any religion, only a few found their way back to active Jewish life. Some German churches acquiesced to or enthusiastically supported German racism even when it violated Christian teaching that one who converted to Christianity was a Christian. Only the Confessing Church remained faithful, protesting on behalf of those who had converted. Jews now closed ranks, irrespective of the divergent views they had held in the past. Many who had played important roles in German life, but had been remote from Jewish activities, were now eager and ready to accept Jewish public activity. At first, the existing Jewish organizations united under the Zentralausschuss fuer Hilfe und Aufbau (“Central Committee for Aid and Construction”), providing welfare and emigration services. This was followed by the creation of the Reichsvertretung der Juden in Deutschland (“Reich Representation of the Jews in Germany”) headed by Rabbi Leo Baek. (The use of the term “Jews in Germany” was imposed when the Nazis prohibited the term “German Jews.”)

From the outset, one of the principal tasks confronting the Reichsvertretung was to organize emigration, which had taken various forms. (See Table: Emigration – Jews from Germany.) There was first of all the spontaneous flight to adjacent countries. In 1933, this was comparatively easy, for the Jews bore German passports which permitted entry to most European countries without visas. Regulations on removal of currency from Germany were not that strict, and a uniform regulation had not as yet been reached. In the course of time, however, the countries of reception placed obstacles in the way of the refugees from Germany, especially by refusing them work permits. Thus, the Swiss government refused such permits to all foreign nationals. In the fall of 1938 it requested that the German government stamp all Jewish passports with the letter J so that non-Jewish Germans could be admitted to Switzerland but Jews could be excluded. Only in a few instances were the emigrants able to maintain themselves on the funds they had brought with them. Emigration was also directed to overseas countries, mainly to the United States, but also to South America, Canada, and Australia. The consulates of these countries were thronged, but the existing regulations were not slackened to help the persecuted Jews. Except for Britain in 1938–39, no entry visas were issued outside the scope of existing immigration laws. The third and principal form of emigration was to Palestine. This was more than a simple rescue operation, for it had ideological overtones, reinforced by the feeling of attachment to the Jewish National Home, while emigration to other countries was dictated by utilitarian reasons only. Most of the Zionists who left Germany made their way to Palestine. A systematic campaign on behalf of aliyah was conducted, and as the dangers grew, an immigration certificate to Palestine became a valuable document, coveted also by non-Zionists.

According to estimates of the League of Nations *High Commissioner for Refugees, 329,000 Jews fled from the Nazis in the period 1933–39, of whom 315,000 left Germany itself. In June 1933 there were 503,000 Jews by religion in Germany (including the Saar Region, incorporated in Germany in 1935), while in the first six years of the Nazi regime, the number of Jews was reduced by 289,000, leaving 214,000 Jews in May 1939. According to the census, there were 234,000 Jews (as defined by the Nuremberg Laws) in Germany in 1939, a reduction of 330,000 since 1925.

Efforts were also made to bring about a change in the occupational structure of the Jews, in order to prepare them for emigration. A large part of the Jewish students had been expelled from their German schools and universities and were now taught new trades on farms or in vocational and agricultural schools. Portable skills were essential to success in other countries. Schools to teach Hebrew, English, Spanish, and other languages were also established to prepare Jews for future emigration. Aliyah to Palestine, and huksharah, prepa-

ration for aliyah, were organized by the Zionist *Palestine Office (Palaestina-Amt), which greatly expanded in this period. The Palestine Office acted in an advisory capacity and was in charge of the transfer of capital through the "Ha'avara Company, which, with the approval of the authorities, succeeded in removing Jewish capital from Germany in the form of exports to Palestine, valued at about $16,200,000. Emigrants to the United States were rendered aid primarily by the Hilfsverein der Deutschen Juden and the American Jewish *Joint Distribution Committee. For the Jews in Germany the last few years preceding the war were marked by a desperate race to discover possible emigration outlets. The number of outlets, however, was continually reduced and, when the last exit to safety was finally closed, there was still a sizable Jewish community left in Germany.

In the period 1933–38, the Jews of Germany stepped up in considerable measure their own public and cultural life. They were now called upon to provide not only for their strictly "Jewish" needs, but also to engage in activities of a general nature, especially in education and culture. The Jewish community had to set up its own elementary and high schools for Jewish children, who had been expelled from the public schools. The teaching staff for these new schools consisted of the Jewish teachers who had been dismissed from the German school system. The "Center for Jewish Adult Education," an institution created by Martin Buber under the auspices of the Reichsvertretung, included among its tasks the training of these teachers for their duties in Jewish schools. In general, the educational and cultural activities of the Reichsvertretung may be regarded as the beginning of a Jewish moral resistance movement.

Among the Zionist youth movements, the largest was Ha-Bonim, No'ar Ha'aluzy, which was founded in 1933 and based on a merger of Kadimah and Berit Olim. Makkabbi Hazair was a General Zionist youth movement, while the Werkleute were absorbed by Ha- shattered, which was founded in 1933 and im Datiyyim. He-Halutz, the largest organization preparing its members for settlement in Erez Israel, established haksharat – agricultural training centers – with the support of the Reichsvertretung. Non-Zionist youth was organized in the Deutsch-juedische Jugend and Vortrupp societies. The Zionist Organization of Germany, which grew tremendously in strength, gained half of the seats in the community council and the national organizations in 1933.

The Jewish press played a great role in strengthening the spirit of German Jews. The cv Zeitung gained a circulation of 40,000 and a similar number subscribed to the Juedische Rundschau. A front-page article of the Rundschau, published under the title, Tragt ihn mit Stolz, den gelben Fleck ("Wear it proudly, the yellow badge"), electrified the Jews with its call for courage in the face of adversity.) The pro-Zionist Israelitishes Familienblatt also jumped to a circulation of 35,000.

In art and literature a similar development took place. Jewish artists and writers who had not succeeded in imme-

World War II

In the course of the war, when German rule was extended over large areas, Jews were sent to, or transferred from, Germany and other European countries. Many German Jews were put to death in Germany itself, along with foreign Jews interned there. In the period 1933–39, the communal and occupational life of German Jewry had undergone a radical change. After expulsion from commercial life and the professions, many Jews switched over to manual labor and agriculture. Although in 1933, 48.12% of German Jews had steady employment, by 1939 this figure had been reduced to 15.6% (Jews "by faith"). Of breadwinners in 1939 who no longer had any regular employment, over 40% were able to live off their capital and property, while others had some income from other sources and insurance. By 1939, thousands of Jews were already imprisoned in concentration camps. The Nazis considered the transfer of German Jews to special reservations in German-occupied territory of Poland or Russia or even the remote island of "Madagascar. But over time and with the capture of more and more Jews in the occupied territories, these plans, even if desired, were simply not feasible. At the beginning of 1942, when the physical destruction of Jews was already in full swing, these plans were finally abandoned. A law passed on July 4, 1939, transformed the Reichsvertretung into the Reichsvereinigung der Juden in Deutschland ("Reich Union of Jews in Germany"), and charged the new organization with promoting Jewish emigration, running the Jewish schools, and social welfare. Leo Baeck remained head of the new organization. The work of the Reichsvereinigung was defined by law, and subject to orders from the minister of the interior. The Nazis regarded it as an instrument which could be maneu-

[Robert Welsch / Michael Berenbaum (2nd ed.)]
The outbreak of the war (Sept. 1, 1939) did not bring about any change in the legal status of the Jews. Until November 1941, i.e., at a time when the mass killing of Jews in Eastern Europe, which had begun as the Germans invaded the Soviet Union in June 1941, some still succeeded in leaving Germany. German Jews were admitted to some neutral countries, others were able to escape across the Atlantic. In fact they reached every corner of the globe, including “Shanghai. Until June 20, 1940, Jews who had some means at their disposal were able to reach Palestine by way of the Italian ports, and until Nov. 11, 1942, they could go to “Lisbon and “Casablanca by way of unoccupied France. On May 1, 1941, there were 169,000 Jews in Germany, and by Oct. 1, 1941, 164,000. In the period that had elapsed since May 1939 their number had therefore been reduced by some 50,000 to 70,000. A substantial number of these had succeeded in leaving Germany, although some of them only moved to countries which soon came under German occupation. About 8,000 Jews were deported by the Nazis, to make room for Germans who were repatriated after the outbreak of war. These Jews were sent in the first shipment to the “Lublin district, and later to unoccupied France. Many Jews were put into the existing concentration camps, or into newly established ones. The mortality rate among the Jews also rose to unprecedented heights.

Some time in 1941, Hitler issued his verbal order for the “Final Solution of the Jewish Question.” On Sept. 1, 1941, the Jews were ordered to wear the yellow badge (“Judenstern, or “Jewish star”). In mid-October 1941, their mass “transfer” (“Evakuierungen” or “Abwanderungen”) to ghettos in Eastern Europe (“ Lodz, “Minsk, “Riga, “Kovno”) and to concentration and forced labor camps was begun, under Adolf “Eichmann’s supervision. By the end of the year, 30,000 Jews had been thus “transferred.” In the period from October 1942 to March 1943, Jews from Germany were “transferred” to “Auschwitz and other killing centers, at first by way of concentration camps and, later, directly. Many synagogues were turned into collection points for those about to be deported. It was in this period that the rate of suicide among the Jews took a sudden rise. The property of the “transferred” Jews, or of those who had committed suicide, was taken over by the state, as property of “enemies of the people and the country.” So too, the property of Jews who left Germany; no distinctions were made between voluntary departures and forced deportation.

Jewish activities were carried on within the framework of the Reichsvereinigung, which in accordance with the law had absorbed all the 1,500 organizations and institutions and the 1,600 religious communal bodies which had existed in Germany in 1939. The last to be absorbed, in January 1943, was the Berlin Community. When emigration ceased, the work of the Reichsvereinigung was restricted to education and social welfare. It supported elementary schools, several high schools and colleges, vocational and agricultural training courses, and language courses, as well as the famous Hochschule fuer die Wissenschaft des Judentums. In July 1942 all Jewish educational institutions were closed down. The Reichsvereinigung also supported Jewish hospitals, children’s homes, and homes for the aged. It was forced to assist the Nazis in gathering the Jews who had been earmarked for “transfer.” The Reichsvereinigung derived its income from contributions, membership dues, and special taxes imposed on emigrants. In July 1943 the activities of the Reichsvereinigung came to an end. By then, most of its officials, as well as most of those whom it had cared for, had been “transferred” to their deaths, or put into prison. The assets of the Reichsvereinigung (about 170 million marks) were confiscated by the Nazis. A new national body was created, headed by Walter Lustig, at the Jewish hospital in Berlin.

In the “privileged” model concentration camp/ghetto which was known as the “Theresienstadt ghetto, of the 144,000 Jews interned, 42,103 were from Germany. In January 1943, Leo Baecck was interned there. This ghetto allowed the continuation of Jewish life in some measure. But by the end of the war, only 5,639 German survivors were left in the ghetto. Of those 144,000 Jews deported to Theresienstadt, 33,000 died there, while 88,000 were again deported to Auschwitz. Of 15,000 children, only some 100 survived.

By the end of 1942 the number of Jews in Germany had been reduced to 51,000, and by the beginning of April the following year to 32,000. On May 19, 1943, Germany was declared “Judenrein. On Sept. 1, 1944, there were still 14,574 Jews in Germany who were not imprisoned. These were, for the most part (97.8%), the spouses of non-Jews, or “half-Jews,” who had been defined as Jews by the Nuremberg Laws. When the tide of battle turned against Germany and concentration and death camps in the East were about to be overrun by Soviet troops, many more Jews were sent to Germany either as slave laborers or on death marches; Germany, which had first tried to be rid of the Jews, was now forced to reabsorb them as they were needed as workers or they were more dangerous to Germany if captured by the Soviets as living witnesses. In January 1945, there were in concentration and forced labor camps in Germany hundreds of thousands of Jews from various European countries. That number grew in the ensuing months until liberation as Jews were forcibly marched back into Germany.

The number of Jews who remained free in Germany – openly or underground – has been estimated at 19,000, and those who returned from the concentration camps after the war (including Theresienstadt) at 8,000. Late (January 1942) and doubtful figures provided by the Nazis state that from the beginning of Nazi rule 360,000 Jews had emigrated from Germany. About 160,000 to 180,000 German Jews are estimated to have been murdered by the Nazis in Germany, or to have died as a result of persecution.

[Jacob S. Levinger / Michael Berenbaum (2nd ed.)]
Early Postwar Period

When the Nazi regime in Germany ended, the general assumption was – in the words of Leo Baeck – that the Holocaust had terminated the thousand-year history of German Jewry and that Jews would not resettle in the country where the massacre of European Jewry had been conceived. This forecast did prove completely accurate. Jews were again living in Germany and they had rebuilt their communal and social organizations; but both numerically and culturally they constituted a faint shadow of the Jewish population of the country at the time of Hitler’s rise to power. Although the Jews formed a very diversified group, their relative influence in all spheres of life was negligible. After a period of consolidation the Jews of Germany consisted of three main groups: the remnants of German Jewry who had survived the war in Germany; “Displaced Persons (DPs) who took temporary refuge in Germany after the war, especially in the American Zone; and Jews who returned to Germany or settled there after the war. Those who survived the persecutions and the war in Germany itself had, on the whole, only a tenuous attachment to Judaism. Some had been baptized, and the majority had entered mixed marriages (surviving the Holocaust only with the help of their “Aryan” relatives) and had raised their children as Christians. Among them were also several hundred women who had married Jews, and converted to Judaism. The average age of this group was over 50. The number of Jews in Germany grew in the immediate postwar period, when several thousand German Jews who had survived the concentration camps (especially Theresienstadt) and did not go into DP camps returned to Germany. Soon after, a few thousand were able to immigrate to the United States and several hundred went to other countries. Of those who remained, only a part (estimated by H. Maor between 6,000 and 8,000) joined the reestablished Jewish communities.

The DPs who arrived in Germany after the war were a “community in transit” and did not regard themselves as a part of German Jewry. At the end of 1946, there was a record number of 160,000 Jewish DPs in Germany; the total number of Jewish DPs who spent some time in the country is estimated at over 200,000. Most of them were in the American Zone, where they neither joined the communities nor had much contact with German Jews. The DPs formed their own organization, She'erit ha-Peletah (The Saved Remnant), which had local regional and central committees. In the British Zone (northwest Germany), however, it was the reestablished communities that joined the She'erit ha-Peletah, which had its headquarters at *Bergen-Belsen. In time the refugees, especially those who lived outside the DP camps in the urban DP assembly centers, established contacts with members of the Jewish communities. When the great stream of aliya and emigration of the She'erit ha-Peletah came to an end in the early 1950s, 12,000 former DPs were left in Germany. There were in 1960, according to Maor, about 6,000 former DPs in Germany who had become members of the Jewish communities. They represented a sizable portion of the total membership of some of the communities, e.g., 80% in Munich and 40% in Frankfurt. No precise data are available on the remaining 6,000. Some may have emigrated, others may be listed as returnees, and still others may have severed all links with the organized Jewish community.

From the end of the war to the beginning of the 1960s, about 6,000 German Jews returned to Germany and some 2,000 Jews from other countries settled there. During the rest of the 1960s, Germany received a few hundred more Jewish immigrants, in addition to several thousand returnees. For the most part, these were people who had not adjusted in the countries to which they had emigrated (including Israel). Others hoped that their presence in Germany would speed up the restitution of their property, or the indemnification payments due to them (see *Restitution and Compensation). Still others were simply attracted to Germany by the prevailing economic prosperity. Some prominent people, mostly artists and men-of-letters, returned to Germany – often to the East – but as a rule they did not join the Jewish communities. In general, the former DPs and the returnees were the more active groups, having much closer ties with Judaism than the group of survivors who never left the country.

Reestablishment of Jewish Communities. The reestablishment of Jewish communities began shortly after the war, but in the early stages the means at their disposal were quite limited. Various organizations were operating in Germany to care for the victims of Nazism, and included the Jews in their activities. Among these were the organizations of Nazi victims and the Bavarian Red Cross. In Bavaria, the ministry of the interior established a State Commissariat for the care of people who had been persecuted on the basis of race, religion, or political convictions. (The first commissioner, appointed in the fall of 1945, was a non-Jewish Social Democrat; in 1946 a leading Jew, Philip Auerbach, was appointed to this post.) A bureau of the same kind was also established in Hessen. The American Jewish Joint Distribution Committee helped the communities establish themselves, and gradually they were able to assume the main burden of the religious and social services required by their members. The Berlin Jewish community at this time included the four zones of the city. In June 1947 a coordinating committee of Jewish communities in Germany, covering all the zones of occupation, was formed. When the aliya and emigration of the DPs came to an end, the communities grew in importance. It was at this time that the

German Federal Republic (West) and the German Democratic Republic (East) were established. The interest of the newly founded government of West Germany in strengthening the Jewish communities was shared by the occupation authorities, especially in the American Zone (headed by High Commissioner John J. McCloy). On July 17, 1950, a Zentralrat der Juden in Deutschland ("Central Council of Jews in Germany") was set up with headquarters at Düsseldorf. The formation of the council was encouraged by the authorities, and it became the supreme organ of the Jewish communities in West Germany, achieving that status first in fact and later in law.

While in the immediate postwar years the Jews in Germany had insisted that their stay in the "accursed land" was temporary and that they would soon leave it, by the early 1950s voices began to call for the building of bridges between the Jewish and German peoples. One community leader declared that the Jewish-sponsored idea of dissolving the Jewish communities in Germany should be abandoned, and a rabbi who had returned to Germany even stated that the Jews remaining in the country were charged with reminding the German people of their guilt and their obligation to atone. Such ideas were supported by the government of West Germany and especially by Chancellor Konrad "Adenauer, who felt that in addition to the reparations agreement with Israel, the existence of a Jewish community in Germany and good relations between that community and the German people would be important contributions to the moral and political rehabilitation of Germany in the eyes of the world. To help bring about a reconciliation with the Jewish people, various German organizations and movements, such as the Aktion Suchnezeichen ("Operation Atonement") led by the Protestant theologian Helmut Gollwitzer, the Society for Christian-Jewish Understanding, the Peace With Israel movement headed by Erich Lueth, and others, were formed.

World Jewish organizations, especially the Zionist movement, disapproved of Jewish integration into German life. They regarded it as morally wrong for Jews to be permanently resident in Germany and tried to persuade them to leave the country. When, however, the reparations agreement was signed between the State of Israel, the *Conference on Jewish Material Claims, and the Federal Republic in September 1952, the psychological and political basis for ostracizing the Jews of Germany no longer existed. The Zentralrat became a member of the Claims Conference, and in 1954 the Zionist Executive approved the reestablishment of the Zionist Organization of Germany. (This is not to be confused with the Zionist Organization of the She'erit ha-Peletah, which was disbanded in 1951 as were all other institutions of the She'erit Ha-Peletah.) The Zentralrat also became affiliated with the *World Jewish Congress. Following the reparations agreement and the legislation for indemnification and the restitution of property, the federal government of West Germany and governments of the Laender adopted a liberal policy toward the restitution of property to the communities and provided them with regular subsidies for their needs. As a result, the Jewish communities of Germany became among the wealthiest in the world. This process of consolidation was not without its upheavals, struggles, and public scandals, which came before the German courts. Among those sentenced to imprisonment were Aaron Ohrenstein, the rabbi of Munich, and Philip Au-erbach, who committed suicide in prison in 1952. There were also court proceedings contesting the legality of several community councils.

Antisemitism continued to exist in the country, perhaps exacerbated by the problem of bringing Nazi criminals to justice and the demand for the exclusion of Nazis from public office and government service. In fact, Neo-Nazi movements sprang up, Jewish cemeteries were desecrated, swastikas were daubed on walls, and antisemitic propaganda was disseminated. On the other hand, there were signs of a genuine change of heart: German youth was educated toward democracy, Jewish literature and literature on Jews appeared on the bookstands, there were exhibitions on Jewish themes, etc. The authorities assisted the communities in the construction of new synagogues and undertook the reconstruction of synagogues of historical value in places where there was no Jewish community (such as the medieval synagogue in Worms).

In October 1967, the number of Jews registered with the Jewish communities in West Germany, including West Berlin, was 26,226 (this includes 1,300 Jews living in Frankfurt who were not members of the community but registered as Jews in the census). According to the figures for Oct. 1, 1966, the largest communities were in West Berlin (5,991 members), Frankfurt (4,168), Munich (3,345), Düsseldorf (1,579), Hamburg (1,500), and Cologne (1,304). (See Map: Germany.) Because of the high average age, the demographic composition of German Jewry was highly abnormal. The death rate greatly exceeded the birth rate, e.g., in 1963–64 there were 482 deaths and only 69 births. In spite of the wide gulf between Jews and Germans, the rate of intermarriage is among the highest in the world. In the period 1951–58, there were 679 marriages in which both partners were Jewish, as against 2,009 mixed marriages; 72.5% of the Jewish men and 23.6% of the Jewish women who married chose non-Jewish partners. (For the period 1901–30 the respective figures were 19.6% for men and 12.2% for women.)

Several aged rabbis returned to Germany, and a few came there from other countries, e.g., the United States, Israel, and Britain, to serve for a limited period. There was a serious scarcity of teachers, religious articles, and community workers. The work of the communities was generally in the hands of a salaried staff. Jewish schools were established in Munich, Frankfurt, Berlin, Düsseldorf, and Hamburg, while elsewhere the community provided religious instruction during after-school hours. There were social welfare departments in the communities and a central welfare office (Zentralwohlfahrtsstelle) in Frankfurt. Many communities maintained homes for the aged and summer camps for children. German-language Jewish weeklies were published in Dussel-
dor and Munich, and a Yiddish newspaper in Munich until 1974. The Juedischer Verlag (Jewish Publishing Co.) in Berlin was reestablished, and another publishing house, Ner Tamid, was opened. The Zionist Organization had branches in most of the communities, as did Jewish women's organizations and youth movements. In most places there were local committees of the *Keren Hayesod and the *Jewish National Fund, and in Berlin, Frankfurt, and Munich there were B’nai B’rith Lodges.

An outstanding contribution to the postwar rehabilitation of Jews in Germany was made by Karl Marx (1897–1966), who returned to Germany in 1945, joined the Zionist movement, and founded the Allgemeine Wochenszeitung des Judentums (*“General Jewish Weekly”) in Duesseldorf. He regarded as his task the “building of a bridge” between the Jewish people and Israel, on the one hand, and Germany, on the other. He had close connections with the first president of the Federal Republic, Theodor Heuss, with Chancellor Adenauer, and with Social Democratic leaders and tried to serve as a link between them and the leaders of Israel and world Jewry. A number of Jews assumed important public offices. Among them were Paul Hertz, a Social Democratic senator in Berlin; Herbert A. *Weichmann, President of the Bundesrat and mayor of Hamburg; Joseph Neuberger (1902–1977), the minister of justice in North Rhine-Westphalia (who returned to Germany from Israel); and Ludwig Rosenberg, chairman of the Federation of Trade Unions. Several scholars and prominent artists, including the actors Ernst *Deutsch and Fritz *Kortner, also returned to Germany.

Despite their manifold activities, the Jewish communities in Germany rested on weak foundations because of their abnormal demographic structure, the inadequacy of Jewish education, and the abyss that continued to exist between the Jews and German society. The replacement of the expression Deutsche Juden (*“German Jews”) by the term Juden in Deutschland (*“Jews in Germany”) may be taken as an indication of the strangeness that Jews feel in Germany and their anxiety about the future.

[Chaim Yahir]

**East Germany (German Democratic Republic)**

There was only a tiny remnant of Jews in the German Democratic Republic, among them some prominent writers, such as Arnold *Zweig, Anna Seghers, and Stefan Heym, and Communist politicians returning from exile. A large segment of the Jewish community, including the presidents of the major Jewish communities, fled to the West after the outbreak of the antisemitic Stalinist show trials, culminating in the Prague Slansky Trial of 1952. In the same year the Jewish community of Berlin, which until then was still a unified body in a divided city, split officially. Until his death in 1965, the communities in East Germany were served by Rabbi Martin Riesenburger. Afterwards, the community was mainly served by Hungarian officials. Although there was no ban on religious practice, the Communist regime made an effort to obscure the identity of Jews. They were allowed to publish a periodical, which was mainly of informative character and contained also the obligatory criticism of the State of Israel. Only a few of the public figures who are of Jewish origin retained any connection with organized Judaism. One of these was the author Arnold Zweig who was president of the Academy of Arts.

In the last years of the German Democratic Republic religious and cultural Jewish life were reinforced by the state, mainly motivated by the wish to improve its ties with the United States. This may have been the main motive behind the decision of the Honecker government to renovate the destroyed Oranienburger Street Synagogue in East Berlin. Jews in the GDR could now attain greater visibility. With this new policy, a significant number of individuals, often children or grandchildren of Jewish communists, discovered their Jewish roots, and in East Berlin some of these joined “We for Ourselves,” a group of mostly marginally Jewish individuals who stood in an ambivalent relationship to the community; several of its members have since been accepted into the Jewish community. With the Honecker government’s new attention to the Jews, a number of important initiatives became possible. East Berlin was able to appoint an American rabbi, Isaac Neuman, who was in office there for a short period from 1987 to 1988. At around the same time, the Weissensee Jewish cemetery, Europe’s largest, was rehabilitated, and a descendant of one of the families that belonged to the former Neo-Orthodox community Adass Jisroel, Mario Offenberg, negotiated with the GDR in order to reestablish this community in East Berlin. The restored Neue Synagogue in Berlin’s Oranienburger Street was now turned into a cultural center and archive, Centrum Judaicum, financed mostly through small private donations from East German individuals. The community in East Berlin reached the height of activity in 1988 and 1989, the two final years of its full independence. 1988 saw the first large observances of Kristallnacht, in a meeting of younger Jews from East and West Germany in East Berlin; an exhibit, Und lehret sie Gedachtnis, was shown there in the reconstructed Ephraim Palais, the residence of King Frederick 11’s Jewish financier; on May 10, 1989, for the first time, Ha-Tikvah was sung and a community membership meeting referred to Israel’s Independence Day. After the collapse of the Wall, Israel-oriented activities intensified; on November 11, 1989, for the first time, a large Israeli flag was displayed in West Berlin and a GDR-Israel Friendship Society began to be formed. These independent Eastern initiatives came to a halt very soon, however. Very much in step with the rapid unification of East and West Germany, the Western Central Council of Jews and the West Berlin Jewish community took control of their Eastern counterparts, and on January 1, 1991, the East Berlin Jewish community ceased to exist.

The number of members of the Jewish communities in East Germany declined from 2,600 in 1952 to 1,200 in 1967 to 350 (most of them in East Berlin) at the time of the dissolution of the German Democratic Republic in 1989. This count, however, ignores a much higher number of individuals of Jewish ancestry who chose not to register with the communities.
November 9, which once had signified the end of German and European Jewry, received an additional meaning not only in German but also in German-Jewish history in 1989. When the Berlin Wall came down, the doors were opened not only to hundreds of thousands of East Germans from the former GDR and to ethnic Germans from the former Soviet Union but also to more unlikely candidates for immigration. With the upsurge of antisemitic rhetoric and acts, political instability, and economic depression, the Jews of the former Soviet Union began to look for new homes. Despite Israel’s negative attitude and despite the fact that officially Germany was a non-immigrant country, it opened its doors to Jewish immigrants and has been trying to integrate them with relatively few bureaucratic impediments. In this respect, there is little disagreement along party lines, and the words of SPD-politician Peter Glotz in the Bundestag debate of October 25, 1990, spoke for the ruling Christian Democrats as well: “The Germans have covered themselves in guilt. I believe that the least we can do now, when Jews express again their wish to return or to come to the land of the Holocaust, is … to solve the problems bureaucratically and without much fanfare.” Initially many Soviet Jewish refugees came to Germany with visitor visas and then applied for political asylum. With the change in the German Basic Law in 1993 this was no longer possible. But even before, Chancellor Helmut Kohl and the governors of the German states had agreed in a meeting on January 9, 1991, that Soviet Jews would be allowed in on humanitarian grounds as quota refugees. After a stay of eight years (according to age) the refugees become eligible for German citizenship. Those who had been admitted by individual German states would be considered as quota refugees retroactively, while allocations were made to the individual states to cover the coming years. There was general agreement that Germany could absorb up to 10,000 Jewish refugees annually. Between 1990 and 1998, 53,559 immigrants from the former Soviet Union joined the Jewish communities: about 1,000 in 1990, an average of 5,000 between 1991 and 1994, and an average of over 8,000 between 1995 and 1998. Between 1998 and 2004 there was almost the same number of Jewish immigrants. The actual number of immigrants from the former Soviet Union is of course much higher (about twice as much), if we consider the (growing) number of non-Jewish family members and the (few) Jews who decided not to join the Jewish communities.

The largest Jewish communities of Germany in 2003 were Berlin (appr. 11,000), Munich (9,000), Düsseldorf and Frankfurt (7,000), and Hanover, Hamburg, and Cologne (5,000). Some of those communities have increased tenfold since unification and have reached the numbers of the 1920s. In a few smaller cities and towns, like Straubing (1,713) or Osnabrück (1,541) there are now far more Jews than before 1933. In other places, mainly in East Germany, new Jewish communities have been established which are exclusively or almost exclusively immigrant communities, among them Rostock, Schwerin, and Brandenburg in the East, but also Emmenden-
not return to Germany. The first rabbi educated in Heidelberg was employed by the Jewish community of Duesseldorf. Thus, most teachers and basically all rabbis are immigrants to the German-Jewish communities, or at least received their education outside Germany. With the disappearance of the older generation of German-born immigrants who returned to officiate in the German-Jewish communities the language issue becomes more and more significant.

Despite these difficulties and mainly due to the further increase of the Jewish population, the number of rabbis in Germany has grown in recent years. In 2004 there were 34 rabbis listed in the directory of community rabbis, as well as 11 Chabad rabbis, both numbers having doubled as compared to the situation a decade earlier. In a few places, such as Brandenburg, the community rabbi comes from the Lubavitch movement. Chabad developed quite a number of activities in the larger (and now also some smaller) communities, especially child-related. Thus, the only local Jewish summer camps in Germany are run by Chabad, which overcomes the language barrier by recruiting young American women who speak Yiddish to the children. These summer camps have been among their most successful activities in Germany. In recent years, Chabad has also initiated the annual Hanukkah lighting ceremony in German public places.

On the other side of the religious spectrum, the Reform and Conservative movements have made considerable inroads in recent years. Both had developed in 19th-century Germany but virtually disappeared with the destruction of German Jewry in the 1930s. Religious Jewish life in postwar Germany was dominated by East European Jews and therefore led to the establishment of Orthodox synagogues. Only in one Berlin synagogue (Pestalozzistrasse) and in Saarbruecken was the prewar organ tradition revived. However, even there Reform services remained in the tradition of prewar German Liberal Judaism, with separate seating and no active role for women in the service. In the 1980s the first egalitarian services were introduced in Berlin and Frankfurt, followed thereafter in a few other cities. Many of their members originally came from the small American Jewish presence in Germany. Having been established outside the Einheitsgemeinde structures, the Berlin and Frankfurt Liberal congregations were granted space within the Gemeinde in the later 1990s. Some other Liberal congregations, as in Munich and Cologne, remained outside the Gemeinde structure or founded a separate association of communities as in Lower Saxony. In 1995 the small new congregation of Oldenburg in Northern Germany hired the first woman rabbi in Germany, Swiss-born Bea Wyler. In 2005, the Zentralrat reached an agreement with the Union of Progressive Jews and accepted Liberal community associations from northern Germany as members.

Most Jews in Germany are what is often termed “non-practicing Orthodox.” This means they do not attend synagogues on a regular basis but go to Orthodox synagogues during the High Holidays or family celebrations. Developments in recent years show the first signs of a more modern approach to the phenomenon of empty synagogues. Beside the Liberal congregations, which are united in an organization together with their Swiss and Austrian equivalents, there are a few modern Orthodox rabbis trying to replace the more East European-style services in their synagogues. They have initiated youth services, beginners’ services, special Kappa- lalat Shabbat events, and regular German sermons. With the few exceptions of the largest communities, there is usually only one synagogue in town. This situation requires a certain amount of compromise in order to serve all community members. Berlin is the only German community which employs an Orthodox and a Liberal rabbi.

Kosher restaurants are integrated in the community centers of Berlin, Frankfurt, and Munich, but most other communities have a kosher kitchen for Sabbath kiddush or special events. Several communities maintain old-age homes with a kosher kitchen. Shohets and mohels are extremely rare in Germany, and usually brought from France or Switzerland. In addition to religious activities the larger communities have their own frameworks of secular cultural programs. In Berlin, Frankfurt, and Munich they are organized in adult education institutions which offer language classes, lecture series, and guest lectures with an often very impressive program. In smaller communities these programs have also increased over the years. It is perhaps a peculiar characteristic of the German situation that the audience for these Jewish cultural programs are overwhelmingly non-Jewish. As one consequence some communities, like Munich, established a Lehrhaus program which tries to create a more intimate atmosphere for the local Jewish population. Beginning in 2001, a cultural symposium called Tarbut has taken place regularly in the Bavarian Alps on themes of Jewish literature, politics, and arts, with several hundred participants from Germany, Austria, and Switzerland.

There exist a number of other Jewish organizations with regular programs, ranging from student organizations (organized in the German-wide Bundesverband Jüdischer Studenten in Deutschland) to Maccabi sports associations, WIZO, and other women’s organizations to senior citizen clubs.

The larger communities run youth centers with a broad range of activities. The lack of leadership is, however, visible in this respect as well. Directors are rare in Germany and are usually recruited from Israel, which means a high rate of turnover, language problems, and often also a gap between a religious leadership and a highly secular clientele. The Zionist Organization, and especially its youth organization, has been among the most active Jewish organizations, organizing seminars and camps, which for many young German Jews become a formative experience in the forging of their Jewish identities.

Jews are a tiny minority in today’s Germany, constituting not more than 0.1% of the total population. Their voice, however, can hardly be ignored in the German public. Whenever there are major public debates about the German past, spokespersons of the Jewish community are given prominent space.
It is notable that all leading representatives of postwar German Jewry, from the volatile Bavarian state commissioner, Philipp Auerbach (who committed suicide in 1952 after a spectacular trial against him which failed to prove that he had embezzled restitution money), and the longtime secretary general of the Central Association, Hendrik van Dam, to its most recent presidents, Werner Nahmann, Heinz Galinski, Ignatz *Bubis, and Paul Spiegel, were German-born Jews, while the majority of Germany’s Jewish community always remained of East European background. The election of Ignatz Bubis as president of the Central Council of Jews in Germany in 1992 marked a significant change of image for the German-Jewish community. He succeeded the stern Auschwitz survivor Heinz Galinski and his predecessor, Werner Nahmann, who had embezzled millions of marks of reparation money. Bubis, who survived the Holocaust as a child, symbolized a new optimism among German Jews and was one of the best-known figures in the German public. He was even suggested as a candidate for the Federal Presidency in the 1990s. The election of Bubis’ successor after his untimely death in 1999 was for the first time a high profile public issue in Germany. Perhaps for the last time a Holocaust survivor, Duesseldorf community president Paul Spiegel, was elected president of the Central Association in January 2000.

In contrast to pre-Nazi Germany there were today only a handful of prominent German Jews in the public sector. For many years not a single professing Jew has been a member of the Bundestag, although there were today a few well-known younger Jews active in political life, such as Michel Friedman for the Christian Democrats and Micha Brumlifik for the Greens. Together with the late Ignatz Bubis, a leading member of the Free Democrats, these most visible Jewish politicians all came from Frankfurt.

In the realm of journalism the foremost weekly, Die Zeit, had a Jewish publisher in Josef Joffe, and a few other prominent Jewish journalists could be found in the press and television. The most important and influential literary critic in Germany in the last decades of the 20th century was Marcel *Reich-Ranicki. Some observers have noticed an upsurge in German-Jewish literature in recent years. Indeed, there are quite a few young writers of varying quality who increasingly write about Jewish topics and are well known to the German public. At the same time it has to be noted that their audience is almost exclusively non-Jewish.

There exists one German-wide Jewish newspaper, the weekly Allgemeine Juedische Wochenzeitung, published by the Zentralrat. Some larger communities, such as Berlin, Frankfurt, and Duesseldorf, issue their own community bulletins. Die Frankfurter Juedische Nachrichten is only issued a few times a year but remains significant both because of its independence and its high level. By now the Russian immigrants have also established their own press. Jewish student papers such as Cheschbon in the 1980s and Nudnik in the 1990s had a rather short-lived existence, but student papers continue to exist in varying formats.

The most prominent Jewish representatives of cultural life in Germany are to be found in the realm of music. An impressive list just of conductors can easily be drawn up, ranging from Daniel Barenboim and Vladimir Ashkenazy to James Levine, Lorin Maazel, and Asher Fish. None of them resides permanently in Germany or is affiliated with Jewish life there, but they all have regular appointments and thus put their stamp on German cultural life. Such a list is more than a curiosity: it demonstrates that for a certain sector of society a burgeoning cultural and economic life can overshadow the tragic past. What is true in music is also true in other areas, such as academia, the sciences, and business. Especially where no language barriers exist, increasing mobility makes people move to prosperous and culturally attractive places and stay there, either temporarily or permanently.

Since the 1960s and 1970s German public discourse has been characterized by a culture of memory, which began with modest exhibits and local memorials and reached its peak in the 1990s with the construction of several Jewish museums and the big debate around the Berlin Holocaust Monument. In the 1980s and 1990s the German public began to discuss the less pleasant aspects of the German past with an openness unknown before – ranging from the Historians Debate all the way up to the present debates about the Goldhagen book, the Walser speech, the Wehrmacht exhibit, and the slave labor reparations.

Here again larger German issues were decisive. It was the generation of 1968, and the issues of 1968, which influenced the future outlooks of both progressive and conservative Jewish intellectuals as well. The identification with the student revolt and its causes, just as the later disappointment with an anti-Semitism often posing as anti-Zionism, shaped the critical Jewish voices emerging first in opposition to the official leadership, but – at least in the Fassbinder scandal – overriding traditional borders. As Jewish intellectuals such as Micha Brumlifik, Dan Diner, and Henryk Broder made it clear, their growing disillusionment with the German left caused them to reconsider their Jewish identities. On the other hand, the minority conservative Jewish view (represented for example by TV journalist Richard Loewenthal in the 1960s and 1970s or by the historian Michael Wolffsohn in later decades) was also decisively shaped by its opposition to the student revolt and the values connected to it.

More noticeable than any internal Jewish discourse is the immense German interest in matters Jewish, mainly in the cultural and scholarly spheres. Jewish museums were built in Frankfurt, Berlin, and many smaller places in the 1980s and 1990s and another one in Munich was under construction. Chairs and departments in the field of Jewish Studies spread in the same period. TV films, series, and mini-series on Jewish life are prime time viewing fare. Jewish festivals have become a regular part of local culture in Berlin, Munich, and many other places, Yiddish klezmer bands flourish, and Jewish book stores carry on a brisk trade.

[Michael Brenner (2nd ed.)]
Antisemitism

Since the early 1980s, there has been an ever stronger evolution of two countervailing trends in West Germany, and as is now apparent, in East Germany as well. The first one consists of pro-Jewish and sometimes pro-Israeli currents with often strongly idealizing and romanticizing elements; the other, in the wake of growing racism, of more virulent forms of antisemitism. In the past, surveys have shown that the right-wing potential – expressed, for example, in sympathy for the moderate right-wing Republikaner party (roughly equivalent to France’s Front National) or by core antisemitic attitudes – has been at about 15%. In recent years, however, the Right has experienced clear gains. This has to do with the traumatic experience of unification for many East Germans, and Germany experiencing the highest growth in foreign population of any state in the European community and far larger absolute numbers of immigrants than Britain or France, former colonial powers. In 1992 alone, willingness to vote for a right-wing party jumped from 12% to 19% in the West, from 8% to 12% in the East; Gerhard Frey’s Deutsche Volksunion (DVU), the right of the Republikaner, grew from 22,000 to 24,000 members. In the 2004 state elections of Saxony, the extremist right-wing NPD (Nationaldemokratische Partei Deutschlands) received almost 10% of the vote, and higher percentages among the younger voters. But in the nationwide Bundestag elections of 2005 they fell clearly under 2%.

Blatantly neo-Nazi groups, such as the Deutsche Alternative (AD) of the late Michael Kuhnen, grew from a few dozen members in the 1980s to over 1,000 in the 1990s, with a substantial growth in particular localities in the East. Neo-Nazi, skinhead-type activists increased concurrently from 1,000 to about 6,000 in early 1993, while the total right-wing extremist membership must be estimated at well over 40,000 members. With this growth and the crystallization of right-wing movements into ever more stable parties and other institutions, antisemitism, previously often underground, is now out in the open and acceptable again in some quarters. This goes hand in hand with desecrations of cemeteries, synagogues, monuments, and plaques commemorating the Holocaust (including, for example, the burning of a barracks at Sachsenhausen), with occasional attacks against individual Jews. These sentiments are often located in the lower and lower-middle class, as well as among some noteworthy neo-conservative and right-wing intellectuals. In order to contain the Right within its ranks, the governing CDU has largely downplayed the seriousness of these developments. While they represent a serious threat, as shown in the pogrom-like acts in Moellin, Rostock, or Hoyerswerda, the recent massive resistance against the Right is at least as noteworthy, especially the anniversary of Kristallnacht which is turning increasingly into a central day of anti-racist action, with hundreds of thousands in the large cities demonstrating against racism and the asylum policies of the government. Some in the Jewish community, notably Central Council Chair Ignatz Bubis, have been important voices in this regard.

Relations with Israel

Prior to the establishment of diplomatic relations between the State of Israel and the German Federal Republic (West Germany) in March 1965, relations between the two states were confined to the agreement of Sept. 10, 1952, for global recompense of the material damage inflicted on the Jewish people by the National-Socialist regime (see *Restitution and Indemnification). An Israel mission was in charge of the implementation of this agreement as the only official representative of Israel in the Federal Republic. No German counterpart existed in Israel, in view of vehement opposition there to extending relations beyond the commercial limits of the agreement. The Israel mission was, however, authorized to grant entry visas to Israel, where the British consulate, acting for the Federal Republic, granted entry visas to West Germany. The value of Israel’s purchases under the agreement amounted to 60–80 million marks annually. As a result of the contact with the large number of suppliers, relations developed and reached far beyond the field of commerce. Consequently, and in view of the Federal Republic’s impressive economic and political recovery from 1953 onward, a need was felt for more clearly defined relations, as well as for the presence of an official representative in Israel. In a letter to the Israeli mission, written in March 1956, the then foreign secretary, H. von Brentano, officially proposed the establishment of a mission in Israel whose status would be parallel to that of the Israeli mission. Although this proposal was accepted by Israel, it was not implemented by Germany, since the German Foreign Office feared the Arab States would react to the establishment of diplomatic relations between Israel and the Federal Republic by recognizing the German Democratic Republic (East Germany) as a second sovereign German state. Such a development would be contrary to the Hallstein Doctrine (adopted in May 1958), whose basic aim was Germany’s reunification.

On March 7, 1965 (two years after Ludwig Erhard had become chancellor of the Federal Republic) an offer to establish diplomatic relations with Israel was made; the timing of the offer was due to an official visit to Cairo by Walter Ulbricht, head of the Democratic Republic. Ulbricht’s visit was considered by the Federal Republic’s government as provocation by President Nasser of the United Arab Republic and an overture to the establishment of diplomatic relations with the Democratic Republic. In consequence of this visit and the publicity campaign initiated by Nasser against the supply of defensive arms to Israel by the Federal Republic (although Egypt received incomparably more weapons from the Soviet Union), diplomatic relations were broken off between Germany and Egypt and most of the Arab States. The Israeli government and the Knesset accepted the West German offer, and on May 12, 1965, diplomatic relations were finally established; exchange of ambassadors followed in July 1965. From July 1965, relations developed satisfactorily between the Federal Republic and Israel. The visit to Israel of the former Chancellor, Konrad Adenauer, in May 1966 was a significant event. It demonstrated his friendship for Israel and for the former prime
minister, David *Ben-Gurion. In November 1967 the former chancellor, Professor Erhard, paid a visit to Israel, which also symbolized the gradual normalization of relations. At the inauguration of the new Knesset building in 1966, the Federal Republic was represented by the president of its parliament, Eugen Gerstenmaier. An Israel-German chamber of commerce was established with Walter Hesselbach, a leading figure in the West German economy, and the former minister of finance, Franz Etzel, at its head. Long-term loans for development were granted by the Federal Republic to Israel in 1966 and subsequent years under an agreement of May 12, 1965. Similar loans had been granted for the development of the Negev in the years 1961–65, agreed upon at the historic meeting between Ben-Gurion and Adenauer at the Waldorf Astoria Hotel in New York on March 14, 1960. Visitors from all walks of life subsequently went from the Federal Republic to Israel, and these visits furthered better understanding between the two countries. Even in the five years preceding the establishment of diplomatic relations, about 40,000 young people aged between 18 and 25 years from the Federal Republic had visited Israel. The first German ambassador to Israel, Rolf Pauls, made unceasing efforts for the improvement of relations. Asher Ben-Nathan was Israel's first ambassador to the Federal Republic. 

[Felix Eliezer Shinnar]

The policy of the Federal Republic of Germany toward Israel was originally based, to a certain extent, on the assumption that Germany had a unique responsibility in regard to the Jewish State, but this factor has since tended to play a smaller role. Since Germany has no special interests in the Middle East, no political conflicts were created. Germany supported the majority of Israel's requests to strengthen its ties with the European community (e.g., the Common Market). Personal relations between the leaders of both countries have also been strengthened in past years.

The support of Israel by the vast majority of Germans revealed by public opinion polls during the Six-Day War has waned since then, and in New Left circles a radical anti-Israel attitude has evolved. Chancellor Willy *Brandt's official visit to Israel, the first by a German chancellor, in 1973, was an occasion for demonstrations of friendship between the two countries. With his unequivocal anti-Nazi past he stressed the fact that his attitude was not determined by any personal feelings of guilt, but that every German – even of the generation which had not been involved in the Nazi atrocities – must remember the Holocaust for which Germany had been responsible. At the same time, however, Brandt strove for the normalization of relations between the two countries and their citizens.

During the Yom Kippur War, however, Germany not only emphasized her neutrality, but even had a hand in the distinctly pro-Arab resolution adopted by the European Community during the war. To some extent, however, Germany later modified this policy and took up a position midway between the friendly attitude of Holland and the pro-Arab stand of France. In his first official statement to the Bundestag on May 17, 1974, the new chancellor of the Federal Republic, Helmut Schmidt, reaffirmed his predecessor's Middle East policy, indicating his intention of continuing Bonn's balanced approach towards Israel and the Arab countries.

In his address at the United Nations on November 19, 1974, the German representative, Ruediger von Vechmar, expressed, among other things, his government's recognition of the right of the Palestinian people to decide whether they wish an independent authority in the territories to be handed over by Israel. West Germany abstained in the vote on the UN resolution recognizing the right of the Palestinians to fight for their independence by every means. It had earlier abstained on the vote to invite PLO representatives to the General Assembly. It voted against the resolution to grant observer status to the PLO and in common with all other countries condemned the passing of the Jerusalem Law in 1980.

Trade relations between the two countries have continued to develop since the reparations agreement, and in 1972 Germany occupied third place in Israel's foreign trade, after the U.S. and England; 9% of Israel's exports and 12% of her imports were tied up with German trade. Imports from Federal Germany rose from $225.2 million in 1972 to $11.8 in 1973, $90 million in 1974, and $790.7 million in 1980. Exports from Israel similarly rose from $103.5 million in 1972 to $136.8 million in 1973, but dropped to $135 million in 1974. In 1980 they were $541.9 million.

In 1990, Germany gave Israel DM 63.6 million in development aid in the form of loans and other contributions; while in 1981, imports by Israel amounted to DM 1,724.4 million, by 1991 they had risen to DM 3,036.4 million; Israeli exports to Germany grew from DM 1,077.1 to DM 1,464.4 million. During the Gulf War, the debate between the "pacifists and bellicists" cut across all parties in Germany, and the Israeli public and politicians were angered about the neutral and sometimes anti-Israel stance taken by German politicians and the media, especially in light of the military hardware and poison gas installations given to Iraq by German firms. Partly because of the upsurge caused by this, Germany promised Israel $670 million in aid; it supported the war effort with $5.5 billion and sent military goods and gas masks valued at $60 million. These monetary concessions vis-à-vis Israel were complemented by a flurry of visits, including that of Foreign Minister Genzher, to Israel and meetings by Chancellor Kohl and others with major international Jewish organizations.

Apart from the Gulf War and despite all historical obstacles, contacts have been increasing all along. Even before unification, for example, the speakers of both the West and East German parliaments, Rita Süssmuth and Sabine Bergmann-Pohl, in a demonstrative act both for international and domestic consumption, undertook to visit *Yad Vashem in Jerusalem, and the number of mutual political visits in general is steadily growing. Presidents Chaim Herzog and Richard von Weizsäcker made major visits to each other's countries, and there are almost annual visits by the foreign ministers as well as occasional visits by the prime minister of Israel to
Germany and by the German chancellor to Israel. Two Federal presidents, Johannes Rau and Horst Köhler, delivered speeches in the Knesset in German, despite the objections of some Knesset members.

Exchanges also intensified at the cultural and scientific levels. After the death of Herbert von Karajan (whose activities in World War II were regarded with suspicion) in 1989, the Berlin Philharmonic Orchestra could finally visit Israel the following year, and even Gottfried Wagner, great-grandson of Richard Wagner, was invited in 1990 to participate in lectures and discussions. Israeli academics receive study grants to Germany, and the German-Israeli Foundation engenders a wide network of scientific cooperation. Israeli artists, likewise, receive considerable attention in Germany; most noteworthy was the 1990 meeting of Israeli and German authors in Mainz, with Aharon Meged, Yoram Kaniuk, Ruth Almog, and David Grossman. In 1991 Amos Oz received the prestigious award of the Frankfurt Book Fair. Tensions between Israel and German Jewry have been aggravated by Israeli pressure on the German government not to admit Jews from the former Soviet Union, and by Ignatz Bubis’ criticism of Israel’s treatment of Palestinians, especially its deportation policy.

Today, in an ironic twist and despite all ambivalences, bitterness, and mutual misunderstandings, the presence of Israel is greater in Germany than in any other European country, and Germany has become the major advocate of Israeli interests and concerns in Europe.

BIBLIOGRAPHY: The major comprehensive work is German-Jewish History in Modern Times (1996–98), ed. by Michael A. Meyer, asst. ed. Michael Brenner, which includes bibliographical essays. Earlier bibliographies are German Jewry (1968), supplemented by From Weimar to Hitler: Germany 1918–1933 (1964); Persuasion and Resistance under the Nazis (1960); and After Hitler (1963), all published by the Wiener Library, London. These are brought up to date in the Yearbooks of the Leo Baeck Institute (1956 ff.). The Bibliography of Jewish Communities in Europe (BiC), compiled by B. Opiph in the Yad Vashem Institute, Jerusalem, is the most complete for an economic, social, and regional history. ADD. BIBLIOGRAPHY: Jewish history in specific regions is covered by the series Bibliographien zur deutsch-juedischen Geschichte, including volumes on Bavaria (1989), Hamburg (1994), and Silesia (1995–2004). The following periodicals are indispensable: Aschkenas; BLBI (since 1992 replaced by S. Volkov, Jews in Weimar Germany (1980); S.E. Aschheim, Brothers and Strangers: The East European Jew in German and German Jewish Consciousness, 1800–1933 (1982); G.L. Mosse, German Jews Beyond Judaism (1985); T. Maurer, Ostjuden in Deutschland 1938–1933 (1986); J. Wertheimer, Unwelcome Strangers: East European Jews in Imperial Germany (1987); M. Kaplan, The Making of the Jewish Middle Class (1991); H. Lavsky, Before Catastrophe: The Distinctive Path of German Zionism (1996); M. Brenner, The Renaissance of Jewish Culture in Weimar Germany (1996); M. Brenner and D.J. Pendar (eds.), In Search of Jewish Community (1998). ANTISEMITISM: P. Massing, Rehearsal for Destruction (1949); A. Lehnchnle, Magic Background of Modern Anti-Semitism (1956); P.G. Pulzer, Rise of Political Anti-Semitism in Germany and Austria (1964); J. Toury, Maimunah u-Mevukhah be-Mahpehekha 1848 (1968); E. Sterling, Judenhaus (1969); G.L. Mosse, Germans and Jews (1970); I. Schorsch, Jewish Reactions to German Anti-Semitism (1972); S. Volkov, Judisches Leben und Antisemitismus im 19. und 20. Jahrhundert (1990); S. Roehrbach, Gewalt im Biedermeier (1993); Ch. Hoffmann, W. Bergmann, and H.W. Smith, Anti-Zionism (2002). HOLOCAUST: R. Hilberg, Destruction of the European Jews (1967); G. Reitlinger, Final Solution (1968); L. Poliakov and J. Wulf, Das Dritte Reich und die Juden (1955); International Military Tribunal, Trial of the Major War Criminals, 23 vols. (1949), index; W. Scheffler, Juden-
GERÖ, ERNÖ (formerly Singer; 1898–1980), Hungarian statesman. Gero was born in Budapest and joined the Hungarian Communist Party before the revolution of Béla *Kun (1919). Following the downfall of Kun, he left Hungary for Germany, but returned secretly and served as editor of the Communist underground newspaper. Later he settled in the U.S.S.R. and took part in the Civil War in Spain (1935–36), where, it is assumed, he served as an agent of the NKVD. It is stated that he was responsible for the “guidance” of the Catalan Communists and partly also for the death sentences passed on actual or presumed “deviationists” in the International Brigade, among them Hungarians. He was regarded as more trustworthy even than the Hungarian dictator Mátyas *Rákosi, and it was even rumored that one of his duties was to keep him under surveillance.

Gerö returned to Hungary with the Russian army at the end of 1944. He was appointed minister of transport and placed in charge of the reconstruction of the devastated country and its industry. Among the works attributed to him was the rebuilding of the splendid bridges over the Danube which had been destroyed by the Nazis. He was appointed head of the committee for implementing the Five-Year Plan.

In 1952, Gerö was appointed deputy prime minister and, as a member of the party Politburo and the United Party, was a central figure in the harsh dictatorship. During the period of relaxed rule which followed the historic 20th Congress, at which Khrushchev exposed Stalin and his regime, Gerö was appointed head of the delegation of reconciliation which was sent to meet Marshal Tito in Yugoslavia. Following the deposition of Rákosi in 1956 Gerö was appointed first secretary of the Communist Party and tried to crush the revolution which broke out on the first day by Stalinist methods. When that failed, he appealed for help to the Soviet army stationed in Hungary. Two days later, he himself was deposed and in 1960 again went to the U.S.S.R., returning to Hungary in 1962, when he was expelled from the Communist Party.

[Baruch Yaron]

GERONA (Catalan, Girona; Lat. Gerunda; Heb. גירונה), city in Catalonia, northeastern Spain. The Jewish community of Gerona was the second largest in Catalonia, probably dating back to the end of the ninth century. The importance of the community was due to its numerical strength, and no less to its religious and cultural achievements. Houses in the Jewish quarter are mentioned in documents from the mid-tenth century. Jews who owned land in Gerona and its surroundings had to pay a tithe to the Church. In 1160 they were permitted to lease shops built outside the city walls. Remains of the public baths and tombstones have been preserved. In the 13th century the community reached its peak from a demographic point of view, with 1,000 people. Jews began to take part in the administration in the 13th century. Noteworthy were the...
The decline of the Gerona community continued throughout the 15th century. In 1431 the last treasurer (gabbai) of the charitable trust (hekdeshei) became converted; Alfonso V ordered him to remain in office and to distribute the money at his disposal to both Christian and Jewish poor, but mainly to the Christians as the majority of the Jews had become converted. In 1442 the area of the Jewish quarter was reduced. A reflection of the state of affairs in the community in 1470 is the will of the widow of one Solomon Shalom, expressing the desire that her Jewish son and Christian daughter should live in peace and unity. In 1486 the Jews were prohibited from owning shops with windows and doors facing the main street. When the edict of expulsion of the Jews from Spain was issued in 1492, there was a small community in Gerona. Most of its members went into exile. The remains of the synagogue were sold for ten florins to a canon of the cathedral and the remaining property owned by Jews to the municipal notary and other citizens.

At the height of its prosperity the Gerona community was a center of learning and produced celebrated scholars, many of whom are known by the cognomen “Gerondi,” i.e., originating from Gerona: their Italian descendants called themselves “Ghirondi.” The primary importance of Gerona in Jewish history is that it became the first center of kabbalistic studies in the Iberian Peninsula. Due to its proximity to Provence, Gerona came under the influence of the Provençal mystics, headed by Isaac the Blind. The center in Gerona came into being at the beginning of the 13th century. The kabbalists of Gerona were instrumental in spreading the Kabbalah among the general public. Ezra ben Solomon, Azriel ben Menahem, Meshullam ben Solomon da Piera, Jacob ben Sheshet, and Abraham ha-Ḥazzan were the leading members of the Gerona circle of mystics. Kabbalists of a different school from Gerona were the cousins Nahmanides and Jonah Gerondi. Both of them, but particularly Jonah Gerondi, were involved in the polemics on Maimonides that split the Jews of Provence and Spain in 1232. In the 13th-14th centuries, Gerona was one of the centers of the movement opposing the teachings of Maimonides. Nahmanides wrote an account of the disputation of “Barcelona for the bishop of Gerona. Nahmanides also had connections with their Ḥavurah Kedoshah (Sacred Association), which had a decisive influence on the development of Kabbalah. Other noteworthy personalities included Zeraḥiah ha-Levi “Gerondi, who left Gerona while a youth; Jonah Gerondi the Younger (active 1270s); the physician Abraham de Castler; “Nissim b. Reuben Gerondi (mid-14th century); David Benjorn, a native of Perpignan (lived in Gerona at the end of the 14th century); Abraham b. Isaac ha-Levi, a distinguished communal leader (14th century); and in the 15th century, Bonastruc Desmaestre and Bonjudah Yehasel ha-Kaslar, both of whom took part in the Tortosa disputation.

The Jewish quarter or call of Gerona is one of the best preserved in the Iberian Peninsula. Despite the changes that the quarter has undergone since the Middle Ages, it still has part of the original streets, buildings, and remains of its Jew-
ish past. The Jewish quarter and its synagogues make one of the best studies in the entire region. Prior to the 13th century the Jews lived in houses that belonged to the cathedral. These houses were in what is now known as the Plaza de los Ápostoles. In the 13th century the call consisted of Força Street, extending from one end of the street up to the building of the Pia Almoina, and from the old city wall, between the street Força and Ballesteries, reaching the streets Lluis Batle and Oliva I Prat. Made of stones, in several buildings within the medieval call one can still see the slots for the mezuzah. The earliest synagogue which existed until the beginning of the 13th century was in the Plaza de los Ápostoles, at the corner of the Cathedral and the Bishop’s Palace. Another synagogue, which was in Força Street, was closed down in 1415 by the order of Benedict X11, because it was claimed that it had been previously a church. (This was probably true.) In 1416 King Alfonso V ordered the return of the synagogue to the Jews. Under Juan II the synagogue was in ruins and remained so until the Expulsion. The third synagogue continued to function until 1492. While there is no absolute certainty, it is possible that this synagogue was at No 10 Força Street, which is today included in the Bonastruc Ça Porta or Nahmanides Center. Most of the tombstones found in the Jewish cemetery are displayed today in this center, where there is also a museum. The entrance to the center is in Sant Llorenç street. The Jewish cemetery was on the hill called, as in Barcelona, Montjuich.

[Haïm Beinart]

GERONDI (Gerundi), ISAAC BEN JUDAH (13th century), Spanish Hebrew poet. It has been suggested that Gerondi may perhaps be identified with Isaac ha-Nasi of Barcelona (a nephew of Sheshet ha-Nasi) whose poetry is lauded by *Al-Harizi (Tahkemoni, ed. by A. Kaminka (1899), 350–1). Gerondi’s surname, Ibn Fasad (בנהוול), has so far not been satisfactorily explained. The Latin transcription of this name, Avenpesat, is that of many Jews of Aragon, Navarre, and Marseille. (Baer, Urkunden, 1(1929), 1095 s.v. Avenpesat). The designation ha-Nadiv, found in some of his acrostics, may refer to his father only. About 20 of Gerondi’s poems are extant; among these are the individual parts of his kerovah, “Va-Arez Etnappal Lifnei Dar Gevohai” for “Rosh Ha-Shanah.” The composition, in which poems by other authors are interpolated, is to be found in the rite of Algers, Tunis, Constantine, and Tlemcen; and while the text in all four is the same, the incidental poems vary.

GERONDI, JACOB BEN SHESHE (mid-13th century), kabbalist in Gerona, Catalonia. His works include Mesiv Devarim Nekhoimi (ed. G. Vajda, 1969), directed against Samuel ibn Ribbi’s Malamar Yikkavu ha-Mayim; Sha’ir ha-Hashamayim (published in Ozar Nehmad (1860), 153–65, and previously in Likkutim me-Rav Hai Ga’on (Warsaw, 1798), 15–25) – a treatise also known as Moshe Kibbel from its opening words; and Ha-Emanuah ve-ha-Bittahon (first published in Arzei Levano (Venice, 1601) and in Kitvei ha-Ramban (ed. Chavel, 1964). In early manuscripts Ha-Emanuah ve-ha-Bittahon was attributed to Nahmanides. Jacob Reifmann suggested that it was written by Bahya b. Asher, and other scholars accepted his conjecture. After this had been disproved by A. Tauber, G. Scholzm was the first to assign the composition to Jacob b. Sheshet on the basis of comparing Ha-Emanuah ve-ha-Bittahon with Mesiv Devarim Nekhoimi. Recently it has become apparent that in several places in Mesiv Devarim Nekhoimi, Jacob b. Sheshet makes reference to some items, stating “as I have written”; in these cases the subject under discussion is not found in Mesiv Devarim Nekhoimi but in Ha-Emanuah ve-ha-Bittahon. The work has been published in several editions; that by C.B. Chavel retains the errors of previous printings.

Although Jacob b. Sheshet and his works are not widely mentioned in the kabbalistic literature of the late 13th and early 14th century, they had a marked influence on this literature. Large sections of Ha-Emanuah ve-ha-Bittahon were included in the works of Bahya b. Asher, and Menahem b. Benjamin Recanati also used the work in several places. Mesiv Devarim Nekhoimi, too, had great influence. Entire homilies were copied by important kabbalists such as Bahya b. Asher, Recanati, the anonymous author of Ma’arekhet ha-Kohut, and Todros *Abulafia. Traces of Sha’ir ha-Shamayim have been discovered in the works of Bahya b. Asher, and *Isaac b. Samuel of Acre copied an important section of it. Jacob b. Sheshet was an outstanding opponent of what he believed to be the hereti-
cal tendencies of philosophy, which, he believed, deny: (1) the true essence of the Torah, considering it merely as a sociopolitical theory designed only to regulate the physical needs of the man and society; (2) the creation of the world; (3) divine providence; (4) retribution. Such heresy results in the denial of the value of prayer and of the possibility of man’s asking his needs of God.

In Meshiv Devarim Nekhohim he formulates the kabbalistic meaning of these basic conceptions. A great part of the work is devoted to the question of the creation of the world. Like other kabbalists he is far from holding the traditional conception of creation out of nothing; however, his commentary to Genesis differs from that of his contemporary kabbalists whose works he knew well. Jacob b. Sheshet posits a continuous emanation from the divine realm, i.e., the world of the Sefirot, to the physical world. To construct this continuity two main elements, heavenly matter and earthly matter, are found in the world of the Sefirot; they evolved until the heavenly and the earthly hylic substances were formed. Thus, according to Jacob b. Sheshet, Genesis is not an expression of a paradigm, i.e., a description of the creation of the physical world which repeats the formation of the world of the Sefirot. It is rather a continuous description, beginning with the creation within the world of the Sefirot and ending with the physical stage of the primal divine element.

Efraim Gottlieb

GERONDI, MOSES BEN SOLOMON D’ESCOLA (second half of 13th century), paytan of Gerona, Catalonia. Gerondi was related to “Naḥmanides, who in 1267 sent a letter from Jerusalem requesting that his greetings be conveyed to Gerondi – his “son and pupil” – whose poem he had read with great emotion on the Mount of Olives. He may have had in mind the “selihah, “Yerushalayim Ir ha-Kodesh,” printed at the conclusion of Naḥmanides’ commentary to the Pentateuch. Gerondi is known to be the author of some other liturgical poems.

Joseph Elijah Heller

GERONDI, SAMUEL BEN MESHULLAM (c. 1300), scholar of Gerona, Catalonia. Hardly any biographical details are known of him. Gerondi’s fame rests primarily on his Ohel Moed (1 (Jerusalem, 1886); 2 (Jerusalem, 1904)), a comprehensive code consisting only of such laws as are of practical application. The book is divided into 4 parts: (1) Ma’arekhet Tamid, on the reading of the Shema, prayer, blessings, tefillin, mezuzah, zizit; appended is a separate section (“gate”) devoted to morals and ethics; (2) Avodat ha-Mishkan, the laws of ritual slaughter, terefot, ritual law, including laws of marriage; (3) Mishmeret ha-Kodesh, on the Sabbath and the *eruv; (4) Yare’ah le-Mo’adim, on the festivals. Each part is subdivided into chapters, sections, and subsections called “gates,” “roads,” and “paths,” respectively. In this work, written after 1320, the author quotes extensively from the early Spanish, Provençal, and German scholars. Like the Toledot Adam ve-Havvah of his contemporary, Jeroham b. Meshullam, Gerondi’s work was to a large extent superseded by the Arba‘ah Turim of *Jacob b. Asher, which fulfilled essentially the same task in a far more comprehensive manner and which was superior both in form and style. Joseph *Caro is almost the sole authority to quote Gerondi. His work, as it has come down, is an abridged version by the author himself of a larger work which is no longer extant.

Israel Moses Ta-Shma

GERONDI, SOLOMON BEN ISAAC (13th century), Spanish liturgical poet. Gerondi was a student of “Naḥmanides (see Tashbeẓ, No. 456). According to L. Zunz he composed five poems which include his variation of a favorite theme among medieval poets, the “Thirteen Attributes of God”; “Shav min ha-Pesilim,” a hymn on the patriarch Abraham; and an elegy for the Ninth of *Av (Shekhurat ve-Lo mi-Yayin). The latter became very popular among Sephardi and Ashkenazi Jews.

GERONDI, ZERAHIAH BEN ISAAC HA-LEVI (12th century), rabbinical scholar and poet. His father, ISAAC HA-YIZHARI BEN ZERAHIAH HA-LEVI GERONDI, was a Hebrew poet and talmudic scholar in Spain. His poetry was included in the rites of the communities of Avignon, Carpentras, Montpellier, Oran, and Tlemcen. Zerahiah, born in Gerona, Spain, left his native city in his youth, possibly to escape from his many enemies there, and settled in Provence. In Narbonne he studied under “Moses b. Joseph, as well as under *Abraham b. Isaac and Joseph *Ibn Plat. He lived for many years in Lunel, which he was compelled to leave on several occasions because of disputes. In Lunel he was the teacher of Samuel, the son of Judah ibn *Tibbon. Judah characterized Zerahiah as unique in his generation, called him his superior in knowledge, and extolled the stylistic excellence of his letters and poems (I. Abrahams (ed.), Hebrew Ethical Wills, 1 (1926), 72). Zerahiah was proficient in Arabic as well as in philosophy and astronomy, having acquired knowledge of the latter in Provence. At the age of 19 he composed a piyyut in Aramaic and began to write his chief halakhic work, Ha-Ma‘or (“The Luminary”), which he completed in the 1180s in Lunel. It is divided into two parts – Ha-Ma‘or ha-Katan (“The Lesser Luminary” – a play on Lunel, “the moon”) on Berakhot, many tractates of the order Mo’ed, and Hullin; and Ha-Ma‘or ha-Gadol (“The Great
Luminary” – a play on his name Zerahiah), on Nashim and Nezikin. (These have several times been published separately, often together with Isaac Alfasii’s commentary, and from 1552 appeared in the Venice edition of the Talmud.) This work, which is deeply critical of Alfasi, constitutes part of the literature of criticism and is representative of the approach adopted by Abraham b. David of Posquières in his criticism of Maimonides. *Ta-Shema asserts that Ha-Maor is not a work of criticism. He demonstrates that the work is really a talmudic commentary. A careful reading of Ha-Maor reveals that the center of discussion is the talmudic text and not Alfasi’s commentary. Over fifty percent of Zerahiah’s work does not mention Alfasi altogether. Indeed, Zerahiah discusses halakhic issues ignored by Alfasi because they have no practical application. Many of Zerahiah’s disagreements with Alfasi do not concern the practical halakah. Rather, they are about the correct understanding of the talmudic text. Nevertheless, Zerahiah did develop numerous rules for correctly reading and interpreting Alfasi, especially when it is unclear as to how Alfasi decides the law. In many instances Zerahiah preferred the version of the talmudic text as emended by Rashi, and he relied to a considerable extent on the methodology adopted by the northern French commentators, thus combining in his work the principles of the halakhic and exegetical schools of Spain and France which merged in Provence. The Maor on Rosh Ha-Shanah 20b contains a comprehensive exposition on the calendar and the principles of intercalation, Zerahiah having found it necessary to reaffirm the views of the Talmud against those who deviated from it. The language and style of the Ha-Maor are unique in their exactitude, brevity, and clarity. It is evident from the fine detail – such as the accuracy in citing other sources – that the work was edited carefully and presented as a completed work. Zerahiah was particularly adept at weaving together quotations from various rabbinic sources to make his point. Many generations of halakhists were influenced by the Maor, which, however, was strongly criticized by several scholars (especially Nahmanides) who composed works in defense of Alfasi.

One area of particular note that exemplifies Zerahiah’s influence on subsequent halakhic decisions is the determination of the halakhic dateline. His discussion of the laws of the New Moon and the necessity for some place in the world other than Jerusalem to experience a full 24 hours of rosh hodesh (the day of the new moon) led Zerahiah to determine that the halakhic international dateline was 90° east of Jerusalem. He was the first to make such a determination, all the while demonstrating the Talmud’s understanding that the earth was round.

Zerahiah also wrote Sefer ha-Zava, a sequel to his earlier work, in which he endeavored to show that Alfasi had disregarded the accepted principles of talmudic interpretation (see Rabad, Temim De’im, 28a–28b, no. 225). In the acrimonious dispute between Abraham b. David and himself, Zerahiah came off second best in a halakhic exchange of letters (D. Crachman, Divrei ha-Rivot, 1908). Zerahiah wrote a criticism of Abraham’s Baalei ha-Nefesh (published together with that work, Venice, 1741; Berlin, 1762) and attacked him in Sela ha-Mahaloket, to which Abraham retaliated by severely criticizing Ha-Maor (Katuv Sham, ed. by I.D. Bergman 1957), introd., 26, 39, 42. Zerahiah was also the author of Hilkhot Shehitah u-Vedikah, Sefer Piṭhei Niddah, a commentary on the tractate Kinnim, and of responsa. Hilkhot Shehitah u-Vedikah was finally published by Lopiansky and Bordon (1984). The Sephardi mahzor contains 18 of his piyyutim, one of which contains a reference to the Crusader rule in Jerusalem.

[Haim Hillel Ben-Sasson / David Derovan (2nd ed.)]

His brother Berechiah ben Isaac ha-Levi, also called “Yizhari” (12th century), was a Spanish liturgical poet and Talmud scholar. According to Gross, the epithet “Yizhari” refers to the name of a Spanish town (perhaps Oliva or Olivares) where his ancestors had lived. He also was born in Gerona (Spain) but lived in Lunel, Provence. In one section of his Sefer ha-Maor, Zerahiah ha-Levi answers a halakhic question posed by his brother, and he also refers to Berechiah in a poem at the end of his Hassagot al Sefer Baal ha-Nefesh le-ha-Rabad. Berechiah was the author of a number of piyyutim, some extant only in manuscript.

GEROVICH, ELIEZER MORDECAI BEN ISAAC (1844–1913), Russian hazzan and composer. Gerovich, who was born in the Ukraine, was gifted with a rich tenor voice. At the age of 18 he went to study music at Berdichev where he became assistant hazzan at the so-called Choral Synagogue (i.e., a synagogue with a choir). After studying cantorial music under Nisan *Blumenthal in Odessa, he attended the St. Petersburg Conservatory. In 1887 he was appointed chief hazzan at the Choral Synagogue at Rostov-on-Don, a post he held for 25 years. Gerovich became famous for his own compositions of synagogue music, based on traditional Jewish melodies but written in an original style. Most of them were collected in his two-volume Shire Tefilla and Schire Simra (1897).

Joshua Leib Néman]
GERSHENZON, MIKHAIL OSIPOVICH (1869–1925), Russian literary historian, philosopher, and essayist. Born in Kishinev, Gershenzon studied in Berlin and Moscow. An anti-Marxist liberal, he nevertheless became the best-known exponent of the thesis that the Bolshevik Revolution would ultimately benefit Russian culture by freeing it from the shackles of tradition. This idea was expressed in his Perеписка из двух углов (“Correspondence From Two Corners,” 1921), an exchange of letters with the Symbolist poet Vyacheslav Ivanov. Gershenzon’s other works include monographs dealing with several 19th-century Russian revolutionaries and men of letters, as well as such major studies as Mechta i Mysl I.S. Turgeneva (“The Dream and Thoughts of Turgenev,” 1919), and Mudrost Pushkina (“The Wisdom of Pushkin,” 1919). One of the foremost Russian intellectuals of his age, he was the organizer and first chairman of the All-Russian Writers Union. Accused of slavophilism, he replied that he was forever bound to Judaism.

Gershenzon was one of the earliest enthusiasts of the revival of Hebrew literature and fought for its recognition as a potentially major contribution to modern writing. He expressed his credo in his foreword to “The Hebrew Anthology” (Russian), and in The Key to Faith (Rus.; Eng. translation, 1925). According to Gershenzon, “a free Jew does not cease being a Jew. On the contrary, only a free Jew is fully capable of absorbing Jewish spirit and merging it with his totally liberated humanity.”

He published an article on “Bialik (1914) and essays on Judaism. He saw in universalism a Jewish spiritual phenomenon and attacked the Zionist movement.

BIBLIOGRAPHY: Y.Z. Berman, M.O. Gershenzon (Rus., 1928), includes bibliography.

[Joseph Wright (2nd ed.)]

GERSHOM (Heb. גֵּרֶשֶׁם, גרשום, הָרְשָׁם), elder son of Moses and Zipporah (Ex. 2:22; 18:3). Gershom was born in Midian. The meaning of the name is unknown, but is explained as “a stranger there,” symbolizing Moses’ flight from Egypt. According to 1 Chronicles 23:16 and 26:24, Gershom’s son was Shebuel. Since, however, he is described as “the chief officer in charge of the treasuries” in the time of David, Shebuel was very likely a more distant descendant of Gershom. Another descendant was Jonathan who acted as a priest at the idol of Michah (Judg. 18:30; MT has “Moses” deferentially written with a suspended nun). The Gershomites had no functions in connection with the Tent of Meeting and no Levitical cities were apportioned to them. They apparently were priests to the tribe of Dan.

[Israel M. Sarna]

GERSHOM BEN JUDAH ME’OR HA-GOLAH (c. 960–1028), one of the first great German talmudic scholars and a spiritual molder of German Jewry. Few biographical details are known of Gershom, most of the stories about him being of a legendary nature. He was apparently born in Metz, but his home was in Mainz (Isaac of Vienna, Or Zaru’a (1862), 2, 275), where he conducted a yeshivah, and where he wrote in 1013 the ketubbah for his second wife Bona, who was a widow. A tombstone in Mainz of which the extant words are “… in memoriam: R. Gershom ben R…. “ is thought to be his. Gershom mentions only one of his teachers, Judah b. Meir ha-Kohen Leontin “from whom I received most of my knowledge” (Responsa Meir of Rothenburg (Prague, 1895), 264). His own best-known pupils are Eliezer the Great (“Eliezer b. Isaac of Worms”), Jacob b. Jakar, and *Isaac b. Judah, the last two of whom were the teachers of *Rashi. His brother Machir compiled a lexicon known as Alfa Beta Rabbi Makhir, now lost. An unconfirmed tradition maintains that Gershom had a son Eliezer, who headed a yeshivah. The *rishonim, however, mention a son who was forcibly converted to Christianity and died before he could repent, yet his father fulfilled the laws of mourning for him (Or Zaru’a, ibid., 428).

The probable time for this is 1012, when Heinrich 1st issued an edict of expulsion against the Jews of Mainz. Gershom succeeded in turning Mainz into a major center for Torah study. This status lasted for a number of generations after his demise.
The reverence in which Rabbenu Gershom was held in subsequent generations was already expressed by Rashi: "Rabbenu Gershom, may the memory of the righteous and holy be for a blessing, who enlightened the eyes of the exile, and upon whom we all depend and of whom all Ashkenazi Jewry are the disciples of his disciple" (J. Mueller (ed.), Teshuvot Hakkhei Zarefat ve-Lutir (1881), no. 21). This is apparently also the source of the title "Meor ha-Golah" ("Light of the Exile").

Gershom's name is connected with many takkanot, most famous of which is his herem ("ban") against bigamy. Well known, too, is the herem forbidding the unauthorized reading of private letters. This latter takkanah in particular, and several others ascribed to him, may not really be his. Rashi cites only one takkanah in his name, the prohibition against reminding forcibly converted Jews, who have repented and returned to the fold, of their transgressions. Jacob *Tam mentions his takkanah against emending talmudic texts. The two important takkanot enforcing monogamy and prohibiting the divorce of a wife against her will are attributed to him by "Meir of Rothenburg (loc. cit., nos. 866 and 1121), but Eliezer Nathan, who lived in Mainz a century after Gershom, refers to them as communal takkanot (Sefer Raban (Prague, 1610), 121b). Fifteenth-century scholars attribute to him the ancient takkanah known as the 'herem ha-yishuv (Israel of Krem's' gloss to Asher b. Jehiel, BB 2:32). It is possible that they were attributed to the great luminary to give these takkanot the weight of his great authority. On the other hand, there is no valid reason that takkanot ascribed to Gershom should not really be his. The reason for this debate is the fact that no original texts of these takkanot have survived. That, coupled with the fact that the scholars of his own generation do not quote Gershom's takkanot, raises the question of his authorship. However, later generations recognized the takkanot as his, including one individual who wrote to Solomon ben Aderet claiming that his community has an oral tradition regarding the takkanot.

Gershom's far-reaching ban on polygamy can be ascribed to the socio-economic situation in Germany of that time. The Jewish community experienced a good deal of economic stability and the rise of a wealthy merchant class. At the same time, the status of women improved. This is evident in the large dowries that were received and in the fact that many women ran their husband's businesses in his absence. An added factor was the increased sensitivity to social injustice. Thus, the time was ripe for a ban on polygamy in the Jewish community.

Rabbenu Gershom's responsa and halakhic decisions are scattered throughout the works of the French and German scholars, and have been collected by S. Eidelberg (1955). Most items deal with civil law. In them he bases himself upon the Bible and Talmud alone, and only seldom refers to the early geonim. In one place he writes that he prefers the opinion of his teacher Leontin, who likewise based himself on Scripture and Talmud (Meir of Rothenburg, loc. cit., no. 264), to that of the famous geonim Yehudai and Sherira, but the sources of Leontin's teaching are obscure. From his works it appears that Gershom was acquainted with the general German law of his time and was even influenced by it. His legal decisions were regarded as authoritative, particularly by French and German scholars throughout the centuries, and influenced the major direction of the halakhah in these countries.

The commentaries attributed to R. Gershom which were published in the Vilna Romm edition of the Talmud to treatates Bava Batra, Ta'anit, and the whole of Seder Kodoshim (except Zevahim), are now considered not to be his. He probably laid the foundations for them, but the present work is that of his pupils and their pupils. *Nathan b. Jehiel, in the Arukh, refers to it sometimes as "the commentary of the sages of Mainz," and sometimes as that of Rabbenu Gershom, but mostly quotes it anonymously (over 550 times). It was superseded by Rashi's commentary and remained almost unknown until the time of Bezalel *Ashkenazi, who was also the first to ascribe them to Rabbenu Gershom.

Gershom transcribed the Mishnah and the Masorah Gedolah of the Bible and corrected them. These copies were highly regarded by the rishonim, on account of their accuracy. He was the first Franco-German scholar to compose selihot and other piyutim (collected by A.M. Habermann, 1944). His selihot were accepted in all German communities; most popular is the piyut Zekhor Berit, included in the selihot of Rosh Ha-Shanah. They reflect the troubles and tribulations of his generation and are noteworthy for their simplicity and naturalness of expression and the emotion with which they are imbued.

[Shlomo Eidelberg / David Derovan (2nd ed.)]

GERSHOM BEN SOLOMON (13th century), Provençal scholar of Béziers. No biographical details are known about him. He compiled a halakhic work, Shalman, giving the halakhic rulings of the Talmud according to the order of the halakhot of Isaac Alfasi, and approximating the order of Maimonides in his Mishneh Torah. In some sources Gershom's work is erroneously called Shulhan and is not to be confused with the Sefer Shulhan in the Paris National Library (Zotenberg, no. 415; see Benjacob, 583 no. 687, and Lubetzky, biblical.). Gershom's book was completed by his son Samuel ben Gershom who also participated in the composition of the earlier portion. Lu-
GERSHON, ISAAC (d. after 1620), scholar and proofreader.

His full name was Isaac b. Mordecai Gershon Treves but he is usually referred to simply as Isaac Gershon. Gershon was born in Safed and studied under Moses *Alshekh. He went to Venice not later than 1576, and on his journey there published his She-lom Esther (Constantinople, c. 1575–76), an anthology of the commentaries of the French and Spanish scholars to the Book of Esther. For more than 30 years he worked as proofreader of books published in Venice, mainly by the Safed scholars. Among the works he saw through the press were Beit Elohim (1575–76) by Israel *Najara; the Pentateuch commentary by Moses Alshekh (1601–07); the Sefer Haredim (1601) by Eleazar *Azikri; and responsa by Moses Galante (1608). Isaac Gershon was a member of the Venice bet din and his signature appears on its resolutions and edicts together with those of the Venice rabbis Ben Zion Sarfaty and Judah Leib *Saraval. He published Mashkit Milhamot (Venice, 1606), containing the rulings of those rabbis who were lenient in connection with the *Rovigo mikveh. He wrote commentaries to other books of the Bible; his commentary on Malachi was published in Lik-kutei Shoshannim (ibid., 1602). Together with the other rabbis of Venice, he defended the emissary, Jedidiah b. Moses b. Mordecai Galante, who was accused of embezzling money he had collected for Erez Israel. Some of Isaac's responsa are extant, published in the works of his contemporaries or in manuscript. Toward the end of his life, apparently in the 1620s, he returned to Safed, and died there.

[David Tamar]

GERSHON, KAREN (Kathe Lowenthal; 1923–1993), German-born poet who came to England before World War II without her parents, who died in the camps. Gershon’s Selected Poems (1966), written under the pseudonym “Karen Gershon,” gave powerful expression to the refugee’s thoughts and emotions from childhood. She also edited We Came as Children (1966), a collective autobiography of young refugees, some of whom, like herself, eventually married English non-Jews; and Postscript (1969), an account of Jewish life in West Germany after 1945. She settled in Israel in 1969 but returned to England in 1975 and died in London.

ADD. BIBLIOGRAPHY: ODNB online as “Kathleen Tripp” (her married name).

[William D. Rubinstein (2nd ed.)]

GERSHON, PINCHAS (Pini; 1951– ), Israeli basketball coach who led the Maccabi Tel Aviv basketball team to three European championships. Gershon’s career as a player ended early, and he then began to coach. In 1993, he guided Galil Elyon to a national championship, the only time in 40 years a team other than Maccabi Tel Aviv had won it. In 1996 he coached Hapoel Jerusalem and took the National Cup. In 1998 he took over Maccabi Tel Aviv, which had had little success in Europe in the preceding years, and led it to the European Final Four. In 2001 Maccabi won the championship, defeating Greek powerhouse Panathinaikos. After taking a break from coaching, and with Tel Aviv slated to host the Final Four, he returned for the 2003/4 season to take Maccabi to a second European championship. In 2004/5 Maccabi took the championship again, becoming the first team since 1991 with back-to-back titles. Gershon was also named Euroleague Coach of the Year, and as a warm-up for the 2005/6 season took the team to the United States, where it split two games against NBA opponents, beating the Toronto Raptors at the buzzer.

Flamboyant and outspoken, Gershon changed the face of European basketball with his offense-minded play and baffling match-up zone. Under his tutelage, Maccabi continued to be the country’s leading sports attraction, playing before sellout crowds in Tel Aviv and attracting the cream of local and foreign players.

[Shaked Gilboa (2nd ed.)]

GERSHON BEN SOLOMON OF ARLES (late 13th century), Provençal scholar. There is almost no exact information about his life. The period in which he lived is estimated from the sources he used for his book Sha’ar ha-Shamayim (The Gate of Heaven, tr. by E.S. Bodenheimer, 1953), the only work by him which is extant, and probably the only one he wrote. It has been estimated that this work was written between 1242 and 1300.

It is now agreed that Gershon lived in Arles in southern France (Provence). The traditional notion that he lived in Catalonia is shown to be incorrect by his own words: “For in the area of Catalonia the sheep and goats are smaller than those in our area” (Sha’ar ha-Shamayim (Roedelheim, 1801), 30b, 26–27). Spain is also not his place of residence: “One in our provinces and one in the provinces of Spain” (ibid., 20a, 4). It also appears that Gershon regarded France as outside his homeland (ibid., 16a, 11).

Sha’ar ha-Shamayim is a brief popular summary of the natural sciences, astronomy, and theology of Gershon’s day. It is divided into three parts: natural sciences, theology, and astronomy. The first part contains ten treatises, on the following subjects: the four elements (including a discussion of meteorology); inanimate objects; plants; animals; fowls; bees; ants, and spiders; fish; man; parts of the body; sleeping and waking (including a discussion on dreams). The chapters on man include also psychological data, the law of heredity, and even clinical prognoses.

The first part is the longest and most detailed. In the extant editions of the work it takes up five-sixths of the entire book, but in some manuscripts there are obvious additions, which are not found in the printed version.

Gershon lists a great number of Greek, Latin, Arabic, and Jewish authors, and cites from their works. Among the authors cited by him are Homer, Plato, Pythagoras, Aristotle, Galen, Hippocrates, Al-Farabi, Avicenna, and Averroes. It appears that he received this knowledge from Hebrew translations of earlier scientific and philosophic literature rather than from original sources. He states in his introduction that he had “some of the books of the philosophers which had been translated from their languages to his own.” He further states, with regard to the second and third parts of the book, that he based it primarily on those writings of “Maimonides and the Arabic scholar Al-Farghani (ninth century), which suited his purposes. It is not known which direct sources were used for the first part of the book.

In addition to citing from written sources, Gershon also set down what he had heard through reports from Jews or Christians. He was not an independent thinker; even where he makes statements in the first person, these are often taken literally from other sources.

Because there were not enough adequate words in Hebrew, and perhaps also in order to make for easier understanding, Gershon expressed many scientific concepts and objects by their foreign names, which he probably found in his sources. These names, usually Latin or Arabic, are an integral part of the text, unlike the foreign usages in other medieval writings, such as the commentaries of Rashi, whose purpose in using foreign words is merely to clarify the meaning of difficult Hebrew terms.

Sha’ar ha-Shamayim served for hundreds of years as a popular book of sciences for readers of Hebrew. It was widely circulated and is extant in many manuscripts. The extant editions are all imperfect and incomplete in comparison with a few of the manuscripts. The first edition (Venice, 1547) apparently served as a basis for all subsequent editions (Roedelheim,
GERSHUNI, MOSHE

[Lothar Kopf]

GERSHOSVITZ, SAMUEL (1907–1960), U.S. social worker and Jewish Welfare Board (JWB) executive. Gershovitz was born in New Rochelle, New York, but raised in the Midwest. Gershovitz’s association with JWB began in 1939 with his position as field secretary for the Midwest. In 1942 Gershovitz received his first position with national JWB. He became executive director in 1947 and executive vice president in 1952. He traveled widely, organizing USOs, community centers, and similar projects in Europe, Central America, and the Pacific. In Anchorage, Alaska, he set up the first Jewish community council.

GERSHOY, LEO (1897–1975), U.S. historian. Born in Russia, Gershoy was brought to the United States in 1903. He taught at Long Island University (1920–38) and Sarah Lawrence College (1938–46). After serving in World War II, he was professor of history at New York University from 1946. Gershoy’s field was French history, specializing in the Ancien Régime and the French Revolution. Among his publications were The French Revolution and Napoleon (1933; new annotated biography, 1964); From Despotism to Revolution, 1763–1789 (1944, 1962); The Era of the French Revolution, 1789–1799: Ten Years That Shook the World (1957); and Progress and Power (with C. Becker, 1965). In 1975 the American Historical Association established the Leo Gershoy Award, which is presented annually to the author of the most outstanding work published in English on any aspect of 17th- and 18th-century western European history.

[Ruth Beloff (2nd ed.)]

GERSHUNI, GRIGORI ANDREYEVICH (1870–1908), Russian revolutionary; founder and leader of the terrorist arm of the Socialist-Revolutionary (S.-R.) Party. Gershuni was born in Tavrova, an estate in the Kovno province where his father was a tenant. After a short period in heder he was educated in a Russian high school in Shavli (Šiauliai), but at the age of 15, before graduating, he was sent by his parents to another town to be a pharmacist’s apprentice. He eventually settled in Minsk (1898) where he opened a bacteriological laboratory. There he took part in semi-legal educational activities among working-class people and was gradually drawn into clandestine circles, partly under the influence of Yekaterina Breshkovskaya, the “grandmother of the Russian Revolution.” The turning point in his revolutionary career was a fortnight of arrest and interrogation in 1900, when the czarist police officer Zubatov tried to enlist him into the loyalist workers’ movement organized by himself as a counterforce to terrorism and revolutionary ideology. The effect on Gershuni was exactly the opposite. He became an ardent supporter of anti-czarist terrorism, and when several revolutionary groups merged into the s.-r. Party, it was Gershuni who organized and headed its terrorist arm, the famous Fighting Organization (Boyevaya Organizatsiya), which, under his personal guidance, assassinated some of the highest and most hated officials and dignitaries, among them the minister Sipiain and governor Bogdanovitch. Yevno *Azeff, who was later unmasked as an agent provocateur of the police, became his closest collaborator in leading the Fighting Organization and took it over in 1903, when Gershuni was denounced by another police agent and arrested. A military tribunal sentenced Gershuni to death, but the sentence was later commuted to life imprisonment. He was imprisoned in the old Schluesselburg fortress in 1906, but after having been transported to an eastern Siberian prison, he was smuggled out in a cabbage barrel and in a daring flight, by way of China (where he met Sun Yat-sen) and Japan, he reached the United States. There he addressed socialist mass meetings of Jewish and other workers in many cities and collected funds for the Russian S.-R. Party. Several weeks later he appeared in Finland where he publicly attended the second S.-R. Party congress in 1907. In 1908 Gershuni died in a Zurich hospital after an illness. In his last days he learned about the Azeff affair. His friends arranged for his burial in the Montparnasse cemetery in Paris alongside other famous Russian revolutionaries. His funeral grew into an impressive demonstration of international sympathy for the Russian revolutionary movement.

Gershuni became a legendary figure in his lifetime. Although completely assimilated in Russian language and culture, he was always conscious of being a Jew. In his revolutionary speech before the military tribunal in 1903 he stressed the plight of the Jewish masses in Russia. In his behavior in prison and in his dealings with the czarist authorities he was always proud and courageous, so as not to play into the hands of antisemitic propaganda which tried to present the Jewish revolutionaries as cowardly manipulators behind the scenes. To his friend Chaim *Zhitlowsky he said that after the revolution, when liberty would be achieved in Russia, he would join those who devote themselves completely to Jewish interests. Gershuni’s reminiscences Iz nedavnovo proshlavo (“From the Recent Past”) were published in Paris by the s.-r. central committee (1908).

[Binyamin Eliav]

GERSHUNI, MOSES (1936– ), Israeli painter. Gershuni was born in Tel Aviv. His father was a farmer and as a young man Gershuni thought he would be one too. When he was 19 his father was killed in a car accident and young Gershuni had to work in the family orchards. Only when he was 24 did

1801; Zolkiew, 1805; Warsaw, 1876; Jerusalem, 1944), in which corrections were made only on the basis of conjecture.

he begin to study art in evening classes at the Avni Institute (1960–64). He studied sculpture and thought of himself as a sculptor. In the 1960s he was one of the young avant-garde artists who exhibited with the support of the Ten Plus group in Tel Aviv and came to the attention of Yona Fisher at the Israel Museum in Jerusalem.

From 1970 to 1978 Gershuni taught at the Bezalel Academy of Art and Design in Jerusalem. As a teacher, in keeping with the spirit of the times, he guided his students toward a Modern-Conceptual art style. Gershuni himself exhibited works in the same style, such as a piece of paper with a piece of margarine on it or torn paper on which he wrote, “The paper looks white but inside it is black.” In those years he was a part of a small group of artists, among them Micha *Ullman and Avital Geva, who met with their mentor, Itzhak *Danziger, to talk about art. They worked as a group in peripheral areas and also created political art. As a result of a conceptual-ideological rebellion Gershuni was dismissed from Bezalel at the end of the 1970s. He changed his personal life style as well as his artistic style, which became emotional and expressive. He started to use his fingers as his tools, stained the canvas or the paper with mixed colors, and added scribbling and free handwriting. During these years he began to deal with the subject of homosexuality.

One of the main themes that Gershuni ventured to deal with was the Holocaust. In his complicated way he mixed Yiddish, the swastika, the star of David, and verses from prayer. It was the first time in Israeli art that the swastika was represented, and it courageously reflected Gershuni’s desire to get into the very heart of the subject. In the Venice Biennial he used the image of blood, creating a puddle of blood on the floor and writing German words referring to the Holocaust on the walls. In these works he also used cutlery and towels to symbolize the Jewish religious heritage and basic existence, purity and impurity.

With the same daring Gershuni dealt with the wars of the State of Israel. In a series of paintings he scribbled the name Itzhak and wrote repetitive sentences about soldiers and killing together with quotations from Israeli patriotic songs. Gershuni was also one of the first artists to get involved in Judaism, delving deeply into his Jewish identity.

In 2003 Gershuni was awarded the Israel Prize. Gershuni decided to come to the ceremony but for political reasons refused to shake hands with Prime Minister Ariel Sharon and Education Minister Limor Livnat. After much tumult in the media and appeals in the Supreme Court the decision was to deny him the prize.

**GERSHWIN, GEORGE** (1898–1937), U.S. composer. Born in New York, he wrote his first songs while working as a pianist with a music publishing firm. His first revue, *Half Past Eight* (1918), was followed by the successful *La La Lucille* (1919) and in the same year his song “Swanee,” sung by Al Jolson in the revue *Sinbad*, caused a sensation. He was commissioned by Paul Whiteman to compose a jazz symphony. The resultant work, *Rhapsody in Blue* for piano and orchestra, was first performed in New York in 1924, with the composer at the piano. It made jazz “respectable” for the American concert stage and made Gershwin famous. He composed the *Concerto for Piano in F Major* (1925), *Three Preludes for Piano* (1926), *An American in Paris* (1928), *Second Rhapsody* (1931), and *Cuban Overture* (1932). Gershwin had little formal training, and after the success of the *Rhapsody in Blue*, in which he had received the help of an orchestrator, he studied with Rubin *Goldmark and Joseph *Schillinger.*

He continued composing music for films and Broadway shows, his most successful revues being *Lady Be Good* (1924), *Oh Kay* (1926), *Strike Up the Band* (1927), *Girl Crazy* (1930), and *Of Thee I Sing* (1931), a political satire. Most of the lyrics for his revues and songs were written by his brother Ira (1896–1983). His last and greatest work was the folk opera *Porgy and Bess* (1935), based on Du-Bose Heyward’s play, *Catfish Row,* about the life of Southern blacks. Gershwin’s musical style was rooted in the jazz idiom of his time, and stimulated by the traditions of Southern blacks. Influences of cantorial style may be discerned in certain wide-ranging phrases, notably the clarinet solo which opens *Rhapsody in Blue.*

On February 28, 1973, the U.S. government issued an 8-cent commemorative stamp in honor of George Gershwin as representative of musicians, on the occasion of the 75th anniversary of his birth. It was the first stamp in the American Arts series of commemoratives, and the U.S. Postal Service issued a first day cover featuring him at the piano.

**GERSONI, HENRY** (Heb., *Gershoni, Zevi Hirsh;* 1844–1897), journalist and author. Born in Vilna, he studied in the Vilna Rabbinical Seminary. Moving to St. Petersburg, he married a Christian girl and converted to Christianity. In 1868 he publicly confessed his conversion in *Ha-Maggid,* a leading Hebrew periodical, but announced his repentance and reaffirmed his loyalty to Judaism. After many wanderings, he settled in New York in 1869. In 1874 he became a rabbi in Macon, Georgia. He also served as rabbi in Atlanta and in Chicago, where he published his short-lived weekly *The Jewish Advance* and, later, *The Maccabean.* He returned to New York in 1893 where he lived by his pen until his death.

Devoted to the new Hebrew literature, Gersoni published articles in the leading Hebrew periodicals. He was also a pioneer of the Yiddish press in America, editor of the *Post* in New York (1870), and a contributor to Jewish periodicals

**GERSHONI, HENRY** (Heb., *Gershoni, Zevi Hirsh;* 1844–1897), journalist and author. Born in Vilna, he studied in the Vilna Rabbinical Seminary. Moving to St. Petersburg, he married a Christian girl and converted to Christianity. In 1868 he publicly confessed his conversion in *Ha-Maggid,* a leading Hebrew periodical, but announced his repentance and reaffirmed his loyalty to Judaism. After many wanderings, he settled in New York in 1869. In 1874 he became a rabbi in Macon, Georgia. He also served as rabbi in Atlanta and in Chicago, where he published his short-lived weekly *The Jewish Advance* and, later, *The Maccabean.* He returned to New York in 1893 where he lived by his pen until his death.

Devoted to the new Hebrew literature, Gersoni published articles in the leading Hebrew periodicals. He was also a pioneer of the Yiddish press in America, editor of the *Post* in New York (1870), and a contributor to Jewish periodicals
in the English language. He translated Turgenev into English and Longfellow’s *Excelsior* into Hebrew.

Gersoni wrote on the burning problems of the day: Orthodoxy and Reform, immigration to America and to Palestine, ethical culture, organizational life of Jewry. His subjective and acute observations of the American scene are still of historic importance, e.g., in his *Sketches of Jewish Life and History* (1873).

**BIBLIOGRAPHY:** J. Kabakoff, *Halutzei ha-Sifrut ha-Ivrit ha-Amerikah* (1966), 79–130. [Eisig Silberschlag]

**GERSON-KIWI, EDITH** (Esther; 1908–1992), Israeli musicologist. Born in Berlin, she studied with the harpsichordist Wanda *Landowska. Settling in Erez Israel in 1935, she devoted herself to teaching and to ethnomusicological research. Her work was sponsored at different periods by the Hebrew University, by the Ministry of Education and Culture, and by various foundations. It included the collection of musical recordings which, by 1970, comprised 7,000 items. From 1967 she also lectured at Tel Aviv University. Her writings deal with the musical traditions of Jewish communities and the mutual influences to be found in Jewish, Christian, and Muslim music. Her publications include *The Persian Doctrine of Dastgā Compositions* (1963) and “Vocal Folk Polyphonies of the Western Orient in Jewish Tradition” (in *Yirat ha-brit*) (1968), 169–93.

**BIBLIOGRAPHY:** B. Bayer, in: *Bat Kol*, 3 (1961), 33–35.

**GERSTEIN, KURT** (1905–1945), German anti-Nazi, SS officer and head of the Waffen SS-Institute of Hygiene in Berlin. The son of a bourgeois family, a German nationalist, and a Christian, Gerstein joined the Nazi Party in 1933, while remaining in the Protestant youth movement. He was expelled from the Nazi Party for activities on behalf of the dissident *Bekenntniskirche* (“Professing Church”) and was twice incarcerated in concentration camps (1936 and 1938). Anxious to know more about the Nazis’ horrifying activities, he volunteered for the Waffen-SS in March 1941 and became an employee at its Hygiene Service. There are, however, other versions of the reason for his entry into the SS. A professional engineer, Gerstein reached officer’s rank and due to his technical abilities was named chief of the disinfection department. He lost a sister-in-law in the so-called euthanasia program. In 1942, as an expert in the use of Zyklon B – a poison gas used in fumigations – Gerstein was sent by the *RSHA* to *Belzec* and *Treblinka*, where his task was to substitute Zyklon B for diesel exhaust fumes as a means of mass murder. At Belzec he witnessed the killing of several thousand Jews from Lvov. Upon his return to Berlin, Gerstein tried to stop the murders, informing Swedish and Swiss legations, the Holy See, and underground Church groups, the German Confessing Church, of his experiences, but despite the accuracy of his reports, he encountered disbelief and indifference. Charged with the task of continuing to supply the murderous gas to the camps, Gerstein succeeded in destroying two consignments. At the end of the war, he submitted to an Anglo-American intelligence team a detailed report in French on Nazi atrocities which was used at the Nuremberg trials. Another, in German, was published after his death in *Vierteljahreshefte fuer Zeitgeschichte* (vol. 1, 1953), entitled “Augenzeugenbericht zu den Massenvergasungen.” Arrested by the French as a suspected war criminal, Gerstein was found hanged in his cell on July 25, 1945, victim either of suicide or murder. His testimony remains essential to our understanding of Belzec, where so little first-hand information was available.

[Ruth Beloff (2nd ed.)]

**GERSTLE, LEWIS** (1824–1902), U.S. merchant. Gerstle, born in Ichenhausen, Bavaria, immigrated to America about 1845, settling in Louisville, Ky., and then in California. After prospecting for gold briefly, he joined Louis Sloss and Company of Sacramento, general merchandise dealers. During this time, Gerstle and Sloss married the sisters Hannah and Sarah Greenebaum. Moving to San Francisco in about 1860, Gerstle and Sloss entered the stock brokerage business, bought and sold hides, operated a tannery, and acquired shipping interests. In 1868, after the American purchase of Alaska, they and others organized the highly successful Alaska Commercial Company for trade in the new territory. They received a fur seal concession, established trading posts, and supplied miners during the Klondike gold strike of 1897. Gerstle was a director of Congregation Emanu-El and the Pacific Hebrew Orphan Asylum and Home Society, a member of the Vigilance Committee, and treasurer of the University of California. He promoted manufacturing establishments and directed two banks.

[Robert E. Levinson]

GERTLER, MARK (1891–1939), English artist. Gertler was born in London, the son of a furrier, but spent part of his early childhood in Poland and America. Gertler was one of the most talented and romantic first generation painters to emerge from the wave of Jewish immigration to England at the turn of the century, and is today one of the most famous of Anglo-Jewish artists. Until he went to school at the age of eight, his only language was Yiddish. Later he began attending evening classes in art and worked for a firm of glass painters.

In 1908, on the advice of Sir William Rothenstein, the Jewish Educational Aid Society sent him to the Slade School of Art. Here he found himself among the brilliant group of Jewish students which included David Bomberg, Jacob Kramer, Bernard Meninsky, and Isaac Rosenberg. In 1911, before he was 20, he painted one of his finest pictures, The Artist’s Mother, one of the collection of his works in the Tate Gallery, London. When he left the Slade in 1912, he began to receive important portrait commissions. Handsome, volatile, and a brilliant raconteur, he was taken up by the Bloomsbury Group of intellectuals, and seemed destined for greatness. Gertler’s early works were influenced by his life in the Whitechapel ghetto. In addition to the studies of his parents and neighbors, often in fancy dress, these include Rabbi and Grandchild (1913) and Rabbi and Rebbetzin (1914). Gertler was later influenced by post-impressionism. From 1919 onward he regularly visited the south of France. Gertler was close to many of the famous figures in the Bloomsbury Group, and was briefly the lover of one of its members, the painter Dora Carrington. He was also a friend of many other noted cultural figures of his time, including D.H. Lawrence and Aldous Huxley. His health began to deteriorate and eventually, depressed by his condition, he committed suicide in 1939. Since his death he has become the subject of much interest by biographers and critics.

[Charles Samuel Spencer]

GERTNER, LEVI (1906–1976) and MEIR (1905–1976), educators who profoundly influenced modern Hebrew and Jewish education in Britain. Born in Hungarian Transylvania of hasidic parents, they began their education in yeshivot.

From 1929 to 1936 Levi Gertner studied history and philosophy at Berlin University before immigrating to Erez Israel, where he studied at the Hebrew University and taught at the Youth Aliyah village of Geva. He arrived in Britain just before World War II in 1939 and in 1941 began work for the Zionist Federation. In 1950 he became director of the newly established Jewish Agency Education Department and in 1953 was made head of the Zionist Day School movement in Britain. Under his guidance 16 day schools were established.

He organized and participated in 83 full-length and more than 100 weekend seminars of the Hebrew Seminar Movement. These were conducted in a traditional Jewish atmosphere, but attracted both the religious and the non-observant of all ages, including lecturers, teachers and students, family groups and individuals.

Meir Gertner, a philosophical thinker and intellectual, followed a more academic pattern, although he was for a time deputy director of the Education Department of the Jewish National Fund in Jerusalem. After studying at Hamburg and the Hebrew University, he obtained his doctorate at Oxford. He became director of Hebrew studies at Carmel College and succeeded Isidore Wartski as Ahad Ha-am Lecturer (later Reader) in Modern Hebrew at the School of Oriental and African Studies in London. In 1972 he became J.H. Hertz Fellow at the Oxford Centre for Post-Graduate Hebrew Studies.

He played an active part in Anglo-Jewish communal life as co-chairman of the Jewish Book Council, a founder member of Jewish Book Week, chairman of the Cultural Committee of the World Jewish Congress, and a Council member of the Hillel Foundation.

[Sonia L. Lipman]

GERTSA (Rom. Herta), town in N. Bukovina, Chernovtski district, Ukraine, which passed from Romania to the Soviet Union in 1940. The locality was founded in 1672. Jews of Galician origin, who were craftsmen and merchants, settled in Gertsia in the first quarter of the 18th century. A known local Jewish institution was a telum dorah of which a minute-book dating from 1764 has been preserved. The oldest tombstone in the cemetery dates from 1766. The community had four synagogues, of which the oldest was built at the end of the 18th century; a mikhvah was founded in 1820, and a mixed school was established in the early 20th century. The community numbered 1,200 in 1803, 1,554 (56.4% of the total population) in c. 1859, 1,939 in 1899 (66.1%), 1,876 in 1910, and 1,801 in 1930 (25%). Many of them were hasidim, followers of the admor of Buczacz, as well as a local admor. Maskilim also lived in the town, among them the bilingual Hebrew–Romanian writer Moise Roman-Ronetti. The bilingual Romanian–French poet Benjamin Fondane (Fundoianu) was born in Gerta, describing it in a poem. During the peasants’ revolt in 1907 the Jews in Gertsia prevented attacks and pillaging by organizing self-defense. After the conferment of Romanian nationality in 1919, Jews were elected to the municipal council, and at one time a Jew served as vice mayor. In 1927 the Romanian governing party appointed a communal board from its
own adherents, but the Jews boycotted it and two years later ensured its resignation. In 1938 there were seven synagogues, an elementary Israeliite-Romanian school, and a Zionist organization. During World War II the Jews in Gertsa (1,600 persons) were deported to *Transnistria. Under the Soviet regime all the Jewish public buildings were secularized and nationalized. In the beginning of the Soviet regime (1940–41) dozens of Jews were deported to Siberia, only some of whom could return to Gertsa in 1960. The majority of Jews immigrated to Israel in the 1970s. Only a few Jews remain in Gertsa in the beginning of the 21st century.

*Lucian-Zeev Herscovici (2nd ed.)*

**GERTZ, ELMER** (1906–2000), U.S. lawyer. Gertz, who was born in Chicago and received his law degree from the University of Chicago, practiced law in his native city from 1930. He became known for his vigorous opposition to capital punishment, his defense of freedom of expression, and his fight for civil rights and liberties. In 1958, taking over the case begun in 1924 by legendary litigator Clarence Darrow, he obtained parole for Nathan Leopold, who had been convicted of murder and served 34 years in prison. In 1962 he secured commutation of the death sentence of William Crump for murder, on the grounds that Crump had been rehabilitated in prison while surviving nine stays of execution. Gertz helped to save the life of William Witherspoon, another convicted murderer, when the U.S. Supreme Court (1968) upheld his contention that prospective jurors should not have been challenged for their conscientious scruples against imposing the death penalty. He was also instrumental in the setting aside of the death penalty imposed on Jack *Ruby (1966). Gertz's court pleas brought about the removal of the ban, on account of obscenity, on the sale of Frank Harris' *Tropic of Cancer* (1964), and the works of the Marquis de Sade. He also secured the abolition by the U.S. Supreme Court of the Chicago motion picture censorship ordinance (1968). In the 1940s, as special counsel for the National Association for the Advancement of Colored People, Gertz was successful in a test case to make housing restrictions in Illinois illegal. He helped secure passage of the Illinois Fair Employment Practices Law and defended its validity before the Illinois Supreme Court in the late 1950s.

Active in many Jewish communal affairs, Gertz was president of the Greater Chicago Council of the American Jewish Congress (1959–63). He served as an officer of the Society of Midland Authors and the Illinois Freedom to Read Committee. From 1970 until his death, he taught civil rights courses at the John Marshall Law School.

While serving as chairman of the Illinois Bill of Rights Committee of the Illinois Constitutional Convention (1969–70), Gertz helped draft what has been called the strongest bill of rights of any state constitution in the country. Gertz also chaired the civil rights committees of the Illinois State Bar Association and the Chicago Bar Association (1978–80) and was president of the First Amendment Lawyers Association (1978–79). In 1983, he won a 14-year legal battle against the John Birch Society by suing its magazine publisher, Robert W. Welch, for libel in regard to an article written about him. This landmark case increased the instances in which a plaintiff could be deemed a private citizen and thus entitled to more protection against the press.

Among his many honors, Gertz was a national trustee of the City of Hope, for which he received the Golden Key Award in 1966. He received the State of Israel Prime Minister's Medal in 1972 (which he considered his greatest accomplishment), and Educator of the Year in 1975. In 2000, he was honored posthumously with the Illinois State Bar Association Medal of Merit. The association's highest honor for a practicing attorney, it is awarded only in extraordinary circumstances for exemplary accomplishments.

*[Morton Mayer Berman / Ruth Beloff (2nd ed.]*

**GERUSIA** (Gr. γεροσοια), council of elders, common throughout the Hellenistic world (e.g., Sparta, Cyrene). Since the “elders” or “city elders” (*Ziknei ha-It*) are mentioned repeatedly in the Bible (cf. Deut. 19:12; 21:2ff.; Josh. 20:4; Judg. 8:14; 1 Sam. 9:3; 1 Kings 21:8; 11; Ruth 4:2ff.), Josephus concludes that the earliest Jewish *Gerusia* dates back to biblical times, functioning as a high court together with the high priest and prophets (Ant. 4:218). During the Hellenistic period the *Gerusia* appears not merely as a legislative and judicial body, but as representative of the Jewish population of Judea. Thus in the famous edict of Antiochus IV the Great, following his conquest of Palestine, the Seleucid monarch describes the splendid reception given him by the Jews — in the person of the *Gerusia* (and not, as might have been expected, the high priest). As a result, the members of the *Gerusia* were exempted from a number of taxes, together with officials of the Temple (Ant. 12:138ff.). Similarly, Antiochus IV Epiphanes, in an epistle to the Jews, addresses his remarks to the *Gerusia* and not the high priest (1 Macc. 11:27). That the Jews of this period considered the *Gerusia* their official representative body is further apparent from the correspondence of “those in Jerusalem and Judea, the *Gerusia*, and Judah” to their brethren in Egypt.
during the early years of the Hasmonean rebellion (1 Macc. 1:10). When Jonathan became leader of the Jewish nation, the office of high priest was apparently formally recognized as representative of the people, and thus in a correspondence with the Spartans “Jonathan the high priest and the Gerusia” are listed together (1 Macc. 12: 6; Jos., Ant. 13, 166).

It would be a mistake, however, to identify the Gerusia, which appears to be a permanent representative body of elders dating back to the Persian period (cf. Judith 4:8, 11: 14, 15:8), with the “Great Assembly” (keneset ha-gedolah), a body representing the total Jewish population of Palestine, and convened only when important constitutional decisions were taken. The “elders” are thus mentioned as a part of the Great Assembly that appointed Simeon high priest and leader of the Jewish nation (1 Macc. 14:28). It is feasible, however, that the Gerusia eventually evolved into what became known as the “Sanhedrin” of Jerusalem, although the precise date of the introduction of this term is unknown (cf. H. Mantel, Studies in the History of the Sanhedrin (1961), 49–50, 61–62, for a summation of the numerous views on this problem). According to Philo (Flaccus, 10:74) there also existed a Jewish Gerusia in Alexandria, which during the rule of Augustus replaced the previous form of local Jewish leadership, the ethnarchate.

BIBLIOGRAPHY: S.B. Hoenig, Great Sanhedrin (1953); Y.M. Grinets, Sefer Yehudit (1957), 105. [Isaiah Gafni]

GERY, a small group of ethnic Russians who adhere to Judaism. As a separate religious group the Gery emerged in the early 19th century from the sect of the Subbotniks (Sabbatarians) and in the late 19th–early 20th centuries adopted Orthodox Judaism. The Gery strive to observe all the commandments of the Jewish religion and to merge totally with Jews of Jewish ethnic origin, including by marriage. Many Gery sent their children to yeshivot. They lived scattered through many districts of Russia (Astrakhan, Saratov, Tambov, Voronezh) on the Don, in the Kuban, in the northern Caucasus and Transcaucasus, and in Siberia where they were sent as exiles. They were persecuted by the czarist government and the Russian Orthodox Church which considered “Judaizing” sects especially dangerous. Cases are known of Jews serving the Gery as rabbis, ritual slaughterers, and teachers. Important roles in their religious education were played by an anonymous Jewish distiller from Tambov district who lived among the Gery from 1805 and in the 1880s by a Lithuanian Jew, David Teitelbaum. Many Gery families settled in the land of Israel in the 19th century, particularly in Galilee (Yesud ha-Ma’alah, Bet-Gan, etc.) and within two to three generations were completely assimilated into the surrounding Jewish populations. After the Russian proclamation of the freedom of religion in 1905, the Gery, now known as “sabbatarians of the Jewish faith,” gained the right to legal recognition of their communities and the right to build synagogues (e.g., at Stantsiya Zima in the Irkutsk district, Tiflis). Although the number of Gery has significantly declined, they still continue to exist (in the Voronezh district, on the Don, in the northern Caucasus, and elsewhere).

In Israel the Gery are recognized as Jews both from the point of view of Halakah and by the laws of the state. Many Gery in the Soviet Union are actively fighting for emigration to Israel and a number of Gery families left for Israel between 1971 and 1980. Twenty families from the village of Il’inka, Talov county, Voronezh district, who moved to Israel in 1973–76 evidently have a Gery background.

[Shorter Jewish Encyclopaedia in Russian]

GESANG, NATHAN-NACHMAN (1886–1944), one of the leaders and president of the Zionist Organization and of the Keren Hayesod of Argentina. Born in Cracow, Gesang went to Berlin to study and became active in the Zionist movement. When he moved to Britain (in 1909) he became secretary of the British Zionist Organization. In 1910 he settled in Argentina and after a short while became the first hired secretary of the local “Zionist Party.” He was one of the leaders of Argentine Jewry and served as president of the Zionist Federation (General Zionists) in 1922–23, 1930–31, and 1941–1944. Gesang was active in the propagation of Zionism from the very beginning of its work, with his speeches and organizational work in Buenos Aires as well as in the province communities, in cities, and in agricultural settlements. He represented the Argentine Zionist Federation at some Zionist Congresses. In 1937 he supported a kind of cooperation with Jabotinsky and the Revisionists who had seceded from the World Zionist Organization and were organized in Ha-Zohar. In the 1930s Gesang promoted the establishment of a representation of the Jewish Agency in Argentina. He participated in the promotion of Hebrew language and culture and published articles in Hebrew, Yiddish, and Spanish on Zionist affairs and Jewish studies. Among his published books are Der Hoveve Tzionism un der Politsisher Tzionism (“Hovevei Zion Movement and Political Zionism,” Yid. and Sp., 1937) and a new edition of the Kuzari by Judah Halevi, with a detailed introduction (1943).

GESELLSCHAFT DER FREUNDE (Ger. “Society of Friends”), German mutual aid society. The society was founded in 1792 by Berlin bachelors, among them Isaac *Euchel, Aaron Wolfsohn, and Joseph Mendelssohn. It officially aimed at mutual aid in cases of illness, poverty, business problems, and death. However, during the first decades of its existence the Gesellschaft also served as the main organization of the late Berlin *Haskalah and was successfully involved in the ongoing fight against the ritual of early burial.

During the first decades of the 19th century, the character of the Gesellschaft der Freunde changed. Instead of being an organization of just one social group, it became the cultural center of all of Berlin Jewry. The association bought a big house in the city center, near the synagogue in Heidereuter-
strasse, where other organizations, schools, and private parties used the dining rooms, ballrooms, and large garden for their dinners, examinations, or wedding celebrations as well. The spectrum ranged from the Reform community to the neo-Orthodox Adass Jisroel, from the social Geselliger Verein der Handwerker to the religious Talmud-Verein. The personal connection with the leadership of the Berlin Jewish community was especially close during this period.

After 1880, the Gesellschaft der Freunde withdrew from public attention. It had to sell its house and became an organization where leading Jewish bankers, entrepreneurs, merchants, and managers met. The "Mendelsohns, "Liebermanns, "Ullsteins, "Mosses, "Rotenhaus, and "Bleichroeders all were members. During the 1920s, dozens of non-Jewish economic leaders joined the association, most of whom resigned, however, after 1933. In 1935, the Gesellschaft der Freunde was closed down by National Socialist officials; most of its members succeeded in emigrating to the U.K., the U.S., Switzerland, and other countries.

GESELLSCHAFT DER JUNGEN HEBRAEER (Ger. "Society of Young Hebrews"), society founded in Prague at the beginning of the 19th century by two young enlightened Jews, Judah and Ignaz *Jetteles. Unlike the Gesellschaft der Freunde in Berlin, on which it was modeled, the society's aim was not only to provide mutual aid for its members, but also to propagate the ideas of the Haskalah among the working youth and uneducated members of Jewish society in Prague. Thus their Yidish Dayshe Monatschrift, of which six numbers appeared in 1802, was published neither in Hebrew nor in German but in Vayshe-Dayshe ("Women's German," i.e., the Yiddish language of Zee'nah u-Re'nah printed in the Hebrew alphabet). Both the society and its periodical were forerunners of the particular Bohemian brand of Haskalah that was influenced by rising Czech nationalism, Jewish consciousness, and loyalty to the house of Hapsburg.

GESELLSCHAFT ZUR FOERDERUNG DER WISSENSCHAFT DES JUDENTUMS (Ger. "Society for the Advancement of Jewish Scholarship"), Jewish scholarly society in Berlin, Germany, 1902–1938. The primary objective of the Gesellschaft was to raise the level of Jewish academic scholarship, thereby earning the respect of disenfranchised Jewish intellectuals and Christian Protestant scholars alike. As Jewish theology was not a recognized academic discipline at German universities, the founders attempted to create a financially viable forum for Jewish scholars to conduct research and to publish their works. The immediate incentive for the establishment of the Gesellschaft was the unequaled success enjoyed by Harnack’s Das Wesen des Christentums and the perceived inability of the Jewish scholarly community to counter his unfavorable portrayal of post-biblical Judaism.

While Hermann *Cohen was the driving force behind foundation of the Gesellschaft, the initiative came from Rabbi Leopold Lucas of Glogau. The society’s first chairman was historian Martin Philipppson. Membership was open to both individuals and organizations, with a membership exceeding 1,700 in the early 1920s.

In pursuit of the advancement of Jewish scholarship, the Gesellschaft held annual meetings featuring scholarly lectures and published and subsidized scholarly volumes. It adopted the prestigious *Monatsschrift fuer die Geschichte und Wissenschaft des Judentums, as its official organ, rescuing the publication from financial ruin by broadening its appeal to the general public. Equally important and innovative was the monetary support of individual Jewish scholars and the financing of research trips to various countries.

The most lofty endeavor of the Gesellschaft, which was never completed, was the "Grundriss der Gesamtwissenschaft des Judentums," projected to be a systematic and comprehensive collection of Jewish scholarship to encompass 36 volumes. The first volume to be published was Leo Baack’s classic Das Wesen des Judentums (1905). Among the other important publications were M. Guedemann, Juedische Apologie (1906); M. Philipppson, Neueste Geschichte des juedischen Volkes (1907–11); G. Caro, Die Sozial-und Wirtschaftsgeschichte der Juden (1908–20); K. Kohler, Grundriss einer systematischen Theologie des Judentums (1910); S. Krauss, Talmodische Archäologie, 3 vols. (1910, 1911, 1912); I. Elbogen, Der juedische Gottesdienst (1913); E. Mahler, Handbuch der juedischen Chronologie (1916); H. Cohen, Die Religion der Vornunft aus den Quellen des Judentums (1919); A. Lewkowitz, Das Judentum und die geistigen Stömmungen des 19. Jahrhunderts (1935); the incomplete Corpus Tannaiticum and Germania Judaica; and two volumes of a trilogy on Maimonides (1908, 1914).

The establishment of the society marked an important step towards the professionalization of *Wissenschaft des Judentums, and can be regarded as a limited success; for more than a generation it provided impetus and organization for all branches of Jewish scholarship, earning respect in both Jewish and non-Jewish academic circles. The society was forced to cease its activities following the *Kristallnacht riots.

GESENIUS, HEINRICH FRIEDRICH WILHELM (1786–1842), German Orientalist, lexicographer, and Bible scholar. Born at Nordhausen, he taught in several German towns (Helmstedt, Goettingen, Heiligenstadt), and was appointed professor of theology at the University of Halle in 1811. He wrote a number of studies on Semitic languages including Versuch ueber die maltesische Sprache…, Leipzig (1810); De Pentateuchi Samaritani origine, indeole et auctoritate…, Halle (1815); De Samaritanorum theologia ex fontibus ineditis commentatio, Halle (1822); Palaeographische Studien ueber phoenizische und punische Schrift (1835); Scripturae linguarum phoeniciorum monumenta quoquot supersunt edita et inedita (1837).

Gesenius’ main field of interest was the scientific investigation of biblical Hebrew based on comparison with other Semitic languages and his studies remained basic for subsequent research. His work was the first in a field of research that freed the study of Hebrew from theological considerations. His most important contributions to the knowledge of Hebrew language and grammar are (1) Hebraisch-deutsches Handwoerterbuch…, in two volumes (Leipzig, 1810–12); an improved edition "Hebraisches und chaldaisches Handwörterbuch ueber das Alte Testament" (Leipzig, 1815; after the tenth edition aramaeisches was substituted for chaldaisches). The book has appeared in German in 16 editions. The 16th edition (1915) was reprinted several times. The standard, though greatly outdated DBB (A Hebrew and English Lexicon of the Old Testament, ed. F. Brown, S.R. Driver, and Ch. A. Briggs, 1907); corrected impression 1963) is based on Gesenius’ work. (2) Thesaurus philologicus criticus linguae Hebraeae et Chaldaeae veteris testamenti (started to appear in 1829 but was completed only posthumously by his pupil E. Roediger, in 1858). In this dictionary, Gesenius drew on talmudic sources and quotes Jewish Bible commentators such as *Rashi, Abraham *Ibn Ezra, and David *Kimhi. (3) Hebraische Grammatik (Halle, 1813), a Hebrew grammar which appeared in German in 29 editions (editor G. Bergstraesser, 1929; 29th edition not completed) and was also translated into English (Gesenius* Hebrew Grammar, ed. A.E. Cowley, 1910). (4) Hebraisches Lesebuch ("A Hebrew Reader," Halle, 1814); (5) Geschichte der hebraischen Sprache und Schrift ("A History of the Hebrew language and script," Leipzig, 1815). (6) Ausfuhrliches grammatisch-kritisches Lehrgebabe der hebraischen Sprache mit Vergleichung der verwandten Dialekte (Leipzig, 1817). In it, he explained his scientific linguistic system based on comparative Semitic philology. Gesenius wrote one exegetical work, a commentary (together with a translation) on Isaiah, in three volumes (Leipzig 1820–21, 1829). Gesenius was a close friend of W. de *Wette, who greatly influenced his work on the authorship of biblical books and Israelite religion. His rationalism aroused the ire of orthodox supernaturalists. Some negative assessments of Judaism in his work were hardly unique to Gesenius’ in his own time.

GESENIUS, GASHMU, an “Arab,” one of the chief opponents of *Nehemiah, who, together with *Sanballat and Tobiah, opposed the rebuilding of the walls of Jerusalem (c. 450 B.C.E.). When Geshem and his allies heard of Nehemiah’s intention to rebuild the wall of Jerusalem, they mocked and scorned him (Neh. 2:10–20). Later, when the wall was completed and all but the gateways fully repaired, they sought by various means to dispose of Nehemiah personally or to compromise his position within the country. These efforts also failed, and Nehemiah’s opponents were forced to admit that the task was divinely supported (Neh. 6).

Geshem’s designation as an “Arab” is supported by the name’s widespread attestation in North Arabia. From the context of Nehemiah 6 it is clear that Geshem was an influential figure. He may be identical with a “king” of the same name mentioned in an Aramaic votive inscription on a silver bowl found in the temple of the Arab goddess Han’Illat at Tell al-Maskhuta, in the neighborhood of Ismailia in Egypt (now in the Brooklyn Museum), which, on paleographical and archeological grounds, was dated as belonging to the fifth century B.C.E. This inscription reads in translation: “What Qaynu son of Geshem, King of Kedar, brought (as offering) to (the goddess) Han’il’lat.” On this basis, it has been suggested that Geshem King of Kedar is identical with Nehemiah’s enemy. The name appears also in Safaitic inscriptions, and on a Nabatean inscription as “Gashmu, which like Nehemiah 6:6 preserves the old Semitic case ending.

[Yuval Kamrat / S. David Sperling (2nd ed.)

GESHER (Heb. *נחר), kibbutz in the Jordan Valley, Israel, near the confluence of the Jordan and Yarmuk Rivers, affiliated with Ha-Kibbutz ha-Me’uhad. Its land, belonging to the Palestine Jewish Colonization Association, was previously settled by another group which later established itself permanently at *Ashdot Ya’akov. Gesher was taken over in 1939.
by Youth Aliyah graduates from Germany joined by Israeli-born youth and settlers from various countries. In the War of Independence (1948) Gesher held out against a heavy bombardment when the Arabs attempted to cross the Jordan in order to reach Haifa. After the Six-Day War, it became a target of frequent artillery attacks from the other side of the Jordan. Gesher developed intensive farming and operated a gypsum plant. Subsequently, it initiated a joint venture with the Israeli Electric Corporation – a visitor’s center with an audio-visual representation of Israel’s early generation of electricity from the Yarmuk and Naharayim Rivers. In 2002 its population was 494. The name of the kibbutz, “Bridge,” refers to a Roman bridge nearby and to modern railway and road bridges spanning the Jordan and Jarash.

**WEBSITE:** www.gesher.org.il  

[Efraim Orni]

**GESHER BENOT YA’AKOV** (Heb. הגשר בית נקבה, “Bridge of the Daughters of Jacob”), a bridge on the Jordan situated at the southern end of the Huleh Valley where the riverbed enters the valley about 6 mi. (9 km.) E. of Rosh Pinnah, near kibbutz Gadot. In excavations conducted near the bridge by M. Stekelis (1935–36), remains of the Early Stone Age were uncovered including remains of elephants. Built of basalt arches, the original bridge was erected at the end of the 13th century on the site of a natural ford of the Jordan (cf. Isa. 8:23) which served as one of the most important links between Erez Israel and Damascus via Galilee and the Golan. A branch of the ancient route, the Roman *Via Maris*, passed through the ford. The name of the bridge is derived from an Arab tradition according to which the patriarch Jacob crossed the Jordan here and his daughters were buried nearby. The crusaders called the ford Vadum Jacob. Because of its strategic importance, it was the scene of several famous battles. In 1157 Baldwin III, crusader king of Jerusalem, was defeated there by the Muslim ruler of Damascus, Nur al-Din. A fortress (“chastellet”), remains of which still stand, erected by Baldwin IV in 1178 and assigned to the Knights Templar, was captured by Saladin within a year of its construction. In 1799 soldiers of Napoleon were stationed at the bridge to prevent reinforcements from Damascus from reaching Acre which his army was besieging. A battle between British and Turkish forces took place at the bridge in 1918. It was one of the bridges blown up by members of the *Haganah* on the night of June 17, 1946. In May 1948 the Syrians entered Israel near the bridge and captured *Mishmar ha-Yarden*, but later withdrew under the cease-fire agreements. After the Six-Day War (June 1967) the bridge served traffic to the Golan Heights.

[Yehoshoua Ben-Arieh]

**GESHER HA-ZIV** (Heb. גשר ה策, kibbutz in the northern Coastal Plain (Acre Valley) of Israel, N. of “Nahariyyah, affiliated with Hudd ha-Kibbutzim. It was founded in 1949 by members of the former kibbutz Bet ha-Aravah evacuated during the War of Independence (1948). The founding members, some from Central Europe and some Israeli-born, were later joined by pioneers from North America, South Africa, and other countries. The kibbutz engaged in highly intensive farming (avocado and banana plantations, citrus groves, field crops, and poultry) and had guest rooms and a gas station. The regional school of the area’s settlements was located in the kibbutz. In 1968 its population was 328, rising to 491 in 2002. Gesher ha-Ziv, meaning “Bridge of Splendor,” commemorates a unit of 14 Haganah men who fell in the area on June 17, 1946, when they blew up a bridge over the Keziv River, during the struggle against the British; the name also refers to the nearby ancient city *Achzib.*

[Efraim Orni]

**GESHURI, MEIR SHIMON** (1897–1977), writer on music. Born in Myslowitz, Silesia, Geshuri went to Erez Israel in 1920. He was active in the founding of the Ha-Po’el ha-Mizrah, but his main interest was research into Jewish music, particularly hasidic song. He was one of the founders of the Israel Institute for Sacred Music (1958). Geshuri was the author of numerous articles and published his main researches in *Ha-Niggun ve-ha-Rikkud ba-Hasidut* (3 vols., 1956–59). A bibliography of his writings was edited by B.M. Cohen in 1966.

"**GESSIUS FLORUS**, the last procurator of Judea before the Jewish War; governed from 64–66 C.E. He was appointed on the recommendation of Nero’s consort Poppaea Sabina (Tacitus, *Historiae*, 5:10). Florus showed himself to be an oppressive and rapacious ruler. On the occasion of a visit to Jerusalem of the Roman governor of Syria, *Cestius Gallus Gaius*, the Jews complained bitterly to him of the procurator’s conduct. On his departure the situation deteriorated. With the renewal of the quarrel at Caesarea between the Jews and the Syrians over the local synagogue, Florus promised the Jews his support if they would list his aid, and his plundering of 17 talents from the Temple treasury, aroused the anger of the people against him, and the Jews sarcastically collected money in the streets of Jerusalem for the “indigent procurator.” Florus demanded that those responsible should be handed over to him for punishment and finally ordered his soldiers to sack Jerusalem, paying no attention to the intercession of *Berenice, the sister of Agrippa II. For a while the leading citizens were able to calm the people, but when Florus led his troops on the city the Jews rose in arms and succeeded in halting the Roman advance. Fearing a second attempt, the Jews now broke down the porticoes connecting the Temple Mount with the fortress of Antonia, whereupon Florus returned to Caesarea. Agrippa tried to calm the people, but they refused to submit any more to the orders of the procurator. Both Florus and the Jews gave the governor of Syria their own version of what had taken place. The latter sent an emissary to Jerusalem to learn the truth of the matter and subsequently informed Nero..."
that the blame for the outbreak of war rested on Florus. There is no doubt that Florus’s conduct was one of the chief causes of the ensuing war which resulted in the destruction of the Second Temple.

[Lea Roth]

**GESTAPO** (abbr. Geheime Staats Polizei, “Secret State Police”), the secret police of Nazi Germany, their main tool of oppression and destruction, which persecuted Germans, opponents of the regime, as well as Jews at the outset of the Nazi regime and later played a central role in carrying out the “Final Solution”; originally the Prussian domestic intelligence, which became a quasi-Federal Bureau of Investigation, though initially with much less power. The right-wing revolution in Prussia in late 1932 brought about a sweeping purge of “left-wing and Jewish elements” in its political police and paved the way for the changes of the Nazi era. After Hitler’s ascent to power, he appointed Hermann Goering as the new Prussian minister of the interior and Goering completed the purge and gave the secret police executive powers, transforming it from a shadowing and information agency into a wide executive arm to persecute enemies of the Nazi regime. The head office of the secret state police – the Geheimes Staatspolizeiamt, or Gestapa – was given powers to shadow, arrest, interrogate, and intern; however, it had to struggle against the Nazi Party organizations, the SA (Storm Troops) and *SS, which also “fought” the regime’s opponents, but without the supervision of traditional state bodies.

Simultaneously, with relatively few changes in the Prussian political police, the Reichsfuehrer of the ss, Heinrich *Himmler, achieved control over the Bavarian political police and established direct ties between the ss, the political police, and concentration camps. Thus Himmler snatched the secret police administration out of the hands of the state conservatives and in collaboration with the Bavarian minister of justice, Hans *Frank, and with Hitler’s direct support, created an independent organization for shadowing, interrogation, arrest, imprisonment, and execution along the lines of the Nazi ideology (see ss and *SD, and *Hitler). The Bavarian political police under Reinhard *Heydrich’s direction was able to evade the laws that still applied in Germany in order to influence individuals, disband political parties, and liquidate trade unions. It led campaigns through the newspapers and radio against political opponents, interrogated individual “enemies,” and sent them to the central concentration camp *Dachau. The officials of the political police all remained civil servants but were simultaneously drafted into the ss and subordinated to Himmler, both through the civil service and Nazi Party. Many of the officials had never been members of the Nazi Party, as was the case of Heinrich *Mueller, an old Weimar secret police man who became Heydrich’s assistant and eventually headed the Gestapo.

From the outset Heydrich’s prisoners included many Jews, most of whom were intellectuals or active in left-wing parties. During 1933 the political police began shadowing and investigating Jewish organizations and Jewish community life and thus set up its own network for imprisonment and uniform repression of all the Jews of Bavaria, in the wake of the policy of isolating Jews that was part of the first stage and was followed by exerting pressure, openly and insidiously, on the Jews to emigrate.

**Unification of the Political Police**

From August 1933, Himmler managed to rise from his starting point in Bavaria to take over the political police of the various *Laender, including Prussia. From the head office of the Prussian Gestapo in Berlin, which also became the headquarters of the ss, Himmler and Heydrich directed all the political police services in Germany. The Gestapo then became the authority that investigated, along with the sd, every aspect of life in Germany, and especially watched over the regime’s “enemies of alien race.” The Jews headed the list. Until the end of 1939, the Gestapo’s Jewish Department was directed by Karl Haselbacher, a lawyer who was among those who drafted the first anti-Jewish laws. Until the outbreak of World War II, most of the murders in the camps were carried out on Gestapo orders under various covers-ups, such as “killed while attempting escape,” but eventually these pretenses were dispensed with, especially where Jews were concerned.

**From 1938**

As an institution in charge of shadowing, interrogating, arresting, and imprisoning “enemies of the Reich,” the Gestapo became a massive authority employing thousands of government officials and ss men who together persecuted the regime’s “enemies” or other opponents. Various groups in the population were turned over and left to the Gestapo’s sole discretion; they were subjected to “neutralization” in camps without prior trial or forced to emigrate or face physical liquidation. From 1938 onward, the Gestapo began increasingly to deal with Jews who had previously been subject to other Nazi authorities. It had a hand in the “Kristallnacht” and enforced Jewish emigration. In competitive cooperation with the sd, the Gestapo set up the Zentralstelle fuer juedische Auswanderung in annexed Austria, directed by Adolf *Eichmann and headed by Mueller. Other centers for forced emigration were set up in 1939 in the Protectorate of Bohemia-Moravia and in Germany proper to accelerate the emigration of Jews by eviction and persecution, impoverishment, and degradation. When the Gestapo and part of the sd were joined under the *RSHA of the ss in November 1939, Office IV (Gestapo) of the new main office acquired sole authority over all Jews who were not yet imprisoned in camps.

During World War II the Gestapo, along with the sd and Security Police, constituted part of the Einsatzgruppen (mobile killing units) in Poland and other occupied countries. These units dealt with the murder and internment of numerous Jews and especially with the expulsion of the inhabitants
of the small towns in Poland to mass concentration centers. Afterward Gestapo officials were appointed supervisors over the mass concentration of Jews. In Berlin headquarters the Gestapo in the first year of the war laid plans for various temporary “solutions for the Jewish problem,” such as the establishment of a “reservation” in Poland or the mass transfer of Jews to Madagascar. At the end of 1940, when the Jews in Eastern Europe were interned in ghettos, the Gestapo, along with the German occupational civil administration, was charged with guarding and supervising the ghettos, imposing forced labor, and causing starvation and disease in an effort to decimate the ghetto inhabitants. In the Western occupied countries the Gestapo saw to registering the Jews and isolating them from the rest of the population for purposes of their eventual removal from economic life and confiscation of property. Under Eichmann, Section 1v8.4 of the Gestapo was “federfuhrrend” (leading) in the “Final Solution.”

The Einsatzgruppen

After the invasion of Russia in 1941, the Einsatzgruppen, headed by Gestapo men and directly responsible to Heydrich and Mueller, renewed the massacres on an enormous scale. The Einsatzgruppen carried out executions of Jews in the Baltic states and in Belorus sia and wiped out part of the Ukrainian Jews. Later in 1941, the decision was made to kill all the Jews of Europe in gas chambers and the Gestapo was to supervise the dispatch of the Jews to the camps specially adapted or constructed for the program of mass murder (see *Holocaust, General Survey). The Gestapo section headed by Eichmann was in charge of the dispatch of Jews to the camps, and it also directly supervised at least one camp, *Theresienstadt, in Czechoslovakia. The section also supplied some of the gas used in the chambers, negotiated with countries under German domination to accelerate the murder, and dealt with Jewish leaders, especially in Hungary (see *Kasztner) in an effort to smooth the process of the impending destruction of various Jewish communities (see *Judenrat). The local Gestapo offices in Germany supervised the dispatch of Jews to death trains and the confiscation of their property. The Gestapo was largely responsible for the actual implementation of the dispatch orders and could choose its victims. It especially held the fate of people of mixed parentage (Mischlinge) in its hands. It excelled in its unabated and premeditated cruelty, in its ability to delude its intended victims as to the fate that awaited them, and in the use of barbaric threats and torture to lead the victims to their death, all as part of the “Final Solution.”

At the same time the Gestapo acted as the principal executive arm of the Nazi regime in all the campaigns of terror, liquidation, looting, starvation, confiscation of property, and theft of cultural treasures (see Desecration and Destruction of *Synagogues; *Poland) throughout Europe. The Gestapo also repressed the anti-Nazi partisan movement and stamped out resistance in the Western European countries. Thus the term Gestapo became an accepted synonym for horror. After the war, very few of the important members of the Gestapo were caught and brought to trial. The courts in the Federal German Republic from 1969 discussed the question of several principal contingents of the Gestapo.

GESSETNER, DAVID (1854–1939), British industrialist. Born in Csorna, Hungary, he was the inventor of the cyclostyle duplicating process and was credited with being the founder of modern stencil duplicating. At 17, chafing at the monotony of clerking on the Vienna Stock Exchange, he went to New York, where, after experimenting with papers for duplicating, he moved on to London to sell his invention and set up business. The firm he founded now has worldwide branches and factories, employing thousands of people. Entering communal life, he was a founder of the Green Lanes Synagogue, London (1897). SIGMUND (1897–1956), David’s son, was chairman and managing director of the Gestetner business when he was 23, and made a name as a progressive industrialist. Influenced by Chaim Weizmann, he was a devoted Zionist, and as chairman of the *Keren Hayesod in England at the time of the Nazi regime in Germany, he helped Jewish craftsmen to escape, and through the *Central British Fund for German Jewry and the Children’s Movement, he helped to resettle refugees. He served in the army in World War 1, and in World War II his factory did war work and he organized the Balfour Club for the Jewish Forces in London. He was treasurer of the Jewish National Fund in Britain in 1949 and became its president in 1950. He was treasurer of the Joint Palestine Appeal and honorary treasurer of the Weizmann Institute Foundation. He was also a successful farmer, and loaned his farm to the Zionist movement for training agricultural pioneers bound for Erez Israel.

GESUNDHEIT, JACOB BEN ISAAC (1815–1878), Polish rabbi and author. Gesundheit was born in Praga, a suburb of Warsaw. He studied there under Leib Zinz of Plotisk. On the death of Dov Berush b. Isaac Meisels, rabbi of Warsaw, Gesundheit was chosen to succeed him (1870). Possessed of considerable means, he had not previously held a rabbinic post despite the fact that he was a great talmudist, headed a yeshivah, and had already written a number of books. Ge-
sundheit fought strongly against "Hasidism, which was on the increase in Warsaw. The Hasidim fought back and together with the assimilationists under Ludwig Nathanson compelled him to resign from the rabbinate after four years. He died four years later. All his published books are entitled Tiferet Yaakov. He wrote novellae on the Shulhan Arukh (1842–1926), and on tractates Gittin (1858) and Hullin (2 pts., 1867–1910). His responsa and other talmudic novellae have remained in manuscript.

[Itzhak Alfassi]

GETZ, STAN (1927–1991), U.S. tenor saxophonist. Getz was one of those rare figures in jazz who manages to achieve huge commercial successes without compromising considerable artistic abilities. Like his first major influence, Lester Young, he had a light yet huge sound and a natural sense of swing. He was one of jazz’s great ballad players and a superb melodist. Of the latter skill he once said, "The saxophone is actually a translation of the human voice, in my conception. All you can do is play melody. No matter how complicated it gets, it’s still a melody." Born in Philadelphia but raised in the Bronx, Getz manifested his musical skills early, playing bass in junior high school and bassoon in high school, where he was selected for the all-city orchestra. He recalled, "I was a withdrawn, hyper-sensitive kid. I would practice the saxophone in the bathroom, and the tenements were so close together that someone from across the alleyways would yell, ‘Shut that kid up,’ and my mother would say, ‘Play louder Stanley, play louder.’"

He turned down a possible scholarship to Juilliard at age 15 to go on the road with the Jack Teagarden band. Shortly after, he moved to Los Angeles, where he quickly found work in the Stan Kenton Orchestra, but he quit when Kenton made disparaging remarks about Lester Young. He would not stay unemployed for long, working with Benny Goodman and Tommy Dorsey before he landed the job that first brought him stardom, as one of the "Four Brothers" sax section in the Woody Herman band known as the Second Herd. He quickly became one of the stars of this be-bop influenced band, with his solo on "Early Autumn" earning him major accolades. Regrettably, he also acquired a heroin habit that would plague him throughout the 1950s, leading him to a brief retirement and exile in Denmark in 1958–61. Getz came roaring back the following year with a series of Brazilian-influenced recordings that would bring his greatest commercial success, including a session with Joao and Astrud Gilberto that included "The Girl From Ipanema," one of the biggest-selling jazz singles of all time. He continued playing and recording steadily until his death from liver cancer at age 64. Elected to the Down Beat Hall of Fame in 1986 by the magazine’s readers, Getz was also held in high esteem by his peers; John Coltrane, the most influential tenor player of the post-World War II era, said of him, “We would all like to play like Stan Getz, if we could.”

[George Robinson (2nd ed.)]

GE’ULEI TEIMAN (Heb. ג’עיילי תיימן; "The Redeemed from Yemen"), moshav and housing quarter in the Hefer Plain, Israel, founded in 1947 by settlers from Yemen as an extension of the neighboring village of *Elyashiv. The farming community was affiliated with Ha-Poel ha-Mizrachi Moshavim Association (from 1967). Its population was 181 in 1968 and 311 in 2002.

[Efraim Orni]

GE’ULIM (Heb. ג’ולים; "Redeemed Ones"), moshav in central Israel, S.E. of *Netanyah, affiliated with Tenu‘at ha-Moshavim, founded in 1938 by settlers from Yemen. Its population in 1968 was 480, expanding to 545 in the mid-1990s, and 670 in 2002. Ge’ulim engaged in intensive farming, including citrus groves, fruit plantations, poultry, and flowers.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

GE’ULLAH (Heb. גֶּעְלָה; "Redemption"), title of several prayers. That section in the morning and evening prayer which is recited between the “Shema and the “Amidah is known as Ge’ulah. This ancient prayer is mentioned in the Mishnah (Ber. 1:4; 2:2; Tam. 5:1) and referred to as Ge’ulah in the Talmud (Pes. 117b). The original text was probably much shorter; according to Zunz it contained only 45 Hebrew words. The present wording varies considerably in different rites. The prayer starts with the words “emet ve-eminah” (“true and trustworthy”) in the evening prayer and with “emet ve-yaziv” (“true and firm”) in the morning prayer (Ber. 12a). It opens with a profession of faith, enumerates the miracles of the redemption of Israel from Egypt, and closes with a plea to the Redeemer of Israel to deliver them again. In some Sephardi rituals, however, there is a longer variant ending. The Talmud (Ber. 4b, 9b) insists that there be no interruption between Ge’ulah and the Amidah and so even the response “Amen” is omitted after the Ge’ulah benediction in the morning prayer. In the evening prayer *Hashkivenu is inserted between them, the interruption being permitted because the recitation of the evening prayer was not considered obligatory in the Talmud.

The name Ge’ulah applies also to the piyyutim which are inserted before the closing formula of this prayer on special Sabbaths and on the three pilgrimage festivals. The Mishnah uses the term Ge’ulah for the benediction recited at the end of Hallel during the Passover seder (Pes. 10:6).

The term Ge’ulah is also used to designate the seventh benediction of the Amidah which ends with the words “the Redeemer of Israel.”
GEVA (Heb. גבעה, "Hill"), kibbutz in the Valley of Jezreel, Israel, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim, and founded in 1921 by Third Aliyah pioneers from Russia who were later joined by new settlers from different countries. In 1968 the kibbutz had 510 inhabitants, engaged in highly intensive mixed farming. In 2002 the population was 542. Baccara Automation Control, a factory manufacturing solenoid valves, was founded in 1964. Shkediya Geva Industries produced almond products and a therapeutic horse stable was located in the kibbutz. Geva is also the home of the Gevaton Singers, founded in 1948 and among the country’s most popular performers of Israeli pioneer music.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

GEVARAM (Heb. גבער, "the People Overcomes"), kibbutz in the southern coastal plain of Israel, S. of Ashkelon, affiliated with Ha-Kibbutz ha-Me’uhad, founded in 1942. The settlers, mainly pioneers from Slovakia, Austria, Holland, and Germany, previously maintained a transitory camp at *Kefar Sava as hired agricultural workers. They initially suffered from lack of water, but by deep drilling a rich groundwater table was discovered sufficient for local needs and to supply other settlements. The siege of the Egyptian army during the War of Independence was lifted in Operation Ten Plagues (October 1948). Gevaram’s economy was based on intensive and largely irrigated farming, dairy cattle, and a metal factory. Its population was 240 in 1968 and 311 in 2002.

[Efraim Orni]

GEVAT (Heb. גבעת, "Hill"), kibbutz in northern Israel, in the *Jezreel Valley, at the foot of the *Nazareth Hills, affiliated with Ha-Kibbutz ha-Me’uhad. It was founded in 1926 by pioneers from Pinsk, Poland. The kibbutz participated in the draining of the Jezreel Valley swamps. With the split in Ha-Kibbutz ha-Me’uhad in 1951–52, some of its members established a separate kibbutz, Yifat, further east. In 1968 Gevat had 625 inhabitants and its economy was based on field crops and dairy cattle. The kibbutz also produced plastic and rubber products. In 2002 its population was 658. Gevat is a historical name, mentioned by Eusebius (Onom. 70:9ff.) in its Aramaic form Gabata.

[Efraim Orni]

GÉVAUDAN, region in France, corresponding to the present department of Lozère. Jews were first recorded in Gévaudan in 1229, in the town of Mende, and they were also found in Marvejols and Meyrueis. The supposition that the names of localities like Salmon, Gimel, etc. indicate an earlier presence of Jews can be dismissed as fantasy. However, it is probable that the place name Montjézieu derives from an earlier name mons judaeus. Guillelmus Durandus, bishop of Mende (1285–96), enforced in his diocese the canonical laws proh-}

diting Christians from entering the service of Jews and forbidding Jews to appear in public during Easter or to work on Sundays and Christian holidays; they were also compelled to wear the “badge. When they were expelled in 1306, Gévaudan’s Jews had an estimated capital of 15,000 livres. A few Jews were living in Marvejols in 1322.

BIBLIOGRAPHY: N. Pinzuti, in: Archives Juives, 2, no. 3 (1965/66, 2ff.)

[Bernhard Blumenkranz]

GEVIM (Heb. גיבים, "Water Holes"), kibbutz in the coastal plain of Israel, 8 mi. (13 km.) E. of Gaza, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim, founded in August 1947. Gevim was one of the first links in the settlement chain extending to the south and Negev that had to defend itself against the Egyptian forces in the Israeli *War of Independence (a few months after its establishment). The founding members were Israeli-born and Youth Aliyah graduates from Central Europe. Farming included field crops, avocado plantations, poultry, and dairy cattle. However, its economic mainstay became factories producing plastics and flutes. Its population was 372 in 2002. Gevim means “Water Holes,” an allusion to the first Negev water pipeline, which passes through the kibbutz.

[Efraim Orni]

GEVIRTZ, STANLEY (1929–1988), U.S. Bible scholar. Gevirtz received his B.A. at Brooklyn College and earned his Ph.D. at the University of Chicago in 1959. He remained at Chicago at its Oriental Institute until 1972. He then left Chicago for the Los Angeles campus of Hebrew Union College, where he taught until his death from cancer. As a young man Gevirtz had studied drama and world literature. As a result he earned a reputation as an outstanding classroom teacher and captivating public lecturer, whose public delivery bordered on the poetic. His monograph, Patterns in the Early Poetry of Israel (1963), illustrates Gevirtz’s literary sensibility and his far-ranging knowledge of ancient Semitic poetic style and syntax. Especially incisive are Gevirtz’s studies of ancient biblical poetry.

[S. David Sperling (2nd ed.)]

GEVULOT (Heb. ג zwłות, "Waterholes"), kibbutz in southern Israel, 20 mi. (32 km.) W. of Beersheba, affiliated with Kibbutz Arzi ha-Shomer ha-Za‘ir, founded in 1943 as the first of the three “observation outposts” established to explore settlement conditions in the Negev (the other two were *Bet Eshel and *Revivim). The sandy loess soil of the region proved cultivable despite the severe lack of water. In 1946, on the basis of Gevulot’s successful experiments, 11 additional settlements were erected in the south and the Negev. In the *War of Independence (1948) the isolated kibbutz held out against the long Egyptian siege until Operation Ten Plagues (October 1948). With water made available through the Yarkon-Negev pipeline in the 1950s, the kibbutz developed intensive farm branches.
such as field crops, dairy cattle, poultry, and flowers. Its factory made polymers products. The kibbutz also made a living from tourism, including a guesthouse and its Watch Tower tourist site. In 2002 its population was 251. Gevulot's name, "Borders," was chosen as the kibbutz was, at the time of its founding, the Jewish settlement nearest to the Egyptian border.

[EFRAIM ORNI]

GEZER (Heb. יצר).

(1) Major city in ancient times located in the northern Shephelah at Tell Jazar (also called Tell Abu-Shusha). Gezer was first settled in the Chalcolithic period (fourth millennium B.C.E.); in the Early Bronze Age it was occupied by a non-Semitic people who followed the custom of burning their dead. Semitic settlers established there in the Early Bronze Age II–IV (3rd millennium B.C.E.) enclosed the city with a wall. The Canaanite occupation reached its peak of prosperity in the Middle Bronze and Late Bronze I Ages (20th–14th centuries B.C.E.), when a stone wall 10 ft. (3 m.) wide with square towers was built around the city. This period at Gezer also yielded objects testifying to links with Egypt as well as a potsherd in ancient Canaanite script. The city is first mentioned in Egyptian documents in the list of cities captured by Thutmose III (c. 1469 B.C.E.). The importance of Gezer in the 14th century is evident from the Tell el-Amarna letters. Milklu, king of Gezer, and his successor Yaphahu controlled an extensive area which also included Ajalon and Zorah; their chief rival was the king of Jerusalem. The capture of Gezer is mentioned in the "Israel stele" of Pharaoh Merneptah (c. 1220 B.C.E.) together with Ashkelon and Yeno'am. During the Israelite conquest, Horam, king of Gezer, was defeated in battle by the Israelites (Josh. 10:33). His city was assigned to the Levites in the territory of Ephraim but its population remained predominantly Canaanite (Josh. 16:3; 21:21). Pharaoh Siamun (?) conquered Gezer and ceded it to Israel "for a portion unto his daughter, Solomon's wife." Commanding the approaches to Jerusalem, the city became one of the major strongholds of Solomon who built a gate there identical in plan with gates he erected at Hazor and Megiddo (1 Kings 9:15–17). Part of the Solomonic city gate, built of dressed stones, and an adjacent casemate wall have been discovered there. A stepped tunnel 216 ft. (66 m.) long cut to provide access to the water table may date to this period. Also found there is a small contemporary stone tablet of seven lines ("the *Gezer Calendar"). Gezer was conquered by Shishak according to that Pharaoh's inscriptions (c. 925 B.C.E.) and archaeological finds indicate that the city declined at that time. Tiglath-Pileser III's capture of the city (probably in 733 B.C.E.) is depicted on a relief found at Calah. In the Assyrian period Gezer's population was augmented by foreign settlers; contracts of two of these, written in cuneiform from the years 651 and 649 B.C.E., have survived. The city recovered in the Persian period and under the Hellenistic kings it again became an important royal fortress. During the Hasmonian wars Gezer was a major Greek base and remained in Greek hands until its capture in 142 B.C.E. by Simeon, who expelled the aliens. He refortified the city and made it the military center of his state, under the command of his son John Hyrcanus, second only to Jerusalem (1 Macc. 4:15; 9:52; 13:43; 16:19). A Hasmonian palace discovered there was apparently built by Greek prisoners of war; a curse was found scratched on one of its stones: "May fire descend from heaven and devour the house of Simeon." Gezer's importance declined after the Hasmonian period and the center of the district was transferred to Emmaus. Eusebius mentions it as a village four miles north (this should read "south") of Emmaus (Onom. 66:19 ff.). It does not appear in other ancient sources but a Roman bathhouse and several Christian lamps found there testify to its continued occupation. On the Madaba Map, the legend "Ge- dor also Giditha" apparently refers to Gezer. It was known as Montgisart in the crusader period; there King Baldwin IV defeated the forces of Saladin in 1177 but by 1191 it was in the hands of the Muslims and served as their headquarters in the war against Richard the Lionhearted.

After crusader times the site was completely forgotten. It was re-identified by C. Clermont-Ganneau in 1873 and investigated in excavations conducted at Tell Jazar by R.A.S. Macalister from 1902 to 1912, and A. Rowe in 1934–35.

[Michael Avi-Yonah]

Later Excavations at Gezer

A ten-year project of archaeological excavations was initiated and carried out between 1964 and 1974 under different directors, G.E. Wright, W.G. Dever, and J.D. Seger. An additional season of work at the site was made by Dever in 1984. One of the goals of the expedition was to re-investigate the gates and walls previously uncovered by Macalister as well as to obtain a good stratigraphical sequence. Twenty-six strata were uncovered dating from approximately 3500 B.C.E. to 100 C.E. Five final reports have been published on the results of the excavations as well as numerous articles.

The earliest remains from Gezer, including architectural remains and caves, date from the Chalcolithic and Early Bronze Age and represent the remains of small villages. During the Early Bronze II the city expanded but was still not surrounded by a city wall. Following a period of abandonment, Gezer was resettled at the beginning of the Middle Bronze Age, growing into a large urban site during the Middle Bronze Age II (c. 1750 B.C.E.) with the construction of structures on terraced slopes. During the latter part of the Middle Bronze II (c. 1650 B.C.E.) the site was fortified with an encircling wall and rectangular towers, one of which was built of cyclopean stones. A three-entryway monumental gate with a mud-brick superstructure and a glacijs of tamped chalk and debris were also excavated. The "high place" with ten massive standing stones (massesboth) excavated by Macalister also dates from the Middle Bronze Age. The Middle Bronze Age city was destroyed in a violent fire and this has been attributed to Pharaoh Thutmosis III who mentioned Gezer in the Karnak Inscription. A cache of gold jewelry and much pottery was found within the destroyed houses. Following
another period of abandonment, Gezer’s fortunes revived during the Late Bronze II A (c. 1400 B.C.E.). A large building – perhaps a palace or Egyptian-style residency – was uncovered. Ten of the Amarna tablets written by kings of Gezer date from this time. One of the excavators (Dever) has suggested that the site was fortified at that time, but this has been contested by others who have suggested an Iron Age date instead. A tomb with 68 individuals was uncovered, containing numerous luxury items and imports. Late Bronze Age Gezer declined, and it was probably conquered in 1207 B.C.E. during the campaign of Pharaoh Merneptah.

The Iron Age stratum from the tenth century B.C.E. includes the fortifications previously excavated by Macalister. In the present excavation they were redated to Solomonic times, following a suggestion by Yadin that these fortifications resembled gates and walls found at Hazor and Megiddo. The fortifications of the site were rebuilt in the eighth century B.C.E. and dwellings from this period were also unearthed. The destruction of this stratum probably took place in c. 733 B.C.E. at the time of the campaign of Tiglath Pileser III, and it may very well have been depicted on a relief in the Assyrian king’s palace at Nimrud, which depicts a town by the name of gaz(ru).

The city of the late eighth to sixth centuries B.C.E. was more modest than the previous city, and it too was destroyed with the Babylonian invasion of Judah in 589–586 B.C.E. Remains of settlements from the Persian, Hellenistic, and Roman periods were also found. Gezer was the residence of Simon Macabaeus for a time, as well as the headquarters of John Hyrcanus. A number of boundary stones have been found in the fields around the site, one referring to the “the boundary of Gezer” and another to the landlord of an agricultural estate by the name of “Alkios.”

(2) Gezer is a kibbutz in central Israel, E. of *Ramleh, and is affiliated with Ihud ha-Kevuzot ve-Kibbutzim. Its land was originally acquired by the Ancient Order of Maccabaeans in England because of its proximity to *Modi’in. The settlement was founded in 1945 by settlers from Central Europe together with Israel-born youth. In the Israel *War of Independence (1948), Gezer, located in the thin chain of settlements connecting Jerusalem with the Coastal Plain, was involved in a hard battle with the Arab Legion and served as a vantage point in Operation Dani (July 1948), which resulted in the inclusion of the towns of Ramleh and Lydda in the State of Israel. Gezer ran various farms branches and had a factory for adhesives. It also operated a special educational park, Ginat Shorashim, dedicated to peace and the environment and rooted in Jewish sources and Jewish soil. A pumping station of the Yarkon-Negev water pipeline is located nearby. In the mid-1990s, the population was approximately 280, increasing to 340 by 2002.

**GEZERTA,** a Hebrew inscription of seven lines, engraved on a limestone tablet written in ancient Hebrew script; discovered in Gezer by R.A.S. *Macalister in 1908. The Gezer Calendar is dated by its script to the tenth century B.C.E. and cites an annual cycle of agricultural activities that seem to begin with the month of Tishri. The word yrh (“month”) or yrhw (“two months”) precedes the name of each month. According to an accepted view, the inscription first lists two months of fruit picking, particularly olives (Tishri–Heshvan). Then follow two months of grain sowing (Kislev–Tevet), two months concerned with the late sowing (Shevat–Adar), one month of flax harvest (by uprooting with a mattock; Nisan), one month of barley harvest (Iyyar), a month of wheat harvest (Sivan), two months of vine pruning or of vintage (Tammuz–Av), and, at the end, the month of qayyiz, i.e., the picking or drying of figs (Elul). In the left lower edge of the inscription “Aby […]” is written vertically. It is possible that the name indicates the owner of the inscription or its author. The nature and purpose of the calendar are not clear, and many different explanations have been proposed. According to some scholars, the calendar was written as a schoolboy exercise in writing. This view derives from the fact that the script is rather crude. Another view holds that the Gezer Calendar was designated for the collection of taxes from farmers. It is also possible that the content of the inscription is a popular folk song, listing the months of the year according to the agricultural seasons. The original is in the Istanbul archeological museum.

**GEZERTA,** term used by the geonim for the oath of imprecation that they instituted in place of the oath by God’s name or
by a divine attribute (kinnuy). Geonic responsa describe the gezerta as a series of imprecations intended to intimidate the deponent (see *Teshuvot ha-Geonim* [Assaf], 1927, #106). The term is first mentioned in a responsum by "*Natronai, gaon of Sura* (853–58), who ascribes it to an earlier gaon, "*Zadok Mar bar Ishi of Sura* (816–18; *Teshuvot ha-Geonim Hemdah Genuzah* #22). Gezerta was employed as a substitute for biblical or mishnaic oaths only, not for post-mishnaic oaths such as the "consuetudinary oath" (shevu'at hetset). Its institution was the culmination of a gradual process, which began with the use of an imprecation even when there was no obligation to impose a biblical or mishnaic oath (see *herem setam*). The transition from an oath by God's name to an oath of imprecation led to an extension of the use of oaths to matters in which a biblical or mishnaic oath could not be administered. The change enabled the geonim to resume the previous practice of administering an oath (of imprecation) to a widow demanding her ketubbah payment in cases that did not warrant a mishnaic oath (Git. 3:4); or an oath with respect to landed property, which is not possible in mishnaic law (Shevu. 65; and see *TB* Ket. 87a, and the geonic responsum in *Shularei Zedek* 73a #9). The gezerta was used, in particular, in the case of destitute debtors, who were required to take an oath that they had no means to repay their debt (Rav Hai Gaon, in *Teshuvot ha-Geonim* [Harkavy], #182; see also his *Mishpetei Shevu'ot*, p. 102).

The gezerta was not instituted through a special geonic enactment (takkanah) but was based mainly on the geonic practice of evading oaths by God's name or kinnuy and replacing it by an oath of biblical imprecation – a process which may date back to the talmudic period. This explains the prevalence in geonic sources of phraseology such as "it is our custom," "they were accustomed to...," in relation to the gezerta; terminology attesting to enactment is used only in relation to the ceremony accompanying the imposition of gezerta: "They enacted that rams' horns should be brought and blown in the presence of the deponent, and he is threatened as well with excommunication and other decrees" (*Hemdah Genuzah*, ibid.).

The geonim suspended the administration of biblical and mishnaic oaths because of the increased taking of false oaths and disrespect for oaths, as well as the talmudic principle that punishment for a false oath applies to the entire world (*TB*, Shevu. 39b) – an explanation offered by many geonim. As Rav Natronai writes: "But now, because of the deceivers... the courts refrained from imposing oaths [sworn] on a Torah scroll... and the courts saw that people were swearing false oaths and bringing calamity upon the world, they refrained from imposing the biblical oath and abolished it entirely" (see *Hemdah Genuzah* #22, and further responsum in, e.g., *Teshuvot ha-Geonim* [Assaf], 1927, p. 97, etc.). Rav Saadiah Gaon writes in his commentary to the *Torah* (*Hayeey Sarah*, ed. Zucker, p. 412): "In our nation they did not discontinue swearing this oath, that is, by the Lord God of heaven and earth, until there were many who swore falsely, and earlier authorities abolished the oath by God's name, because they knew that punishment might be visited upon the entire world. They then began to administer the oath of imprecation, punishment for which is imposed only upon the person who swears, [and we follow] their tradition to this day." Similarly, Rav Hai Gaon (*Mishpetei Shevu'ot*, p. 11) writes: "Our rabbis are now accustomed not to administer the oath by God's name, for the entire world may suffer and the punishment for [violation] is severe..." The imprecation was a useful substitute for the oath, because of the use of a curse and an imprecation was taken more seriously, in addition to the power of excommunication and the accompanying ceremony to deter people from lying: "Wherever a person is required to swear a biblical oath, he is now made to hold a Torah scroll... and inflated water skins are brought, as well as a bier on which the dead are borne... and lighted candles... and wood ashes... and sacks are placed in the center... and a ram's horn is blown together with the imprecation" (responsum by Rav Sherira and Rav Hai, *Teshuvot ha-Geonim* [Assaf], 1927, #3; see also responsum by Rav Paltoi, Gaon of Pumbedita, in *Teshuvot ha-Geonim* [Lyck], #10). Perhaps, moreover, it was in view of the prevalent use by the Muslims of oaths in God's name – they in fact refer in their writings to the Jewish oath – that the geonim were motivated to avoid a formula similar to that used in the Muslim oath.

The renunciation of oaths and their replacement by imprecation did not affect the actual obligation to take an oath, which was still considered as having biblical force, as declared by Rav Sherira Gaon in a responsum (*Shularei Zedek*, p. 71a, #3). The basic elements of the administration of oaths were not abandoned, and the imprecation "inherited" the various practices involved, such as holding an object (generally a Torah scroll) while swearing. These practices were still the hallmark of biblical (and mishnaic) oaths as against later rabbinic oaths (such as the "consuetudinary oath"), in which the Torah scroll was held not by the deponent but by the person administering the oath (the scroll might also be placed on a chair; see, e.g., *Teshuvot ha-Geonim* [Harkavy], #550). The gezerta also retained certain other elements of the oath, such as naming the suspicious party, answering "amen," etc.

The identification of the oath with the imprecation known as gezerta may be attributed to Saadiah Gaon. He cites a series of passages from the Bible to stress that the gezerta was not innovated by the geonim but could already be found in biblical tradition. This was indeed Saadiah's tendency in other contexts as well – to demonstrate that everything was rooted in the Bible, in order to reject Karaites' criticism of the Rabbanite approach (see, e.g., *Shularei Zedek* 41b, #38). Saadiah makes systematic use of gezerta in connection with oaths of biblical force (such as the oath imposed on a defendant who admits part of a claim, or the oath required to rebut the evidence of a single witness), and mishnaic oaths (such as the oath of a widow or of partners). The identification of the oath with imprecation around the time of Saadiah enabled the geonim to innovate the institution of *herem setam*, which was imposed when there was no obligation to administer an oath.
The provisions of the *gezerta* as instituted by the *geonim* were accepted in their time by communities outside Babylonia (Iraq) as well. In the transitional period between the *geonim* and the later rabbis, the *gezerta* still continued in use, though without its ceremonial accoutrements, in the Jewish centers of North Africa (R. Hananel), Spain (R. Joseph b. Abitur, R. Isaac Alfasi), and even Italy (R. Kalonymus and Meshullam b. Kalonymus), France, and Germany (R. Gershom Meor ha-Golah, R. Judah ha-Kohen (author of *Sefer ha-Dinim*), Rashi, R. Eliezer b. Nathan of Mainz, R. Isaac the Elder), as implied by the works of the major authorities of those countries. However, as time passed, a marked change is observed in rabbinical literature. The *gezerta* with its special practices became increasingly rare, until it was virtually abandoned and the use of real oaths (by God’s name or *kinnuy*) was resumed, even in regard to the post-mishnaic oath (*shevu‘at hesset*).

The change is first evident in Spain and Provence, as follows from the writings of Nahmanides, R. Shelomo b. Adret, R. Yom Tov b. Abraham Ishibili, R. Isaac bar Abba Mari (author of *Sefer ha-’Ittur*), R. Abraham b. David of Posquières, and others, continuing later, around the end of the 13th century, in Germany and France. In Germany and France, however, when oaths by God’s name or *kinnuy* were discontinued, the rule requiring an object to be held and the “amen” response during the administration of the oath were also almost completely abolished. When the use of oaths was resumed, there was still no requirement to hold an object while taking the oath. The early rabbis of Spain, where the oath by God’s name (or *kinnuy*) had been resumed, found it necessary to permit the defendant to request that a *herem setam* be imposed upon the plaintiff, lest the latter unnecessarily demand that an oath be administered to the former. In contemporary Franco-Germany, however, where the use of God’s name in oaths had not yet been resumed, there was no need for such protection of the defendant. Only later do we find a return to oaths by God’s name in France and Germany and, consequently, the possible imposition of *herem setam* upon the plaintiff.

[Gideon Libson (2nd ed.)]

“GHAZĀLĪ, ABU HAMID MUHAMMAD IBN MUHAMMAD AL-ṬūsĪ AL-” (1058–1111), Persian Muslim theologian, jurist, mystic, and religious reformer, who wrote mainly in Arabic.

Al-Ghazālī’s best-known work is his *Iḥyā’ ilām al-Dīn* (“Revival of the Religious Sciences,” 1096–7), in which he successfully reconciled orthodox Islam and *Sufism*.

In his early career, al-Ghazālī wrote his famous *Tahāfut al-Falāsifa* (“Incoherence of the Philosophers,” 1095) in which he directly confronted the claims of the philosophic systems of al-Fārābī and Avicenna. The book is divided into 20 topics, the most important of which is the discussion of the creation of the world. At the end of his work, he offers the legal opinion that the philosophers are guilty of heresy and are liable to the death penalty on three counts: they believe in the eternity of the world, they disbelieve in the omniscience of God, and they do not accept the dogma of bodily resurrection.

Al-Ghazālī had summed up the philosophic system of al-Fārābī and Avicenna in his *Maqāṣid al-Falāsifa* (“Intentions of the Philosophers,” 1094), which was supposed to serve as an introductory volume to his “Incoherence,” but was used as a handy, independent compendium of philosophy.

In his *Al-Munqidh min al-Dālāl* (“Deliverance from Error,” 1108) he discussed his initial skepticism concerning the possibility of knowledge, and then his search for enlightenment in *Kalām* (scholastic theology), philosophy, the doctrine that there exists an authoritative Imām, or religious guide, to absolute knowledge (Isma’i’lism), and finally Sufism, in which he found the solution to his quest for certainty through prophecy.

The four large volumes of al-Ghazālī’s *Revival of the Religious Sciences* constitute one of the major works of Sunni Islam. While the first part deals with knowledge and the requirements of faith imposed on the individual (such as ritual purity, prayer, charity, fasting, pilgrimage, recitation of the *Koran*) and part two concentrates mainly on duties relating to social interrelations (such as practices relating to eating, marriage, earning a living, friendship), parts three and four are dedicated to the inner life of the soul and deepen the perspective of the first two parts. As a result of al-Ghazālī’s endeavor, some of the warmth and emotional religious feeling inherent in Islamic mysticism was infused into the legalistic approach of Sunni Islam.

Al-Ghazālī found the strictness of exacting logical tools especially effective for the renovation and revival of the religious sciences. In addition to a systematic description of logic in his introduction to his writing on legal theory entitled *Al-Mustaṣfā min ilm al-Uṣūl* (“The Essentials of Islamic Legal Theory,” 1109), he dedicated three other works to Aristotelian logic: *Mi’yar al-Ilm* (“The Standard Measure of Knowledge,” 1095), *Miḥakk al-Nazar fi al-Mantīq* (“The Touchstone of Proof in Logic,” 1095) and *al-Qistās al-Mustaqīm* (“The Just Balance,” 1105–96). The first two were written shortly after the *Tahāfut* in the same momentum of thought, and the third was composed after his retirement.

Along with his magnum opus, *Iḥyā’ ilām al-Dīn*, al-Ghazālī’s sincere commitment to Sufism yielded a number of distinctive works on Sufism and ethics, such as *Mīzān al-ʾAmal* (“The Balance of Action,” 1095), *Kitāb al-ʿArbaʿīn fī ʿUṣūl al-Dīn* (“The Forty Chapters on the Principles of Religion”), which is an abbreviation of the *Revival, Mishkāt al-Anwār* (“The Niche of the Lights,” 1106–7), on the guidance of the inner light to divine intellectualism, and others. In these writings, al-Ghazālī presents his unique perception of man’s ultimate
goal: an intellectual or spiritual nearness to God instead of the imaginary and metaphorical sensuous pleasures depicted in the Koran and in the Traditions. Al-Ghazālī’s conversion to Sufism is not only a move from practical orthodoxy to the internal worship of God, but also a move from a formal conservative form of faith, expressed through practicing the Islamic law, to a learned mode of faith, expressed through an intellectual-mystical progression. In the same token, his revival of the religious sciences on the basis of Sufism, is a move from naive belief to a learned belief based on semi-philosophical grounding.

Influence on Jewish Philosophy
Al-Ghazālī’s influence on Jewish thought falls into two periods: (1) through the 13th century, when he influenced Jewish thinkers who thought and wrote in Arabic, and (2) from the 13th century onward, when a number of his works were translated into Hebrew, some more than once, commented on, and read by the Jewish thinkers of Provence and Spain, who did not know Arabic.

In the first period al-Ghazālī influenced *Judah Halevi, who followed al-Ghazālī’s *Incoherence in attacking the Aristotelian philosophy then current in Spain. One of Judah Halevi’s main arguments refers to the difference of opinion among philosophers, except in matters of mathematics and logic, to which al-Ghazālī had already referred. However, in a more general and profound sense, al-Ghazālī made apparent the great danger of philosophy for revealed religion, and it is in this sense that Judah Halevi, and later on Hasdai *Crescas, were true disciples of their great Islamic predecessor. Judah Halevi also quotes textually from an early work of al-Ghazālī that sums up the dogmatic bases of the belief of a religious person. This early work of al-Ghazālī was later incorporated into his Revival (D. Baneth, Knesset, 7 [1942], p. 317 [Hebrew]). Unlike Halevi, who was mostly influenced by the anti-philosophical tone of al-Ghazālī, Ibn Da’ud who wrote his Emunah Ramah (“The Exalted Faith”) in 1160 was mainly influenced by al-Ghazālī’s reliable account of philosophy in his concise reworking of the Aristotelian-Avicennian definitions in his Intentions.

Although it cannot be demonstrated conclusively, most probably *Maimonides had read al-Ghazālī’s *Incoherence and was influenced by it in formulating the contrasting conceptions of a God of religion, who exercises free will, and a God of philosophy, who is restricted by the immutability of the order of nature (Maimonides, Guide of the Perplexed, ed. by S. Pines [1963], cxxvii). The parallel between al-Ghazālī, who attempted to reconcile Islam and Sufism in his Revival, and *Maimonides, who attempted to reconcile the law of Judaism with philosophy in his Guide, is instructive, and Maimonides’ idea of an all-inclusive legal work including non-legal aspects may have been influenced by al-Ghazālī’s Revival as well. S. Harvey has pointed to particular similarities between al-Ghazālī’s Book of Knowledge, the first book of the Mishneh Torah. This scholar and others have shown that Maimonides was also influenced by al-Ghazālī’s supreme way to approach God, such as his concepts of divine love, spiritual pleasures, and the world to come.

The number of works of al-Ghazālī translated into Hebrew during the 13th century indicates his popularity during the preceding period, in which they had become well known and were considered worth translating. His Intentions of the Philosophers was translated into Hebrew three times. The first Hebrew translation of al-Ghazālī’s Maqāṣid was made by Isaac *Albalag (1292). Yet, this translation, known as Sefer Tikun ha-De’ot (or De’ot ha-Filosofim) includes only two parts of the original; namely, logic and metaphysics. The third part of this Hebrew version was completed in 1307 by Isaac Pulgar. Albalag, who advocated the philosophy of Averroes, chose al-Ghazālī’s compendium of the Avicennian-oriented Aristotelianism out of pedagogical considerations and used it as a point of departure for his own views, which he expressed in excursuses appended to his translation.

The second translation is that of Judah ben Solomon Nathan, who translated the work twice, under the title Kawwanot ha-Filosofim sometime between 1330 and 1340; and the third one is an anonymous translation composed at the first half of the 14th century, to which *Moses of Narbonne composed a full commentary (c. 1349). In his commentary on the Maqāṣid, Narboni insists that al-Ghazālī wrote a small work entitled Maqāṣid al-Maqsāid (Kawwanot ha-Kawwanot), where he confronts the metaphysical issues he challenged in the Maqāṣid. In some Hebrew manuscripts, the *Tahafut is followed by a small treatise, in which al-Ghazālī answers the objections which he himself had raised. Narboni’s commentary was the object of further comments and commentaries, from the 14th century to the beginning of the 16th century, such as the 14th-century encyclopedia Ahavah ba-Tamugim by *Moses ben Judah Nogah (1353–56). Even a poetical, rhymed, and abridged version based on selected passages from Judah ben Solomon Nathan’s translation was composed in the second half of the 14th century (1367) by *Abraham ben Meshulam Avigdor, under the title Segullat Melakhim. Al-Ghazālī’s Intentions of the Philosophers became a very popular and frequently quoted text in the 15th and 16th centuries and over 50 manuscripts of the Hebrew translations from these centuries are extant. Partial commentaries were written by Moses Riti (1388–1460), Isaac ben Shem-Tob (metaphysics), and (probably) by Elijah Habillo (metaphysics and physics), and there is evidence that the Maqāṣid was studied at the schools of Judah Messer Leon and Abraham Bibago and even among the learned Jews of Bohemia and Poland. In addition, there are about 11 anonymous commentaries on the Maqāṣid in various European libraries. David ben Judah Messer Leon in his Ein ha-Kore’ says that Maimonides drew his Peripatetic theories from the Maqāṣid (Steinschneider, Hebr. Bibl. ii. 86). Moses Almosnino cites a commentary by Elijah Mizrahi which is no longer extant. The last commentary on the Maqāṣid al-Falasi-
fah was by the Karaite Abraham Bali (1510). In his criticism of Aristotelian philosophy, Hasdai Crescas preferred to use al-Ghazālī’s Intention rather than his Incoherence in order to refute the Averroist-Aristotelian argumentation. Following Ibn Dā‘ud’s historical exemplar, he treated the Intentions as a dependable sourcebook for philosophical definitions and suppositions.

Al-Ghazālī’s Tahāfut al-Falāsifah was translated by Zer- ahyah ha-Levi in 1441 under the title Happalot ha-Filosofim. Isaac ben Nathan of Cordova translated in the 14th century a small treatise by Al-Ghazālī under the title Maimar bi-Teshu- vot She’elot Nish’al Mehem, in which he answers philosophical questions (published by H. Malter, Frankfurt-on-the-Main, 1897). Jacob ben Makhir (d. 1308) translated, under the title Moznей ha-Iyyunim, a work in which al-Ghazālī refuted the philosophical arguments contradicting simple religious faith. Simon d’Aaron (d. 1444) cites a passage from Mozney ha-Iyyunim in his Keshet u-Magen. Al-Ghazālī’s Mishkāṭ al-Anwār fl Riyād al-Azhār was translated by Isaac ben Joseph Alfasi under the title Maskit ha-Orot be-Pardes ha-Nizzanim. Moses ibn Hibäh quotes the Mishkāt in his commentary on Behinat Olam, where he makes the sun a metaphor to the Law. Johanan Alemanno compares the hierarchy of lights in al-Ghazālī’s paradigm to the symbolic system of the Kabbalah in his Heshek Shelomoh.

Al-Ghazālī’s ethical teachings were studied by Jewish thinkers of the Middle Ages. Mizīn al-Amal (Moznei Zedek) was translated by Abraham ibn Hasdai ben Samuel ha-Levi of Barcelona, who replaced the Koranic quotations with parallel Biblical and Talmudic verses. The Mizīn served as a source for Abraham Ibn Dā‘ud’s parable of the pilgrim in his Emunah Ramah, used originally by Al-Ghazālī to illustrate the importance of different scientific disciplines.

Altogether, at least six works ascribed to al-Ghazālī were translated into Hebrew during the Middle Ages. Translations into Hebrew letters of al-Ghazālī’s Intentions, Incoherence, and Deliverance are extant, which is another indication of al-Ghazālī’s popularity among the Jewish intellectuals who knew Arabic.

It is interesting to note that on the flyleaf of a manuscript containing some of his works in Arabic letters, the contents are described in Hebrew letters as being by “Abū Hāmid al- Ghazālī, the memory of the righteous be blessed,” the usual designation for a pious Jew. This illustrates how congenial his general outlook was felt to be by Jewish medieval thinkers and is a striking example of Jewish-Islamic medieval symbiosis. Al-Ghazālī greatly influenced distinguished Jewish thinkers who wrote in Arabic and Hebrew. His case presents an example of Jewish assimilation of Islamic thought during the Middle Ages.

GHELERTER, LUDWIG LITMAN ("Leon"; 1873–1945), physician; one of the pioneers of the general and Jewish socialist movements in Romania. Born in Jassy, Gheelerter studied medicine in his native town, where he joined the socialist movement. His doctoral thesis was on a problem of social medicine: Alcool si alcoolism ("Alcohol and Alcoholism," 1899). In 1895 he was among the founders in Jassy of *Lumina, ("The Light"), the first Jewish socialist society in Romania, with a journal of the same name, and signed the memorandum of the society to the London Congress of the Second International (1896). He was also active in the struggle for civil rights of Jews deprived of Romanian citizenship, thus coming into conflict with the official leadership of the party. A notable speaker, organizer, and writer, Gheelerter continued to uphold his views during the disintegration of the movement and assisted in the reorganization of the Jewish socialist society in Jassy in 1915 and in publication of a weekly, Der Veker. After World War I he moved to Bucharest and founded a new party, Partidul Socialist Unitar ("The United Socialist Party"). Although Gheelerter held similar views to those of the Bund, he did not join that movement. He established the Socialist Workers’ Party of Romania (1929) which was affiliated to the Fourth International but rejoined the Social Democratic Party of Romania on the eve of World War II. Gheelerter founded and headed the Jewish hospital of Bucharest (1926) and helped promote popular Jewish cooperative credit banks. He accepted non-Jewish patients also in his hospital, named Iubirea de oameni ("Love of People"). While not a Zionist, he was sympathetic toward pioneering enterprises in Palestine, especially cooperatives and kibbutzim. Romanian immigrants named a New York branch of the Workmen’s Circle after him.

GHENT (Flemish Gent; Fr. Gand), city in N.W. Belgium. That there was a Jewish settlement in Ghent in the eighth century, as indicated in some early Christian chronicles, is difficult to believe. The Jews were expelled from the city as from the rest of Flanders in 1125, but they were apparently permitted to return in the 13th century. The Jews were again expelled during the "Black Death," 1348–49. Jews began to settle again only in the 18th century. In 1724, the municipal council decided on a special formula of oath for the Jews. However, by 1756, only one Jewish resident, a jeweler, was still in Ghent. When the area passed to France, at the end of the 18th century, the Jewish population increased. It numbered 20 families (107 persons) in 1817, and maintained a synagogue. The majority were peddlers, some of whom were lottery-ticket dealers. Apparently the Jewish street (Jodenstraatje) received its name at this time. In 1847, the municipal council granted a plot of land to the community for establishing a Jewish cemetery. In May 1940, before the Nazi occupation, the Jewish population numbered 300. In 1941 the Nazis prohibited the Jews of Belgium to live outside Brussels, Antwerp, Liège, and Charleroi, so that any Jews who remained in Ghent did so illegally. After the liberation in September 1944, there were 150 Jews in Ghent. There were an estimated 80 Jews living in Ghent in 1969.

GERON, YAKKIR MORDECAI BEN ELIAKIM (d. 1817), Turkish rabbi (the Italian branch of the family write the name Ghiron, and the Turkish, Gheron). Gheron succeeded his father as rabbi and doyyn of Adrianople and district in 1800. He devoted himself particularly to the building of synagogues and supervised the studies in a talmud torah which he had established during his period of office in Adrianople. A certain scholar who had converted to Islam was found burnt to death, and the pasha of the town accused the Jews of having been responsible. Gheron was imprisoned and sentenced to death. The pasha’s secretary, to whom the rabbi had previously shown kindness, succeeded in having the death sentence repealed, and in its stead a fine was imposed on the Jewish community. In 1812 he went to Jerusalem and was appointed a member of the bet din of Jacob Moses Ayash. His name appears as a signatory to a *takkanah of 1814 with reference to milk milked by gentiles. His responsa appear in the Nimmukei Yosef (Leghorn, 1795) of Josef ibn Habib.

[Simon Marcus]
exercised. By analogy the word is currently used to describe similar homogeneous quarters of non-Jewish groups, such as immigrant quarters, Black quarters in American cities, native quarters in South African cities, etc.

For historical survey see *Jewish Quarter.

In Muslim Countries
In Muslim countries the Jewish quarter (Arab. ḫāra) in its beginnings never had the character of a ghetto. It was always built on a voluntary basis, and it remained so in later times in the vast Ottoman Empire. Istanbul (Constantinople) was the classic example of a capital in which the Jewish quarters were scattered all over the city. In Shi’ite countries (Persia, Yemen) and in orthodox North Africa (Malikite rite) all non-Muslims were forced to live in separate quarters – for religious reasons (ritual uncleanness). Embassies from Christian countries had to look for their (even temporary) dwellings among the Jews. Christian travelers and pilgrims to the Holy Land always remark that in case there was no Christian hospice in a town, they had to look for hospitality among the Jews. After the regulations compelling the Jews to dwell in separate quarters had been repealed (in the 19th and 20th centuries), and they could freely move out, the majority voluntarily remained in their old quarters. Only after the establishment of the new independent states in North Africa did most of the Jews abandon their old dwellings.

See *Jewish Quarter, in Muslim Countries.

Holocaust Period
The Crystallization of German Policy. While ghettos were traditionally permanent places of Jewish residence, in Poland, under the Nazis, the ghettos were viewed as a transitional measure. "I shall determine at which time and with what means the ghetto, and thereby the city of Lodz, will be cleansed of Jews," boasted Hans Biebow, the Nazi official who ran the Lodz ghetto. "In the end … we must burn out this bubonic plague."

A secret memo issued on September 21, 1939, by Reinhard *Heydrich, the chief of the Security Police, to the chiefs of all task forces operating in the conquered Polish territory, established the basic outlines of German policy in the territories.

Heydrich distinguishes between the ultimate goal (Endziel), which would require some time to implement, and the intermediate goals, which must be carried out in the short term. He said: Some goals cannot yet be implemented for technical reasons and some for economic reasons. Room was left for innovation.

He wrote: "The instructions and directives below must serve also for the purpose of urging chiefs of the Einsatzgruppen to give practical consideration to the problems involved."

His language was specific: the Endziel, the final goal, must be distinguished from the language that is later to be used, the endlosen, or final solution, a polite euphemism for the murder of Jewish men, women, and children. The ultimate goal was unarticulated.

The first intermediate goal was concentration. Jews were to be moved from the countryside into the larger cities. Certain areas were to become Judentrein, free of Jews, and smaller communities were to be merged into the larger ones.

Heydrich ordered local leaders to establish a Council of Jewish Elders, 24 men to be appointed from the local leaders and rabbis that are to be made fully responsible, "in the literal sense of the word," to implement future decrees. A census must be taken and leaders are to be personally responsible for the evacuation of Jews from the countryside. It was unnecessary to indicate what personal responsibility implied; clearly, the lives of individual Judenrat members were at risk.

Due priority was given to the needs of the army and to minimize economic dislocation, not of the Jews, but of industries essential to German economic interest. Businesses and farms were to be turned over to the locals, preferably Germans, and, if essential and no Germans were available, even to Poles.

The Einsatzgruppen were to issue reports, a census of people, an inventory of resources, industries, and personnel.

It is within this framework that the Jewish Councils were established and that the work of securing the occupied territory began. A second decree dated two months later and signed by Hans *Frank, the head of the General Government, further specified the role of the Jewish Council, which was to have a chairman and a deputy.

"The Jewish Council is obliged to receive through its chairman and his deputy the order of the German official agencies. Its responsibility will be to see that the orders are carried out completely and accurately." Jews were ordered to obey the orders of the Jewish Councils.

In retrospect, but only in retrospect, it can be seen that the ghetto was a holding pen, intended to concentrate Jews and hold them captive until such time as an infrastructure was created that could solve the Jewish problem.

The ghetto originally had two goals. The Germans created a situation in which hard labor, malnutrition, overcrowding, and substandard sanitary conditions contributed to the death of a large number of Jews. One in ten died in Warsaw in 1941, before the deportations, before shots were fired. This policy was at odds with the other use of the ghetto as a source of cheap labor that could be of benefit to the Reich and also to individual commanders. In the end, and often only in the end, even the availability of cheap labor gave way to the "Final Solution."

The lifespan of some ghettos was extended because they provided a large reservoir of cheap labor; but while this consideration might forestall the murder process, it did not prevent it. Thus the commander of Galicia, for example, sent out an order in the fall of 1942 to decrease the number of ghettos from 1,000 to 55, and in July 1943 Himmler decided to transfer the surviving inhabitants of ghettos throughout Ostland to concentration camps. The last ghetto on Polish soil (*Lodz), which had been in existence since April 1940, was liquidated in August 1944.
Special ghettos were established for Jews deported from Romania to Transnistria and resettled in cities or towns and in neighborhoods or on streets that had been occupied by Jews who had been murdered shortly before by the German army. One exception was the ghetto at *Theresienstadt, which was established at the end of 1941 to house Jews from Bohemia and Moravia and later Jews from Germany and other Western countries were deported there as well. The Germans intended Theresienstadt to be a showcase to the world of their mass treatment of the Jews and thus to mask the crime of the "Final Solution." Still Theresienstadt was actually a ghetto – a holding pen for captive Jews – a concentration camp where conditions of imprisonment prevailed, and a transit camp: of the 144,000 Jews sent to Theresienstadt, 88,000 were shipped from there to Auschwitz, while 33,000 died in the ghetto. Of the 15,000 children sent to Theresienstadt, fewer than 100 survived.

There were several crucial differences between ghettoization in Poland and ghettoization in former Soviet territories. In Poland, ghettoization began shortly after the onset of war, before mass killings and before the murderous intentions of the Germans were clear to all. In former Soviet territories, ghettoization occurred only after the Einsatzgruppen murders; Jews were certain that German rule would be murderous even if the nature of German intentions was unclear. Some ghettos were situated near forests which could facilitate escape and a chance, however remote, of survival.

The Jewish Reaction to the Establishment of the Ghettos. In Poland, the Jews, who were unaware of the Nazis’ intentions, resigned themselves to the establishment of ghettos and hoped that living together in mutual cooperation under self-rule would make it easier for them to overcome the period of repression until their country would be liberated from the Nazi yoke. They gave a name to their strategy of *survivor, *iberleben, to live beyond, beyond German rule until liberation. If within the ghetto, they presumed they would somehow be safer, as they would no longer interact with non-Jews in quite the same way and be freed of daily humiliations and dangers. Based on past experience and also on rational calculations or economic self-interest, it seemed to them that by imprisoning Jews in ghettos, the Nazis had arrived at the final manifestation of their anti-Jewish policy. If the Jews would carry out their orders and prove that they were beneficial to the Nazis by their work, they would be allowed to organize their community life as they wished. In addition, the Jews had practically no opportunity to offer armed opposition that would prevent the Germans from carrying out their plans. The constant changes in the composition of the population (effected by transfers and roundups) and in living quarters made it more difficult to express opposition; the hermetic imprisonment from the outside world prevented the acquisition of arms; and conditions in the ghetto (malnutrition, concern for one's family, etc.) weakened the strength of the opposition. On the other hand, the Germans had the manpower and technical equipment to repress any uprising with ease, and the non-Jewish population collaborated with them, or at best remained apathetic. Any uprising in the ghettos, even if it could be pulled off, was thus doomed to military failure. Any attempt at resistance was risky as the German practice of collective responsibility and disproportionate punishment left the remaining ghetto population at risk. Thus uprisings, when they occurred, were usually last stands undertaken when all hope for collective survival was lost and when the only question was what could be done in the face of impending death.

Typology of the Ghettos. In most cases, the ghetto was located in one of the poor neighborhoods of a city that had previously housed a crowded Jewish population. Moving large numbers of widely dispersed people into ghettos was a chaotic and unnerving process. In Lodz, where an area already housing 62,000 Jews was designated as the ghetto, an additional 100,000 Jews were crowded into the quarter from other sections of the city. Bus lines had to be rerouted. To avoid the disruption of the city’s main transportation lines, two streets were walled off so trolleys could pass through. Polish passengers rode through the center of the Lodz ghetto on streets that Jews could only cross by way of crowded wooden bridges overhead.

In Warsaw, the decree establishing the ghetto was announced on October 12, 1940 – *Yom Kippur, the Jewish Day of Atonement. Moving schedules were posted on billboards. Whole neighborhoods were evacuated. While Jews were forced out of Polish residential neighborhoods, Polese were also evicted from the area that would become the ghetto. During the last two weeks of October 1940, according to German figures, 113,000 Poles (Christians) and 140,000 Jews had to be relocated, bringing with them whatever belongings they could pile on a wagon. All abandoned property was confiscated. In every Polish city, the ghettos were overcrowded. Jews were transferred from the other neighborhoods in the city, and in many cases from nearby villages, to housing there, while the non-Jewish inhabitants of the neighborhood were forced to move to another area. These transfers caused great overcrowding from the outset. In Lodz, for example, the average was six people to a room; in Vilna there were even eight to a room during one period. Whenever the overcrowding lessened because of the deporting of Jews to extermination camps, the area of the ghetto was reduced significantly.

At first there were two types of ghettos: open ones, which were marked only by signs as areas of Jewish habitation; and closed ones, which were surrounded by fences, or in some cases even by walls (as in *Warsaw). This difference, however, lost all significance during the period of deportations before an open ghetto was destroyed, or what the Germans called liquidated. In advance all access roads were blocked by the German police, whereas in closed ghettos shifts of German police or their aides constantly guarded the fences and walls. A more significant distinction was the fact that the Germans regarded the closed ghettos as large concentration camps, and
therefore most of them were liquidated later than the open ghettos. In contrast to these ghettos, which were all in Polish and Russian territory, the ghettos in Transnistria were not predestined for liquidation. Neither was the ghetto in Theresienstadt. Transnistria even succeeded in maintaining contact with the outside world and received assistance from committees in Romania. Theresienstadt was, in fact, cut off from the world (except for the transports that came in and went out), but the standard of living was higher there than in Eastern European ghettos.

**Jewish Administration.** For every ghetto, the German authorities appointed a Judenrat, which was usually composed of Jewish leaders acceptable to the community. The Judenrat was not a democratic body, and its power was centered in one person, not always the chairman, who was responsible for its cooperation in matters relating to the ghetto. The leader of the Judenrat was subordinate to the German authorities, who delegated to him much authority with regard to the Jews but treated him disrespectfully and often cruelly. Many Jews appointed to the Judenrat believed that they were placed in their position in order to serve the Jewish people in its time of great need. They faced two masters. To the Germans they represented Jewish needs and to the Jews they represented German authority. The Germans were uninterested in meeting Jewish needs and German authority was eventually lethal for the Jews.

Ghetto life was one of squalor, hunger, disease, and despair. Rooms and apartments were overcrowded, with 10 or 15 people typically living in space previously occupied by four. Daily calorie allotments seldom exceeded 1,100. Without smugglers who brought in food, starvation would have been rampant. The smugglers’ motto: “Eat and drink for tomorrow we die,” was only too apt.

There were serious public health problems. Epidemic diseases were a threat, typhus the most dreaded. Dead bodies were often left on the street until the burial society came. Beggars were everywhere. Perhaps most unbearable was the uncertainty of life. Ghetto residents never knew what tomorrow would bring.

In the ghetto, life went on. Families adjusted to new realities, living in constant fear of humiliation, labor conscription, and deportation. Survival was a daily challenge, a struggle for the bare necessities of food, warmth, sanitation, shelter, and clothing. Clandestine schools educated the young. Religious services were held even when they were outlawed. Cultural life continued with theater and music, poetry and art offering a temporary respite from squalor.

From the beginning, the Jewish leadership was faced with the impossible task of organizing ghetto life under emergency conditions and under the ceaseless pressure of threats of cruel punishment. Jewish institutions, to the extent that they existed, continued to function, either openly, such as the institutions that fulfilled religious needs, or in secret, such as the various political parties. The major function of the leadership, however, was the provision of sustenance and health and welfare services (including hospitals) and sanitation, and this had to be accomplished without adequate means. Raul Hilberg likened their task to a small isolated municipal government living in hostile territory. The authority of leaders always derived from the Germans. To provide these services, they taxed those who still had some resources and worked those who had none. They practiced the time-honored traditions of their people honed by centuries of exile and persecution. Decrees were evaded or circumvented. They tried to outwit the enemy and alleviate the awful conditions of the ghetto, at least temporarily. Some behaved admirably; others became infatuated with their power and imposed it on the powerless, captive population.

Despite what was often their best effort, in the course of time these institutions collapsed in most ghettos. It was even more difficult to establish those services which had not existed within the Jewish community before the Holocaust, such as police, prisons, and courts. The authority vested in these institutions was broad within the narrow autonomous framework that existed in the ghettos, and in many instances they were, of course, not properly utilized under conditions of the life-and-death struggle imposed on the inhabitants of the ghetto.

**Liquidation of the Ghettos.** The lifespan of the Polish ghettos was brief; formed in 1940, most were destroyed beginning in 1942 shortly after the *Wannsee Conference.* The destruction of the ghettos was conducted as part of the policy of the "Final Solution," for which purpose the Germans prepared special death camps, what they called extermination camps. When it was decided to liquidate a ghetto, they would call on the Jews to present themselves voluntarily to be transferred to labor camps (sometimes with false promises of improved living conditions), but if deception proved unsuccessful, they would round up the residents and bring them by force to assembly areas, from where they would be transported, usually by train, to their destination. Ghetto leaders faced the ultimate decision. For a time they could save some but only at the sacrifice of others. *Rumkowski in Lodz saved the able-bodied and shipped the children to Chelmno, reasoning that the best chance of survival was if the ghetto was transformed into a work camp, productive for the Wehrmacht. “Survival by work” was his motto. In Warsaw, *Czerniakow tried to save the children; when he could not, he killed himself rather than participate in their deportation. Jewish police were employed to send Jews to the trains. In some ghettos – but not many – the leadership chose suicide rather than cooperation. The great majority of the ghetto inhabitants were killed immediately upon their arrival in the camps; a minority, the young and the able-bodied, women without children, were employed in forced labor and were killed after a short time by one of the regular means of extermination. Only a very small number remained alive, sometimes after having been shunted from camp to camp.
See also *Holocaust. For more information on specific ghettos see *Kovno, *Lodz, *Lublin, *Theresienstadt, and *Warsaw.

[Michael Berenbaum (2nd ed.)]

**GHETTO FIGHTERS’ HOUSE** (Heb. בית להורמים, Beit Löhamei ha-Getta'ot), a ghetto uprising and Holocaust remembrance authority, established in kibbutz *Lohamei ha-Getta'ot*, on April 19, 1950, by a group of former ghetto fighters and partisans. The house serves as a memorial and research and documentation center on the Holocaust period, and on Jewish resistance under Nazi rule in Europe. It contains an important historical archive on the Holocaust, and particularly on organized resistance; papers left by the poet Itzhak *Katzenelson, after whom it is named; documents from the *He-Ḥalutz archives in the Warsaw and Bialystok ghettos; a collection of the publications of the Jewish underground in occupied Poland; on the Jewish underground in Holland and France; a register of names of Jewish partisans who fought in Italy and Yugoslavia; and photographs, films, and pictures. It also contains the papers of Yitzhak *Zuckerman and Miriam Nocitch, a collection of 60 diaries in different languages, and several thousand testimonies of Holocaust survivors. The museum maintains a permanent display as well as special exhibits dealing with different aspects of the Holocaust and Jewish resistance; models of the Warsaw ghetto and the *Treblinka death camp are on show. In 2005 the Museum's permanent exhibition underwent a significant upgrading that will take several years to complete. On the national Holocaust Remembrance Day in Israel (27th of Nisan), a mass memorial assembly is held at the amphitheater outside the museum. The Ghetto Fighters’ House has published a series of books and periodicals, *Dappim le-Heker ha-Shoah ve-ha-Mered* (1951–52, 1969); and *Yediot Beit Löhamei ha-Getta'ot al shem Yizḥak Katzenelson* (1951–60).

The Museum also has a highly acclaimed children’s exhibition, Yad la-Yeled, designed to tell the story of the Holocaust to younger children. Designed by Ram Karmi, the exhibit is semicircular, descending into the depths of the earth. It unfolds section by section, not allowing the visitor to take in the entire exhibition at once, and tells the story of the Holocaust through the testimonies of those who were children during the Holocaust and through documents and imaginative reconstructions that suggest the magnitude of what happened in a manner that children can understand. At the center of the exhibition is a Janusz *Korczak* room, based on the work of the famed Polish-Jewish educator and physician who ran an orphanage in the ghetto. This world of imagination and the empowerment of children here contrast boldly with the contents of the rest of the Museum. Educational activities in arts and crafts, drama, and music enable children to process what they have experienced. Among the other activities of the Museum, aside from those related to the Holocaust, are the international book-sharing project and work in democracy and pluralism that attracts neighboring Arab and Jewish communities in Galilee.

**GHEZ**, Tunisian family, whose most eminent members were **DAVID** (second half of 18th century), author of a number of works of which only one, *Ner David*, part 1 (Leghorn, 1868), has been published; the others include a commentary to the tractates *Shabbat*, *Pesaḥim*, and *Sukkah*, as well as novelle about various other tractates. **MOSES** (end of 18th century) wrote commentaries to the tractate *Shevuōt* and *Eliaj *Mizrahi's supercommentary on Rashi to the Pentateuch under the titles *Yeshu'at Yakov* and *Yedei Moshe*. He also wrote *Yismah Moshe* (Leghorn, 1863), a commentary to the Passover Haggadah, notes on the Pentateuch, and three poems. **JOSEPH** (b. 1800), son of David, was a kabbalist. He left numerous works in manuscript, including a commentary to Maimonides' Mishneh Torah, sermons, glosses on the Talmud, on the Zohar, etc. In Pi ha-Medabber (Leghorn, 1854), his kabbalistic commentary to the Passover Haggadah, he cites explanations by his cousin Haiyim Ghez.

Another member of the family was **MATHILDA GHEZ** (1918–1990), a communal leader in Tunisia. In 1957 she moved to Israel and was elected to the Knesset (in 1965 representing Rafi, and in 1969, the Israel Labor Party).

**“GHILLANY, FRIEDRICH WILHELM** (1807–1876), German theologian. A municipal librarian in Nuremberg, Ghillany wrote on various historical subjects but he was chiefly concerned with religious questions, and adopted the teachings of G.F. Daumer (1800–1875), a deist in search of “true religion.” Following the Damascus blood libel, Ghillany wrote *Die Menschenopfer der alten Hebraer* (Nuremberg, 1842), in which he accused the Jews of “cannibalism” and “molochism” in both ancient and modern times and of the ritual murder of Jesus. He gave further expression to his antisemitism in *Die Judenfrage durch fünf Jahrhunderte* (ibid., 1843), and *Das Judenthum und die Kritik* (ibid., 1844). Both Daumer and Ghillany were praised by Nazi propagandists.

**GHIRON**, family of scholars whose name derives from Gerona in N. Spain. Among its most important members are:
JOHANAN GHIRON (1646–1716), born in Casale Monferrato, Italy. Johanan was rabbi of Florence for 34 years, and was given the title Alluf Torah ("Master of the Torah") in appreciation of his great erudition. Though by upbringing and inclination he sided with the Shabbatean movement, he willingly signed the excommunication on Nehemiah "Hayon. After his death, all the takkanot he had instituted were repealed. Johanan was the author of (1) Mishnah ha-Ramim, an apology for his attitude in connection with the dispute over Hayon, with an appendix consisting of his letters (still in manuscript); (2) prayers, on the occasion of the earthquakes in Lugo in 1688 and in Ancona in 1690. The prayer on Ancona was also recited in Florence on the occasion of the earthquake in Leghorn in 1742. It was published in the Shever ba-Mezarim of Raphael Meldola (Leghorn, 1742); (3) responsa mentioned in the Pahad Yizhak of Isaac *Lampronti, in the Shemesh Zedakah of Samson Morpurgo, and elsewhere (Montefiore collection); (4) glosses on the Arba'ah Turim and halakhic novellae (unpublished).

JUDAH HAYYIM GHIRON, his son, was born in Casale Monferrato and was rabbi of Florence from 1719 to 1738. His Mekor Dimnah, on his father's activities with Nehemiah Hayon and on his takkanot, together with a selection of letters on Nehemiah Hayon and an appendix to his father's Mishnah ha-Ramim, are still in manuscript. JUDAH HAYYIM LEONTI GHIRON (1739–1761) was rabbi of Casale. His halakhic correspondence with contemporary scholars is preserved in the Asiatic Museum in Leningrad. SAMUEL HAYYIM GHIRON (1829–1895) was born in Ivrea. In 1854 he qualified as a teacher of literature and in 1877 was appointed rabbi of Turin. He published a prayer book according to the Italian rite, with an Italian translation (Leghorn, 1879). In the National Library, Jerusalem, there is an elegy on the death of Hillel Cantoni in Italian and Hebrew, the latter by Samuel Ghiron (Turin, 1857). In 1880, with the assistance of B. Peyron, he published a catalog of the Hebrew manuscripts in Turin. He also wrote essays, sermons, and poems. ISAIAH GHIRON (1837–1888), director of the Braidsenese Library in Milan, wrote books in Italian on Hebrew numismatics and inscriptions. In 1874 he was editor of Rivista di Lettere, Scienze ed Arti.

[Simon Marcus]

GHIRONDI, MORDECAI SAMUEL BEN BENZION AYEH (1799–1852), Italian scholar and biographer. Ghirondi was a descendant of a rabbinic family. His grandmother Mazal-Tov Benvenida Ghironi (c. 1760), wife of Mordecai, rabbi of Cittadella, was famous for her Jewish learning and educated many disciples to a relatively high grade of knowledge. Ghirondi was born in Padua. He taught theology at the rabbinical college of Padua, where he had studied, beginning in 1824. He was assistant rabbi of Padua 1829–31, and from 1831 to his death was chief rabbi.

Apart from a juvenile moral treatise, Tokho Razuf Akavah (1818), Ghirondi's minor works include some scattered essays and a number of unpublished works, mainly in the Montefiore collection and in the Jewish Theological Seminary of America. His major work is Toledot Gedolot Yisra'el (1853), a biographical dictionary of Jewish scholars and rabbis composed as an extension of Zekher Zaddikim li-Verakhah, a similar biographic work by Hananel Graziaio *Neppi. The Toledot was published by Ghirondi's son Ephraim Raphael (1834–57) at Trieste. Although naive and badly proportioned, the work retains its importance for information, based in some entries on personal acquaintance or oral tradition, on Italian rabbis of the 18th and early 19th centuries; these are the vast majority of the entries. Ghirondi also annotated *Azulai's Shem ha-Gedolim (publ. in E. Gartenhaus, Eshel ha-Gedolim, 1958).

Ghirondi was a notable book collector; many of his manuscripts are in the Montefiore Library in Jews' College, London, and his printed books and some manuscripts are in the Jewish Theological Seminary in New York.

BIBLIOGRAPHY: Ghirondi-Neppi, 56, 374–6.

[Penuel P. Kahane]

GHIRSHMAN, ROMAN (1895–1979), French archaeologist, specialist in Iranian studies. Ghirshman was born and educated in Paris. He had his first experience in excavation at Tello in Iraq in 1930. In 1931 he was sent to Iran as leader of an expedition and this was the beginning of a long series of successful excavations of important early settlements in Iran and Afghanistan. These included Tepe Gyan, Tepe Sialk, and Tchoga Zanbil in Elam. Ghirshman, who held a professorship at the University of Aix-en-Provence, was head of the French archaeological mission to Afghanistan from 1941 to 1943, and director of the Suse mission in Iran from 1946 to 1967. His numerous publications on Iranian art, history, and culture include Fouilles de Télé Gyan 1931 et 1932 (with G. Contenau, 1935), Fouilles de Sialk (2 vols., 1938–39), Iran: From the Earliest Times to the Islamic Conquest (1954), and Iran: From the Origins to Alexander the Great (1964).

GIBBETHON

(Gibbethon Heb. גיבָּתוֹן)

(1) Town in the territory of Dan, mentioned with Eltekeh and Baalath (Josh. 19:44). It is also listed as a levitical city of the Kohathite family (ibid. 21:23) and was thus apparently a Davidic administrative center (its name is absent in the parallel text of levitical cities in 1 Chron. 6). Gibbethon appears twice in the Book of Kings as a Philistine city that was besieged by Nadab and "all Israel" and again by Elah; both sieges, however, were interrupted by revolts in the besieging armies and were unsuccessful (1 Kings 15:27; 16:15). It may also be included in the list of cities captured by Thutmose III in c. 1469 B.C.E. (no. 103). Gibbethon is generally identified with Tel al-Malāt (now called Tell Gibbathorn), southwest of Gezer, a prominent mound containing pottery from the Chalcolithic to the Arabic periods.

[Michael Avi-Yonah]
GIBBOR, JUDAH BEN ELIJAH (b.c. 1460), Karaite author and poet living in Constantinople. His writings include a poetical commentary on the Pentateuch Minḥat Yehudah (published in the Karaite ritual, Venice, 1529). In this poem, often commented upon by Karaite scholars, Gibbor refers with deep respect to Maimonides; it deals with the three pillars of Karaism—Scripture, analogy, and (Karaite) tradition. He also wrote three works which are no longer extant: Hilkhot Shehitah, on the laws of ritual slaughter; Sefer Mōādim, regulations for the festivals, and Mōād Katan, on the secondary festivals, which also contained the essential teachings of the Kabbalah. Gibbor's eldest son, Elījah Shubshī (1483–1501), who died at the age of 18, wrote a commentary on Shesh Kenafayim, an astronomical work by Immanuel b. Jacob *Bonfils of Tarascon.

[Isaak Dov Ber Markon]

GIBBS, TERRY (Julius Gubenko; 1924– ), U.S. vibraphonist, drummer. The Brooklyn-born Gibbs grew up in a musical family. His brother Sol taught him to play drums and vibes and the two boys worked for their father, Abe, whose band, the Radio Novelty Orchestra, was a fixture on the Depression-era bar mitzvah-wedding circuit. It was a training ground that gave him a healthy respect for Jewish music and for the business side of the music industry. But it was while he was on a two-week furlough from the U.S. Army during WWII that Gibbs had a life-changing encounter, slipping into a jazz club to hear Charlie Parker play the new jazz music called “be-bop.” One night turned into two weeks as the young G1 spent every night of his furlough at Minton’s Playhouse absorbing the new sounds. His first stop upon his discharge from the army was 52nd Street again, where he took up the vibes in earnest in a bebop quintet that featured tenor saxophonist Allen Eager and drummer Max Roach. Gibbs’s major career break followed shortly after when he was hired by Woody Herman as part of the clarinetist’s legendary Second Herd, a bop-oriented band that featured a powerhouse sax section whose members included Eager, Al Cohn, and Stan “Getz. After Herman dissolved that group, Gibbs went to work for a succession of excellent leaders, most prominently Benny “Goodman. Eventually he relocated to the West Coast, where he started his own group and divided his time between jazz jobs and studio and television work. Gibbs remained active into his seventies.

[George Robinson (2nd ed.)]

GIBEAH, GEBA (Heb. גִּבְּאָה, Gib‘ah, “hill”), a central city in the territory of Benjamin and the royal capital at the time of Saul. It was situated on the main road from Judah to Mount Ephraim (Judg. 19:11–13), near the Jerusalem–Shechem road. The territory of the tribe of Benjamin is characterized by a hilly terrain. The biblical sources relating to this territory contain a large number of place names based on the root g-b-ʿ, the stem for the Hebrew word meaning “hill.” These include the name Gibeon, Geba (1 Sam. 14:5), and Gibeah (Judg. 19:12; 1 Sam. 14:2), the latter thought to be identified at Tell el-Ful. There are also longer versions of these names such as Geba of Benjamin (1 Sam. 13:16), Gibeah of Benjamin (1 Sam. 13:2), and Gibeath Haelohim (1 Sam 10:5).

According to the story in Judges 19–21 the city was destroyed during the civil war that ensued as a result of the atrocities committed by the people of Gibeah against the concubine from Judah. Later Gibeah became one of the Philistines strongholds in the highlands (1 Sam 10:5). According to 1 Samuel 10:26; 11:4 Saul came from Gibeah; however, the genealogical lists in 1 Chronicles 8:29; 9:35 suggest that Saul’s ancestral home was at Gibeon. After the battle of Michmash (1 Sam. 13–14) Gibeah became Saul’s capital and was renamed after him as “Gibeah of Saul” (1 Sam. 15:34).

After the schism Gibeah became an important strategic city on the northern border of Judah. It is also mentioned in Isaiah 10:29 in Sennacherib’s march through the region north of Jerusalem.

The modern site of Tell el-Ful is situated 3.5 miles (5.5 km.) north of the Damascus Gate in Jerusalem. It is located on the crest of the watershed, with deep valleys extending to the east and west. The hill rises with steep terraces on the east, south and north, but on the west the slope is more gradual. The ancient road from Judah to Mount Ephraim extended along the base of the tell. This was the main north-south route of central Palestine and the tell, 2,755 ft. (840 m.) above sea level, commanded it. The top was relatively flat, about 500 ft. (150 m.) north to south by 300 ft. (90 m.) east to west.

Edward Robinson (1841, 14–15) first identified Gibeah at the village of Jabab, but later changed his mind and identified it with Tell el-Ful. Although the identification of Gibeah with Tell el-Ful is generally accepted, it is still a matter of debate among some scholars. Hence, more recently J.M. Miller (1975) and P.M. Arnold (1990) have challenged this identification and proposed that Gibeah should be identified with Geba (modern Jabab). But this proposal has been rejected due to the fact that Gibeah belonged to a group of sites whose precise location was already lost in ancient times. The name Gibeah was
transferred as Geba to the place now known as Jaba’. Moreover, there is no archaeological evidence to support Miller or Arnold’s claims, and in recent surveys Jaba’ produced ceramics of the Iron Age II as well from the Persian period, but none from the Iron Age I. Tell el-Ful, however, produced ample evidence from the Iron Age I. Tell el-Ful is also an extremely commanding and important site; the view from the summit covers a wide area. The strong fortress (or tower) at the summit is situated on the main trade route leading from Jerusalem to the north, and from the coast in the west to Moab and Ammon in the east. No other proposed site in the vicinity has such obvious advantages.

Tell el-Ful was excavated by W.F. Albright (in 1922–23, and in 1933) and by P.W. Lapp (1964). Five phases of occupation were uncovered, from the Iron Age I period to the Roman Period. These include a new fortress from the fourth century B.C.E. which survived until the second century B.C.E. (Josephus, Wars, 5:51 mentions Gibeah as a settlement situated 30 ris (3.5 miles) north of Jerusalem; Titus camped there on his way to Jerusalem, and eventually his troops destroyed it.) The site continued to exist until the time of "Bar Kokhba (132–35 B.C.E.). The earliest occupation, however, appears to have been in the Middle Bronze II (c. 2000–1550 B.C.E.) as is indicated by pottery and a mace-head. No building remains dating from earlier than the Iron Age have been discovered on the summit of the hill, though MB buildings were excavated in 1995–96 on the lower east slope. The stratum with archaeological remains most relevant to our topic is from the Iron Age I and was divided into three “periods”:

1. Period I: miscellaneous constructions that antedated the foundation of the fortress and which were destroyed by fire
2. Period II: Fortress I, destroyed by a massive fire
3. Period III: Fortress II, a second fortress which was a reconstruction of the first one, and eventually abandoned.

Paul Lapp’s main objection to Albright’s result was the suggestion that during Period II at Tell el-Ful an entire fortress existed at the site. In addition, Albright suggested that towers were built at each one of the four corners of the fortress which, when reconstructed, measured 203 × 187 ft. (62 × 57 m.). However, in actual fact the contour of the mound precludes such an extension of the fort eastwards; and since the tower which Albright discovered stood at a height of 10 ft. (3 m.) and was well preserved; it is not clear why traces of the fort have not been discovered elsewhere at the site.

The evidence so far indicates that there was only one solitary massive tower, not a fortress, during Tell el-Ful Period II (i.e., the period of Saul). It is possible, however, that at the time of Saul only the tower was necessary and that additional walls were added later.

The main reason for the uncertainty in dating the early archaeological periods at Tell el-Ful stems from the attempts to correlate the archaeological finds with the biblical story in Judges 19–21. Albright (1924, 45) dated the foundation of Tell el-Ful to 1330 B.C.E. and the fortress to 1200 B.C.E. Albright was convinced that the archaeological results supported the story as it appears in Judges and dated the destruction of Gibeah in this story to 1100 B.C.E. Albright based this on the assumption that the Benjaminites’ war must have occurred long before Saul’s accession to kingship; by which time the atrocities at Gibeah would have been forgotten. The second period Albright (1933, 8) assigned to the time of Saul on the evidence of potsherds attributed to the last phase of Iron I and before the transition to Iron II period in the 10th century.

However, the archaeological data from Tell el-Ful does not provide enough substantial evidence from which an accurate chronology may be deduced. Therefore, consideration should be made of A. Mazar’s (1981, 1–36) dating considerations at the site of Giloh. The settlement at Giloh (south of the Rephaim Valley, and a twin site of Tell el-Ful) was founded about the time Lachish was destroyed in the reign of Rameses III, c. 1184–1153, i.e., in the first half of the 12th century B.C.E. It is not possible to determine whether this was a few years before or after the destruction. Some of the vessels which appear at Giloh have parallels at Lachish, but other types especially the “collared rim” jars and some of the cooking pots do not appear at Lachish. Taking this dating into consideration one may assume that Period I at Tell el-Ful (like Giloh) was constructed some time around 1153 B.C.E. at the latest, even though there is no clear indication as to how long the Period I settlement survived or how many years elapsed between Period I and Period II at Tell el-Ful.

Lapp’s excavation results allowed Period I to run for 50 years from 1200 to 1150, though a slight modification must also be made. Thus 50 years should be allowed for Period I, from 1153 B.C.E., placing Period II (i.e., Saul’s period) roughly about 1100 B.C.E. It is generally accepted that Saul reigned for a period of about 20 years. It has been argued (Shalom Brooks, 1997) that there was a gap of at least 17 years between Saul’s death and David’s accession to the throne. Hence, taking away about 40 years from 1100 B.C.E. brings us closer to the date of c. 1060–1050 B.C.E., the time which marks the end of the rule of the house of Saul, contrary to the generally accepted dates for Saul, i.e., 1025–1005 B.C.E.

In concluding this discussion it is possible to propose that the end of Period I at Tell el-Ful (most probably a Philistine post, defeated by Saul as described in 1 Samuel 13–14), ended by fire some time before or around 1100 B.C.E. It is possible also that Saul built the large tower (Period II, fortress I) and that it ended with a violent destruction after Saul’s death. The second fortress (Period II fortress II) was built almost immediately after the first one was destroyed as a rebuilding of the first fortress. This fortress, according to the archaeological finds, survived for a short period of about 10 years. Because the fortress was built immediately after the first one had been destroyed, with the building following almost exactly the same plan, it might be suggested that the builder was possibly closely connected with Saul. That person may have been Abner, Saul’s uncle, or Ishbaal, Saul’s son. Is it possible that they tried to rebuild Saul’s tower in order to resettle Saul’s town?
Abner was murdered a few years later (11 Sam 3:27), which would explain why fortress 11 was abandoned.

The archaeological evidence shows that Gibeah stood in ruins until the eight century B.C.E. No attempts were made to rebuild or inhabit the site. Perhaps it was during this period that the story in Judges was written to explain why Gibeah had been destroyed.

**GIBEON** (Heb. גבעון), the largest and best-known city in the territory of the tribe of Benjamin, resembling a royal city (Josh. 10.2).

Biblical Gibeon has been identified with modern el-Jib, 6 miles (9 kms.) north of Jerusalem. The first proper scientific identification of the place with modern el-Jib was made in 1838 by Edward Robinson. During the archaeological excavations of 1956, 1957, and 1959, directed by J.B. Pritchard (1962, 24–52), this identification was confirmed by the discovery of 56 jar handles inscribed with the name Gdn (or Gdd).

Gibeon was first mentioned in Joshua 9 in an incident which tells how the Hivite inhabitants of Gibeon deceived Joshua into making a peace covenant with them. When the deception was discovered, the Gibeonites were sentenced to become “hewers of wood and drawers of water” (Josh. 9:21, 23). Later when the Amorite king Adoni-Zedek attacked Gibeon for siding with the Israelites, Joshua was obliged to protect them and chased the Amorites down the pass of Beth-Horon supported by “hailstones and the sun standing still upon Gibeon” (Josh. 10:1–14; Isa. 28:21). However, the reference to this story in Joshua 9 presents a problem since there is no archaeological evidence for a settlement at Gibeon during the Late Bronze Age, the period in which the conquest stories in Joshua are placed.

In Joshua 18:25 and 21:17 Gibeon is described as a levitical city. The section in 11 Samuel 2:12–17 describes the scene of the contest at the “pool of Gibeon” between the two opponents groups; that of Abner (Saul’s supporters) and that of Joab (David’s supporters). In that contest 12 men of each group were “thrusted through” by the swords of their opponents. In 11 Sam. 20:8 Joab slew Amasa at Gibeon; in 11 Sam. 21:1–10 seven of Saul’s sons were executed, i.e. two of Rizpah, Saul’s concubine, and five of Michal from her marriage to Paltiel (and not Adriel as mentioned in 11 Samuel 21:8; Adriel is the Aramaic version of the Hebrew Paltiel (see Z. Ben-Barak 1991, 87)). According to the narrative, the execution had to be carried out to end the three-year famine during David’s reign, caused by Saul’s violation of the covenant with the Gibeonites, not recorded anywhere else in the Bible.

It is stated (1 Kings 3:4–5) that the people were sacrificing at the high place at Gibeon; Solomon offered one thousand burnt offerings on the altar; and Solomon’s famous inaugural dream is placed at the high place at Gibeon. According to 1 Chronicles 16:39; 21:29 the “tabernacle” was there, too.

Examining the textual material Shalom Brooks (2005) has argued that Gibeon played an important role in Israelite cultic life before Solomon, i.e. since the time of Saul. Firstly, it is not plausible that Gibeon was insignificant during the time extending from Samuel and Saul to David; its cultic popularity does not make sense unless the sanctuary had a long history behind it. Secondly, the description of the worship held at Gibeon makes sense and is convincing particularly since Gibeon is described as a levitical city (Josh. 21:17). This view can be supported by Blenkinsopp (1974) who proposed that the sanctuary that David visited (11 Sam. 21:1) was at Gibeon; and that the first altar that Saul built to Yahweh (1 Sam. 14:33) was in the Gibeonite region and must be a great stone which is at Gibeon (11 Sam. 20:8). This story has cultic significance (Josh. 24:26; 1 Sam. 6:14–16) and may be identified with the altar on which Solomon offered sacrifices (1 Kings 3:4).

In Jeremiah 28:1 Gibeon is mentioned as the home of the false prophet Hananiah; and the “great pool” of Gibeon is mentioned again as the site of a bloody combat when Johanan unsuccessfully attacked Ishmael, Gedaliah’s assassin. A reference from the post-exilic period is found in Nehemiah 3:7. It indicates that the men from Gibeon assisted in the rebuilding of the city wall of Jerusalem. The earliest extra-biblical reference to Gibeon is found at Karnak, in a list of cities either captured or visited during the campaign Sheshonk (biblical Shishak, 1 Kings 14:25) made in Canaan, c. 924 B.C.E.

The archaeological data from el-Jib indicates that there was no Late Bronze Age (c. 1550–1200 B.C.E.) settlement at Gibeon, i.e. prior to the settlement in the Iron Age I Period (Pritchard 11, 1976, 449–50). However, the site was occupied in the EB I (c. 3300–3050 B.C.E.), and MB II (c. 2300–2000 B.C.E.), and these periods are only represented by pottery and other artifacts discovered in tombs on the west side of the mound. It should be noted that late Bronze Age pottery was also found, though these were found in eight of the tombs only. During the 1960s an additional 18 burial caves were uncovered. These had been hewn out of the limestone western slopes of the hill and were in use during the MB I and LB I periods.

The Iron Age I Period (c. 1200–1000 B.C.E.) at the site consisted of a massive city wall, 10.5–11 ft. (3.2–3.4 m.) in width, which was built around the hill. Two water systems were discovered; they were constructed in the Iron Age to provide the inhabitants of the city with water in the time of
The most interesting aspect of these lists is the naming of the wife of "the father of Gibeon" as Maacah. This name does not appear as an Israelite name, but is the name of an Aramean principlality in the Golan. When it appears as a personal name it always represents a non-Israelite or someone of non-Israelite descent. This reference to the non-Israelite Maacah may express itself in intermarriage with the local women. Such intermarriages probably resulted in acquisition of rights of heritage and property. The "father of Gibeon" could indicate the head of a large family, quite wealthy and influential. Saul's ancestors are recorded as Kish, Ner … and Benjamin, that is, in ascending order from the smaller to the larger unit. Also in 1 Samuel 9:1 Kish, Saul's father, is described as gibbor hayil, which is also taken to mean a man of wealth.

[Simcha Shalom Brooks (2nd ed.)]

**GIBEONITES AND NETHINIM** (חָלֶּנָּים; כַּפּוֹר הָאָיִיל). The Gibeonites, residents of four important cities in the vicinity of Jerusalem, feared that they might share the fate of Jericho and Ai, which were destroyed by the Israelites, and tricked "Joshua into a treaty that would spare them (Josh. 9). Had Joshua known that these people were actually Canaanites whom he was pledged to dispossess, he would not have concluded a treaty with them, but the Gibeonites had disguised themselves as coming from a distant land, and had made overtures of devotion to the God of Israel. As they were returning to their nearby cities, the ruse was discovered, but by that time the Israelites were bound by the treaty, and could not drive them out or destroy their cities, which were strategically located to control access to Jerusalem and the roads through the Judean mountains. As a result of this treaty, five Canaanite rulers immediately formed a coalition under the king of Jerusalem and attacked Gibeon. Under the terms of the treaty, the Gibeonites called upon Joshua to come to their aid, and he routed the Canaanite coalition (Josh. 10; cf. 11:19). Thus deceived by the Gibeonites, the Israelites adopted an alternative measure, that of forced labor: "On that day Joshua gave them over to be hewers of wood and drawers of water for the assembly and for the altar of the Lord until this day, at the place which He will choose" (Josh. 9:27). The Gibeonites appear again in connection with a famine during the reign of *David (11 Sam. 21). David learned that the famine was a punishment for an offense committed by Saul, who had put a number of Gibeonites to death out of zeal for Israel and Judah, but in violation of Israel's ancient oath. In expiation, David was obliged to hang
seven of Saul’s descendants on a hill at Gibeath-Shaul, where Saul had resided, and where at least some of his descendants undoubtedly still lived.

The designation Nethinim is derived from the Hebrew verb *natan* (“to give over”), which can mean devoting someone to cultic service. The verb is used in this sense with respect to Joshua’s action toward the Gibeonites in Joshua 9:27, where cultic servitude is involved (“for the altar of the Lord”). The Book of Ezra (8:20) states that David and his commanders “devoted” (Heb. *natan*) the Nethinim “to the service of the levites” which may reflect the ancient practice of committing captives and conquered peoples to temple slavery, which was a widespread phenomenon in the ancient Near East. The Bible itself offers other indications of its operation in ancient Israel. Many modern scholars consider that such was the status of the Nethinim, and cite certain data in support of this view. The Nethinim are listed together with “the sons of the servants of Solomon” in the census of Israelites returning from Babylonia in about 538 B.C.E. (Ezra 2 = Nehemiah 7), and the latter are generally considered to have been royal slaves. Furthermore, a large number of foreign names in the list of Nethinim suggests that they were captives of war.

There are, however, counterindications. It is possible that “servants of Solomon” were not slaves but royal merchants (see: Servants of “Solomon”). The verb *natan*, discussed above, need not necessarily imply servitude, but was used to designate other types of cultic devotion as well. It was applied to the levites, who were hardly temple slaves, and was used to characterize a relationship to the cultic establishment which was primarily administrative and religious; one not based on the economic institution of temple property, under which temple slaves are to be classified.

A later tradition identifies the Gibeonites of Joshua’s time with the Nethinim mentioned in the post-Exilic literature. This tradition probably arose in Palestine during the late Hellenistic or early Roman period, at a time when the Jews had become familiar with temple slavery among the pagans, especially in the form of sacred prostitution. It was probably known to the historian Josephus of the first century C.E. who translates the term Nethinim in Ezra, chapter 2, by the Greek term *hierodoulos* (from δοσκολος ʿιεροί, “sacred slaves”). On the other hand, it probably arose after the completion of the Septuagint translation to the Bible which never renders Nethinim as *hierodoulos*, but either translates the term literally into Greek as *dedomenoi* (so in 1 Chron. 9:2), or uses Greek transcriptions of the original Hebrew term. Modern scholarship, though recognizing that identification of the Gibeonites with the Nethinim represents a later tradition, nevertheless tends to accept the identification of the Nethinim as “uncircumcised” temple personnel, such as those referred to by Ezekiel (44:7). Conclusive clarification of the exact social status and precise cultic functions of the Nethinim must await further evidence, but the possibility that they represented a guild of free cultic practitioners should not be disregarded.

1 Chronicles 9:1–2 states that in the days of David the Nethinim were among the first settlers in the land, but they are never actually mentioned in the pre-Exilic books of Samuel and Kings, nor in any other biblical book presumed to be pre-Exilic. Some scholars claim that this term occurs in Numbers 3:9 and 8:19, which speaks of the dedication of the levites; however, this is unlikely, and it is better to take the repeated *netumin netumin* (“devoted, yea, devoted”) as mere passive participles. Although Ezra 8:20 associates the Nethinim with the levites, they are left as two separate groups elsewhere in the Bible (cf. Ezra 2; 7:7; Neh. 10:29; 11:3; 1 Chron. 9:2). However, there is evidence to support the tradition of 1 Chronicles 9 concerning the pre-Exilic existence of the Nethinim. A hoard of Hebrew ostraca dating from the last days of the kingdom of Judah has been uncovered at the site of ancient Arad in the Negev, where an Israelite sanctuary was in use throughout most of the pre-Exilic period. An official named “the Kerosite” appears in one of the ostraca. The personal name Keros otherwise occurs only once, and that in the list of Nethinim in Ezra 2:44 (= Neh. 7:47): “the sons of Keros.” Therefore it is probable that the Kerosite at Arad was a member of a group of Nethinim, who would logically be located at a sanctuary. If true, this would be the first contemporary attestation of the existence of Nethinim in the pre-Exilic period. Evidence of a comparative nature also suggests that the Nethinim were a very ancient group. The administrative archives at Ugarit have yielded a list of *ytnm*, the Ugaritic form of Hebrew *nethinim* (C.H. Gordon, *Ugaritic Text-Book*, 301:1, 1). They are also mentioned in a poetic ritual text (ibid., 52:3) and it is reasonable to consider them some sort of cultic personnel, as in Palestine. One of the families or groups of *ytnm* at Ugarit had the same name as a group of Nethinim listed in Ezra (cf. Ugaritic *bnt hgb*, ibid., 301:2, 5 with *benei Hagab*, *Hagabah in Ezra* 2:45–46). It is therefore possible that the Nethinim were an international group of persons skilled in certain cultic arts, who had attached themselves to the Israelites at an early period. The manner in which they are listed suggests that they were organized according to family groups, as was customary.

Akkadian sources also throw light on the semantic and institutional background of the Nethinim. Neo-Babylonian documents refer to members of a religious order dedicated to the service of different Babylonian deities, called *širku,* “devotees, oblates” (from Akk. *širiku,* “to give, present”). This word is the semantic equivalent of the Hebrew Nethinim, and the members of both orders were temple servitors (Speiser). The Bible provides several more references to the Nethinim which are instructive. About the middle of the fifth century B.C.E. Ezra recruited Nethinim along with other personnel preparatory to his return to Judah (Ezra 7:24; 8:1–20). Nehemiah 3 describes the resettlement of Jerusalem, whose recruited population of skilled persons included Nethinim. In about 438 B.C.E. the leaders of the people convoked a great assembly in Jerusalem to ratify a new covenant (Neh. 10:1–40), and the Nethinim were among the principal signatories (10:29; cf. 584 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7
Only bona fide Israelites would have been admitted to the covenant, especially at a time when there was great concern in rooting out foreign strains from the community.

[Baruch A. Levine]

### Post-Biblical Period

Nothing more is heard of the Nethinim until they appear in the legislation of the Mishnah which classifies them with proselytes, freedmen, mamzerim, waifs, and foundlings with whom alone they are permitted to intermarry (Kid. 4:1). The Mishnah (Hor. 3:8), however, classifies the Nethinim as being one level lower than mamzerim but preceding proselytes and freedmen. They were regarded as the descendants of the Gibeonites (Yev. 78b–79a) and the prohibition in their marrying Jews of pure pedigree as having been established by King David (ibid. 78b) and reconfirmed by Ezra (Num. R. 8.4). It is impossible to explain this loss of status since the days of Nehemiah. It is possible that, in employing the classification Nethinim, the talmudic sages did not have the actual biblical group in mind at all, but merely reapplied an ancient term to contemporary groups of declassed persons who were the subject of their own legislation, thus stigmatizing them with traditional associations. An attempt by the rabbis to abolish the inferior status of the Nethinim was rejected by Judah ha-Nasi on the grounds that when the Temple was rebuilt it would be deprived of hewers of wood and drawers of water, and the matter was relegated to “the time to come” (Yev. 79b). Maimonides, too, regards the Nethinim as the descendants of the Gibeonites (Yad, Issurei Bi’ah 12:23–24).

### Gibeonites in the Aggadah

Although the Gibeonites deserved no better fate than all the rest of the Canaanite nations, in that the covenant made with them was obtained through subterfuge, Joshua nevertheless kept his promise to them, in order to show the world the sanctity of an oath to Israel (Git. 46a). He hesitated to defend them when they were attacked, but God reminded him, “If you estrange those who are distant you will ultimately estrange also those who are near” (Num. R. 8.4). In the course of time it became obvious that the Gibeonites were not worthy of being received into the Jewish fold and Joshua, therefore, left their fate to be decided by the one who was to build the Temple (TJ, Sanh. 6:9, 23c–d).

During David’s reign Israel suffered from a drought which was ascertained to be God’s punishment for the murder of seven Gibeonites by the descendants of Saul. When David sought to make restitution through ransom, the Gibeonites firmly refused, insisting upon lives from the household of Saul. This cold-bloodedness clearly demonstrated to David the absence in the Gibeonite character of Israel’s three basic attributes – mercy, humility, and benevolence – and he consequently excluded them from the assembly of Israel (TJ, Kid. 4:1, 65c). Ezra renewed the edict, which is to be in force even in the Messianic era (ibid.).

### GIBRALTAR

British crown colony, south of Spain. Jews lived in Gibraltar in the 14th century, and in 1356 the community issued an appeal for assistance in the ransoming of Jews captured by pirates. In 1473, a number of Marranos fleeing from Andalusia applied for permission to settle in Gibraltar. The Treaty of Utrecht (1713), which ceded the fortress to England, excluded the Jews from Gibraltar in perpetuity. However, by an agreement in 1729 between England and the sultan of Morocco, his Jewish subjects were empowered to come there temporarily for the purpose of trade, and the establishment of a permanent community was not long delayed. The majority of the Jewish settlers were from adjacent parts of North Africa. By 1749, when the legal right of Jewish settlement was recognized, the community numbered about 600, being about one-third of the total number of civilian residents, and there were two synagogues. During the siege of 1779–83, many took refuge in London, reinforcing the Sephardi community there. Subsequently, the community in Gibraltar resumed its development. During the period of the Napoleonic wars, Aaron Nuñez *Cardozo was one of the foremost citizens of Gibraltar; his house on the Almeida subsequently became the city hall. In the middle of the 19th century, when the Rock was at the height of its importance as a British naval and military base, the Jewish community numbered about 2,000 and most of the retail trade was in their hands, but thereafter the number declined. During World War II, almost all the civilian population, including the Jews, was evacuated to British territories, and not all returned. In 1968, the community numbered 670 (out of a total population of 25,000); it still maintained four synagogues and many communal organizations. Sir Joshua A. *Hassan was the first mayor and chief minister of Gibraltar from 1964 to 1969. In 2004, about 600 Jews lived in Gibraltar, with the same four synagogues and a communal rabbi. Almost all Jewish children attended the community’s primary schools and girls went to the Jewish secondary school. The community published a weekly newsletter.

[Cecil Roth]

### GIDAL, TIM (Ignaz Nachum Gidawitsch; 1909–1996), photographer. Gidal was born into an Orthodox family of Russian immigrants in Munich. From 1929 he was among the pioneers of modern photojournalism and became one of its leading historians. Based in Jerusalem between 1936 and 1947, and again from 1970, he has achieved an international reputation.
Gidal started taking photographs during his studies (1928–1935) at the universities of Munich, Berlin, and Basle. His photographs were published in the foremost illustrated weeklies in Germany. In 1936 Gidal immigrated to Palestine where he continued his work. In 1938 he moved to London, where he worked for Picture Post, the magazine in which the new medium reached its zenith. Between 1942 and 1944 he served as Chief Staff Reporter for Parade, the Eighth Army magazine. In 1947 he found a new base in New York where he stayed until 1970, the time of his return to Jerusalem. During this period Gidal and his first wife Sonia traveled the world and produced a series of 23 photographic books, entitled My Village. He also served as consultant for Life magazine and taught at the New School for Social Research in New York. From 1971, he taught at the Hebrew University of Jerusalem and produced scholarly works and compilation albums including his seminal Modern Photojournalism: Origin and Evolution 1910–1933 (1972); Ewiges Jerusalem/Eternal Jerusalem 1840–1914 (1980) (one of the most beautiful published collections of photographs on Jerusalem); and in 1988, a major work of illustrated history, The Jews in Germany from Roman Times until the Weimar Republic (in German). During this period, he also published and exhibited his work in Israel, Europe and the U.S., and in 1983 was awarded the prestigious Dr. Erich Salomon Prize in Germany. His photo-history of Palestine/Israel appeared in the Encyclopaedia Judaica Year Books 1973, 1974, and 1975 and were subsequently published in The Land of Israel: 100 Years Plus 30 (1978).

Critics have said about Gidal’s photography that “it has about it a visual innocence going straight for the subject photographed,” but describing his photographs as innocent does not mean that they are necessarily simplistic or naive. Speaking of his own pictures, Gidal insists that he is not an artist. “An artist adds to nature. His personality is an ingredient of his painting. With my camera, I can only use what is already there. Art is expression of the inner self. Photography is a depiction of the outer world.”

Gidal sees his photographs as “a variation on the everlasting theme of the tragicomedy of daily life, facts of the human condition. I do not wait until the selected moment satisfies a constructivist formal urge. I am directed more by participating and by intuition.” His photography communicates an accomplished sense for simplicity and straightforwardness, representing a balance between his keen sense of form and construction and his respect for the subject itself.

His brother, George Gidal (1908–1931), was also a pioneer photojournalist in Germany whose promising career was cut short by his death in a car accident.

GIDDAL (end of third century C.E.), Babylonian amorah. He was one of the best-known younger pupils of Rav. Most of Giddal’s sayings in the Talmud are in the name of this teacher, often via Hiyya b. Joseph, but a few in the name of Hiyya b. Joseph himself. Once Giddal defended himself by swearing on the Holy Scripture and Prophets that his saying was that of Rav (Er. 17a). After Rav’s death he studied in the academy of Huna in Sura, and there came into contact with Zeira (Ber. 49a). He appears to have had heated debates with Huna (“Giddal became impotent through the discourses of Huna”: Yev. 64b). However, he was also ruled by the decisions of Judah b. Ezekiel of Pumbedita (Av. Zar. 11b). Later in life he went to Palestine (Kid. 59a). He interpreted Song of Songs 5:13 in an allegorical way, to teach that one should not study lightheartedly. “Any scholar who sits before his teacher and his lips do not drip bitterness shall be burnt” (Shab. 30b). He interpreted Psalms 39:7 to the effect that anyone who quotes a saying should imagine himself as standing in the presence of the one who originally said it (TJ, Shab. 12, 3a et al.). A man who writes a Torah Scroll was regarded by Giddal as if he had received it at Mount Sinai (Men. 30a). His keen sense of justice is revealed in the story about a field which he intended to buy but was anticipated by another buyer. When Isaac Nappaḥa (the Palestinian) ruled that the owner of the field should sell it to Giddal, he declined even to accept it as a gift (Kid. 59a). This explains his sharp critique of people who dealt unjustly (although he gives it in the name of Rav): “If an inhabitant of Naresh has kissed you, then count your teeth. If a man of Nehar Pekod accompanies you, it is because of the fine garments he sees on you. If a Pumbeditan accompanies you, then change your quarters” (Hul. 127a). Giddal was accustomed to sit at the gates of the ritual bath and to instruct the women about the rules of immersion. When asked whether he was not afraid lest his passion get the better of him, he replied that to him the women looked like so many white geese (Ber. 20a).

GIDEON (Heb. גיִדְוָן, derived from הַגְּדָה, “to cast down”), also called Jeruhaal (Heb. גָּרוּחַ; “let Baal contend,”) or “let Baal replace,” Judg. 6:32), son of Joash, the Abiezrite from ‘Ophrah, in the area of the tribe of Manasseh. Gideon is regarded as one of the “Judges although his biography (Judg. 6:1–8:32) does not contain the usual formula that “he judged Israel.” He was appointed to leadership in an angelic revelation reinforced by signs and wonders of folkloristic nature, which were intended to confirm his divinely ordained mission and to emphasize his charismatic personality (6:34).

Gideon was destined to deliver Israel from the Midianites and their allies, Amalek and “the children of the east” (6:3; cf. *Midian, *Amalek, *Kedemites (Benei Gedem), described as camel-mounted bedouin who came marauding from the fringes of the desert into the cultivated areas west of the Jordan. In the course of their invasions they menaced those Israelite tribes, especially Manasseh, whose settlements bordered on the Valley of Jezreel. These areas made good targets for plunder, and provided convenient passage to the interior and to the coast. Gideon’s brothers appear to have been among those killed in such an attack (8:18–19). At first, only
the Abiezrites responded to his call, but he was later joined by the tribes of Asher, Zebulun, and Naphtali (6:34–35; cf. 7:23). From more than 30,000 followers, a carefully selected force of 300 men was assembled at his camp at *En-Harod (7:2–7). Upon gathering intelligence as to the state of the enemy’s morale, Gideon struck with a surprise night attack that wrought havoc in the Midianite camp. The Midianites and their allies withdrew eastward to the Jordan, and Gideon summoned support from Naphtali, Asher, Manasseh, and Ephraim to block the escape routes, thereby ambushing the retreating enemy. In the pursuit, two Midianite princes, Oreb and Zeeb, were captured and beheaded (7:25; cf. Ps. 83:12–13). At this point, the Ephraimites complained about their exclusion from the original operations, but Gideon diplomatically settled the affair (Judg. 8:1–3). Gideon then resumed the pursuit of the enemy beyond the Jordan, requesting material support, meanwhile, from the non-Israelite cities of Succoth and Penuel. The rulers of these cities refused, fearing Midianite reprisals should Gideon fail. After decisively defeating the enemy, who retreated deeper into the desert, Gideon returned to Succoth and Penuel to settle accounts there (8:4–21). The military victory over the Midianites was remembered and cited for many generations (Isa. 9:3; 10:26; Ps. 83:10; cf. 1 Sam. 12:11).

There can be no doubt about the outstanding position Gideon occupied prior to the founding of the monarchy. Not only are his exploits recorded with un wonted detail, but also, and most exceptionally, the narrative is concerned with his post-military activities. Clearly, he enjoyed some special leadership status, though its precise nature is unclear. It is in Gideon’s time that we encounter a desire for change from tribal, charismatic rule to a more comprehensive, hereditary type when the “men of Israel” offer to make Gideon the founder of a dynasty (Judg. 8:22). However, it should be noted that the verb employed is “rule” (mshl) rather than “reign” (mlkh), the word usually employed for kingship. Apparently, the incident represents an intermediary stage in the movement toward the establishment of a permanent monarchy.

Despite his refusal of the offer, Gideon continued to play a leading role. He had a large harem and fathered 70 sons (8:30). Through his concubine in Shechem (8:31) he was related to some of the leading families in that town (9:1–4), and a son born of the union, *Abimelech, was later crowned king of that city-state (9:6). Gideon also exercised authority in the sphere of the cult. At the outset of his career he had built an altar to the Lord at Ophrah and had dared to destroy a local Baal altar, an act which earned him the name *Jerubaal (6:24–32; cf. 1 Sam. 12:11; 11 Sam. 12:1). Subsequent to his military victories he fashioned an *ephod from the spoils of war (Judg. 8:24–27), which, while it did not meet with the approval of the editor of Judges, illustrates the deeply religious character of Gideon.

[Prof. Nahum M. Sarna]

In the Aggadah

Gideon, Jephthah, and Samson were the three least worthy of the Judges (Rh 25a and b). Because on the eve of one Passover Gideon said of the Lord, “Where are all the miracles which God did for our fathers on this night” (Judg. 6:13), he was chosen to save Israel (Yal. Judg. 62) and that victory was also gained on Passover (cf. Yannai, “Az Rav Nissim,” Passover Hagadah). Another reason was his filial piety (Mid. Hag., Gen. 48:16). When Gideon sacrificed his father’s bullock after the angel appeared to him, he would have transgressed no less than seven commandments, were it not that he was obeying an explicit divine command (Tj, Meg. 114, 72c). The cake of barley bread seen by the Midianite soldier in his dream (Judg. 7:13) indicated that the children of Israel would be vouchsafed victory as a reward for bringing the offering of an omer of barley (Lev. R. 28:6). On the breastplate of the high priest the tribe of Joseph was represented by Ephraim alone. To remove this slight upon his own tribe Manasseh, he had a new ephod made after his victory, bearing the name of Manasses. Although he consecrated it to God, after his death it became an object of adoration (Yalkut, Judg. 64). He is identified with Jerubaal of 1 Samuel 12:11 and from the juxtaposition of this name in that verse with that of Samuel, the rabbis deduce that
even the most worthless of individuals, once he is appointed as leader of the community, is to be accounted as the greatest (RH 25a and b).

In the Arts

In the Arts

Literary works on this theme have tended to stress Gideon's heroism and patriotic motivation. Probably the first treatment occurs in the early 17th-century Old Testament dramatic cycle known as the Stonyhurst Pageants, in which an English writer devoted some 300 lines to the Hebrew judge. Several works in verse and prose dealt with the subject from the 18th century onward, including Gideon; or the Patriot (London, 1749), a fragmentary epic poem by the English dramatist Aaron Hill, a rival of Alexander Pope. In the 18th century, Grete Moeller wrote the verse play Gideon (Ger., 1927), two other dramas being August Schmidlin's Gideon, biblisches Heldendrama... aus der Zeit der Richter (1932) and Gideon (1953), a “tragedy in 22 scrolls” by the Yiddish writer David *Ignatoff. An unusual modern interpretation of the story was the U.S. writer Paddy *Chayefsky’s play Gideon (1962), which dramatizes man's alternate dependence on and rebellion against God.

In art the typology of Gideon is particularly subtle. The miracle of the fleece was interpreted as a symbol of the Jews, first chosen and favored (or wet), and then rejected (or dry). The fleece also became the emblem of the Burgundian Order of the Golden Fleece, one of the supreme honors of knight- hood. Gideon is usually represented as a knight in armor, helmeted, and with a broken pitcher in his hand, as in the 17th-century statue in Antwerp Cathedral. Narrative cycles are rare (though Chartres offers a 13th-century sequence of four episodes) with most representations concentrating on the appearance of the angel, the miracle of the fleece and the dew, the selection of the 300 warriors, or the victory over the Midanites. The angel’s appearance and Gideon’s incredulity, seen as a prefiguration of the Annunciation, are depicted at Chartres and in the tapestry of La Chaise-Dieu (1510). The miracle of the fleece occurs frequently at Chartres; in the Amiens and Avignon cathedrals (15th century); in the Petites Heures d’Anne de Bretagne (15th century); in a 16th-century fresco in Chilandari, Mount Athos; and in a fresco by Salvador Rosa (1615–1673) in the Quirinal. The selection of the warriors is illustrated in the French Psalter of St. Louis and the English Queen Mary’s Psalter (both dating from the 13th century) and by Federico Zuccaro (1540/43–1609) in a drawing at the Louvre. The victory is again portrayed at Chartres.

An early musical interpretation of the Gideon theme occurs in Daz Gedeones wollenvlüs (“Gideon’s Woollen Fleece”), an allegorical song by the minnesanger Rumelant (c. 1270), which typically combines the search for biblical prototypes of the knightly ideal with the mystical concept of divine love. The martial atmosphere also prevails in at least some of the later compositions on this subject, beginning with “Gideon – Der Heyland Israels,” the fifth of J. Kuhnau’s Biblische Sonaten for keyboard instrument (1700). Johann Mattheson’s oratorio Der siegende Gideon, written for the Hamburg celebration of Prince Eugene of Savoy’s victory at Belgrade (1717), was begun, completed, and performed in the record time of 11 days. One of J. Chr. Smith’s oratorios for which the music was taken wholly or largely from Handel was his Gideon (1769). Other compositions inspired by the subject include oratorios by Friedrich Schneider (1829) and Charles Edward Horsley (1959) and a choral work for eight male voices, Les soldats de Gédéon (1868), by Camille Saint-Saëns.

GIDEON, MIRIAM (1906–1996), U.S. composer of choral and orchestral works. Gideon was born in Greeley, Colorado, to Abram Gideon, a professor of philosophy and ordained rabbi, and Henrietta Shoninger Gideon, a teacher. Gideon’s choice of a career in music was influenced by her uncle Henry Gideon, an organist and choir director at Temple Israel in Boston, with whom she spent summers. She studied piano and composition while attending Boston University, graduating in 1926 with a degree in French and mathematics. Gideon continued her musical studies in New York City, ultimately earning an M.A. from Columbia in 1946. She taught at several institutions in New York City, including City College, the Jewish Theological Seminary (1955–91), and the Manhattan School of Music (1967–91). In 1970, she received a Doctorate of Sacred Music in Composition, from the Jewish Theological Seminary. She married Frederick Ewen, an English professor, in 1949.

Gideon wrote over 50 compositions covering the gamut from orchestral to vocal chamber works. Her early choral settings include Slow, Slow Fresh Fount (1941) and Sweet Western Wind (1943). She turned to contrapuntal vocal chamber work with The Hound of Heaven (1945). In 1948, she was awarded the Bloch Prize for choral work for How Goodly Are Thy Tents – Psalm 84 (1947), a work in a modal idiom with Jewish melodic contours. Early orchestral works were Lyric Piece for String Orchestra (1944) and a full orchestral work, Symphonia Brevis (1953). Works with Jewish themes included May the Word of My Mouth (premiere, 1938), Adon Olom (1954), Three Biblical Masks (1958), and the cantata The Habitable Earth (1965), based on the Book of Proverbs. Her more important vocal chamber works include The Condemned Playground (1965), Questions on Nature (1964), Rhymes from the Hill (1968), and Nocturnes (1976).

Gideon was the first woman ever commissioned to set Jewish liturgy. She completed Sacred Service for Sabbath Morning (1971), based on Reform liturgy, for The Temple, Cleveland, Ohio. Shirat Miriam L’Shabbat, for Conservative lit-
urguy, was completed in 1974 for Park Avenue Synagogue and published in 1976. Later Jewish text settings include *Eishet Chayil (A Woman of Valor)* (1982). Her sacred compositions reflect the influences of her exposure to synagogue music, yet remain introspective and personal. Awards include an ASCAP, for symphonic music (1958); National Federation of Music Clubs (1969); and a National Endowment for the Arts Award (1974). In 1975, she became the second woman ever admitted to the American Academy and Institute of Arts and Letters.

[Judith S. Pinnolis (2nd ed.)]

**GIDEON, SAMSON** (originally Gideon Abudiente; 1699–1762), English financier. His father Reuel Gideon Abudiente (c. 1655–1722), a West India merchant in London, was descended from the Hamburg scholar of the same name. Gideon early made a considerable fortune by speculation. In the mid-18th century, he was the principal agent for raising English government loans. His advice helped to preserve the financial stability of the country during the Jacobite rebellion in 1745. During the Seven Years’ War (1755–63), he advised the English government in financial matters, and in 1758 was thanked by the king for his services in raising a loan for Hanover. Gideon left more than £500,000. In his younger days he supported the synagogue, and in 1720 contributed a sonnet in English to the Spanish translation of the Psalms by D. Lopez *Laguna. Subsequently, however, he bought a country estate, married out of the faith, had his children baptized, and, on the pretext of disapproving of the Jewish Naturalization Bill (1753), resigned his synagogue membership. He continued nevertheless to contribute to the synagogue secretly and left it a large legacy on the condition that he would be buried in its cemetery. By 1750 Gideon had obtained a coat of arms for himself and was a substantial landowner. In 1757 his daughter married Viscount Gage. In 1759 he obtained the title of baronet for his son, also samson gideon (1745–1824), who became Lord Eardley in 1789. The son had no contacts with Judaism. In 1770 he was elected to Parliament, the first member of Parliament to have known Jewish ancestry. He was also the first person of known Jewish ancestry to be granted a peerage in Britain. Among his descendants was Hugh Culling Eardley Childers (1827–1896), who was chancellor of the Exchequer in 1882–85.

[G. Roth / William D. Rubinstein (2nd ed.)]

**GIEHSE, THERESE** (1898–1975), German actress. Giehse was born as Therese Gift to the textile merchant Salomon Gift and his wife, Gertrude, in Munich. Between 1918 and 1920 she took acting lessons and made her debut at the Buehnenver- ein in Munich (1920). She adopted the name Giehse, and after engagements at various provincial theaters worked under Paul Barnay (1884–1960) in Breslau (now Wroclaw, Poland). Otto Falckenberg (1873–1947), then director of the Muenchner Kammerspiele, invited her to join his ensemble in 1925 where she stayed until 1933 and also got to know the *Mann family. Giehse, Erika Mann, and Klaus Mann founded the Literarische Cabaret – “Die Pfefermuehle” in 1933 in response to the Nazi rise to power. She immigrated via Austria to Switzerland in March 1933 because of the increasing political pressure and refounded Die Pfefermuehle. During her exile in Zurich (1933–37) she also toured in various European and American cities and through her marriage to British actor John Hamp- son-Simpson became a British citizen (1936). From 1937 on she worked at the Zuericher Schauspielehaus and starred in the world premiers of Bertold Brecht’s plays *Mutter Courage und ihre Kinder* (1941), *Der gute Mann von Szestau* (1943), and *Herr Puntila und sein Knecht Matti* (1948). She performed at various theaters in Munich, Berlin, and Zurich from 1949 to 1952 and had successes with major roles in plays by Friedrich Duerrn- matt like *Der Besuch der alten Dame* (1956) and *Die Physiker* (1962). In 1954 she returned to Munich and had various roles in film, radio, and theater productions. She was awarded the Bundesfilmpreis/Filmband in Silber (1955).

[Bjoern Siegel (2nd ed.)]

**GIESSEN, city in Hesse, Germany. A persecution of the Jews took place there in 1350. Jews are again mentioned in 1375. In the 17th century the few dozen Jews of Giessen were compelled to listen to missionary sermons by Christian preachers. In 1662 they were expelled from the town. Jews were permitted to return and to settle in Giessen in 1708. Some Hebrew printing took place in Giessen during the 17th and 18th centuries, most of it by non-Jewish printers. The community numbered 200 in 1828, 458 in 1871, and 1,035 (3.3% of the total population) in 1925. In 1933, under the Nazi regime, Richard Laqueur, rector of the university, was dismissed from his office because he was Jewish; about 750 Jewish students were expelled from the university. The number of Jews in Giessen was reduced to about 100 in 1935. During World War II the last Jewish family in Giessen was forced to leave in 1938. On the eve of the war there were 20 Jewish families in Giessen and its environs in 1933 had left. The last synagogues erected in 1867 and 1899 were destroyed during *Kristallnacht* in November 1938. By the end of the year 730 of the out of the 1,265 Jews living in Giessen and its environs in 1933 had left. The last Jews were deported in September 1942. There were 27 Jews living in Giessen in 1967 and around 200 at the beginning of the 21st century.

[Akiva Posner]
GIFT, the transfer of legal rights without any consideration or payment. It is essentially no more than a sale without payment and all the principles of the law of sale apply (see "Sale").

The Da'at of the Parties
The decision (gemirat ha-da'at) of the parties to conclude a gift transaction – the intention of one to give and the other to receive – is established by means of an act of kinyan, i.e., by the performance of one of the recognized acts whereby property is acquired (see "Acquisition, Modes of"). Upon performance of the kinyan, ownership of the property passes from the donor to the donee and neither may any longer withdraw from the transaction. The test as to whether or not the gemirat ha-da'at exists is an objective one, namely: if the parties performed an act customarily performed by people in order to conclude such a transaction and if in the particular circumstances of the case there existed no reason why most people would not conclude the transaction, the gift will be effective (Kid. 49b). A gift may be conferred on a person without his knowledge, because it is assumed that he agrees to get a benefit, the rule being that "a benefit may be conferred on a person in his absence, but an obligation may only be imposed on him in his presence" (Git. 11b). Similarly, the gemirat ha-da'at of the parties does not require a consensus ad idem between the parties. If it is manifest that the donor made up his mind to effect the gift, whereas the donee has not made up his mind to receive it, the latter may retract but the former may not, since the gemirat ha-da'at of a party to a transaction precludes him from retracting from it. Consequently, when a person confers a gift on another through a third party, the donee may refuse to accept it until it has reached his hands, even if he has heard of the intended gift – but the donor may not withdraw, since the person acquiring the gift on behalf of the donee performed a kinyan whereby the donor's decision to conclude the transaction was made (Yad, Zekhiyyah 4:2). If the donee should discover a defect in the gift, and it is of such nature that people would generally not want such a gift, the donee may retract even after the gift has come to his hands (Kesef Mishneh, Zekhiyyah 4:1, concl.).

When it is manifest to all that there was an absence of gemirat ha-da'at on the part of both parties, the transaction will be void. A person cannot transfer to another, by way of a gift, something which is not yet in existence, or which is not his own; nor can a gift be conferred on someone who is not yet born; nor can a gift be conferred of something which one owns but which is not at the present time in his possession, such as where the owner has been robbed (see "Theft and Robbery"). According to some scholars, however, even these kinds of gifts may validly be conferred in certain circumstances (see "Sale"). Similarly, if a person promises a valuable gift to another verbally, but without a kinyan, so that the latter does not rely on the promise, there would not even be any moral sanction against him if he should withdraw (BM 49a).

If it is clear, notwithstanding an act of kinyan, that the donor did not really intend to effect the gift (for example, he was compelled to make the gift under duress), it will be void. Even if there was no duress, but prior to the gift the donor had declared before witnesses that he was not making it of his own free will, the transaction will also be void, even if the witnesses were not themselves aware of any duress exercised against him, because by his declaration he manifests an intention of not making the gift (Yad, Zekhiyyah 5:4; see "Oones"). Moreover, as a gift must be made openly and publicly, an undisclosed gift is invalid, since "the donor is not presumed to have made up his mind to a gift, but is scheming for the loss of other people's property" (ibid. 5:1). Similarly, if a person makes a written disposition of all his property to one of his sons, the latter does not acquire it all since the assumption is that the father intended to do no more than appoint this son administrator so that his brothers should accept his authority. This is also the case if he made a disposition in favor of his wife. However, where he disposes of only part of his assets to his wife or son, or where he expressly states that an absolute gift is intended, the gift will be effective (ibid. 6:2–4). A gift by a woman before her marriage by way of a written disposition in favor of a person other than her prospective husband becomes ineffective if the latter should die or be divorced from her, since the disposition of her assets to another was made in order to keep these from her husband in the event of his inheriting her (ibid. 6:12). On the other hand, one who gives money for kiddushin ("marriage") which is known to be invalid, e.g., to one's own sister, intends to do so for the sake of gift (Kid. 46b). According to another opinion he gives the money as baiment.

A deaf-mute, an idiot, and a minor lack the legal capacity to make a gift, since they have no da'at, but the scholars prescribed that minors or deaf-mutes, depending on the degree of their understanding of the nature of the transaction, may effectively make certain gifts, by virtue of the rule of "for the sake of his sustenance" (Yad, Mekhirah 29; see "Sale"). According to many opinions, they may also receive gifts, even in terms of biblical law (Tos. to Kid. 19a). The sages also prescribed that someone may acquire and receive a gift on behalf of a minor, even if the latter is no more than one day old (Rashbam to BB 156b).

Conditions of the Gift
The donor may make the gift conditional upon certain terms, failing which the gift will be void (see "Conditions"). As in the case of a sale, the stipulating party must impose his conditions in such a manner as to make it clear and known to all that he intends in all seriousness that the gift be considered void if the conditions should not be fulfilled and that he is not merely making a statement at large (Yad, Zekhiyyah 3:6–7). When it is apparent from the circumstances that he intends to make his gift subject to the happening of certain events, the condition will be operative even if not expressly stated and, at times, even if not stated at all (Tos. to Kid. 49b). Thus a gift would be void if made by a person who transfers all his assets to another on hearing of his son's death, but subsequently finds out
that his son is still alive – since the circumstances show that he would not have given away all his assets if he had known that his son was really alive (bb 164b). Similarly, a gift made to the family of one’s bride is returnable, if the marriage should fail to take place and the gift was not of a perishable kind (ibid.). So too, where it is customary for wedding gifts to be sent to a friend in order that the latter shall give his own similar gifts to the donor upon his own marriage; the latter may claim such from the former if they are not given, gifts of this kind being regarded as similar to loans (Yad, Zekhiyyah 7).

The donor may stipulate that the gift is to be returned, in which event the gift is valid but the recipient is obliged to return it after the expiry of the stipulated period. During this stipulated period, however, this gift is the property of the recipient, like all his other property; but after the stipulated period, the recipient must return the property to its former owner, and failure to do so will amount to the nonfulfillment of a condition, voiding the transaction of a gift ab initio (Sh. Ar., h. m 241:6). Similarly, the donor may stipulate that he is making a gift, first for the benefit of one person and then for another (see *Wills). Where the true intention of the donor is in doubt, his ultimate purpose may be deduced with the aid of the rule that “he who gives a gift gives in a liberal spirit.” Thus if one says, “give to so-and-so a house capable of holding 100 barrels,” and it is found to hold 120 barrels, the donee will have acquired the whole house (bb 71a). Generally, no responsibility is imposed in connection with the gift, and if it should be foreclosed, the donee will have no recourse against the donor, unless expressly provided for between the parties (Yad, Shekerim 13:1).

In the State of Israel the rules of gift are ordered in terms of the Gift Law, 1968, consisting of six material paragraphs. On the question of the degree of its reliance on Jewish law, see Elon in bibliography.

[Shalom Albeck]

In the State of Israel

INTERSPOUSAL GIFT. Issues involving the Gift Law frequently arise in the rabbinical courts in the context of division of property between a husband and wife in the course of divorce (see *Divorce; *Joint Property).

In File 2319/42, 13 PDR 144, the wife claimed that she was entitled to 50 percent of the rights in the apartment, based on the fact that the apartment was registered in the Land Registry Office in the name of both spouses. The husband claimed that the apartment was purchased with his money and that it was mistakenly registered in the wife’s name as well, since he did not know at the time that she was mentally ill, and upon becoming aware of her mental illness he had immediately filed for divorce. The District Rabbinical Court in Tel Aviv ruled that, even if the apartment was purchased exclusively with the husband’s money, he could not have done so without the loan that he received from the Housing Ministry, and this loan is only granted if the apartment is registered in the name of both spouses. Consequently, registration of the apartment in both of their names must be regarded as an unconditional gift made by the husband to his wife. The rabbinical court accordingly held that half the apartment did indeed belong to the wife.

An additional question in this field arose before the Supreme Court in the case of Boehm (HCJ 609/92 Boehm v. The Rabbinical Court of Appeals, 47(3) PD 288). A petition was filed to reverse the decision of the Rabbinical Court of Appeals, ruling that the apartment of a couple divorced as a result of the wife’s infidelity would belong solely to the husband, because the half-interest in the apartment given by the husband to his wife was given on the condition that she not betray her husband. Even though this condition had not been expressly written or stipulated orally, the rabbinical court inferred that there had been an implied condition to that effect, based on the parties’ presumed intention. (In addition, the Court ruled that the husband’s offer to give the wife 30% of the value of the apartment as a compromise was not binding upon him once the wife refused the offer.) The appellant’s argument was that the decision violated civil law principles in effect in the State of Israel, regarding equal rights of women as expressed in the Woman’s Equal Rights Law, 5711 – 1951, and provisions of the Gift Law, 5728 – 1968, with respect to the possibility of revoking a gift. It also contradicted the provisions of the Basic Law: Human Dignity and Freedom.

The Supreme Court (per Justice Menachem Elon) ruled that, “as a factual finding had been made that the apartment was purchased with the husband’s money, and that legally, the act constituted an interspousal gift, the Court’s task was solely to ascertain what the parties presumably intended to accomplish by that act.” As such, the issue did not concern the woman’s equal rights or basic rights (p. 294 of the decision, ibid.). In addition, the Court ruled that, since the rabbinical court has jurisdiction to decide the matter, it must rule according to Jewish law. On the basis of these findings, the Court denied the petition, holding that the rabbinical court ruled according to Jewish religious law and that, accordingly, this gift must be viewed as a conditional gift. “He did not make the gift with the intention that she should leave him (i.e., the gift was given on the condition that if she leaves him he would not confer her any rights)” (ibid.).

Justice Elon noted further that, even under the provisions of the Gift Law, a gift may be given conditionally, and one can infer that such a condition exists on the basis of the presumed intention of parties, as evidenced by the circumstances. Indeed, in a number of cases the Supreme Court ruled regarding interspousal gifts, that circumstances occasionally indicate that the gift was given conditionally, and once the judicial forum has construed the gift contract as being conditional, the condition becomes an integral part of the contract. By the same token it is clear that the rabbinical court was entitled to interpret the contract as including a condition, pursuant to Jewish law.

The Supreme Court further stated in its decision that the rabbinical court had ruled that a gift between spouses is given on the condition that they will not divorce, even in the reverse situation – i.e., where the wife gave half-ownership in
the apartment to her husband. In that case too the husband must return his half-ownership of the apartment to the wife (see also under "Condition").

**A GIFT FROM A LIVING PERSON AND A WILL.** The Supreme Court also considered the laws pertaining to gifts under Jewish law in the case of Abergil ([CA 2555/98 Abergil v. The Estate of Ben Yair, 53(5) PD 673, per Justice Yitzchak Englander](https://www.justis.gov.il/SupremeCourt/SupremeCourt)) In that case, a man gave his house as a gift to the appellant, by means of a written deed of gift signed by witnesses and certified by a notary. His intention was for the gift to be effective according to both the laws of the State and Jewish law. The giver wrote in the gift deed that he was giving his apartment as a gift to the appellant "from this time while I am alive until one hour before my death." The Supreme Court discussed the use of this formulation in halakhic literature. Its purpose is to effect conveyance of the gift in such a manner that title in the gift would be given at the time of the conveyance of the deed of gift, while its proceeds – the right to use the gift – would not be conveyed until after the death of the giver (ibid., p. 681).

The Supreme Court notes that the "Jewish legal tradition does not allow a person to bequeath property to "one who is not competent to inherit from him" and similarly does not allow for "disinheritance of an heir" (Sh. Ar, Hm 281, A). Hence, the only permissible way under Jewish law to allocate an estate in deviation from the rules of inheritance is through a living gift – that is, by using language of a gift and not of inheritance. Consequently, the Court ruled that in essence this was a will pursuant to the Israeli law: "From a substantive perspective, and pursuant to the Succession Law, a gift that becomes effective upon death of the donor is a will ... the essence of the transaction must be viewed as a true will within the meaning of the civil Succession Law. Therefore, since the will did not conform with a number of requirements prescribed by the Succession Law, 5725 – 1965, such as the requirement that the will not benefit any one person involved in drafting it (section 35 of the Law), it is void." The Court also stated that according to these holdings, "a Jewish person wishing to dispose of his estate in accordance with halakhah must ensure that he complies with the provisions of the civil law regarding wills and that there are formulations that satisfy the requirements of both legal systems" (ibid., p. 686; see also under "Wills; "Succession").

Rubinstein), regarding a gift that is subject to an implicit condition](https://www.justis.gov.il/SupremeCourt/SupremeCourt) and is under "Condition".

**GIFTER, MORDECAI** (1916–1991). U.S. rabbi and talmudic scholar. Gifter was born in Richmond, Virginia, but he moved to Baltimore with his family, when his father realized that his son could not be adequately taught in a city with such limited Torah resources. He studied at Yeshiva College and at the Rabbi Isaac Elchanan Theological Seminary (*RIETS*) in New York under Rabbi Moshe Halevi Soloveitchik. On the advice of his uncle, Reb Yehuda Leib Zer, one of the directors of the *RIETS*, a newly ordained Rabbi Gifter went to study in the Telz yeshivah of Lithuania in the winter of 1932. He became very close to the rosh yeshivah, Reb Avrohom Yitzchok Bloch. With the expansion of the Ner Yisroel yeshivah in Baltimore by Rabbi Jacob Isaac Ruderman, Rabbi Gifter was invited to teach there. In 1943, Rabbi Gifter became rabbi in Waterbury, Connecticut, and one year later, his uncles, R. Eliyahu Meir Bloch and R. Chaim Mordechai Katz, founded the Telz yeshivah in Cleveland. They asked him to join them.

Gifter moved to Israel in 1976, founding the Telz yeshivah in Kiryat Telz-Stone near Jerusalem with the support of Irving Stone, Cleveland philanthropist. However, three years later, the rosh yeshivah of Telz in Cleveland, Rabbi Boruch Soro- tkin, died, and Gifter returned to Cleveland to succeed him. He remained at Telz until his death. The growth of Telz mirrored the growth and self confidence of ultra-Orthodoxy. A gifted speaker in Yiddish and English, Gifter was known for his humility. Introduced as a *gaon* in a local synagogue, he spent the first part of his discourse refraining the compliment and speaking of the denigration of learning and the inflation of complimients over the generations.

Among the works he wrote were *Hirhurei Teshuvot* (1977), *Torah Perspectives* (1986), and *Sefer Pirkei Moed* (1992).

[Michael Berenbaum (2nd ed.)]

**GIKATILLA (Chiquitilla; Heb. גיקטילה), ISAAC IBN** (fl. second half of 10th century), Spanish Hebrew poet and grammarian. A student of *Menahem b. Jacob ibn Saruq, he took part in the controversy on grammar between him and *Dunash b. Labrat. Moses *Ibn Ezra in his *Kitab al-Muhadara wal-Mudhakara* (published by A. Halkin (1975), 314) states that Isaac ibn Gikatilla and his contemporary the poet R. Isaac Mar Saul surpassed their immediate predecessors – Dunash b. Labrat, Menahem ibn Saruk, and other contemporary poets in nobility and eloquence, and that “both came from Lucena and had similar skills, but Ibn Gikatilla was superior because of his greater knowledge of Arabic culture.” Moses ibn “Tibbon in his commentary (still in manuscript) to the azharot of the...
Solomon ibn *Gabirol mentions that Isaac ibn Gikatilla had also written some *azharot. Only in 1950, however, were four manuscripts containing the majority of these *azharot published by M. Zulay. The influence of *Saadiah Gaon is strongly marked in these poems. This type of *azharah is the first of its kind to be written in Spain, and at the end of each name “Isaac” appears. Besides this work, Moses ibn Ezra ascribed another verse to Gikatilla. This ascription has been authenticated by a number of scholars.

Isaac ibn Gikatilla, together with Judah ibn Daud (Hayyuj?) and Isaac ibn Kapron, who were also students of Menahem ibn Saruk, actually defended their teacher against the attacks of Dunash b. Labrat. In their reply (ed. together with Yehudi ben Sheshet's reply by S.G. Stern and by S. Benavente, see bibl.), they praise the grammatical works of Menahem, enumerate some of Dunash's errors, and try to invalidate his system of comparison between Hebrew and other Semitic languages, Arabic and Aramaic. In their criticism of the new metrical system introduced by Dunash adapting the Arabic basic elements, they accuse Dunash of having corrupted the Hebrew language by adapting it to the Arabic meter. *Yehudi b. Sheshet, the pupil of Dunash, replied and from his words “Behold, the greatest among you, ben Gikatilla” (Stern, pt. 2, p. 17) it can be deduced that Gikatilla was presumably the most outstanding scholar among his colleagues. Yehudi b. Sheshet's enumeration of the errors of Gikatilla makes it possible to estimate the extent of the latter's contribution to the jointly written reply of Menahem's disciples. Gikatilla was a teacher of the grammarian Jonah *Ibn Janah whom he encouraged in the study of the Arabic language. Ibn Janah, in many of his own works, cites Gikatilla without, however, mentioning the source. Other grammarians of the Middle Ages, such as Judah *Ibn Bal'am, also quote him.

GIKATILLA (Chiquatilla), JOSEPH BEN ABRAHAM (1248–c. 1325), Spanish kabbalist whose works exerted a profound and permanent influence on kabbalism. Gikatilla, who was born in Medinael, Castile, lived for many years in Segovia. Between 1272 and 1274 he studied under Abraham *Abulafia, who praises him as his most successful pupil. Gikatilla, who was at first greatly influenced by Abulafia’s ecstatic, prophetic system of kabbalism, soon showed a greater affinity for philosophy.

His first extant work, Ginmat Egoz (1615), written in 1274, is an introduction to the mystic symbolism of the alphabet, vowel points, and the Divine Names. The title derives from the initial letters of the kabbalistic elements *gematria (“numeration”), *notarikon (“acrostics”), *temurah (“permutation”). In common with his mentor, Gikatilla also links this mystic lore with the system practiced by *Maimonides. This work makes no suggestion of the theosophical doctrine of Sefirot or “spheres” (see “Kabbalah”), later adopted by Gikatilla. The Sefirot here are identified with the philosophical term “intelligences.” On the other hand, the author shows himself familiar with the revelatory mysticism of *Jacob b. Jacob ha-Kohen, although the latter is not mentioned by name. Several of Gikatilla’s other writings also deal with the theory of letter combinations and alphabetical mysticism. However, in the 1280s, Gikatilla evidently made contact with *Moses b. Shem Tov de Leon, and thereafter the two exerted a mutual influence on each other’s kabbalistic development.

Before writing Ginmat Egoz, Gikatilla had written a commentary on the Song of Songs (but not the one in the Paris manuscript 790 which bears indications that Gikatilla wrote it in 1300 in Segovia). The later work endorses the doctrine of *Shemiot, a theory of cosmic development based on the sabbatical year, as expounded in the Sefer ha-*Temunah. Gikatilla also compiled Kelalei ha-*Mitzvot, explaining mitzvot by a literal interpretation of halakhah (Ms. Paris 713); a number of piyyutim (Habermann, in Mizraḥ u-Ma‘arav, 5 (1932), 351; Gruenwald, in Tarbiz, 36 (1966/67), 73–89), some devoted to kabbalistic themes; and Sefer ha-Meshalim, a book of proverbs to which he added his own commentary, whose ethical precepts were close to kabbalistic principles. (The proverbs alone published by I. Davidson, in Sefer ha-Yovel shel “Hadoar” (1927), 116–22; the book with commentary, in Ms. Oxford 1267). While Gikatilla wrote numerous works on Kabbalah, many others have been attributed to him erroneously. A. Altmann, for instance, has shown that Gikatilla was not the author of the lengthy Sefer Túimei ha-Mitzvot. Written by an unknown kabbalist about 1300 (Cambridge Ms.) and also attributed to Isaac ibn Farhi, it had a wide circulation. A number of treatises await clarification as to authorship.

Gikatilla’s most influential kabbalistic work, written before 1293, is his Shaarei Orah (1559), a detailed explanation of kabbalistic symbolism and the designations of the ten Sefirot. He adopted a system intermediate between that of the Geronese school of kabbalists and the *Zohar. This is one of the first writings to disclose knowledge of portions of the Zohar, although it departs from its approach in several fundamental respects.

Sefer Shaarei Zedek (1559) provides another explanation of the theory of Sefirot, reversing their normal succession. Other published works by Gikatilla are Sha’ar ha-Nikkud (1601), a mystical treatise on vocalization; Perush Haggadah shel Pesah, a kabbalistic commentary on the Passover Haggadah (1602); a number of essays on various subjects (publ. in Sefer Erez ba-Levanon, ed. by Isaac Perlov, Vilna, 1899); kabbalistic works remaining in manuscript are: mystical treatises on certain mitzvot; a commentary on the Vision of the
Chariot of Ezekiel (numerous manuscripts); and consider-
able points of halakhah from the second half of the 14th century has been erroneously ascribed to Gikatilla. Joseph *Caro made use of them in his Beit Yosef. Problems of Kabbalah put to Joshua b. Meir ha-Levi by Gikatilla are in manuscript, Oxford, 1565. Also extant are a number of prayers, such as Tefillat ha-Yihud, Me'ah Pesukim ("100 Verses," on the Sefirot), and Pesukim al-Shem ben Arba'im u-Shetayim Otiyyot ("Verses on the 42-Lettered Divine Name"). Commentaries were written on Sha'arei Orah by an anonymous 15th-century kabbalist (publ. by G. Schollem, in his Kitvei Yad be-Kabbalah (1930), 80–83) and by Mattathias *Delacrut (mainly included with the work). A summary was translated into Latin by the apostate Paul Riccius (1516).

Gikatilla made an original attempt to provide a detailed yet lucid and systematic exposition of kabbalism. He was also the originator of the doctrine equating the infinite, *Ein Sof, with the first of the ten Sefirot. The conception was rejected by the majority of kabbalists from the 16th century onward, but his works continued to be highly esteemed and were published in many editions.

[Gereshom Schollem]

GIKATILLA (Chiquatilla/Chiquitilla), MOSES BEN SAMUEL HA-KOHEN (11th century), Spanish Jewish liturgical poet, Hebrew translator, and grammarian. Born in Córdoba of good family, he lived principally in Saragossa and, it seems, traveled extensively. One of a group of youths favored and supported by *Samuel ha-Nagid, Gikatilla wrote poems of praise dedicated to his benefactor and to the latter's son Joseph. Most of his works in the fields of grammar, Bible exegesis, and other subjects have been lost except for quotations in the works of others, and are now known only through laudatory or critical references to them. Abraham *Ibn Ezra refers to him as the “greatest of the grammarians.” From the quotations ascribed to him, it can be deduced that he wrote commentaries in Arabic to most of the books of the Bible. He mentions, always with a note of criticism, *Saadiah Gaon, Hayyuj, Samuel ha-Nagid, Ibn Janah, Yeshu'ah, the Oriental paytanim, Midrashim, Christian translations of Psalms, and others. He made extensive use of the Targum. His Arabic commentary on Psalms still remains in manuscript; the only incomplete copy has the commentaries on Psalms 12, 42, 44, 69, 74, 78, 104, 109, 119, 141, and 144 (in fragmentary versions); the commentaries on Psalms 43, 70–73, 79–103, 110–118, and 145–150 are lost. The text of this copy is the work of Ibn Gikatilla, as is shown by his own quotations in his treatise on masculine and feminine Hebrew gender. Ibn Gikatilla says explicitly that he had written earlier commentaries on Job, Isaiah, and possibly on Jeremiah and Amos. The passages in this unique copy demonstrate that Ibn Gikatilla’s commentary has four levels, paying attention to semantics, morphology, syntax, and exegesis. Although the two first levels continue the line of the Andalusian Hebrew grammarians from the 10th century, especially of the Kitab al-Na’taf by Hayyuj, they combine the oldest rabbinical tradition with the intellectual trends of his time. The original exegetic method developed by Ibn Gikatilla was very critical, of high intellectual quality, and had a profound influence on other Andalusian authors. According to Ibn Gikatilla, the Psalms are prayers and songs. He usually adopted the literal meaning (haqiqa) of the text and used the figurative meaning (majaz) for unusual texts like Psalm 26:7: “Gates, raise yours heads.” Ibn Gikatilla usually rejects miracles; he is probably the most rationalistic of all medieval commentators. Ibn Bilam accused him of “agnosticism.” Other extant fragments of his exegetical writings suggest also that he was a bold and original commentator. He was among the few who explained the aspirations of the prophets as applying to their own times and not to those of the Messiah. He was the first exegete to attribute the chapters from Isaiah 40 onward to a prophet other than Isaiah. On Isaiah 41, the following is reported in his name: “These first consolations, from the middle of the book onward, refer to the Second Temple” (i.e., not to the messianic age). Concerning Psalm 106:47 he said, “This psalmist was in Babylon.” Similar comments on other chapters are also cited in his name. He wrote a Sefer Dikduk (“Book of Grammar”): The Book on the Masculine and Feminine (Kitab al-Tadkir wal-Ta’init). This monographic lexicographical work, probably inspired in the Muslim book by Anbary from Basra, became quite famous, and it is quoted in other Andalusian works as “small but tasty.” Gikatilla also translated from Arabic into Hebrew the work of Hayyuj on weak and geminate Hebrew verbs for non-Arabic-speaking Jews from North Spain, and possibly also some works of Samuel ha-Nagid. As a translator, he innovated and fixed the Hebrew terminology for Hayyuj’s theories, which is still used today. He added hundreds of glosses to the original Arabic version, sometimes reducing and sometimes extending the text, and also included some explicit criticism on Hayyuj. In that way Gikatilla offered an updated version of the original Arabic work.
The scanning excerpts of Gikatilla’s commentaries were collected by S. Poznański. Of his Hebrew hymns and poems, only ten have been published. Moses Ibn Ezra said of him: “He was among the greatest of the exalted rhetoricians and poets in both languages, but he had a soft spot that damaged his privileged position” (Kitab al-Muhadara wal-Mudhakara, ed. A. Halkin (1975), 364). His poems, which are rhymed and stylistically characteristic of his time, include religious compositions, friendship and love poems, and drinking songs; they were published by Brody (1937). His commentary on Psalms has been preserved in the manuscript Firk 1-358 (Finkel edited and translated three of them into Hebrew). His Hebrew translation of Hayyuj’s grammatical works was edited by Nutt. The fragments belonging to his Treatise on Hebrew Gender were translated into Hebrew and published by Allony. Bacher edited an Arabic Targum commentary on Job that may also be his work.

[Abraham Meir Habermann / José Martínez (2nd ed.)]

GIKOW, RUTH (1915–1982), U.S. artist, known primarily as a figurative painter of murals and easel paintings. Gikow was also involved in socially conscious organizations, worked on WPA-sponsored murals, and held several gallery exhibitions before her death.

Gikow was born in Russian Ukraine to Boris and Lena Gikow. Her family fled after a pogrom and spent the first years of Ruth’s life wandering in Eastern Europe, at one point living in a gypsy camp outside Bucharest. They immigrated to New York City in 1920, when Ruth was five years old. After graduating from Washington Irving High School with honors in art, Gikow won admission to Cooper Union, where she studied with regionalist painter John Steuart Curry. A scholarship enabled her to study with social realist painter Raphael Soyer, whose progressive sympathies were more to Gikow’s political tastes. Another lasting influence was Cooper Union’s director Austin Purvis, who took students into the urban streets, encouraging them to represent daily life in their art. During the 1930s Gikow became involved with activist artists’ organizations like the Artists’ Union and the American Artists’ Congress. In the late 1930s she taught at the American Artists School, successor to the radical left-wing John Reed Club Art School.

In 1940, while working with the Mural Division of the New York City WPA Art Project, Gikow executed a mural for the children’s wing of Bronx Hospital. Entitled Children’s Indoor and Outdoor Activities, the mural depicted a world with children and animals living together in harmony. In 1943, the artist was featured in live demonstrations of mural painting at the World’s Fair, in which Gikow stood on a 12-foot scaffolding while visitors watched her paint and listened to her explain the process. She also painted commercial murals for retail stores, including Macy’s. By 1946, when the artist held her first one-person show of oil paintings, she had participated in group shows at the A.C.A. Gallery and elsewhere, designed textiles, and produced illustrations for such books as Crime and Punishment and History of the Jews in America (a children’s text). Gikow was a strong colorist, often mixing her oil paints with turpentine to achieve a more fluid effect.

In 1946 she married painter Jack Levine and had one daughter. Her paintings were purchased by major art museums including the Metropolitan, the Whitney, the Museum of Modern Art, and the National Institute of Arts and Letters in New York, the Smithsonian Institute in Washington, the Philadelphia Museum of Art, and the Tel Aviv Museum, as well as collections at Brandeis University, New York University, and elsewhere. By the time of her death, Gikow had received several honors, including a National Institute of Arts and Letters grant in 1959, two Childe Hassam awards, and a Smith College citation as one of America’s ten outstanding women artists. [Lauren B. Strauss (2nd ed.)]

GILADI, ALEX, Israeli member of the International Olympic Committee and vice president for global operations at NBC. Giladi began his career as a sportswriter in 1964. He worked until 1972 at Yedioth Ahronoth, and then moved to Israeli TV, becoming head of the sports department in 1975. In 1981 he became vice president for global operations at NBC, responsible for all of the network’s foreign sports coverage. In 1985 he became a member of the TV and Radio Committee of the International Olympic Committee. In 1993 he was named president of Keshet, one of the commercial TV networks that run Israel’s Channel 2. In 1994 he became Israel’s first and only delegate to the International Olympic Committee. In that capacity he had the honor of handing out medals to Israeli athletes in the Olympic Games. He was also the first Israeli to carry the Olympic torch, in Athens in 2004.

[Shaked Gilboa (2nd ed.)]

GILADI (Butelbroit), ISRAEL (1886–1918), pioneer in Erez Israel and leader of “Ha-Shomer. Born in Galarasi, Bessarabia, Giladi was a member of Pōalei Zion and an advocate of...
Jewish self-defense. In 1905 he went to Ereẓ Israel and joined the Jewish laborers in the settlements. In 1907 he was one of the founding members of the Bar Giora secret defense society and a year later joined the collective labor group in *Sejera. When Ha-Shomer was founded in 1909, Giladi was elected to its committee and put in charge of the defense of settlements in Galilee, Samaria, and Judea. He became acting head of the organization in 1913 when Israel *Shochat, its leader, left for Constantinople. During World War I he proposed the establishment of an agricultural settlement to serve as a base for Ha-Shomer and, in the summer of 1917, he and a group of friends established Kefar Bag (named after the Bar Giora society) south of Metullah. He died in an influenza epidemic. Giladi was the author of Divrei Yemei ha-Aguddah ("History of the Association"), a source for the history of Ha-Shomer (published in Kovez ha-Shomer, 1937). After his death, the village he had helped found, Kefar Giladi, was named after him.

[Amnon Netzer (2nd ed.)]

**GILĀN**, province of Iran situated in the southern part of the Caspian Sea and to the north of Alborz Mountains at the delta of the river Seifād-Rud. Gilān's population density, within its present borders, is 14,000 people per square mile and at the beginning of the 20th century had a population of about half a million, a majority of whom were the original Gilān people who spoke the Gilaki dialect and minorities who were Armenians, Gypsies, Jews, and a few thousand immigrants from Russia.

The beginning of the Jewish settlement in Gilān is not known, but the first reference to Jews living in Chākhān, a place north of the city of Lāhijān, appears in Mir Zahir al-Din's writings (1441/2). The second source is the Chronicle of *Bābāi ben Lutf (Ms JTS 401, fol. 20b) referring to the city of Rasht (17th century). The third source belongs to the Armenian Bishop Arakel (17th century), who mentions the city of Fuman. The fourth source is the record of Ya'akov Dilmanian regarding the transfer of the Jews from Gilān and Deylamān to Mashhad (see *Mahshad). Jaubert (p. 435) and Rabino (pp. 70–71) mention that about 50 Jewish families lived in Rasht in miserable conditions (during 1806–09).

In the plague of 1830 about one third of the then 60,000 inhabitants of Rasht perished. According to Curzon (vol.2, p. 385) the city of Rasht looked like a ghost town. The plague certainly affected the local Jews, too. Levy (p. 1005) claims that many Jews in Rasht perished in the massacre which, according to him, occurred around 1750. There is a place in Rasht called Yehudi-Tappeh (Jewish Height) but no one remembers exactly when it was populated by Jews.

Another important city in Gilān is Siyāhkal whose Jewish population holds a tradition saying that they were the descendants of King David. Unlike the Jews of Rasht, the Jews of Siyāhkal speak Gilaki among themselves, which may indicate their antiquity in Gilān. According to Rabino (pp. 33, 80) there were between 15 and 20 Jewish families in Siyāhkal working as petty merchants at the beginning of the 20th century. There was a pogrom in Siāhkal in which many Jews were killed, some converted to Islam, and others left the city to live in Rasht. It is possible that this pogrom occurred around the year 1880 (Netzer, Siyāhkal).

There are also general references to the existence of Jews in several settlements in Gilān such as Eframjān, Khamomā, Yahud-Kelayeh, Lāhijān, Fumanāt, Rudbār, and others about which we know very little (Netzer, Siyāhkal).

Up to 1948, Rasht and the sea port Pahlavi were relatively the most populated cities as far as Jews, Armenians, and Muslims were concerned. Most of the Jews were immigrants from *Kashan, *Isfahan, and Siyāhkal, almost all of whom worked in textile business. At that time, Rasht had about 30 Jewish families, one synagogue, and one elementary school called Koresh. The Jewish population of Pahlavi numbered less than half of that of Rasht. After the Islamic Revolution in Iran there remained only one Jewish family in Rasht. There are no reports on the existence of Jewish communities in the early 21st century in other cities and towns of the province of Gilān.

[Amnon Netzer (2nd ed.)]

**GILBERT, BRAD** (1961– ), U.S. tennis player, winner of 20 singles titles and successful pro coach. Born in Oakland, California, the youngest of three children in a family of tennis prodigies, Gilbert attended Pepperdine University, where he was the 1982 NCAA singles runner-up. Though saddled with a weak backhand, an average net game, and little natural ability, Gilbert's court smarts, preparation, tenacity, and an ability to engage in mental warfare on the court helped him win 20 singles titles and three doubles titles during his 14-year career. Gilbert never made it past the quarterfinals (1987 U.S. Open, 1990 Wimbledon) of any of the four major tournaments, but he was consistently ranked among the top 40 players, peaking at No. 4 in January 1990. Gilbert compiled a lifetime 519–288 career record, including 10–5 in Davis Cup play. He won a bronze medal in men's singles at the 1988 Olympics, and won gold at the 1989 Maccabiah, defeating Amos Mansdorf.

Gilbert began coaching at the end of his playing career, guiding Andre Agassi and later Andy Roddick to No. 1 world rankings. Gilbert's knowledge of the tactical side of tennis — how to recognize and attack an opponent's weaknesses — resulted in his being regarded as one of the top five coaches in the game. Gilbert, inducted into the Intercollegiate Tennis Association Men's Hall of Fame in 2001, is the author of Winning...
GILBERT, FELIX (1905–1991), U.S. historian. Born in Baden, Germany, Gilbert immigrated to the U.S. in 1936. During World War II he served as research analyst in the Office of Strategic Services and the U.S. Department of State (1943–46). In 1946 he joined the faculty of Bryn Mawr College, rising to the position of professor of history in 1948. From 1962 he was professor at the School of Historical Studies at the Institute for Advanced Study in Princeton.

Gilbert’s principal scholarly interests were the Italian Renaissance and diplomatic history of the 18th and 20th centuries. Among his major works were Hitler Directs His War (1951), To the Farewell Address: Ideas of Early American Foreign Policy (1961), Niccolò Machiavelli e la vita culturale del suo tempo (1964), Machiavelli and Guicciardini: Politics and History in Sixteenth-century Florence (1965), The End of the European Era: 1890 to the Present (1970), The Pope, His Banker, and Venice (1980), and A European Past: Memoirs, 1905–1945 (1988). With G.A. Craig he edited The Diplomats, 1919–1939 (2 vols, 1953–63), and he was the general editor of the Norton History of Modern Europe (1971).

GILBERT, INA (1932— ), Canadian painter and president of the Society of Canadian Artists. Born into a family of painters in Toronto, Gilbert graduated in political science and economics. Later she took up interior design, began painting at night, and studied techniques of etching. Her works display a bold sense of color and a quality of whimsy. They are executed in acrylic paint on canvas or on sheets of plexiglass where she creates an appearance of depth by using two or three superimposed sheets.

GILBERT, SIR MARTIN (1936– ), British historian. Born in London, the son of a jeweler, Gilbert was educated at Highgate School and Magdalen College, Oxford. His earliest work concerned British foreign policy in the 1930s, which in 1962 brought him into contact with Randolph Churchill. Between 1962 and 1968 he worked as research assistant to Randolph Churchill on the official biography of Sir Winston Churchill. From 1968 Gilbert was the sole author of what became the most voluminous biography ever written, totaling over nine million words and running to six volumes plus an as yet unfinished set of companion volumes containing documents. Appointed a fellow of Merton College, Oxford, in 1962, Gilbert remained on an extended sabbatical while engaged in the biography; during this time he also produced a series of major studies on the creation of the State of Israel, the Holocaust, and World War II. A tireless worker on behalf of Soviet Jewry, he was at one time writing over a dozen letters a day to “refuseniks” and became personally known to many Russian Jews during his frequent visits to the U.S.S.R. He has written on the situation of Soviet Jewry and authored a biography of Anatoly Shcharansky. In 1987 he was a non-governmental representative on the U.N. Commission on Human Rights (43rd session) in Geneva. He is a highly popular author, although some historians have criticized his preference for pure narrative history. He has defended his choice to abstain from judgments and has said that “by what you select you make plain your views.” Volume 6 of the Churchill biography, Finest Hour, 1939–41, won the 1983 Wolfson Award. In 1988 he was awarded the Ka-Zetnik Prize for Literature by Yad Vashem and the Holocaust Memorial Foundation. Since 1978 Gilbert has been a governor of the Hebrew University of Jerusalem. He has homes in London and Jerusalem.

GILBERT, MELISSA ELLEN (1964— ), U.S. actress. Born in Los Angeles, Calif., Gilbert was adopted the day after her birth by comedian Paul Gilbert and his actress wife Barbara (née Crane). Melissa Gilbert’s grandfather, Harry Crane, was creator and writer of The Honeymooners. She first appeared in a commercial for baby clothes at the age of two, but her parents decided to keep her out of show business until she turned seven. She then started filming more than 30 commercials, including sports for McDonald’s and Crest. At nine, in the summer of 1973, she was cast in the role of Laura Ingalls on the NBC TV series Little House on the Prairie, which ran until 1983. In 1979, she starred as Helen Keller opposite Patty Duke as Annie Sullivan in The Miracle Worker, which won an Emmy Award, and in 1980 Gilbert played Anne Frank in the NBC adaptation of The Diary of Anne Frank. She became involved with Rob Lowe in 1981 and moved to Manhattan after Little House. In 1985, Gilbert became the youngest person to ever receive a star on the Hollywood Walk of Fame, and in 1987 she earned an Outer Critics Circle Award for best debut acting in the off-Broadway show A Shayna Maidel. Gilbert and Lowe ended their relationship in 1987, and soon after in 1988 she married actor Bo Brinkman. The two had a son, Dakota Paul, but the couple divorced in 1992. Gilbert returned to Hollywood, where she continued to act, mostly in television.
She married actor Bruce Boxleitner in 1995 and the two had a son together, Michael Garrett. In November 2000, Gilbert was elected to the Screen Actors Guild board and then became its third female president. On November 2, 2001, she was elected a vice president of the AFL–CIO, and in 2002 was re-elected as SAG president. Gilbert also has two stepsons, Sam Boxleitner and Lee Davis Boxleitner, and her siblings include actress-director Sara Gilbert and actor Jonathan Gilbert.

GILBERT, MILTON (1909–1979), U.S. economist. Gilbert, who was born in Philadelphia, joined the U.S. Department of Commerce in 1938 as editor of the department’s Survey of Current Business, later becoming director of national and statistical accounts. He also worked at the Organization for European Economic Cooperation (OEEC), and from 1960 to 1975 served as economic adviser to the Bank of International Settlements in Basle. His major interests were social accounting, business fluctuations, foreign exchange, and international finance. He strongly advocated that an increase in the official price of gold was essential to bringing about the repair of the international monetary system.

GILBERT, WALTER (1932– ), U.S. molecular biologist and Nobel laureate. Gilbert was born in Boston and graduated from Harvard University (B.A. 1953, M.A. 1954) and received his doctorate from Cambridge University in mathematics in 1957. Appointed assistant professor of physics at Harvard from 1959 to 1964, he was an associate professor in biophysics from 1964 to 1969 and professor of molecular biology from 1969 to 1972; during that period he was an American Cancer Society professor. He left Harvard in 1981 to become CEO of Biogen, N.V. Returning to Harvard (1985–2002), he was the Carl M. Loeb University Professor. As emeritus, he was a managing partner of Bioventures Investors in 2005, a venture capital fund investing in biotechnology. He has founded many biotechnology companies. Among them are Biogen, Myriad Genetics, Memory Pharmaceuticals, and Paratek Pharmaceuticals.

He is a member of the National Academy of Science, the American Academy of Arts and Sciences, the American Physics Society, and the American Society of Biological Chemistry. He is an overseer of the Museum of Fine Arts, Boston and on the collections committee of the Fogg Museum of Art, Harvard.

Gilbert’s research has been in the fields of biophysics, genetic control mechanism, and protein DNA interaction. He worked extensively in the field of the early evolution of genes. He is the recipient of many awards, culminating in the Nobel Prize in chemistry in 1980, along with Frederick Sanger and Paul Berg.

Gilbert is married to Celia Gilbert, poet and painter, who is the daughter of I.F. Stone.

GILBOA (Heb. גִּלְבֹּא), mountain ridge branching off to the N.E. from the Samarian Hills and lying on a S.E.–N.W. axis. The ridge is an upfaulted block that drops precipitously to the Beth-Shean Valley in the east and the Harod Valley in the northeast and more gradually to the southern Jezreel Valley in the west. Along the fault lines at the mountain’s foot in the east and the northeast are some of the most plentiful natural springs in Israel. The entire length of the ridge is 10½ mi. (about 17 km.). The summit is 479 m. high, lying 1¼ mi. (about 2 km.) south of Kfar Faqû’a. It is from this village that the Arabic name for the mountain, Jebel Faqû’a, was derived.

Mt. Gilboa was the scene of the battle in which Saul and his sons were killed (1 Sam. 31:1–6). David cursed the mountain in his lament over Saul and his sons (1 Sam. 1:21): “Ye mountains of Gilboa, let there be no dew nor rain upon you, neither fields of choice fruits.” The ancient name is preserved in the present-day Arab village of Jalbûn, situated southeast of Kaf Faqû’a. Jalbûn is mentioned by Eusebius as Gelbous (Onom., 7:2:16). In September 1921 kibbutz *En-Harod was established at the foot of the mountain, next to the En-Harod spring (the kibbutz was transferred in 1929 to the northern side of the Harod Valley; on the side of the mountain itself is moshav Gidona – established in 1949 – which initially bore the name Gilboa). In the time of the British Mandate, especially between 1936 and 1939, Gilboa served as a base for Arab raids on the Jewish settlements in the Harod and Beth-Shean Valleys. Similarly, the Arab Legion and irregulars fortified positions on Mt. Gilboa during the *War of Independence in the spring of 1948, with the aim of cutting off the Harod and Beth-Shean Valley settlements from the west. This danger was overcome with the occupation of the villages of Zar‘In (see *Yizre’el) and Mazâr by a *Palmah detachment. The 1949 armistice border, following the military front,
gave Israel a foothold on the northern and eastern rims of the mountain and left to Jordan most of its inhabited parts in the west and south. After the *Six-Day War, this border marked the northeastern corner of the occupied region of Samaria.

Apart from the new villages founded in the 1950s and 1960s at the foot of Mt. Gilboa in the west, north, and east, five settlements came into being on the mountain proper – Nurit, established in 1950 as a moshav and later transformed into a Gadna training camp and nature study center; Ma‘aleh Gilboa, founded in 1962 as a Nahal outpost, which became a civilian kibbutz affiliated with Ha-Kibbutz ha-Dati in 1967; Kibbutz Meirav, also affiliated with Ha-Kibbutz ha-Dati; Malkisauh, a drug rehabilitation village founded in 1990; and Gan Ner, a community founded in 1985. The Jewish National Fund planted a forest on Mt. Gilboa with over 3,000,000 trees – one of the country’s largest – and built many access roads and paths opening the mountain for tourism. A large area has been declared a nature reserve where plant species exclusive to Mt. Gilboa are afforded protection.

[Abraham J. Brawer / Shaked Gilboa (2nd ed.)]

**GILBOA, AMIR** (1917–1984). Israeli poet. Born in Radzy-wilow, Volhynia, Gilboa went to Palestine in 1937, working initially as a laborer. He began to publish poetry while serving in the Jewish Brigade during World War II. The accent on linguistic sensitivity in the 1940s prompted Gilboa to abandon flowery rhetoric, but he nevertheless preserved the multilevel allusions inherent in this style. His poetry with its developed lyrical sense and complex structure speaks with compassion, and his blending of personal and national motifs is reminiscent of Bialik. Gilboa sensitively and at times enigmatically describes the feelings of the individual within the crowd in a surrealistic dream atmosphere. These feelings range from the fear and expectation of the apocalypse to an expression of wild and childlike joy. A similar atmosphere distinguishes his poems about biblical characters, but the aura of nightmare of wild and childlike joy. A similar atmosphere distinguishes his poems about biblical characters, but the aura of nightmare.

His confidence in his own personal vision enables his perspective of distance or irony draws him into a confrontation with the primordial element in Hebrew poetry, particularly the Psalms. His confidence in his own personal vision enables him to create poems wherein ancient words and experiences are suffused with wonder and freshness. The same compassion that typifies his attitude toward human beings is also seen in Gilboa’s relationship with trees and plants, their tactile values and biological vitality replacing human attributes. He received the Israel Prize in 1982 for Hebrew poetry.

Gilboa’s four volumes of poetry are Le’ot (“Fatigue,” 1942); Sheva Rashuyyot (1949); Shirim ba-Boker ba-Boker (1953); Kehulim va-Adumim (1965); and “Raziti Likhtov Siftei Yeshinim” (1968). His Collected Works appeared in 1987. Selected poems in English translation appeared under the title The Light of Lost Suns (1979). Warren Bargad wrote a study in English entitled To Write the Lips of Sleepers: The Poetry of Amir Gilboa (1994). For English translations of his works, see Goell, Bibliography, 24.

[Dan Tsalka]

**GILBOA, JACOB** (1920– ). Israeli composer. Born in Czecho-slovakia, he studied architecture in Vienna and continued his studies at the Haifa Technological Institute after immigrating to Israel in 1938. Later he studied composition with Josef *Tal and Paul *Ben-Haim and graduated from the Jerusalem Music Academy and Teachers Seminary in 1947. In 1963 he took classes with Stockhausen and Pousseur at the Cologne new music courses. His early style was post-Romantic with Mediterranean elements and later he combined avant-garde style with Oriental elements. His style is unique and difficult to define. Among his many awards were the Israel Composers and Authors Association Prize on four occasions and the Prime Minister’s Award in 1983. He has also represented Israel at the ISCM festival four times (1969, 1973, 1978, 1989). His works include Seven Little Insects for piano (1955); Chagall Windows (1965); Crystals (1967); From the Dead Sea Scrolls (1972); Cedars (1972); Reflections on 3 Chords of Alban Berg for piano (1979), 3 Lyric Pieces in Mediterranean Style for orchestra (1984), Steps of Spring for children’s/women’s chorus (1986); and works with tape such as 3 Vocalises for Peter Breughel, (1979) and The Grey Colours of Käthe Kollwitz (1990). Gilboa also wrote lyrics for many Israeli folk songs.

[Uri (Erich) Toepplitz and Yohanan Boehm / Gila Flam and Israela Stein (2nd ed.)]
GILEAD (Heb. גִּלְעָד), the central region east of the Jordan, approximately between the river Yarmuk in the north and the northern end of the Dead Sea in the south. The name Gilead is explained in the Bible as deriving from Gal-ed, in Aramaic Ygar-Sahadutha (Gen. 31:47), and there are some scholars who relate its meaning to the Arabic Jal‘ad, meaning “harsh,” “rude,” because of the mountainous and rocky nature of the region.

According to the Bible, Israelite Transjordan was divided into three main regions: the plain, Gilead, and the Bashan (Deut. 3:10; Josh. 20:8; 11 Kings 10:33). The plain is the flat height north of the Arnon which was the scene of constant battle between Israel and Moab. The Bashan is the northern part of Transjordan north of the Yarmuk, for which Israel competed with the Arameans. Gilead is the clearly Israelite section of Transjordan and, therefore, in its broad meaning, encompassed central Transjordan, on both sides of the Jabbok, from the Sea of Galilee to the Dead Sea (Gen. 37:25; Josh. 22:9, 15; 11 Sam. 2:9; 11 Kings 10:33; Ezek. 47:18; Amos 1:3; etc.). Different parts of the Bible mention the two halves of Gilead, north and south of the Jabbok (Deut. 3:12; Josh. 12:2, 5; 13:31).

The allotted settlements of tribes on the other side of the Jordan are described according to this geographic division: “From the Arnon, which is by the valley of Arnon, and half the hill-country of Gilead, and the cities thereof, gave I unto the Reubenites and to the Gadites; and the rest of Gilead, and all Bashan, the kingdom of Og … gave I unto the half-tribe of Manasseh” (Deut. 3:12).

On the other hand, there are some places in the Bible from which it appears that the name Gilead designates a smaller area. Numbers 32:1 separates the land of Jazer from the territory Gilead. In Deuteronomy 3:15–16 the name Gilead includes only the northern part, between the Jabbok and the Yarmuk (though “from the Gilead to the valley of Arnon” is not separated – it is a part of the territory of the tribes of Reuben and Gad). On the other hand, “the land of Gilead” which is enumerated among the 12 regions of Solomon (1 Kings 4:19) is in southern Transjordan, including the plain. In place of “the land of Gilead,” however, the Septuagint reads “the land of Gad.”

In light of these different descriptions several scholars have concluded that the name Gilead originated comprised a more limited area and broadened only with the continuation of Israelite settlement.

According to R. Smend, the name Gilead originally referred to ‘Ajlūn, the region between the Jabbok and the Yarmuk. He bases this opinion on the names of the cities Jabesh-Gilead and Ramoth-Gilead, both of which belong to this region, and also on the genealogical lists of Manasseh which mention Gilead, the son of Machir (Num. 26:29; Josh. 17:1; see ‘Manasseh’). R. de Vaux, on the other hand (and also M. Noth), prefers a more southerly location, between al-Salt and the Jabbok, because of the present-day Jebel Jal‘ad, Khirbat Jal‘ad, and Khirbat Jal‘ud, which preserved the name, as well as various biblical statements (especially Num. 32).

Gilead was described in the Bible as pastureage land (Num. 32:1; Jer. 50:19; Micah 7:14). It was known for its spices, among other things (Jer. 8:22; 46:11). There are iron deposits in the vicinity of the Jabbok that were exploited in early times. Archaeological research has shown that the first great settlement of Gilead flourished around the 4th–3rd centuries B.C.E. During the 20th century B.C.E. there was a definite decline in the settlement of Gilead and the southern parts of Transjordan, and it seems that these areas were occupied mainly by a nomadic population. This decline was not present in the Bashan and in northern Gilead, up to the area of Bet Arbel (Irbid), around 20 mi. (30 km.) south of the Yarmuk. Heavy population of the whole Gilead and the southern regions of Transjordan was resumed around the beginning of the 13th century, with the establishment of the kingdoms of Amman, Moab, and Edom. According to biblical tradition most of the areas of Gilead were then occupied by two Amorite kings, Og king of Bashan and Sihon king of Heshbon, from whom these areas were conquered by the settling Israelite tribes (Num. 21:32; Deut. 1:4; 3:10–13; Josh. 12:15–16; Judg. 11; etc.). The southern part of Gilead was settled by the tribes of Reuben and Gad, and north of the Jabbok – the half-tribe Manasseh. The latter comprised several family units, such as Machir and the villages of Jair (1 Kings 4:13), and the Gadites, too, spread southward up to the Sea of Galilee (Josh. 13:27). According to biblical tradition, the name Israel was given to Jacob at Peniel which is on the Jabbok in central Gilead (Gen. 32:29–31).

The Bible records the war, during the time of the judges, between the Gileadites and Amman, under the leadership of Jephthah the Gileadite (Judg. 11), which resulted in bloody conflict between the Gileadites and the Ephraimites (ibid. 12:1–6). This period saw the weakening of the bonds between the tribes of the Gilead and western Erez Israel, as can also be seen from their nonparticipation in the war of Deborah (ibid. 5:17) and from the building of the altar by the tribes from the other side of the Jordan “over against the land of Canaan in the borders of Jordan” (Josh. 22:11).

Nevertheless, the Ammonites’ attempt to conquer Jabesh-Gilead and its being saved by Saul were the direct motivations for the establishment of the Israelite monarchy (1 Sam. 11). The mountainous nature of the Gilead and its broad pasture-lands helped preserve desert customs and early Israelite traditions to which prophetic vision became attached. It is not, therefore, a coincidence that this was the place of origin of Elijah the Gileadite whose spirit greatly affected the development of prophecy.

The Gileadites remained loyal to the ruling house of Israel that protected them from their neighbors in the east and plunderers from the desert. In time of trouble the Israelite kings sought refuge in Mahanaim and Penuel on the Jabbok (11 Sam. 2:8; 1 Kings 12:25). The Gilead is mentioned as one of three places over which Abner son of Ner appointed Ish-Baal (Ish-Bosheth) son of Saul as king (11 Sam. 2:8–9). In the time of Solomon Transjordan was divided into three areas (1 Kings 4:13–14, 19): (1) the vicinity of Ramoth-Gilead, the village of...
Jair in the Gilead and the region of Argob in the Bashan, i.e., northern Gilead and the Bashan; (2) the vicinity of Mahanaim, i.e., central Gilead on both sides of the Jabbok; (3) "the land of Gad" according to the Septuagint (masoretic text, "the (southern) land of Gilead"), i.e., southern Gilead and the plain up to the Arnon River.

With the division of the kingdom Gilead remained in the area of northern Israel. However, the Bashan and the northern part of Gilead were quickly conquered by the Arameans (1 Kings 22; 11 Kings 9:14; 11 Chron. 18), and Ramoth-Gilead thereafter became an area of perpetual conflict between them and Israel. The Arameans also took the opportunity to broaden their boundaries in Gilead (Amos 1:13). In around 814 B.C.E. Hazael of Aram Damascus conquered the whole land of Gilead from Israel (11 Kings 10:32–33). At the beginning of the eighth century Damascus was weakened under Assyrian pressure (ibid. 13:5), and the Gilead was restored to the area of Israel (ibid. 13:25; 14:25, 28). In 733 the Gilead was conquered by Tiglath-Pileser 111, king of Assyria, and many of its inhabitants were exiled to Assyria (ibid. 15:29; 1 Chron. 5:26). The Assyrian satrapy Gal'aza (= Gilead) was established in the place, except for the regions of southern Gilead which were occupied by the Ammonites (Jer. 49:1).

Gilead in the Persian period was included in the fifth satrapy called Abimahara ("beyond the river," i.e., Transsephrates) whose capital was at Damascus. During the rule of the Ptolemies the name Galaaditis (Gilead) designated a small district in Transjordan and in the Seleucid period it was the name of one of the four large eparchies into which Coele-Syria was organized (1 Macc. 5:17–45).

[Yoahan Aharoni]

**GILEAD, ZERUBAVEL** (1912–1988), Hebrew poet, writer, and editor. Born in Bendery, Bessarabia, his family immigrated to Palestine in 1922 and settled in the newly founded kibbutz *En-Harod, where he grew up. He was active in the Ha-No'ar ha-Oved and He-Halutz youth movements, served as an emissary of the latter in Poland, and was information officer of the *Palmah* and a member of its general staff during Israel's War of Independence. His poems, stories, and articles appeared in numerous journals and newspapers from 1929. His works include *Néirim* (poems, 1936), *Marot Gilboa* (sketches, 1943), *Aggadat Yadut* (poems, 1947), *Sihah al ha-Hof* (stories, 1954), *Nahar Yarok* (poems, 1956), *Sihah she-Lo Tammah* (essays, 1965), *Yam shel Malalah* (poems, 1967), *Ha-Kikkli* (poems, 1978), *Or ha-Har* (poems, 1986), and *Be-Zel ha-Téénah* (poems, 1988). From 1956, he was one of the editors of *Mi-Bifenim*, a periodical of Ha-Kibbutz ha-Me'uhad, and was an editor of the Kibbutz ha-Me'uhad publishing house. An English translation of his selected poems appeared in 1983. For further English translations, see Goell, Bibliography, index.

**GILELS, EMIL GRIGORYEVICH** (1916–1985), Russian pianist. Born in Odessa, he became a teacher at the Moscow Conservatory in 1939 and in that same year won the first prize at the international piano competition in Brussels. He was awarded the Stalin Prize in 1946 and the Lenin Prize in 1962. Gilels became popular on concert platforms all over the world. The virtuosity of his early days was enhanced by a depth of interpretation and range of expression that made him one of the foremost pianists of the time.

**GILEL** (Heb. גִּלֵל), name indicating an ancient sacred site on which a circle of large stones was erected. *Gilgal* ("circles") were constructed in Canaan from very early times; the Bible mentions several places called Gilgal which were named after *gilgal* in their vicinity.

(1) The best-known Gilgal is the place "on the east border of Jericho" where the Israelites encamped after crossing the Jordan. There Joshua set up the 12 stones which the Israelites had taken from the Jordan (Josh. 4:19–20). At Gilgal *Pesah* (Passover) was celebrated and those born in the desert were circumcised. "This day have I rolled away (gallot from root galot) the reproach of Egypt from off you" is the biblical explanation given for the place-name (5:7–10). The camp at Gilgal served as a base during Joshua's wars (9:6; 10:6–9; 14:6). After the conquest of Canaan, the site continued to be sacred; in times of national crisis sacrifices were offered there; Samuel judged Israel there; and Saul was crowned king at Gilgal (1 Sam. 10:8; 7:16; 11:14–15). Later its cult aroused the wrath of the prophets (Hos. 4:15; Amos 4:4; 5:5). In the period of the Second Temple it was called Beth-Gilgal and was inhabited by levites who were sons of the Temple singers (Neh. 12:29). The 12 stones in Gilgal are mentioned in the Talmud (Sot. 35b). The Madaba Map shows a church, in which the stones have been embodied, east of the tell of Jericho. Khirbat al-Madaba has been suggested for its identification.

(2) Another Gilgal is perhaps referred to in the verse: "in the Arabah, over against Gilgal, beside the terebinths of Moreh" (Deut. 11:30); its location is not clear.

(3) The Gilgal from which "they went down to Beth-El" which is associated with the activities of Elisha (11 Kings 2:1–2;
gilgul (Heb. גִּלְגַּלוּת; “transmigration of souls,” “reincarnation,” or “metempsychosis”). There is no definite proof of the existence of the doctrine of gilgul in Judaism during the Second Temple period. In the Talmud there is no reference to it (although, by means of allegoric interpretations, later authorities found allusions to and hints of transmigration in the statements of talmudic rabbis). A few scholars interpret the statements of Josephus in Antiquities 18:1, 3, and in Jewish Wars 2:8, 14 on the holy bodies which the righteous merit, according to the belief of the Pharisees, as indicating the doctrine of metempsychosis and not the resurrection of the dead, as most scholars believe. In the post-talmudic period *Anan b. David, the founder of Karaism, upheld this doctrine, and in some of his statements there is an echo and a continuation of the ancient sectarian traditions. The doctrine of transmigration was prevalent from the second century onward among some Gnostic sects and especially among Manicheans and was maintained in several circles in the Christian Church (perhaps even by Origen). It is not impossible that this doctrine became current in some Jewish circles, who could have received it from Indian philosophies through Manicheism, or from Platonic and neoplatonic as well as from Orphic teachings.

Anan’s arguments on behalf of gilgul, which were not accepted by the Karaites, were refuted by *Kirkisani (tenth century) in a special chapter in his Sefer ha-Orot; one of his major points was the death of innocent infants. Some Jews, following the Islamic sect of the Mu’tazila and attracted by its philosophic principles, accepted the doctrine of transmigration. The major medieval Jewish philosophers rejected this doctrine (“Saadia Gaon, The Book of Beliefs and Opinions, treatise 6, ch. 7; Abraham ibn Daud, Emanuah Ramah, treatise 1, ch. 7; Joseph *Albo, Ikkarim, treatise 4, ch. 29). *Abraham b. Hiyya quotes the doctrine from neoplatonic sources but rejects it (Meditations of the Sad Soul, 46–47; Megillat ha-Megalleh, 50–51). *Judah Halevi and *Maimonides do not mention gilgul, and *Abraham b. Moses b. Maimon, who does refer to it, rejects it completely.

In Early Kabbalah
In contrast with the conspicuous opposition of Jewish philosophy, metempsychosis is taken for granted in the Kabbalah from its first literary expression in the Sefer ha-“Bahir (published in late 12th century). The absence of any special apology for this doctrine, which is expounded in the Bahir in several parables, proves that the idea grew or developed in the circles of the early kabbalists without any affinity to the philosophic discussion of transmigration. Biblical verses (e.g., “One generation passeth away, and another generation cometh” (Eccles. 1:4), taken as meaning that the generation that passes away is the generation that comes) and talmudic aggodot and parables were explained in terms of transmigration. It is not clear whether there was any connection between the appearance of the metempsychotic doctrine in kabbalistic circles in southern France and its appearance among the contemporary Cathars (see *Albigenses), who also lived there. Indeed the latter, like most believers in transmigration, taught that the soul also passes into the bodies of animals, whereas in the Bahir it is mentioned only in relation to the bodies of men.

After the Bahir the doctrine of gilgul developed in several directions and became one of the major doctrines of the Kabbalah, although the kabbalists differed widely in regard to details. In the 13th century, transmigration was viewed as an esoteric doctrine and was only alluded to, but in the 14th century many detailed and explicit writings on it appeared. In philosophic literature the term halatukah (“transference”) was generally used for gilgul; in kabbalistic literature the term gilgul appears only from the Sefer ha-“Temunah onward; both are translations of the Arabic term tanasukh. The early kabbalists, such as the disciples of *Isaac the Blind and the kabbalists of Gerona, spoke of “the secret of ibbur” (“impregnation”). It was only in the late 13th or 14th centuries that gilgul and ibbur began to be differentiated. The terms hitnallefut (“exchange”) and din benei halot (from Prov. 31:8) also occur. From the period of the *Zohar on, the term gilgul became prevalent in Hebrew literature and began to appear in philosophic works as well.

Biblical verses and commandments were interpreted in terms of gilgul. The early sects to whom Anan was indebted saw the laws of ritual slaughter (shehitah) as biblical proof of transmigration in accordance with their belief in transmigration among animals. For the Kabbalists the point of departure and the proof for gilgul was the commandment of levirate marriage (see *Halizah); the brother of the childless deceased replaces the deceased husband so that he may merit children in his second gilgul. Later, other mitzvot were interpreted on the basis of transmigration. The belief in metempsychosis also served as a rational excuse for the apparent absence of justice in the world and as an answer to the problem of the suffering of righteous and the prospering of the wicked: the righteous man, for example, is punished for his sins in a previous gilgul. The entire Book of Job and the resolution of the mystery of his suffering, especially as stated in the words of Elihu, were interpreted in terms of transmigration (e.g., in the commentary on Job by *Nahmanides, and in all subsequent kabbalistic literature). Most of the early kabbalists (up to and including the author of the Zohar) did not regard transmigration as a universal law governing all creatures (as is the case in the In-
dian belief) and not even as governing all human beings, but saw it rather as connected essentially with offenses against pro-
creation and sexual transgressions. Transmigration is seen as a very harsh punishment for the soul which must undergo it. 
At the same time, however, it is an expression of the mercy of the Creator, “from whom no one is cast off forever”; even for 
those who should be punished with “extinction of the soul” (keritut), gilgul provides an opportunity for restitution. While 
some emphasized more strongly the aspect of justice in trans-
migration, and some that of mercy, its singular purpose was always the purification of the soul and the opportunity, in a 
new trial, to improve its deeds. The death of infants is one of the 
ways by which former transgressions are punished.

In the Bahir it is stated that transmigration may con-
tinue for 1,000 generations, but the common opinion in the 
Spanish Kabbalah is that in order to atone for its sins, the soul 
transmigrates three more times after entering its original body 
(according to Job 3:29, “Behold, God does all these things, 
twice, three times, with a man”). However, the righteous trans-
migrate endlessly for the benefit of the universe, not for their 
own benefit. As on all points of this doctrine, opposing views 
also exist in kabbalistic literature: the righteous transmigrate 
as many as three times, the wicked, as many as 1,000! Burial 
is a condition for a new gilgul of the soul, hence the reason 
for burial on the day of death. Sometimes a male soul enters 
a female body, resulting in sterility. Transmigration into the 
bodies of women and of gentiles was held possible by sev-
eral kabbalists, in opposition to the view of most of the Safed 
kabbalists. The Sefer Peli'ah viewed proselytes as Jewish souls 
which had passed into the bodies of gentiles, and returned to 
their former state.

**Gilgul and Punishment.** The relationship between trans-
migration and hell is also a matter of dispute. Bahya b. Asher 
proposed that transmigration occurred only after the accep-
tance of punishment in hell, but the opposite view is found in 
the Rûa'ya Meheinma, in the Zohar, and among most of the 
kabbalists. Because the concepts of metempsychosis and 
punishment in hell are mutually exclusive, there could be no 
compromise between them. Joseph of Hamadan, Persia, who 
lived in Spain in the 14th century, interpreted the entire matter 
of hell as transmigration among animals. The transmigrations 
of souls began after the slaying of Abel (some claim in the gen-
eration of the Flood), and will cease only with the resurrection 
of the dead. At that time the bodies of all those who underwent 
transmigrations will be revived and sparks (nizâ'ot) from the 
original soul will spread within them. But the other answers 
to this question were proposed by many kabbalists, especially in 
the 13th century. The expansion of the notion of transmigration 
from a punishment limited to specific sins into a general prin-
ciple contributed to the rise of the belief in transmigration into 
animals and even into plants and inorganic matter. This opin-
ion, however, opposed by many kabbalists, did not become 
common until after 1400. Transmigration into the bodies of 
animals is first mentioned in the Sefer ha-Temunah, which 
originated in a circle probably associated with the kabbalists 
of Gerona. In the Zohar itself this idea is not found, but some 
sayings in Tikkunei Zohar attempt to explain this concept ex-
eggetically, indicating that this doctrine was already known to 
the author of that work. Tûamei ha-Mitzvot (c. 1290–1300), 
an anonymous work on the reasons for the commandments, 
records many details (partly quoted by Menahem *Recanati) 
on the transmigration of human souls into the bodies of ani-
mals, the great majority of which were punishments for acts 
of sexual intercourse forbidden by the Torah.

**In the Later and the Safed Kabbalah.** A more general elaboration of the entire concept appears in the works of Joseph b. Shalom *Ashkenazi and his colleagues (early 14th century). They maintain that transmigration occurs in all forms of existence, from the Sefirot (“emanations”) and the angels to inorganic matter, and is called din benei halof or sod ha-shelah. According to this, everything in the world is constantly changing form, descending to the lowest form 
and ascending again to the highest. The precise concept of 
the transmigration of the soul in its particular form into an 
existence other than its original one is thus obscured, and is 
replaced by the law of the change of form. Perhaps this ver-
sion of the doctrine of gilgul should be seen as an answer to 
philosophical criticism based on the Aristotelian definition of 
the soul as the “form” of the body which consequently cannot 
become the form of another body. The mystery of true gilgul 
in this new version was sometimes introduced instead of the 
traditional kabbalistic teaching as found in Masoret ha-Berit 
(1916) by David b. Abraham *ha-Lavan (c. 1300). The kabbal-
ists of Safed accepted the doctrine of transmigration into all 
forms of nature and, through them, this teaching became a 
widespread popular belief.

In Safed, especially in the Lurianic Kabbalah, the idea 
of nizâ'ot ha-neshamot (“sparks of the souls”) was highly de-
veloped. Each “main” soul is built in the spiritual structure of 
“mythical limbs” (parallel to the limbs of the body), from which 
many sparks spread, each of which can serve as a soul or as 
life in a human body. The gilgulim of all the sparks together 
are aimed at the restitution of the hidden spiritual structure of 
the “root” of the principal soul; it is possible for one man to 
possess several different sparks belonging to one “root.” All the 
roots of the souls were in fact contained in Adam’s soul, but 
they fell and were scattered with the first sin; the souls must 
be reassembled in the course of their gilgulim which they and 
their sparks undergo and through which they are afforded the 
opportunity to restitute their true and original structure. The 
later Kabbalah developed much further the idea of the affinity 
of those souls which belong to a common root. In the kabbal-
istic commentaries on the Bible many events were explained 
by such hidden history of the transmigration of various souls 
which return in a later gilgul to situations similar to those of 
an earlier state, in order to repair damage which they had pre-
viously caused. The early Kabbalah provides the basis of this 
idea: there Moses and Jethro, for example, are considered the
reincarnations of Abel and Cain; David, Bathsheba, and Uriah, of Adam, Eve, and the serpent; and Job, of Terah, the father of Abraham. The anonymous Gallei Razayya (written 1552; published partly Mohilev, 1812), and Sefer ha-Gilgulim (Frankfurt, 1684) and Sha’ar ha-Gilgulim (1875, 1912) by Hayyim Vital present lengthy explanations of the histories of biblical characters in the light of their former *gilgulim.* *Luria and Vital* expanded the framework to include talmudic figures. The transmigrations of many figures are explained in Gilgulei Neshamot by Menahem Azariah da *Fano* (edition with commentary, 1907). Many kabbalists dealt in detail with the function that was fulfilled by the several *gilgulim* of Adam’s soul; they also explained his name as an abbreviation of Adam, David, Messiah (first mentioned by Moses b. Shem-Tov de *Leon*).

**Ibbur**

In addition to the doctrine of *gilgul,* that of *ibbur* ("impregnation") developed from the second half of the 13th century. *Ibbur,* as distinct from *gilgul,* means the entry of another soul into a man, not during pregnancy nor at birth but during his life. In general, such an additional soul dwells in a man only for a limited period of time, for the purpose of performing certain acts or commandments. In the Zohar it is stated that the souls of Nadab and Abihu were temporarily added to that of Phinehas in his zeal over the act of Zimri, and that Judah’s soul was present in Boaz when he begat Obed. This doctrine was a respected one in the teachings of the kabbalists of Safed, especially in the Lurianic school: a righteous man who fulfilled almost all of the 613 *mitzvot* but did not have the opportunity to fulfill one special *mitzvah* is temporarily reincarnated in one who has the opportunity to fulfill it. Thus the souls of the righteous men are reincarnated for the benefit of the universe and their generation. The *ibbur* of a wicked man into the soul of another man is called a *Dibbuk* in later popular usage. The prevalence of the belief in *gilgul* in the 16th and 17th centuries also caused new disputes between its supporters and detractors. A detailed debate on the doctrine of transmigration took place in about 1460 between two scholars in Candia (Ms. Vatican 254). Abraham ha-Levi ibn Migash disputed against the doctrine of *gilgul* in all its manifestations (Sefer Kevod Elohim, 2, 10–14, Constantine, 1585) and Leone Modena wrote his treatise Ben David against transmigration (published in the collection Tā’um Zekennim, 1885, pp. 61–64). In defense of transmigration, Manasseh Ben Israel wrote Sefer Nishmat Hayyim (Amsterdam, 1652). Works of later kabbalists on the subjects are Midrash Talpiyot, Anaf Gilgul (Smyrna, 1736) by Elijah ha-Kohen ha-Itamari, and Golel Or (Smyrna, 1737) by Meir *Bikayam.*

**GILLIGAN, CAROL FRIEDMAN** (1936– ). U.S. social psychologist. Daughter of William E. Friedman and Mabel (Caminez) Friedman, Carol Gilligan spent her early years in New York City. Her mother was a teacher and therapist and her father an attorney. Gilligan, who describes her Jewish identity as rooted in Reconstructionist Judaism, celebrated her bat mitzvah at the Society for the Advancement of Judaism in New York. She received her B.A. in literature in 1958 from Swarthmore College, M.A. in 1960 from Radcliffe College in clinical psychology, and doctorate in 1964 from Harvard University in social psychology. After a departure from academia to a world of dance, motherhood, and political activism, Gilligan returned to teaching, at the University of Chicago in 1965–66 and then at Harvard in 1968. Gilligan became a full professor at Harvard in 1986 and in 1997 was named Harvard’s first professor of gender studies, occupying the Patricia Abjerg Graham Chair. In 1999, Gilligan returned to her childhood home of New York City and became a visiting professor at New York University, where she was named university professor in 2002.

Carol Gilligan’s work fundamentally altered the world of psychological theory and research by demonstrating that gender was a central component in human behavior and development. Beginning with her groundbreaking book, In a Different Voice: Psychological Theory and Women’s Development (1982) and culminating in The Birth of Pleasure (2003), Gilligan proposed that women’s moral and personal development did not conform to patterns of maturation that had been observed for men. She suggested that mainstream psychological theories about human growth reflected a male bias that ignored female identity and experience. During the 1980s, Gilligan founded the Harvard Project on Women’s Psychology and Girls’ Development and conducted two longitudinal studies tracing the relational worlds of girls between ages six and seventeen. This research profoundly influenced understanding of the tensions and dilemmas girls face in American society. Together with her graduate students, Gilligan edited or co-authored five books that stemmed from these and related studies in coeducational and urban public schools, Mapping the Moral Domain: A Contribution of Women’s Thinking to Psychological Theory (1988); Making Connections: The Relational World of Adolescent Girls at Emma Willard School (1990); Women, Girls and Psychotherapy: Reframing Resistance (1991); Meeting at the Crossroads (1992) (New York Times Notable Book of the Year); and Between Voice and Silence: Women and Girls, Race and Relationship (1995). In the late 1990s, Gilligan turned her attention to the development of boys, with special focus on the early childhood years and parent-child relationships.

Gilligan received numerous awards, including a Grawemeyer Award for her contributions to education (1992), a Heinz Award for her contributions to understanding the human condition (1998), and a senior research award from the Spencer Foundation (1989–93). In 1996 she was named one of the 25 most influential Americans by Time magazine.

[Miriam B. Raider-Roth (2nd ed.)]

GILLMAN, NEIL (1933—), U.S. scholar in Jewish thought and philosophy. Born in Quebec City, Quebec, Canada, Gillman earned his B.A. from McGill University (1954), and received both a master's degree in Hebrew literature and rabbinic ordination from the Jewish Theological Seminary of America (JTSA; 1960). He also received a Ph.D. in philosophy from Columbia University (1975) and later held the Aaron Rabinowitz and Simon H. Rikkind Chair in Jewish Philosophy at JTSA, where he served in various faculty and administrative roles.

From the 1970s, Gillman primarily taught Conservative Jews how to hold the dynamic tensions among belief, behavior, and community. Students at the Jewish Theological Seminary are taught by Gillman that they must create a personal philosophy that serves them both as an individual and as a member of the Jewish community, and that their philosophy will likely evolve over time. Gillman’s extensive experience teaching adults in synagogues throughout America has broadened the impact of his work by bringing the scholarship of Jewish thought from the principal academic institution of the Conservative movement in Judaism to people of all ages and backgrounds.

From his scholarly works on death and dying, such as “Coping with Chaos: Jewish Theology and Ritual Resources in Death, Bereavement, and Mourning” (2005) to widely read articles in popular Jewish periodicals, including “I Believe” (Sh’mah, 1993), Gillman has demonstrated the ability to articulate the challenges facing modern Jews. His ability to help others clarify their personal philosophy and to see how their relationship to God is magical comes not only by sharing his knowledge of those who came before him and how they were able to change their own thinking, but also through sharing his own personal, evolving story.

Gillman’s books on Jewish thought include Sacred Fragments: Recovering Theology for the Modern Jew (1990), which won the National Jewish Book Award in Jewish Thought; The Death of Death: Resurrection and Immortality in Jewish Thought (1997); The Way Into Encountering God in Judaism (2000); and Traces of God: Seeing God in Torah, History and Everyday Life (2005).

Committed to creating materials that are accessible to a variety of audiences, Gillman’s publications also include scholarly monographs such as “Mordechai Kaplan and the Ideology of Conservative Judaism” (Proceedings of the Rabbinical Assembly, 1984) and “Covenant and Chosenness in Postmodern Jewish Thought” (Covenant and Chosenness in Mormonism and Judaism, 2001), as well as other writings targeted at a broader audience, such as “Why Can’t I Pray and What Can I Do About It” (Moment, 1990) and “On Teaching Jewish Theology” (The Melton Journal, 1994). In 1991, Gillman began writing a column, Sabbath Week, in New York newspaper The Jewish Week.

[Donna Fishman (2nd ed.)]

GILLMAN, SID (1911–2003), innovative U.S. football coach, recognized as a leading authority on passing theories and tactics, influential in changing the downfield passing game and in the use of film footage as a preparatory tool for coaching; the only coach elected to both Pro (1983) and College (1989) Football Halls of Fame.

Born and raised in a traditional kosher home in Minneapolis, Minn., to Sara (Dickerson), who was born in New York, and David, born in Austria. Gillman played college football from 1931 to 1933 at Ohio State University, where he was a Grantland Rice A.P. All-American honorable mention, 1932–33. He also played in the inaugural College Football All-Star Game in 1934. While working as a movie theater usher at his father’s theater, he would remove the football segments from newsreels and take them home to study. Gillman was the first coach to analyze game footage, something practiced by all coaches today.

Gillman played one year in the National Football League for the Cleveland Rams, then began coaching, first as an assistant coach at Denton University (1935–37, 1941), Ohio State (1938–40), and the University of Miami of Ohio (1942–43), before being named head coach at Miami of Ohio (1944–47). He led Miami to a 31–6–1 record, including a 13–12 victory in the 1947 Sun Bowl. After a year as assistant coach at Army in 1948, Gillman was named head coach at the University of Cincinnati (1949–54), which he led to three Mid-American Conference titles, two bowl games, and a 50–13–1 record, resulting in a remarkable .814 winning percentage (81–19–2) in his college coaching career.

In 1955, after failing to receive the Ohio State head-coaching job—which Gillman always suspected was because he was Jewish—he moved to the pros as head coach with the Los Angeles Rams, where he compiled a 28–31–1 record in 1955–59 and led the team to the NFL championship game in 1955. When the American Football League debuted in 1960, Gillman was named head coach of the Los Angeles Chargers, which moved to San Diego in 1961. He led the team to five Western Division titles, one league championship— in 1963, beating the Boston Patriots 51–10 – and an 82–47–6 record in the first six years of the league’s existence. He also coached the Houston Oilers in 1973–74, winning Coach of the Year honors in 1974. Gillman, who finished with a 123–104–7 professional record, is credited with putting names on the backs of jerseys, and with first suggesting the idea of a “Super Bowl” game between champions of the NFL and AFL.

[Elli Wohlgelehrter (2nd ed.)]

GILMAN, ALFRED G. (1941– ), U.S. pharmacologist and Nobel laureate in medicine. Gillman was born in New Haven, Connecticut, and received his B.Sc. in biochemistry from Yale in 1962 and M.D. and Ph.D. from Case Western Reserve University, Cleveland, in 1969. He was a research associate at the National Institutes of Health, in 1969–71, and worked at the University of Virginia, Charlottesville, in 1971–81, where he became professor of pharmacology. From 1981 he was profes-
sor and chairman of the department of pharmacology at the University of Texas Southwestern Medical Center in Dallas, Texas. Gilman's life-long research interests concern the ways in which cells respond to external stimuli transmitted from the surrounding plasma membrane. Sutherland's discovery of the cyclic AMP system introduced the concept of transduction in the plasma membrane and the generation of a second messenger initiating cellular responses. The discovery of the G protein family (short-hand for guanine nucleotide-binding regulatory proteins) by Gilman and his colleagues greatly expanded knowledge of the plasma membrane events which signal appropriate responses to an enormous range of external stimuli including hormones and bacterial toxins. In 1994 he and Martin Rodbell were awarded the Nobel Prize for medicine for this work. His subsequent work largely concerned the distribution and properties of the different members of the G protein family, and the cyclic AMP system. Gilman took over the editorship of the world's best-known textbook of pharmacology (The Pharmacological Basis of Therapeutics) from his distinguished pharmacologist father. His honors include membership in the U.S. National Academy of Sciences and the Gairdner and Lasker Awards.

[Michael Denman (2nd ed.)]

GILYONOT (Heb. גיליוןות), an independent literary monthly published in Tel Aviv from 1934 to 1954, founded and edited by Yizhak *Lamdan. Lamdan's strong Zionist and socialist ideas were expressed both in his literary and editorial policy. He viewed modern Hebrew literature as a “continuation of the Hebrew literature” of the past. In addition to recognized Hebrew writers, Lamdan encouraged younger writers to publish in Gilyonot and several contemporary writers of stature published their first works in its pages (S. *Yizhar, for example). He also invited the participation of Hebrew writers living in Europe and the U.S. He manifested great interest in U.S. Jewry, devoting an issue of Gilyonot to that community (vol. 31, no. 8–10). Of interest also is the 18th anniversary issue (vol. 26, no. 5–6), which dealt with the history of Hebrew periodical literature. The final issue of Gilyonot appeared after Lamdan's death and was dedicated to his memory.

[Getzel Kressel]

GIMBEL, U.S. merchant family. ADAM GIMBEL (1817–96), who emigrated from Bavaria, settled in New Orleans in 1835. Six brothers and two sisters followed him to the United States. Adam was a peddler along the Mississippi River before opening a dry goods store in Vincennes, Indiana, in 1842. By the time he sold his firm 40 years later, he owned four stores in Vincennes. He was a member of the city council from 1842 to 1866. The two eldest of Adam's seven sons, Iacob (1851–1922) and ISAAC GIMBEL (1857–1931), established a department store in Danville, Illinois, in the 1880s. When they found the undertaking unprofitable, they moved to Milwaukee, Wisconsin, where they founded Gimbel Brothers. In 1894 they opened a second department store in Philadelphia, which was run by their brothers CHARLES (1861–1932) and ELLIS GIMBEL (1865–1950). The Gimbel’s first New York venture came in 1910 with the establishment of a department store at Herald Square, which grew rapidly when two older firms were merged with it. In 1923 Gimbel Brothers bought Saks and Co. and shortly thereafter built a Saks subsidiary on Fifth Avenue. The Gimbel chain was further extended in 1926, when it took over Kaufman and Baer of Pittsburgh.

In the next decades, Saks branches were opened in Chicago, Detroit, Beverly Hills, and San Francisco. BERNARD F. GIMBEL (1885–1966), Isaac’s son, became president of Gimbel Brothers in 1927. He was a distinguished civic figure who played a large part in the organization and direction of New York City’s World Fairs in 1939 and 1964–65. He was a generous contributor to a number of scholarly institutions and was active in the work of the National Conference of Jews and Christians. Bernard’s son, BRUCE A. GIMBEL (1913–1980), succeeded his father as president of Gimbel Brothers, Inc. in 1953. Sales during the fiscal year ending January 31, 1961, in a total of 53 urban and suburban stores in the chain, reached a record $61.6 million. Ten additional stores were opened over the next three years. However, in 1973 the company was absorbed by Brown and Williamson Tobacco Corp. and later by BAT Industries plc. The last Gimbel’s store closed its doors in 1987.

Maintaining the family’s dedication to philanthropy, the Bernard F. and Alva B. Gimbel Foundation, established in 1943, supports services, programs and advocacy efforts in New York City that deal with education, workforce and economic development, civil legal services, criminal justice, reproductive rights, and the environment.

[Hanns G. Reissner Ruth Beloff (2nd ed.)]

GIMMEL (Heb. גימל), third letter of the Hebrew alphabet; its numerical value is therefore 3. The basic shape of this letter consists of two strokes forming an angle: thus in the Proto-Sinaitic 𐤈, Proto-Canaanite 𐤉, and Proto-Arabian 𐤊 scripts. In the tenth-century B.C.E. Phoenician script two types occur: 𐤉 and 𐤊. The first type was adopted by the ancient Hebrew and Greek scripts (cf. the gamma Γ), while the second one prevailed in the later Phoenician and Aramaic scripts. From the Aramaic א developed the Hebrew א, Syriac א, and Arabic א. The modern Hebrew cursive gimmel evolved as follows: א → א → א. See *Alphabet, Hebrew.

[Joseph Naveh]

GINGOLD, HERMIONE (1897–1987), British actress. Born in London, the daughter of a stockbroker from Austria, Hermione Gingold had a varied career on the London and New York stage, lasting over 60 years, from 1908 until 1973, usually appearing in comedies and reviews. A second career in Hollywood saw her star in such films as Gigi (1958), and a further career in American television found her typecast as a delightful eccentric. Twice married, her first husband was the British Jewish literary agent and publisher MICHAEL JOSEPH (1897–1958), whom she married in 1918 and divorced in 1926.
GINOSSAR, ROSA

His firm, Michael Joseph Ltd., published the works of such famous writers as Michael Arlen, Daphne DuMaurier, and Dick Francis. Gingold wrote a posthumously published autobiography, How to Grow Old Gracefully (1988). There is a biography of her husband, Michael Joseph: Master of Words (1986), which never mentions the fact that he was Jewish.

[William D. Rubinstein (2nd ed.)]

GINGOLD, PINCHAS M. (1893–1953), U.S. Labor Zionist and Yiddish educator. Gingold was born near Grodno, Lithuania, and immigrated to the United States at the age of 16. A founder of the Jewish Legion at the start of World War I, Gingold enlisted and saw action with the British Army in Palestine. Upon his return to New York (1920), he joined the Labor Zionist movement and was active in the American and the World Jewish Congress. During the 1920s and 1930s Gingold was the director of the Yiddish Teachers Seminary. In 1932 he edited the Yidishe Dertsung, an educational journal sponsored by the Jewish National Workers’ Alliance (Farband). After 1930 he headed the national committee of the Jewish Folk Schools. The committee published the Pinchas Gingold Book (1955), a commemorative Yiddish volume containing Gingold’s essays on Jewish education and culture and his reminiscences of the Jewish Legion.

GINIEWSKI, PAUL (1926–), French editor and author. Born in Vienna, Giniewski went to France in 1940 and from 1943 to 1945 was a member of the French Resistance. He served as chairman of the press committee of the Zionist Federation of France and in 1951 became editor in chief of the French Jewish periodical, La Terre Retrouvée. His books include Quand Israël combat (1957), Israël devant l’Afrique et l’Asie (1958), Le Bouclier de David (1960), Bantustans: A Trek Towards the Future (1961), and Une autre Afrique du Sud (1962).

GINNEGAR ( Heb. גוניגהר), kibbutz on the northern rim of the Jezreel Valley, Israel, S.W. of Nazareth, affiliated to Ihud ha-Kevuzot ve-ha-Kibbutzim. It was founded in 1922 by pioneers of the Third Aliyah. Its settlers had previously set up kibbutz Deganyah Gimmel in the Jordan Valley. Ginnegar was one of the earliest Jezreel Valley settlements, and in the initial years of struggle, the settlers were employed in the planting of the Balfour Forest, at the time the largest *Jewish National Fund forest in the country, located on the slopes above the kibbutz. The kibbutz economy was based on highly intensive farming and it owned a factory manufacturing plastic products. In 2002 its population was 448. Ginnegar is a historical name mentioned, in forms like Neginegar (ִנֶּגִּינֶּגָר) in the Talmud (TJ, Er. 1:9, 19c; Kil. 4:4, 29b; and et al.), and is preserved in the Arabic name of the site Jinjar.

WEBSITE: www.ginegar.co.il.

[Efraim Orni]

GINNOSAR (גִּנְנוֹסַר), kibbutz on the shore of Lake Kinneret, Israel, founded by Israel-born youth and Youth Aliyah graduates of *Ben Shemen. The kibbutz was set up at the time of the Arab riots early in 1937, serving initially as a guard outpost on *Palestine Jewish Colonization Association (PICA) lands. In spite of PICA’s opposition, the settlement became permanent. Before 1948, in the pre-State period, Ginnosar served as a training and organizational center of the *Palmah. It developed subtropical intensive farming (bananas, avocado, mango, and litchi), field crops, dairy cattle, and fishery. In addition, the kibbutz operated a banana plant nursery and also opened a large guesthouse and restaurant. Yigal Allon House, a memorial museum, is located inside the kibbutz. It features the so-called “Jesus boat,” constructed in around 40 B.C.E. and salvaged from Lake Tiberias in 1986. In 2002 the population of Ginnosar was 483.

BIBLIOGRAPHY: www.ginosar.net/history.html.

GINNOSAR, PLAIN OF (Heb. נְגִינָסָר), narrow plain on the N.W. shore of Lake *Kinneret. The plain extends c. 3½ mi. (5½ km.) along the coast and its width in the center from the sea to the edge of the alluvial soil and the foot of the hills is c. 1¼ mi. (2 km.). In antiquity the name Ginnosar apparently also applied to the rim of the hills since Josephus states that it is 2½ mi. (3.7 km.) wide (Wars, 3:516ff.). Its area covers over 1,600 acres (6,450 dunams). The plain of Ginnosar was created by alluvial soil deposited by three brooks which pass through the plain: Nahal Ammud and Nahal Zalmon, perennial brooks, and Nahal Arbel, a brook flowing intermittently. The extreme fertile basaltic red soil washed down from the hills to which the sea added moisture and dew produced the famous fruits praised by Josephus (ibid.) and the Talmud. The fruits are described as being large, easily digested, and causing the skin to become smooth. Several interesting anecdotes are told about rabbis who partook of them, including a story about *Simeon b. Lakish whose mind began to wander (Ber. 44a).

The plain of Ginnosar was included in the territory of *Naphtali and the Talmud attributes the blessings of Jacob and Moses to Naphtali to this plain: “It is the plain of Ginnosar which has tens its fruits like a hind [which runs swiftly]” (Gen. R. 99:12); “Naphtali, satisfied with favor, and full with the blessing of the Lord: that is the plain of Ginnosar” (Sif. Deut. 355). The name appears in ancient sources in various forms of which the most correct appears to be the Greek form Gennesar as in 1 Maccabees 11:67 and in talmudic sources, but the form Ginnosar is most frequently used and has become generally accepted. The lands of the plain of Ginnosar are now cultivated by the settlements of *Migdal and *Ginnosar.

[Abraham J. Brawer]

GINOSSAR (née HACOHEN), ROSA (1890–1979), Zionist women leader. Daughter of the writer Mordecai ben Hillel *Hacohen, Rosa Ginoesser was born in Gomel, Belorussia and immigrated with her family to Ereẓ Israel in 1907 with the Second Aliyah. She studied law there and succeeded in having the ban against the admission of women to the Palestine bar removed, becoming the first practicing woman lawyer in Ereẓ.
Israel. She married Shlomo, the son of Ahad "Ha-Am (Asher Hirsch Ginsberg), Israel's first ambassador to Italy (1949–51), who hebraized his name to Ginossar. Rosa Ginossar joined "WIZO at its inception in 1920, becoming its first secretary, and was actively associated with the organization throughout its history. After serving as treasurer for many years, she was elected chairman of the World Executive in 1951 and president in 1963. On her retirement from active work in 1970, she was appointed honorary president.

GINOTT, HAIM G. (1922–1973). U.S. psychologist. Ginott was born in Tel Aviv but immigrated to the United States, where he received his doctorate from Columbia University in 1952. He specialized in group psychotherapy, especially with children, practicing as chief clinical psychologist at the Child Guidance Clinic at Jacksonville, Florida, from 1952 to 1960 and lecturing at Jacksonville University from 1955 to 1958. In 1960 he was appointed an adjunct associate professor and supervisor of child psychotherapy at New York University. In 1966 he was appointed associate clinical professor in the postdoctoral program at Adelphi University in Garden City, Long Island, N.Y. He served as UNESCO expert in guidance and counseling to the government of Israel from 1965 to 1966.

Ginott was best known for his practical and commonsense approach to child psychotherapy. In his Group Psychotherapy with Children (1961), he stressed the importance of the details of play therapy, such as the selection of children, how to equip a playroom, etc. Nor did he overlook the parent, including the screening of the parents of prospective clients and ways of conducting parent guidance groups. He addressed himself to those colleagues who "knew about Oedipus and Electra, but were puzzled when confronted with children's incestuous approaches; they knew about transference and resistance, but had difficulty in transferring a resisting child from the waiting room to the playroom."

From 1967 Ginott devoted himself to writing authoritative books for the nonspecialist, and his Between Parent and Child (1967) made him the public's favorite expert on child psychology. His later books dealt with the teenager (Between Parent and Adolescent, 1969) and the school-age child (Teacher and Child, 1972).

GINSBERG, ALLEN (1926–1997). U.S. poet and leader of the mid-20th century "Beat Movement," an aesthetic and political movement marked by its rebellion against the claustrophobic culture and repressive politics of Cold War 1950s America. He was born Irwin Allen Ginsberg in Newark, New Jersey. His mother, Naomi, was a Russian Jewish immigrant and communist whose lifelong battle with mental illness became the focus of his highly regarded poem "Kaddish." His father, Louis, was a Jewish-American socialist, high school teacher, and published poet (see below). Ginsberg attended Columbia University, where he studied with Lionel "Trilling, and during which time he met and established lasting friendships with such future Beat writers as Jack Kerouac, author of On the Road, and William Burroughs, author of Naked Lunch. During this time Ginsberg also had a life-altering vision. While reading William Blake's poem "Ah! Sunflower," he heard Blake speak to him and experienced a profound mystic awareness of the divinity of all creation. His prophetic vision convinced him that he was meant to become an ecstatic poet, writing "open breath poetry" in the mystical, hermetic tradition of Blake and Walt Whitman. While writing his early poems, he worked as a dishwasher, spot-welder, night porter, actor, and market research worker.

Ginsberg finally entered the popular imagination with "Howl," which, from his first public reading of the poem in San Francisco in 1955, quickly came to be considered the central spiritual, prophetic poem of his alienated generation. "Howl," with its famous opening line "I saw the best minds of my generation destroyed by madness, starving hysterical naked," was both a powerful Lament at the grief and suffering of his fellow artists and visionaries – "angelheaded hipsters" – and a Jeremiad against the dehumanization of the industrialized, tranquilized, repressive culture of Eisenhower and McCarthy's 1950s. "Howl" turned Ginsberg into a well-known public poet and personality, especially after its publication as part of his first book of verse, Howl and Other Poems (1955). Howl involved its publisher in a highly publicized obscenity trial, which only added to Ginsberg's rising fame. He came to specialize in readings of his own works in coffee shops and on college campuses, as well as later playing music with famous rock and folk artists including Bob Dylan.

Ginsberg's later works include Empty Mirror (1960); Kaddish and Other Poems 1958–60 (1960); Reality Sandwiches 1953–60 (1965); The Fall of America: Poems of These States, 1965–1971 (1973); White Shroud: Poems 1980–1985 (1986); and Cosmopolitan Greetings: Poems 1986–1992 (1995). Stylistically, much of his work is notable for its jazz rhythms and surrealistic imagery, and for his candid, vivid descriptions of madness, homosexuality, drug-induced hallucinations, and physical anguish, all illuminated by an exalted Blakean vision of man's perfectibility in innocence. Some of the poems also reveal the author's bizarre, even apocalyptic, sense of humor.

Ginsberg often referred to himself as a "Buddhist Jew," and while he never rejected his Jewish heritage, he did often criticize both American Jews and the State of Israel. In fact, he saw this critique as central to his Jewishness. Ginsberg writes about his Jewish family members, the Holocaust, Israeli, and Jewish themes such as memory, loss, and reconciliation in his poems "Visiting Father and Friends," "Jaweh and Allah Battle," "To Aunt Rose," and "Kaddish," his marvelous transformation of the Jewish prayer of mourning and memory into a painfully honest elegy for his dead mother. In his later poem "Yiddishe Kopf," Ginsberg explores the complex nature of his Jewish identity and its roots in Jewish food, history, intellectualism, alienation, and radical political activism. Addition-
ally, his poetic style was greatly influenced by Jewish forms, namely cantorial chanting and Hebraic poetry, with their long lines and anaphoric opening repetitions, as well as being influenced by the prosody of Blake, Whitman, and William Carlos Williams and by American jazz. While many of his works deal with Jewish themes, many more explore his fascination with Eastern religious practices and religious syncretism. His later works *Wichita Vortex Sutra* (1966) and *Planet News* (1968) reflect Buddhism's mystical notion of man's oneness with a benevolent universe. Ginsberg also helped establish the Naropa Institute, a Buddhist university in Boulder, Colorado.

In addition to producing important poetic and prose works to the end of his life, Ginsberg was also active in the love-ins, anti-Vietnam War protests, drug experimentation, and gay rights movements of the 1960s and 1970s, becoming increasingly involved in progressive political movements in his later years. He traveled widely, visiting Martin Buber in Jerusalem in 1961 and traveling to every part of the globe. Ginsberg was a fellow of the American Academy of Arts and Sciences in 1992 and awarded the Chevalier l'ordre des Arts et de Lettres in France. By the time of his death, his poetry had been translated into dozens of languages, and his balding head, black beard, bespectacled face, and patriarchal demeanor had became familiar to millions all over the world.

His father, Louis Ginsberg (1896–1976), was born in New Jersey and published two books of poetry, *The Attic of the Past and Other Lyrics* (1920) and *The Everlasting Minute and other Lyrics* (1937), which at their best give literary freshness and color to everyday things.

[David Ignatow / Rohan Saxena and Craig Svonkin (2nd ed.)]

**GINSBERG, EDWARD** (1917–1997), U.S. attorney and business executive. Born in New York City, Ginsberg moved with his family to Cleveland, Ohio. He received his B.A. from the University of Michigan (1938) and his Juris Doctor from Harvard University (1941). After graduation, he returned to Cleveland, where he practiced law for more than 50 years. He was a partner in the Cleveland law firm of Gottfried, Ginsberg, Gruen & Merritt. He was also a director of Rusco Industries, and a board member of Orlite, an Israeli company.

Active in Jewish communal life, Ginsberg devoted himself to Israeli and Jewish activities in the U.S. and around the world. After World War II, he played an important role in raising funds for the establishment and support of the Jewish state. He was a general chairman and then president of the National United Jewish Appeal, president of the *American Jewish Joint Distribution Committee*, and a leader in the Cleveland Jewish Community Federation, and the *United Jewish Appeal*. He served as vice president of the Jewish Telegraphic Agency and was the founder of the *Cleveland Jewish News*. He served as a life trustee of the Jewish Community Federation of Cleveland and was president of the Fairmount Temple. He sponsored many educational programs at the Hebrew University of Jerusalem, which made him an honorary founder. Hebrew Union College and Hebrew University in Jerusalem awarded him honorary degrees, and he was awarded the Eisenman Award for humanitarianism by the Jewish Community Federation.

He was also involved in many business activities, including directorships of the *Israel Airlines* and the First National Bank and Trust Company. A lifelong sports enthusiast, Ginsberg was a partner in the New York Yankees and a director of the Chicago Bulls.

The Edward Ginsberg Center for Community Service and Learning, named in his memory at the University of Michigan, is dedicated to engaging students and faculty members in a process that combines community service and academic learning to promote civic participation, build community capacity, and enhance education.

[Ruth Beloff (2nd ed.)]

**GINSBERG, HAROLD LOUIS** (1903–1990) U.S. Bible scholar and Semitist. Born in Montreal (Canada), Ginsberg, at the urging of his parents, spent two years in medical school. With their premature deaths, he decided to move to mandatory Palestine in the early 1920s, where he taught Hebrew and English. In Palestine Ginsberg became interested in Semitic languages. Because the Hebrew University had not yet opened, Ginsberg, aided financially by his uncles, was able to study at Jews College and the University of London. He returned to Palestine, where he completed the writing of his London doctoral thesis on the Hebrew verb. By this time the Hebrew University had opened and Ginsberg was able to study talmudic philology with J.N. *Epstein*. In addition he was able to work with W.F. *Albright* of the American School of Oriental Research in Jerusalem. In 1936 Ginsberg was invited to the Jewish Theological Seminary of America, where, from 1941, he was professor of Bible at the Jewish Theological Seminary of America, New York. While the bulk of his publications in the biblical field are philological – word studies, text restorations, and exegesis – he also elucidated problems of biblical history and religion. Ginsberg made significant contributions to Aramaic linguistics and was a pioneer in the interpretation of Ugaritic texts and their application to the Bible. His Semitic and exegetical skills are combined luminously throughout his work.

Ginsberg was an editor of the new Bible translation of the American Jewish Publication Society (editor in chief of the translation of the Prophets from 1962). He edited the Bible division of the *Encyclopaedia Judaica*.

Ginsberg was a fellow of the American Academy for Jewish Research (vice president, 1969–70) and was the honorary president of the American Society of Biblical Literature (1969). He was a member of the Israel Academy for the Hebrew Language.

His works include *Kitvei Ugarit* (1938); *The Legend of King Keret* (1946); *Studies in Daniel* (1948); *Studies in Koheleth* (1950); a new Hebrew commentary on Ecclesiastes (1961);

In Ginsberg's days at the Jewish Theological Seminary there was no Ph.D. program but Ginsberg's classes influenced several generations of rabbis to become biblicists and academicians.

[Moshe Greenberg / S. David Sperling (2nd ed.)]

**GINSBERG, MITCHELL I.** (1915–1996), U.S. social worker and educator. Ginsberg, a native of Boston, received his B.S. (1937) and his M.A. in education and psychology (1938) from Tufts University and his M.S. in social work from Columbia University (1941). He served in the U.S. Army from 1942 to 1946 as supervisor of a psychiatric social work unit. He was a social worker in Manchester, New Hampshire, and in Boston, then moved to the personnel and training bureau of the National Jewish Welfare Board in New York. He joined the faculty of the Columbia University School of Social Work, and in 1953 he became full professor, serving as associate dean (1960–66). He was a consultant in various training programs of the U.S. Peace Corps project and to the City of New York. In 1966 Ginsberg was appointed commissioner of the New York City Department of Social Services under Mayor John Lindsay. During his two-year tenure, he initiated several reforms, including the elimination of expensive investigations of welfare applicants and late-night inspections of recipients' homes. In 1968 he held the position of administrator of the city's Human Resources Commission, serving also as consultant on the community action program of the U.S. Office of Economic Opportunity.

Ginsberg returned to Columbia in 1971 as dean of the School of Social Work and special assistant to the president for community affairs. During the next 10 years, he helped launch Columbia Community Services, a cooperative project that provides health and social services to the homeless. When he retired in 1986, Ginsberg was designated professor and dean emeritus, continuing to teach and serving as co-director of Columbia's Center for the Study of Human Rights and chairman of the citywide Emergency Alliance for Homeless Families and Children.

In recognition of his lifelong work on behalf of the underprivileged, Columbia established in 1991 the Mitchell I. Ginsberg Professorship in Contemporary Urban Problems, which provides research on preventive policies and practical solutions to homelessness and other urban problems. The Ida R. and Mitchell Ginsberg Social Policy Endowed Fund was established at Columbia to support further studies in social policy by students at the School of Social Work.

[Werner J. Cahnman]

**GINSBURG, CHRISTIAN DAVID** (1831–1914), Bible scholar. Born in Warsaw, he converted to Christianity in 1846 and soon afterward moved to England. Through two successive marriages to women of wealth he was able to pursue scholarship without ever holding an academic post. In England Ginsburg devoted himself to research on the masoretic text of the Bible; *The Massorah* (his magnum opus), published between 1880–1905 in four volumes, is the fruit of his labor. In the first two volumes, the original text of the masorah (in Hebrew) is arranged alphabetically with many additional notes drawn from manuscripts. The third volume contains supplements, and some masoretic tracts; the fourth renders into English all Hebrew entries of the first volume up to the letter “yod,” with explanatory notes. In his work, Ginsburg amassed rich and rare material; some of it, however, is not accurate. He also published two standard editions of the Hebrew Bible (1894, 1911) based on the same research. In *Introduction to the Masoretico-Critical Edition of the Hebrew Bible* (1897, repr. 1966) and in *A Series of 15 Facsimiles of MSS of the Hebrew Bible* (1897; second edition: *A Series of 18 Facsimiles…*, 1898), he explains his system. In 1904, on the occasion of its centennial, the British Bible Society entrusted Ginsburg with the publication of a new critical Hebrew Bible text; it was completed only in 1926. Before his death, however, he edited and published the Pentateuch (1908), Isaiah (1909), the Prophets...
(1911), and Psalms (1913). In his research he based himself on 75 manuscripts and 25 earlier Bible editions.

Ginsburg also wrote commentaries on the Song of Songs (1857), Ecclesiastes (1861), Leviticus (1882); and published The Karaites, their History and Literature (1862); The Essenes (1864); The Kabbalah, Its Doctrines, Development and Literature (1863, 1920); Massoret ha-Massoret, by Elijah *Levita, with an English translation and critical explanatory notes (1867); Jacob b. Chajim ibn Adonijah’s Introduction to the Mikraot Gedolot Bible edition (Hebrew and English) with explanatory notes (1865, repr. 1968); The Moabite Stone (1870). He also published the New Testament in Hebrew, translated by the convert J.E. Salkinson (1885). Ginsburg spent the last years of his life in Middlesex. His collection of Bible manuscripts is in the possession of the British Bible Society.

**GINSBURG, DAVID** (1920–1988), Israeli organic chemist. Born in New York, Ginsburg immigrated to Israel in 1948. He worked at Weizmann Institute of Science in Rehovot until 1954, when he became professor of chemistry at Haifa Technion where he was acting president 1961–62. He wrote *Opium Alkaloids* (1962), and edited *Non-Benzoin Aromatic Compounds* (1960). His research covered polynuclear aromatic compounds, heterocyclic nitrogen compounds, reactions with tertiary butyl hypochlorite, morphine, colchicine, and conformational analysis. Ginsburg was awarded the Israel Prize for exact sciences in 1972.

**GINSBURG, EVGENIA SEMIONOVA** (1906–1978), Russian writer; mother of the writer Vassily Axenov. She was born in Kazan and spent the years 1937–48 in prisons where she wrote the poem "And again like grown white Jews" (I vinov kak sedye evrei) on 31 of October 1937. The refrain of the poem says: /Next year in Jerusalem/. In the Samizdat she published her memoirs from the prisons and camps *Krutoi Marshrut (Into the Whirlwind)*. It was published in all European languages abroad in the 1970s. In 1966 the journal *Yunost* published her documentary novel about the students in the 1920s. Various items of her writings were published in the Soviet press under the pseudonym Ye. Axsenova.

**GINSBURG, JEKUTHIEL** (1889–1957), mathematician and Hebrew writer, brother of Simon and Pesah *Ginzburg. Born in Russia, he emigrated to the United States in 1912, studied at Columbia University and, later, taught mathematics at Teachers College of Columbia University. In 1930 he was appointed professor and head of the department of mathematics at Yeshiva College. In 1932 he founded the quarterly *Scripta Mathematica*, edited the *Scripta Mathematica Library*, and coauthored (with D.E. Smith) the *History of Mathematics in America before 1900* (1936). His Hebrew feuilletons appeared in *Hadoar* under the pseudonym of J.L. Gog. His articles on the role of Jews in mathematics were collected in his *Ketavim Nivharim* ("Selected Writings," 1960), which includes his biography and data on his literary and scientific works.

[**Ruth Beloff (2nd ed.)**]

**GINSBURG, RUTH JOAN BADER** (1933– ), U.S. lawyer and Supreme Court justice. Born in Brooklyn, the daughter of Nathan Bader and Celia Amster Bader, Ginsburg graduated from Cornell University in 1954. Following her graduation she married classmate Martin Ginsburg, who was already a law student at Harvard. In 1956, Ruth Bader Ginsburg also entered Harvard Law School, one of nine women in her class. During the next two years, she coped with an infant daughter and her husband's diagnosis and recovery from a severe form of cancer while excelling academically in an environment which was less than welcoming to female students. Following her husband's graduation and employment in New York City, Ginsburg completed her studies at Columbia Law School. She was elected to the law reviews of both institutions, and was recommended as a law clerk by Albert Sachs, dean of Harvard Law School, to Supreme Court Justice Felix *Frankfurter in 1960. Frankfurter refused to employ Ginsburg be-
cause she was a woman, a pattern repeated by New York City law firms. She was ultimately hired as a law clerk by a district court judge in New York.

In 1963, following her participation in a comparative law project in Sweden sponsored by Columbia University, she became the second woman to join the law faculty of Rutgers University. At Rutgers, Ginsburg became increasingly committed to addressing social conditions that denied women choices and opportunities open to men. Appointed as the director of the Women's Rights Project of the American Civil Liberties Union in 1972, Ginsburg looked for sex discrimination cases that raised issues amenable to change through legislation. She often employed the strategy of using male plaintiffs to show that laws that discriminated between men and women – even when supposedly designed to benefit women – were based on negative and unfair stereotypes that perpetuated the prevailing notion that women were generally dependent on men. Seeking to persuade a majority of the Supreme Court that sex-based legal distinctions demanded heightened judicial scrutiny, Ginsburg won five out of the six major women's rights cases she argued. The Supreme Court's ruling in Craig vs. Boren in particular – a 1976 case for which Ginsburg filed the brief – made it far more difficult to enact laws based on sexual stereotypes.

In 1980, eight years after being appointed the first tenured woman law professor at Columbia University, Ginsburg was elected to the United States Court of Appeals for the District of Columbia Circuit. There she earned respect for clear thinking, careful reasoning, and assiduous preparation of her cases. In June 1993, when President Clinton proposed her to replace Justice Byron R. White, she became the first Supreme Court justice to be nominated by a Democratic president in 26 years; she was confirmed by the Senate in August 1993. On the Court, Ginsburg was a strong supporter of women's rights and civil liberties in general.

Her husband, MARTIN D. GINSBURG, an expert in tax law, was the lawyer to Ross Perot, billionaire oil magnate and 1992 presidential candidate, for many years. He was an economic adviser to Perot during his campaign. Ginsburg taught at Georgetown University Law School, to which Perot donated $1 million in his honor in 1986.

[Judith R. Baskin (2nd ed.)]

GINSBURG, SAUL (1866–1940), author and historian of Russian Jewry. Born in Minsk, he received a traditional Jewish as well as secular education. He graduated in 1891 from the law faculty of Peterburg University. He was active in the Hovevei Zion movement. Ginsburg became a contributor to Voskhod in 1892, and in 1896 published a historical study in that journal, "Zabytaya epokha" ("A Forgotten Era"), concerning the first Russian-Jewish periodical Razo xét. The following year he began contributing a regular review of the Hebrew press (under the pseudonym of "Ha-Kore") to Voskhod, as well as a literary column, and in 1899 was appointed to the editorial board. Together with P. "Marek he published Yevreyskiye narodnye pesny ("Jewish Folk Songs," 1901), which became a landmark in the study of Jewish folklore. In 1903 Ginsburg established Der Fraynd, the first Yiddish daily in Russia, which played an important role in the development of Yiddish journalism and was noted for its high literary standards. In 1908 Ginsburg left Der Fraynd to devote himself completely to the study of the cultural history of the Jews in Russia. He took part in the historical periodical Perekhitoye (4 vols., 1908–13). In 1913 he published Yevrei i otechestvennaya voyna 1812 goda ("Jews and the War of 1812"), a study of the history of Russian Jews during the Napoleonic Wars, and was a cofounder of the Jewish Literary and Scientific Society (which was closed down by the authorities in 1910). He graduated in 1891 from the law faculty of Peterburg University. When the Bolshevist Revolution broke out, Ginsburg was one of a small group who strove to carry on independent Jewish scientific work under the Soviet regime. From 1922 to 1928 he edited Yevreyskaya mysl ("Jewish Thought") and Yevreyski vestnik ("Jewish Herald"). In this period several of his studies on the history of Russian Jews also appeared in Zukunft, the New York Yiddish monthly. In 1930 Ginsburg left the Soviet Union and was able to take his voluminous archive with him. He first settled in Paris, but moved to New York in 1933. Here the Yiddish daily Forward regularly published his popular historical essays. A collection of his studies, Historische Verk, appeared in three volumes in 1937–38 with a bibliography by I. Rivkind. Two posthumous volumes were Amolike Peterburg ("Petersburg as It Was," 1944), and Meshumodim in Tsarishn Rusland ("Jewish Apostates in Czarist Russia," 1946). Some of his articles and studies are devoted to personal memoirs.

GINSBURGER, ERNEST (1876–1943), French rabbi and Jewish historian; born in Héricourt (Haute-Saône), France. During World War I he volunteered as rabbi of the French 18th Army Corps and was awarded the Médaille Militaire. He was subsequently chief rabbi of Geneva, Belgium, and Bayonne. Arrested in March 1942, he was interned at Compiègne and deported to a death camp in February 1943. Ginsburger left valuable essays on Jewish history, including Les Juifs de Belgique au XVIIIe siècle (1932), "Les Juifs de la France du Moyen Âge" (in REI, 47 (1903), 87–122), and Le Comité de Surveillance de Jean-Jacques Rousseau – Saint-Esprit-les-Bayonne (1934), based on the minutes of the only committee in revolutionary France with a majority of Jewish members.

GINZBERG, ELI (1911–2002), U.S. economist and social planner. Ginzberg was born in New York City, the son of rab-
binic scholar Louis *Ginzberg. He studied economics at Columbia University and in 1935 was appointed to the Columbia School of Business, where he was A. Barton Hepburn Professor of Economics until 1979. In addition to his teaching duties, Ginzberg was an adviser to several U.S. presidents, from Franklin D. Roosevelt through Jimmy *Carter. He was named director of the Eisenhower Center for the Conservation of Human Resources, when it was established in 1950. Under his guidance the Center was responsible for pioneering research efforts in employment and health policy. He also served with the United States War Department (1942–44 and 1946–48), the Surgeon General's Office, the White House Conference on Children and Youth (1959–65), and the National Manpower Council, of which he became chairman in 1962. His activities as a consultant, which were widely sought, embraced the United States Departments of State, Defense, Labor, and Health, Education and Welfare, the Hoover Commission, and the National Advisory Mental Health Council.

From 1953 to 1959 he was a governor of the Hebrew University of Jerusalem.

In 1978, on the verge of retirement from Columbia, Ginzberg accepted an appointment to direct the Revenon Fellows Program on the Future of the City of New York at Columbia. For the next 20 years he oversaw the selection of 240 Revenon Fellows and guided them into positions of leadership.

A specialist in labor economics, Ginzberg was particularly interested in problems of manpower utilization and economic growth, especially as they affected underdeveloped countries and minority groups. He was a leading expert on the economic aspects of African-American inequality in the United States, and he frequently traveled abroad in an advisory capacity to the governments of developing nations, especially Israel.

GINZBERG, LOUIS (1873–1953), one of the outstanding Talmud scholars of the first half of the 20th century; leader and the major halakhic authority of the Conservative movement in North America. Born in Kovno, Lithuania, Ginzberg received a typical East European Jewish education: private tutors, four years of study at the Telz and Slobodka yeshivot, and academic studies at three German universities. After studying with *Noeldeke at Strassburg, he received his doctorate from the University of Heidelberg in 1898 for his study of the midrashim quoted by the Church Fathers.

Ginzberg was a direct descendant (sixth generation) of Abraham, brother of *Elijah, the Gaon of Vilna. He was acutely aware of his ancestry and refers to the Gaon frequently as 'dodi zeken' (my great uncle), "the pride of our family," my famous ancestor, and the like. Ginzberg’s father and mother were extremely pious Jews and even though he became more liberal when he left home at age 15, he remained an observant Jew for the rest of his life. Nonetheless, he was plagued until his death by a certain ambivalence about following the path of Wissenschaft des Judentums.

Ginzberg was a brilliant polymath, "a walking encyclopedia." He knew most of the Bible by heart at age seven and had mastered much of rabbinic literature by age 14. His magnum opus, The Legends of the Jews, contains 36,000 references which Ginzberg kept in his head. In addition to rabbinics, Ginzberg was an expert in philosophy, Kabbalah, and mathematics and he knew at least 12 languages.

In 1899, Ginzberg immigrated to the United States at the invitation of Rabbi Isaac Mayer *Wise to accept a position as preceptor in Biblical Exegesis at *Hebrew Union College in Cincinnati, but the invitation was withdrawn by the time he arrived. Wise changed his mind because he heard that Ginzberg was an adherent of higher criticism of the Bible and, paradoxically, because he was afraid that Ginzberg was too observant. He was hired by The Jewish Encyclopedia from 1900 to 1902, writing 400 articles, many of which have remained classics until today. In 1902, Solomon *Schechter invited Ginzberg to become professor of Talmud at the newly reorganized *Jewish Theological Seminary (JTS). There Ginzberg made his academic and spiritual home for the next 51 years until the day he died.

As professor of Talmud at JTS, Ginzberg had tremendous influence on the development of Jewish studies at JTS and throughout the world. He brought young scholars such as H.L. *Ginsberg, Saul *Lieberman, Shalom *Spiegel, and A.J. *Heschel to JTS. He was one of the founders of the American Academy for Jewish Research in 1919 and served as its president until 1947. He raised substantial sums of money for classics such as *Kasovský's concordance of the Mishnah and *Tosefta, B.M. *Lewin's Ožár ha-Géôním, and *Schreiber's Meiri. He helped found the Institute for Jewish Studies at the Hebrew University and taught there in 1928–29. Finally, he played a major role in training and ordaining 650 rabbis over the course of two generations.

Ginzberg devoted most of his academic scholarship to three fields: Aggadah, the Jerusalem Talmud, and Geonica. In the realm of Aggadah, The Legends of the Jews (7 vols., 1909–38) remains unsurpassed. It also appeared in Hebrew
translation (6 vols., 1966–75) and in a one-volume abridgment called *Legends of the Bible* (1956). It retells the story of the Bible from Adam to Chronicles, weaving together thousands of aggadot culled from early and late Midrashim, Philo, Josephus, the Apocrypha, and the Church Fathers. In other words, Ginzberg systematically collected and rearranged the aggadah, as Maimonides had the halakhah in his *Mishneh Torah*. In addition to his *Legends*, his dissertation was devoted to *Die Haggada bei den Kirchenpatern* (1889–1900) and in 1928 he published over 40 *Genizah* fragments of Midrash in *Genzei Schechter*, volume 1.

In the realm of the Jerusalem Talmud, his *Seridei Yerushalmi* (1909) remains the only published volume of *Genizah* fragments of this basic rabbinic work. His *Perushim ve-Hidushim ba-Yerushalmi on Berakhot*, Chapters 1–5 (1941–61) remains one of the only scientific commentaries to the *Yerushalmi*. He also wrote commentaries on several other tractates; his commentary on *Pesahim* was scheduled for publication in 2005–6, over 50 years after his death.

In the realm of Geonica, the first volume of *Geonica* (1909) remains one of the few English language introductions to the field. The second volume of *Geonica*, as well as *Genzei Schechter*, volume 2, contain over 100 *Genizah* fragments of geonic response and commentaries and early Karaite works.

Ginzberg also wrote a book of biographies (*Students, Scholars and Saints*, 1928), an early study of the Zadokite Fragment from the *Genizah* which later turned out to be one of the Dead Sea Scrolls (*Eine Unbekannte Judische Sekte*, 1922; *An Unknown Jewish Sect*, 1976), and two volumes of collected articles (*On Jewish Law and Lore*, 1955; *Al Halakah ve-Aggadah*, 1960).

Ginzberg was a leading proponent of the “Positive-Historical School,” which later became the Conservative movement. In an essay from 1901 about Rabbi Zacharias “Frankel (1801–1875), the founder of this school of thought in Germany, Ginzberg describes Frankel’s historical Judaism, which was really Ginzberg’s own: “We may now understand the apparent contradiction between the theory and practice of the positive-historic school. One may, for instance, conceive of the origin and idea of Sabbath rest as the professor of Protestant theology at a German university would conceive it, and yet minutely observe the smallest detail of the Sabbath observances known to strict Orthodoxy. For an adherent of this school, the sanctity of the Sabbath repose not upon the fact that it was proclaimed on Sinai, but on the fact that the Sabbath idea found for thousands of years its expression in Jewish souls.” In other words, the authority of Jewish law does not derive from a one-time event of revelation at Mt. Sinai but from the fact that *Kelal Yisrael*, the collective Jewish people, observed Jewish law for thousands of years.

Ginzberg believed that it was not possible to understand Jewish history and culture without a thorough knowledge of Jewish law (“The Significance of the Halachah for Jewish History,” 1929). Furthermore, we now know from a recently published volume (*The Responsa of Professor Louis Ginzberg*, 1996) that Ginzberg was a prolific *posek* (decisor) for the Conservative movement between 1915 and 1953. He wrote over 100 responsa, first as chair of the Committee on the Interpretation of Jewish Law of the “United Synagogue (1917–27), and then as a private *posek*. From his responsa, one can learn about his approach to Jewish law. On the one hand, he was quite strict with regard to liturgical and synagogue-related issues: “I am not one of those who likes ‘new things,’ and I have a special aversion to changes in the customs of the synagogue” (*ibid.*, p. 99).

On the other hand, he usually judged a case on its own merits and frequently arrived at a lenient decision. Ginzberg occasionally prohibited something not because it was technically forbidden by Jewish law, but in order to preserve the “spirit of the law” or to prevent “mar’it ayin” (the appearance of impropriety) or “hillul ha-shem” (the desecration of God’s name). He opposed introducing the organ into the synagogue because it would cut off American Jewry from *Kelal Yisrael*.

In Ginzberg’s opinion, Jewish law is determined by the Talmud and the *rishonim* (early authorities ca. 1000–1500 C.E.) and not by Midrashim, later customs, or the *aharonim* (1500 ff.).

Ginzberg was a lifelong Zionist. His second article, published in Dutch in 1899, was a “Plea for Zionism.” He was a ZOA delegate to the Zionist Congress in Basel in 1905. In 1918, he said that the United Synagogue of America “should take an active part in the work for the restoration of Palestine.” He believed that the State of Israel must respect the Sabbath and *kashrut* and leave matters of marriage and divorce to the rabbinate. But he was opposed to religious coercion of the State against Jews who do not recognize the authority of halakhah. He was opposed to mixing religion with politics because it would lead to the weakening of religion and the corruption of politics. According to Historical Judaism, Jewish nationalism without religion is like a tree without fruit, and Jewish religion without nationalism is like a tree without roots.

[David Golinkin (2nd ed.)]

Ginzberg, Iser (1872–1947), Hebrew and Yiddish journalist, short story writer, and editor. Ginzburg was born in Develtov (Russia), and as a youth became influenced by the ideals of the *Haskalah*. He settled in the U.S. in 1893, and graduated from Cornell University Medical School in 1900. Influenced by radical politics, he contributed articles to American-Yiddish publications, including the *Fraye Arbeter Shtime* and *Tsukunft*, and was on the staff of the *Forverts*. Ginzburg also remained active as a Hebrew-language journalist, contributing to publications such as *Hatoren* and *Hadoar*. He wrote on contemporary problems and reviewed books dealing with Jewish religion, literature, and history. His major works are *Der Tal-“

[Eliahschulman / Marc Miller (2nd ed.)]

GINZBURG, NATALIA (1917–1991), Italian novelist and playwright. Natalia Ginzburg, who was born in Palermo, was the daughter of the biologist, Giuseppe Levi, and a non-Jewish mother. She studied in Turin, where her associates were the Jewish anti-fascist intellectuals who were active in the Italian resistance. Her first husband, Leone Ginzburg, a victim of the Nazis, died in a Roman prison in 1944. Her first story, La strada che va in città (1942; Road to the City, 1949), appeared under the pen name "Alessandra Tornimparte." Later works are È stato così (1947), the novel Tutti i nostri ieri (1952; Eng. ed. Dead Yesterdays, 1956; U.S. ed. A Light for Fools, 1957), the short story volume Valentino (1957), Le voci della sera (1961; Voices in the Evening, 1963), and Le piccole virtù (1962). Natalia Ginzburg’s characters, who are lonely, persecuted, and engaged in a hopeless quest for sympathy and understanding, include many Jews. Her deep pessimism was overcome, for once, in her outstanding work, Lessico famigliare (1963; Family Sayings, 1967). This is a psychological novel based on the author’s recollections of her own family and the events of her youth. The characters range from the bourgeois, assimilated Jews of the late 19th century, personified by her father, to the anti-fascist circles of Turin and her first friends. But the book’s main achievement lies in the distinctive language of the narrative. Natalia Ginzburg uses her family’s private phraseology, including many expressions from Spanish- and German-Jewish dialects, in such a way that it plays a leading role in recreating the flavor of an age. Natalia Ginzburg’s three plays are Ti ho sposato per allegria, La segretaria, and L’inerzia. The last was produced as The Advertisement by the National Theater in London.

GINZBURG, VITALY LAZAREVICH (1916– ), Russian physicist and Nobel laureate. Ginzburg was born in Moscow and obtained his Ph.D. in physics (1940) from Moscow State University. In 1941 he joined the Lebedev Physical Institute of the U.S.S.R. Academy of Sciences (FIAN), where he remained, including the period in World War II when the Institute was evacuated to Kazan. His research was greatly influenced by the Russian physicists I.E. Tamm and L.D. Landau (Nobel Prize in physics in 1962). Ginzburg won the Nobel Prize in

GINZBURG, SIMON (1890–1944), poet and critic. Ginzburg was born in the village of Lipniki, Volhynia, where he received a traditional education. He published his first poem in Ha-Shiloah in 1910. In 1912 he settled in the U.S., studied at Columbia University, and obtained a doctorate from Dropsie College in 1923. He immigrated to Palestine in 1933, but returned to America shortly before World War II as the emissary of the Hebrew Writers’ Association. He was one of the editors of Ha-Toren (1913–15) and Levine Ahiver in 1918, and a contributor to numerous Hebrew publications. Both in content and language, Ginzburg was greatly influenced by Bialik to whom he dedicated his book of poems Shirim u-Folemot ("Songs and Poems," 1931). Essentially a romantic poet, the American rural landscape attracted him, but he was repelled by the noise of New York. In Ahavat Hoshe’a ("Love of Hosea," 1935), he reveals dramatic ability; the twilight of the Northern Kingdom and the regeneration of the Jews on the eve of disaster are used to suggest a significant lesson for contemporary Jewry. In addition to a biography in English of Moses Hayyim Luzzatto (1931), Ginzburg published three of his plays, with critical notes, including Ma’asheh Shimson from a manuscript in the New York Public Library, his poetry, Sefer ha-Shirim ("Book of Poems," 1944–45), and an edition of his letters, under the title R. Moshe Hayyim Luzzatto u-Venei Doro ("R. Moshe Hayyim Luzzatto and His Contemporaries," 1936). These works, and his critical essays on the poet, are a major contribution to Luzzatto scholarship. His other critical essays were collected in Be-Massekhet ha-Sifrut ("In the Web of Literature," 1945). He translated Coleridge’s The Rime of the Ancient Mariner into Hebrew, as well as D.H. Lawrence’s Sons and Lovers, and poems by Tennyson, Hood, Byron, and Poe.

His younger brother Pesah (1894–1947), also born in the village of Lipniki, studied in Odessa, and lived for a time in the United States (1913–18), England, Canada, and the Scandinavian countries before settling in Palestine in 1922. He published several newspapers, which were, however, short-lived; edited various magazines; and was a night editor of Haaretz for about 20 years. Pesah’s poems, short stories, and articles appeared in the Hebrew press, a number of them also as separate booklets, including Regina Ashkenazi (1919) and Sippur Erez Yisraeli (1945). He translated extensively, mainly Scandinavian and English literary works.

[Elise Silberschlag]
physics in 2003 for his contributions to understanding superconductivity, which allows electric currents to pass through some metals and other materials (superconductors) at very low temperatures. Type 1 superconductors displace magnetic flow to allow the passage of electric currents. Type 2 superconductors allow the passage of electric currents despite the persistence of magnetic fields. The distinction is important to the practical applications of superconductivity such as magnetic resonance imaging (MRI) in medicine. His main theoretical contribution was to recognize the role of wave function in superconducting materials. Ginzburg also made important contributions to the design of Soviet thermonuclear weapons, especially by suggesting lithium as the source for generating tritium hydrogen in the reaction. He had a broad interest in the development and applications of theoretical physics and astrophysics. He succeeded in becoming a corresponding member (1953) and a full member (1966) of the U.S.S.R. Academy of Sciences despite the antisemitism of the Stalinist era. He was editor of Russia's principal physics journal (Physics-Uspekhi) from 1998. His democratic and pro-Israel views are set out in his autobiography.

[Michael Denman (2nd ed.)]

**GIOVANNI MARIA** (c. 1470–c. 1530), Italian lute player, born in Germany. His original Jewish name is unknown and when, after settling in Florence, he was baptized, he took his new name in honor of Cardinal Giovanni de' Medici. He was still often referred to, however, as “Giovanni Maria, the Jew.” In 1492 he was condemned to death for murder, but fled to Rome, where he entered the service of the Cardinal de' Medici. When the cardinal became Pope Leo X, Giovanni Maria was given the revenues of the township of Verrocchio, with the title of count. He subsequently entered the service of Pope Clement VII, the doge of Venice, and the dukes of Mantua and Urbino. A few of Giovanni Maria's own compositions were published and he is referred to with admiration in various literary works of the period. His son Camillo was also a musician in the papal service.

**GIRGASHITES** (Heb. גירגשites), one of the nations inhabiting the land of Canaan (Gen. 15:21; Deut. 7:1; Josh. 3:10; Neh. 9:8). The name also appears as that of the fifth ethnic group descended from Canaan (Gen. 10:16; 1 Chron. 1:14). Although the Girgashites are not referred to in the narrative of the wars of conquests, and their locality is not stated, they are named by Joshua among the peoples the Israelites dispossessed (24:31).

They have been uncertainly identified with the Qaraqsha, allies of the Hittites in their wars with Ramses II. If that identification is correct the Girgashites would have been part of the southward migrations from Anatolia of peoples displaced by the fall of the Hittite empire ca. 1200 B.C.E. A personal name grgš appears in Ugaritic, but its connection with this people is unknown. The sibilant termination of the biblical name suggests a Hurrian origin.

**GIROUD, FRANÇOISE** (France Gourdji; 1916–2003), French journalist and writer. Born in Geneva, Switzerland, Giroud, an ardent polemicist, was a major figure in the political press in France. In 1953, she co-founded with Jean-Jacques Servan-Schreiber one of France's first news magazines, L'Express, which began as a weekly supplement of Les Echos, a daily newspaper specializing in economics, but soon became a mainstay of France's political landscape. Giroud's journalistic motto was “understanding quickly how things work, and helping people to understand quickly.” L'Express was aimed at revolutionizing the French press by “telling people the truth,” in Servan-Schreiber's words; important writers took part in the project, including left-wing thinkers like Camus and Sartre and center-right writers like Malraux and Mauriac. From the beginning, L'Express voiced strong and clear opinions against colonial wars, which were often met with censorship from the
State. Giroud, a journalist and political columnist for most of her life, also held government positions as secretary of state for the condition of women (1974) and secretary of state for culture (1976–79). An outspoken, but moderate feminist, she played a vital role in the creation of a feminist press in France, and directed the monthly women's magazine Elle. From 1983 on, she was an editorialist and columnist on the center-left weekly Le Nouvel Observateur. Her published books include Lou, histoire d'une femme libre (2004), Les taches du léopard (2005), and Une Femme honorable (2008).

[Dror Franck Sullaper (2nd ed.])

GISCALA (Gush Halav; Heb. גֶּשֶׁת חַלָּב), ancient Jewish city in Upper Galilee, today the Christian-Arab village of al-Jish, 5 mi. (c. 8 km.) N.W. of Safed. According to the Mishnah, "the acropolis of Gush Halav" was surrounded by a wall built in the time of Joshua (Ar. 9:6). Canaanite and Israelite remains from the Early Bronze and Iron Ages have been uncovered there but the city is first mentioned (as Giscala) in connection with the history of the Jewish War (66–70/73). It was the birthplace of the Zealot leader *John (Johanan) b. Levi of Giscula, a dealer in oil, who fortified the city at his own expense and escaped to Jerusalem with his followers when the Romans surrounded it; Giscalca thereupon surrendered – the last city in Galilee to fall to the Romans (Jos., Wars, 2:275, 590; 4:92–120, 208; Life, 70, 75, 189). After the destruction of the Second Temple, during the days of the amoraim and tannaim, Jews also lived there. The city was situated in the center of an olive-growing district and derived its main livelihood from oil; the inhabitants also engaged in the production of silk (Tosef., Shev. 7:15; Eccl. R. 2:8, no. 2). A Jewish community continued into the Middle Ages, at least until the 13th century. The village was severely damaged by an earthquake in 1783.

On the summit of the hill on which Giscalca stands is a Maronite church with the remains of an ancient synagogue beneath it and, at its foot, near a spring, are the ruins of a second synagogue, excavated by H. Kohl and C. Watzinger in 1916, in which an Aramaic inscription was found on a column mentioning a certain Yose son of Tanhum. The latter synagogue was excavated in 1977–1978 by E. Meyers, J.F. Strange, and C. Meyers, and dated to between 250–551 C.E. A hoard of Roman coins was also found in the village. Numerous rock tombs are scattered through the village and its vicinity; according to an unsubstantiated local tradition, these include the graves of *Shemaiha and *Avtalyon. A monumental tomb built of masonry and with a large sarcophagus was excavated in 1973 by G. Edelstein and F. Vitto.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

Modern Period

In October 1948 when it was taken by the Israeli army, the Muslims left and the Christian inhabitants of the neighboring Kafr Bir'im came to settle in the village soon afterwards. Since then, the village population has been made up almost exclusively of members of the Maronite sect, forming Israel's major Maronite community. In 1968, it had 1,600 inhabitants. Its economy was based on olives, figs, deciduous fruits, vineyards, tobacco fields, and beef cattle. The historical name Gush Halav ("Milk Clod") assumedly points to the production of milk and cheese for which the village has been famous at least since the early Middle Ages; some scholars, however, assume that the name refers to the light color of the local limestone, in contrast with the dark-reddish basalt rock of the neighboring village Ra'a-al-Ahmar ("Red Mountain Top"), today moshav Kerem Ben Zimrah.

GISER, MOSES DAVID (Moyshe; 1893–1952), Yiddish writer and editor. Born in Radom (Poland), Giser was deported during World War I for labor in Germany. In 1919, he published his first poem in Der Yidisher Arbeter (Vienna). Returning to Warsaw in 1921, he joined the Yiddish expressionist group *Khaliastre. He emigrated to Argentina in 1924, where he taught in Yiddish schools, continued publishing his works (many under his pseudonym David Bender), operated a printing press, and edited the Yiddish publications Zid-Amerike, Pasific, and Dos Yidische Vort. While his early lyrics focused on Polish Jews in cities and villages, his later lyrics dealt with Latin American scenes and people. A posthumous edition of his selected works appeared as Dos Gezang fun a Lebn ("The Song of a Life," 1953).

[Melech Ravitch / Marc Miller (2nd ed.)]

GISSIN, AVSHALOM (1896–1921), pioneer in the military defense of the yishuv. Born in Petah Tikvah, Gissin studied at the officers' school of the Turkish Army in Istanbul and Damascus. At the end of World War I he returned to Palestine and founded *Maccabi and the scout movement in Petah Tikvah, where he schooled local youth in the use of arms. When Arab riots broke out in 1921, Gissin left his work as a surveyor in the south and returned to his home to organize the defense of the settlement. He was killed with three others in battle while defending Petah Tikvah against armed Bedouins. Maccabi Avshalom, the Petah Tikvah soccer team, is named after him. His grandfather, Ephraim Gissin (1835–1898), born in
Mohilev, Belorussia, was an early member of Hovevei Zion and went to Ereẓ Israel in 1895, joining his three sons and daughter who had settled in Petaḥ Tikvah.

GISZKALAY, GUSH HALAY, JÁNOS (pseudonym of Dávid Widder; 1888–1951), Hungarian poet and journalist, and leader of the Hungarian and Transylvanian Zionist movements. Born in Nyitra, Giszkalay worked in Budapest, where he contributed to the Jewish press and, from 1918, edited the Zionist newspaper, Zsidó Szemle. During the “White Terror” which followed the defeat of Béla *Kun in 1918, he wrote justifying a Jewish girl’s protest in a school essay against the Hungarian persecution of the Jews. Giszkalay maintained that antisemites had no moral right to demand patriotism of the oppressed Hungarian Jews. This led to an order for his arrest and he fled to Romania, where he joined the staff of Új Kelet, the Hungarian-language Jewish daily in Kolozsvár (Cluj), Transylvania. Giszkalay’s verse betrays the influence of E. Ady, the leading modern Hungarian poet, who was himself greatly influenced by the Bible. Outstanding for their enthusiasm and richness of language, Giszkalay’s poems deeply impressed Zionist youth. His best-known poems were Kezét fel az égre, ki férfi ki bátor! (“Whoever is a man, whoever is courageous, let him raise his hand!”); A messiás heroldja (“The Herald of the Messiah”); and Péntek a háboruban (“A Wartime Friday Night”). Anthologies of his poems include Új próféciák (“New Prophecies,” 1923). He also wrote a children’s story, Vitéz Benájá három utja (“Three Journeys of Knight Benayahú,” 1928). Giszkalay’s Zionist activities encouraged many Hungarian Jews to settle in Ereẓ Israel. In 1941 he immigrated to Palestine, where he worked as a shepherd on kibbutz Ma’agan. Later he moved to Haifa, where he translated his own works into Hebrew.

[Baruch Yaron]

GITAI, AMOS (1950– ), Israeli film director. Gitai made over 46 movies and regularly showed his films at prestigious international festivals, where they often won awards. He triumphed at the Cannes Film Festival in 2005 when Hanna Laslo, the leading actress in his film Free Zone, won the Best Actress Award, the first time an Israeli actress has been so honored. Born in Haifa, Gitai studied architecture and earned a doctorate at the University of California, Berkeley. In the 1970s, while studying in the U.S., he began making documentaries, then moved to Paris for more than ten years. He continued to direct documentaries and also began making features. His films usually focus on Jewish history or crises in Israel and express his strong left-wing perspective. His 1989 film, Berlin Jerusalem, a look at friends in Germany in the 1920s who move to Palestine, won the critics’ prize at the Venice International Film Festival. In 1993, he returned to Israel. While he is celebrated abroad, his films generally receive a less enthusiastic reaction in Israel. His 1999 film, Kadosh, is about ultra-Orthodox sisters; in 2000, he drew on his own experiences in the Yom Kippur War in the film, Kippur; and his 2002 film, Kadma, examines the fate of a group of immigrants to Palestine just before the establishment of the state. His other films include Yom Yom (1998), Eden (2001), and Promised Land (2004).

[Hannah Brown (2nd ed.)]

GITIN, SEYMOUR (Sy; 1936– ), U.S. archaeologist. Gitin was born in Buffalo, New York. He earned a B.A. in ancient history at the University of Buffalo and studied ancient Near Eastern languages and literature in the rabbinic program at the Hebrew Union College–Jewish Institute of Religion in Cincinnati, Ohio. There he earned a B.A. (1959) and an M.A. in Hebrew letters as well as receiving ordination (1962). During this period, he spent a year in Jerusalem at the Hebrew University, studying ancient Hebrew texts and archaeology, and in 1961 he participated in the archaeological survey of the Western Negev directed by Nelson *Glueck.

In the late 1960s, he continued his archaeological studies with Nelson Glueck and with William G. Dever at the Hebrew Union College, first in Cincinnati and then in Jerusalem. From 1970 through 1975, he studied Near Eastern languages at the Hebrew University with Jonas Greenfield and epigraphy and paleography with Joseph Naveh, and completed an intensive tutorial archaeological research program with faculty members of the Hebrew University and his dissertation supervisor William G. Dever. In 1970, he joined the Tell Gezer excavation staff, where he was a senior field archaeologist from 1971 to 1975. In 1971, he also served as senior field archaeologist for the Jebel Qa’aqir excavations. In 1976, he became director of the Gezer Publications Program and during 1977–78 was assistant professor of the archaeology of the Land of Israel at the Jerusalem campus of the Hebrew Union College. In 1979, he was awarded a Ph.D. from the Hebrew Union College–Jewish Institute of Religion in Cincinnati. His dissertation, A Ceramic Typology of the Late Iron Age, Persian, and Hellenistic Periods at Tell Gezer, appeared as an Annual of the Nelson Glueck School of Biblical Archaeology. In 1980, he was appointed as the fifth long-term director and professor of archaeology at the W.F. Albright Institute of Archaeological Research, where in 1994 he became the Dorot director and professor of archaeology.

As Albright director, Gitin has been the creative force behind the establishment of the institute as an international center for the study of cultural and economic interconnections in antiquity in the Eastern Mediterranean basin. He also developed a doctoral and post-doctoral fellowship program in ancient Near Eastern studies at the Albright, which is one of the most extensive research programs of its kind in the world. Despite the complex political climate of the region, this program has successfully promoted academic ties and collaboration between students and scholars of different cultural and religious backgrounds. Today, the Albright is the only such institute in the Middle East where foreign, Israeli, and Pales-
tinian scholars continue to interact and exchange information on a friendly and congenial basis.

Gitin's own research has resulted in major contributions to the field of archaeology, as seen in his groundbreaking work in late Philistine studies of the Iron Age II, which has dramatically altered the traditional perception of the history of the Philistines. His research is based on the results of the Tel Miqne-Ekron excavations, jointly sponsored by the Albright Institute and the Hebrew University, and directed by Gitin for 14 seasons during the years 1981–96 with his colleague Trude Dothan. Contrary to conventional wisdom, Gitin has demonstrated that around 1000 B.C.E., the Philistines had not assimilated into one of the major culture groups, the Canaanites, Phoenicians, or Israelites. Rather they continued to exist for another 400 years, at the end of which the Philistines of *Ekron achieved the zenith of their economic development under the influence of the Neo-Assyrian empire. In his more than 60 publications on the development of Philistine material culture, best summarized in his 1997 article “The Neo-Assyrian Empire and its Western Periphery: The Levant, with a Focus on Philistine Ekron,” Gitin has shown that it was a process of acculturation which ultimately contributed to the disappearance of the Philistines from the pages of history. This is supported by his publications, “A Royal Dedicatorary Inscription from Ekron” (1998, with T. Dothan and J. Naveh), analyzing one of the most important archaeological finds of the 20th century, and “Israelite and Philistine Cult and the Archaeological Record: The ‘Smoking Gun’ Phenomenon” (2003). These and his other publications on the unique assemblage of incense altars from Ekron have helped to establish a new perception of Philistine cultic practices and their sitz im leben in the ancient Near East.

Gitin also created and directs the international research project “The Neo-Assyrian Empire in the 7th Century BC: A Study of the Interactions between Center and Periphery.” The project, under the aegis of the Council of American Overseas Research Centers, located at the Smithsonian Institution in Washington, D.C., is designed to investigate the growth and development of the first “world market” in history and involves 50 scholars working in Bahrain, Cyprus, Egypt, Greece, Iran, Iraq, Israel, Jordan, Spain, Syria, Tunisia, and Turkey.

In recognition of his archaeological experience, Gitin was appointed editor of the three-volume work in progress, The Ancient Pottery of Israel and Its Neighbors from the Neolithic through the Hellenistic Period, which is destined to become the archaeologist’s “ceramic bible.” The project is sponsored by the Israel Exploration Society, the Albright Institute, the Israel Antiquities Authority, and the American Schools of Oriental Research.

Gitin is the recipient of the University of Buffalo’s Distinguished Alumni award (1998), a doctorate of human letters, honoris causa, from the Hebrew Union College (2003), and the Israel Museum’s Percia Schimmel Award for Distinguished Contributions to the Archaeology of Eretz Israel and the Lands of the Bible (2004).

[Shimon Gibson (2nd ed.)]

**GITLIN, JACOB** (1880–1953), South African communal leader. For half a century Gitlin was the moving spirit in Zionist activities in *Cape Town, where he arrived from Vilna, Lithuania, in 1902. His furniture business became the unofficial headquarters of the Zionist movement there. As chairman of the Western Province (Cape) Zionist Council, he helped to make the organization one of the most influential Zionist centers in South Africa. Active in many spheres, he helped to found the Cape Board of Jewish Education.

[Louis Hotz]

**GITLOW, BENJAMIN** (1891–1965), U.S. Socialist and one-time Communist. Gitlow was born in New Jersey. He early became active in the Socialist Party and in the Retail Clerks Union of New York. Nominated in 1917 by the Socialist Party for the New York assembly, Gitlow was elected but became convinced that more revolutionary action was necessary and helped form the American Communist Labor Party. Elected to its Labor Committee at its 1919 founding convention, Gitlow was arrested that same year for publishing revolutionary material and served a three-year term. Gitlow then became a member of the Communist International executive committee and presidium, and also held a high position in the American Communist Party. While serving as general secretary in 1929, he and some associates were expelled by Moscow for not following the international communist line. In 1933, along with Lazar Becker, a colleague, he formed the Workers Communist League, later the Socialist Party. Disillusioned with Marxism, he became involved in investigations to expose the Communist movement and eventually wrote a bitter attack on the movement in his autobiography, *I Confess: The Truth About American Communism* (1940).

[Albert A. Blum]

**GITTAIM** (Heb. גיטאים), biblical city in the northern Shephelah. Its name is derived from Gath, and some of the biblical verses mentioning Gath may, in fact, refer to Gittaim (e.g., 1 Sam. 7:14; 1 Kings 2:39; 1 Kings 12:18; 1 Chron. 7:21; 8:13; 11 Chron. 26:6). Since, according to the Bible, the Beerothrites of the tribe of Benjamin fled to Gittaim (11 Sam. 4:3), the city must have been situated in the vicinity of this tribe. It is mentioned together with Hadid, Neballat, Lydda, and Ono in Nehemiah 11:33. Some scholars identify Gi-im-tu, the city captured by...
Sargon II in 712 B.C.E., with Gittaim, and not Gath. Eusebius locates it between Antipatris and Jabneh (Onom. 72:2–3); it appears as Gitta on the Madaba Map. Recent studies have shown that it was probably located at Tel Ra’a’s Abu Humayd near Ramleh, a large site of some 100 dunams containing surface pottery dating from the Early Iron Age to the Arab period.

[Michael Avi-Yonah]

GITTELSON, ROLAND BERTRAM (1910–1995), U.S. rabbi. Gittelsohn, who was born in Cleveland, Ohio, was ordained at the Hebrew Union College in 1936. After serving as rabbi from 1936 to 1953 at the Central Synagogue of Nassau County in Long Island, he was appointed rabbi of Temple Israel, Boston, Mass. in 1953 and served there for the remainder of his career. Gittelsohn served as a U.S. Navy chaplain from 1943 to 1946 where he was the first Jewish chaplain in U.S. history assigned to the Marine Corps. He received three ribbons for his role in the Iwo Jima campaign and preached the address of dedication of the Jewish section of the Iwo Jima cemetery. He was a prominent communal leader serving on President Harry S. Truman’s Committee on Civil Rights in 1947 and on the Governor’s Commission in Massachusetts, including the Governor’s Commission on Abolition of the Death Penalty (1957–58), the Governor’s Committee on Migratory Labor (1960–62) and the Governor’s Committee to Survey Operations of Massachusetts Prisoners (1961–62). Long active in Reform movement affairs, in 1968 he was elected president of the Central Conference of American Rabbis. He was also president of the Association of Reform Rabbis (1975–87) and a member of the Zionist General Council of the World Zionist Organization. During the late 1960s and early 1970s, he repeatedly called on the American Jewish community to adopt a more activist position on social and political issues, particularly in opposition to the war in Vietnam. Gittelsohn wrote Modern Jewish Problems (1935), Little Lower than the Angels (1955), Man’s Best Hope (1961), My Beloved Is Mine (1969) on the Jewish view of marriage; and Fire in My Bones (1969).

[Abram Vossen Goodman]

GITTIN (Heb. גיטין, “divorces”), sixth tractate of the order Nashim in the Mishnah, Tosefta, and Babylonian and Jerusalem Talmuds. Gittin is placed before Kiddushin because of the custom of arranging the tractates in the order of their length, Gittin containing nine chapters and Kiddushin only four. From a statement of Rashi (Git. 71b, s.v. ta’amah) and others, it seems that there was a different order of chapters, the present seventh chapter, according to Rashi, preceding the sixth. But from the geonom, tosafot (to Git. 62b, s.v. haomer), and Nahmanides (in his novellae at the end of chapter 6) it appears that the present order is correct. The entire tractate deals with bills of divorce, with few digressions on other topics. The first chapter deals with the bringing of a bill of divorce (get) from outside Erez Israel, the bearer of which has to testify that “it was written and signed in my presence.” The question of the borders of Erez Israel is dealt with in this connection. The first Mishnah of the second chapter, in fact, is a continuation of the first chapter and deals with the same topic. A similar phenomenon also occurs at the beginning of the seventh chapter; its first two mishnayot are a direct continuation of the theme of “agency in the writing and delivery of a get” dealt with in the sixth chapter. The second chapter discusses the materials used for writing a get and the persons who may write and deliver it. The third chapter contains a group of halakhot based upon the principle that a previous condition may be presumed to exist: e.g., “If a man brings a get and has left the husband aged or sick, he may deliver it on the presumption that he is still alive” (3:3); the possibility of his death and the consequent invalidity of the get, necessitating a levirate marriage if he is childless, is ignored.

The fourth and fifth chapters cite a series of halakhot enacted for “general welfare” or in the interests of peace: e.g., “Scrolls of the Law, tefillin, and mezuzot should not be bought from gentiles at more than their value, for the general good” (4:6), i.e., so that gentiles should not be encouraged to steal such religious requisites from Jews; similarly, “one does not prevent the gentle poor from gathering gleanings, the forgotten sheaf, and the corner of the fields in the interest of peace” (5:8). The sixth chapter discusses agency and clarifies the difference between an agent for the delivery of a get, in which case the woman is not divorced until the get reaches her, and an agent for the reception of the get, where the agent represents the wife with the result that she is divorced as soon as the agent receives the get. The seventh chapter deals with the laws of conditional divorces. The eighth chapter, which derives from the Mishnah of R. Meir (“the whole of this chapter is R. Meir” – Tj., 8:5, 49c), contains a list of invalid divorces; should the woman remarry on the strength of them, she would need to receive a divorce from both husbands (a formula repeated in mishnayot 5–9). The ninth chapter contains parts of formulæ of bills of divorce (9:3), from which it may be inferred that in early days there was no fixed formula (cf. also Toseft, Git. 9:6; Kid. 5b) and that divorces were written in Aramaic or Hebrew. The tractate concludes with a dispute between Bet Shammai and Bet Hillel about the grounds on which a man is permitted to divorce his wife. “Bet Shammai says, ‘a man may not divorce his wife unless he has found unchastity in her,’ while Bet Hillel says, ‘even if she spoilt his food.’” According to Akiva, he may even divorce his wife if he finds another more attractive. This additional opinion is not a third one but an explanation of the words of Bet Hillel (see also Halevy, Dorot, 1, pt. 3 (1923), 569), and the radical wording is apparently intended to reject the views of Christians, who forbade divorce entirely (Mark 10:2–12, et al.).

The Tosefta, which in the printed edition contains seven chapters (the Mss. have nine like the Mishnah), supplements the Mishnah and gives the continuation of the development of the halakhah. Thus Mishnah 7:8 teaches: “If the husband
said) "This is your get if I do not return within 12 months,' and he died within 12 months, it is not valid" – for the get only becomes effective at the end of 12 months and a divorce cannot be effected after death. To this the Tosefta (7:11) adds: "but our rabbis permitted her to marry." The Babylonian and Jerusalem Talmuds remark: "who are meant by 'our rabbis'? *Judah Neshiah . . ." Judah (11) the son of Gamaliel and the grandson of Judah ha-Nasi redactor of the Mishnah (76b; 71; 73; 48d). This is one of three instances in which Judah Neshiah is called "our rabbi," although in general "our rabbis" refers to the generation of quasi-tannaim following Judah ha-Nasi (see Epstein, Tannaim, 231). Tosefta 5:4–5 affords information about cooperation between Jews and gentiles in the field of social welfare. In a city containing Jews and gentiles the communal leaders collect from both in the interest of peace. The gentle poor are supported together with the Jewish poor, in the interest of peace. Eulogies are delivered over them; when in mourning they are comforted; and their burial is undertaken in the interest of peace.

From the tractate it is possible to prove that there existed a kind of official recognition by the government of Jewish civil jurisdiction and that government sanctions were invoked to execute the decisions of the Jewish courts. Thus the Mishnah (9:8) teaches: "A bill of divorce given under compulsion is valid if ordered by a Jewish court, but if by a gentile court it is invalid; but if the gentiles beat him and say, 'Do what the Jews bid thee,' it is valid." Thus even a bill of divorce arranged by gentiles can also be valid, i.e., if the Jewish court requests the gentile court forcefully to compel the husband to give a divorce. So too in the Jerusalem Talmud (9:10, 50d) "and if gentiles compel on the initiative of (the bet din of) Jews, it is valid." The Jerusalem and Babylonian Talmuds explain and clarify the subjects raised in the Mishnah; e.g., Mishnah 4:2 cites a takkanah of Rabban Gamaliel the Elder that for the general good the husband is forbidden to annul a bill of divorce that has been handed over to a messenger but has not yet reached the wife. According to Simeon b. Gamaliel in a baraita (33a), should the husband disobey the takkanah and annul the divorce, the annulment is of no effect, and the divorce is valid. On this, the Talmud asks: "And is it possible that where a divorce has been annulled according to Torah law, we should, to uphold the authority of the court, allow a married woman to remarry?" To this the Babylonian Talmud replies: "Yes. When a man betroths he does so on the conditions laid down by the rabbis, and in this case the rabbis annul his betrothal." The Jerusalem Talmud (4:2), however, holds that the rabbis do have the power to annul *Torah* law, even without the premise that all who betroth do so on the conditions laid down by the rabbis.

Aggadic sayings are sometimes interwoven with the halakhah. Mishnah 5:6 quotes various takkanot in connection with the law of buying land from the sicaricon (i.e., those usurping the owner's land by decree of the Roman government), the purpose of these takkanot being to normalize economic conditions and the purchase of property. In connection with this, the Talmud (55b ff.) cites a collection of interesting aggadot relating to events connected with the destruction of the Temple and its causes (67b ff.). The beginning of the seventh chapter enumerates a long list of popular remedies, and the passage includes the story of *Asmodeus* (Ashmedai) and his demons.

Mishnah 5:8 lays down, "in the interest of peace," the order in which men are called to the public reading of the Pentateuch: "A priest reads first, after him a levite, and after him an Israelite." The Babylonian Talmud (60a) completes the order in which Israelites are called to the reading of the law. From this list the degree of importance of the functionaries in Jewish society can be inferred: "First scholars appointed parnasim over the community, then scholars fit to be appointed parnasim over the community, then the sons of scholars whose fathers have been appointed parnasim over the community, after them heads of synagogues and the general public." The Babylonian Talmud (67a) quotes a baraita specifying the distinctive merits of scholars: "Meir was wise and a scribe; Judah was wise when he desired to be; Tarfon was like a heap of nuts; Ishmael was like a well-stocked shop; Akiva was like a storehouse with compartments; Johanan b. Nuri was like a basket of fancy goods; Eleazar b. Azariah was like a basket of spices; the Mishnah of Eliezer b. Jacob is scant but clear. Yose always had his reasons; Simeon used to grind much and produce little ... and what he discarded was only the bran" (cf. ARN 18, 68). The following dicta and aphorisms are worthy of note: "dina de-malkhuta dina, "the law of the government is binding" (a halakhic rule of great importance in the Diaspora; 10b); "a man should not terrorize the members of his household" (6b); "The words of the Torah abide only with one who sacrifices himself for their sake" (75b); "If a man divorces his first wife, even the altar sheds tears" (90b). In the Soncino translation of the Talmud tractate Gittin was translated by M. Simon (1936). For the commentators, editors, and translations of the tractate, see *Talmud*.

"GIUSTINIANI, AGOSTINO (Pantaleone; 1470?–1536), Italian Orientalist and Hebraist. Born in Genoa, Giustiniani, a friend of Erasmus, "Pico della Mirandola, and Sir Thomas More, taught in Bologna, and in 1513 wrote a kabbalistic work inspired by J. *Reuchlinis De verbo mirifico and De arte cabalistica.* He then made a bold, but unsuccessful, attempt to publish the first modern polyglot Bible, of which only the first part, *Psalterium octaplum* (Genoa, 1516), appeared. This contained the Hebrew text of Psalms, the Targum, an Arabic translation, two Greek and two Latin translations, and a commentary based largely on rabbinic sources. On Psalm 19:3 there is a curious marginal allusion to Christopher *Columbus (Giustiniani’s Genoese compatriot* and his voyages of discovery, which is the first such allusion in Hebrew literature. Although this Psalter, dedicated to Pope Leo X, was well
received, it did not enjoy great commercial success, and the project then came to an end.

In 1514 Giustiniani was made bishop of Nebbio in Corsica, but political considerations led to his acceptance of the chair of Hebrew in Paris. From 1517 until 1522 he taught at the new College of the Three Languages, founded by Francis 1, and published various works, including an edition of R. David "Kimhi's Hebrew grammar (Liber Vivarium Linguae Sanctae, Paris, 1520?), and Rabi Mossé Dux seu Director dubitantium aut perplexorum (Paris, 1520), a Latin version of the Guide of the Perplexed of *Maimonides. The latter, which Giustiniani produced with the aid of Jacob *Mantino, was marred by its reliance on faulty texts. Many of his kabbalistic writings appeared in the De arcans catholicae veritatis (Ortona, 1518) of P. Colonna "Galatinus. Giustiniani bequeathed his library of rare books and manuscripts to Genoa. Little is known about the last years of his life. In 1536, on a trip to Corsica, he was lost at sea.

[Godfrey Edmond Silverman]

**GIUSTINIANI, MARCO ANTONIO** (fl. 16th century), printer of Hebrew books in Venice, Venetian patrician. His master printer Cornelius "Adelkind printed a fine edition of the Babylonian Talmud (1546–51). Soon, this very active press faced a formidable competitor in the house of "Bragadini which issued Maimonides' Mishneh Torah, with the notes of Meir Katzenellenbogen. Giustiniani then printed the full text of that code without R. Meir's notes. The mutual recriminations that the rivals engaged in at the Papal Court ultimately resulted in the confiscation and burning of all Hebrew books (1553).

**BIBLIOGRAPHY:** D. W. Amram, Makers of Hebrew Books in Italy (1903), index.

**GIVAT ADA** (Heb. גבעת עד), moshavah in central Israel on the slopes of the Ma'ansheh Hills. Founded in 1903 by the Jewish Colonization Association (ICA) on land purchased by Baron Edmond de Rothschild, after whose wife Ada (Adela Baron Edmond de Rothschild, after whose wife Ada (Adela Giustiniani, marco antonio

GIVATAYIM (Heb. גבעת איים; "Two Hills"), township in central Israel, between Tel Aviv and Ramat Gan, founded in 1922 as a workers' suburb named Shekhanit Borochov (after Ber (Dov) "Borochov). In 1942 this quarter was united with four others in the vicinity to form the municipal unit of Givatayim. In 1959 Givatayim received municipal status. The town's population increased from 7,000 in 1947 to 42,100 in 1968 and 47,400 in 2002. Compared with other urban communities, Givatayim's population was characterized in 1969 by an exceptionally high percentage of Israeli-born and veteran Israelis (over 70%), while among those born abroad, 79.6% originated from Europe and America. At the beginning of the 21st century, Givatayim had the highest senior citizen population in Israel (21.8%). Standards of living and education were above average. The municipality pays particular attention to the environment. Buildings in Givatayim tend to be low, and 10% of the city's area consists of green zones, including 26 public parks and squares. In 2003 Givatayim was chosen as the best cared for city in Israel.

The city is situated within the Tel Aviv conurbation and its built-up area links up with that of the neighboring municipalities. Its area includes 1.2 sq. mi. (3.211 sq. km.).

[Efraim Orni / Shaked Gilboa (2nd ed.)]

**GIVAT BRENNER** (Heb. גבעת ברנר), kibbutz in central Israel, south of *Rehovot, affiliated with Ha-Kibbutz ha-Me'uhad. It was founded in 1928 by pioneers from Lithuania and Italy who were later joined by immigrants from Germany and several other countries. The members initially derived a livelihood mainly as hired laborers on farms and in industries nearby, but they quickly developed their own intensive farming branches (plant nurseries, field crops, and orchards) and industrial enterprises (including plants for metal sprinkler parts, textiles, fruit and vegetable preserves, ceramics, furniture, baby food), and became the largest collective settlement in the country. Following the split in *Ha-Kibbutz ha-Me'uhad in 1951–52, a number of its members joined a new kibbutz, *Nezer Sereni. In 1968, Givat Brenner had 1,520 inhabitants, declining to approximately 1,340 in the mid-1990s, and 1,180 in 2002. Its Bet Yesha rest home and resort was the first of its kind in a labor settlement. The kibbutz has a cultural center named after Enzo *Sereni, who was one of its members. The settlement is named after Joseph H. "Brenner.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

**GIVAT HA-SHELOSHAH** (Heb. גבעת שלושה), kibbutz in central Israel, east of Petah Tikvah, affiliated with Ha-Kibbutz ha-Me'uhad, first founded in 1925 on a site west of Petah Tikvah by pioneers from Eastern Europe. The kibbutz initially
subsisted mainly on its members’ wages as hired laborers in local farms and industry. Gradually it developed its own farm branches and industrial enterprises. With the urbanization of the vicinity, the kibbutz was allocated a new site in rural surroundings of Rosh ha-Ayun further east. The transfer also made possible the establishment of two separate kibbutzim for the two sectors created as a result of the 1951–52 split in Ha-Kibbutz ha-Me’uhad (the kibbutz that joined Ihud ha-Kevuzot ve-ha-Kibbutzim assumed the name Einat). In 1968, Givat ha-Sheloshah had 510 inhabitants, dropping to 439 in 2002. Its farming was highly intensive, with citrus and other orchards, irrigated crops, and dairy cattle. The kibbutz had a shoe factory and a plant for building materials. The name, “Hill of the Three,” commemorates three Jewish laborers from the Petah Tikvah area who were executed by the Turks during World War I.

[Efraim Orni]

**GIVAT HAYYIM** ( Heb. הגבעה היחידה, two kibbutzim in central Israel 4 mi. (6 km.) south of Hadera. The founding settlers from Austria and Czechoslovakia were among the first pioneers on the Hafer Plain lands. They worked on drainage of the local swamps and planted eucalyptus groves. In 1932, the group established a kibbutz and was joined by immigrants from other countries. They developed intensive farming and set up a cask factory and a food preserves plant. Givat Hayyim was affiliated with Ha-Kibbutz ha-Me’uhad, and after a split in that movement in 1951–52, was partitioned into two neighboring kibbutzim – Givat Hayyim and Givat Hayyim Bet. In 1968, Givat Hayyim (Ha-Kibbutz ha-Me’uhad) numbered 705 persons and Givat Hayyim Bet (Ihud ha-Kevuzot ve-ha-Kibbutzim) had 690 inhabitants. In 2002, their populations were 960 and 801, respectively. Each had a one-third interest in the Pri-Gat juice company. The name commemorates Chaim *Arlosoroff.

**WEBSITE:** www.gat.co.il.

[Efraim Orni]

**GIVAT HEN** ( Heb. הגבעה הפוכה), moshav in central Israel near *Ra’anannah, affiliated with Tenu’at ha-Moshavim, founded in November 1933 in the framework of the “Thousand Families Settlement Scheme” by settlers from Eastern Europe who had become agricultural workers in Ra’anannah. They began by developing auxiliary farms which later became full-fledged farmsteads mainly based on citiculture, vegetable gardens, and dairy cattle. Later, some of the farmers went into organic farming. In 2002 the moshav’s population was 331. The moshav’s name is composed of the initials of Hayyim Nahman *Bialik’s first names.

[Efraim Orni /Shaked Gilboa (2nd ed.)]

**GIVAT SHEMUEL** ( Heb. הגבעה השלומה), town in central Israel, located east of *Bene-Berak on land purchased from the Arab village of Ibn-Ibrak. Givat Shemuel was founded in 1944 by a group of Romanian Jews, with a committee running the settlement as an association. In 1948, with the expansion of the settlement and the creation of the new neighborhood of Kiryat Yisrael, the association became a municipal council. Over the years additional neighborhoods were built and by the end of 2002 the population of Givat Shemuel had grown to 15,200 in a mixed religious and secular population, on a land area of 1.4 sq. mi. (3.5 sq. km.). The town is named after Samuel *Pines, a Romanian Zionist leader.

**WEBSITE:** www.gshmuel.gov.il.

[Shaked Gilboa (2nd ed.]

**GIVAT ZE’EV** ( Heb. הגבעה הצהובה), urban settlement east of Jerusalem. In 1977 a group of settlers including native-born Israelis and immigrants from the U.S.S.R. occupied a deserted Jordanian army camp near ancient Giv’on nearby. After a few failed efforts to found a settlement, the Israeli government took over in 1981 and in 1983 the first new settlers began to arrive. By 2002 the population had reached 10,600, on a land area of 0.04 sq. mi. (1 sq. km.), and enjoyed municipal status. The majority of the population consists of young families and was expanding rapidly with another 2,000 apartments under construction in 2004. Givat Ze’ev is named for Ze’ev (Vладимиr) * Jabotinsky, the leader of the *Betar movement.

**WEBSITE:** www.givat-zeev.muni.il.

[Shaked Gilboa (2nd ed.)]

**GIVENS, PHILIP** (1922–1995), Canadian politician and Jewish community leader. Givens was born in Toronto to Polish immigrants Hyman and Mary Gevertz. After completing Jewish parochial school, he graduated from the University of Toronto in 1945 with a degree in political science and economics and Osgoode Hall Law School in 1949. A member for the Liberal Party from youth, Givens gave up legal practice for politics. A long-time member of the Toronto city council, in 1961 Givens was elected as controller of the City of Toronto. A forceful, progressive, and energetic promoter of the city, after only one term as controller he was elected mayor of Toronto in 1963 – the second Jewish mayor of Toronto. His term as mayor was marked by the rapid expansion of Toronto’s cultural and transportation infrastructure. Especially controversial was his championing the purchase of an abstract sculpture, *The Archer*, by Henry Moore, for the plaza of the new City Hall. Opponents branded Givens’s support for public art as ugly and a waste of money but Givens had his way. While the sculpture has since become a source of community pride, the controversy rebounded against Givens and he was defeated in his 1966 re-election bid. Givens turned his attention to the federal politics and was elected to Parliament in the 1968 Pierre Trudeau landslide. Givens resigned in 1971 before completing his term, after a dispute with Prime Minister Pierre Trudeau over issues that affected the Jewish community and out of disappointment at not being made a member of Cabinet. Givens ran for the Liberal Party in the 1971 Ontario provincial sphere and remained in the Ontario legislature until he retired from
electoral politics in 1977. He subsequently held a number of judicial appointments.

Givens was a committed member of the Toronto Jewish community. A Yiddishist and Zionist, he was founding president of the Upper Canada Lodge of B’nai B’rith and president of the Toronto Zionist Council and member of the national executive of the Zionist Organization of Canada. He chaired the United Israel Appeal in Toronto and was active in the Canadian Jewish Congress, the Canadian Council of Christians and Jews, and a number of other community organizations. Givens is fondly remembered for his flamboyant style and devotion to the preservation of Yiddish language and culture.

[Frank Bialystok (2nd ed.)]

GIVET (Vichniac), Jacques (1917—), Swiss poet. Born in Moscow, Givet became prominent in Swiss intellectual circles. His verse collections, at first influenced by surrealism, include Nous n’irons plus au bois (1938), Les cicatrices de la peur (1954), and L’œuf et la mémoire (1963). Givet also published a remarkable polemical tract on neo-antisemitism, La gauche contre Israël (1968).

GLADIATOR, professional fighter in Roman public games. Little information is available about the gladiatorial contests held in the Middle East under Roman imperial rule. The performances were arranged by the authorities with a predominantly Hellenistic culture; in Judea, for instance, they were sponsored by *Herod in *Caesarea. The Jewish sources make mention of Jews in this connection, and it was common knowledge that gladiators were bought for “large sums” (TJ, Git. 46b–47a). Rabbinical opinion was in general opposed to providing a ransom for a man who had sold himself as a gladiator, although an opinion is expressed that he should be ransomed since his life was in danger (Git. 46b–47a). “It is the accepted custom that a gladiator does not make a will,” since he might be killed at any moment (Gen. R. 49:1, ed. by Theodore and Albeck, 1200). Some Jewish gladiators deliberately infringed the dietary laws to annoy their coreligionists and lived in Roman style (Git., loc. cit.). Others, however, were obliged to sell themselves out of financial stress “in order to exist” (TJ, Git. 4:9, 46a–b). Rabbinical opinion was in general opposed to providing a ransom for a man who had sold himself as a gladiator, although an opinion is expressed that he should be ransomed since his life was in danger (Git. 46b–47a). “It is the accepted custom that a gladiator does not make a will,” since he might be killed at any moment (Gen. R. 49:1, ed. by Theodore and Albeck, 1200). Some Jewish gladiators deliberately infringed the dietary laws to annoy their coreligionists and lived in Roman style (Git., loc. cit.). Others, however, were obliged to sell themselves out of financial stress “in order to exist” (TJ, loc. cit.). The expression “meal for gladiators” denoted an early repast consisting of an enriched diet (Pes. 12b; Shab. 10a). It is related of the amorah Resh Lakish (see *Simeon b. Lakish) that he sold himself as a gladiator but that by combining courage with guile he managed to outwit the promoters of the contest and kill them all (Git. 47a). The rabbinical attitude toward the gladiatorial contests is clear from their association in the Midrash with brothels, gaming, and sorcery (Tanh. B., Gen. 24).

[Alfred Hillel Ben-Sasson]

GLAGAU, Otto (1834–1892), antisemitic German writer. Glagau was born in Koenigsberg, Prussia. As a journalist and political writer he had already made quite a reputation when he began, in the Gartenlaube of 1873, a series of articles on fraudulent stock-jobbing which were so full of invective that the editor discontinued them. Glagau had lost heavily in unfortunate speculations, and was very bitter against the stock exchange. In this spirit he wrote Der Boersen- und Gruendungsschwindel in Berlin und Der Boersen- und Gruendungs schwindel in Deutschland (Leipzig, 1877), in which he made some exposures of dishonest business methods, but in general caricatured rather than described the German business world. He naturally became involved in numerous libel suits. In these books he attacked the Jews vehemently as the perpetrators of all questionable financial transactions. It may be said that these books inaugurated the antisemitic movement.

GLANTZ, Jacobo (Yaakov Glanz; 1902–1982), Yiddish Mexican poet. He was born in Novovitebsk, Ukraine, into a family of religious farmers. He studied both in a traditional Jewish school and in Russian secular schools, and taught Yiddish language and literature at ORT schools in Odessa. Glantz wrote poetry in Russian and was part of literary bohemian groups of the Russian Revolution. In 1925 he immigrated to Mexico, where he worked in many occupations. In 1927 he started to publish in the first Yiddish newspaper in Mexico, Meksikaner Yiddish Lebn, and in 1927 he authored with Itzhak Berliner and Moshe Glikovsky the first book of poems in Yiddish to appear in Mexico: Dray Vegn. In 1936–46 Glantz was the literary editor of the newspaper Der Veg. In 1939 he suffered a lynching attempt by a fascist local group. Most of his poetry was in Yiddish, but he also wrote in Spanish and on Latin American subjects (such as his long poem Cristóbal Colón). He published essays on the Yiddish poet H. Leivick and on Novo-Vitebsk (1950).

[Florinda F. Goldberg (2nd ed.)]

GLANTZ, Margo (1930– ), Mexican author and critic. The daughter of Yiddish poet Jacobo *Glantz, she grew up in an atmosphere of both Jewish European and Mexican Christian and popular culture. Her books reflect this complex double identity as well as the strife of an independent woman in a man-ruled culture. Glantz’s best-known book, Las genealogías (1981; The Family Tree, 1991), retells her family’s and her own memories. Since Las mil y una calorías (“One Thousand and One Calories,” 1978), her narrations defy the traditions of the genre by means of fragmentation and irony. Among them: Síndrome de naufragios (“Shipwreck Syndrome,” 1984); Zona de derrumbe (“Zone of Collapse,” 2001); El rastro (2002; The Wake, 2005); Historia de una mujer que caminó por la vida con zapatos de diseñador (“History of a Woman
who Walked through Life with Designer Shoes," 2005). Her essay "De la amorosa inclinación a enredarse en cabellos" ("On the Loving Tendency to Entangle Oneself in Hair," 1984) satirizes Jewish Orthodoxy related to woman’s hair and submission. Glantz contributes to the Mexican press and media. She published critical essays on Mexican literature, which she also taught at Mexican, American, and European universities. She received several awards for her literary and critical works.

[Florinda F. Goldberg (2nd ed.)]

GLANVILLE, BRIAN LESTER (1931— ), English novelist and journalist. Glanville’s first novel was *The Reluctant Dictator* (1952). He emerged as the leading young Anglo-Jewish novelist of the decade with *The Bankrupts* (1958) which exposed the sham culture of Anglo-Jewry’s nouveau riches, but proved controversial. Glanville was attacked in various quarters for his unsympathetic attitude toward and relative ignorance of Judaism. *A Bad Streak* (1961) and *Diamond* (1962) also incorporate critical portrayals of Jewish types. Three later novels on general themes were *The Director’s Wife* (1963), *A Roman Marriage* (1966), and *The Olympia* (1969). Glanville became a sports writer for the *Sunday Times* in 1960, remaining in that position for 30 years. He published books on soccer, including *A History of the World Cup* (2002).

GLANZ, LEIB (1898—1964), cantor and composer. He was born in Kiev, where his father was cantor at the synagogue of the Talna Hasidim. He led congregational prayers at the age of eight. After holding cantorial posts at Kishinev and in Romania, he immigrated to the United States in 1926 to become cantor of the Ohev Shalom Synagogue in Brooklyn, N.Y. Glanz had a lyric tenor voice which had great appeal both in its technical range and warmth of expression. He rebelled against the “sobbing” style favored in his time by many cantors and disapproved of the excessive use of the minor scale. The music he arranged for the synagogue had grace as well as devotional fervor. While holding his post at Brooklyn, he toured extensively and then accepted a post as cantor of Heikhal Sinai Synagogue and the Sha’arei Tefillah Synagogue in Los Angeles. In 1954 he settled in Israel and was chief cantor of the Tiferet Zevi Synagogue in Tel Aviv until his death. Glanz regarded the pentatonic scale as the ancient basis of Jewish music. He did research on liturgical melodies, and arranged choral music in the hasidic style. He aimed at creating new tradition of *hazzanut*, and for this purpose founded the Tel Aviv Institute of Religious Jewish Music, to which the Cantorial Academy he headed became affiliated. He left more than 100 compositions in manuscript form and many recordings of his own performances.

[Joshua Leib Nééman]
dish, most notably the works of Edgar Allen Poe. In the volume *Velt un Vort* ("World and Word," 1958), Glanz-Leyeles collected the best of his important essays on poets, novelists, and memoirists. In his criticism, he maintained that a critic should call attention to the way in which a work enriched literature rather than to its failings. In his 75th year, he visited Israel for the first time and was stimulated to a new burst of lyric creativity.

[Sol Liptzin / Anita Norich (2nd ed.)]

GLAPHYRA
(first century B.C.E.), daughter of Archelaus, king of Cappadocia. Glaphyra's first husband was Alexander, son of Herod the Great. After Alexander's execution (7 B.C.E.) Herod returned her to her father. However, her two sons by the marriage, Tigranes and Alexander, remained with the king. Glaphyra then married Juba, king of Libya. This marriage seems to have ended abruptly, and the princess returned home again. There she met Archelaus, son of Herod, who immediately divorced his wife Mariamne and married her. This marriage constituted a transgression of Jewish law, since Glaphyra had already borne children to the brother of Archelaus. Glaphyra died shortly after her arrival in Judea.

[Isaiah Gafni]

GLASER, DONALD ARTHUR
(1926– ), U.S. physicist and Nobel laureate. Glaser was born in Cleveland, Ohio, and received his B.Sc. in physics from the Case Institute of Technology (1946) and his Ph.D. in physics and mathematics from the California Institute of Technology (1949). He joined the physics department of the University of Michigan (1949), becoming professor (1957) before moving to the University of California at Berkeley as professor of physics (1959) and of physics and neurobiology from 1989. Glaser's early research interests, for which he was awarded the Nobel Prize (1960), concerned the properties of high-energy particles. He designed the bubble chamber for tracking these particles as a method superior to the cloud chambers previously in use. Subsequently he worked on computational models of the human visual system supported by physical and psychological observations of visual perception.

[Michael Denman (2nd ed.)]

GLASER, EDUARD
(1855–1908), scholar, archaeologist, and explorer. Born in Deutsch-Rust (Czech Republic), Glaser was, along with another Jewish scholar, Joseph *Halévy, the lead-

GLASER, JOSEPH
(1925–1994), U.S. Reform rabbi. Glaser was born in Boston, Massachusetts. His education was interrupted by World War II, where he served in combat infantry and earned a Purple Heart. He returned to the United States and received his B.A. from UCLA (1948) and his law degree from the University of San Francisco before entering Hebrew Union College-Jewish Institute of Religion, where he ordained in 1956. His first assignment was a pulpit in Ventura, California, and he served as registrar and instructor at the Los Angeles campus of the Hebrew Union College, which opened in the mid-1950s to accommodate the rapid expansion of the California Jewish community. Glaser left his congregation in 1959 to become the Northern California/Pacific Region director of the *Union of American Hebrew Congregations, the
congregational arm of the Reform movement. He moved to New York in 1971 to serve as executive vice president of the *Central Conference of American Rabbis. He remained in that position until his retirement. Within a few years Rabbi Alfred *Gottschalk was to head the Hebrew Union College and Alexander *Schindler the *UAHC, thus giving the Reform movement stable and experienced leadership during most of the last quarter of the 20th century.

Glaser directed the activities of the *CCAR, an organization of 1,700 rabbis, mainly in North America. He played an important role in the 1990 decision of the Reform Rabbinate to open membership to rabbis without regard to their sexual orientation, balancing that with a reaffirmation of the ideal of a monogamous, procreative marriage.

A social activist, he was an advocate for Native Americans and Tibetan refugees, as well as for Israel. He served as chairman of Religion in American Life, the first Jew to preside over the non-sectarian organization designed to fortify the American people's faith in God. He also served on the executive committee of the Synagogue Council of America and the Union of American Hebrew Congregations. He was on the board of American Jewish World Service and other organizations.

[Michael Berenbaum (2nd ed.])

**GLASER, JULIUS ANTON (Joshua; 1831–1886).** Austrian jurist. Born in Poestelberg, Bohemia, he converted to Christianity in his youth. He obtained doctorates in law from the universities of Zurich and Vienna. In 1856 he was appointed assistant professor of criminal law at Vienna University and four years later became full professor. From 1871 to 1879 he was minister of justice and later attorney general. Glaser's principal contribution to Austrian jurisprudence was the introduction of a new penal code in 1873. The code was largely concerned with protecting the rights of the accused and remained in force in Austria until 1938. Among his numerous legal publications are Das englischschtische Strafvorden (1856); Anklage, Wahrspruch und Rechtsmittel im englischen Schwurgerichtsverfahren (1866). In addition, he coedited the Allgemeine Österreichische Gerichtszeitung.

[Guido (Gad) Tedeschi]

**GLASGOW,** city in S.W. Scotland. The first Jew to settle in the city was Isaac Cohen in 1812; however there was no sizable community or synagogue until 1833, when services were held in the house of the *shohet*, Moses Lisenheim. By 1831, 47 Jews lived in the city, most of them originating from Eastern Europe, though six had already been born in Glasgow. Four years later the community acquired its first burial ground, which was used until 1851. There was a split in the congregation in 1842 when a hall attached to Anderson College was leased for religious services; a minority of community members objected, arguing that since human bodies were dissected at the college, it was an unfit place for a synagogue. Subsequent bitterness between the two groups led to court proceedings over the right to use the cemetery; the majority won the case. However, at the election of Nathan Marcus *Adler as chief rabbi of Great Britain in 1844, both parties exercised a vote. By 1850 there were 200 Jews in the city and eight years later they consecrated a new synagogue, known as the Glasgow Hebrew Congregation. In 1879 a synagogue was built for the community at Garnethill, with E.P. Phillips as minister; it was soon followed by two others in the South Side. (In 1979 the Garnethill Synagogue celebrated its centenary.) As elsewhere in Britain, an influx of immigrants followed the Russian persecutions of 1881; in 1897 there were 4,000 Jews in the city and in 1902, 6,500. Many of the newcomers, who settled in the Gorbals district, were tailors or furriers.

The community was always active in Zionism, supporting *Hovevei Zion* in the 19th century and Zionist associations in modern times. Mainly because of the stimulus of the *Habonim movement, a large number of young Glasgow Jews settled on kibbutzim in Israel. A charity board originally known as the Glasgow Hebrew Philanthropic Society (1858) and later called the Glasgow Jewish Board of Guardians also helped in the organization of the Jewish Old Age Home for Scotland, situated in the south of the city. The Glasgow *talmud torah* and Board of Jewish Religious Education organized classes for children (as do the individual synagogues), directed the Hebrew College (for post-bar mitzvah Jewish education), and assisted in running the yeshivah. In 1970 there was a Jewish day school at the primary level and Hebrew was taught in two municipal secondary schools; Glasgow University taught both biblical and modern Hebrew.

*The Jewish Echo* (weekly, established in 1928) was Scotland's only Jewish newspaper until 1965, when *The Jewish Times* (later renamed *Israel Today*) was established. The community had many organizations of Jewish interest, e.g., Bnei Akiva, *ort*, and the Jewish Lad's Brigade (which claimed the world's only Jewish bagpipe band). Ten Orthodox and one Reform synagogue served the community. Religious leaders of note included Samuel I. *Hillman, Kopul* Rosen, I.K. Cosgrove (1903–1973), and Wolf Gottlieb (b. 1910). Among the community's outstanding members were Sir Maurice *Bloch, Sir Isaac *Wolfson, Sir Ian M.* Heilbron, Sir Myer *Galpern (b. 1903, lord provost and lord lieutenant of Scotland (1958–60) and Labor M.P. (1959)), Samuel Krantz (b. 1901) and L.H. *Dai-ches. Notable in the university as well as in the community were Noah Morris (professor of medicine), Michael Samuel (professor of English language), and David Daiches Raphael (professor of political and social theory).

In 1969 the Jewish population numbered about 11,400 (out of a total of 1,045,000). In the mid-1990s the Jewish population dropped to approximately 6,700. In 2001 the British census recorded a Jewish population of 4,224. Dr. Kenneth E. Collins has written a number of important studies of Glasgow Jewry, including *Second City Jewry* (1990). At the beginning of
the 21st century, six synagogues functioned in Glasgow, which also had a range of Jewish institutions, mainly in the city's southern suburbs. (See also Oscar *Slater.)

**GLASHOW, SHELDON LEE** (1932– ). U.S. physicist. Glashow was born in New York. He graduated from Cornell University in 1954, received his M.A. from Harvard in 1955 and his doctorate in 1959. After serving as assistant professor at Stanford University in 1961, he received a similar appointment at Berkeley (1961–66), where he was then named associate professor (1966–67); in 1967 he was appointed professor at Harvard. He is a member of the National Academy of Science, the American Academy of Arts and Sciences, the American Physics Society, and Sigma Xi. Glashow’s research has been in the fields of theory of elementary particles and the interactions between them: a unified conception of strong and weak electrodynamics and the identification of basic constituents of matter. He is the recipient of many awards, culminating in the Nobel Prize in physics in 1979 for his “contributions to the theory of the weak and electromagnetic interactions between elementary particles including, inter alia, the predictions of weak currents.”

**GLASMAN, BARUCH** (1893–1945), Yiddish novelist, short story writer, and essayist. Glasman was born in Kapitkevich, Belarusia, and raised in nearby Mozyr. When he was 13 his family moved to Kieve, where he attended a Russian secondary school. In 1911, he emigrated to the U.S. and received a B.A. from Ohio State University in 1918, after which he served in the U.S. Army (1918–19). He began his literary career in English, publishing short stories in the Anglo-Jewish journal *Menora*. He soon turned to writing in Yiddish and published his works in *Tzukunft*, *Der Yidisher Kemfer*, *Der Tag*, *Morgn-Zhurnal*, and *Forverts*. In 1924, he moved to Poland, where he toured, lecturing to audiences on the subject of Yiddish literature in America. In 1930, he returned to New York, where he remained until his death in 1945. Glasman is best known for his novels, including *A Trep* (“A Step,” 1917), *Af an Inzl* (“On an Island,” 1927), and *In Goldenem Zump* (“In the Golden Swamp,” 1940). His selected works appeared in eight volumes (1927–37).

**GLASNER, MOSES SAMUEL** (1856–1924), rabbi and early leader of the *Mizrachi movement in Hungary and Transylvania*. Glasner, a great-grandson of R. Moshe *Sofer, was born in Pressburg. From 1878 until 1923, when he settled in Erez Israel, he was the rabbi of Klausenburg. He was one of the two Orthodox rabbis in Hungary (the other being Moses Aryeh Roth) who joined the Zionist movement and Mizrachi, and at the founding convention of Mizrachi (Pressburg, 1904) he spoke out against the Orthodox Hungarian rabbis for their attacks upon Zionism and the Mizrachi. He propagated the Zionist idea in speeches and writings among Orthodox circles. He also published several halakhic works (*Or Bahir*, 1908; *Halakhah le-Moshe*, 1912; *Dor Revi‘i*, 1921) and a work on the aggadah, *Shevivei Esh* (1903). In Jerusalem, he took part in the educational and cultural activities of Mizrachi and was especially close to Rabbi A.I. *Kook.*

**GLASS.**

**Earliest Times**

The earliest manufacture of glass does not antedate the late third millennium B.C.E., when the first glass beads were made in Mesopotamia and Egypt. The invention of glass vessel-making dates to the mid-second millennium B.C.E., when the first core-formed glass vessels appear almost simultaneously in Egypt and Mesopotamia. Egypt’s glass industry was particularly flourishing in the el-Amarna period (the first half of the 14th century B.C.E.). Some Mesopotamian glass vessels have been found in northern Syria, though none in Palestine, but several Palestinian sites have yielded Egyptian glass vessels of the 14th–13th centuries B.C.E. A rich collection of such vessels was found in the small Canaanite Fosse Temple at Lachish; others were found at Beth Shean and Tell Dayr ‘Allâ (the ancient Sukkoth). Egyptian glass vessels were also found in tombs at Tell al-ʿAjul, Beth Shemesh, and Zaharat al-Humrây south of Jaffa. Gezer and Megiddo yielded similar glass vessels. There is no positive evidence that there was any manufacture of glass vessels in Canaan in the Late Bronze Age. A complete decline in glassmaking set in toward the end of the second millennium B.C.E. and it is only in the second half of the eighth and the seventh centuries B.C.E. that glass vessels appear again. None of the molded and cut luxury glass bowls and other colored vessels of that period has come to light in Palestine, but a core-formed vessel of the seventh century was found in a tomb at Achzib. Glass-inlay pieces of the late ninth and eighth centuries were found together with the ivories in the palace of the kings of Israel at Samaria, but whether they were made of Syrian or imported glass is not known. An active production center of core-formed glass vessels, probably on the island of Rhodes, began making small amphoriskoi, aryballoses (short-necked flasks), alabastra, and juglets late in the seventh century B.C.E., and specimens have been found in an early sixth-century tomb at Gibeah, north of Jerusalem, and
in Ammonite tombs in Jordan. Other vessels of this type have been found in Israel at Athlit, Achzib, Hazor, Beth Shean, and En Gedi. Molded and cut luxury glass vessels continued to be made in the Achaemenid period (sixth to fourth centuries) and the remains of an alabastrum of this type were found in a tomb at Athlit. Core-formed glass vessels of the Hellenistic period have occasionally been found in Palestine. The fragments of molded bowls found in second- and first-century B.C.E. levels at Ashdod, Jerusalem, Samaria, and other sites, may be products of local glass factories, possibly situated somewhere along the coast. There is, however, no indication whatsoever that Jews had any connection with glassmaking during the Hellenistic period, either in Palestine or in the Diaspora.

Glass in Hellenistic and Roman Periods

Glass is mentioned only once in the Bible, in Job 28:17, where it is equated with gold. This reflects the early situation when glass was of great value. The obscure statement in Deuteronomy 32:18–19 about Zebulun’s hidden treasures in the sand was explained by Targum Jonathan as referring to glass, but this seems anachronistic. The Septuagint followed a very different line when it chose to render this passage as close as possible to Genesis 49:13. This probably indicates that when the Greek version of the Bible was prepared, this area had not had the obvious connection with glass that it had later on. A very early tradition seems to be preserved in the Palestinian Talmud (ττ, Pes. 1:6, 27b) and in the Babylonian Talmud (Shab. 14b, 15a), according to which Yose b. Jozer and Yose b. Johanan, who lived in the first half of the second century B.C.E., declared that glass vessels are liable to become impure. The U.S. talmudist Louis Ginzberg suggested that this declaration had an economic basis – it was meant to protect local pottery and metal ware from competition with foreign glass imports. Glass was, however, rare and valuable all through the Hellenistic period, and could not have presented competition to any local products. An explanation must therefore be sought in the cultural-religious sphere. The edict is contemporary with the first large-scale production of glass drinking bowls, and the two Jewish authorities may have objected to them because they identified them with Hellenistic influence, manners, and customs.

A revolutionary event was the invention of glassblowing toward the end of the first century B.C.E., which made it possible to produce glass vessels cheaply and in great variety. The invention seems to have taken place during the reign of Augustus (31 B.C.E.—14 C.E.) somewhat along the Phoenician coast, perhaps at Sidon, an area where a glass production center was apparently already in existence. The fame of Sidonian glass must have been considerable, since glassmakers working in Rome in the first century C.E. boasted of their Sidonian origin when they stamped the handles of their cantharoi in Greek or Latin, as, for example, Artas Sidon.

Several Jewish tombs of the first and second centuries C.E. have yielded glass vessels. Glass vessels are relatively rare in ossuary tombs around Jerusalem, which are no later than 70 C.E. A tomb excavated at Ramat Rahel in 1931 (Tomb 1) contained a small bottle with a spheric body and a short cylindrical neck. Several tombs in a cemetery on the Mount of Olives yielded simple, small glass bottles with pearshaped bodies and elongated necks. All these glass vessels are typical of the first-century vessels common throughout the Roman Empire. A Jewish tomb of the middle of the first century at Carthage yielded a shallow glass bowl of a shape very common in the early imperial period. So-called “candlestick” bottles which have small convex bodies and long tubular necks were found in a few ossuary tombs in and around Jerusalem which can be dated to the second century. To the relatively limited testimony from Jewish tombs were added in 1960–61 the finds from the Judean desert caves in which fugitives of the Bar Kokhba revolt took refuge. The finds included typical glass vessels of the early part of the second century C.E. It appears, then, that the only Jewish glass vessels of this period were the normal ware of the day. It stands to reason that some of the vessels, perhaps even many of them, were made by Jews but this is no more than a logical assumption. The Mishnah includes passages which refer specifically to glassmaking. Kelim 8:9 mentions יִנְשׁ אֵקֻלִּית – those who make glass (the “metal”) – and צַג – those who make glass vessels and their furnaces. Makers of glass vessels are also mentioned in Kelim 24:8. The Mishnah would not have included regulations about these trades if they had not been part and parcel of the daily life in Palestine, at any rate in the second century C.E. and possibly earlier. This, then, proves the existence of Jewish glassmakers in this period.

Gold Glass. The first group of glass vessels which is distinctively Jewish by reason of its decoration is the famous gold glass with Jewish symbols. The term is used to describe decorations of thin gold foil encased between two layers of glass medallion; and must not be confused with gilding, where the gold is left uncovered. The commonest type of gold glasses are those which were used, in the third and the fourth centuries C.E., as a decorated base of very shallow plates, bowls, or beakers. The thinly hammered gold foil was pasted on a round piece of clear or dark blue glass, within the boundaries of a low raised glass base. The outlines and the designs of the desired pictures, patterns, and inscriptions were prepared by removing the superfluous gold from the background, and leaving the designs in gold. Enamel paints were used at times to enrich the decoration. In the final stage the decorated base was reheated and joined to the outer surface of a large, hot, clear glass “bubble” which was later given the shape of the required bowl. A similar method was used to decorate the body of a vessel by smaller medallions of gold foil on blue glass. This technique was not exclusively Jewish. In the third and fourth centuries C.E. this particular craft flourished on an unprecedented scale. The center of the industry was Rome, and most of the pieces were found in pagan, Christian, or Jewish catacombs in and around the city. The vessels were broken deliberately, often skillfully chiseled around the edges, and stuck
into the plaster near or on the graves of the deceased. The reasons for this custom have not yet been convincingly explained. Of the 500 bases and decorative medallions that have survived, only about a dozen bear definitely Jewish symbols. The earliest was found in 1882 in the catacomb of the saints Peter and Marcellinus (now in the Vatican Museum) and another around 1894 in the catacomb of Saint Ermete. A gold glass now in Berlin is said to have been found in the Jewish catacomb of Vigna Randanini in Rome and another which is now in the Cologne City Museum is said to have come from the Villa Torlonia catacomb. Other Jewish gold glass pieces are now in the Vatican and in the British, the Ashmolean, the Metropolitan, the Wuerzburg University, and the Israel museums. Most of the Jewish gold glass bases have their decorations presented in two registers. These include representations of the Ark of the Covenant flanked by a pair of lions or doves, temple vessels like menorot, amphorae, and shofarot, and objects relating to Sukkot, the Feast of the Temple, such as lulavim, etrogim, and motifs found in other Jewish objects and catacombs of the period. Of a different type is the Vatican fragment found in 1882. This bears a miniature painting of a tetrastyle temple inside a peristyle court surrounded by palm trees. The temple is approached by four steps and on the tympanum of the gable is a menorah. In front of the temple are a lulav, an etrog, two amphorae, and other objects. The temple is flanked by two free-standing columns. Most scholars seem to agree that this is a representation of Solomon's Temple, and it can be assumed that it was copied from an early illuminated Bible manuscript. This fragment bears a Greek inscription. Other Jewish gold glasses have inscriptions in Latin, similar to those found on the non-Jewish glasses such as ANIMA DULCIS (“sweet soul”). Only one Jewish small gold glass medallion is known. This shows a shofar between two etrogim. It is now in the Vatican Library. These Jewish gold glasses are generally thought to have been drinking vessels, perhaps for ritual purposes. The fragment with Solomon’s Temple may tentatively be attributed to the third or early fourth century C.E.; the rest are more likely to be of the fourth century. Their decoration has numerous parallels in Jewish art. It is possible to assume that they were made by Jews.

In addition to the gold glasses and cut bowls from Rome there are further specimens worth noting: Moshe *Schwabe and Adolf *Reifenberg uncovered and published in 1935 a Jewish gilded glass sepulchral inscription in Greek ending with Shalom in Hebrew, with a menorah below the inscription and a shofar on its right. They also published a stamped glass medallion from Rome bearing a menorah and the name of the glassmaker: EX OF [FICINA] LAVRENTI.

The Eastern Mediterranean: Third Century to Arab Conquest

The excavations at the Jewish cemeteries at Beth She’arim have yielded some finds of glass. Several vessels and many fragments were found in catacombs 12–20 and date to the third and first half of the fourth century C.E. These are, with very few exceptions, fragments of various common types of receptacles of the period, mainly bottles, and do not have any characteristics which could identify them as Jewish. An exceptional decorated glass plate was discovered in catacomb 15. With a diameter of 52 cms. (c. 20 ins.), it is unusually large, and engraved on its exterior are 13 arches under which are vessels, tools, doors, and hanging lamps and several unidentified objects. Although this may represent a temple facade, nothing in the designs on the plate is specifically Jewish. The remains of a glass factory were found at Beth She’arim during the excavations in 1940 and were attributed to the first half of the fourth century C.E. and to the Byzantine period. A large slab of glass – 3.40 × 1.94 × 0.45 m. (11 × 6½ × 1½ ft.) – apparently the bottom of a glassmaker’s tank, was also discovered in a cistern. This too possibly dates to the Byzantine period. It is therefore reasonable to assume that some of the vessels found in the cemeteries around the site were local products. Several glass vessels, also of contemporary Palestinian types, were found in a Jewish tomb of the late fourth to fifth centuries at Gezer (Tomb 201). Glass lamps having three handles for suspension and cups of the type used for bronze polycandela were in use in Palestinian synagogues of the Byzantine period. Lamps suspended from seven-branched candelsticks are depicted on the mosaic pavement of the synagogue of Naaran (sixth century C.E.). Several other synagogue mosaic pavements have representations of seven-branched candelsticks with glass lamps. A complete glass lamp and many fragments of lamps of various types were found in the Beth-Shean synagogue. They belong to its last phase in the first half of the seventh century and are now in the collection of the Israel Department of Antiquities. Similar fragments of lamps from the late sixth or early seventh centuries were also found in the synagogue of Maon near Nir Am, southeast of Gaza. Exactly the same types of lamp were used in contemporary churches in Palestine and Syria, so the glass finds in such Jewish contexts as the catacombs of Beth She’arim, Gezer (Tomb 201), or the ruins of synagogues do not differ from the normal glassware of their times. Between the late fourth and early seventh centuries there are a few groups of ornamental glass objects such as pendants and bracelets, bearing symbols which identify them as specifically Jewish. In a tomb excavated at Tarshiḥa in western Galilee a small circular pendant of greenish glass with a loop for suspension was found stamped with a menorah. The tomb was in use in the fourth and fifth centuries. The pendant is now in the Rockefeller Museum, Jerusalem (31.2868). The British Museum has a pendant made of light brownish glass, said to be from Tyre, with a menorah, a shofar on the left, and a lulav and etrog on the right. There are similar pendants in the Israel Museum and in the Reifenberg collection. Of unknown provenance is a small greenish glass medallion in the Jewish Museum, New York, representing a menorah in a wreath. It was originally applied to a vessel and dates to the fourth century C.E. An identical piece from Egypt is in the Israel Museum. A fragment of a blue glass bracelet with the menorah stamped on it several times was found in the western part of
the Jezreel Valley. It is now in a private collection. A complete bracelet of blue glass with 14 impressions of a menorah and shofar on its right side was acquired in New York in 1965. It is said to be of east Mediterranean provenance. Both the fragment and the complete example are probably of the fourth or fifth century. Another bracelet of very dark green glass with similar impressions but of unknown provenance is in the Museum Haaretz, Tel Aviv.

**Hexagonal Bottles from Palestine.** By far the most interesting Jewish glass from Palestine are the mold-blown hexagonal and octagonal small jugs or jars. These were blown into hexagonal or octagonal metal molds which were open top and bottom. The designs which were hammered into the mold appeared on the lower part of the jug, as an impression and not as a relief. Some hexagonal jugs have a long neck and a handle while others have a short neck and outspayed rim. Nearly all these vessels were made of a bubbly brown glass, but there are a few known examples made of greenish glass. Of many such mostly Christian jugs, only about 30 survived bearing Jewish symbols, such as menorah, often with a shofar on the left, and a lulav and etrog on the right, sometimes with an incense shovel on the right. The other sides are decorated with trees, arches, and other objects or patterns. Similar jugs and jars bearing Christian symbols have identical features, indicating that they were made in the same workshops. They are believed to have been used as containers for oil taken from the lamps of the Church of the Holy Sepulcher to be blessed at Golgotha, and there can be no doubt that they were made in Jerusalem. These are attributed to the late sixth or early seventh century, and by analogy the Jewish vessels can be attributed to the same period. It can be assumed that Jewish pilgrims used the vessels for carrying away oil from lamps at their center of veneration – probably the Western Wall. During the excavations at Ephesus in Asia Minor a bottle was found on which are painted in black a menorah, a shofar, a lulav, and an etrog. Though this seems to be the only known Jewish glass vessel from the eastern Mediterranean area, apart from Palestine and Syria, the existence of Jewish glassmakers in the region in the sixth century C.E. can be deduced from two popular Byzantine fables of that time, one from Emesa (Homs), the other from Constantinople, both of which the central figure is a Jewish glassmaker.

**In the East from Medieval to Modern Times**

The fact that Jews were active in glassmaking in medieval times is borne out by references in sources of the period. Arab historians have preserved the interesting information that the Khalif 'Abd al-Malik (685–705) employed a group of Jews to make the glass lamps and vessels for the Mosque in Jerusalem but that Omar ibn Abd al-Aziz deprived them of this office. Very important data have been preserved in the Cairo Genizah. A document signed in the spring of 1011 deals with a dispute over the payment for a consignment of 50 “bales of glass” sent by three Jews from Tyre to Cairo. This ties up with a statement made by *Benjamin of Tudela, who visited Palestine in 1170, that at Tyre were “Jews, makers of good glass which is called Tyrian glass and is famous in all countries.” Benjamin of Tudela also mentions that at Antioch “are about ten Jews and they are glassmakers.” In an article on the Cairo Genizah published in 1961, S.D. Goitein mentions four contracts of partnership in glass workshops, one of which refers to a Jewish glassmaker who arrived in Cairo “from the west.” He appears to have traveled overland from Tunis. Goitein believes that Jews were connected with the issue of the well-known Islamic glass weights. However, no actual survivals of Jewish glass manufactured in this period are known.

It has been suggested that Jews were connected with the age-old glass works at Hebron. The first to mention these works seems to have been the Augustine monk, Jacob of Verona, who visited Hebron in 1335; but he made no reference to any Jews there, although production was already on a large scale.

[L.A. Mayer assumed that a group of clumsily inscribed Syro-Egyptian glass mosque lamps were executed by “Jewish craftsmen, who were literate, but in a different script.” During the Ottoman period, in the 17th century, there was in Damascus a Jewish center for the manufacturing of similar glass lamps. One such lamp in the Jewish Museum in London bears a Hebrew inscription and dates from 1694. Of Middle Eastern 18th-century origin are bottles of opaque glass, which have Hebrew dedicatory inscriptions cut in them. One which belonged to the Charles Feinberg Collection is now in the Israel Museum. Another specimen in the Victoria and Albert Museum in London has a metal top and decorative chains. These were probably used as oil or wine containers.

**In the West From Medieval to Modern Times**

The art of glassmaking was reintroduced into Europe during the period of the Crusades. Numbers of Eastern glassmakers settled in northern Italy, Spain, and southern France. Jewish craftsmen may have been among them; though it cannot be proven.

**Eastern Europe.** There were, however, Jewish glassmakers in Central and Eastern Europe after the 15th century. There are also records of Jewish glaziers and glassmakers in Bohemia and Moravia from the 15th century onward, and the craft was frequently practiced by Bohemian Jews in the latter half of the 16th century.

From glass vessels and from contracts between Jewish glassmakers and the aristocracy it is clear, for instance, that the Jews took an active part in the flowering of glassmaking in Hungary in the 17th and 18th centuries.

*Hevra Kaddisha Beakers.* In the 17th and 18th centuries Hungarian and Bohemian Jews apparently participated in the general practice of manufacturing decorated jugs or beakers for special occasions. Among them were prominent beakers used by members of a guild or a fraternity at their annual banquets and given each year by the men chosen head of the guild. In-
tering are some painted and cut-glass beakers which were executed for the Jewish Burial Society, the *hevra kaddisha*, in some German and Bohemian communities. Several such beakers survived, mostly in the Jewish Museum in Prague. Their most common decoration is the burial procession. One such beaker dated 1692 is now in the New York Jewish Museum.

In modern times too Jews were prominent in the marketing and industrial production of Czechoslovakian glass, centered in Bohemia. In the period between the world wars there were many Jewish firms which produced sheet glass, plate glass, and mirrors, as well as glass pastes for artificial jewelry. When Hitler occupied Czechoslovakia some of the leading Jewish producers of artificial gems and costume jewelry moved their firms to the United States.

**England.** In the late 18th and 19th centuries Lazarus Jacobs (d. 1796) of Bristol and his son Isaac (d. 1833) were important glass manufacturers and merchants, the latter holding a royal appointment as glass manufacturers to George 111. They were especially celebrated for their opaque white, and the elegant royal blue glassware for which Bristol was famous. Another eminent Jewish glassmaker was Meyer Oppenheim, who came from Pressburg in Hungary. He invented a ruby flint glass which he produced in Birmingham from 1756 to 1775. A number of Jews were associated with the glass industry in Birmingham, where the lead glass used for artificial gems was known as “Jew’s glass” in the middle of the 19th century.

**The United States.** The earliest known American glass cutter was a Jew named Lazarus Isaacs who arrived from England in 1773. He was employed by Stiegel at his factory at Manheim, Pennsylvania, where the first fine glassware in America was produced. Jews do not reappear in American glassmaking until the late 19th century, when Lazarus Straus and Sons of New York was a leading producer of high quality cut glass in the United States and Europe (see *Straus family*).

**Israel.** On their return to Ereẓ Israel, the Jews revived the glass industry on the Phoenician coast, where it existed in ancient times. In the late 19th century, the Baron de *Rothschild set up a glass factory at Tantura near the site of the Phoenician harbor of Dor to provide bottles for the nascent wine industry, and in 1934 Phoenicia, the Israel Glass Works, was founded in the Haifa Bay Area. Under the patronage of Baroness Bathešva de Rothschild, a new style of art glass was evolved in the early 1960s, based on forms of the talmudic period.

From the end of the 19th century a school of primitive glass paintings developed in Safed, Jerusalem, and other centers. One of its later offsprings is the painter Shalom of Safed. Their subjects were *holy places, Mizraḥ panels, amulets, and biblical topics.*

**Glass, Montague Marsden** (1877–1934), U.S. humorist. Glass, who was born in Manchester, England, was taken to the U.S. at the age of 13. He studied and practiced law in New York, but in 1909 abandoned his profession to become a full-time writer. The Jewish clients whom Glass met in his law office inspired a series of short stories which he began publishing in various magazines in 1908. The first collection, *Potash and Perlmutter*, appeared in 1910 and this was followed a year later by *Abe and Mawruss*. Though treated humorously, the two clothing manufacturers, Abe Potash and Morris Perlmutter, were sympathetically presented and their entertaining foibles and typically Jewish family virtues endeared them to Jewish readers. Both story collections became the basis of stage successes. The first *Potash and Perlmutter* play, produced in 1913, had long runs in New York and London. Glass also wrote *Elkan Lubliner – American* (1912), *Worrying Won’t Win* (1918), and *You Can’t Learn Them Nothing* (1930).

[Jo Ranson]

**Glass, Philip** (1937– ), U.S. composer and performer. Born in Baltimore, Glass began to study violin at six and flute at eight. At 12, he started composing while working at his father’s record shops after school. At 15, he entered the University of Chicago (where he received a B.A. in liberal arts, 1956). Later he studied composition at Juilliard with Bergsma and Persichetti (receiving a M.A. in composition, 1961). Awarded a Fulbright scholarship, he went to Paris to study for two years with Nadia Boulanger. There he made the acquaintance of Indian musician Ravi Shankar, whose music Glass adapted for the film score of *Chappaqua*. After leaving Paris, he traveled in North Africa and the Indian subcontinent. Non-European music became one of the sources of his own style, named repetitive music (or minimalism), which was founded by him in the 1960s together with Riley, *Reich, and La Monte Young*. Minimalistic music is based on a short melodic formula and its numerous varied repetitions over time. In Glass’s view, such music required a special type of reception: “When it becomes apparent that nothing ‘happens’ in the usual sense, but that, instead, the gradual accretion of musical material can and does serve as the basis of the listener’s attention, then he can perhaps discover another mode of listening…. It is hoped that one would then be able to perceive the music as ‘presence,’ freed from dramatic structure, a pure medium of sound” (P. Glass, 1974).

In the late 1960s and early 1970s Glass wrote a great number of chamber pieces and established his own Philip Glass Ensemble that had the exclusive right to perform his instrumental music. Performances at this time were held in New York lofts (Glass’s in Greenwich Village, sculptor Donald Judd’s in SoHo), private art galleries (those of Leo Castelli
and Paula Cooper), and museums (the Guggenheim and the Whitney). Occasionally, Glass had to work as a plumber or taxi driver in order to survive when not touring with his ensemble throughout the U.S., Canada, and Europe. However, the seminal work of this period, *Music in Twelve Parts*, was premiered in the traditional atmosphere of New York’s Town Hall, hired by the composer himself. This opus includes 12 sections and lasts over four hours. Being the culmination of Glass’s minimalism, it shows the transition to greater vertical complexity, up to traditional formal harmony in the conclusion of the piece.

From the late 1970s the composer produced numerous scores for music theater, film, and dance. A great public success was *Einstein on the Beach*, the opera that was named a “theater of visions” because of its lack of narration. Instead of plot, there are series of dramatized icons (like Einstein’s violin, or the trains symbolizing the theory of relativity). The following operas return little by little to narrative music theater (*Satyagraha*, 1980, on Gandhi, and *Akhnaten*, 1984, on the Egyptian pharaoh who introduced monotheism). Afterwards, in the second opera trilogy based on the films of Cocteau, Glass used his individual multimedia forms (for example, the film is accompanied by a new soundtrack composed by Glass).

Glass also scored numerous films over the last two decades, from the wordless, visionary cinema of Godfrey Reggio, Paul Schrader’s experimental *Mishima*, and Errol Morris’s intense documentary *The Thin Blue Line* to Hollywood war films (*Hamburger Hill*) and horror films (*Candyman* and its sequel). His score for *Kundun* received an Oscar nomination, while *The Truman Show* won him a Golden Globe. Glass collaborated with pop singers Paul *Simon, David Byrne, Suzanne Vega*, and Laurie Anderson in the song-cycle *Songs from Liquid Days*. Other collaborations were with Allen Ginsberg in *Hydrogen Jukebox*, with Ravi Shankar in *Passages*, and with Doris Lessing on two science-fiction operas, *The Making of the Representative for Planet 8* and *The Marriages between Zones Three, Four and Five*. His work influenced rock and film music as well as classical music. As an example of reciprocal influence, it is worth mentioning that Glass wrote symphonic versions of the art-rock albums *Low* and *Heroes* by David Bowie and Brian Eno, who, in turn, were influenced by Glass at the end of the 1970s. Glass became one of the best known and commercially successful composers of his generation.

[Julia Kreinin (2nd ed.)]

**GLATSTEIN, JACOB** (1896–1971), Yiddish poet, novelist, and critic. Born in Lublin, Poland, Glatstein was encouraged by his father to read widely in contemporary Yiddish literature. Like many Yiddish writers of his generation, he visited I.L. “Peretz in Warsaw. As a result of violent outbreaks of antisemitism in Lublin, Glatstein convinced his parents to let him immigrate to the U.S. (1914). His debut as a Yiddish writer was the short story “Di Geferlekhke Froy” (“The Terrible Woman”) in the journal *Fraye Arbeter Shime*. In the 1920s and 1930s, he published more than 100 short stories in the style of Guy de Maupassant and Abraham *Reisen under the pseudonym Y. Yungman in the Yiddish daily *Morgn Zhurnal*. In 1920, together with Aaron *Glanz-Leyeneles and N.B. Minkoff, Glatstein inaugurated the *Inzikhist* (“introspectivist”) movement in U.S. Yiddish poetry. Taking their name from the journal *In Zikh*, which was to appear irregularly (1920–39), and from the group anthology, *In Zikh, A Zamlung Introspective Lider* (*Introspection, a Collection of Introspective Poems*, 1920), the *Inzikhistn* announced their mission of revitalizing and modernizing Yiddish poetry. The key words in the introspectivists’ manifesto (1921) were *kaleidoscopic, contradictory, and chaotic*. They rebelled against the aestheticism of *Di Yunge*, which they considered ivory tower art-for-art’s-sake, removed from truth and life. The introspectivists rejected decorum and formal elegance in favor of free verse whose rhythms were to be correlates of unique, individual experience. Like their Anglo-American contemporaries, whose work they knew well, the introspectivists emphasized the concrete image and favored suggestion and association. They distrusted metrical regularity and fixed patterns and sought to capture the rhythms of the human voice and modern urban life. From his earliest poems onward Glatstein was the poet in love with his medium, the Yiddish language. No poet in Yiddish has been so richly inventive in coining new words and word combinations. No poet in Yiddish has had a better ear for folk idioms and, indeed, for the sound structure of Yiddish generally. Many of Glatstein’s poems seem to grow out of the latent powers hidden in the shape, sound, and history of individual words. The introspectivists early declared that a Yiddish poem was Jewish by virtue of its medium; no subject was barred. They often wrote on themes far removed from Jewish life.

Glatstein’s reputation rests primarily on his poetry. Critics divide his work into two periods: the first includes his four books of poetry: *Yankev Glatshteyn* (1921), *Fraye Ferzn* (“Free Verse,” 1926), *Kredos* (“Credos,” 1929), *Yidishtaytsn* (“Yiddish-Meanings,” 1937); and the second, his books of poetry and criticism from 1943 to 1978 (the last two posthumous), including *Gedenklider* (“Remembrance Poems,” 1943), *Shtralendike Yidn* (“Radiant Jews,” 1946), *Dem Tats Shotn* (“My Father’s Shadow,” 1953), *Fun Mayn GInshter Mi* (“The Fruits of My Labor,” 1965), *Di Freyd fun Yidishn Vort* (“The Joy of the Yiddish Word,” 1961), and *A Yid fun Lublin* (“A Jew from Lublin,” 1966). In poems such as “Zing Ladino” (“Sing Ladino”), “Mir, di Vort proletariyer” (“We, the Word Proletariat”), and “Tsum Kopmeyster” (“To the Headmaster”) from the collection *Yidishtaytsn*, Glatstein crafted some of the most experimental, “wild” modernist poems ever written in Yiddish. These poems are both part of the main trends of European
and American modernism, and deeply rooted in the phonetics, semantics, and cultural specificity of Yiddish. He was, however, also a distinguished writer of both imaginative and critical prose. There are no novelistic travel narratives in Yiddish literature comparable to *Ven Yash iz Geforn* ("When Yash Set Out," 1938; Eng. *Homeward Bound,* 1969) and *Ven Yash iz Gekumen* ("When Yash Arrived," 1940; Eng. *Homecoming at Twilight,* 1962). These loosely autobiographical works, part of a projected trilogy inspired by his nine-week journey to Lublin to visit his dying mother in summer 1934, inaugurated the second phase of his artistic career; they are notable for their poetic style and their brooding sense of impending catastrophe. Because he remained independent of political allegiances, he was able to give a compelling portrait of Polish Jewry on the eve of the Holocaust in these novels. *Emil un Karl* (1940), a novel of a Jewish and a Christian boy in Hitler-occupied Austria, is particularly suited to the young reader. The war years and the Holocaust transformed Glatstein into one of the great elegists of Eastern European Jewish life. It became his major poetic purpose to meditate on, mourn, and celebrate a shattered way of life. Already in "A Gute Nakht, Velt" ("Good Night, World," 1938), he bitterly rejects European culture and defiantly and joyously declares his return to the narrow confines of traditional Jewish life. No American Yiddish poem has aroused as much comment as this anti-universalist poem of exegation and affirmation.

As columnist for the New York daily *Tog-Mornig Zherunal* and as regular contributor of the column *In Tokh Genumen* to the weekly *Yidisher Kemfer* (1945–57) and other periodicals, Glatstein commented on virtually every significant event in Jewish literary and cultural life and on world literature generally. As critic of Yiddish literature he exerted great influence and helped to raise the level of critical awareness both among writers and readers. His essays and reviews appeared in a series of volumes entitled *In Tokh Genumen* ("The Heart of the Matter," 1947; 1956; 1960), continued in *Mit Mayne Far-togbiikher* ("With My Dawn Journals," 1963) and *Oyf Groyte Temes* ("On Ready Themes," 1967).

Glatstein’s poetry revolutionized Yiddish modernism and added a cosmopolitan, intellectual voice to the chorus of Yiddish avant-garde poetry. His greatest contribution to Yiddish poetry were his Holocaust poems, the Bratslav poems, and his homage to the Yiddish language. He once quipped: "What does it mean to be a poet of an abandoned culture? It means that I have to be aware of Auden but Auden need never have heard of me." (I. Howe, *A Margin of Hope* (1982), 264). Although Glatstein lived in New York for more than half a century and published more than 20 books, he remained virtually unknown outside Yiddish literary circles. In a tribute to the poet, Cynthia Ozick recognized his crucial role in the rise of Jewish American literature (1972): "...if Jacob Glatstein had not lived and written his splendid poetry, and if there were no other Yiddish writers present to write as only they can about our lives and our natures there would be no hope for a Jewish literature of any kind in America."

### Bibliography:

[Leonard Prager / Jan Schwarz (2nd ed.)]

### Glatzer, Nahum Norbert (1903–1990), scholar, teacher, and editor. Glatzer was born in Lemberg (Lvov), and pursued his higher education in Germany and at the Breuer Yeshivah in Frankfurt on the Main (1920–22). He became a disciple and associate of Franz *Rosenzweig, whose life and work so influenced him that he decided to devote himself to scholarship rather than pursue a career in the rabbinate. In 1932 he succeeded another mentor, Martin *Buber, in the University of Frankfurt’s chair of Jewish philosophy and ethics. In fact, Glatzer had been Buber’s only doctoral student during his years at the university (1924–33). In 1933 Glatzer left Germany for Israel, where he taught at Bet Sefer Reali in Haifa. From 1938 he was in the United States, teaching at several colleges before joining the faculty of Brandeis University in 1950. He served as editorial adviser to *Schocken Books, where he was chief editor (1945–51), and was a director of the Leo Baeck Institute from 1946. Before retiring from Brandeis in 1973, Glatzer served as the Michael Tuch Professor of Jewish History and Samuel Lane Chair in Jewish History and Social Ethics, as well as chair of the NEJS Department from 1957 to 1969. He was also the first faculty member to receive Brandeis’s honorary degree.

In his doctoral dissertation, *Untersuchungen zur Geschichtslehre der Tannaiten* (1933), Glatzer maintained that the rabbis of the first and second centuries c.e. retained their faith in the God of history in the face of apocalyptic tendencies and the consequent denigration of this world. Glatzer’s *Geschichte der Talmudischen Zeit* (1937) elaborates and continues his earlier work. He wrote a number of studies on particular problems of talmudic history.

Glatzer wrote, translated, and edited more than 50 books, with a range of expertise that extended from the Bible to existentialism. He also wrote extensively on the history of 19th-century Jewry, especially on the history of the Wissenschaft des Judentums. His book *Franz Rosenzweig: His Life and Thought* (1953, 1961) is considered the definitive volume on Rosenzweig. Glatzer edited more than a dozen anthologies, which are used widely in teaching Jewish history and ideas.

GLAUBER, ROY J. (1925– ), U.S. physicist and Nobel laureate. Glauber was born in New York and gained his B.S. (1946), M.A. (1947), and Ph.D. in physics (1949) from Harvard University. He worked on the Manhattan Project at Los Alamos (1944–46), at the Institute for Advanced Studies at Princeton University (1949–51), and the California Institute of Technology, Pasadena (1951–52) before returning to the Harvard physics department (1952). He was professor of physics (1962–76) and the Mallinckrodt Professor of Physics from 1976. His research concerned the behavior of light particles and the adaptation of quantum theory to describe the detection process irrespective of the nature of the light source. The resulting quantum theory of optical coherence helped to inspire the burgeoning field of quantum optics. It has important practical applications as a method of achieving extraordinarily precise physical measurements in fields such as chronology and the application of laser techniques for medical purposes. He was awarded the Nobel Prize in Physics (2005) with John L. Hall and Michael K. Kasevich.

[Abram Leon Sachar / Ruth Beloff (2nd ed.]]

GLAZER, NATHAN (1923– ), U.S. sociologist. Born in New York, Glazer attended the City College of New York, the University of Pennsylvania, and Columbia University, where he received his Ph.D. in sociology. He was a member of the editorial staff of Commentary (1945–53) and worked in publishing at Doubleday and Random House. He was an urban sociologist with the Housing and Home Finance Administration in Washington, D.C., and a lecturer and instructor at the universities of Chicago and California and at Bennington and Smith Colleges. From 1963 to 1968 he was professor of sociology at the University of California at Berkeley.

Glazer then went to Harvard in 1968 as professor of sociology and education. In 1969 he became a fellow of the American Academy. In 1983 he taught in India as Distinguished Fulbright Lecturer. He also served on the United States Board of Foreign Scholarships (1984–89), which supervises the Fulbright Program, with special responsibility for South Asia. In 1993 he became professor emeritus of sociology and education at Harvard and subsequently became engaged in a research project on Indian federalism and democracy and studied Indian government policy affecting minority groups.

Glazer, who has written extensively on issues of ethnicity and race in American society, is co-editor of The Public Interest magazine and a contributing editor at The New Republic.

Glazer published numerous papers and articles on housing problems and on problems of American ethnic groups, including papers on the specific problems of American Jews; the latter appeared chiefly in Commentary. He wrote and also contributed the article “Social Characteristics of American Jews” to Jews: Their History, Culture and Religion (1694–1735) (vol. 2 (1960)), ed. by L. Finkelstein.

He co-authored The Lonely Crowd (with David Riesman and Reuel Denney, 1950); Faces in the Crowd (with Riesman, 1952), and The Social Basis of American Communism (with Daniel Patrick Moynihan, 1961). He also wrote American Judaism (1957); Beyond the Melting Pot (1963), an analysis of the persistence of ethnic groups – African-Americans, Puerto Ricans, Jews, Italians, and Irish – in the New York metropolitan area; Remembering the Answers (1970); Affirmative Discrimination: Ethnic Inequality & Public Policy (1975); and We Are All Multiculturalists Now (1998). He co-edited Conflicting Images: India and the United States with his wife, Sulochana Raghavan Glazer (1990).

[Michael Denman (2nd ed.)]

GLAZER, SIMON (1878–1938), U.S. Orthodox rabbi and author. Glazer, who was born in Ezwillig, Lithuania, was ordained in 1896 by Rabbi Alexander Mose Lapidus and Rabbi Isaac Rabinowitz. He fled from service in the Russian army; unable to receive permission to stay in Koenigsberg, he left for Palestine, where he was unable to earn a living and therefore immigrated to the U.S. in 1897 where he served as a cantor in Buffalo while mastering English and subsequently served as rabbi in several cities in the Midwest before becoming chief rabbi of the United Synagogues of Montreal and Quebec (1907–18). He worked to improve Jewish education, helped establish a Federation of Jewish charities and helped found the Y.M.H.A. He believed in using whatever means possible to interest Jewish children in Jewish education. He also approved of Sunday school education believing that it was better than the lack of all Jewish education. He moved to New York in 1923 and was rabbi of Beth Hamidrash Hagadol (1923–27) in Harlem; Temple Beth-El, Brooklyn (1927–30); and the Mai-
monides Synagogue (1930–38). A prolific writer and journalist, Glazer was a founder (1907) and the first editor of the Yiddish daily, the *Canadian Jewish Eagle* (*Kanader Adler*) and was active in rabbinic and Zionist organizations. His published works include: *Jews of Iowa* (1904); *Guide of Judaism* (1917); *The Palestine Resolution* (1922); *History of Israel* (6 vols., 1930), a reworking of Graetz's *History of the Jews*; and *Visions of Isaiah* (1937), a collection of sermons. He also wrote on *Techinah Book: Containing Prayers and Religious Duties for the Daughters of Israel* (1930).

His son, B. Benedict Glazer (1902–1952), was a prominent Reform rabbi in the U.S. He was rabbi of Temple Beth El in Detroit, Michigan, from 1942 until his death.

**GLICENSTEIN, ENRICO** (Enoch; 1870–1942), sculptor, painter, and print maker. The son of a tombstone carver, Glicenstein was born in Turek, Poland, and began studying for the rabbinate. After working as a sign painter and wood-carver in Lodz he went to study art in Munich, where he won the Prix de Rome in 1894 and 1897. He went to live in Italy in 1897 with his wife, Henle, daughter of the painter Samuel Hirshenberg, but had to leave the country in 1928 because of his refusal to join the Fascist Party and settled in New York. He died in an automobile accident. Glicenstein, who had been elected an honorary member of the Société des Beaux-Arts in 1906 on Rodin's recommendation, had one-man shows in nearly all the art centers of the world including the 15th Venice Biennale (1928). Glicenstein was predominantly a carver.

The majority of his works were done in wood, mostly oak or walnut. Spurning mechanical aids, he preferred the arduous, time-consuming method of cutting directly into his material. He created stern monolithic pieces, in solid, sturdy forms, devoid of any unnecessary detail. Like the expressionists, he felt free to exaggerate, to abbreviate, to elongate, and to distort, although he showed that a sculpture can be expressive while maintaining a firm equilibrium between form and content. Form is maintained, too, in Glicenstein's drawings, etchings, and his few paintings. As a draftsman, he was never indecisive. Likewise, the mastery of a knowledgeable hand is seen in the prints, cut with a needle into copper by vigorous strokes that aim straight to the core of a face, action, or scene. Among his time who sat for Glicenstein's portrait busts were Ludwig *Mond, Hermann *Cohen, Gabriele D'Annunzio, Sir Israel *Gollancz, Ignace Paderewski, and Franklin D. Roosevelt.*

*Gollancz, Ignace Paderewski, and Franklin D. Roosevelt.*

dates as a scientist were his elections as an honorary member of the Histochemical Society and had an important impact on its early development, serving as president from 1951 to 1957 and again from 1968 to 1970. Glick was also president of the International Committee for Histochemistry and Cytochemistry (IHC) from 1972 to 1976. He served on the editorial boards of several histochemistry and cytochemistry journals and was the editor for *Methods of Biochemical Analysis* from 1954 to 1986. In 1971, he was listed as one of the 50 most cited authors in a survey of world science literature reported by *Current Contents–Life Sciences.* He wrote more than 275 publications. Glick received many other honors, including the Van Slyke Medal and Award, the Ames Award from the American Association of Clinical Chemistry, and a Career Award from the U.S. Public Health Service. Additional recognition of his stature as a scientist was his elections as an honorary member of both the Royal Danish Academy of Sciences and Letters and the Finnish Histochemical Society. The David Glick Lectureship was established in 1982 by the International Federation of Societies for Histochemistry and Cytochemistry (IFHSC). Glick not only had a keen mind and a creative and entrepreneurial spirit but exhibited an unusual openness toward students and colleagues. These traits, together with his analytical acumen and eloquence, made him a much sought-after lecturer and board member.

[Bracha Rager (2nd ed.)]
GLICK, HIRSH (1922–1944). Yiddish poet and editor. Glick was born in Vilna and, as a teenager, became active in Ha-Shomer ha-Za'ir. In 1935 he began composing original verse in Hebrew. He joined the circle of the Yung Vilne group of Yiddish writers and, in 1939, edited and published four issues of the literary journal Yungvald. Glick spent the war years in the Vilna ghetto and forced labor camps nearby, where he continued to compose Yiddish poems, including the work for which he is best known, “Zog nit Keynmol” (“Never Say”), which became the official hymn of the Vilna partisan fighters. The poem was subsequently translated into many languages, including Hebrew (by the poet A. Shlonsky), Dutch, English, Polish, Romanian, and Spanish. In October 1943, Glick was transferred to the concentration camp at Goldfield (Estonia), from which he escaped the following year; he died in combat against the Nazis in the forest nearby.

GLICK, IRVING SRUL (1934–2002), Canadian composer. Born in Toronto, Glick was raised with music. He learned about cantillation from his father, a Russian-born cantor; the Western classical repertoire from his brother, a professional clarinetist; and Jewish folk music from the Habonim Zionists.

When Glick graduated from the University of Toronto with a bachelors and masters of music in theory and composition, he firmly believed in the international, non-denominational nature of music. After studying with composers Louis Saguer, Darius Milhaud, and Max Deutsch, he began changing this view. Contemplating his existence as a composer and his personal Jewish identity, he concluded that his Jewish roots were deeper than his desire to compose universal music.

This reassessment allowed Glick to incorporate ancestral musical motifs into his compositions. At times, as in his only ballet Heritage Dance Symphony, he attempted to synthesize dance music and jazz rhythms with Hebraic lyricism. Alternately, he layered textural and chordal density with Jewish folk tonality. Through experimentation, Glick developed a complex personal idiom combining Jewish and classical traditions into openly lyrical, emotional music. For example, Glick’s song cycle, I Never Saw Another Butterfly, addressed the Holocaust by using the poetry of the Theresienstadt concentration camp children. Harmonic dissonance contrasts the children’s tragic deaths with the thirst for life in their writing. Conversely, Glick’s 1998 composition Old Toronto Klezmer Suite, honoring his mother’s memory and the remembered splendor of his childhood community, represents his fusion style and playful idealism.

In 1969, Glick became choir director at Toronto’s Beth Tikvah, work he considered a labor of love, beauty, and inspiration. In 1978, he became the synagogue’s composer-in-residence. While working as a Canadian Broadcasting Corporation producer, he also taught composition at York University and the Royal Conservatory of Music in Toronto. By the time of his death in 2002, Glick had written several hundred pieces of music.

[Deborah Hopper (2nd ed.)]

GLICKMAN, DANIEL ROBERT (Dan; 1944– ), U.S. secretary of agriculture (1995–2001) and congressman (D-KS, 1976–1994). Glickman, a native of Wichita, Kansas, received his B.A. from the University of Michigan and his law degree from George Washington University. He began his public service as member and president of the Wichita School Board. He was a partner in the law firm of Sargent, Klena and Glickman and served as a trial attorney for the U.S. Securities and Exchange Commission.

During his 18 years in Congress, Glickman served on the House Agriculture Committee, House Judiciary Committee, and the House Permanent Select Committee on Intelligence. For six years he chaired a key Agriculture Subcommittee which oversaw nearly 75% of the Agriculture Department’s farm program budget. On the House Judiciary Committee, he staked out his leadership on aviation policy and authored landmark legislation creating product liability protection for small airplane manufacturers. He also was a member of the Intellectual Property Subcommittee. As chairman of the House Permanent Select Committee on Intelligence, he led the effort to demystify and make more publicly accessible the activities of the U.S. intelligence community, and he presided over the committee’s investigation of the Aldrich Ames case, the FBI agent convicted of spying for the Soviet Union.

He is the author of several major legislative proposals, including the law authorizing the United States Institute of Peace and several measures promoting alternative energy uses. Glickman also wrote the legislation that increases criminal penalties for the destruction of religious property.

His tenure as secretary of agriculture under Clinton was noted for the modernization of food safety regulations, an expansion of international trade agreements to open foreign markets to U.S. products, policies aimed at preserving forest lands and conservation, and an improved commitment to civil rights. Glickman was an advocate for farmers and ranchers in the face of the turbulent farm economy.

In 2004 Dan Glickman succeeded Jack Valenti, becoming only the fourth person to head the Motion Picture Association of America, the trade association founded in 1922 to advocate on behalf of the major motion picture studios. Immediately prior to his joining MPAA, Glickman was director of the Institute of Politics at Harvard University’s Kennedy School of Government.

Glickman served on the board of directors of the Chicago Mercantile Exchange; Hain – Celestial Corporation; Ready
Glickman, Martin Irving

He returned to Syracuse as a sophomore, where his long and distinguished broadcasting career began in 1937. After Glickman scored two touchdowns to help upset Cornell, a local haberdasher hired him to do a sports broadcast on radio for $50 to capitalize on his sudden fame. After graduating in 1939, and a stint in the Marines, Glickman broadcast college basketball games, and was the first radio announcer for the New York Knicks, beginning on November 7, 1946.

Glickman was a pioneer in the technical precision of describing basketball and establishing the precise geometry of the court, using a language and terminology — the key, the lane, the top of the circle, the mid-court stripe, between the circles — that survives to this day. With his unmistakable greeting — “Hello, fans! I’m Marty Glickman” — and his famous calls — “Swish!” “It’s high enough, it’s deep enough, it’s good!” and “It’s good … like Nedicks!” — Glickman was the radio voice of the Knicks for 11 years, the football Giants for 19 years, and the New York Jets for 11. He broadcast horse races at Yonkers Raceway for 12 years, did pre- and post-game shows for the Brooklyn Dodgers and New York Yankees for 22 years, college basketball for 21 years, Paramount newsreels for 15 years, as well as doing track meets, wrestling matches, high school football, roller derbies, rodeos, four marbles tournaments, and even described the circus to an audience of blind children.

Novelist Jack Kerouac, in On The Road, wrote: “Man, have you dug that mad Marty Glickman announcing basketball games — up-to-midcourt-bounce-fake-set-shot, swish, two points. Absolutely the greatest announcer I ever heard.”

Glickman was awarded the Basketball Hall of Fame’s Curt Gowdy Award in 1991, elected to the National Sportscasters and Sportswriters Hall of Fame in 1992, and the American Sportscasters Hall of Fame in 1993. In 1996 he published The Fastest Kid on the Block: The Marty Glickman Story.

Glid, Nandor (1924–1997), Yugoslav sculptor. Glid was born in the town of Subotica. During the Nazi occupation he was in a forced labor camp and later fought with the Yugoslav partisans. After the war he studied at the Academy of Fine Arts in Belgrade. He began as a portrait sculptor but later worked on monuments to commemorate concentration camp victims. He was commissioned to carry out his projects for monuments in the former Nazi camps of Mauthausen and Dachau. The monument in Subotica to a group of anti-Nazis (mainly Jews) who were hanged there is also his work. He has exhibited monotype graphics on war and camp subjects.

the Kiev Music School in 1891 and the Moscow Conservatory in 1894. He taught for some time in St. Petersburg, spent two years (1905–07) in Berlin, and became director of the Kiev Conservatory in 1914. In 1920 he went to the Moscow Conservatory as professor and held this post until his death. Glière was a prolific composer. He studied the folk music of various national groups and used folklore elements in his compositions. His symphonic works reflect Russian traditional harmony. Prokofiev, Miaskovsky, and Mossaiov were among his pupils. A tireless conductor, Glière appeared in remote regions of the country. From 1938 to 1948 he was chairman of the Union of Soviet Composers. His major works are: three symphonies (1900, 1907, and 1911), several operas, among them Shah-Senem (1923–34) on an Azerbaijan subject, and Rachel (1943) after Maupassant’s novel. His ballets include: Cleopatra (1925), Red Poppy (1927), The Bronze Horseman (1949), and Taras Bulba (1952). His concerto for harp and orchestra (1938) and especially the concerto for voice and orchestra (1942) won great popularity. He composed chamber music, songs, and piano works. Glière received many awards, including the Order of Lenin and the Stalin Prize.

**GLIKIN, MOSHE** (1874–1973), Zionist and *yishuv* leader. Born in Moscow, in 1892 Glikin went to Erez Israel, where he worked as a laborer at Ein Zeitim. He returned to Russia in 1894 and later studied in Leipzig, where he was secretary of a student Zionist association. He attended the Fifth and Sixth *Zionist Congresses and voted against the “Uganda Scheme. He directed the office of the Zionist *Democratic Fraction in Berlin in 1902 and later worked at the offices of various Zionist periodicals in Russia. In 1908 Glikin returned to Erez Israel, where he worked first in the Atid edible oil factory in Haifa and then at the Beaziel School of Arts and Crafts in Jerusalem. From 1910 he was director of *Migdal Farm. During World War I, he was exiled by the Ottoman authorities to Nazareth. In 1920 he was a delegate to the first Asefat ha-Nivharim (‘the Elected Assembly’ of the *yishuv”) and was a founder of the Hadar ha-Karmel, the new Jewish quarter of Haifa, where he then lived.

[Israel Klausner]

**GLINYANY** (Pol. Gliynian; Yid. Gline), small town in Lwów district, Ukraine. An organized Jewish community existed from 1474. The first settlers were leaseholders. The Jews of Glinyany suffered during the Tatar raids and Cossack massacres in 1624, 1638, and 1657, and particularly in 1648–49 (see *Chmielnicki*). The first synagogue, built of wood, was erected there in 1704. Glinyany was a stronghold of the Shabbateans and later of the Frankists (see Jacob *Frank*); in 1758 King Augustus III assigned Glinyany to the latter as one of their places of residence before baptism. In the 18th century Glinyany became a center of Hasidism when R. Jehiel Michael Moskovitch (great grandson of Jeciel Michael of Zloczow) established his court there. A Jewish-German school in Glinyany, established under Joseph I after Austrian annexation of Galicia, remained open until 1806. A public school in the name of Baron Hirsch existed there from 1816 to 1914, and among the teachers was the historian Meir Balaban. The center of Zionist activity was a club, “National Home,” founded in 1906, and a Hebrew school was opened in 1909. Between the world wars the economic situation deteriorated due to Ukrainian and Polish competition and antisemitism. The community numbered 688 in 1765, 1,708 in 1880 (out of a total population of 3,695), 2,177 in 1900 (out of 4,906), 1,679 in 1921 (out of 4,355), 1,906 in 1931, and 2,300 in 1939.

**Holocaust Period**

Under Soviet rule (1939–41), the communal bodies were disbanded and all political activity outlawed. In 1940 the former political leaders and important businessmen were arrested. In spring 1941 young Jews were drafted into the Soviet army and placed in special work units. The city fell to the Germans on July 1, 1941. On July 27 a pogrom broke out, led by the Ukrainian populace in which the Jews were murdered and robbed, and their sacred literature was burned. A provisional Jewish committee was set up in an attempt to prevent further persecution. The community had to pay a fine of 1,000,000 zlotys, but could not raise such a sum. Emissaries were sent to the German authorities in Peremyslshyan in an effort to lower the sum and delay payment, but met with partial success. The Jews of Glinyany were sent to a labor camp in Kurwice. The *Judenrat, headed by Aaron Hochberg, considerably assisted the community until the period between Nov. 20, 1942, and Dec. 1, 1942, when the remaining Jews were interned in Peremyslshyan ghetto. They perished there when it was liquidated in the summer of 1943. A few groups of Jews tried to hide in bunkers in the woods but were hunted down, mostly by the Ukrainians, and killed. A group of 40 resisted and fought when discovered. The city of Glinyany was taken by Soviet forces in August 1944, at which time only 20 Jewish survivors were found there. These left Glinyany in 1946.

**BIBLIOGRAPHY:** M. Balaban, in: Yel, 6 (c. 1910), 586; Beter far Geshikhote, 4 pt. 3 (1953), 163; H. Halpern (ed.), Megilas Glina (1950); Kharbon Gline (1964); A. Korech (ed.), Kelihaat Glina 1473–1943, Toledoteha ve-Hurbanah (1950).

**GLIWICE** (Ger. Gleiwitz), city in Silesia, Poland. It passed to Prussia in 1742, reverting to Poland in 1945. A “Jewish Street” is mentioned there in the Middle Ages. In 1587 the city council opposed further Jewish settlement and those already resident probably left soon afterward. In 1715 a Jew acquired the liquor privileges in Gliwice and built a home there; he con-
verted to Christianity, and in 1753 opposed the acceptance of additional Jewish residents. However, the community grew from 62 in 1795, to 178 in 1812 (6.9% of the total population), and numbered 2,009 (16.5%) in 1867, 1,962 (3.17%) in 1905, and 2,200 (2%) in 1921. The industrialized city having grown much more rapidly than the Jewish community. The first synagogue, in use from 1812, was replaced in 1861. In 1932 the community maintained a mikveh, library, school (100 pupils), home for the aged (founded 1926), seven charitable and nine social organizations.

Holocaust and Contemporary Periods
There were 1,845 Jews living in Gliwice in 1932. When the Nazis came to power in 1933 the community was subjected to the same antisemitic persecution as in the rest of Germany, causing around 400 to leave. On Nov. 10, 1938 (*Kristallnacht*), the Nazis burned down the large synagogue, and arrested all male Jews between the ages of 18 and 60. After two days of torture in prison, they were deported to *Buchenwald* concentration camp where some died. The rest were sent home after three or six months’ imprisonment. All the women were forced to do hard, humiliating work in the city. Jews were also compelled to leave their homes and settle in densely crowded living quarters with a minimum of one family per room. Deportation to the East commenced in May 1942, leaving just 40 intermarried Jews in the city. After the war a number of Jews from Poland settled there. There were 200 Jews living in the town in 1950. The new community had its own producers’ cooperative (1962). A number emigrated after the Six-Day War.

GLOBES, Israeli financial daily, established in 1983. Its founding editor was Uri Gotleib and its owners from 1984 were Haim Bar-On and Eliezer Fishman. The newspaper expanded over the years from supplying mostly financial data about the Israeli Stock Market to covering the gamut of Israeli finance, industry, and economics and key economic developments abroad. During Matti Golan’s editorship in 1988–92, its circulation climbed to 22,500.

The newspaper’s growth coincided with Israel’s economic crisis in the 1980s caused by rampant inflation and subsequently the economic growth that accompanied the Likud’s free market economics. *Globes*’ growth spurred other Israeli dailies to add economic supplements, but this, in turn, limited *Globes*’ potential readership growth from beyond the country’s economic and industrial sector to the wider Israeli public. The newspaper succeeded in withstanding competition from a short-lived financial rival, the *Telegraph* (1993–96), edited by Golan after he left *Globes*. In 1996 Haggai Golan was appointed *Globes*’ editor. It is a subscriber-only newspaper, published in the early evening after the closure of the Tel Aviv Stock Market. 3.4% of Israelis read the newspaper in 2005, according to a TGI Teleserker survey. Other estimates put their circulation at 35,000. The newspaper has Internet editions in Hebrew and English; according to *Globes* the Hebrew edition has 200,000 registered users.

“GLOBOCNIK, ODILIO (1904–1945), Nazi executioner of Polish Jewry. Born in Trieste, Italy, Globocnik joined the Nazi Party in Austria in 1922 and the then illegal Austrian SS in 1934. He was nominated *Gauleiter* of Vienna in reward for his part in the preparation of Austria’s annexation in 1938, but was later dismissed for embezzlement. Recognizing the usefulness of his ideological fanaticism and ambition, his longtime friend Heinrich Himmler brought him back from disgrace and appointed him SS and police leader for the Lublin District on November 1, 1939. In the fall of 1941 – just months before the Wannsee Conference – Himmler authorized Globocnik to organize what became known as *Aktion Reinhard*. He organized Jewish slave labor camps as industrial enterprises of the SS, and in April 1942 he was put in charge of “Action Reinhard” (see *Holocaust, General Survey*) to annihilate Polish Jewry and confiscate their property. He organized the death camps of *Belzec*, *Sobibor*, ‘Majdanek,’ and *Treblinka*. At the end of 1942, he directed the brutal resettlement of Poles from the Zamosć region. In September 1943, he and other SS officials who worked on *Aktion Reinhard* were transferred to Trieste. Globocnik committed suicide shortly after his arrest by British troops in Austria in May 1945. His role in the “Final Solution” was central and provides key information on the decision-making process for the murder of the Jews. The decision to annihilate the Jews in the Generalgouvernement (GG) was made as early as the first half of October 1941. On October 17, 1941, during a conference in Lublin in the presence of Hans Frank, SS and police leader for the Lublin District, Odilo Globocnik said that *Reichsführer-SS* Heinrich Himmler and Hitler ordered the “evacuation of Jews beyond the Bug river,” a statement that meant the physical elimination of Jews from the GG. Globocnik also planned to resettle all the Poles from the Lublin District and even spoke about the resettlement of Poles from the entire GG. Ethic Germans were to take their place.

GLOBUS, Yoram (1941– ). Israeli movie producer who founded and ran the international production company, the Cannon Group, with his cousin, Menachem *Golan. From the late 1970s to the late 1980s, they produced hundreds of low-brow movies of all kinds, specializing in action films...
such as *The Delta Force* (1986) with Chuck Norris and *Death Wish II* (1982) starring Charles Bronson. Golan and Globus's willingness to wheel and deal earned them the nickname “the Go-Go boys.” Globus balanced box-office hits with the occasional art-house drama and produced such films as Jean-Luc Godard's *King Lear* (1987) and Robert Altman's *Fool for Love* (1985). Born in Tiberias, Globus began making movies with Golan in the 1960s in Israel. Among his Israeli credits are the popular *Eskimo Limon* (1978) comedy and its sequels, as well as such classics as the 1974 musical *Kazablan* and *Operation Thunderbolt* (1977), the story of the IDF's hostage rescue at Entebbe, which was nominated for an Academy Award. After the Cannon Group was sold in the late 1980s, Golan and Globus went their separate ways, although they occasionally worked together later. Globus went on to run Globus–United, which includes the largest movie theater chain in Israel, production facilities, and a distribution company.

[Hannah Brown (2nd ed.)]

**GLOCK, CHARLES Y.** (1919– ), sociologist and author. Born in New York City, Charles Glock earned his bachelor's degree from New York University (1940), his master's degree from Boston University (1941), and his doctorate from Columbia University (1952). He served in the U.S. Army Air Forces in World War II and was awarded the Bronze Star and the Legion of Merit.

Glock served as the executive director of the Bureau of Applied Research at Columbia beginning in 1947, becoming managing director in 1949 and director in 1952. He taught at Columbia as professor of sociology from 1956 to 1958, then at the University of California, Berkeley, from 1958 to 1978. He also served as director of Berkeley's Survey Research Center from 1958 to 1967 and as director of an extensive research program on religion and society from 1962 through 1979. Glock was named professor emeritus at Berkeley in 1978.

Glock is perhaps best known for his 1966 work, with co-author Rodney Stark, *Christian Beliefs and Anti-Semitism*, in which Glock and Stark suggest an inherent relationship between Christian beliefs and religious and secular antisemitism. They contend that, because of the traditional Christian claim of universal truth, a strong belief in Christianity leads to the belief that Christianity is the only true religion, which in turn leads to unfavorable images of those who practice other religions, especially Jews, who are considered to have rejected Jesus. The authors also claim that differences in degrees of antisemitism among Christian denominations correspond to differences in Christian beliefs among the denominations. Critics suggested that Glock and Stark did not sufficiently address nonreligious causes of antisemitism, and that therefore the relationship between Christian beliefs and antisemitism was not necessarily inherent.

In 1968 Glock and Stark published *American Piety: The Nature of Religious Commitment*, which was considered a significant contribution to the study of American religion. *The New Religious Consciousness*, edited by Glock and Robert Bel-lah in 1976, which examined religious groups associated with the counterculture movement of the 1960s, was also well received. Glock's other works include *Prejudice, U.S.A.* (with Ellen Siegelman, 1969), *Adolescent Prejudice* (with Robert Wuthnow, Jane Piliavin, and Metta Spencer, 1975), and *Anti-Semitism in America* (with Harold E. Quinley, 1979). Glock received the Roots of Freedom Award from the Anti-Defamation League of B'nai Brith in 1977.

[Dorothy Bauhoff (2nd ed.)]

**GLOGAU** (Pol. *Glogó*), town in Silesia, W. Poland. Jews are first mentioned there in 1280. In 1299 the duke of Gross-Glogau granted them a charter of privileges. The community possessed a cemetery, a synagogue, inhabited a “Jews’ lane,” and engaged in moneylending, and the cloth and fur trade. The Jews of Glogau escaped persecution during the *Black Death*, 1348–49, but in 1401 two Jews were burned to death for an alleged *Host desecration*, and the synagogue and other buildings were destroyed in a riot by the populace in 1442. The community subsequently recovered and prospered until 1488, when Duke Hans, after first taxing them heavily, expelled them. Nevertheless, a few Jews continued to live outside the city bounds. After the expulsion of Silesian Jewry in 1582 the family of Israel Benedict was allowed to live in Glogau and received a letter of privilege in 1598. Protected by this, other members of his family and numerous fictitious relatives flocked to the city from Poland and Prague. A Jewish quarter was organized and a synagogue built in 1636. Despite the sufferings caused by the Thirty Years’ War, the plague, a general conflagration in 1678, and local opposition, the community grew from 81 families in 1673 to 1,564 persons in 1725. After it returned to Prussia in 1745, *Frederick II* confirmed the limited rights of the community. One of the most prosperous communities in Central Europe, Glogau Jewry overshadowed that of *Breslau*. From the beginning of the 18th century, the community possessed its own seal. The Jewish population gradually outgrew the confines of the Jewish quarter and totaled 2,000 in 1791 (one-fifth of Silesian Jewry). In the 19th century, the community decreased from 1,516 in 1812 (12% of the total population) to 1,010 in 1880 (5.4%), and 716 in 1900. Solomon and Eduard *Munk*, Michael *Sachs*, and David and Paulus *Cassel* were born in Glogau. Solomon *Maimon* was buried in the old cemetery. The community remained approximately the same size (around 600) until 1933. Many left during the Nazi persecutions and their numbers had declined to 120 by 1939. Most were deported to the East from March 1942. The community was not reestablished after World War II.

**GLOGAU, JEHIEL MICHAEL BEN ASHER LEMMEL HA-LEVI** (c. 1740–1818), rabbi in Burgenland (Austria).
Glogau took his name from his birthplace, where his father served as dayyan, before becoming rabbi in Eisenstadt. Around 1780 Glogau served as preacher of the hevra kadisha of Vienna. On the death of his father in 1789 he succeeded him at Eisenstadt. He was in halakhic correspondence with Moses *Sofer, who held him in high esteem (Hatam Sofer Ohn., nos. 40, 80). His son Moses (d. 1837), who served as rabbi of Liben near Prague and then in Deutschkreutz (Burgenland), published the commentaries on aggadah of his father and grandfather together with his own work entitled Hut ha-Meshullash bi-Shar'am (Vienna, 1821). The work contains sermons on the weekly readings of the Torah, each consisting of three parts: the sermons of his grandfather, entitled Shiri Asher; of his father, entitled Shir ha-Mayim; and his own, Shiri ha-Katan.

**GLOTZ, GUSTAVE** (1862–1935), French historian. He was born at Haguenau and taught at the lycée in Nancy (1886–92), and Paris (1892–1907). In 1907 he became professor of Greek history at the Sorbonne. In 1920 he became a member of the Académie des Inscriptions et Belles Lettres, and in 1928 president of the Institut de France. Well known as a French patriot and as a fine scholar and a popular teacher, he was honored at his Sorbonne jubilee in 1932, when the Mélanges Gustave Glotz (2 vols., including bibliography) was presented to him. His work is notable for its special study of ancient Greek social and economic life. He directed the publication of the Histoire générale, in which the first three volumes of the Histoire grecque (1925–36) are his work in collaboration with Robert Cohen. He contributed to the Dictionnaire des antiquités grecques et romaines. His other works include Etudes sociales et juridiques sur l’antiquité grecque (1906), Le travail dans la Grèce ancienne (1920; Eng. 1926), La civilisation égéenne (1923, Eng. 1925), and La cité grecque (1928; Eng. 1929). He was an editor of the Revue des Études Grecques.

[Irwin L. Merker]

**GLOUCESTER**, county town in N. England. Its Jewish community is first mentioned in the financial records of 1158–59. It was again mentioned in connection with an alleged ritual murder in 1168. The Jewry was situated in the present East Gate Street, the synagogue being on the north side. Josce of Gloucester, a prominent financier under Henry II, apparently financed an illegal raid on Ireland. Under John, the community suffered greatly from royal exaction. Gloucester possessed an *archa. It was one of the dower-towns of Queen Dowager Eleanor from which the Jews were expelled in 1275. The members of the community, first transferred to *Bristol, were afterward scattered. A small community was reestablished at the close of the 18th century but decayed in the middle of the 19th century. The last survivor died in 1886.

[Cecil Roth]

**GLUBOKOYE** (Pol. Głębokie), Molodechno district, Belarus, in Poland until 1793 and from 1921 to 1939. Jews are mentioned there in the middle of the 16th century. Within the framework of the Council of Lithuania (see *Councils of the Lands) Glubokoye came under the jurisdiction of the *Smorgon community. Samuel *Mohilever was rabbi there from 1848 to 1856. Jews traded in lumber, farm products, and bristles, exporting them to Poland and Russia. They also owned flour mills and hide-processing factories. Most identified themselves with the Chabad Hasidism. The community numbered 755 in 1766, 3,917 in 1897 (70% of the total population), and 2,844 in 1921 (63%). After World War I Jewish trade was only partially revived. In 1927 a Hebrew Tarbut school was opened.

**Holocaust Period**

In September 1939 Glubokoye was annexed to the Soviet Belorussian Republic. All Jewish public life ceased and Jewish institutions were closed. The town was occupied by the Germans on July 2, 1941. In the first days several Jews accused of being Communists were put to death. When many of the prisoners in the Soviet jail of nearby Berezwiecz were found dead the blame was placed on the Jews and a pogrom was prevented only after intercession by R. Josef Ha-Levi Katz. In early November 1941 a ghetto was set up in the town and the Jews there were grouped into two categories: those fit for work, and the sick and the aged. Jews from the nearby towns of Shkarovshchisna, Postawy, and Plissa were also brought to the ghetto and its population reached 6,000. On March 25, 1942, 105 Jews were arrested and shot. Following this Action, the youth tried to organize and make contact with the partisans. On June 19, 1942, about 2,500 Jews classified “unfit for work” were murdered in the Borek forest. In 1943 Soviet partisans attacked targets in the vicinity of Glubokoye. The Germans, fearing that contact might be established between the ghetto and the partisans, began to deport the Jews and liquidate the ghetto. On August 20, 1943, members of the Judenrat were ordered to organize the Jews for deportation. Upon entering the ghetto, the Germans met with armed resistance by Jewish groups. Some Jews tried to break through the siege, but few succeeded. In order to break the resistance and to prevent a mass escape, the Germans set the ghetto on fire and left 5,000 dead. Jews from Glubokoye who managed to escape joined partisan units, including the Kaganovich unit.

[642]
About 100 survived the Holocaust. The community was not reconstituted after World War II.

[Aharon Weiss]

GLUCK, ALMA (born Reba Fiersohn; 1884–1938), U.S. soprano. Born in Bucharest, Romania, she was taken to New York as a child. When she left school, she worked as a secretary, and it was not until her marriage to Bernard Gluck, in 1906, that she began taking singing lessons. In 1909 she obtained an engagement at the Metropolitan Opera, New York, where she remained for four years. Subsequently, after studying in Berlin with Marcella Sembrich, she concentrated on concert work. Her great success was enhanced by her recordings. In 1914, having divorced her first husband, she married the violinist Efrem Zimbalist. Her home in New York became the meeting place of distinguished musicians and she was a principal figure in the founding of the American Guild of Musical Artists. Her daughter by her first marriage became the novelist Marcia Davenport.

GLUCK, HANNAH (1895–1978), British painter. Hannah Gluck, widely known as “Gluck,” was born in London and belonged to the well-known *Gluckstein family. She attended St. Pauls Girls’ School but, refusing to go to the university, she enrolled in the St. John’s Wood Art School, London, which she left after one year and was thereafter self-taught. In 1916, while on a holiday in Cornwall, she met a group of distinguished artists, including Munnings and Harold and Lora Knight, and this made her more determined to become a genuine artist. She eventually studied music, but after a promising beginning returned to painting. In 1926, the Fine Art Society of London held an exhibition of her work entitled “Stage and Country,” which included landscapes as well as theater scenes and portraits. Its success led to other successful exhibitions in 1932 and 1937. Nothing was heard of Gluck for some 35 years, during which time she was living in the country, painting very slowly, and, having no financial means, not bothering to exhibit. In 1973, however, the Fine Art Society persuaded her to hold another show, which included the portrait of her grandfather done in 1915, a series of works from 1917 to 1937, as well as paintings covering the period from World War I. It proved a thrilling exhibition and Gluck was hailed as a minor master.

During the subsequent five years, until her death, Gluck was reestablished both as a painter in her own right and as part of the reassessment of English art in the 1920s and 1930s.

GLUCK, LOUISE (1943– ). U.S. poet. Gluck was born in New York City to a father who never acted on his dream of being a writer and a mother who fought to attend Wellesley College before women’s education was accepted. Honed by inner wounds from the death of an older sister, and by her battle with anorexia, years of psychoanalysis, and study with Stanley Kunitz, Gluck’s poetic voice is lyrical yet reticent, cloaking the confessional in the classical. Her poetry explores the intimate drama of family tragedies resonating through the generations and the relationship between human beings and their creator. Although her poetry shows the strong influence of psychoanalysis and classical mythology, she also draws on Jewish tradition for mythic images and stories. Her works include an award-winning collection of essays on the theory and practice of poetry, Proofs & Theories (1994), as well as her many books of poetry, most notably, The House on Marsland (1975), Descending Figure (1980), Ararat (1990), and The Seven Ages (2001). In The Triumph of Achilles (1985), she creates her own midrashic interpretation of a story from the Midrash Rabbah and measures her immigrant grandfather’s life against that of Joseph in Egypt. The Wild Iris (1992), an entire book in the voice of one of the Hebrew prophets translated to a modern sensibility, won the Pulitzer Prize. She writes with passion restrained by intelligence in a voice of controlled elegance, and luminous mystery. Although her use of myth and story to illuminate the individual heart and the archetypal family, as well as her recurrent attempts to understand God, have led some to call her work cryptic or harsh, she has received multiple awards for her poetry, and her critical recognition as one of America’s finest poets resulted in her term as U.S. poet laureate in 2003.

GLUCKMAN, HENRY (1893–1987), South African physician and politician who was the only Jew to hold a cabinet post in the Union of South Africa. He represented a Johannesburg division in Parliament from 1938 until 1958, when he retired from politics to devote himself to industrial interests. Largely as a result of his work as chairman of the government’s National Health Services Commission (1942–44), whose report influenced future health policy, the prime minister, General J.C. Smuts, in 1945 appointed him minister of health and housing. He held this position until 1948 when Smuts’ government left office. Gluckman was chairman of the Central Health Services and Hospitals Coordinating Council (1943–45) and of the National Nutrition Council (1945–48). He was a regional vice president of the World Parliamentary Association. He served in the South African Medical Corps in both world wars and was president of the National War Memorial Health Foundation, and vice president of the Jewish Ex-Service League.

Gluckman was an executive member of the Jewish Board of Deputies and vice president of the Zionist Federation. Particularly interested in the Hebrew University, he was on its
board of governors and was chairman and lifetime president of the South African Friends of the Hebrew University.

[Louis Hotz]

GLUCKMAN (Herman), MAX (1911–1975), social anthropologist. Born and educated in Johannesburg, South Africa, and Rhodes scholar to Oxford, 1934, he was assistant anthropologist to the Rhodes Livingstone Institute in North Rhodesia (now Zambia) from 1939 to 1941 and its director from 1941 to 1947. In 1947 he was appointed lecturer in social anthropology at Oxford and in 1949 professor of social anthropology at the University of Manchester. He did field research in Zululand from 1936 to 1938; in Barotseland from 1939 to 1941; Tonga in North Rhodesia in 1944; and Lamba in 1946. Gluckman became an expert on African societies, the political systems of tribal society, and more generally political anthropology. His Custom and Conflict in Africa (1955) paid special attention to cultural change and the significance of conflict, which he regarded as a basic element in society. He was chairman of the Association of Social Anthropologists of the British Commonwealth from 1962 to 1966. He wrote Administrative Organization of the Barotse Native Authorities (1943), Rituals of Rebellion in South-East Africa (1954), Custom and Conflict in Africa (1955), Order and Rebellion in Tribal Africa (1965), Politics, Law, and Ritual in Tribal Society (1965), and The Ideas in Barotse Jurisprudence (1965). Gluckman died in Jerusalem, where he was a visiting scholar at the Hebrew University.

GLUCKSMAN, HARRY L. (1889–1938), U.S. communal worker. Glucksmans was born in New York. A founder of the Jewish center movement in the U.S. and Canada, he joined the *National Jewish Welfare Board in 1917 when it was organized as a war service agency and was executive director for 19 years until his death. Previously, Glucksmans had served in executive capacities with the Jewish Big Brothers (in N.Y.), the 92nd Street YMHA (also in N.Y.), and the New Orleans YMHA. He was an administrator and organizer, Glucksmans was widely consulted on various aspects of Jewish community life. He was a supporter of Zionism and was prominent in the American Jewish Committee, the New York YMHA, and the Jewish Board of Guardians.

GLUCKSTEIN, English family of caterers. In 1872 ISIDORE GLUCKSTEIN (1851–1920) opened a small tobacconist’s shop in London with his brother-in-law Barnett *Salmon. This concern developed into Salmon and Gluckstein, the largest firm of retail tobacconists in England, which was then purchased by the Imperial Tobacco Company in 1904. In 1887 Isidore Gluckstein was also one of the founders of the catering firm, J. Lyons and Company, together with his brother MONTAGUE GLUCKSTEIN (1854–1922), Alfred Salmon, son of Barnett Salmon, and Sir Joseph *Lyons. Montague Gluckstein conceived the idea of this popular catering establishment and played a leading part in its development, based on the principle of offering good food at moderate prices. He succeeded to the chairmanship of the company on the death of Lyons in 1917. ISIDORE MON-

TAGE GLUCKSTEIN (1890–1975) was chairman of the company 1956–60, and president 1961–68.

Other members of the family were SIR SAMUEL GLUCK-

STEIN (1880–1958), who was active in the London Coun-
try Council and occupied many posts in executive committee
ties and was mayor of Westminster 1920–21; and SIR LOUIS HALLE GLUCKSTEIN (1897–1979), Conservative member of parliament from 1931–45, chairman of the Greater London Council in 1968, and president of the Liberal Jewish Syna-
gogue from 1944.

GLUECK, ABRAHAM ISAAC (1826–1909), Hungarian rabbi. Glueck was born in Vertes and served as rabbi of Tolcs-
vva for almost 50 years, until his death. His published works are Bécs Yezhak on tractate Hullin (1896), and on Gittin in two parts (1909–10), and responsa Yad Yizhak, in three parts (1902–08). R. Joseph ha-Kohen Schwartz published a complete volume entitled Zafenat Pa’ne ah (1909), consisting of notes to the third part. Glueck also published the Parashat Mordekhai (1889) of Mordecai Benet, together with his own glosses. Many of his works were apparently lost in the Holocaust.

[Naftali Ben-Menahem]

GLUECK, NELSON (1900–1971), U.S. archaeologist and president of *Hebrew Union College. Glueck, who was born in Cincinnati, Ohio, received his rabbinic ordination from the Hebrew Union College there in 1923. Continuing his studies in Germany, Glueck received his Ph.D. at Jena in 1927. In 1928–29 he studied at the American School of Oriental Research in Jerusalem. Glueck began teaching Bible at Hebrew Union College in 1929, and while still a member of the faculty resumed his connection with the American School of Oriental Research. He was director of the Jerusalem School during 1932–33, 1936–40, and 1942–47, and field director of the Baghdad School in 1942–47. During World War II Glueck worked with the U.S. Office of Strategic Services, then was director of the Union of American Hebrew Congregations, to which he had been appointed in 1941.

A conspicuous figure among American archaeologists, Glueck undertook systematic excavations throughout Tran-
sjordan. In 1937 he uncovered the Nabatean Temple at Jebel el-Tannur, and in 1938 he began excavating the Iron Age site of Tell-el-Kheleifeh (Ezion-Geber), near Akaba. From 1952 onward he surveyed ancient sites in the Negev.

In 1947 Glueck was elected president of Hebrew Union College. The college, isolated geographically from the main centers of American Jewish life, also tended to be overshad-
owed by the burgeoning activities of its patron, the Union of American Hebrew Congregations. Avoiding philosophical controversy, Glueck successfully fought to maintain the independence of the college, and at the same time transformed its structure. In 1949 he succeeded Stephen Wise as president of the Jewish Institute of Religion in New York, and the amalgamation of the two schools followed. Branches of the combined institution were opened in Los Angeles and Jerusalem largely due to Glueck's enthusiasm. The buildings in Cincinnati were greatly enlarged and the granting of fellowships for postgraduate studies, particularly to Christian students of Judaica, was increased considerably.

In addition to contributions to learned journals, Glueck has published Das Wort Hesed im alttestamentlichen Sprachgebrauche (1927); Explorations in Eastern Palestine (4 vols., 1934–51); The Other Side of the Jordan (1940); The River Jordan (1946); Rivers in the Desert (1959); and Deities and Dolphins: The Story of the Nabateans (1966). On his 70th birthday, the festschrift Near Eastern Archeology in the Twentieth Century was published in his honor.

GLUECK, SHELDON (1896–1980), U.S. criminologist. Born in Warsaw, Glueck was taken to the United States in 1903. In 1925 he became an instructor in criminology at Harvard and was professor of law from 1931. A member of the advisory committee on Rules of Criminal Procedure of the U.S. Supreme Court, he was also an adviser at the Nuremberg war crimes trials after World War II.

Glueck’s work in criminology was largely accomplished with the help of his wife, ELEANOR GLUECK-TOUROFF (1898–1980), who held research posts in criminology at Harvard from 1928 to 1953. For over 30 years they carried out unique follow-up investigations of delinquent and criminal behavior to determine the effectiveness of various forms of correctional treatment. The research resulted in several important publications including One Thousand Juvenile Delinquents (1934). Later research into the early identification of delinquency and recidivism led to the development of prognostic tables to predict post-offense behavior of criminal offenders. The Glueck system of prediction enabled them to determine which children in the first grade would probably become persistent delinquents unless there was timely and effective intervention. The predictions were based on certain factors in the social background of the children such as parental discipline, relationship with parents, and the cohesiveness of the family. Validation studies of these prediction tables generally confirmed their accuracy, and were approved by a number of eminent criminologists and social scientists.

Among their many publications were Unraveling Juvenile Delinquency (1950), in which the Glueck Social Prediction Table is described, and Predicting Delinquency and Crime (1959), which incorporates various tables of prediction for different types of criminal and delinquent behavior. They also wrote Ventures in Criminology (1964). Among Sheldon Glueck’s other writings were: Mental Disorder and the Criminal Law (1925); and The Nuremberg Trial and Aggressive War (1946).

GLUECKEL OF HAMELN (1646/47–1724), merchant, wife, mother, and Yiddish memoirist. David Kauffman, who edited her Yiddish text, was the first to call her “Glueckel von Hameln”; she signed herself as “Glilk bas Judah Leib.” Glikl was born in Hamburg to the merchant Judah Leib and the businesswoman Beila Melrich. Judah Leib, one of the original Ashkenazim to settle in Hamburg, never had the status of that city’s great Sephardi financiers; he became a prosperous trader and a notable of the German-Jewish community based in the adjacent town of Altona. At 14, Glikl married Hanyyim ben Joseph, a native of Hameln. After briefly boarding with their families, Glikl and Hanyyim established their own household in the Ashkenazi section of Hamburg. The couple had 14 children; 12 lived long enough to marry and all but one had children of their own. Using as his public names either Hamel or Goldschmidt, Hanyyim traded successfully in gold, silver, pearls, and money, attended the German fairs, and arranged sales from Moscow to London. Glikl helped with the account books, local pledges, and contracts. In 1689, Hanyyim died from a fall, leaving Glikl with eight children still at home. After marrying off some children nearby and others in distant cities, such as Berlin and Metz, she continued Hanyyim’s business with much success.

In 1699, Glikl married Hirsch Levy, a wealthy widower, provisioner to the armies of Louis XIV, and a leader of the Metz Jewish community. Less than two years later, Levy went bankrupt and the couple had to live in straitened circumstances. After Hirsch’s death in 1712, Glikl moved in with her daughter Esther and her banker son-in-law Moses Schwabe and watched her grandchildren grow up until her own death in 1724.

Glikl began to record her reflections and incidents from her life in the “melancholy” period following Hanyyim’s death and gave her writings final form several years after the death of her second husband. This carefully crafted text, interspersed with relevant folk tales, is the first surviving extensive written document by a Jewish woman. However, Glikl was drawing from an established practice of self-description, by women as well as men, in ethical wills and personal narratives. She also drew upon her wide reading in Yiddish printed books, such as women’s prayers, moral teachings, extracts from the Bible, and story collections, and from sermons heard from the women’s section of the synagogue. Through her book, she could tell her children about their past and also reflect on the ups and downs in her life, her sins and strengths, and the meaning of suffering. Her autobiography, a woman’s presentation of family life, the relations between generations, religious sensibility, business activities and values, and the messianic hopes of the 18th century, is an invaluable source for Yiddish language and literature and for early modern Jewish history.
It is important to point out that all of the translations of Glikl's memoirs, in German, French, Hebrew, and English omit as much as two-thirds of the actual text, based on various editorial principles shaped by the translator's approach to the material at hand. This has meant that the genre and the significance of Glikl's writings for her time and audience are still far from adequately understood. Although some of the core issues of the problem have been discussed by C. Turniansky, much room remains for further research, analysis, and full translation.

[Natalie Zemon Davis (2nd ed.)]

"GLUECKS, RICHARD (1889–1945), ss-Brigadefuehrer (major general), charged with participation in the mass murder of Jews in the "Final Solution" (see *Holocaust, General Survey*). A native of Dusseldorf, he served as an artillery officer during World War I, and then became a merchant. After Hitler came to power, Gluecksohn became a member of the Nazi Party and the SS. In 1936 he was appointed chief of staff under Theodor Eicke, inspector of concentration camps, and succeeded him in 1940. Gluecks was responsible for the establishment of Auschwitz and the construction of gas chambers. Under his jurisdiction, exploitation of prisoner's labor was introduced in the camps. Gluecksohn was the ideological leader of Ha-No'ar ha-Ziyoni and of progressive Zionism. He wrote monographs on Aḥad Ha-Am (1927) and Ma’mo’nim (1935). Active in public life as a leader of the General Zionist Party in Palestine, he was also a member of the Zionist General Council, had two representatives on the city council, and was active in foreign trade. The leader of the newly settled Sephardi community, Albertus *Denis, received permission to operate a mint. The Jews, known as members of the "Portuguese nation," had two representatives on the city council, and possessed a synagogue, school, cemetery, and printing press. The first rabbi was Abraham de Fonseca, who later moved to Hamburg. Due to the rising prosperity of *Altona, the city declined economically in the early 18th century and many Jews left; their privileges lapsed in 1732. Although the synagogue was completely rebuilt in 1767 only 20 families remained by then. The last rabbi died in 1813, and the synagogue was dismantled in 1895.

**GLUECKSTADT, town in Schleswig-Holstein, N.W. Germany; until 1864 under Danish rule. It was founded in 1616 by Christian IV of Denmark who in 1619 granted special privileges to induce a group of Hamburg Jews to settle there. By 1650, 130 Sephardi Jews had taken residence in the town. They opened a sugar refinery, a soap factory, and saltworks, and were active in foreign trade. The leader of the newly settled Sephardi community, Albertus *Denis, received permission to operate a mint. The Jews, known as members of the "Portuguese nation," had two representatives on the city council, and possessed a synagogue, school, cemetery, and printing press. The first rabbi was Abraham de Fonseca, who later moved to Hamburg. Due to the rising prosperity of *Altona, the city declined economically in the early 18th century and many Jews left; their privileges lapsed in 1732. Although the synagogue was completely rebuilt in 1767 only 20 families remained by then. The last rabbi died in 1813, and the synagogue was dismantled in 1895.

**GLUECKSOHN, Glickson**, MOSHE (1878–1939), Hebrew journalist and Zionist leader. Born in Cholynka, near Grodno, Gluecksohn began his Zionist activity in Western Europe among Jewish students. He was a delegate to the Sixth Zionist Congress (1903) and later congresses, joining the opposition to the Uganda Scheme. From 1908 to 1914 he was the secretary of the Hovevei Zion committee in Odessa. In 1910 Gluecksohn began to publish articles in Hebrew in Haolam and later also in Ha-Shiloah. After the February Revolution, 1917, he edited the Moscow Hebrew daily Ha-Am. After the Bolshevik Revolution he left for Palestine (autumn 1919). From 1923 to 1938 he edited the daily Haaretz, and during his period of editorship the paper became an important Zionist organ, supporting the policy of Chaim Weizmann and the Zionist leadership and strongly opposing Revisionism. Gluecksohn was the ideological leader of Ha-No’ar ha-Ziyoni and of progressive Zionism. He wrote monographs on *Aḥad Ha-Am* (1927) and Ma’mo’nim (1935). Active in public life as a leader of the General Zionist Party in Palestine, he was also a member of the Zionist General Council, had two representatives on the city council, and was active in foreign trade. The leader of the newly settled Sephardi community, Albertus *Denis, received permission to operate a mint. The Jews, known as members of the "Portuguese nation," had two representatives on the city council, and possessed a synagogue, school, cemetery, and printing press. The first rabbi was Abraham de Fonseca, who later moved to Hamburg. Due to the rising prosperity of *Altona, the city declined economically in the early 18th century and many Jews left; their privileges lapsed in 1732. Although the synagogue was completely rebuilt in 1767 only 20 families remained by then. The last rabbi died in 1813, and the synagogue was dismantled in 1895.

**GLUECKSTADT, ISAAC HARTVIG** (1839–1910), Danish financier. Glueckstadt, who was born in Fredericia, Denmark, started his business career as a private banker in Christiania (Oslo) in 1865; five years later he was made manager of the
Norwegian Credit Bank. In 1872 he was recalled to Copenhagen as director of the new Landmandsbanken, which developed into the largest bank in Scandinavia under his farsighted management. From the outset, Glueckstadt recognized the importance of international connections and did not confine himself to banking alone. Many important Danish commercial enterprises, among them the Copenhagen Free Port and the East Asiatic Company, owed a great deal to his initiative and support. For many years he was chairman of the board of delegates of the Jewish Community

[Julius Margolinsky]

GLUSK (Glosk), ABRAHAM ABBA (second half of 18th century), Haskalah pioneer. According to one opinion, he was born in Glusk (Lublin province), and to another, in the town bearing the same name in the province of Minsk. He is also identified with the “Glusker Maggid” whose works were burned for heresy in the courtyard of the Vilna synagogue. Glusk, who acquired a wide knowledge of philosophy and secular learning, left his native land in search of free ideas. After a long period spent wandering from city to city, he reached Berlin where he met Moses Mendelssohn. However he was persecuted by local Orthodox circles and the head of the Berlin community asked the authorities to expel him from the city on the pretext that he had no right of residence. Mendelssohn, however, who considered Glusk a profound thinker, enabled him to remain. Glusk later traveled in Germany, Holland, France, and England before returning home. His subsequent fate is unknown. The German poet A. von Chamisso wrote a poem dedicated to Glusk (1832).

GLUSKA, ZEKHARYAH (1895–1960), leader of the Yemenite community in Erez Israel. Born in Nadir, Yemen, Gluska moved to Erez Israel with his parents who settled in the Neveh Zedek quarter in Jaffa in 1909. In 1911 he joined the Ha-Po‘el ha-Za‘ir Party and became one of the first members of the Histadrut. In 1921 he helped form the Ze‘irei ha-Mizrah movement, which was founded to integrate Yemenite youth in Erez Israel, and he acted as its representative in the first Asefat ha-Nivharim. Gluska was a founder of Hitahdut ha-Teimanim (“Union of Yemenites”) in Erez Israel and its chairman from 1925. He became its representative in the central yishuv bodies and at Zionist Congresses. In 1949 he was elected on behalf of the Yemenite list to the First Knesset.

[Benjamin Jaffe]

GLUSKIN, ZE’EV (1859–1949), Zionist. Born in Slutsk, Belarus, Gluskin joined the Ḥovevei Zion in Warsaw in the 1880s, became a member of *Benei Moshe, and was among the founders of the Menuhah ve-Nahalah society, which established the settlement of Rehovot. He was also one of the founders of the Ahu‘asaf publishing house, which introduced innovations in the publishing and distribution of Hebrew books. He participated in the establishment of the Carmel society (1896), which marketed and exported the wine produced in the settlements, and was its first director. In 1901 Gluskin took part in a Hovevei Zion deputation to Baron Edmond de Rothschild to persuade him to continue his settlement activities in Erez Israel. In 1904 he was among the founders of the Geulah Company, which was established for the private purchase of land in Erez Israel.

Gluskin went to Erez Israel late in 1905 and took over the directorship of Agudat ha-Koremim (“Vintners Association”) and of its wine cellars in Rishon le-Zion and Zikhron Ya‘akov. When World War I broke out, he went to Alexandria and helped organize aid both for the refugees from Erez Israel and for Jews who had remained there. He supported the volunteer movement for the establishment of a Jewish regiment in the British Army from among the Erez Israel refugees. He was director of the Geulah Company from 1925–46. He published his memoirs (1946), which contain valuable material on the history of the Jews and of Zionism in Russia and Erez Israel.

[Yehuda Slutsky]

GLUSK (Yid. Hlus), town in Polesie district, Belarus. Jews settled in Glusk in the third quarter of the 17th century. Jehiel b. Solomon *Heilprin was rabbi there and compiled the regulations of its ḳeḥra kaddisha*. In 1717 the Jews paid a 600 zloty poll tax. In 1819 they numbered 1,405, in 1847 – 3,148, in 1897 – 3,801 (71% of the total population), and in 1926 – 2,581 (58.3%). Glusk had no industry. Some of the Jews produced a special kind of tea (called Glusk tea) but most were gardeners, carpenters, horse merchants, and small traders. In the mid-1920s 40 families earned their livelihoods from farming, the others were artisans, and some still engaged in trade. A Yiddish school and Jewish council were in operation. In 1939 the Jews numbered 1,935 (38% of the total population). The Germans occupied Glusk on July 3, 1941. In December 1941 and January 1942 the Jews were murdered near Khvastovichi. Some who escaped to the forest fought in partisan units.

[Shmuel Spector (2nd ed.)]

GNAT, tiny insect. Included among the plagues of Egypt is arav, identified by one tanna as “a swarm of gnats” and “hornets” and by others as “a mixture of animals” (Ex. R. 11:3). In the Septuagint arav is rendered by the Greek word for “flies.” In Egypt there are many species of gnats or mosquitoes, in particular *Culex* and the *Anopheles*, a conveyor of malaria.
Their eggs are laid in bodies of water and the gnat develops by stages – larval, pupal, imaginal. Despite the inconvenience caused by the gnat, the rabbis stated that it, too, is important in the complex of ecological relations between creatures (Shab. 77b). They also declared that even “if all mortals were to gather together to create one gnat,” they would fail to do so (Sif. Deut. 32).

[1] **Jehuda Feliks**

**GNESIN, MIKHAIL FABIANOVICH** (1883–1957), Russian composer, musicologist, and teacher. Born in Rostov-on-Don, he studied with Lyadov and Rimsky-Korsakov at the St. Petersburg Conservatory. From 1910 to 1923 he taught at Rostov, Yekaterinodar, and Petrograd, and undertook study trips to Greece, Italy, France, Germany, and Palestine (in 1914 and 1921) and worked in Meyerhold's St. Petersburg studio. He also made a survey of music education in the Jewish schools on behalf of the *Odessa Committee. During 1921 he stayed in Palestine, and then went to Germany where he was one of the founders of the Jibneh music publishing house and reorganized the activities of the *Society of Jewish Folk Music of which he had been one of the founders in 1908.

From 1923 to 1935 he was professor of composition at the Moscow Conservatory, where he also served as head of the pedagogical faculty and of the “studios for the development of the national music of the Soviet peoples.” From 1935 to 1945 he taught composition at the Leningrad Conservatory, and from 1945 to 1951 headed the composition department at the music school, which bore his name and that of his sister who was also a musician. Gnessin's pedagogical activity included the creation of the basic plan for teaching music composition, which is still followed in the Soviet Union. In addition to his memoirs, he published a number of books on composition, aesthetics, Jewish music, and a study of Rimsky-Korsakov. Among his students were Khachaturian and Khrennikov. As a composer, he pioneered the new Russian symphonic style, and the use of material from the various peoples of the U.S.S.R. Of the 68 items in the list of his works, about a quarter bear “Jewish” titles. The sources for these were, as he himself declared, threefold: tunes of his maternal grandfather, the Vilna badhun and singer Shayke Fayfer (Isaiah Fleysinger); the synagogue tradition which he received from his first teacher, Eliezer *Gerovich; and the melodies he had collected in Palestine. The publication of his Jewish compositions ended in 1929 (see list, up to this date, in Sendrey, *Music*). Of his later works, the most noteworthy are *Song of the Old Homeland* for orchestra, op. 30; *Wolochs* for string quartet and clarinet, op. 56, in two versions (1938, 1951); *Pastoral Elegy* for piano trio, op. 57 (1940); the opera *Abraham's Youth*, to his own libretto, op. 36 (1921–23); and the suite *A Jewish Orchestra at the Mayor's Ball*, from his music to *Gogol's Revisor* (“The Government Inspector”). His opera *Bar Kokhba*, to a libretto by Samuel Halkin, remained unfinished.

[Haim Bar-Dayan]

**GNESIN, MENAHEM** (1882–1952), Israeli actor and pioneer of the Hebrew theater. Menahem Gnessin, a brother of Uri Nissan *Gnessin, went to Palestine from the Ukraine in 1903 and for some years was a laborer and teacher in the villages. In 1907 he founded the Amateur Dramatic Arts Company for the presentation of plays in Hebrew. He staged *Chirikov's The Jews, Gutzkow's Uriel Acosta*, and other plays in Jaffa, Jerusalem, and the Judean settlements. Returning to Moscow in 1912, Gnessin and N. *Zemach established a Hebrew group which formed the nucleus of *Habimah*. By 1923 Gnessin was in Berlin, organizing the Te'atron Erez Yisraeli, which performed a one-act play, *Belshazzar* by H. Roche, with great success. In 1924 he took the group to Palestine and worked as an actor, teacher, and director. When Habimah reached Palestine in 1928, he joined the company. Gnessin wrote articles on the theater and published his memoirs *Darki im ha-Te'atron ha-Yisri*, 1905–26 (”My Career in the Hebrew Theater,” 1946).

[Gertho K. Gershony]

**GNESIN, URI NISSAN** (1881–1913), Hebrew author who was the first to introduce the psychologically oriented prose style into Hebrew literature. Born in Starodub, Ukraine, Gnessin spent his childhood and youth in Pochev, a small town in the province of Orel. His father was head of a yeshivah and Gnessin studied in a heder, later at his father's yeshivah where J.H. *Brenner was also a student. Besides his religious studies, Gnessin was interested in secular subjects, studying classical and modern languages and literatures. As a boy, he wrote poems and at 15 began publishing, together with Brenner, a literary monthly and a literary weekly for a small circle of friends and readers. These served as a forum for many of his early works. Nahum Sokolow invited the young poet, then 18, to join the editorial staff of *Ha-Zefirah in Warsaw; this marks the beginning of a productive period in his literary career. Gnessin published poems, literary criticism, stories, and translations in *Ha-Zefirah. A small collection of short stories and sketches, Zilelei ha-Ḥayyim (“The Shadows of Life”), appeared in 1904.

At this time Gnessin began wandering from city to city, unable or unwilling to strike permanent roots. After a year's stay in Warsaw he moved to Yekaterinoslav, then to Vilna, where he worked for a time for the periodical *Ha-Zeman*, and then went to Kiev. Gnessin tried to study abroad but was not accepted by various schools since he did not have a formal ed-
ucation. Financial distress, hunger, and an inner restlessness beset Gnessin during his stay in Kiev; yet it was the time of his greatest prolificacy. However, plans to found a Hebrew literary organ and a publishing house did not materialize. In 1907 Gnessin left Kiev and at Brenner’s invitation went to London (via Warsaw and Berlin, where he stayed for a short time) to co-edit "Ha-Me’orer with Brenner. The periodical failed and there were violent disagreements between him and Brenner. London proved to be a severe disillusionment in other ways—the spiritual life of London Jewry was disappointing and his later fatal heart disease, probably contracted in Kiev, began to affect him. In the autumn he immigrated to Ereẓ Israel but was unable to adjust. The country was a bitter experience for the young writer; his painful impressions found expression only in his letters however. He ascribes his disappointment at times to himself, at times to his environment which he saw as “Jews who trade in their Judaism.” In the summer of 1908 Gnessin returned to Russia. He died in Warsaw four years later.

Gnessin’s work, one of the major landmarks in Hebrew prose, is characterized by modern literary techniques and devices which he introduced into Hebrew literature. The interior monologue through which the reader receives an unmediated impression of the hero’s continuous flow of ideas, sensations, feelings, and memories as they come into his consciousness was one of the main literary vehicles used by Gnessin to convey the psychological anxieties of his characters. He was among the first Hebrew writers to probe the problems of alienation and uprootedness, particularly as they affected the Jew in the modern age. Among his works four stories of his middle period are most outstanding and their impact on Hebrew prose is felt to this day: “Haziddah” (“Aside,” 1905); “Bein atayim” (“Meanwhile,” 1906); “Be-Terem” (“Before,” 1909); and “Ezel” (“By,” 1913). His early work, Zilelei ha-Haṣiyim, fails to reveal an individualistic literary character, while later stories, like “Ba-Gannim” (“In the Gardens,” 1909) and “Ketahat” (“A Quarrel,” 1912), mark the transition to a new psychological style. Brenner, G. "Shofman, and Gnessin were among the first to cast the problems of the Jew of the age in a literary context. Gnessin poignantly describes the dilemma of the Jew whose world outlook is rooted in the values and spirit of the Jewish East European town, but who, at the same time, adopted the characteristics of a “citizen of the world” sharing the achievements and the deterioration of 20th-century culture. Gnessin’s treatment of the theme is close to that of Berdyczewski.

The four stories are autobiographical and Gnessin, under the guise of different names, is the protagonist. The plots, variations of the same theme, are about a man who leaves home, travels to distant lands, and becomes a “citizen of the world” only to find himself uprooted. A cosmopolitan, he is now completely alienated and lonely. After traveling far and wide, he returns home only to be faced by the awful realization that he has become an alien in his own homeland. At times he may only go as far as the next town, a center somewhat larger than his own hamlet, but the experience uproots and alienates him. The past becomes irretrievable, the gap unbridgeable, and he is cast in a strange, complex, and confusing world. The theme, apparently peculiar to contemporaneous Jewish intellectuals who had rejected religious tradition, merges in Gnessin with the more universal theme of perplexity, cultural strangeness, loss of God, and loss of roots. Out of his anguish, the lost son, wishing to comfort himself, cries: “Father, there is a God in heaven, isn’t there, and He is so good!” (“Be-Terem”). The very names of the stories imply the protagonist’s detachment from time and place.

Scandinavian literature and the stories of Chekhov, his favorite author, had a marked influence on Gnessin. His sense of time as a factor in the life of man and of society resembles that of Marcel Proust. Through the associative technique, Gnessin focused the past and future in the present, rendering the present less real than the past. He broke with the realistic trend then current in the Hebrew short story and became a “modern” author in the spirit of developments in world literature after World War I.

Gnessin’s style involves a flow of lyrical patterns which approaches poetic rhythm. His lyricism, however, is neither ambiguous nor vague and his description of details, objects, characters, and scenery is vivid and precise. One of Gnessin’s stylistic devices is to reflect the inner world of his characters in all that surrounds them. This demands a descriptive realism and an avoidance of rhetoric. His language, despite certain Russianisms, captured the rhythms of the spoken tongue. His critical essays, which he signed U. Esthersohn, show a close affinity to the 19th-century school of symbolism. Among the works he translated are prose poems by Baudeelaire and works by Chekhov, Heinrich Heine, S. Obstfelder, M. Spектор, and J. Wassermann. An edition of his collected works (Kitvei) appeared in 1982. The story “Sideways” appeared in A. Lelchuk and G. Shaked (eds.), Eight Great Hebrew Novels (1983); “Up-roar” is included in G. Abramson (ed.), The Oxford Book of Hebrew Short Stories (1996). For further translations into English, see Goell, Bibliography, 2102.

GNIEZNO (Ger. Gnesen), city in Poland; first capital of Poland and center of the Catholic Church in that country until the beginning of the 14th century. Jews are mentioned there in 1267. Various charters of privilege granted to individual Jews or the community giving them rights of residence, and permission to organize defense and engage in commerce (1497, 1499, 1519, 1567, 1571, 1637, 1661) were destroyed in fires that periodically devastated the town. From the 13th to the middle of the 17th centuries, Gniezno Jewry remained one of the smaller communities in the kingdom, numbering 100 people in 30 houses at the end of the period. A representative from Gniezno participated in the provincial (galil) council of the communities of Great Poland in 1519. Several such councils were convened at Gniezno (in 1580, 1632, 1635, 1640, 1642). Local and visiting merchants and their agents dealt in wool and rags and collected tolls at the biannual fairs, and even attempted to carry on business outside the Jewish quarter (1643). The synagogue, built in 1582, was modeled after the one in Poznan. Eliezer *Ashkenazi was among the rabbis of Gniezno. The events surrounding the Swedish War (1655–59), as well as attacks led by the Jesuits and by the troops of Stephan *Czarniecki, ended with the destruction of the community. In 1661 it reorganized outside the city walls. A new synagogue was built in 1680. In the first half of the 18th century the community suffered during the Northern War, and there was an outbreak of fire as well as cases of *blood libel (1722, 1738). There were 60 Jews living in Gniezno in 1744. The community increased from the second half of the 18th century, particularly after Gniezno came under Prussian rule with the second partition of Poland in 1793, growing from 251 in the beginning of the period to 1,783 in the middle of the 19th century. It had cultural and welfare institutions, craftsmen’s associations, a school, and a synagogue. The talmudic scholar Moses Samuel *Zuckermann officiated as rabbi in Gniezno from 1864 to 1869. Subsequently many Jews emigrated to the German states and from the second half of the 19th century to America, especially after Gniezno was incorporated within independent Poland in 1919. The community numbered 750 in 1915 and approximately 150 in the 1930s.

[Lea Goldberg]

Holocaust Period
Before World War II nearly 150 Jews lived in Gniezno. During the Nazi occupation, the town belonged to Warthegau. During the first four months of the occupation, the town was emptied of all its Jewish inhabitants. A certain number escaped before and after the Germans entered, but the majority were deported on orders given on Nov. 12, 1939, by Wilhelm Koppe, the Higher SS and Police Leader of Warthegau. The orders called for the deportation of the entire Jewish population of Gniezno by the end of February 1940 to the territory of the Generalgouvernement. On Dec. 13, 1939, 65 Jews from Gniezno, probably the last of the community, arrived in Piotrkow Trybunalski in the Radom district. After the removal of the Jews from Gniezno, the Germans blew up the synagogue and razed the old Jewish cemetery, using it as the site of a warehouse. No Jews resettled in the town after World War II.

[Danuta Dombrowska]

GNOSTICISM, designates the beliefs held by a number of nonorthodox Christian sects flourishing in the first to second centuries C.E., which developed mystical systems of philosophy based on the gnosis (Gr. “knowledge”) of God. These systems were syncretic, i.e., mixtures of pagan magic and beliefs from the Babylonian and Greek world as well as from the Jewish. Judaism made an important contribution to the conceptions and the developments of gnosticism. One way in which Jewish motifs were infused into gnosticism was through the Bible, which was holy to Christianity and likewise through other Jewish literature – in Hebrew, Aramaic, and Greek – which was used by the Christians. The chapters on the Creation in Genesis were also of special influence. Special importance was also attributed to the account of the first man and his sin, which is interpreted by gnosticism as the downfall of the divine principle into the material world. From their negative attitude toward the world of natural existence and moral law which is meant to regulate man’s behavior in this world, the gnostics came to a view of the God of Israel, the creator of the universe, as the god of evil, or an inferior god, and they strongly rejected his Law and its commandments. They interpreted the stories in the Bible in a way opposite to their meaning and intention: thus, for example, the original serpent is often seen by them as the bearer of the true “knowledge,” of which God intends to deprive man; and Cain becomes a positive figure persecuted by God, etc.

Jewish influence on gnosticism is also evident in the use of names, concepts, and descriptions taken from the Hebrew or Aramaic, e.g., God, the creator of the universe, is called in some gnostic systems Yaldabaoth (Yalda Baha), according to some “the Child of Chaos”); other mythological or symbolic figures in gnosticism are Barbelo (Be-arba Eloha, “in four gods,” i.e., the father, the son, the female principle in the divine, and the first man), Edem (Eden), Akhamot (hokhmot, “wisdom,” according to Prov. 9:1); the name of the gnostic Naassene sect is derived from nahush (“serpent”); the mysterious words “Zav la-zav zav la-zav kav la-kav kav la-kav zeeir shan...
ze‘ir sham” (Isa. 28:10, 13) serve as the mystical designation of the three gnostic Sefirot.

In addition to these contributions unwittingly and unintentionally made by Judaism to gnosticism, there existed in Judaism itself, at the end of the Second Temple period, emotional and intellectual attitudes which were close to the spiritual world of gnosticism. It is possible that these had a more direct influence on the emergence of gnosticism or, at least, that they served as seeds for a few of its ideas. There are indications of this in the literature of the Dead Sea Sect. Common to both gnosticism and the Dead Sea Scrolls is the view of esoteric “knowledge” as a redemptive factor, which enables a group of select people to bridge the abyss separating the human from the divine, and to rise “from a spirit perverse to an understanding of you and to stand in one company before you with the everlasting host and the spirits of knowledge, to be renewed with all things that are and with those versed in song together” (Thanksgiving Psalms, Q1H 11:13–14), and to be those “who heard the glorious voice and saw the holy angels, men whose ears are opened and hear deep things” (War Scroll, Q1M 10:11).

The literature of the sect also reflects a dualistic outlook on the world conceiving a schism between the principle of good (the light) and the principle of evil (the darkness) each with its own hosts of angels and spirits. This view, however, in contrast to its expression in gnosticism, does not step beyond the framework of Jewish belief in divine unity. Even the feeling of disgust and revulsion with man and the impurity of his material basis (“the mystery of the flesh is iniquity”); Manual of Discipline, 105 11:9) does not culminate in the notion of distinction between matter per se and the divine spiritual world; “For the world, albeit now and until the time of the final judgment it go sullying itself in the ways of wickedness owing to the domination of perversity” (ibid., 4:19), but God “created man to rule the world” (ibid., 3:17–18). Thus, despite a certain spiritual kinship between the writings of the sect and the world of gnosticism, the former are not records of a “gnostic Judaism,” but rather reflect certain general attitudes of mind shared at that time by others including Jews, which could be the point of departure for truly gnostic speculations.

There is no explicit mention in talmudic literature of gnosticism and its history. It is possible, however, that the appellation “*Minim” refers in some instances to gnostics.

For the influence of gnosticism on the history of Jewish mysticism, see “Kabbalah.

[David Flusser]

GOAT. The classification of the domesticated goat bred in Israel is disputed among scholars, some maintaining that it originates from the wild goat *Capra hircus, hence the name of the domesticated goat as *Capra hircus mammbrica, others, that it originates from the wild *Capra priscas, the name of the domesticated goat therefore being *Capra priscas mammbrica.

The wild goat is apparently the akko mentioned as one of the permitted wild animals (Deut. 14:5). The goat of Ereẓ Israel has recurved horns, those of the he-goat being branched. Its bones have been found in excavations at Megiddo and a drawing of it in excavations at Gezer (dating from about 3,000 years ago). The goat has black hair (cf. Song 4:1), but a few have black hair with white or brown spots (cf. Gen. 30:32). This black hair may have symbolized sin, and for this reason it was chosen as a sin offering and for the scapegoat (see “Azazel; Lev. 16:8 ff.). The expression sa’ir (lit. “hairy”) for a he-goat (ibid., 4:24) and sē’irah for a she-goat (4:28) is connected with their long hair. The curtains of the Tabernacle were made of goat’s hair, as were the black tents of the Bedouin—“the tents of Kedar” (Song 1:5). The she-goat is called ez, but izizim is also a general expression for the species, the kid being referred to as gedī izizim (Gen. 38:17) or seh izizim (Deut. 14:4); he-goats are called attudim (Num. 7:17) or teyashim (Gen. 30:35). The he-goat usually leads the flock and hence apparently the reference to it as “stately in going” (Prov. 30:29, 31). Another name for the he-goat is zafir (Dan. 8:3).

GOA, city and district on the W. coast of India, about 250 miles (400 km.) S. of Bombay, a Portuguese province from 1510 until 1961. The first Jew to be mentioned in Goa was Gaspar da Gama who was kidnapped by Vasco da Gama in 1498 and baptized. From the early decades of the 16th century many New Christians from Portugal came to Goa. The influx soon aroused the opposition of the Portuguese and ecclesiastical authorities, who complained bitterly about the New Christians’ influence in economic affairs, their monopolistic practices, and their secret adherence to Judaism. As a result of these complaints the Portuguese Inquisition was established in Goa in 1560, and lasted, apart from a temporary suspension from 1774 to 1778, for almost 250 years. Even before the Inquisition was formally established, a physician named Jeronimo Diaz had been burned in 1543 for maintaining heretical opinions. Many prominent New Christians became victims of the Inquisition in Goa. The great scientist Garcia de Orta was not affected during his lifetime, but 12 years after his death, in 1580, his remains were exhumed, burned, and the ashes thrown into the ocean. In the latter part of the 16th century Coje Abrahão served as interpreter to the Portuguese viceroys, despite ecclesiastical objections. Eighteenth-century travelers refer to the existence of a synagogue and organized Jewish communal life, but this is doubtful.

[Walter Joseph Fischel]
The importance of the goat lay in its flesh, that of the kid being particularly delicious (Gen. 27:9; 38:20; Judg. 13:15). Ancient peoples apparently boiled a kid in milk on idolatrous fertility festivals, the prohibition of seeching “a kid in its mother’s milk” (Ex. 23:19; 34:26; Deut. 14:21) being connected with this. From its threefold repetition, the sages deduced a general prohibition against eating meat with milk, as well as its concomitant laws (Kid. 57b). Goat’s milk was widely used (cf. Prov. 27:27), being also regarded as a remedy for chest trouble. A baraita, however, tells of a pious man who reared a goat in his house for this purpose, but because he transgressed the prohibition of the sages against the breeding of goats, his colleagues rebuked him, calling the goat an “armed robber” (bk 80a), the goat being regarded as a robber since it jumps over fences and damages plants. A Greek inscription prohibiting the breeding of goats has been uncovered at Heracleas. According to the Mishnah (bk 7:7) “small cattle (goats and sheep) are not to be bred in Erez Israel, but may be bred in Syria or in the deserts of Erez Israel.” After the destruction of the country’s agriculture, especially following the Muslim conquest, goats were imported to Erez Israel, and they increased in number. Some maintain that they were responsible for the erosion of the land by ruining the terraces, destroying the natural vegetation, and creating fissures on the slopes. The eroded soil was deposited in the valleys, blocking the flow of rivers to the sea and forming marshes such as those of the Valley of Jezreel, which were drained by Jews only in the present century. Even now goats, still kept in large numbers by the Bedouin, cause damage to Israel’s natural woods by chewing the young shoots, thereby preventing them from growing to full height.

In the 1940s, the Jewish settlers introduced into the country the white European goat, distinguished for its yield of milk. In the Diaspora, particularly in Eastern Europe, the Jews in the towns and villages raised goats so as to have an independent supply of milk. In popular Jewish folklore the goat is a well-known motif which finds expression in jokes (“the rabbi and the goat”), in folk songs (“the child and the goat,” see Ha-Zome’ah), as also in poems and paintings (e.g. those of *Chagall).

[Lehuda Feliks]

“GOBINEAU, JOSEPH ARTHUR, COMTE DE (1816–1882), French diplomat and essayist. Of his abundant literary efforts, only his Essai sur l’inégalité des races humaines (1853–55) is now remembered. In this essay Gobineau simplified to the extreme current opinions on the “racial factor” in history and the hierarchy of races, white, yellow, and black. According to him, only the white or “Aryan” race, the creator of civilization, possessed the supreme human virtues, such as honor, love of freedom, etc., qualities which could be perpetuated only if the race remained pure. Though he held the Jews in no particular aversion, Gobineau believed that the Latin and Semitic peoples had degenerated in the course of history through various racial intermixtures. Only the Germans had preserved their “Aryan purity,” but the evolution of the modern world condemned them too to crossbreeding and degeneracy. Western civilization must be resigned to its fate. The success of the Essai was posthumous and, predictably, assured by Gobineau’s German admirers. Chief of these was Richard Wagner, who shared his cultural pessimism, and the literary society of Bayreuth, followed by a group of authors and anthropologists who founded the Gobineau-Vereinigung in 1894. Gobineau’s influence on recent history, and especially on antisemitic ideology, was due less to his dilettante philosophy of history than to the construction given it by German and other fanatics.

**GOD.**

**IN THE BIBLE**

The Bible is not a single book, but a collection of volumes composed by different authors living in various countries over a period of more than a millennium. In these circumstances, divergencies of emphasis (cf. Kings with Chronicles), outlook (cf. Jonah with Nahum), and even of fact (cf. Gen. 26:34 with 36:2–3) are to be expected. These factors have also affected the biblical presentation of the concept of God. There are passages in which Israel’s monotheism is portrayed in unalloyed purity and incomparable beauty (I Kings 19:12; Isa. 40:18), and there are other verses in which folkloristic echoes and mythological reflexes, though transmuted and refined, appear to obscure the true character of the Hebrew concept of the divine (Gen. 2 and 3). Notwithstanding these discrepancies the Bible is essentially a unity; its theology is sui generis and must be studied as a whole to be seen in true perspective. This total view of biblical doctrine does not seek to blur differences and to harmonize the disparate; rather it resolves the heterogeneous elements into a unitary canonical ideology – the doctrine of the final editors of the Bible. It blends the thoughts, beliefs, and intuitions of many generations into a single spiritual structure – the faith of Israel – at the heart of which lies the biblical idea of God. It is this complete and ultimate scriptural conception of the Deity that will be described and analyzed in this section.

**The One, Incomparable God**

God is the hero of the Bible. Everything that is narrated, enjoined, or foretold in biblical literature is related to Him. Yet nowhere does the Bible offer any proof of the Deity’s existence, or command belief in Him. The reason may be twofold: Hebrew thought is intuitive rather than speculative and
systematic, and, furthermore, there were no atheists in antiquity. When the psalmist observed: “The fool hath said in his heart “There is no God”” (Ps. 14:1), he was referring not to disbelief in God’s existence, but to the denial of His moral governance. That a divine being or beings existed was universally accepted. There were those, it is true, who did not know YHWH (Ex. 5:2), but all acknowledged the reality of the Godhead. Completely new, however, was Israel’s idea of God. Hence this idea is expounded in numerous, though not necessarily related, biblical passages, and, facet by facet, a cosmic, awe-inspiring spiritual portrait of infinite magnitude is built up. Paganism is challenged in all its aspects. God is One; there is no other (Deut. 6:4; Isa. 45:21; 46:9). Polytheism is rejected unequivocally and absolutely (Ex. 20:3–5). There is no pantheon; even the “dualism of Ormuzd and Ahriman (of the Zoroastrian religion) is excluded (Isa. 45:21); apostheosis is condemned (Ezek. 28:2ff.). Syncretism, as distinct from identification (Gen. 14:18–22), which plays a historical as well as a theological role in paganism, is necessarily ruled out (Num. 25:2–3; Judg. 18). Verses like Exodus 15:11 – “Who is like Thee, O Lord, among the gods?” – do not lend support to polytheism, but expose the unreality and futility of the pagan deities. The thought is: Beside the true God, how can these idol-imposters claim divinity? The term “sons of gods” in Psalms 29:1 and 89:7 refers to angels, the servants, and worshipers of the Lord; there is no thought of polytheism (see E.G. Briggs, The Book of Psalms (ICC), 1 (1906), 252ff.; 2 (1907), 253ff.). The one God is also unique in all His attributes. The prophet asks: “To whom then will ye liken God? Or what likeness will ye compare unto Him?” (Isa. 40:18). Though the question is rhetorical, the Bible in a given sense provides a series of answers, scattered over the entire range of its teaching, which elaborate in depth the incomparability of God. He has no likeness; no image can be made of Him (Ex. 20:4; Deut. 4:35). He is not even to be conceived as spirit; the spirit of God referred to in the Bible alludes to His energy (Isa. 40:13; Zech. 4:6). In Isaiah 31:3, “spirits” parallls “a god” (el, a created force), not the God, who is called in the verse YHWH. Idolatry, though it lingered on for centuries, was doomed to extinction by this new conception of the Godhead. It is true that the Torah itself ordained that images like the cherubim should be set up in the Holy of Holies. They did not, however, represent the Deity but His throne (cf. Ps. 68:5[4]); its occupant no human eye could see. Yet the invisible God is not a philosophical abstraction; He manifests His presence. His theophanies are accompanied by thunder, earthquake, and lightning (Ex. 19:18; 20:15[18]; Hab. 3:4ff.). These fearful natural phenomena tell of His strength; He is the omnipotent God (Job 42:2). None can resist Him (41:2); hence He is the supreme warrior (Ps. 24:8). God’s greatness, however, lies not primarily in His power. He is omniscient; wisdom is His alone (Job 28:23ff.). He knows no darkness; light ever dwells with Him (Dan. 2:22); and it is He, and He only, who envisions and reveals the future (Isa. 43:9). He is the source of human understanding (Ps. 36:10[9]), and it is He who endows man with his skills (Ex. 28:3; 1 Kings 3:12). The classical Prometheus and the Canaanite Kōthar-and-Hasis are but figments of man’s imagination. The pagan pride of wisdom is sternly rebuked; it is deceptive (Ezek. 28:3ff.); but God’s wisdom is infinite and unsearchable (Isa. 40:28). He is also the omnipresent God (Ps. 139:7–12), but not as nomen, mana, or orenda. Pantheism is likewise negated. He transcends the world of nature, for it is He who brought the world into being, established its laws, and gave it its order (Jer. 33:25). He is outside of time as well as space; He is eternal. Everything must perish; He alone preceded the universe and will outlive it (Isa. 40:6–8; 44:6; Ps. 90:2). The ever-present God is also immutable; in a world of flux He alone does not change (Isa. 41:4; Mal. 3:6). He is the rock of all existence (11 Sam. 22:32).

The Divine Creator

God’s power and wisdom find their ultimate expression in the work of creation. The miracles serve to highlight the divine omnipotence; but the supreme miracle is the universe itself (Ps. 8:2, 4 [1, 3]). There is no theogony, but there is a cosmogony, designed and executed by the divine fiat (Gen. 1). The opening verses of the Bible do not conclusively point to creation ex nihilo. The primordial condition of chaos (tohu and bohu) mentioned in Genesis 1:2 could conceivably represent the materia prima out of which the world was fashioned; but Job 26:7 appears to express poetically the belief in a world created out of the void (see Y. Kaufmann, Religion, 68), and both prophets and psalmists seem to substantiate this doctrine (Isa. 42:5; 45:7–9; Jer. 10:12; Ps. 33:6–9; 102:26; 212:2). *Maimonides, it is true, did not consider that the Bible provided incontrovertible proof of creation ex nihilo (Guide, 2:25). The real criterion, however, is the overall climate of biblical thought, which would regard the existence of uncreated matter as a grave diminution of the divinity of the Godhead. God is the sole creator (Isa. 44:24). The celestial beings (“sons of God”) referred to in Job 38:7, and the angels who, according to rabbinic aggadah and some modern exegeses, are addressed in Genesis 1:26 (cf. 3:22) were themselves created forms and not co-architects or co-builders of the cosmos. Angels are portrayed in the Bible as constituting the heavenly court, and as taking part in celestial consultations (1 Kings 22:19ff.; Job 1:6ff.; 2:1ff.). These heavenly creatures act as God’s messengers (the Hebrew mal’akh and the Greek ἅγγελος, from which the word “angel” is derived, both mean “messengers”) or agents. They perform various tasks (cf. Satan, “the Accuser”), but except in the later books of the Bible they are not individualized and bear no names (see *Angels and Angelology). Nor are they God’s only messengers; natural phenomena, like the wind (Ps. 104:4), or man himself, may act in that capacity (Num. 20:16). Some scholars think that since the Bible concentrated all divine powers in the one God, the old pagan deities, which represented various forces of nature, were demoted in Israel’s religion to the position of angels. The term shedim (Deut. 32:17; Ps. 106:37), on the other hand, applied to the gods of the nations, does not, according to Y. Kaufmann, denote demons, but rather “no-gods,” devoid
of both divine and demonic powers. The fantastic proliferation of the angel population found in pseudepigraphical literature is still unknown in the Bible. It is fundamental, however, to biblical as well as post-biblical Jewish angelology that these celestial beings are God’s creatures and servants. They fulfill the divine will and do not oppose it. The pagan notion of demonic forces that wage war against the deities is wholly alien and repugnant to biblical theology. Even Satan is no more than the heavenly prosecutor, serving the divine purpose. The cosmos is thus the work of God above, and all nature declares His glory (Ps. 19:2, 13ff.). All things belong to Him and He is the Lord of all (1 Chron. 29:11–12). This creation theorem has a corollary of vast scientific and social significance: the universe, in all its measureless diversity, remains a homogeneous whole. Nature’s processes are the same throughout the world, and underlying them is “One Power, which is of no beginning and no end; which has existed before all things were formed, and will remain in its integrity when all is gone – the Source and Origin of all, in Itself beyond any conception or image that man can form and set up before his eye or mind” (Haffkine). There is no cosmic strife between antagonistic forces, between darkness and light, between good and evil; and, by the same token, mankind constitutes a single brotherhood. The ideal is not that of the ant heap. Differentiation is an essential element of the Creator’s design; hence the Tower of Babel is necessarily doomed to destruction. Although uniformity is rejected, the family unity of mankind, despite racial, cultural, and pigmented differences, is clearly stressed in its origin (Adam is the human father of all men) and in its ultimate destiny at the end of days (Isa. 2:2–4). The course of creation is depicted in the opening chapter of the Bible as a graduated unfolding of the universe, and more particularly of the earth, from the lowest levels of life to man, the peak of the creative process. God, according to this account, completed the work in six days (that “days” here means an undefined period may be inferred from Gen. 1:14, where time divisions are mentioned for the first time; cf. also N.H. Tur-Sinai, in EM, 3 (1958), 593). The biblical accounting of the days, however, is not intended to provide the reader with a science or history textbook but to describe the ways of God. Running like a golden thread through all the variegated contents of the Bible is the one unchanging theme – God and His moral law. Of far greater significance than the duration of creation is the fact that it was crowned by the Sabbath (Gen. 2:1–3), bringing rest and refreshment to the toiling world. The concept of the creative pause, sanctified by the divine example, is one of the greatest spiritual and social contributions to civilization made by the religion of Israel. The attempts to represent the Assyro-Babylonian Sabattu or Sapattu as the forerunner of the Hebrew Sabbath are without foundation. The former was a designation for the ill-omened 15th day of the month, and the notions associated with it are as polarically different from those of the Sabbath, with its elevating thoughts of holiness and physical and spiritual renewal, as a day of mourning is from a joyous festival.

God in History

The Sabbath did not mark the retirement of the Deity from the world that He had called into being. God continued to care for His creatures (Ps. 104), and man – all men – remained the focal point of His loving interest (Ps. 8:5[4]ff.). The divine providence encompasses both nations (Deut. 32:8) and individuals (e.g., the Patriarchs). Cosmogony is followed by history, and God becomes the great architect of the world of events, even as He was of the physical universe. He directs the historical movements (ibid.), and the peoples are in His hands as clay in the hands of the potter (Jer. 18:6). He is the King of the nations (Jer. 10:7; Ps. 22:29). There is a vital difference, however, between the two spheres of divine activity. Creation encountered no antagonism. The very monsters that in pagan mythology were the mortal enemies of the gods became in the Bible creatures formed in accordance with the divine will (Gen. 1:21). Nevertheless, the stuff of history is woven of endless strands of rebellion against the Creator. Man is not an automaton; he is endowed with free will. The first human beings already disobeyed their maker; they acquired knowledge at the price of sin, which reflects the discord between the will of God and the action of man. The perfect harmony between the Creator and His human creation that finds expression in the idyll of the Garden of Eden was disrupted, and never restored. The revolt continued with Cain, the generation of the Flood, and the Tower of Babel. There is a rhythm of rebellion and retribution, of oppression and redemption, of repentance and grace, and of merit and reward (Jer. 18:7–10). Israel was the first people to write history as teleology and discovered that it had a moral base. The Bible declares that God judges the world in righteousness (Ps. 96:13); that military power does not presuppose victory (Ps. 33:16); that the Lord saves the humble (Ps. 76:10) and dwells with them (Isa. 57:15). The moral factor determines the time as well as the course of events. The Israelites will return to Canaan only when the iniquity of the Amorite is complete (Gen. 15:16); for 40 years the children of Israel wandered in the wilderness for accepting the defeatist report of the ten spies (Num. 14:34); Jehu is rewarded with a dynasty of five generations for his punitive action against the house of Ahab; and to Daniel is revealed the timetable of redemption and restoration (Dan. 9:24). It is this moral element in the direction of history that makes God both Judge and Savior. God’s punishment of the wicked and salvation of the righteous are laws of the divine governance of the world, comparable to the laws of nature: “As smoke is driven away, so drive them away; as wax melts before fire, let the wicked perish before God…” (Ps. 68:2–3; cf. M.D. Cassuto, in Tarbiz, 12 (1941), 1–27). Nature and history are related (Jer. 33:20–21, 25–26); the one God rules them both. The ultimate divine design of history, marked by universal peace, human brotherhood, and knowledge of God, will be accomplished in “the end of days” (Isa. 2:2–4; 11:6ff.), even as the cosmos was completed in conformity with the divine plan. Man’s rebellions complicate the course of history, but cannot change the design. God’s purpose shall be accomplished; there will be
new heaven and a new earth (Isa. 66:22), for ultimately man will have a new heart (Ezek. 36:26–27).

God and Israel

Within the macrocosm of world history there is the microcosm of Israel's history. It is natural that in the context of national literature the people of Israel should receive special and elaborate attention, although the gentle world, particularly in prophetic teaching, is never lost sight of. The Bible designates Israel 'am segullah, "a treasured people," which stands in a particular relationship to the one God. He recognized Israel as His own people and they acknowledge Him as their only God (Deut. 26:17–18). He redeems His people from Egyptian bondage, brings them to the promised land, and comes to their aid in periods of crisis. Israel's election is not, however, to be interpreted as a form of favoritism. For one thing, the Exodus from Egypt is paralleled by similar events in the histories of other peoples, including Israel's enemies (Amos 9:7). In truth, Israel's election implies greater responsibility, with corresponding penalties as well as rewards: "You only have I singled out of all the families of the earth; therefore I will visit upon you all your iniquities" (Amos 3:2; see "Chosen People"). The choice of the children of Israel as God's people was not due to their power or merit; it was rather a divine act of love, the fulfillment of a promise given to the Patriarchs (Deut. 7:7–8; 9:4–7). The Lord did, however, foresee that the spiritual and moral way of life pioneered by Abraham would be transmitted to his descendants as a heritage. Subsequently this concept found material expression in the covenant solemnly established between God and His people at Sinai (Ex. 24:7ff.). This covenant demanded wholehearted and constant devotion to the will of God (Deut. 18:13); it was an everlasting bond (Deut. 4:9). Thus to be a chosen people it was incumbent upon Israel to become a choosing people (as Zangwill phrased it). The rhythm of rebellion and repentance, retribution and redemption, is particularly evident in the story of Israel. Yet the fulfillment of the divine purpose is not in doubt. God's chosen people will not perish (Jer. 31:26–27). It will be restored to faithfulness, and in its redemption will bring salvation to the whole earth by leading all men to God (Jer. 3:17–18). Until that far-off day, however, Israel will remain God's witness (Isa. 44:8).

The Divine Lawgiver

The covenant that binds the children of Israel to their God is, in the ultimate analysis, the Torah in all its amplitude. God, not Moses, is the lawgiver; "Behold, I Moses say unto you" (cf. Gal. 5:2) is an inconceivable statement. It would not only be inconsistent with Moses' humility (Num. 12:3), but would completely contradict the God-given character of the Torah. However, notwithstanding its divine origin, the law is obligatory on Israel only. Even idolatry, the constant butt of prophetic irony, is not regarded as a gentle sin (Deut. 4:19). Yet the Bible assumes the existence of a universal moral code that all peoples must observe. The talmudic sages, with their genius for legal detail and codification, speak of the seven Noachian laws (Sanh. 56a). Although the Bible does not specify the ethical principles incumbent upon all mankind, it is clear from various passages that murder, robbery, cruelty, and adultery are major crimes recognized as such by all human beings (Gen. 6:12, 13; 9:5; 20:3; 39:9; Amos 3:13ff.). It would thus appear that the Bible postulates an autonomous, basic human sense of wrongdoing, unless it is supposed that a divine revelation of law was vouchsafed to the early saints, such as assumed by the apocryphal and rabbinic literatures (and perhaps by Isa. 24:5). The Torah – which properly means "instruction," not "law" – does not, in the strict sense of the term, contain a properly formulated code; nevertheless, detailed regulations appertaining to religious ritual, as well as to civil and criminal jurisprudence, form an essential part of pentateuchal teaching. The halakhic approach is reinforced by a number of the prophets. For instance, Isaiah (58:13), Jeremiah (34:8ff.), Ezekiel (40ff.), and Malachi (1:8; 2:10) lent their authority to the maintenance of various religious observances. Ezra and Nehemiah rebuilt the restored Jewish community on Torah foundations. Yet paradoxically the Bible also evinces a decidedly "anti-halakhic" trend. In Isaiah the Lord cries: "What to Me is the multitude of your sacrifices… I have had enough of burnt offerings of rams and the fat of fed beasts… who requires of you this trampling of My courts?… Your new moons and your appointed feasts My soul hates… When you spread forth your hands, I will hide My eyes from you; even though you make many prayers, I will not listen" (1:11–15). Jeremiah not only belittles the value of the sacrifices (7:22); he derides the people's faith in the Temple itself. "The temple of the Lord, the temple of the Lord, the temple of the Lord are these" (7:4). Even the Book of Psalms, though essentially devotional in character, makes an anti-ritual protest: "I do not reprove you for your sacrifices… I will accept no bull from your house… For every beast of the forest is Mine, the cattle on a thousand hills… If I were hungry, I would not tell you; for the world and all that is in it is Mine. Do I eat the flesh of bulls, or drink the blood of goats?" (50:8–13). These and similar passages represent a negative attitude towards established cultic practices. No less consonant with Torah law seems the positive prophetic summary of human duty formulated by Micah (6:8): "He has told you, O man, what is good; and what does the Lord require of you but to do justice, and to love lovingkindness, and to walk humbly with your God?" A similar note is sounded by Hosea (2:21–22 [19–20]): "I will espouse you with righteousness and with justice, with steadfast love, and with mercy. I will espouse you with faithfulness; and you shall be mindful of the Lord"; by Amos (5:14): "Seek good, and not evil, that you may live"; and by Isaiah (1:17): "Learn to do good; seek justice, correct oppression; defend the fatherless, plead for the widow." The emphasis here is on moral and spiritual conduct; the ceremonial and ritualistic aspects of religion are conspicuously left unmentioned. The paradox, however, is only one of appearance and phrasing. Inherently there is no contradiction. The ostensibly antinomian statements do not oppose the offering of sacrifices, prayer, or the observance of the Sabbath and festivals. It is not ritual but hypocrisy that
they condemn. Isaiah (1:13) expresses the thought in a single phrase: “I cannot endure iniquity and solemn assembly.” Organized religion must necessarily have cultic forms; but without inwardness and unqualified sincerity they are an affront to the Deity and fail of their purpose. The underlying motive of the precepts is to purify and elevate man (Ps. 119:29, 40, 68). The Torah (Wisdom) is a tree of life and its ways are ways of peace (Prov. 3:17, 18). Sin does not injure God (Job 7:20), but is a disaster to man (Deut. 28:15 ff.). It is heartfelt devotion that saves the mitzvah from becoming a meaningless convention and an act of hypocrisy (Isa. 29:13). The specific commandments are in a sense pointers and aids to that larger identification with God’s will that is conterminous with life as a whole: “In all your ways acknowledge Him” (Prov. 3:6). Just as the divine wonders and portents lead to a deeper understanding of the daily miracles of providence, so the precepts are guides to the whole duty of man. Biblical religion is thus seen to be an indivisible synthesis of moral and spiritual principles, on the one hand, and practical observances on the other.

The Biblical Theodicy
The moral basis of providence, reinforced by the ethic of the Torah, also raises another kind of problem. Can the biblical theodicy always be justified? The issue is raised already in the Bible itself. Abraham challenges the divine justice: “Shall not the Judge of all the earth do right?” (Gen. 18:25). Moses echoes the cry in another context: “O Lord, why hast Thou done evil to this people?” (Ex. 5:22). The prophets are no less perplexed: “Why does the way of the wicked prosper? Why do all who are treacherous thrive?” (Jer. 12:1). The psalmist speaks for the individual and the nation in many generations, when he cries: “My God, my God, why hast Thou forsaken me?” (Ps. 22:1), and the Book of Job is, in its magnificent entirety, one great heroic struggle to solve the problem of unwarranted human suffering. The biblical answer appears to point to the limitations of man’s experience and understanding. History is long, but individual life is short. Hence the human view is fragmentary; events justify themselves in the end, but the person concerned does not always live to see the denouement. In the words of the psalmist: “Though the wicked sprout like grass and all evildoers flourish, they are doomed to destruction forever” (Ps. 92:8–10; cf. 37:35–39). The brevity of man’s years is further complicated by his lack of insight. God’s purpose is beyond his comprehension: “For as the heavens are higher than the earth, so are My ways higher than your ways and My thoughts than your thoughts” (Isa. 55:9). In the final analysis, biblical theodicy calls for faith: “But the righteous shall live by his faith” (Hab. 2:4); “they who wait for the Lord shall renew their strength” (Isa. 40:31). It is not an irrational faith: – Certum est quia impossibile est (Tertullian, De Carne Christi, 3), but is necessitated by innate human intellectual limitations. In another direction the problem is even more formidable. God, the Bible states categorically, hardened Pharaoh’s heart; nevertheless the Egyptian ruler was punished for this. Indeed his obduracy was induced in order to provide the occasion for his punishment (Ex. 7:3). Here the fundamental norms of justice by any standards are flagrantly violated. The explanation in this sphere of biblical theodicy is not theological but semantic. Scripture ascribes to God phenomena and events with which he is only indirectly concerned. However, since God is the author of all natural law and the designer of history, everything that occurs is, in a deep sense, His doing. Even in human affairs the king or the government is said to “do” everything that is performed under its aegis. Thus God declares in Amos 4:7: “And I caused it to rain upon one city, and I caused it not to rain upon another city,” although the next clause uses passive and impersonal verbal forms to describe the same occurrences. The processes of nature need not be mentioned, since the laws of the universe are dictates of God. Similarly Exodus states indiscriminately that “Pharaoh hardened his heart” (8:28), that “the heart of Pharaoh was hardened” (9:7), and that “the Lord hardened the heart of Pharaoh” (9:12). In the end it is all one; what God permits He does. This interpretation does not, however, fit another area of divine conduct. Uzzah, the Bible states, was struck dead for an innocent act that was motivated by concern for the safety of “the ark of God” (11 Sam. 6:6–7). Wherein lay the iniquity? Here the reason appears to be of a different character. Even innocent actions may in certain circumstances be disastrous. Uzzah’s attempt to save the ark from falling was well meant, but it was conducive to irreverence. Man needs God’s help; God does not require the help of man (Sot. 35a; for a similar thought cf. Ps. 50:12; another explanation is given by Kimhi, 11 Sam. 6:6). In one thoughtless moment Uzzah could have reduced the sacred ark in the eyes of the people to the impotent level of the idols, which the prophets depicted with such scathing mockery. The same principle operated in the tragedy of Nadab and Abihu, and Moses explained the underlying principle in the words: “I will show Myself holy among those who are near Me” (Lev. 10:1–3).

The Limitation of the Infinite God
Is the Godhead subject to restriction? The irresistible conclusion to be drawn from biblical teaching is that such a limitation exists. Man’s freedom to resist or obey the will of God is a restriction of the Deity’s power that is totally unknown in the physical universe. It must be added, however, that this restriction is an act of divine self-limitation. In His love for man God has, so to speak, set aside an area of freedom in which man can elect to do right or wrong (Deut. 5:26; 30:17). In rabbinic language: “Everything is in the power of Heaven except the reverence of Heaven” (Ber. 33b). Man is thereby saved from being an automaton. It adds a new dimension to the relationship between God and man. Man may defect, but when, on the other hand, he chooses the path of loyalty, he does so from choice, from true love. Needless to say, without such freedom there could be neither sin nor punishment, neither merit nor reward. The divine humility, which permits human dissent, is also the grace to which the dissenter succumbs in the end. Man is a faithful rebel, who is reconciled with his Maker in
the crowning period of history. God’s self-limitation is thus seen as an extension of His creative power. Other biblical concepts that might be construed as restrictions of God’s infinitude are, on closer scrutiny, seen not to be real limitations. The association of the Lord with holy places like the Tent of Meeting, the Temple, Zion, or Sinai does not imply that He is not omnipresent. In prophetic vision Isaiah saw the divine train fill the Temple, and at the same time he heard the seraphim declare: “the whole earth is full of His glory” (6: 1–3). God’s geographical association, or His theophany at a given place, signifies consecration of the site, which thus becomes a source of inspiration to man; but no part of the universe exists at any time outside God’s presence. Sometimes God is depicted as asking man for information (Gen. 3:9; 49). On other occasions He is stated to repent His actions and to be grieved (Gen. 6:6). These are mere anthropomorphisms. The Lord knows all (Jer. 11:20; 16:17; Ps. 71:10), and unlike human beings He does not repent (Num. 23:19). Genesis 6:6 is not a contradiction of this thesis; its “human” terminology does not imply a diminution of God’s omniscience, but emphasizes the moral freedom granted to man. In addition to spiritual option, the Creator, as has been stated, gave man knowledge. This finds expression, inter alia, in magical powers, which, in as much as they are “supernatural,” constitute a challenge to God’s will. In Moses’ protracted struggle with Pharaoh, the Egyptians actually pit their magical powers against the Almighty’s miracles. In the end they acknowledge their relative weakness and admit that they cannot rival “the finger of God” (Ex. 8:15). This is to be expected, for the divine wisdom is unbounded (Job 11:7), whereas human understanding is finite. Nevertheless the use of all forms of sorcery, even by non-Israelites, is strongly denounced (Isa. 44:25); to the Israelite, witchcraft is totally forbidden (Deut. 18:10–11). The differentiation between magic and miracles had deep roots in Hebrew monotheism. To the pagan mind magical powers were independent forces to which even the gods had to have recourse. The miracle, on the other hand, is regarded in the Bible as a manifestation of God’s power and purpose. It is an attestation of the prophet’s mission (Isa. 7:11); whereas divination and sorcery are either forms of deception (Isa. 44:25) or, where magic is effective, as in the episode of the witch of Endor (1 Sam. 28:7ff.), it represents an abuse of man’s God-given knowledge. There is no independent realm of witchcraft, however; all power, natural and supernatural, emanates from the one God. To the Israelite all that happens is wrought by God.

**The Divine Personality**

Though inconceivable, God is portrayed throughout the Bible as a person. In contradistinction to the idols, who are dead, He is called the living God (11 Kings 19:4, 16). He is neither inanimate nor a philosophical abstraction; He is the living source of all life. Anthropomorphisms abound in the Bible, but it is not by these that the divine personality, so to speak, is depicted. Anthropomorphic figures were intended to help early man to grasp ideas that in philosophical terms transcended the human intellect. God’s essential personality is primarily reflected in His attributes, which motivate His acts. He is King, Judge, Father, Shepherd, Mentor, Healer, and Redeemer – to mention only a few of His aspects in His relationship to man. Different biblical teachers conceived God’s character from different historical angles. Amos was conscious of God’s justice. Hosea underscored the Lord’s love, and made forgiveness and compassion the coefficient, as it were, of divinity: “I will not execute My fierce anger… for I am God and not man” (11:9). Ezekiel stresses that God does not desire the destruction of the wicked but that through repentance they may live (18:23).

The heart of the matter is clearly stated in the Torah: “The Lord passed before him (Moses), and proclaimed, ‘The Lord, the Lord, a God merciful and gracious, slow to anger, and abounding in steadfast love and faithfulness, keeping steadfast love for thousands, forgiving iniquity and transgression and sin, but who will by no means clear the guilty…‘” (Ex. 34:6–7). Maimonides was philosophically justified in insisting that God has no attributes and that the epithets applied to Him in the Bible really represent human emotions evoked by His actions (Guide, 2:54). The Bible, however, which is little interested in the speculative approach to the Deity, but teaches practical wisdom and religion as life, without the help of catechism or formulated dogmas, prefers to endow God with personality to which it gives the warmth and beauty of positive characterization. In sum, the divine nature is composed of both justice and love. The Bible recognizes that without justice love itself becomes a form of injustice; but in itself justice is not enough. It can only serve as a foundation; the superstructure – the bridge between God and man – is grace.

**Between Man and God**

Grace is the divine end of the bridge; the human side is existential devotion. Otherwise, what M. Buber felicitously called the “I-Thou” relationship cannot come into being. Hence, underlying all the commandments is the supreme precept: “And you shall love the Lord your God with all your heart, and with all your soul, and with all your might” (Deut. 6:5). This love is unqualified: “You shall be whole-hearted with the Lord your God” (Deut. 18:13). It calls for complete surrender; but this is not conceived as a narrow, if intense, religious attitude. It is broad-based enough to allow for deep-rooted spiritual communion. Man pours out his heart in prayer to God; it is to Him that he uplifts his soul in thanksgiving and praise; and it is also to Him that he addresses his most searching questions and most incisive criticism of life and providence. Sincere criticism of God is never rebuked. God reproaches Job’s friends, who were on His side; but Job is rewarded despite his searing indictment of God’s actions. The God-man relationship flowers in an evolutionary process of education: Man is gradually weaned from his own inhumanity, from atrocities, like human sacrifice (Gen. 22:2–14), from bestial conduct, and from wrongdoing his fellowman. The goal again is love: “You shall love your neighbor as yourself” (Lev. 19:18). It is a corollary of the love of God: “I am the Lord.” Reward and retri-
bution play a role in the divine educational procedures; but their functions are limited – they are not ultimates. The eternal fires of hell are never used as a deterrent, though punishment of the wicked after death is obscurely mentioned (Isa. 66:24; Dan. 12:2), nor is paradise used as an inducement. The Torah-covenant is an unquenchable spiritual light (Prov. 6:23); but the “I-Thou” relationship does not end with the written word. God communes with man directly. The prophet hears the heavenly voice and echoes it; the psalmist knows, with unfaltering conviction, that his prayer has been answered and that salvation has been wrought before he actually experiences it. At one with God, man finds ultimate happiness: “In Thy presence is fulness of joy, in Thy right hand bliss for evermore” (Ps. 16:11).

The Hebrew term for the love that binds man to God (as well as to his fellowman) is ’āhavah; but sometimes the Bible uses another word, yir'ah (literally: “fear”), which seems to turn the “I-Thou” nexus into an “It” relationship. The psalmist declares: “The fear of the Lord is the beginning of wisdom” (111:10), and Ecclesiastes comes to the conclusion: “The end of the matter; all has been heard. Fear God, and keep His commandments, for this is the whole duty of man” (12:13). The picture is thus completely changed. The heavenly Father suddenly becomes a divine tyrant, before whom man cowers in terror, as does the unenlightened pagan before the demonic force that he seeks to appease. This might be consonant with the notion of “the jealous God” (Ex. 34:14), but it would appear to be irreconcilable with the concept of the God of hesed (“lovingkindness,” “grace”). Here, too, this is not a theological but a semantic problem. Yir'ah does not signify “fear”; it is best rendered by “reverence.” “Love” and “reverence” are not antithetic but complementary terms. They are two aspects of a single idea. ’Āhavah expresses God’s nearness; yir'ah the measureless distance between the Deity and man (see “Love, Love and Fear of God”). God spoke to Moses “mouth to mouth” (Num. 12:8); yet in his human frailty the Hebrew leader could not “see” his divine interlocutor (Ex. 33:20). The inner identity of “love” and “reverence” is reflected in the Torah’s religious summary: “And now, Israel, what does the Lord your God require of you but to revere the Lord your God, to walk in all His ways and to love Him, and to serve the Lord your God with all your heart and with all your soul” (Deut. 10:12). Talmudic Judaism (Shab. 120a) drew a distinction between hasidut (steadfast love of God) and yir'at shamayim (“reverence of Heaven”), but this represents a later development. In the Bible this bifurcation does not exist; “reverence of God” is by and large the biblical equivalent of “religion.”

Likewise there is no spiritual contradiction between the “gracious” and the “jealous” God. “Jealousy” is an anthropomorphic term used to define God’s absolute character, which excludes all other concepts of the Godhead. It does not detract from the divine love and compassion; it serves only to protect them. The sum of all the divine attributes finds expression in the epithet “holy.” It is the highest praise that prophet and psalmist can give to the Lord (Isa. 6:3; Ps. 22:4[3]), and since man is created in the image of God (Gen. 1:26), the attribute of holiness becomes the basis of the concept of “the imitation of God”: “You shall be holy; for I the Lord your God am holy” (Lev. 19:2). The Bible makes it clear, however, that, in seeking to model himself on the divine example, it is primarily God’s moral attributes that man must copy. Even as God befriends the sojourner and acts as the father of the fatherless and as the judge of the widow, so must man, on his human scale, endeavor to do (Deut. 10:18–19; cf. Sot. 14a). Indeed all that uplifts man, including the Sabbath and abstinence from impurity, is comprised in the concept of the imitation of God. At the highest level Israel’s ethic and theology are indissolubly linked.

To sum up: The biblical conception of God was revolutionary both in its theological and its moral implications. The pagan world may occasionally have glimpsed, in primitive form, some of the higher truths inherent in Israel’s ethical monotheism. Egypt for a brief span attained to monolatry (Akhenaton’s heresy); Babylon had a glimmering of a unified cosmic process; Marduk, Shamash, and Aton punished evildoers; and some Greek philosophers commended the imitation of the godhead. Yet no cult in antiquity even remotely approached the elevated conceptions associated with the one God of the Bible. This spiritual revolution not only eventually brought paganism to an end, but its inner dynamic gave birth, in time, to two daughter religions, Christianity and Islam, which, despite their essential differences from Judaism, are deeply rooted in biblical thought.

**IN HELLENISTIC LITERATURE**

Certain Jewish concepts of God were apparently known to the circle of Aristotle. His pupil Theophrastus (fourth century B.C.E.) said of the Jews that they were “the philosophers among the Syrians,” because of their concept of the unity of God. The skeptic *Hecateus of Abdera, the first of the Greek thinkers to attempt to define the substance of the Jewish concept of God, states that the Jews do not give form or image to God, because they regard the cosmos – which includes everything – as God. Their idea of the unity of God, according to Hecateus, includes all existing things. Megasthenes, a Greek writer of the early third century, also notes that the important philosophers, outside of Greece, were the wise men of Israel. He arrived at this conclusion because of the fact that the unity of God was an accepted idea in Israel. Thus the Greek thinkers regarded the Jewish notion of divine unity as a view founded upon philosophic meditation in the spirit of the ideas common in their own circles, and in the spirit of the Ionian monists.

However, the primary quality of God according to Jewish teachings – ethical personalism – was not considered by the Greek writers. This idea of God’s ethical will, which is beyond the universe and beyond nature and has absolute dominion over nature and over man, was far from the Greek mode of thought. Strangely no signs of influence of the Greek concept of God’s unity are found in the early Jewish compositions in
Greek. In the Septuagint, for instance, there is a recognizable tendency to avoid anthropomorphism (e.g., “And they saw the God of Israel” (Ex. 24:10) is translated as: “And they saw the place where the God of Israel stood”). This tendency, however, has deep roots in the Jewish concepts of God during the period of the Second Temple, which found expression in the abstention from uttering the Tetragrammaton or in applying to God terms taken from everyday usage. This should not be regarded as intentional avoidance of anthropomorphism, as there are no signs of such avoidance in the Bible. It rather expresses a reverence for the majesty of God, which compelled the choosing of special expressions relating to divine matters. In any event the Septuagint contains no trace of the terms or linguistic usages current in Greek philosophic literature. All those terms to which the philosophers gave a special abstract connotation, such as Nous ("Mind"), Cosmos ("Universe"), Psyche ("Divine Soul"), occur in the Septuagint not in their abstract philosophical sense but in their normal concrete daily usage. Even in the apocryphal Wisdom of Solomon – a book undoubtedly influenced by Greek philosophy – the concepts of God are no different from those found in the Bible. Although the author of the Wisdom of Solomon praises the value of Wisdom in his book and regards it as a sort of partner in the creation of the world, this idea does not in the slightest detract from the concept of the unity of God for God is the Creator of the world, and Wisdom is not regarded as an independent or separate entity from God. The moral value of Wisdom in the life of man is particularly stressed as a force which refines the spirit of man and elevates him to a higher intellectual moral level. In so doing the author reduces the importance of Wisdom as a cosmic force. Man, according to the Wisdom of Solomon, seeks a personal closeness with God; God reveals Himself by signs and wonders in the history of the Jewish nation and by utilizing reward and punishment. All this accords with what is found in the Bible. Yet in contrast to the later Jewish view, the author of the Wisdom of Solomon regards God as a creator from existent material (not ex nihilo) as in the doctrine of matter and form found in Plato. The philosopher Aristobulus of Paneas (first half of second century B.C.E.) already clearly expressed his opposition to anthropomorphism, and explains such expressions as “the hand of God,” or “the voice of God” allegorically (see Allegory) as the power of God, the expression of God’s power of dominion in the world, etc. In the teaching of Aristobulus there is already a clear attempt to make the Jewish view of God correspond to the teaching of the Greek philosophers, even though it is difficult to determine to which school of philosophy Aristobulus himself belonged. The author of the Letter of Aristobulus too was influenced by Greek philosophy. God rules over all creatures and all are dependent upon Him, while He himself is not dependent upon any creature. The author of the Letter of Aristobulus lays down that all men are aware of the unity of God as the Creator of everything, the director of everything, and the ruler over everything, but different peoples designate Him by different names (Letter of Aristobulus 16). The name of the chief god current among the Greeks, Zeus, indicates his character as the source of life in nature and it too therefore is nothing else but a term for the one God.

**Philo**

The influence of Greek philosophy is especially strong on Philo. Philo, under the influence of Plato, frequently uses for God the terms τὸ ὄν, τὸ ὄν ὄντως which in the teaching of Plato signify “existence” or “true existence” (see Timaeus, 270–289). Philo points to a basis for these in the expression “I am that I am” (cf. Som. 1:230–31, Ex. 3:14). There is no hint of such terminology in the Septuagint (the sentence used by the Septuagint for “I am that I am” has no connection with the above-mentioned terms used by Plato and Philo). Philo also uses such terms as “the one,” “unity,” etc., for the purpose of stressing God’s transcendence over perfection, over all concepts of the good and the beautiful, and for His being above human comprehension. Such a degree of philosophic abstraction in the conception of God rules out any possibility of personal relations between man and God, examples of which are found in the Bible and the later literature. However as a Jew Philo was unable to content himself with mere abstraction, and he frequently raises the question of the relations of man to God, particularly on the methods by which man can come to apprehend God. Apprehension of God is possible, according to Philo, from two aspects: that of His existence, and that of His subsistence. A conception of God’s existence can be achieved without great difficulty, since His works testify to this: the universe, man, and all other creatures.

However many aberrations occur in such a conception, since many people do not distinguish the ruler of the world from the powers subject to him; these people are compared to one who ignores the chariot driver and thinks that the horses are directing the movement toward the goal with their own powers; in such a manner the distorted concepts of God current in the circles of idolaters are created. Philo battled with exceptional vehemence against the views of those who regard the various heavenly powers or other hidden forces as independent active causes. It is his opinion that sound human intelligence has the power to avoid such aberrations in the understanding of God and this was achieved, according to Philo, by the greatest of the Greek philosophers whose names he mentions with much respect. However, this recognition of God’s existence founded upon contemplation of the material world is very far from perfect, since it judges the uncreated from the created, whereas it is impossible to judge the reality of God by the creatures He created. A more perfect apprehension of God’s reality is attained by those who “apprehended him through Himself, the light through the light.” This was achieved only by the few intimates of God who are in no need of external analogies as aids to the apprehension of God. This type of person is called by Philo, “Israel,” i.e., according to his etymology, “seers of God” (Praem. 43ff.). This level of understanding of the Divine existence was attained by Moses. The conceptual level of apprehension of the Divine existence is the
highest that a mortal can attain. For as a result of the frailty of human nature man does not possess the power to apprehend anything of the nature of the Divine. Even the sharpest vision is not capable of seeing Him who was not created, since man possesses no instrument which could prepare him to apprehend His image, and the most man can attain is the apprehension that the nature of God is not within the bounds of human apprehension. Nevertheless the attempt at such apprehension is not in vain. For even though the results of such effort will always be negligible, the effort itself elevates man and lifts him to a high degree of spiritual purity. Examples of such endeavor by man to apprehend the Divine nature are described in Philo’s writings. After human intellect investigates everything to be found on earth, it turns to the contemplation of heavenly causes and partakes of their harmonious motion. From there it rises to the sphere of the intelligibles and at the time it contemplates the ideas of sensible things and absorbs their spiritual splendor, “a sober intoxication” (νηφάλια μέθη) assails it and elevates it to the level of prophecy. With a spirit full of supramundane yearnings it is elevated to the highest level of the intelligible world and already beholds itself approaching the King Himself in His glory. Now, however, when the craving for vision is greatest, dazzling beams of abounding light pour themselves over it and the brilliance of their glitter dims the eye of reason (Op. 69–72; Praem. 36f.). The impossibility of direct contact between God’s nature and the sensible world created the concept of duality in Philo’s understanding of the world, a concept much influenced by Plato. According to this view it does not become the majesty and elevation of God to be in direct contact with matter, and the forces within God or the activities overflowing from him fulfill the function of the intermediaries. The great gap between the sublime God and the perceptible world is bridged in Philo’s teaching by the idea of level and intermediaries which serve as a connection between the absolute being of God and the changing level of the perceptible world. Angel, Idea, Logos – are the terms utilized by Philo to formulate the principles of the theory of levels whose influence upon subsequent religious thought was enormous.

[Joshua Gutmann]

IN TALMUDIC LITERATURE

Abstract philosophical concepts, such as are found in Philo, are foreign to the thought system of the rabbis of the Talmud and Midrash. However, a marked tendency is discernible among them to present an exalted picture of God, as well as to avoid expressions that could throw the slightest shadow on the conception of His absolute Oneness. In the Targums, the early Aramaic translations of Scripture, the name God is frequently rendered “memra (“word”) of God.” It is certain that no connection whatsoever is intended between this word and the “logos,” or with the idea of an intermediary between God and the world. Were this the intention, the word “memra” would have been used in the Targum to such verses as: “The Lord sent a word unto Jacob” (Isa. 9:7); “so shall My word be that goeth forth out of My mouth” (ibid. 55:11); “He sent His word and healed them” (Ps. 107:20). It is precisely in these verses that the Targum employs the word pitgam (“word”) or nevi’ah (“prophecy”). Even in the verse “By the word of the Lord were the heavens made” (Ps. 33:6) “word” is rendered by the Targums as milta (“word”) of God. Nor is there any mention of the expression “memra” in the Targums of the account of creation. It is therefore certain that this word, which occurs only in the Targums, but not in the Talmud and Midrash, was used only to guard against any idea which (in the minds of the common people for whom the Targum was intended) might militate against the exalted conception of the Divinity or tend to diminish the pure concept of God. For the same reason one finds many euphemisms employed as substitutes for the names of God, such as Ha-Gevurah (“Might”), Rahmana (“the Merciful”), Ha-Kadosh Barukh Hu (“The Holy One, blessed be He”), or such terms as Shamayim (“Heaven”), Ha-Makom (“Omnipresent”), Ribbono shel Olam (“Lord of the Universe”), Mi-sha-Amar ve-Hayah ha-Olam (“He who spoke, and the Universe came into being”), Avinu she-ba-Shamayim (“Our Father in heaven”), Mi she-Shikken Shemo ba-Bayit ha-Zeh (“He who caused His name to dwell in this house”). A special significance was given by the rabbis to the tetragrammaton, and to Elohim, the tetragrammaton denoting the attribute of mercy, and Elohim, that of judgment (Gen. R. 333). That this was a time-honored distinction is evident from its occurrence in Philo where, however, in conformity with the tradition of the Septuagint to translate the tetragrammaton by the Greek word κύριος which corresponds more closely to the concepts of rule and judgment, the name is regarded as the symbol of the attribute of judgment, and the name Elohim (translated in the Septuagint by θεός) as a symbol of the attribute of mercy. The idea of the unity of God, which was widely discussed in non-Jewish circles at the time, receives strong emphasis in the aggadah. The concept of the unity of God is based upon the premise that the cosmos, with all its activities, is inconceivable without the existence of a single power which determines and directs it in accordance with a preordained plan and in conformity with a definite purpose. In order to give concrete expression to this idea, the rabbis of the aggadah utilized various parables, whose prototypes are found in Philo. They were particularly fond of the parable of “the ship and the captain,” or of “the building and its owner,” or of “the building and its director” (Sif. Deut. 341; Gen. R. 12:12; Mid. Ps. 23 to 24:1ff.; Gen. R. 39:1). Just as it is impossible for the ship, for example, to reach its destination without a captain, so administration of the cosmos and of individuals is impossible without a directing and supervising force. Other parables frequently found in the aggadah were intended to bring about reverence for the might of God, whose awesomeness is rendered even greater for the very reason that it defies man’s powers of comprehension. If the brilliance of the sun blinds the human eye, how much more so the light of God (Hul. 59b). Man is unable to observe more than a particle of His grandeur and sublimity. The rabbis of the aggadah also use the soul as an example in
teaching this doctrine. If a man's own soul, the source of his life, is beyond his intellectual comprehension, how much less can he comprehend the Creator of the universe and the source of its life (Mid. Ps. to 103:1; Lev. R. 4:3).

The recognition of the oneness of God is regarded by the scholars of the Talmud as a cardinal principle of religion, concerning which mankind as a whole was commanded, the seven precepts binding upon Noachians including idolatry (see *Noachide Laws*).

If there is any difference between the biblical concept of God and that of the Talmud it lies in the fact that the God of the Talmud is more “homey,” so to speak, than the God of the Bible. He is nearer to the masses, to the brokenhearted, to the ordinary person in need of His help. Only in this sense, does He at times appear to be an even greater epitomization of ethical virtues than the God of Scripture.

One finds no echo in the *aggadah* of the arguments for and against idolatry, such as occur in the Greek literature of that period. The *aggadah*’s attacks on idolatry are much more extreme than those of the biblical period, the dominant note being one of contempt and disdain for those who presume to descrate in a degrading and crude manner that which is most holy in human life – the service of God. In the course of their violent attacks on idolatry, the rabbis did not shrink from denouncing with equal vehemence the cult of emperor-worship, a type of idolatry for which Nimrod, Sisera, Sennacherib, Hi-ram, and Nebuchadnezzar served as the prototypes.

In apocalyptic circles, among those who expounded *Merkabah mysticism* and those who entered *paradise*, there is no discernible variation from the aggadic concept of God, where the scholars of the Talmud placed upon the study of the esoteric doctrine of the *Maaseh Merkavah* and upon those of whom it was said that they “entered paradise” having a great deal to do with this. Despite this there were many in these circles “who looked and became demented,” or “who cut down the saplings” (i.e., led astray the youth). The Talmud applied to them the term *minim* (“sectarians”), a term which also included Christians, Gnostics, and other sectarians, whom the rabbis regarded either as complete disbelievers (Sif. Deut. 32, 39) or as rejecting the oneness of God. Regardless of whether these sectarians were Jews or whether they wished to identify themselves with them, the rabbis made every effort to exclude them from the fold, at times taking drastic measures to do so. The reaction of the rabbis to the varying concepts of God that were widespread in their time was thus characterized by exceptional vigilance. Even more significant, however, was the complete absence, in their doctrine of the Deity, of any materialistic elements. Though, according to the rabbis, angels play an important role in the lives of human beings, this does not in the least affect the closeness of God to every person in his daily life: “When trouble comes upon a man, he does not burst upon his patron suddenly, but goes and stands at his door… and he calls his servant who announces: ‘so and so is at the door’… Not so, however with regard to the Holy One, blessed be He. If trouble comes upon a man, he should cry out neither to Michael nor to Gabriel, but let him cry out to me, and I shall answer him immediately” (TJ, Ber. 93a, 13a).

The nearness of God is the predominating idea of the Talmud and Midrash. God mourns because of the evil decrees He has pronounced upon Israel; He goes into exile with His children; He studies Torah and gives His view on halakhic topics, and is overjoyed if the scholars triumph over him in halakhah. Every generation of Israel has been witness to the nearness of God. God revealed Himself at the Red Sea as a warrior; at Sinai as a sage filled with mercy; after the incident of the golden calf, as a congregational reader draped in a tal- lit (“prayer shawl”), instructing the people how to pray and repent. These metaphors are not intended anthropomorphically, but are rather devices for driving home the idea of God’s nearness to his people, by the use of striking and daring images. The sages see no difference between God’s closeness to Israel in the past and in the present. The idea of the selection of Israel and the greatness of its destiny stands, both in the past and in the present, at the very center of the relationship between God and His people, and complete confidence therefore exists that God will answer His people whenever they seek Him. The concept of God’s nearness to man is also enshrined in the ethical teaching of the time, the rabbis enjoining man to imitate the attributes of God: “Just as He is merciful and compassionate, be thou too merciful and compassionate” (Mekh., be-Shallah 14:2; Sifra 19:1).

[Yehoshua M. Grintz]

**IN MEDIEVAL JEWISH PHILOSOPHY**

Medieval Jewish philosophy concentrated very heavily on problems concerning the existence and nature of God, His knowability, and His relationship to man and the world. Neither the Bible nor rabbinic literature contain systematic philosophic treatments of these topics, and it was only under the stimulus of Greek and Arabic philosophy that Jews engaged in such inquiries. In natural philosophy, metaphysics, and theology Jewish thought was influenced by *Kalām* thinkers and by Arabic versions of neo-platonism and Aristotelianism. Fundamental to Jewish philosophic speculation about God was the conviction that human reason is reliable (within its proper limits), and that biblical theology is rational. Most medieval Jewish philosophers considered intellectual inquiry essential to a religious life, and were convinced that there could be no real opposition between reason and faith. Thus, “Saadia Gaon held that, "The Bible is not the sole basis of our religion, for in addition to it we have two other bases. One of these is anterior to it; namely, the fountain of reason…" (Book of Beliefs and Opinions, 3:10). “Bahya ibn Paquda believed that it is a religious duty to investigate by rational methods such questions as God’s unity, because, of the three avenues which God has given us to know Him and His law, “the first is a sound intellect” (Hovot ha-Levavot, introduction; cf. 1:3). Even “Judah Halevi, who distrusted philosophy, said, “Heaven forbid that there should be anything in the Bible to contradict that which is manifest or proved” (Kuzari, 1:67). This attitude toward the
relationship between reason and faith dominated medieval Jewish philosophy. It reached its highest, most elaborate, and most familiar expression in the thought of *Maimonides, and was reaffirmed by later philosophers, such as "Levi b. Gershom and Joseph "Albo.

**The Existence of God**
The first task of philosophical theology is to prove the existence of God, though medieval philosophers did not always begin their treatises with this topic. Of the familiar philosophical arguments for the existence of God, the ontological argument, i.e., that God's existence follows necessarily from a definition of what He is, seems to have been unknown to medieval Jewish thought. Emphasis was placed on the cosmological argument, according to which the existence of God was derived from some aspect of the world, such as the existence of motion or causality. Some attention was also given to the teleological argument, according to which the existence of God was derived from order existing in the world.

**Teleological Argument.** The simplest form of the teleological argument, the argument from design, was used by Saadiah and Bahya. Both derided those who claim that the world arose by chance without an intelligent and purposive creator. They pointed out the high improbability (in their view, incredibility) that the extremely complex and delicately balanced order of the universe could have come about accidentally, since even ordinary artifacts are known to require an artisan. A more sophisticated version of this argument was offered by Levi b. Gershom. From the teleological nature of all existing things, i.e., the fact (as he supposed) that each thing is moved toward the realization of its own proper end, he concluded that all things together move toward their common ultimate end. This is the final cause of the world, namely God.

**Cosmological Argument.** In Saadiah's versions of the cosmological argument, following the Kalam closely, he deduced the existence of God from the creation of the world. He first demonstrated that the world must have been created in time out of nothing, and he then showed that such a world could only have been created by an omnipotent God whose essence is an absolute unity. Bahya followed a similar method. His basic argument was that since the world is composite, it must have been put together at some point in time; it could not have made itself, because nothing can make itself; therefore, it must have been created, and the creator of the world we call God. The earliest Jewish philosopher to turn away from the Kalam in favor of a stricter Aristotelianism was Abraham *Ibn Daud, and the most prominent by far was Maimonides (see *Aristotle and Aristotelianism). In contrast to the followers of the Kalam, Maimonides rejected the view that proofs for the existence of God are contingent on proofs of the creation of the world. He showed that in principle one cannot prove either that the world is eternal or that it was created, but went on to argue that even if we grant the eternity of the world, we can still demonstrate the existence of God. The arguments he used, two of which had already been set forth in Abraham Ibn Daud's *Emunah Ramah, are essentially cosmological. The most familiar of Maimonides' arguments is the argument from motion. Since things in the world are in motion and no finite thing can move itself, every motion must be caused by another; but since this leads to an infinite regress, which is unintelligible, there must be an unmoved mover at the beginning of the series. This unmoved mover is God. Another of Maimonides' arguments begins from the fact that the existence of all things in our experience is contingent, i.e., their existence begins and ends in time, so that each thing can be conceived as not existing. Contingent existence is unintelligible, unless there is at least one necessary existence, one being whose existence is eternal and independent of all cause, standing behind it. Maimonides laid great stress on the conception of God as necessary existence. This argument was the only one that Hasdai *Crescas found acceptable, though he was a severe critic of the Aristotelianism of his predecessors. In addition to other arguments, Saadiah and Judah Halevi offered a non-philosophical argument. Since the revelation at Sinai took place in the presence of 600,000 adults, there is public evidence that places the fact of God's existence beyond all reasonable doubt.

**The Nature of God**
For Judaism, the proof of God's existence is incomplete unless it also establishes His absolute unity. Though Jewish philosophers conceived this unity in different ways, none deviated from the fixed belief in God's unity. In reflecting on this question, practically all Jewish philosophers of the Middle Ages came to the conclusion that the unity of God necessarily implies that He must be incorporeal. This conclusion then required them to set forth figurative or metaphorical interpretations of the many biblical passages that ascribe bodily characteristics to God, because no proper philosophical understanding of God can accept a literal reading of these anthropomorphisms. As Abraham Ibn Daud pointed out, Jewish thinkers were particularly sensitive to this problem because many non-Jews held the slanderous opinion that the Jews believe in a corporeal God. Thus, it is understandable that medieval Jewish philosophers devoted much attention to arguments for God's incorporeality and the detailed exegesis of anthropomorphic passages in Scripture. Some scholars even suggest that the primary purpose of Saadiah's philosophical work was to refute all claims that God is corporeal. Maimonides began his *Guide of the Perplexed with an elaborate and comprehensive effort to refute all literal interpretations of passages in the Bible that speak of God as having corporeal features.

**Divine Attributes**
Having rejected the literal meaning of biblical statements about God, the medieval philosophers had to determine what may be considered a legitimate description of God. Can attributes of God, such as goodness, mercy, wisdom, and justice be predicated of Him positively? The bulk of medieval opin-
ion held that one cannot properly say anything positive about God, for two reasons. First, ascribing multiple attributes to Him compromises His unity. Second, human language reflects the limitations of the human perspective, so that describing God by way of human predicates reduces Him to the finiteness of man. Therefore, a majority of the medieval philosophers held that nothing positive can be said about God. However, since there is no choice but to talk about God in some way, despite the limitations of human language, they had to find some interpretation of the divine attributes which would not be a positive one. The most widely accepted solution was to understand the essential attributes, such as living, wise, powerful, which describe the divine nature, as negative, so that every seemingly positive assertion about God only says what He is not. For example, the statement, “God is wise,” can only mean that He is not ignorant. In this way one may speak of God's nature in the language of men without compromising His unity and without reducing Him to human form. Because God transcends all knowledge and all experience, one can only affirm that He exists and even this must be interpreted as negating that He lacks existence and describes what He is solely in terms of negative attributes. This view was held with minor variations by Saadia, Bahya, Joseph ibn Zaddik, Judah Halevi, Ibn Daud, and Maimonides. Besides these descriptions of God's nature which were interpreted as negative attributes, there are others, such as merciful and just, which appear to describe what God does rather than what He is. These could also not be interpreted positively since such positive predication of these descriptions, too, could compromise God's unity. These descriptions were therefore interpreted as attributes of action, i.e., as describing God's effects without, however, attempting to account for a property in God which causes these effects. This non-positive predication of the attributes of action again safeguards divine unity. Maimonides gave the most subtle and comprehensive treatment to the problem of attributes. While holding rigorously to the negative interpretation of essential attributes, he also followed some of his predecessors in affirming the doctrine of attributes of action. Thus, a great calamity may be interpreted in human eyes as an expression of God's anger, and a seemingly miraculous rescue of men from danger will be understood as an instance of God's love and compassion. Two major figures of the late medieval period rejected the doctrine of negative attributes. Both Levi b. Gershon and Hasdai Crescas argued in favor of the view that if God is to be intelligible, His attributes must be understood as positive predicates. They did not think that positive predication compromises the divine unity and perfection. Moreover, Levi b. Gershon believed that positive predicates could be applied to God literally because their primary meaning is derived from their application to God, while their human meaning is secondary. The position of Joseph Albo, the last of the medieval Jewish philosophers, is ambiguous. Although he affirmed the doctrine of negative attributes, he also tried to argue that the divine attributes have a descriptive-positive meaning.

Relation of God to Man and the World

In denying God's corporeality and in developing the doctrine of negative attributes, the philosophers went far toward protecting the unity of God. However in proclaiming this absolute metaphysical unity they also generated serious problems. If God is conceived as the metaphysical One, eternal, absolute, unique, and incomparable, how should His relationship to man and the world be understood? In every relation there is multiplicity, and in relations with the corporeal world there is also inescapable temporality. With respect to "creation the problem was often solved (or at least avoided) by invoking various forms of neoplatonic theories of emanation.

Divine Providence

The issue was particularly acute with respect to the question of divine providence and God's relationship to man. To remain consistent with the Bible and rabinic teaching, the philosophers had to affirm the doctrine of "reward and punishment and, thus, support the view that God knows and is concerned about individual human life and action. Yet, such a God seems to be a temporal, changing being, not the absolute, eternal One. In a most radical statement Maimonides asserted that, "the relation between us and Him, may He be exalted, is considered as non-existent" (Guide of the Perplexed, 1:56). Maimonides tempered this view, however, and developed a theory according to which God shows providence to the human species. God is removed from any direct involvement with individual animals or with inanimate objects: "For I do not by any means believe that this particular leaf has fallen because of a providence watching over it; nor that this spider has devoured this fly because God has now decreed and willed something concerning individuals" (ibid., 3:17). Moreover, according to Maimonides, the providential care of man is totally dependent on the level of the individual's intellectual development. As the human intellect develops in its highest form, it is brought into progressively closer contact with the divine nature which overflows toward it; for the individual human intellect is only a particularization of the divine overflow. "Now if this is so, it follows necessarily... that when any human individual has obtained... a greater proportion of this overflow than others, providence will of necessity watch more carefully over him than over others... Accordingly, divine providence does not watch in an equal manner over all the individuals of the human species, but providence is graded as their human perfection is graded... As for the ignorant and disobedient, their state is despicable proportionately to their lack of this overflow, and they have been relegated to the rank of the individuals of all the other species of animals" (ibid., 3:18). Maimonides solved the problem by making providence an extension of the divine nature in the perfected human intellect, and thus succeeded in preserving God's unity and eternity. Similar views were held by Levi b. Gershon and Abraham Ibn Ezra. While the medieval Jewish philosophers succeeded in meeting the challenge of their intellectual environment, many Jews felt that in the
The kabbalistic view of God is in principle a derivation from the desire to abolish the contradiction between the two concepts: God's unity and God's existence. The emphasis of God's unity leads the philosopher to reject anything that could undermine that absolute unity — any attribute, determination, or quality that can be interpreted as an addition to His unity and as evidence for plurality. On the other hand, the emphasis on God's life which is characteristic of religious faith endangers His unity, since life is variegated by its very nature: it is a process and not a state. In the opinion of many kabbalists the divinity should be conceived of in the following two fundamental aspects:

1. **God in Himself who is hidden in the depths of His being**;

2. **the revealed God who creates and preserves his creation**.

For kabbalists these two aspects are not contradictory but complement one another. Regarding God Himself the first aspect suffices, and in the opinion of some (Moses Cordovero, and the Chabad Hasidism), one could doubt whether from this point of view anything at all exists apart from God. It is precisely the second view, however, that is required by religious faith: namely, a revealed God who can be recognized by His action and revelation.

In terms of God Himself, He has neither a name nor an attribute and nothing can be said of Him except that He is. This absolute divinity is usually called in Kabbalah *Ein-Sof* (“the Infinite”). *Ein-Sof* lacks any attributes, even more than, if one may say so, does the God of Maimonides. From the sayings of some early kabbalists, it is apparent that they are careful not even to ascribe personality to God. Since He is beyond everything — beyond even imagination, thought, or will — nothing can be said of Him that is within the grasp of our thought. He “conceals Himself in the recesses of mystery”; He is “the supreme cause” or “the great existent” (in Berit Menuahah, Amsterdam, 1648), appellations which contain a negation of the personal nature of God. There were also kabbalists, however, who wished to give a personality to *Ein-Sof*, though in their opinion too this personality was indefinable: according to them the *Ein-Sof* is ba’al ha-razon, “the possessor of will” (Menahem Azariah da *Fano*), hence it is possible to say of Him, as do faithful pious Jews, “Blessed be He”; “May He be blessed and exalted,” etc. Both these conceptions are met with in the pages of the *Zohar*. In favor of the personal character of *Ein-Sof* weighed the argument that even without the existence of emanations, the *Sefirot*, and the worlds, His perfection would not lack anything, hence one should not think that God acquired personality through the emanation of the “attributes” or the *Sefirot*, which determine for us the personal character of God. It should be said that, in the opinion of all kabbalists the *Ein-Sof* is divinity itself, but some kabbalists doubt whether it is also “God.” For the life of the *Ein-Sof* is concealed within itself and is not revealed, while the religious man seeks the revelation of this concealed life. This revelation comes through the emanation of the *Sefirot*, which are the domain of the life of the revealed God. This emanation is not a necessity, according to the nature of the *Ein-Sof*; it is a voluntary activity of the emanator.

The special difficulty in connection with this view is that according to kabbalistic doctrine the ten *Sefirot* or worlds of heavenly Parzufim (“configurations,” in the Lurianic Kabbalah) are not created regions distinct from the *Ein-Sof*, like other creations, but are included within the divine unity (see *Emanation*). The *Sefirot* are also attributes (and some kabbalists explicitly identify them with the “attributes of action” of the philosophers) but in actual fact they are more than attributes: they are the various stages at which God reveals Himself at the time of creation; they are His powers and His names. Each quality is one facet of His revelation. Hence every name applied to the divine is merely one of these qualities: Eheyeh, Yah, El, Elohim, Zevaot, Adonai — each points to a special aspect in the revealed God, and only the totality of all these qualities exhausts the active life of God. It is this totality, its order, and its laws, in which the theology of the Kabbalah is fundamentally interested. Here the personality of God is manifested even if it is not developed: God revealed himself not only at Mt. Sinai; He revealed Himself in everything since the beginning of the creation, and will continue to reveal Himself until the end of time; His act in creation is His main revelation. From this position stems a certain dualism in the realm of the revelation of the divine: on the one hand there is *Ein-Sof* which is transcendent and its traces are not discernable in the creatures; yet on the other hand the traces of the living God, who is embodied in the world of the *Sefirot*, are found in everything and discernable in everything — at least to the mystic who knows how to interpret the symbolic language of outer reality. God is in His creation, just as He is outside of it. And if the *Sefirot*, active in the creation, are the “souls” and the inwardness of everything, then the *Ein-Sof* is the “soul of the souls.” By the mere fact of being a creature, no creature is divine, though nevertheless something of the divine is revealed in it. The world of *Sefirot* then is the region of divine revelation per se, for the flow of divine life rises and descends in the stages of the *Sefirot*. The divine revelation emanates also upon the region of creation, through the “clothing” of the *Sefirot* in the mundane world.
In critical literature on Kabbalah opinions vary on the question to what extent the formulations of this fundamental standpoint are pantheistic. At various times a pantheistic view of God had been attributed in particular to the Zohar, to Moses Cordovero, and to Abraham *Herrera. Important in the theology of the Kabbalah is the new view of the divine presence, which is no longer a synonym for God Himself, but a name for the last Sefirah which is the passive and receptive element in God, although it is simultaneously active and emanating upon the creatures. The unity of God in the Sefirot is dynamic and not static and all explanations by kabbalists of the Shema ("Hear O Israel") testify to this: this is the unity of the stream of life flowing from the Ein-Sof, or, according to some opinions, from the will which is the first Sefirah (See *Kabbalah). [Gershom Scholem]

**IN MODERN JEWISH PHILOSOPHY**

**Moses Mendelssohn**

Moses *Mendelssohn, the first modern Jewish philosopher, believed that, "Judaism knows nothing of a revealed religion in the sense in which Christians define this term." The truths of religion, particularly those that have to do with the existence and nature of God, are principles of reason and, as such, are available to all men. Through rational reflection we know that God exists, that He is a necessary and perfect being, creator of the world, omnipotent, omniscient, and absolutely good. These truths, which constitute the essential grounds of salvation, are the elements of a natural religion shared by all men. What is peculiarly Jewish is not religion, but the necessary condition of their salvation. True religion, on the other hand, is universal. God has made known to all men, through reason, the essential and eternal truths about His nature and the world He created.

**Solomon Formstecher**

Solomon *Formstecher was especially indebted to the idealist philosopher *Schelling for the metaphysical foundations of his theology. He conceived God as the "world-soul," which is the ultimate ground of the unity of all reality. While nature is the open manifestation of God in the world of our experience, it is only as spirit that God can truly be conceived. His essence is beyond all human knowledge, and to restrict God to the necessarily anthropomorphic conceptions of man borders on pantheism. Formstecher believed that the world-soul is not in the world, but is prior to and independent of it. God is an absolutely free spirit, whose freedom is most clearly evident in His activity as creator of the world. Because of His absolute freedom, God is understood as the ultimate ethical being and as the ideal that man should strive to imitate and realize in his own ethical life.

**Samuel Hirsch**

Samuel *Hirsch taught a doctrine similar to that of Formstecher, although he was more dependent on the philosophy of *Hegel. He emphasized the centrality of the ethical even more than Formstecher did. Man discovers his freedom in his own self-consciousness. He knows himself, not as part of nature, but as an "I" who stands in freedom over against the world. God is conceived, on this human model, as a being who is absolutely free and supreme in power over all that exists. Through the miracles that He performs, God exhibits to man His absolute power and freedom. For Hirsch, Judaism is, above all, the religion of the spirit. Its highest purpose is the actualization of human freedom in the ethical life, because only in free and moral acts does man truly serve God.

**Solomon Ludwig Steinheim**

Unlike most of his contemporaries, Solomon Ludwig *Steinheim thought that philosophy and religion are radically opposed. He held that the true knowledge of God can be acquired only through revelation, and that scriptural revelation contradicts the canons of human reason. If God is conceived in purely rational terms, then His freedom must necessarily be denied, because rationality entails causal necessity. The God of reason is subject to causal rules, since, even as first cause, He is limited to that which reason finds possible. Such a God is not absolutely free. Neither is He a true creator, for according to the principle that nothing comes from nothing, He could not have created the world freely and *ex nihilo. Steinheim rejected reason in favor of revelation, denied the principle of causality, and represented God as the true and free creator who stands above the limitations of rational necessity. Only through such a theology does man become free. Freedom is possible for man only if he subordinates his reason to the God of revelation, whose creative freedom provides the sole ground of genuinely human existence.

**Nachman Krochmal**

Nachman *Krochmal, although living in Eastern Europe, was more fully Hegelian than his Western Jewish contemporaries. They modified the prevailing philosophy to accommodate the personal God of traditional Judaism, but Krochmal developed a doctrine which borders on pantheism. He conceived God as Absolute Spirit, containing in itself all reality. Absolute Spirit has none of the characteristics of a personal God. Even as cause, He is impersonal: He causes the world only in the sense that He is its totality. The world is derived from God through emanation, which Krochmal understood as a form of divine self-limitation. In this Krochmal was affected by kabbalistic doctrines, which he combined with Hegelianism.

**Hermann Cohen**

Three figures of major importance appeared in the late 19th and early 20th centuries, Hermann *Cohen, Franz *Rosenweig, and Martin *Buber. In his early years Cohen thought of God as a philosophical construct that served as the guarantor of morality and moral progress. The existence of God, according to this conception, cannot be proved. He is beyond all positive descriptions, and is thought of only as an "idea" in the technical Kantian sense. Though His nature is absolutely
unknown to us, God as idea is the one absolutely necessary ground of morality. His reality is affirmed because the alternative of denying morality cannot be accepted. In his later years Cohen adopted more traditional language as he became more deeply concerned for Judaism. He then spoke of God as the Creator, the God of love, and the source of all being, who is absolutely one and unique.

Franz Rosenzweig
In Rosenzweig’s view, God is not known through philosophic inquiry or rational demonstration. He is met in direct existential encounter, which is true revelation. In the anguished consciousness of his own creaturely contingency, man encounters God, who is the creator of the world, and above all he encounters dependence. This meeting reveals God as an all-powerful and loving father. His love for man results in commandments that bind every individual for whom the divine-human encounter is a reality.

Martin Buber
Like Rosenzweig, Buber stressed, above all, the personal quality of God. He is the Eternal Thou, whom one meets as the supreme partner in dialogue. This is not the depersonalized God of the philosopher-theologian, whose nature is expressed in a set of formal propositions. Man knows Him only as the Ever-Present, who meets him in true encounter. No effort to give a consistent definition of God succeeds. “Of course God is the ‘wholly Other’; but He is also the wholly Same, the wholly Present. Of course He is the Mysterium Tremendum that appears and overthrows; but He is also the mystery of the self-evident, nearer to me than my I” (I and Thou (1937), 79).

Mordecai Kaplan
In the United States Mordecai *Kaplan developed a naturalistic view of God in conscious opposition to the traditional, supernatural views. Convinced that modern science makes it impossible to believe in a transcendent, personal God, Kaplan nevertheless saw value in retaining the idea and the name “God.” He conceived God simply as that power in nature which makes possible the fulfillment of man’s legitimate aspirations. Despite his commitment to scientific naturalism, Kaplan believed that the world is so constituted that valid human ideals are supported and helped toward realization by the cosmic process. It is this force making for human salvation that Kaplan called God.

[Marvin Fox]

ATTRIBUTES OF GOD

The discussion in Jewish philosophy of the attributes or predicates (Heb. te’arim; Arab. šfūt) of God is based on the problem of how God, whose essence is presumed to be unknowable, can be spoken of in meaningful terms.

Philo
Philo was the first to introduce the doctrine of the unknowability of God, which he derived from the Bible (see C. Siegfried, Philo (1875), 203–4; H.A. Wolfson, Philo, 2 (1947), 86–90, 119–26). He interprets Moses’ prayer, “Reveal Thyself to me” (according to the Septuagint version of Ex. 33:18) as a plea for a knowledge of God’s essence, and God’s answer as pointing out that only His existence, and not His essence, can be known (Wolfson, op. cit., 86–87). From God’s unlikeness to any other being follows His simplicity, i.e., essential unity, indivisibility, and His being “without quality,” i.e., without “accidents” such as inhere in corporeal objects, and without “form,” such as inheres in matter. God belongs to no class. He is without genus or species, and consequently no concept can be formed of Him (ibid., 97–110). The scriptural passages describing God in anthropomorphic and anthropopathic terms must, therefore, be understood as serving a merely pedagogical purpose. Since God’s essence is unknowable, all the predicates of God in Scripture describe Him only by what is known of Him through the proofs of His existence, and they refer only to the causal relation of God to the world. Philosophical discussion of the problem of God’s attributes gained new impetus under the influence of Muslim philosophy, especially the Kalām.

Kalām
The most elaborate Jewish Kalām discussion of attributes is found in Saadiah’s Emunot ve-De’ot (Book of Beliefs and Opinions, tr. by S. Rosenblatt, 1948). Saadiah finds in Scripture the following attributes assigned to God: He is one, living, omnipotent, omniscient, and unlike any other being. His unity and incomparability follow logically from the notion of “Creator” (1:1), as do the notions of existence, omnipotence, omniscience. The latter three attributes do not imply diversity in God. Just as the attribute of “Creator” does not add anything to the essence of God, but merely expresses His causal relation to the world, so do these three attributes, which explain the term Creator, add nothing to His essence, but merely denote the existence of a world created by Him (1:4). It would seem to follow that these three attributes are active, not essential attributes, but this is not Saadiah’s ultimate meaning. Since these attributes, when applied to God (unlike the case when they are applied to man) are not distinct from God’s essence, Saadiah upholds positive essential attributes (existence, omniscience, omnipotence), but reduces their meaning to that of God’s causality as Creator. He does, however, distinguish between these essential attributes and attributes of action. Attributes such as merciful, gracious, jealous, and avenging are attributes of action in the sense that they express a certain affection for the creatures produced by the causality of God (1:12).

Neoplatonism
Jewish neoplatonic writings are marked by a new emphasis on the unity of God. At the same time the notion of the will of God was injected into the discussion. The extant writings of Isaac *Israeli, the earliest Jewish neoplatonist, contain few references to the attributes (see A. Altmann and S.M. Stern, Isaac Israeli (1958), 151–8). Solomon ibn Gabirol’s views are more explicit. In his Mekor Ḥayyim and his poem Keter Malkhut, Ibn Gabirol emphasizes God’s unity (Mekor Ḥayyim,
3:4; 5:30). Negative terms are used particularly with reference to the “mystery” (sod) of the divine unity, concerning which we do not know “what it is,” but which may be described as unaffected by plurality or change, or by attribute (toá’ar) and designation (kinnui). His negative interpretation of the divine attributes is, however, complicated by Ibn Gabirol’s doctrine that matter and form, the two principles which constitute all created beings, derive from the essence and the will of God respectively. Matter (which is originally “spiritual” matter) proceeds from the very essence of God, and form is impressed upon, and diffused in matter by virtue of God’s will. Ibn Gabirol’s will tends to assume the character of an intermediate between God and the world and, in certain respects, shares in the divine absoluteness (ibid., 5:37–9; 4:20). Bahya ibn Paquda’s elaborate treatment of the attributes in the “Shá’ar ha-Yihud” (“Chapter on Unity”) of his Hovot ha-Levavot starts from the thesis that from the existence and order of the universe, the existence of one single creator can be inferred. Like Aristotle (Metaphysics, 5, 5, 1015b, 16–7), Bahya distinguishes between the “accidental” and “absolute” senses of the term “one” and concludes that the truly One is God alone, who is incomparable and unique (1:8–9). Having established God’s unity in the neoplatonic sense, Bahya proceeds to discuss the meaning of the attributes, which may again be classified under two heads: essential attributes and attributes of action. The essential attributes are existence, unity, and eternity. They do not imply a plurality in God’s essence, but must be interpreted negatively, i.e., God is not nonexistent; there is no plurality in Him; He is not a created thing. The attributes of action which describe God’s actions either in anthropomorphic terms or in terms of corporeal motions and acts are used by Scripture in order to establish a belief in God in the souls of men (1:10), i.e., for pedagogical reasons.

Aristotelianism
In Jewish Aristotelianism the discussion of the divine attributes reached a new level, reflecting the influence of Avicenna and, subsequently, of Averroes. The notion of God as the “necessary being” which was introduced by Avicenna, contested by al-*Ghazâli, and modified by Averroes, replaced, in some measure, the neoplatonic concept of the One. Moreover, the problem of the meaning of terms like “one” and “being” came to the fore, for even though these terms were predicated of God in a peculiar sense, they seemed also to bear a generic sense in which they were predicated of other beings as well. Al-*Fârâbi held the notion that common terms of this kind are predicated of God “firstly” or “in a prior manner,” and of other beings “secondly” or “in a posterior manner,” i.e., that the perfections implied by the particular predicate derive from God as their cause or exemplar. According to Avicenna, the term “one” is predicated of God and other beings “in an ambiguous sense” (see H.A. Wolfson, in Homenaje a Millas-Vallicrosa, 2 (1956), 545–71), which implies the doctrine of the “analogy” of being (A.M. Goichon (tr.), Ibn Sina, Livre des Directives et Remarques (1951), 366–9, n. 2), a view which was not adopted by the first Jewish Aristotelians (Abraham ibn Daud and Maimonides), who substituted for it the notion of the purely homonymous character of these terms, that is that terms applied to God and other beings share only the name but not the meaning. Only under the influence of Averroes did the doctrine of the “analogy” of being eventually command the assent of Jewish Aristotelians (notably Levi b. Gershom, see below). Abraham Ibn Daud, in his Emunah Ramah (ed. by S. Weil (1852), 48–57), follows Avicenna in establishing the existence of God as “the necessary being” in the sense that God’s essence necessarily implies His existence, while in the case of all other beings their existence is only “possible” and extrinsic to their essence. True unity is therefore established in the case of God alone by virtue of His intrinsic necessary existence. Ibn Daud enumerated seven positive attributes: unity, truth, existence, omniscience, will, omnipotence, and being. These neither imply definitions of God nor constitute a plurality in Him. They have to be interpreted as either negations or as asserting God’s causality. Unlike Avicenna, he asserts the homonymy of the term “being” in the case of God as compared with its application to all other beings. God’s being is true and necessary because it alone has an undervived and independent existence. The other eight attributes are explained by Ibn Daud as negative.

Maimonides. The most incisive treatment of the attributes is found in Maimonides’ Guide of the Perplexed (1:50–60). Maimonides argues that every attribute predicated of God is an attribute of action or, if the attribute is intended for the apprehension of His essence and not of His action, it signifies the negation or privation of the attribute in question (1:58). There cannot be affirmative essential attributes, i.e., affirmative predications relating to the essence of God which is unknowable (1:60). The anthropomorphic and anthropopathic descriptions of God in Scripture have to be understood as attributes of action, or as assertions of God’s absolute perfection (1:53). Novel elements in Maimonides’ discussion of attributes are his fivefold classification; his rejection of relational attributes; and his interpretation of negative attributes. Maimonides lists and discusses five kinds of attributes:

1. A thing may have its definition and through it its essence is predicated of it. In the case of God, who cannot be defined, this kind of attribute is impossible.

2. A part of a definition may be predicated. This, again, is inapplicable to God; for if He had a part of an essence, His essence would be composite.

3. A quality subsisting in an essence may be predicated. None of the genera of quality is applicable to God.

4. A relation to something other than itself (to time, place, or another individual) may be predicated of a thing. This is inadmissible in the case of God who is not related to time or place and not even to any of the substances created by Him.

5. The action performed by a certain agent may be predicated of him. This kind of attribute makes no affirmation of
his essence or quality and is therefore admissible in the case of God (1:52).

The “13 attributes of mercy” revealed by God to Moses (Ex. 34:6–7) are attributes of action. They do not denote affections (e.g., compassion) on the part of God, but merely express the actions proceeding from Him in terms drawn from analogous human experience. Maimonides makes the point that not only the many attributes of God used in Scripture, but also the four intellectually conceived attributes of existence, omnipotence, omniscience, and will are attributes of action and not essential attributes (1:53). Because of God’s absolute uniqueness and unlikeliness to anything else, God’s essence is unknowable (1:55). The only correct way of speaking of God’s essence is that of negation. Maimonides lists eight terms (existence and life, incorporeality, firstness, omnipotence, omniscience, will, and unity), all of which are interpreted as negative in meaning and as expressing the dissimilarity between God and all other beings, e.g., “God exists” means “God is not absent”; “He is powerful” means “He is not weak.” The negation means that the term in question (e.g., “weak”) is inapplicable to God. It also means that the affirmative term (e.g., “powerful”) is equally inapplicable, and that it can only be used in an equivocal sense. Maimonides’ doctrine of attributes reflects, fundamentally, Avicenna’s position as represented by al-Ghazālī in his Tahāfut al-Falāsifa (i.e., denial of essential attributes based on the concept of God’s “necessary existence,” which, in turn, is based on the Avicennian ontological distinction between essence and existence in the cases of all beings except God), but goes beyond Avicenna in rejecting relational attributes.

Post-Maimonidean Philosophy

In post-Maimonidean Jewish philosophy the influence of Averroes became increasingly pronounced. Averroes’ attack on Avicenna’s ontological distinction between essence and existence (Tahāfut al-Tahāfut, ed. by S. van den Bergh (1954), 179–81, and passim) achieved particular prominence and led to the adoption of the theory that the divine attributes did not imply homonymous terms, but rather that essence and existence are identical in all beings, including God.

LEVI BEN GERSHOM (Gersonides). The full implications of Averroes’ critique of Avicenna appear in the doctrine of Levi b. Gershom (Milhamot Adonai, 3:3). The attributes are not to be interpreted as equivocal in meaning. They are to be understood secundum prius et posterius (both by a priori and a posteriori reasoning). They do not thereby imply a kind of relation and similarity between God and other beings, nor do they involve plurality: “For not every proposition in which something is affirmed of something implies plurality of that thing” (see H.A. Wolfson, in JQR, 7 (1916/17), 1–44, 175–225). Gersonides quotes scriptural passages affirming God’s oneness (Deut. 6:4) and existence (Ex. 3:14), and he concludes from them the attributes of intellect, life, goodness, omnipotence, and will must likewise be predicated of God in a positive sense.

HASDAI CRESCAS. The last significant development of the doctrine of divine attributes in medieval Jewish philosophy is found in Hasdai Crescas (Or Adonai, 1:3, 1–6). He distinguishes between the essence of God, which is unknowable, and essential predicates which are knowable. The latter are neither identical with God’s essence nor merely accidental to it, but inseparable from it in the sense that the one cannot be thought of without the other. This distinction is not in conflict with the notion of God’s absolute simplicity. Nor is God’s unlikeliness to any other being thereby denied. The attributes of omnipotence and omniscience may be predicated of God secundum prius et posterius. There are, however, some attributes which are, in the final analysis, negative in meaning, namely existence, unity, and eternity. These too apply to God and all other beings secundum prius et posterius and are thus not equivocal. Crescas thus firmly rejects denial of affirmative attributes, and suggests that such denial may be interpreted as really referring only to God’s essence, where it is legitimate, but not to His essential attributes (1:3,3 end).

Modern Philosophy

In modern Jewish philosophy the divine attributes are no longer discussed with the stringency imposed by the medieval tradition as inherited from Philo and the neoplatonists and modified by the Aristotelians. Nevertheless, the concepts evolved by the medieval thinkers are not entirely lost. Both Moses Mendelssohn and Hermann Cohen reflect in different ways, according to their respective positions, essential elements of the earlier discussion. Mendelssohn deals with the attributes particularly in his small treatise Die Sache Gottes oder die gerettete Vorsehung (1784). He asserts in the name of “the true religion of reason” the conjunction in God of his “greatness” and His “goodness.” The greatness of God contains two parts: His power or omnipotence and His wisdom or omniscience. Mendelssohn’s discussion of the divine attributes (he does not use this term) is directed towards the problem of theodicy. The essential point is that the infinite wisdom of God is allied to His infinite goodness, which constitutes God’s “justice.” In its highest degree justice is “holiness” in which equity and mercy are included. The concept of the goodness of God implies that God’s punishment of the sinner is meant for the sake of the sinner’s improvement. Hermann Cohen presents his concept of the attributes of God in much closer dependence on the medieval Islamic and Jewish philosophers, particularly on Maimonides. The concept of the unity of God in Judaism, according to Cohen, must not be confounded with that of mere “oneness,” which is merely negative in meaning. Cohen adopts the term “uniqueness” (Einzigkeit), which denotes God as the only Being in the true sense of the word, and signifies also His incomparability (Isa. 40:25), eternity, and causality (Religion der Vernunft (1929), 51–54, 70), as well as the concept of God as creator (ibid., 73–77). He interprets Maimonides’ theory of negative attributes as the absolute negation of negativity and the affirmation of positivity. Thus,
propositions such as “God is not weak” are given in the logical form “God is not non-active” ([Juedische Schriften, 3 (1924), 252, 257; Religion der Vernunft, 72–73). Moreover, he links this interpretation with his own concept of Ursprung (principium; Gr. archê) as the thinking which alone can produce what may be considered as being, and which does not depend on the data of sense experience. Cohen interprets Maimonides’ attributes of action as expressing the “correlation” between God and men (see A. Altmann, In Zwei Welten (1962), 377–99). They denote exemplars for man’s action rather than qualities in God (Religion der Vernunft, 109ff., 252, 313). The attributes of action can be reduced to two: love and justice which, in Cohen’s ethical monotheism, become “concepts of virtue for man” (ibid., 475, 480).

[Alexander Altmann]

JUSTICE AND MERCY OF GOD

Central among the biblical affirmations about God are those that emphasize His justice (mishpat) and righteousness (zedakah) on the one hand, and His mercy (rahamim) and loving-kindness (hesed) on the other. God’s justice and mercy are both affirmed in God’s proclamation to Moses at Sinai before the giving of the Decalogue: “The Lord, the Lord, a God compassionate and gracious, slow to anger, abounding in kindness and faithfulness, extending kindness to the thousandth generation, forgiving iniquity, transgression, and sin; yet He does not remit all punishment, but visits the iniquity of the fathers upon children and children’s children, upon the third and fourth generations” (Ex. 34:6–7). Justice and mercy are the bases of the covenant between God and the Israelites. God’s mercy is revealed in the fact that He redeemed the people of Israel from slavery in Egypt to make them His people and contract a covenant with them: “When Israel was a child, I loved him, out of Egypt I called my son” (Hos. 11:1). His justice is revealed in the fact that He punishes the Israelites if they sin and do not uphold their side of the covenant: “You only have I known of all the families of the earth; therefore I will punish you all your iniquities” (Amos 3:2). Both the justice and mercy of God are evident in the biblical portrayal of God’s relationship with Israel; “I will betroth you to me in righteousness and in justice, in steadfast love and in mercy” (Hos. 2:19). In exercising justice and punishing the people of Israel when they sin God reveals His power and lordship not only to Israel but to the world as a whole. God’s justice is often tempered by His mercy: “My heart recoils within me, My compassion grows warm and tender. I will not execute My fierce anger, I will not again destroy Ephraim; for I am God and not man...” (Hos. 11:8–9). By exercising His mercy God hopes to encourage the people of Israel to uphold their side of the covenant and fulfill His demands as expressed in the Torah. The relationship between justice and mercy in God’s attitude toward the people of Israel is intricate and varied, and while some biblical verses emphasize His justice and others, His mercy, it is impossible to say that one or the other is predominant.

In Post-biblical Judaism

This same intermingling of justice and mercy is to be discerned in the works of Philo and other post-biblical writings (see G.F. Moore, Judaism in the First Centuries of the Christian Era, i (1927), 386–400). In rabbinc Judaism a vivid expression of this intermingling is found in a parable in Genesis Rabbah (12:15) comparing God to a king who in order to prevent a fragile goblet from shattering must mix hot and cold water when filling it. Thus the world exists because of the admixture of the attributes of mercy and justice (middat ha-rahamim and middat ha-din). Behind this parable lies a complex development of biblical ideas in which the two divine appellations, the Tetragrammaton (YHWH) and Elohim, were understood to refer to the two main manifestations of God’s providence: the first, to express the attribute of mercy; the second, that of justice (see A. Marmorstein, The Old Rabbincic Doctrine of God, pt. 1 (1927), 43–53, 181–208). The presence of both names in Genesis 2:4 signifies that mercy and justice were both necessary in order to make creation possible. Genesis Rabbah 39:6 expresses a similar notion: “If thou desirest the world to endure, there can be no absolute justice, while if thou desirest absolute justice the world cannot endure...”. Insofar as God’s justice and mercy are necessary for creation it is not only the community of Israel that is the major object of these divine activities but the world as a whole. Nonetheless, it must be recognized that rabbinc Judaism was more concerned with the divine activities of mercy and justice as they were directed toward the community of Israel. The fate of the Jewish people in the Roman period was a tragic impetus to this discussion. Faced, too, with the problem of the suffering of the righteous and the prosperity of the wicked, the rabbis examined the concept of divine justice and advanced a number of new interpretations of it in an effort to justify the apparent imbalance of suffering and prosperity in the world. It was suggested that ultimate reward and punishment would take place in the “afterlife, that suffering was a process of purification (yissurin shel ahavah), and that the individual often suffered for the sins of his ancestors or of the community at large.

While various trends in medieval Jewish philosophy and mysticism interpreted the divine attributes of justice and mercy differently, they all affirmed that these were qualities of God. In the face of the Holocaust in the 20th century, some thinkers, for example, R. Rubenstein, have seriously questioned the concept of divine justice and mercy, while others, for example, Emil Fackenheim, maintain that it is a major obligation of Jewish religious thought to rediscover the meaning of the concept in the face of the contemporary situation.

[Lou H. Silberman]

CONCEPTIONS OF GOD

Monotheism

The normative Jewish conception of God is theism, or more exactly, *monotheism. It conceives of God as the creator and sustainer of the universe, whose will and purposes are su-
preme. He is the only being whose existence is necessary, uncaused, and eternal, and all other beings are dependent on Him. God as conceived by Judaism transcends the world, yet He is also present in the world, and “the whole earth is full of His glory” (Isa. 6:3). He is a personal God, whom man can love with the highest and most complete love, while confronting Him as father, king, and master. He loves man and commands him, and His commandments are the criterion of the good. He is absolutely one, admitting no plurality in His nature, and absolutely unique, so that no other existing thing can in any way be compared to Him. This is essentially the picture of the biblical God as it was developed and understood in classical Jewish thought.

This conception of God contrasts sharply with the mythological gods, who have parents and children, eat and drink, have desires and passions. Judaism categorically rejected the mythological gods. However, a variety of more sophisticated conceptions of God confronted Judaism, presenting challenges and evoking responses.

Atheism

It might be supposed that the greatest threat to monotheism would be atheism, but throughout most of Jewish history this was not the case. In the Bible there is no awareness of genuine atheism. The biblical authors attacked idolatry and other mistaken conceptions of God. Frequently, they attacked those who deny that God is concerned with man and the world, but seemed unaware of men who did not believe in a superior power.

Atheism was known in the Middle Ages, and was countered by the various proofs for the existence of God that were common to all medieval philosophical theology. Yet, since the dominant medieval culture was overwhelmingly religious, atheism constituted only a minor threat. In modern times atheism became a significant and widely held doctrine, based on and reinforced by naturalistic scientific ideas and scientifically oriented philosophy. The classical proofs for God’s existence have been largely discredited and no longer provide a satisfactory ground for theism. Modern atheists usually offer arguments for the existence of God, but do not claim that they have proofs. These arguments, though not decisive, provide a justification for the theistic option, since it is claimed that these are matters about which no demonstrative certainty is possible. In the 20th century theistic belief usually rests on a combination of admittedly incomplete intellectual evidence and personal faith and commitment.

Polytheism and Dualism

Polytheism, the belief that there are many gods, was never a serious threat to normative Judaism, because it is a form of idolatry which could not be readily confused with biblical doctrine. Wherever polytheism appeared among Jews, recognized authorities rejected it vigorously.

Dualism was the only version of polytheism which made serious inroads into the cultural world of the Jews. Dualism teaches that there are two cosmic powers, each of which has domination over one portion of the universe. The Zoroastrian version has a god of light and a god of darkness, while the Gnostics taught that there is a hidden god who is beyond all knowledge and the evident god who created and formed the world. Dualism is soundly rejected in a classical biblical passage which says, “I am the Lord, and there is none else, beside me there is no God… I form the light and create the darkness; I make peace and create evil; I am the Lord that doeth all these things” (Isa. 45:5, 7). This forceful denial of dualism is repeated in a slightly modified form in the daily liturgy. The Talmud challenges the heresy of dualism explicitly with strong prohibitions against any deviations from standard liturgy that might have dualistic implications. Rabbinic rulings proscribe any form of prayer that suggests that there are two independent powers controlling the world (Ber. 33b).

The medieval philosophers also argued against dualism. Saadiah Gaon dealt with the problem explicitly, offering three arguments against the dualistic position. He first showed that if the doctrine of one God is abandoned, there is no reason to restrict the cosmic powers to two. Arguments can then be made for almost any number one chooses. A second objection is that dualism makes unintelligible the fact that there is an ordered world, since, presumably, each power could frustrate the designs of the other. Finally, he argued that we cannot conceive of such powers as gods at all, since each would limit the other (Beliefs and Opinions, 2:2). Other medieval philosophers attacked dualism indirectly through their arguments for the necessary unity of God.

Though there are similarities between Kabbalah and Gnosticism, the kabbalists did not succumb to the temptations of dualism. “On the contrary,” says Gershom Scholem, “all the energy of orthodox Kabbalistic speculation is bent to the task of escaping from dualistic consequences; otherwise they would not have been able to maintain themselves within the Jewish community” (Scholem, Mysticism, 13).

Trinity

The Trinitarian conception of God is associated especially with Christianity. Though Christian theologians normally interpret the Trinity as a doctrine of one God in three persons, Jewish thinkers rejected it categorically as a denial of the divine unity. Since only heretical Jewish sects could even entertain the possibility of a Trinitarian God, most Jewish anti-Trinitarian polemics were directed specifically against Christianity. Occasionally, kabbalistic doctrines seem to have a Trinitarian cast, as is the case in the thought of Abraham Abulafia (ibid., 123 ff.). However, these Trinitarian formulations are always interpreted in such ways that they clearly do not refer to a triune God. Some Shabbateans (see “Shabbetai Zevi”) developed a trinity consisting of the unknown God, the God of Israel, and the Shekhinah (“Divine Presence”; ibid., 287 ff.). Their heresy was vigorously attacked by official Jewish spokesmen.

Pantheism

A far more complex problem is posed by Jewish attitudes toward pantheism. This doctrine teaches that God is the whole
of reality and that all reality is God. Because it does not involve any polytheistic notions and seems, therefore, compatible with standard Jewish doctrines about God's unity, pantheism found occasional followers among even highly respected Jewish thinkers. It also evoked great opposition, because it denies some of the fundamentals of Jewish monotheism. The pantheistic God is not a separate being who transcends the world, nor is he even a being who is immanent in the world. He is identical with the totality of the world. He is not a personal God; he neither commands men nor seeks their obedience. Consequently, there are almost no instances of pure pantheism within the normative Jewish tradition, though pantheistic tendencies have appeared at various times. They derive from an overemphasis on the immanence of God or an excessive stress on the nothingness of the world. They must be considered in any account of Jewish conceptions of God. Hermann Cohen expressed the extreme view of many thinkers when he stated categorically "Pantheism is not religion" (see Ethik des reinen Willens [1921], 456–66). Nevertheless, one can find various traces of pantheistic thought, if not actual pantheism, in many deeply pious Jewish thinkers. Some scholars attempted to put a pantheistic interpretation on the rabbincic use of Makom ("Place") as a name for God because "He is the place of the world, but the world is not His place" (Gen. R. 68). (The original significance of Makom as a divine name has no pantheistic connotations.) Philo also spoke of God as "Place" and for this reason is considered by some interpreters to have a pantheistic doctrine. H.A. Wolfson however, argues that for Philo the doctrine that God is the place of the world means that "God is everywhere in the corporeal world, thereby exercising His individual providence, but He is no part of the corporeal world and is unlike anything in it" (see his Philo [1947], 245ff.). The elements of pantheism which appeared periodically in the history of Jewish thought were almost always tempered by the use of theistic language and adjustments to theistic claims. Solomon ibn Gabirol conceived of reality as a graded continuum, moving from the Godhead through a series of levels of being down to the corporeal world (Mekor Hayyim, passim). His system seems pantheistic, because it treats all reality as one continuous emanation of the divine substance. Nevertheless, in his general religious orientation he returns to standard conceptions of a personal God who is the creator of the world. The thought of Abraham Ibn Ezra exhibits a similar ambiguity. He used purely pantheistic language when he said that "God is the One. He is the creator of all, and He is all… God is all and all comes from Him" (Commentary to Genesis, 1:26; to Exodus, 23:21). Yet, there are countless places in his writings where he also uses strictly conventional theistic terminology. Wherever there is strong neoplatonic influence on Jewish thought a suggestion of pantheism is usually present. Pantheism also appears in mystical doctrines that stress the immanence of God. In the Kabbalah there is an ongoing struggle between pantheistic and theistic tendencies. The former often provide the doctrinal base of a kabbalistic system, while the latter determine the language in which the system is expressed. Scholem states, "In the history of Kabbalism, theistic and pantheistic trends have frequently contended for mastery. This fact is sometimes obscured because the representatives of pantheism have generally endeavored to speak the language of theism; cases of writers who openly put forward pantheistic view are rare… The author of the Zohar inclines toward pantheism… On the whole, his language is that of the theist, and some penetration is needed to lift its hidden and lambent pantheistic core to the light" (Mysticism, 222). The same tendency can be observed in Hasidism. In a key passage R. Shneur Zalman of Liady asserted that "there is truly nothing besides Him" (Tanya, Shaar ha-Yihod ve-ha-Emunah, ch. 3); yet, he can hardly be called a pure pantheist when we consider the many conventional theistic formulations in his writings. Only in the case of Nachman Krochmal does there seem to be an instance of genuine Jewish pantheism. Krochmal ascribed true existence only to God, who is Absolute Spirit. In his thought only the Absolute Spirit truly exists, and he denies any other mode of existence. Krochmal was far less inclined than earlier Jewish thinkers to adopt language appropriate to a doctrine of a personal, theistic God.

**Deism**

Deism was still another conception of God that confronted Jewish theology. Deistic doctrine contains two main elements. First is the view that God, having created the world, withdrew himself from it completely. This eliminates all claims of divine providence, miracles, and any form of intervention by God in history. Second, deism holds that all the essential truths about God are knowable by unaided natural reason without any dependence on revelation. The vast bulk of Jewish tradition rejected both deistic claims. It is hardly possible to accept the biblical God and still affirm the deistic view that he is not related to the world. Numerous rabbincic texts are attacks on the Greek philosophers who taught such a doctrine. Similar attacks continued throughout the history of Jewish philosophy. Of the medieval philosophers, only Levi ben Gershon seems to have had deistic tendencies.

Among modern Jewish thinkers, Moses Mendelssohn is sometimes classified as a deist because he held that there is a universal natural religion, whose doctrines are known by reason alone. It does not seem correct, however, to identify Mendelssohn's God with the deistic God, because he ascribes to God qualities of personality and involvement with the world that are hardly in accord with standard deism (see Guttmann, Philosophies, 291ff.). However, Mendelssohn is open to varying interpretations, and Leo Baed was not alone when he propounded the view that for Mendelssohn "Judaism had become merely a combination of law and deistic natural religion." Over the centuries of its history Judaism has been exposed to a variety of conceptions of God, but none has ever been strong enough to overcome the basic Jewish commitment to monotheism. Other doctrines have influenced Jewish thought and have left their traces, yet, the monotheistic...
faith has consistently emerged as the normative expression of Jewish religion.

[Marvin Fox]

GOD, NAMES OF. Various Hebrew terms are used for God in the Bible. Some of these are employed in both the generic and specific sense; others are used only as the personal name of the God of Israel. Most of these terms were employed also by the Canaanites, to designate their gods. This is not surprising, since the early Israelites arose in Canaan and spoke “the language of Canaan” (Isa. 19:18). It must be noted, however, that in the Bible these various terms, when used by the Israelites to designate their own deity, refer to one and the same god, the God of Israel. When Joshua told the tribes of Israel, assembled at Shechem, that their ancestors had “served other gods” (Josh. 2:4.2), he was referring to the ancestors of Abraham, as is clear from the context. The God who identified Himself to Moses as YHVH said He was “the God of Abraham, the God of Isaac, and the God of Jacob” (Ex. 3:6). Therefore, the terms “the Fear of Isaac” (perhaps rather, “the Kinsman of Isaac,” Gen. 31:42, 53) and “the Mighty One of Jacob” (Gen. 49:24; Isa. 49:26), are synonymous with YHWH.

ʾEl
The oldest Semitic term for God is ʾel (corresponding to Akkadian ʾilu(m), Canaanite ʾel or ʾil, and Arabic ʾel as an element in personal names). The etymology of the word is obscure. It is commonly thought that the term derived from a root ʾyl or ʾwl, meaning “to be powerful” (cf. yesh ʾel yadi, “It is in the power of my hand,” Gen. 31:29; cf. Deut. 28:32; Micah 2:1). But the converse may be true; since power is an essential element in the concept of deity, the term for deity may have been used in the transferred sense of “power.”

In Akkadian, ʾilu(m), and plural ʾilā and ʾilānu, is used in reference to any individual god as well as to divine beings in general; but it is not employed as the personal name of any god. In Ugaritic Canaanite, however, ʾil occurs much more frequently as the personal name of the highest god ʾel than as the common noun “god” (pl., ʾil; fem., ʾilī). In the Ugaritic myths El is the head of the Canaanite pantheon, the ancestor of the other gods and goddesses, and the creator of the earth and its creatures; but he generally fades into the background and plays a minor role in the preserved myths.

In the Bible ʾel is seldom used as the personal name of God, e.g., “El-Elohei-Yisrael,” “El, the God of [the Patriarch] Israel” (Gen. 33:20; cf. Ps. 146:5). Almost always, ʾel is an appellative, with about the same semantic range as ʾelohim (see below). The word can thus be preceded by the article: ha-ʾel, “the [true] God” (e.g., Ps. 18:31, 33, 48; 57:3). Like ʾelohim, ʾel can be employed in reference to an “alien god” (Deut. 32:12; Mal. 2:11) or a “strange god” (Ps. 44:21; 81:10). It can also have the plural form ʾelim, “heavenly beings” (Ex. 15:11). In contrast to the extremely common word ʾelohim, ʾel occurs relatively seldom, except in archaic or archaizing poetry, as in Job and Psalms. But ʾel and, rarely, ʾelohim are used when the term is modified by one or more adjectives, e.g., “a jealous god” (e.g., Ex. 20:5; 34:14), “a god compassionate and gracious” (e.g., Ex. 34:6; Ps. 86:15). Moreover, ʾel, not ʾelohim, is used when the divine is contrasted with the human (Num. 23:19; Isa. 31:3; Ezek. 28:9; Hos. 11:9; Job 25:4). As an element in theophoric names, ʾel, not ʾelohim, is used often as the first element, e.g., Elijah, Elisha, and Elihu, and even more often as the last element, e.g., Israel, Ishmael, and Samuel. Of special interest are the divine names of which El is the first element: ʾEl ʾElyon, ʾEl ʾOlam, ʾEl Shaddai, ʾEl ʾRoʾi, and ʾEl Berit.

ʾEl ʾElyon
The Hebrew word ʾelyon is an adjective meaning “higher, upper,” e.g., the “upper” pool (Isa. 7:3), the “upper” gate (1 Kings 15:35), and “highest,” e.g., the “highest” of all the kings of the earth (Ps. 89:28). When used in reference to God, the word can rightly be translated as “Most High.” Since in reference to God ʾelyon is never preceded by the article ha- (“the”), it must have been regarded as a proper noun, a name of God. Thus, it can be used as a divine name meaning “the Most High” (e.g.,

672 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7
Deut. 32:8; Isa. 14:14; Ps. 9:3) or in parallelism with YHWH (e.g., Ps. 18:14; 21:8; 83:19), El (Num. 24:16; Ps. 107:11), and Shaddai (Ps. 91:1).

Among the Canaanites, ‘El and Elyon were originally distinct deities. El is attested over 500 times in texts from Ugarit (Ras Shamra) in Northwest Syria from the later second millennium. In a list of gods in an Aramaic treaty of the eighth century B.C.E. from Seirfe in Syria we have ‘l w’lyn, which has been interpreted by some scholars as “El and Elyon,” that is, two distinct gods, and by others as “El, who is Elyon,” which would approximate Genesis 14:18–20. Eusebius, bishop of Caesarea in the fourth century, cites the first-century author Philo of Byblos, who himself cites the "Phoenician Theology" of one Sanchuniathon, to the effect that Elioum was the name of a deified mortal, who became the ancestor of Zeus Dema-

rous. According to Genesis 14:18–20, Melchizedek, king of Salem, was “a priest of God Most High ‘El Elyon,” and he blessed Abraham by “God Most High, Creator of heaven and earth.” Abraham accepted the title “Most High” as merely descriptive of his own God; he spoke by “YHWH, God Most High, Creator of heaven and earth.” Greek inscriptions refer to Zeus Hypsistos, a reflection of Semitic terminology. Whereas for the pagans the term referred to the god who was supreme over the other gods, in Israel it referred to the transcendent nature of the one true God.

‘El ‘Olam
According to Genesis 21:33, “Abraham planted a tamarisk at Beer-Sheba, and invoked there the name of YHWH, the everlasting God.” The Hebrew for “the Everlasting God” is ‘el ‘olam, literally, “the God of an indefinitely long time.” Perhaps it was the title of El as worshiped at the local shrine of Beer-Sheba (cf. El Bethel, “the El of Bethel,” in Gen. 35:7). Then Abraham would have accepted this Canaanite term as descriptive of his true God. In any case, the epithet is logical in the context, which concerns a pact meant for all times. The term by which Abraham invoked YHWH at Beer-Sheba is apparently echoed in Isaiah 40:28, where YHWH is called “the Everlasting God [elohei ‘olam], the Creator of the ends of the earth” (cf. Jer. 10:10, melekh ‘olam, “the everlasting King”; Isa. 26:4, zur ‘olamim, “an everlasting Mountain”). In Deuteronomy 33:27, where “the ancient God” (elohei qedem) parallels “the everlasting arms” (zeroot ‘olam), the text is uncertain. Only in the late passage of Daniel 12:7 (probably translated from Aramaic) is the article used with ‘olam: “The man clothed in linen… swore by Him that liveth for ever (be-hei ha-‘olam).”

‘El Shaddai
According to the literary source of the Pentateuch that the crit-
ics call the “Priestly Document,” YHWH “appeared to Abra-
ham, Isaac, and Jacob as El Shaddai” (Ex. 6:3). The traditional English rendering of the obscure Hebrew term ‘El Shaddai as “God Almighty” goes back to ancient times. The Septuagint renders Shaddai as Pantokrator, “All-powerful”; this is fol-
lowed by the Vulgate’s Omnipotentens, “Omnipotent.” Apparently, this rendering is based on an ancient rabbinic interpretation, such as “who,” and dai, “enough,” i.e., “He who is self-sufficient” (e.g., Hag. 12a); thus, the Jewish translators Aquila and Symmachus in the early centuries C.E. translated shaddai by Greek hikanos, “sufficient, able.” But this definition can hardly be taken as the true etymology of the term. No fully satisfactory explanation of it has yet been accepted by all scholars. The term is often explained as a cognate of the Akkadian word šadu, “mountain,” either in the sense that ‘El Shaddai would mean “God the Mountain” (cf. zur, “Mountain,” an epithet of God, e.g., Deut. 32:4, 30, 37); the abode of “‘El of Heaven,” or ‘El Shaddai could mean “‘El-of-the-Mountain,” i.e., of the cosmic mountain, the abode of “‘El of Heaven.” The ending -ai of shaddai would be adjectival, as in Ugaritic ry (to be vocalized ʿarṣaḥ), “She of the Earth,” the name of one of the three daughters of the Ugaritic El. No Ugaritic equivalent of ‘El Shaddai has yet been found. Deities known as ʿidyin are mentioned in the ninth-eighth century B.C.E. Balaam text unearthed at Deir Alla (probably biblical Sukkoth) in Jordan. In the Bible the full name, ‘El Shaddai, is used only in connection with Abraham (Gen. 17:1), Isaac (Gen. 28:3), and Jacob (Gen. 35:11; 43:14; 48:3). The word Shaddai alone occurs as God’s name in the ancient oracles of Balaam (Num. 24:4, 16), in poetic pas-
sages (Isa. 13:6; Ezek. 1:24; Joel 1:15; Ps. 68:15; 91:1; and 31 times in Job), and even in archaizing prose (Ruth 1:20–21). More-
over, Shaddai is an element in Israelite names with parallels in ancient sources, such as Ammishaddai (“‘My Kinsman is Shaddai”; Num. 1:12) and Zurishaddai (“‘My Mountain is Shaddai”; Num. 1:6).

‘El Ro’i
The divine name ‘El Ro’i occurs in Genesis 16:13. After Hagar was driven away by Sarai (Sarah) and fled into the western Negev, at a certain spring or well she had a vision of God, “and she called YHWH who spoke to her, ‘You are ‘El Ro’i.” The meaning of the word “Ro’i” in this context is obscure. By itself it can be either a noun, “appearance” (1 Sam. 16:12), “spectacle” (Nah. 3:6), or a participle with a suffix of the first person singular, “seeing me,” i.e., who sees me (Job 7:8). Therefore, ‘El Ro’i could mean either “the God of Vision” (who showed Himself to me) or “the God who sees me.” The explanation of the divine name that is given in the second half of the same verse (Gen. 16:13b) is equally obscure. As the Hebrew text now stands, it is usually rendered as “She meant, ‘Have I not gone on seeing after He saw me [aharei ro’i]?” (1 vs. 1962), or, “She meant, ‘Did I not go on seeing here [halom] after He had seen me?’” (E.A. Speiser, Genesis (1964, 177). In the following verse (16:14) it is stated: “Therefore the well was called B‘er-Lahai-Ro’i.” This name is explained in a footnote as “Apparently, ‘The Well of the Living One Who sees me’” (1 vs.). However, on the basis of the name of the well, E.A. Speiser (op. cit., p. 119) would emend the unvocalized Hebrew text of Genesis 16:13, lgm ḫlm ʾryt ʾryt ʾḥry ʾḥry, to read ḫlm ʾḥlm ʾḥy wʾḥy, “Did I really see God, yet remain alive?” The name of the well he would then take to mean, “Well of living sight.” Since the well was in the re-

region occupied by the Ishmaelites (and Hagar was the mother
of Ishmael), the divine name, 'El Rōi, may have been proper to the Ishmaelites rather than to the Israelites.

'El Berit
The divine name 'El Berit (“God of the Covenant”) occurs only in Judges 9:46, where mention is made of “the house [i.e., temple] of 'El Berit” at Shechem. This is certainly the same sanctuary that is called “the house [i.e., temple] of Baal Berit” in 9:4. From the treaty of the temple of Baal-Berith the citizens of Shechem gave 70 silver shekels to Abimelech, the son of Jerubbaba, another name of Gideon) to aid him in his fight for the sole kingship of Shechem against the other sons of Jerubbaba (ibid.). A few years later, the rebellious citizens of Shechem were burned to death by Abimelech in the temple of El-Berith where they had taken refuge (9:46–49).

The Deuteronomist editor of the Book of Judges regarded Baal-Berith as a pagan god. But the case is not quite that simple. First of all, in early Israel the word ba‘al, meaning “owner, master, lord,” was often regarded more or less as a synonym of adon, “lord” (see below under “Adonai”), and so it could be used legitimately as a title of YHWH. Among the sons of King Saul, who was certainly not a worshiper of a pagan god, were those who bore the names of Merib-Baal, “the Lord contends” (?), and Eshbaal (originally, ‘ish-ba‘al), “man of the Lord,” 1 Chron. 8:33, 34; 9:39, 40; and even one of King David’s sons was called Beeliada (originally ba‘al-yada‘), “the Lord knows” (1 Chron. 14:7), who is called Eliada (‘el-yada‘), “God knows,” in 1 Samuel 5:16. Only after the time of Solomon was the word “Ba‘al” recognized in Israel as the specific title of the Canaanite storm-god Hadad, and thereafter avoided by true Israelites as a title for YHWH. (Scribal tradition later changed the ba‘al in older Israelite names to boshet (“shame”) in the Books of Samuel and Kings; see “Euphemism and Dysphemism.”) It is likewise uncertain what the berit (“covenant”) refers to in the words Ba‘al-Berith or El-Berith. Shechem was regarded as a sacred site by Abraham and Jacob, each of whom erected an altar there (Gen. 12:6–7; 33:19–20). In addition, Jacob’s acquisition of land at Shechem (Gen. 33:19; cf. 48:22) and the connubium between the sons of Jacob and the sons of Hamor (as the Shechemites were then called) imply certain covenant agreements. Moreover, the strange name, “sons of Hamor” (benei hamor, “sons of the ass”), who is said to be the “father of Shechem” (Gen. 34:6), seems to have something to do with covenant making. From the “El-Amarna Letters (c. 1400 B.C.E.) it is known that there was a strong Hurrian element in Shechem. The Septuagint is therefore probably correct in reading bēry (“the Horite,” i.e., the Hurrian) instead of hērwy (“the Hivite”) of the Masoretic Text in describing the ethnic origin of “Shechem” (Gen. 34:2); moreover, the uncircumcised Shechemites (Gen. 34:14, 24) were most likely not Semitic Canaanites (see E.A. Speiser, op. cit., 267). It is also known that the slaughtering of an ass played a role among the Hurrians in the making of a covenant. Thus, Baal-Berith or El-Berith may have been regarded by the Shechemites as the divine protector of covanants.

Did the early Israelites perhaps regard El-Berith as the God of the covenant made between YHWH and Israel? It is a noteworthy fact that Joshua made a covenant with all Israel precisely at Shechem, the city sacred to El-Berith, “the God of the Covenant” (Josh. 8:30–35; 24:1–28). Therefore, even though the late Deuteronomist editor of the Book of Judges considered Baal-Berith one of the pagan Canaanite Ba‘alim, this term may well have been regarded in early Israel as one of the titles of YHWH. A god iblīt, found in a second millennium hymn, has been interpreted variously as El-berith and as Iībrāt, an old Semitic deity.

'Eloah, 'Elohim
The word ‘elohah “God” and its plural, ‘elohim, is apparently a lengthened form of ‘el (cf. Aramaic ‘elah, Arabic ‘ilāh). The singular ‘elohah is of relatively rare occurrence in the Bible outside of Job, where it is found about 40 times. It is very seldom used in reference to a foreign god and then only in a late period (Dan. 11:37ff.; 11 Chron. 32:15). In all other cases it refers to the God of Israel (e.g., Deut. 3:21; Ps. 50:22; 139:19; Prov. 30:5; Job 1:4, 24). The plural form ‘elohim is used not only of pagan “gods” (e.g., Ex. 12:12; 18:11; 20:3), but also of an individual pagan “god” (Judg. 11:24; 1 Kings 12:2ff.) and even of a “goddess” (1 Kings 11:5). In reference to Israel’s “god” it is used extremely often—more than 2,000 times—and often with the article, ha-‘elohim, “the [true] god.” Occasionally, the plural form ‘elohim, even when used of the god of Israel, is construed with a plural verb or adjective (e.g., Gen. 20:13; 35:7; Ex. 32:4, 8; 1 Sam. 7:23; Ps. 58:12), especially in the expression ‘elohim hayyim, “the living God.” In the vast majority of cases, however, the plural form is treated as if it were a noun in the singular. The odd fact that Hebrew uses a plural noun to designate the god of Israel has been explained in various ways. Some scholars take it as a plural that expresses an abstract idea (e.g., zekunim, “old age”; ne‘urim, “time of youth”), so that ‘Elohim would really mean “the Divinity.” More likely, however, it came from general Canaanite usage. In the el-Amarna Letters Pharaoh is often addressed as “my gods [ilānīya] the sun-god.” In the ancient Near East of the second half of the second millennium B.C.E. there was a certain trend toward quasi-monotheism, and any god could be given the attributes of any other god, so that an individual god could be addressed as ‘ēlōhah, “my gods,” “my pantheon,” or ‘adonai, “my lords.” The early Israelites felt no inconsistency in referring to their god in these terms. The word ‘elohim is employed also to describe someone or something as godlike, preternatural, or extraordinarily great, e.g., the ghost of Samuel (1 Sam. 28:13; cf. Isa. 8:19 “spirits”), the house of David (Zech. 12:8), and Rachel’s contest with her sister (Gen. 30:8).

Adonai
The Hebrew word ‘adon is correctly rendered in English as “lord.” In the Bible it is often used in reference to any human being who had authority, such as the ruler of a country (Gen. 42:30), the master of a slave (Gen. 24:96), and the husband of...
a wife (Gen. 18:12). In formal polite style a man, not necessarily a superior, was addressed as "my lord" (adoni; e.g., Gen. 23:6, 15; 24:18); and several men could be addressed as "my lords" (adonai; e.g., Gen. 19:2). Since God is "Lord [adon] of all the earth" (Josh. 3:11), He is addressed and spoken of as "my Lord" – in Hebrew, Adonai (literally, "my Lord," in the plural in keeping with the plural form, Elohim, and always with the "pausal" form of a long a at the end). Originally, "adonai," especially in the combined form "adonai ʾYHWH" (e.g., Gen. 15:2; 8; Deut. 3:24; 9:26), was no doubt understood as "my Lord." But later, "Adonai" was taken to be a name of God, the "Lord."

**YHWH**

The personal name of the God of Israel is written in the Hebrew Bible with the four consonants ʾYHWH and is referred to as the "Tetragrammaton." At least until the destruction of the First Temple in 586 B.C.E. this name was regularly pronounced with its proper vowels, as is clear from the "Lachish Letters, written shortly before that date. But at least by the third century B.C.E. the pronunciation of the name ʾYHWH was avoided, and Adonai, "the Lord," was substituted for it, as evidenced by the use of the Greek word Kyrios, "Lord," for ʾYHWH in the Septuagint, the translation of the Hebrew Scriptures that was begun by Greek-speaking Jews in that century. Where the combined form 'Adonai ʾYHWH occurs in the Bible, this was read as 'Adonai ʾElohim, "Lord God." In the early Middle Ages, when the consonantal text of the Bible was supplied with vowel points to facilitate its correct traditional reading, the vocal points for 'Adonai with one variation – a sheva with the initial yod of ʾYHWH instead of the hataf-patah under the aleph of 'Adonai – were used for ʾYHWH, thus producing the form YeHoWaH. When Christian scholars of Europe first began to study Hebrew, they did not understand what this really meant, and they introduced the hybrid name "Jehovah." In order to avoid pronouncing even the sacred name 'Adonai for ʾYHWH, the custom was later introduced of saying simply in Hebrew ha-Shem (or Aramaic Shemā, "the Name") even in such an expression as "Blessed be he that cometh in the name of ʾYHWH" (Ps. 118:26). The avoidance of pronouncing the name ʾYHWH is generally ascribed to a sense of reverence. More precisely, it was caused by a misunderstanding of the Third Commandment (Ex. 20:7; Deut. 5:11) as meaning "Thou shalt not take the name of ʾYHWH thy God in vain," whereas it really means either "You shall not swear falsely by the name of ʾYHWH your God" (JPS) or more likely, "Do not speak the name of ʾYHWH your god, to that which is false," i.e., do not identify ʾYHWH with any other god.

The true pronunciation of the name ʾYHWH was never lost. Several early Greek writers of the Christian Church testify that the name was pronounced "Yahweh." This is confirmed, at least for the vowel of the first syllable of the name, by the shorter form Yah, which is sometimes used in poetry (e.g., Ex. 15:2) and the -yahu or -yah that serves as the final syllable in very many Hebrew names. In the opinion of many scholars, ʾYHWH is a verbal form of the root hwh, which is an older variant of the root hyh "to be." The vowel of the first syllable shows that the verb is used in the form of a future-present causative hiphil, and must therefore mean "He causes to be, He brings into existence." The explanation of the name as given in Exodus 3:14, Eheyeh-Asher-Eheyeh, "I-Am-Who-I-Am," offers a folk etymology, common in biblical explanation of names, rather than a strictly scientific one. Like many other Hebrew names in the Bible, the name Yahweh is no doubt a shortened form of what was originally a longer name. It has been suggested that the original, full form of the name was something like Yahweh-Asher-Yhweh, "He brings into existence whatever exists"; or Yahweh Zevaiot (I Sam. 1:3, 11), which really means "He brings the hosts [of heaven – or of Israel?] into existence." "The Lord of Hosts," the traditional translation of the latter name, is doubtful.

According to the documentary hypothesis, the literary sources in the Pentateuch known as the Elohist and the Priestly Document never use the name Yahweh for God until it is revealed to Moses (Ex. 3:13; 6:2–3); but the Yahwist source uses it from Genesis 2:4 on and puts the name in Eve's declaration, "I along with Yahweh have made a man," thus implying that it was known to the first human generation (Gen. 41; cf. 4:26). The apparent purpose of Exodus 6:2–3 is to glorify Moses at the expense of the patriarchal traditions.

**Divine Epithets**

Besides the above-mentioned divine names, the god of Israel is also given several epithets or appellatives that are descriptive of His nature. Yahweh shares several of these epithets with other ancient divinities. Only a few of these can be mentioned here.

Israel's god is "Creator of heaven and earth" (Gen. 14:19, 22). He is also called "the Creator of Israel" (Isa. 43:15 – unless this is to be emended to "the Mighty One of Israel; cf. Isa. 1:24); for His creative activity was regarded, not only as His initial bringing of the world into existence, but also as His continuous governing of the world (Isa. 29:16; 45:9; 64:7; Jer. 37:5; 31:35–36). Like some of his Canaanite and Phoenician contemporaries He is called "the Holy One" (Isa. 40:25; Hab. 3:3); Yahweh is specifically, "the Holy One of Israel" (e.g., Isa. 1:4; 51:19, 24). In common with numerous Mesopotamian gods, Yahweh is called "Shepherd." He cares for his flock as loving care for "the Shepherd of Israel" (Ps. 80:2; cf. 28:9; Hos. 4:16). Another common title that ʾYHWH shares with Mesopotamian gods is "the Mountain" (e.g., Deut. 32:4; 18, 31, 37; 1 Sam. 2:2; 11 Sam. 22:32 (= Ps. 18:32); Isa. 44:8), thus emphasizing Yahweh's enduring power and the place where one finds refuge. The God of Israel is very often spoken of or addressed as "King" or "King of Israel," thus describing His sovereign rule over His Chosen People, to give them peace, happiness, and salvation (e.g., Isa. 41:2; 44:6; 52:7). The so-called "Enthronement Psalms of ʾYHWH" (Ps. 47:93; 96–99) emphasize the Lord's kingship over Israel. Prophetic oracles are proclaimed as pronouncements made by His Royal Majesty (Jer. 46:18; 48:15;
51:57). Although before the time of Saul, Israel generally rejected the idea of human kingship as an encroachment on the Lord’s sole rule over Israel (1 Sam. 8:7; 12:12), at a later period the Chronicler did not hesitate to speak of the Davidic kings as the Lord’s representatives seated on the royal “throne of YHWH” (e.g., 1 Chron. 17:14; 28:5; 29:23). Not only the nation, but also individual Israelites addressed the Lord as “King” (Ps. 53:4; 44:5; 84:4). It is disputed whether the term “King” was used of YHWH before the monarchical period in Israel. This title for YHWH is rare in the Pentateuch (Ex. 15:18; Num. 23:21; Deut. 33:5). Gideon, in refusing to “rule over” Israel, does not speak of YHWH as the king of Israel but says, “It is YHWH who is to rule over you” (Judg. 8:22–23). The term “King” is not mentioned in this passage. The phrase “Ancient of days,” which is employed as an epithet of God in modern times, is biblical in origin (Dan. 7:9, 13, 22). A careful reading of these passages shows that “Ancient of Days” was yet an epithet of Yahweh. For the use of the names of God as a basis for the documentary hypothesis see *Bible, cols. 906–7.

**Apocrypha**

In the Apocrypha, as in the Hebrew Bible, the most common names are “God” (Gr. Theos; in Ben Sirah usually Elohim but sometimes El), “Lord” (Gr. Kyrios, which no doubt generally stands for Adonai; but Ben Sira commonly has YHWH, represented by three yods in the medieval mss.), “the Most High” (Gr. ho Hypsistos, probably for Heb. El ‘Elyon, but perhaps at times for Ha-Gavoha as in the Talmud), “the Lord Almighty” (Gr. Kyrios Pantokrator for Heb. YHWH Zevaoi) or simply “the Almighty” (Gr. ho Pantokrator for Heb. Zevaoi alone), “the Eternal One” (Gr. ho Aionios), “the Creator” (Gr. ho Yoz), or simply “Creator” (Gr. ho Yoz), “the Rock of Isaac” (Heb. Elyon), “The Rock of the Ages” (Gr. ho Yoz, so called), “the Rock (Gr. ho Yoz, so called),” “the Rock (Gr. ho Yoz, so called),” “the One Rich in Forgiveness,” because again...
not only naturally repealed the decree, but demonstratively ordained that the divine name be entered even in monetary bonds, the opening formula being "In such and such a year of Johanan, high priest to the Most High God." The rabbis, however, forbade this practice since "tomorrow a man will pay his debt and the bond (with the name of God) will be discarded on a dunghill"; the day of the prohibition was actually made an annual festival (R.H 18b).

It is, however, specifically stated that this prohibition refers only to seven biblical names of God. They are 'El, 'Elōhim (also with suffixes), "I am that I am" (Ex. 3:14), 'Adonai, the Tetragrammaton, Shaddai, and Zevaot (R. Yose disagrees with this last, Shev. 35a–b). The passage states explicitly that all other names and descriptions of God by attributes may be written freely. Despite this, it became the accepted custom among Orthodox Jews to use variations of most of those names in speech, particularly 'Elōkim for 'Elōhim, and Ha-Shem ("the Name"); and, for reasons of assonance, 'Adoshem for Adonai. The adoption of Ha-Shem is probably due to a misunderstanding of a passage in the liturgy of the Day of Atonement, the Avodah. It includes the formula of the confession of the high priest on that day. Since on that occasion he uttered the Ineffable Name, the text has "Oh, Ha-Shem, I have sinned," etc. The meaning is probably "O [here he mentioned the Ineffable Name] I have sinned," and from this developed the custom of using Ha-Shem for 'Adonai, which is in itself a substitute for the Tetragrammaton (see also Allon, Mehkarim, 1 (1957), 194ff.; S. Lieberman, Tosefta ki-Feshutah (Môdêd), 4 (1962), 755).

"Shabbetai b. Meir ha-Kohen (first half 17th century) states emphatically that the prohibition of erasure of the divine name applies only to the names in Hebrew but not the vernacular (Siftei Kohan to Sh. Ar., YD 1798; cf. Pithei Teshuvah to YD 2769), and this is repeated as late as the 19th century by R. Akiva Eger (novellae, ad loc.). Jehiel Michael Epstein, however, in his Arukh ha-Shulhan (hm 27:3) inveighs vehemently against the practice of writing the Divine Name even in vernacular in correspondence, calling it an "exceedingly grave offense." As a result the custom has become widespread among extremely particular Jews not to write the word God or any other name of God, even in the vernacular, in full.

Rabbinical Names of God

The rabbis evolved a number of additional names of God. All of them, without exception, are references to His attributes, but curiously enough they are not included in the list of the permitted names enumerated in the passage in Shevuot: "the Great, the Mighty, the Revered, the Majestic," etc. (35a–b). The most common is Ha-Kadosh baraikh Hu ("the Holy One, blessed be He"; in Aramaic, Kudsha berikh Hu). It is an abbreviation of "the Supreme King of kings, the Holy One blessed be He." The full formula is found in the Mishnah (e.g., Sanh. 4:5; Avot 3:1), but more often the abbreviation is found (e.g., Ned. 3:11; Sot. 5:5; Avot 3:2; 5:4; and Uk. 3:12); it is by far the most common appellation of God in the Midrash. Another name is Ribbono shel Olam ("Sovereign of the Universe"), normally used as an introduction to a supplication, as in the prayer of "Onias ha-Me'agel for rain (Ta'an. 3:8). One of the most interesting names is Ha-Makom (lit. "the place," i.e., the Omnipresent; Av. Zar. 40b; Nid. 49b; Ber. 16b), and it is explained in the Midrash: "R. Huna in the name of R. Ammi said, 'Why do we use a circumlocution for the name of the Holy One, blessed be He, and call him Makom? Because He is the place of His world, but this world is not His [only] place"' (Gen. R. 68:49). The name Ha-Rahamman ("the All-Merciful") is commonly used in the liturgy, particularly in the *Grace after Meals. In the Talmud, the Aramaic form, Rahmana, is also found (Git. 17a; Ket. 45a), as it is in several prayers from the geonic period. So also Shamayim ("heaven") as in Yirat Shamayim ("Fear of God"); Ber. 16b), however Avina she-ba-Shamayim ("Our Father in Heaven"); Yoma 8:9) is also used. According to the Talmud (Shab. 10b) Shalom ("Peace") is also one of the names of God, as is the word Ani ("I") in Mishnah Sukkah 4:5, and in Hillel's statement (Suk. 53a) "If Ani is here, all is here," it is given the same connotation.

Reference is made to a "Name of 12 letters" and a "Name of 42 letters" (Ked. 71a). Of the former, it is stated that "it used to be entrusted to everyone, but when unruly men increased, it was confided only to the piouos of the priesthood and they used to pronounce it indistinctly ("swallowed it") while their priestly brethren were chanting the benediction." R. Tarfon, who was a kohen, states that he once heard the high priest thus muttering it. Similarly the 42-lettered Name is entrusted only to those of exceptionally high moral character. Rashbi (ad loc.) states that these names have been lost. According to the kabbalists the prayer Anna be-Khovah, found in the prayer book, and consisting of 42 words, is connected with this latter name. Finally it should be mentioned that to the rabbis it is definite that the Tetragrammaton denotes God in His attribute of mercy and 'Elōhim (which in fact means a "judge") (cf. Ex. 22:8, 27)) denotes Him in His attribute of justice.

[Louis Isaac Rabinowitz]

In Kabbalah

The names of God play different roles in the kabbalistic literature. According to a magical tradition adopted by *Naḥmanides, there is a reading of the Torah as a continuum of divine names. Though he asserted that this reading is lost, other kabbalists, especially the ecstatic ones, adopted this theory in order to interpret the biblical verses as combinations of divine names. Following some discussions found in "Hasidei Ashkenaz, in this kabbalistic school, the divine names, the Tetragrammaton, and the name of 72 letters, serve as a vital part of the mystical technique. According to the theosophical-theurgical kabbalists, the various divine names point to each of the divine powers, or sefirot, and they serve both as symbols for those powers and instruments to unify them. In a few cases, kabbalists assume that in the Bible there is no name that points to the highest divine realm. In practical Kabbalah,
recipes based on divine names, imagined to achieve a variety of magical acts, abound.

[Moshe Idel (2nd ed.)]

**In Medieval Jewish Philosophy**

The multiple names of God in the Bible posed a special problem for medieval Jewish philosophers. Concerned to defend and explicate God’s absolute unity, they found it necessary to treat the divine names in a way that eliminates any suggestion of plurality in God’s being. They either reduced the multiple names to a single common meaning or showed that, among the numerous names, one alone was the proper and exclusive name of God. *Saadia Gaon held that the two most widely used scriptural names, YHWH and ‘Elohim, have a single meaning. This is in marked contrast to the above-mentioned teaching that one name stands for God’s attribute of mercy and the other for His attribute of justice.

*Judah Halevi, Abraham *Ibn Daud, *Maimonides, and Joseph *Albo all emphasized the Tetragrammaton as the only proper name of God. Judah Halevi held that all the other names “are predicates and attributive descriptions, derived from the way His creatures are affected by His decrees and measures” (Kuzari, 2:2; 41–3).

Maimonides declared that, except for YHWH, “All the names of God that are to be found in any of the books derive from actions” (Guide of the Perplexed, 1:61–64), but only the Tetragrammaton “gives a clear and unequivocal indication of His essence,” a view which is shared by Albo (Sefer ha-Ikkarim, 2:28). For Halevi the meaning of YHWH is hidden, and for Ibn Daud it refers to God as master of the universe. The philosophers identified God as creator, first cause, first mover, first being, or necessary existence, but none of these technical philosophic terms can be considered names of God.

**In Modern Jewish Philosophy**

From Moses *Mendelssohn through Martin *Buber, modern Jewish philosophy exhibits two main tendencies with respect to the names of God. One line, moving from Mendelssohn through such thinkers as Solomon *Formstecher, Samuel *Hirsh, Nachman *Krochmal, and Hermann *Cohen, treats the names of God as primarily metaphysical. In his German translation of the Bible, Mendelssohn renders YHWH as the “Eternal”; Formstecher speaks of God as the “World-Soul”; and Krochmal conceives Him as “Absolute Spirit.” In his extensive discussion of the traditional divine names, Cohen interprets all of them as pointing to God’s unity and His uniqueness. YHWH refers to God as absolute Being; Ehyeh-asher-ehyeh (Ex. 3:14) relates to His eternal and unchanging nature; and Shekhinah, translated by Cohen as “Absolute Rest,” refers to the unchanging divine nature.

In contrast, Franz *Rosenzweig and Martin Buber view the names as primarily religious and personalistic. In their translation of the Bible, they render YHWH by the personal pronouns YOU or HE. Ehyeh names the God who is always present to man and constantly participates in human concerns. Thus, Buber interprets Exodus 3:14 as saying, “I again and again stand by those whom I befriend; and I would have you know indeed that I befriend you.” They consider the philosophico-symbolic interpretation of the names as seriously inadequate in its failure to grasp the personal-religious reality which is fundamental to Judaism. Turning in a radically different direction, Mordecai *Kaplan developed a purely naturalistic conception of God. He refers to Him as “The Power that makes for salvation” and interprets this as “The Power that makes for the fulfillment of all valid ideals.”

[Marvin Fox]

**GODAL, ERIC**

(1898–1969), German cartoonist. Born in Berlin, Godal began drawing topical illustrations and cartoons for Acht Uhr Abendblatt when in his twenties. He drew some of the first cartoons of Hitler and his stormtroopers, and when the Nazis seized power in 1933 escaped from Berlin when the men sent to arrest him surrounded the wrong house. Godal went to Prague, where he worked for the anti-Nazi daily *Prager Mittag* and for the satirical weekly *Der Simplicius* which had been founded as an answer to the famous weekly *Simulcismus* of Munich, which had by then accepted the Nazi line. Godal reached the U.S. before World War II and contributed to various papers there. He returned to Germany in 1954 and worked for the *Hamburger Abendblatt* and the woman’s magazine *Constanze.* Together with Rolf Italiaander he published the book *Teenagers* in 1958, combining essays and illustrations which attempted to explain the feelings of the first generation born after World War II. Godal visited Israel in 1968 to write a series of illustrated articles. His memoirs, *Kein Talent zum Tellerwaescher,* were published in 1969.

**GODDARD, PAULETTE**

(Pauline Marion Levy; 1911–1990), U.S. film actress. Born in Long Island, New York, Goddard was the only child of a Mormon mother and a Jewish father. She began her public career as a child model at a local depart-
ment store and debuted in the Ziegfeld Follies at age 13. She went to Hollywood in 1931, where she had bit parts in several films. In 1932 she appeared as one of the 20 original chorus girls, known as the “Goldwyn Girls,” in the Eddie Cantor film The Kid from Spain, along with such young starlets as Lucille Ball, Betty Grable, and Jane Wyman. That year, Charlie Chaplin chose her to star opposite him as the waif in Modern Times (1936). They were subsequently secretly married, but by 1940 the couple split up and they were divorced in 1942. In 1939 her performance in the films The Women and The Cat and the Canary landed her a 10-year contract with Paramount, and she rose to become one of the studio’s top film stars during the 1940s. She starred once again with Chaplin in his first talking film, The Great Dictator (1940). In 1944 she married actor-director Burgess Meredith (they divorced in 1950). They produced and starred in Diary of a Chambermaid (1946). Among Goddard’s other films were The Ghost Breakers (1940); Northwest Mounted Police (1940); Second Chorus (1940); Pot o’ Gold (1941); Hold Back the Dawn (1941); Nothing but the Truth (1941); The Lady Has Plans (1942); Reap the Wild Wind (1942); The Forest Rangers (1942); So Proudly We Hail (1943), for which she was nominated for a Best Supporting Actress Oscar; The Crystal Ball (1943); Standing Room Only (1944); I Love a Soldier (1944); Kitty (1945); Suddenly It’s Spring (1947); Unconquered (1947); An Ideal Husband (1947); On Our Merry Way (1948); Hazard (1948); Bride of Vengeance (1949); Anna Lucasta (1949); Charge of the Lancers (1954); and The Unholy Four (1954).

Goddard left the film industry in the mid-1950s and moved to Europe, where, in 1958, she married novelist Erich Maria Remarque. She made her last film appearance in 1964 in Time of Indifference and in 1972 performed in the TV movie The Snoop Sisters. Upon her death, she bequeathed a large amount of money to the Hebrew University and to New York University.

[Godine, Felipe]

GODEFROI, MICHAEL HENRI (1813–1882), Dutch lawyer and statesman, who was the first Jew to hold a cabinet post in Holland and the first Jewish member of the Second Chamber of Parliament. Born in Telchan, Belorussia, Godiner moved to Warsaw as a teenager, became active in the Russian Social Revolutionary movement, was recruited into the Russian army in 1912, and was wounded in battle two years later. In 1918, he was taken prisoner by the Austrian army but escaped and rejoined the Russian army. From 1921 to 1923 he attended a Soviet literary institute in Moscow. His first short stories, published after 1921, dealt with the Russian civil war and employed the impressionistic symbolic style of the Kiev novelists Dov *Bergelson and *Der Nister. His later short stories followed the requirements of socialist realism. Godiner’s most popular novel was Der Mensch mit der Biks (“The Man with the Rifle,” 2 vols., 1928). He translated Russian novels into Yiddish and wrote a drama Dzehim Kuperkop (“Jim Cooperkop,” 1930). Godiner traveled to Birodzhan several times and helped found Jewish schools and libraries there. In June, 1941, when the Germans invaded Russia, he left Moscow to fight with the partisans and died in battle. His short novel, Zaveler Trakt (“Blocked Highway,” 1938), was reprinted posthumously in New York in 1950.

[Godik, Giora]

GODÍNEZ, FELIPE (c. 1585–c. 1639), Spanish playwright. Born in Moguer, Godínez became famous as a preacher in Seville. Jewish sympathies remained strong in his “New Christian” family: one of his grandparents was penanced by the Inquisition and an uncle fled to North Africa, where he reverted to Judaism. Old Testament themes inspired a number of Godínez’ plays – El divino Isaac, Las lágrimas de David, Amán y Mardoqueo o la reina Esther, Los trabajos de Job, and Judit y Holofernes. Of these, Los trabajos de Job is memorable for its pathetic evocation of the trials of its hero. Godínez also wrote works on the lives of Christian saints, as well as some comedies of intrigue typical of the period, notably Aun de noche alumbra.

[Henriette Boas / Bart Wallet (2nd ed.)]
el sol. The biblical works are considered his best. Godínez was arrested by the Inquisition and in November 1624 appeared at an auto-de-fé – one of the very few dramatists of the Spanish Golden Age to appear at an auto-de-fé in person. His property was confiscated, and he was deprived of his ecclesiastical offices and imprisoned for two years. After his release he moved to Madrid, where he was accepted in literary circles, although writers like Lope de Vega (1562–1635) satirized him because of his Jewish origin. Godínez nevertheless agreed to deliver Lope de Vega's funeral oration.

[Kenneth R. Scholberg]

**Godowsky, Leopold** (1870–1945), pianist. Born in Sosnówka near Vilna, he was a child prodigy and early embarked on a widely acclaimed international concert career. His enquiries into the fundamentals of pianistic technique led him to the composition of etudes and pieces for both the elementary and virtuoso level, with special attention to left-hand technique. He also edited some of the standard etude works.

His son, also called Leopold Godowsky (1900–1983), was a U.S. violinist and co-inventor, with Leopold *Mannes*, of the Kodachrome color process. Though photography was only Godowsky’s hobby, he was best known for his pioneering work in the development of color film. He was born in Chicago, but spent much of his youth in Berlin and in Vienna, where his father held prominent positions for several years. Godowsky met Leopold Mannes in a school in Connecticut when they were both 16 years old. While still at school, they began experimenting to find a successful method of producing color film. They built a camera with three lenses and three filters, one for each primary color, and superimposed them on a single plate. Eventually, they produced a double-layered plate on which part of the spectrum could be photographed. Working at the Eastman Kodak laboratories in Rochester, N.Y., they succeeded by 1935 in developing three-color motion-picture film, and soon after followed with the process for stills. In 1938 they initiated research for Kodacolor, Ektacolor, and Ektachrome film and in 1939 they left Rochester. Godowsky built his own laboratory on his estate in Connecticut for further experiments. In addition, Godowsky was the first violinist of the San Francisco Symphony Orchestra and played in the Los Angeles Philharmonic.

**“Goebbels, Paul Josef”** (1897–1945), Nazi leader and propaganda minister. Exempted from military service during World War I because of his clubfoot, Goebbels received a Ph.D. in literature and history in 1920. After some political searching, he made several unsuccessful attempts to write for liberal papers, most of which happened to be owned by Jews. He joined the Nazi Party in 1922. He never forgot his failure with liberal newspapers. After some soul-searching, Goebbels resolutely backed Hitler in the party’s factional intrigues. In 1926 he was appointed Gauleiter (“district head”) of Berlin, where he succeeded in building a strong party organization out of insignificant beginnings. The Nazi success at the polls in the early 1930s was due to a considerable extent to the propagandist genius of Goebbels, who had become chief of the party’s propaganda department at the beginning of 1929. Appointed minister for people’s information and propaganda after the Nazi accession to power, he became virtual dictator of Germany’s communications media and artistic life. Goebbels’ Manichean philosophy of a charismatic hero-leader opposed by powers of darkness (the latter personified by the Jew) was reflected in his propaganda. He was one of the instigators of the anti-Jewish boycott of April 1, 1933, and of *Kristallnacht* (1938), organizing the latter in Berlin and participating in the Nazi conference dealing with the aftermath of the pogrom, in which heavy sanctions were imposed on the Jews. Continually demanding new oppressive measures against the Jews, he was among the initiators of the *Final Solution* (see *Holocaust, General Survey*), doing his best to incite the killers by various propaganda methods. As Gauleiter of Berlin he strove to make it judenrein, i.e., “cleansed” it of its Jewish population. Goebbels stayed with Hitler to the end, killing himself and his family after Hitler’s suicide.

[Yehuda Reshef]

**“Goering, Hermann Wilhelm”** (1893–1946), Nazi leader. A fighter pilot during World War I, Goering was awarded the highest military decoration (“Pour le Mérite”). In 1922 he joined the Nazi Party, becoming the first leader of its storm troops (SA). He was at Hitler’s side during the Munich putsch of Nov. 9, 1923, and suffered a thigh wound, which caused his life-long drug addiction. He stood by Hitler through all the party’s vicissitudes, boasting of being his leader’s most faithful paladin. He participated in the intrigues that brought the Nazis to power and was appointed Hitler’s minister of air transport and Prussian prime minister. In the latter capacity he formed the *Gestapo*. Goering created the Nazi Air Force (Luftwaffe) and planned its strategies; he was as much responsible for its initial successes as for its later failures. In 1936 he was appointed “Plenipotentiary for the Four-Year Plan” to prepare Germany economically for war. Goering decided to use the property of German Jewry for financing Germany’s rearmament, and he utilized his office to organize its expropriation. In the spring of 1938 he promulgated a set of orders obli-
ing German Jewry, which by then included the Jews of Austria, to declare and register their property. The *Kristallnacht in 1938 gave him the opportunity to realize his plans and set his “aryanization” into action to expropriate Jewish businesses and property. On Nov. 12, 1938, Goering convened a conference of Nazi officials and experts, including Josef *Goebbels and Reinhard *Heydrich. The conference decided to impose a fine of a billion marks on Germany’s Jews to expiate the murder of vom Rath. Furthermore, all Jewish property was to be taken over by the Reich and the owners indemnified with government low-interest bonds at a price lower than the real value. Goering’s expropriation methods later served as a pattern for looting Jewish property in the countries occupied during World War II. Continuing the policy set by the November Conference, on Jan. 24, 1939, Goering appointed Heydrich head of the newly formed central organization for Jewish emigration, the “Zentralstelle fuer juedische Auswanderung.” At the start of World War II, Goering was appointed Hitler’s successor. He organized the plunder of the occupied countries, especially the Soviet Union. He collaborated with Alfred *Rosenberg in confiscating Jewish collections of art and used the loot to enlarge his own private collection. On July 31, 1941, Goering charged Heydrich with the implementation of Hitler’s decision on the “Final Solution” (see “Holocaust, General Survey). He sent a representative to attend the *Wannsee Conference. He was involved in every phase of the destruction of European Jews and knew their fate. He was a fanatical anti-Semite (see his remarks at the Nov. 12, 1938 conference), but according to some authorities he saved individual Jews, at least before the start of the destruction process. With the decline of Germany’s fortunes, Goering’s influence waned. The failures of his Luftwaffe and his indolence and corruption made Hitler lose faith in him. Before committing suicide, Hitler stripped him of all his offices and had him arrested. Goering was condemned to death by the Nuremberg International Military Tribunal as a major war criminal, specific reference being made to his decisive role in the extermination of the Jews. He poisoned himself before the execution could take place.

[Yehuda Reshef]

GOERLITZ, MATHIAS (1915–1990), Mexican artist and architect. Born in Danzig, Germany, the grandson of a painter, Goerlitz studied in Berlin. Art historian in the National Gallery of Art in Berlin, he was forced to leave Germany in 1941 by the Nazis. He lived two years in Spain and in 1949 went to the University of Guadalajara, Mexico, where he helped construct a museum and later executed the plan for two 195 feet (60 meters) high towers on the north highway to Mexico City. He was interested in religious motives and liturgical art. He also took part in the design of the Magen David Synagogue of Mexico City.

GOERLITZ, town in Silesia, Germany. The earliest extant sources attest to the presence of a Jewish community at the beginning of the 14th century but it was probably even older. It is known that there was a *Juedengasse on which both Jews and non-Jews were living in 1307. The cemetery dates from 1325, and the community owned a bathhouse and a synagogue as well. In this period the only occupation pursued by Jews which was attested in the sources was that of moneylending. The persecutions in the wake of the *Black Death brought the community to an end in 1349, but it was reestablished in 1364. After their expulsion in 1389, Jews were permitted to stay in Goerlitz only to participate in trade fairs.

Shortly before 1849 a new community was founded. A cemetery was acquired in 1850; the first synagogue was consecrated in 1870 and the second in 1911; the latter was destroyed in 1938. In 1880 there were 643 Jews in Goerlitz. In 1932, even before the Nazi regime, ritual slaughter was prohibited in Goerlitz. Separate areas for Jewish merchants were set up in the marketplace on Aug. 30, 1935. The number of Jews decreased rapidly, from 600 in 1931 to 376 in 1933 and 134 in 1939. The remnants of the community were wiped out during World War II.

[Bernhard Brilling]

“GOETHE, JOHANN WOLFGANG VON (1749–1832), German writer. As a boy, Goethe acquired a thorough knowledge of *Luther’s translation of the Bible, which left its mark on his conversation, letters, and literary work. Among his youthful projects were a “biblical, prose-epic poem” Joseph and several dramatic pieces on biblical subjects (*Isabel, Ruth, Selima, Der Thronfolger Pharaoh), none of which has been passed on to us; only fragments of the tragedy Belsazar, written in alexandrine verse, have survived. Goethe also mentions, among “youthful sins” which he condemned to the fire, a work inspired by the history of Samson. His notebooks show him wrestling with the Hebrew alphabet and with the Judeo-German dialect (*Judento-deutsch) which he heard on visits to the Judengasse of his native Frankfurt. He records how, on one such occasion, when part of the ghetto burned down, he helped to quench the flames while other youngsters jeered at the hapless Jews. Goethe even planned a novel in which seven brothers and sisters were to correspond in seven languages, including *Judendeutsch; a surviving *Judendpredigt written in that dialect has been dated on 1768. In 1771 he reviewed Isachar Falkensohn *Behr’s *Gedichte eines polnischen Juden. He thought very highly of the poetic quality of the Hebrew bible; his own translation of the Song of Songs (1775) proves his knowledge of the original text.

Goethe’s *Faust has almost 200 passages containing biblical parallels, beginning with the “Prologue in Heaven,” for which the first chapters of Job served as a model, and end-
ing with the final scene of Faust's death, which was inspired by the biblical and talmudic accounts of the death of Moses. In the explanatory prose parts of his late collection of poems *West-östlicher Divan* he integrated an extensive study on *Israel in der Wüste*, which deals with the role of Moses and the Israelite people.

After he moved to Weimar in 1775, Goethe's social life brought him into contact with many Jewish and converted Jewish intellectuals and artists, including Heinrich "Heine, who did not impress him, and Felix Mendelssohn-Bartholdy, whom he loved. Goethe allowed the artist Moritz "Oppenheim to paint his portrait and to illustrate his poetic idyll *Hermann und Dorothea* (1798). He opposed legislation aimed at liberalizing the position of Jews in German society. In general, however, contemporary Judaism did not play a major role in his work. Goethe's many Jewish biographers include Albert Bielschowsky, Ludwig Geiger, Richard Moritz Meyer, Eduard Engel, Georg Simmel, Emil "Ludwig, Friedrich "Gundolf, Georg "Brandes, Richard Freidenthal and Hans Mayer.

**GOETSCHEL, JULES** (1908–1981), Swiss lawyer, educated in Basle and Paris, politician and communal leader. Under the impact of National Socialism Goetschel turned to the Social Democratic party and was elected member of the cantonal parliament of Basle-city (1949–68) and its president for 1967–68. In his inauguration speech he spoke of the long route of Basle Jews towards gaining social acceptance. He was active in the affairs of the Basle Jewish community, especially for the Jewish home for the aged, La Charmille.

**GOETTINGEN,** city in Germany. Jews are first mentioned there in the 13th century. The community, composed of a dozen families, had a synagogue and paid 4½% of the city's taxes. It was destroyed in 1350 during the "Black Death persecutions, but in 1370 a charter giving protection to the Jews of the city was re-endorsed. In 1591 the Jews were expelled from Goettingen. Several resettled in the city at the end of the 17th century, and in 1718 Jews were given permission to acquire real property. In the university quarter their numbers were limited to three families. Some Hebrew printing took place in Goettingen. Abraham Jagel's *Lekah Tov* was published there in 1742, and Hebrew type was also used in A.G. Wachner's *Antiquitates Hebraeorum* (1742–45). The community numbered 43 in 1833, 265 in 1871, 661 (1.75% of the total population) in 1910, 410 in 1933, and 173 in 1939. In 1859 there was appointed at Goettingen University the first Jew to become a professor in a German university, the mathematician Moritz Abraham "Stern. The university was noted for its biblical scholars, most of whom were champions of the documentary hypothesis, from J.G. "Eichhorn and G.H.A. "Ewald to Paul de "Lagarde and Julius "Wellhausen. When James "Franck, the Nobel prizewinner, resigned his chair in 1933, a number of professors demanded that he be tried for sabotage; six other Jewish professors were put on compulsory leave, among them the mathematicians Otto "Neugebauer and Richard "Courant, as well as Nikolaus "Pevsner, and Eugen "Caspar. The synagogue was burned down on Kristallnacht. In March and June 1942, 150 Jews were deported; including those who had sought refuge in other localities, 267 local Jews were murdered by the Nazis during the Holocaust. There were 26 Jews living in Goettingen in 1965, bolstered in the 1990s by immigrants from the former Soviet Union.

**GOFFMAN, ERVING** (1922–1982), Canadian sociologist and ethnographer. The son of Ukrainian Jewish immigrants, Goffman was born in Mannville, Alberta, and raised in Dauphin, Manitoba, near Winnipeg. He was educated at the University of Manitoba, the University of Toronto (B.A., 1945) and the University of Chicago (M.A., 1949; Ph.D., 1953). He held academic appointments at the University of Chicago (1952–54), the National Institute of Mental Health, Bethesda, Maryland (1954–57), the University of California, Berkeley (1958–68; full professor, 1962); and the University of Pennsylvania, where he was the Benjamin Franklin Professor of Anthropology and Sociology from 1968 until his death from cancer in 1982.

Goffman practiced a form of sociology that he developed largely in opposition to the prevailing "value-free" quantitative methods in favor in the 1940s and 1950s. Using qualitative methods of subtle, sophisticated critical observation, he focused on personal interactions in public places and developed a system of classification and categorization of everyday behaviors, which he referred to as the "interaction order." He
understood these behaviors in terms of a strategic “presentation of self,” of “impression management” and interpersonal “dramaturgy.” Though Goffman’s work was immensely influential among sociologists, the quality of his writing as well as the ironies implicit in his portraits of people performing or representing their own identities made his work influential with a wider, more literary, audience outside academic sociology.

Goffman’s first major book, and probably still his best known, was The Presentation of Self in Everyday Life (1959), in which he set forth his basic insights and established the metaphorical language he was to use in all of his published work. Asylums (1961) was based on an ethnographic study he had conducted at St. Elizabeth’s, a federal mental hospital in Washington, D.C., in 1955–57, under the sponsorship of the National Institute of Mental Health. Here he developed his ideas about the deforming effects on those caught in “total institutions” – not only the inmates but the managers as well. It is safe to say that these two books are among the most influential sociological publications of the post-World War II era. His other major publications, Stigma (1963), Behavior in Public Places (1963), Strategic Interaction (1969), Relations in Public: Micro-Studies of the Public Order (1971), Frame Analysis: Essays on the Organization of Experience (1974), Gender Advertisements (1979), and Forms of Talk (1981), extend and elaborate his observations and theory.

Goffman’s interest in acting and game behaviors extended beyond his published work. He is said to have been an avid poker and blackjack player, and while at Berkeley in the 1960s he actually trained as a blackjack dealer and worked at a Las Vegas casino.

[Drew Silver (2nd ed.)]

GOFNAH (Gufnah, or Bet Gufnin; Heb. גּוּפְנָה), town in N. Judea that is first mentioned in the Second Temple period. The Talmud refers to it as Bet Gufnin, a name derived from the Hebrew root גון (“vine”). Gofnah replaced Timnah as the center of a toparchy in the time of Herod and continued to occupy this position in later times (Jos., Wars, 1:45; 3:55; Pliny, Historia Naturalis, 5:25, 30). In the middle of the first century B.C.E., the inhabitants of Gofnah were sold into slavery by the Roman general Cassius for failure to pay taxes, but they were freed shortly afterward by Antonius. The city was part of the area under the command of Hananiah b. Johanan in 66 C.E. during the Jewish War. Vespasian occupied it in 68 C.E., established a garrison there, and concentrated the priests and other important persons who had surrendered to him in the city (Jos., Wars, 6:115). Gofnah is also mentioned in the Talmud as a city of priests (Ber. 44a; Tj, Taan. 4:8, 69a). In the Middle Ages it continued to exist as Gafeniyyah. It is marked as a road station on the Peutinger Map; Eusebius places it 15 miles (24 km.) north of Jerusalem on the road to Neapolis (Onom. 168:16). Remains found there include a Jewish tomb with inscribed ossuaries, one of which mentions a Judah, son of Eleazar (in Aramaic); a Greek inscription, Salome daugh-

ter of Iakeimos, in a burial cave; a Roman villa; and a Byzantine church.

On the site of historical Gofnah there is now the Arab village of Jiñá, which in 1967 had 655 inhabitants, of which 538 were Christians and the rest Muslims (for the number of inhabitants in the 19th century, see Bagatti’s figures). There were 961 residents in 1997. One of the folk legends about Jiñá refers to the hill opposite the village called Jebel ed-Dík (“Mount of the Rooster”). Apparently a Jew from Jiñá was in Jerusalem during the final days of Jesus. When he perceived that Jesus had risen from the dead, he immediately converted and when arriving back home told his wife what had happened. She replied that she could not believe it, unless the rooster she had just killed and half-plucked would come back to life. Suddenly the rooster revived and flew away to the mountain. Its Greek Orthodox church of St. George stands on medieval and Byzantine foundations. Another church may exist close to the village. Tombs, buildings, installations, and other remains are also visible in the vicinity.

[Michael Avi-Yonah and Efraim Orni / Shimon Gibson (2nd ed.)]

GOG AND MAGOG ( Heb. גוג ו酡ג). Gog and Magog are first mentioned together in Ezekiel 38–39 in the vision of the end of days, where the prophet describes the war of the Lord against “Gog, of the land of Magog, the chief prince of Meshech and Tubal.” After the ingathering of Israel Gog will come up against Israel with many peoples from the furthest north to plunder it and carry away spoil. The Lord Himself will go to war against Gog and punish him “with pestilence, and with blood, and with overflowing rain,” and His name will be magnified and sanctified in the eyes of many nations. Gog will die in the land of Israel and his place of burial will be called “the valley of hamon Gog” and for seven years the inhabitants of Israel will use the weapons of the enemy for fuel.

Since, in the list of the sons of Noah (Gen. 10:2), Magog is mentioned as the brother of Gomer and Madai, the most reasonable identification put forward is with Giges, also known as Gogo, king of Lydia, and Magog, with his country. That, however, does not affect in any way the symbolic nature of the name and the special character of Ezekiel’s vision. Gog and his people are not historical enemies of Israel, like Babylonia and Assyria. They will attack simply out of a lust for violence and with the intention of destroying a peaceful kingdom. Indeed, other prophets prophesied about a people that would come up from the north to besiege Israel in the end of days, but Ezekiel, who prophesied after the destruction of the Temple, fixed the date of the last war after the ingathering of the exiles and the rebuilding of Jerusalem.

In the Septuagint the name Gog appears in two other places where it is not mentioned in the Hebrew text. In Numbers 24:7, Gog appears instead of Agag, and in Amos 7:1, the reading is “Gog,” instead of gizei (“the mowings”). These vari-

ENCYLOPAEDIA JUDAICA, Second Edition, Volume 7 683
GOGIM

(Heb. גוגים), name appearing in the Bible as “king of Goiim.” Genesis 14:1, 9 mentions “Tid’al king of Gogiim,” as one of the kings participating in a war during the time of Abraham. It has been suggested that Tidal is Tudhaliya, the name of five Hittite kings (Heb. תול zona. Ugaritic transliteration Tid’l, T’l). Given the unhistorical character of Genesis 14, which lumps together names from different periods, it is probably futile to attempt to identify the biblical character with a specific Hittite Tudhaliya. Another possibility is that Tidal of Genesis 14 is borrowed from a Mesopotamian source opposed to Sennacherib king of Assyria (705–681), in which he was called Tudhula, “evil offspring” in Sumerian. This was in keeping with the other midrashic names in the chapter already observed by medieval Jewish scholars, Bera, “in evil,” and Birsha, “in wickedness.” The word goyim is also used to indicate “nations” in general. There is an opinion that the connection between the two usages of the word goyim resembles that of ummān-Manda (“the horde, the armies of ‘Manda’”), an ancient term applied to various groups including the barbarian nation that helped the Babylonians destroy Harran in 610 B.C.E. Thus, there is reason to believe that the name Goiim in Hebrew corresponds to ummān, and simply means “nations,” and is incomplete for “the nations of…,” the actual name of Tidal’s realm having been omitted in translation or lost in transmission. The usage in Joshua 12:23 is probably a corruption of Goiim to Gilgal (according to LXX), that is, the king Gilgal of Galilee instead of the king of Goiim of Gilgal (cf. Isa. 8:23).

GOTHEIN, BARUCH BENEDICT (c. 1770–1842), Hungarian rabbi and author. Goitein was born in the town of Koj tin, Moravia and studied in the yeshivah of Moses "Mintz in Budapest. He was appointed rabbi in Hőgyez, in Hungary. Goitein's name rests upon his Kosef Nivhar, 3 parts, Prague, 1827–28; repr. of 2nd ed., 1966, an examination of, and commentary on, 160 talmudic themes. Although a product of the Hungarian method of study, the close approximation of his method with that customary in the Lithuanian yeshivah made his work very popular in talmudic circles. He resigned from his rabbinical office in 1841 and was succeeded the following year by his son Zevi Hirsch (Hermann; 1805–1860) author of Yadel Moshe (1905) on the 613 commandments.

[Encyclopaedia Hebraica]
GOITEIN, SHLOMO DOV (Fritz; 1900–1985), Orientalist. Descended from a Hungarian family of rabbis, Goitein was born in Burgkunstadt, a small village in southern Germany. He acquired an extensive Jewish education before his student years at the University of Frankfurt (1918–23). There he studied Arabic and Islam with the scholar Josef *Horovitz, while continuing his talmudic training. Upon completing his doctoral dissertation, he fulfilled his long-time Zionist ambition to live in Palestine. He immigrated there in 1923, and, like so many other European university-trained immigrants, taught for four years at the Reali School in Haifa. In 1928, three years after the founding of the Hebrew University, he joined the faculty of the Institute of Oriental Studies there. He was appointed professor in 1947 and continued to teach at the Hebrew University until 1957, when he became professor of Arabic at the University of Pennsylvania, Philadelphia, until his retirement in 1971. In the same year he became a long-term member of the School of Historical Studies at the Institute for Advanced Study in Princeton, where he lived the remainder of his life.

From 1938–48 Goitein served the British Mandatory government in Palestine as senior education inspector. He maintained his early devotion to education in later years. In addition to his works in Arab and Judeo-Arabic studies, Goitein published works on biblical research, including Iyyunim ba-Mikra (1958), and works on pedagogy, such as Horatāt ha-Tanakh (1942) on the teaching of Bible in elementary and secondary schools and Horatāt ha-Ivrit (1958). In his twenties, he composed a play based on the story of a famous Jewish woman in the court of one of the counts of medieval France, Pulcellina (1927). He also wrote and published Hebrew poems.

Goitein was a prolific scholar, whose output and influence should rightly be compared with that of his contemporary, Gershom *Sholem – with whom he made the journey from Germany to Palestine on the same boat in 1923. His bibliography (published by the Ben-Zvi Institute, second, expanded edition, 2000) contains 737 items. Roughly speaking, three more or less distinct periods of Goitein’s scholarly career can be discerned, though there was considerable overlap of subjects. During the first period, Goitein published a series of investigations of the religious institutions of Islam, such as prayer (Das Gebet im Quran (1933), a summary of his German dissertation), and the Ramadan month of fasting, among others. The crowning achievement of his studies of early Islam was the publication of the fifth volume of al-Balādhurī’s (9th century) historical work Ansāb al-ashrīf (1936).

During the second period of his research, Goitein dealt primarily with the cultural legacy of the Jews of Yemen, a byproduct of his intensive contact with and ethnographic work among Yemenite Jews in Palestine. Among the results of this work were Jemenica, a collection of proverbs from central Yemen (1934; From the Land of Sheba, 1947) and the publication of the account by Hayyim Cabshush, who accompanied Joseph * Halevy, on his explorations in Yemen (Ar. text, 1941; Heb. tr., 1939). His studies of contemporary Yemenite Jewry, whom he considered the “most Jewish and most Arab of all Jews,” had a profound influence on his research on medieval Arab Jewry as well.

In his third period, Goitein was mainly engaged in publishing documentary texts from the Cairo *Genizah, from which he derived conclusions about the history of the Jews in Mediterranean countries and about the general history of these texts. Many of his views about relations between Jews and Arabs had already begun to form earlier, in articles published in the 1930s and 1940s and in his popular book Jews and Arabs – Their Contacts through the Ages (1955; 1974; reprinted with new preface by Mark R. Cohen, 2005). But from the 1950s on, he concentrated all his energies on researching the “historical documents” of the Genizah, a term he coined to differentiate the letters, legal documents, marriage contracts, bills of divorce, and lists from the literary material. In his work he continued and deepened the research begun earlier by such scholars as Jacob * Mann. Goitein went far beyond his predecessors, however, because he was a trained Arabist. He opened the door to the study of the mass of Judeo-Arabic documents from everyday life, something done only sporadically by those who came before him.

Goitein “discovered” the Genizah on a trip to the Hungarian Academy of Sciences in Budapest in 1948, among the manuscripts that had previously belonged to the private collection of David * Kaufmann (1852–1899). A few years later in Cambridge and in Oxford he came upon legal documents from the Genizah relating to the then largely undocumented subject of the medieval India trade. He decided to research this topic and continued to work on it after his move to the United States in 1957. But, as he later wrote, he soon realized that to understand the world of the India merchants, he had first to survey the whole Mediterranean. This occupied him for the rest of his life, resulting in hundreds of articles and his magnum opus, A Mediterranean Society (5 volumes, 1967–88; Index volume 1993).

A Mediterranean Society is a masterpiece, comparable in European history to the work of Fernand Braudel on the Mediterranean during the early modern period (Goitein wrote that he did not read Braudel until he completed his own work). The first volume describes “economic foundations.” Here the Jewish merchants and craftsmen of Egypt and other Mediterranean lands come forth, representing not just their ethnic and religious group, but also their economic class. Their activities are fully representative of the economic life of the majority Muslim population. Thanks to Goitein, the value of the Genizah as a source for Islamic history was therefore demonstrated. In the second volume, “The Community,” we see especially inner Jewish life and also how a minority group viewed Muslim government. Even if diachronic factors prevailed in Jewish communal life, as Goitein maintained, a reflection of the environment is visible in many of the pages of this book, too. The “Family” takes centerstage in the third volume. Even this fundamental cell of Jewish life shows the imprint of the Islamic milieu, as Goitein himself saw. In “Daily
Life” (vol. 4), Goitein surveyed material culture as reflected in the Genizah. His discussions of the city, domestic architecture, clothing, food, as well as other aspects of quotidian existence – similar to the “structures of everyday life” portrayed in the first volume of Braudel’s *Civilisation matérielle, économie et capitalisme: xve–xviii siècle* (1967) – make this volume, like the one on economic foundations, as much a contribution to general as to Jewish history. In the final volume, “The Individual,” Goitein writes a fascinating study of the *mentalité* of the Mediterranean Arabic-speaking Jew.

The period covered by *A Mediterranean Society*, roughly 1000 to 1250, was a particularly lenient period of Jewish history under Islam. Goitein wrote the entire work while living in the United States and conceded (in the introduction to vol. 2) that his experience living in open, capitalist America had had an impact on his reconstruction of life in the Genizah world. He was sometimes criticized for this and for being anachronistic (H.H. Ben-Sasson in *Zion*, 40 (1975)). His lasting achievement, however, is to have surveyed every aspect of life during this period, the most thoroughly documented period of medieval Jewish history, and to have laid the groundwork for students and other followers to expand upon the foundations he laid. Directly or by inspiration, Goitein trained most of the major senior scholars of the historical Genizah working in the field in the late 20th and early 21st centuries.

No sooner did Goitein deliver the manuscript of the final volume of *A Mediterranean Society* to the publisher in December 1984 than he returned to the project with which he had begun his Genizah career, to the extensive notes and the more than 400 texts he had identified over the years related to the India trade. He died two months later, leaving the “India Book” to be completed by others. (Part One, containing roughly half of the opus, was edited by Mordechai Akiva Friedman for publication by the Ben-Zvi Institute.)

In 1980 Goitein was the recipient of the Harvey Prize of the Haifa Technion (jointly with Michael Rabin and Efraim Racker). Other awards included the Haskins Medal of the Medieval Academy of America, the Levi Della Vida Prize of the Gustave E. von Grunebaum Center for Near Eastern Studies (University of California), and, just two years before his death in 1985, a MacArthur Laureate Fellowship.

[Mark R. Cohen (2nd ed.)]

**GOLAN** (Heb. גֹּלָן), a town of the half-tribe *Manasseh* in Babylon. The city was located outside the district named for it, which ended at Nahr al-ʿAllān (“Allan River”), the eastern boundary of Golanitis. This identification conforms with the assumption that the city was located outside the district named for it, given its name to the entire district of Golan (or Gualan) to the west of it. According to Eusebius it was a large village in Bata-nea in the fourth century B.C.E. (Onom. 64:68). Schumacher has identified it with Sahkm al-Jawlān, a village 5 miles (8 km.) east of the Nahr al-ʿAllān (“Allan River”), the eastern boundary of Golanitis. This identification conforms with the assumption that the city was located outside the district named for it, which ended at Nahr al-ʿAllān. D. Urman has cast doubt on the Sahkm al-Jawlān identification owing to the fact that Bronze and Iron Age remains have not yet been found there. Other scholars have proposed a more northerly location for Golan, in the region of “Maacah. W.F. Albright, however, was of the opinion that the biblical city must have been situated within the region of the present-day Golan. Josephus was the first to use the name Golan not only as the name of a town but also of a region. There are several references to Golan in the Talmud; these, however, seem to refer to the district and not to the city (TJ, Meg. 3:1, 73d).

For geography, archaeology, and settlement of the region see “Ramat ha-Golan.”

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

**GOLAN, MENAHEM** (1929– ). Israeli producer-director. Born to Polish immigrants Noah Globus and Deborah (née Godman) in Tiberias, Israel, Golan served as an air force pilot and at 19 changed his surname in honor of the Golan Heights. Following his military service, he went to London to study at the Old Vic Theatre School. Golan spent many years directing Israeli theater productions. In the early 1960s, he went to the United States to study film in New York. While serving as an assistant on the Roger Corman film *The Young Racers* (1963) he became a protégé of the low-budget director. Golan returned to Israel again to collaborate with his cousin, Yoram Globus, and the two wrote and directed the film *El Dorado* (1963). The cousins went on to form Noah Films to produce features for the Israeli market. In 1964, their production of Ephraim Kishon’s *Sallah Shabati*, starring Chaim “Topol, received Oscar and Golden Globe nominations for best foreign film. In 1978, Golan immigrated to the United States, and a year later the cousins bought controlling interest in the failing production company, Cannon Group, Inc. Golan and Globus produced a few high-quality independent films, like *Barfly* and *The Hanoi Hilton* in 1987, but the majority of its success was built on such action pictures as *Breakin*’ (1984), *Missing in Action* (1984), *Cobra* (1986), *The Delta Force* (1986), and *Superman IV: The Quest for Peace* (1987). In the 1980s Golan and Globus were called “The Go-Go Boys” and were famous for selling movies at the Cannes Film market solely on the basis of a poster. Cannon
was eventually sold to Pathe Communications in 1989. While the cousins stayed on, a falling-out led Golan to start the 21st Century Film Corporation, which released Captain America (1991). In 1999, Golan established New Cannon, Inc.

[Adam Wills (2nd ed.)]

GOLB, NORMAN (1928– ), scholar of Jewish history. Born in Chicago, Golb received his early education there; in 1954 he earned his doctorate in Judaic and Semitic studies from Johns Hopkins University. He was the recipient of several fellowships, including the Warburry Fellowship for Research in Judaic and Semitic Studies at the Hebrew University of Jerusalem (1955–57), and he was a visiting faculty member at the University of Wisconsin (1957–58), Harvard University (1966), and Tel Aviv University (1969–70). Golb was a faculty member of the Hebrew Union College in Cincinnati from 1958 to 1963; in 1963 he joined the faculty of the University of Chicago, where he became, in 1988, the Ludwig Rosenberger Professor of Jewish History and Civilization. He was also chairman of the university’s Aronberg Judaica Lectureship Committee.

Golb’s many fellowships and research awards have included Guggenheim Fellowships (1964, 1966) and grants from the National Endowment for the Humanities, the American Philosophical Society, and the Littauer Foundation. His studies have appeared in numerous academic journals over the years and involve significant interpretations of archaeological discoveries. He identified *Obadiah the Proselyte as the author of the oldest Hebrew musical manuscript, uncovered the earliest extant legal record of the Jews of Sicily, identified a Hebrew document concerning the First Crusade, and discovered manuscripts pertaining to the Jews of medieval Normandy.

Golb’s 1976 work in Hebrew, Toledot ha-Yehudim be-Ir Rouen bi-Tmei ha-Benayim (“History and Culture of the Jews of Medieval Rouen”), was followed by studies of archaeological discoveries made in 1976 and 1982 in the Street of the Jews in Rouen. In 1985 he published Les Juifs de Rouen au Moyen Age: Portrait d’une culture oubliée, for which he received the Grand Medal of the City of Rouen. In 1987 he was granted an honorary doctorate by the University of Rouen and was awarded the Medal of the Region of Haute Normandie.

Golb took an active role in the campaign to make available the Dead Sea Scrolls for academic study, and he was one of the organizers of an international conference on the scrolls for the New York Academy of Sciences and the Oriental Institute. His later works include Who Wrote the Dead Sea Scrolls? The Search for the Secret of Qumran (1995) and The Jews of Medieval Normandy: A Social and Intellectual History (1998). Among other honors, he is a fellow of the American Academy for Jewish Research.

[Dorothy Bauhoff (2nd ed.)]

GOLCUV JENIKOV (Czech. Golčův Jeníkov; Ger. Goltsch-Jenikau), town in E. Bohemia, Czech Republic. Jews appear to have settled in Golčuv Jeníkov at the end of the 16th century. Documents indicate that there was a synagogue in 1659 which was rebuilt in 1806 and 1870; it continued in existence after World War II. Because of plague the Jews settled temporarily outside the town in 1861. In 1724 there were 28 families in Golcuv Jenikov; there were 613 Jews there in 1847 (27.8% of the total population), and 79 (3.9%) in 1931. The community had a Jewish German-language school from 1797 to 1907. R. Aaron *Kornfeld, whose yeshivah was the last in Bohemia, lived in Golcuv Jenikov. Those members of the community, who had not succeeded in leaving by 1942, were deported to Nazi extermination camps. The synagogue accessories were transferred to the Central Jewish Museum in Prague. After the Holocaust, some Jews returned to Golcuv Jenikov, where the Jewish quarter (rebuilt after a fire in 1808) and cemetery (the oldest monument dates from 1726) still existed in 1970. The synagogue was put at the disposal of the Prague State Jewish Museum in 1969. In nearby Habry (Habern), a Jewish community was founded in the 14th century. Its synagogue dates from 1650. Habry had 21 Jewish families in 1724; 120 families in 1848; 143 persons in 1893; and 79 in 1930. In 1898 it was incorporated in the Golcuv Jenikov community. Other than the few who emigrated in World War II, the Jews of Golcuv Jenikov were deported to the death camps of Poland via Theresienstadt in 1942.

[Jan Herman]

GOLD, BENJAMIN (1898–1983), U.S. labor leader. Gold, who was born in Bessarabia, Russia, was taken to the United States in 1910. In the following year, he started to work in the fur industry. Gold joined both the Socialist Party and the Fur Workers Union, where he became identified with the union’s left wing. During the 1920s a struggle took place between the union’s left wing led by Gold (who had joined the Communist Party by 1925) and the more conservative wing. Gold, who became the general manager of the union’s New York joint board in 1925, led a bitter strike in 1926 that lasted 17 weeks. The strike ended with the union winning only one of its major demands, a 40-hour work week. The American Federation of Labor then investigated the joint board and charged it with being Communist-controlled and corrupt. As a result of these charges, the union’s executive council expelled Gold and his fellow officers. Gold and other left-wing needle trade unionists then formed the Needle Trades Industrial Union and the Fur Workers Industrial Union.

During the Depression, Gold attended the Lenin School of Moscow. In 1935 the Fur Workers Industrial Union was disband and its members joined the new cio International Fur Workers Union (which later became known as the International Fur and Leather Workers Union). In 1937 Gold became the union’s president, while continuing to play an important role in the Communist Party. Regarded by many as the most incorruptible figure in the needle trade, Gold was held in high esteem by the manufacturers because he brought...
reliable production as well as high wages and good benefits to the industry.

In 1948 the union was forced to leave the CIO as a result of that organization’s investigation into Communist influence in a number of its member unions. Shortly afterward, Gold, in order to be eligible to sign the Taft–Hartley Act’s loyalty pledge which, in turn, would provide him with the legal protection afforded by the act, resigned from the Communist Party. Gold continued as union president until he resigned in 1954. After resigning, he worked as a fur cutter until his retirement.

Gold wrote Avreml Broide (1944), Mentshn, dertseylungen fun Ben Gold (1948), and Memoirs (1985).

[Albert A. Blum]

GOLD, HENRY RAPHAEL (1893–1965), U.S. rabbi and psychiatrist. Born in Grajewo, Poland, Gold was ordained rabbi by the Jewish Theological Seminary in 1916. He held rabbinical positions in Memphis (1916–18), Boston (1918–24), New Orleans (1924–28), and Dallas (1928–43). While in Dallas, he took up the study of medicine, receiving an M.D. from Baylor University in 1934 and later teaching medical psychiatry there. He also served as a commissioner of the Dallas Housing Authority. On giving up his rabbinate in Dallas, he moved to New York and entered private practice as a psychiatrist and psychologist. Gold was an active Zionist. At various times he served as president of Hapoel Hamizrachi and the National Council for Torah Education and as vice president of the Union of Orthodox Jewish Congregations and of the Zionist Organization of America.

[Sefton D. Temkin]

GOLD, HERBERT (1924– ), U.S. novelist. Gold, who was born in Cleveland, recollected that “we were just about the only Jewish family in Lakewood at the time.” He served in the U.S. Army during World War II. After the war he studied in Columbia and in Paris, finally settling in San Francisco, and eventually was appointed professor at the University of California at Berkeley. Gold’s books deal with the search for love between men and women, parents and children. He has claimed that his writing is a need “to make the world magic” and his style – witty yet compassionate – reflects this. His most successful characters are young people who affect cynicism without being cynical, and who hide their real sensitivity behind a conventional mask. Gold’s humor stems from the relentless truthfulness of his description of male and female relationships. His novels include The Birth of a Hero (1951), The Prospect Before Us (1954), The Man Who Was Not with It (1956), and The Optimist (1959). Therefore Be Bold (1960) is a humorous Jewish work set in the Middle West; Love and Like (1960) a collection of short stories; and Salt (1963) a satirical novel dealing with life in the impersonal metropolis. Gold also published essays on the contemporary American scene titled The Age of Happy Problems (1962). His “family” works are spun around the substance of his life: Fathers (1966), in which the novelist drew upon his own family experiences to tell of the Jewish immigrants who sought fulfillment in the United States; My Last Two Thousand Years (1972), and Family (1981). These memoirs are also meditations about the informing power (or lack of such) of place, tradition, class, and gender – this last especially in Family.

[GOLD, HUGO (1895–1974), publisher and historian. Gold was born in Vienna. He studied philosophy at the University of Vienna and soon after was drafted into the army. With the beginning of World War I, Gold served as a commander on the Eastern Front. He was captured by the Russian Army and sent to Siberia, from where he returned in 1918. In 1924 he became the head of the publishing house Juedischer Buch- und Kunstverlag, formerly owned by his uncle Max *Hickl. From 1924 to 1939 he was the publisher and editor of the journal Juedische Volksstimme, and from 1931 to 1936 of the historical journal Zeitschrift fuer die Geschichte der Juden in der Tschechoslowakei. In 1940 Gold settled in Palestine. After World War II he established in Tel Aviv the Olamenu publishing house, which concentrated on books in the German language relating to Central European Jewry. From 1964 he published and edited the Zeitschrift fuer die Geschichte der Juden (Tel Aviv). Gold’s main contributions as a historian are works on the history of the Jews in Czechoslovakia, Austria, and Bukovina, including Die Juden und Judengemeinde Bratislava in Vergangenheit und Gegenwart (1932); Geschichte der Juden in Wien (1966); Max Brod, Ein Gedenkbuch 1884–1968 (1969); and Gedenkbuch der untergegangenen Judengemeinden des Burgenlandes (1970). The works he wrote and edited are a major source of information about the destroyed Jewish communities in Central Europe.

GOLD, MICHAEL (Irwin Granich; 1893–1967), U.S. Communist author and journalist. Born in New York to poor immigrant parents from Romania, Gold left school at the age of 13 and worked at various odd jobs to help support his family. He later attended City College night school and began to write his first sketches and poems, which from the start were politically radical in tone. After a brief and unhappy tenure as a special student at Harvard and an extended stay in Mexico in 1916–17, he returned to New York where he worked as a copy editor on the Socialist Call and contributed articles and poetry to Masses. He joined the Communist Party soon after its formation and became editor first of the Liberator (1920–22) and later of New Masses (1928–32), both of which were devoted to
“proletarian” literature and culture. Gold also worked closely in these years with the left-wing New Playwrights’ Theater and himself wrote several plays and a collection of short stories, 120 Million (1929). In 1930 he published his autobiographical novel of the Lower East Side, Jews Without Money, whose stark imagistic prose has made it one of the best-known accounts of Jewish immigrant life in New York. Throughout the 1930s and 1940s Gold wrote a regular column for the Communist Daily Worker but produced little of literary value. During the last years of his life he lived in San Francisco, where he contributed to the radical West Coast publication, The People’s World. His books include The Hollow Men (1941) and Change the World! (1937), a collection of his newspaper columns.

GOLD, PHILIP (1936– ), Canadian medical researcher. Gold was born in Montreal and studied at McGill University from which he holds both an M.D. degree and a Ph.D. From 1973 he was professor of medicine, and subsequently Douglas G. Cameron Professor of Medicine, at McGill, where he was also a professor in the Department of Physiology and the Department of Oncology. Among the other major academic and research appointments that he held were director of the McGill Cancer Center, director of the McGill University Clinic and physician-in-chief of the Montreal General Hospital, chairman of McGill’s Department of Medicine, and executive director of the Clinical Research Center of the McGill University Health Center.

Gold is widely known for his development of an important diagnostic (CEA) test for cancer; his work won him international renown and brought him numerous awards. He is a Companion of the Order of Canada and a Fellow of the Royal Society of Canada. In his professional work Gold has written numerous scientific papers and is co-editor of Clinical Immunology. He served as president of the Canadian Society of Immunology from 1975–77.

GOLD, WOLF (Ze’ev; 1889–1956), rabbi, leader of religious Zionism. Born in Szczeczyin, Poland, and descended from a long line of rabbis, Gold was ordained at the age of 17 by Rabbi Eliezer Rabinowitz after having studied at the Yeshiva in Mir and succeeded his father-in-law as rabbi in Juteka. In 1907 he emigrated to the U.S., where he served in several congregations: South Chicago, Scranton, Pennsylvania, Williamsburg, New York, San Francisco (where he strenuously fought Reform), and Brooklyn, New York. A man of handsome presence with a beautiful speaking voice, he was a powerful orator and capable organizer. Everywhere he engaged in educational and communal activities, founding a Hebrew school (Williamsburg Talmud Torah), a yeshivah (“Torah Vada’at”), a hospital (“Beth Mosheh,” Brooklyn) which he established when the Jewish hospital abandoned its kashrut supervision, a Hebrew teachers training college (San Francisco), and an orphanage (also in Brooklyn). Gold was from the beginning in the forefront of Zionist workers in the U.S. – in the Order of the Sons of Zion, and the Zionist funds; he was a delegate to all Zionist Congresses and a member of the Zionist General Council from 1923. From 1913 he was active in the *Mizrachi movement, which, together with his lifelong friend M. *Bar-llan (Berlin), he organized in the U.S.; he served as president of the American Mizrachi 1932–35. His contract specified that he could work three months a year on Zionist activities, which involved extensive travel. From 1945 he represented the Mizrachi on the executive of the Jewish Agency and was a member of the Jewish delegation at the United Nations in 1946. Already in 1924 Gold went to Erez Israel to assist in the religious propaganda work of the chief rabbinate and the Mizrachi in the new settlements. His experience led him to the idea of an agricultural yeshivah which was founded eventually (1918) in *Kefar ha-Ro’eh. He settled in Erez Israel in 1935. With the establishment of the State of Israel he became a member of the Provisional Council of State and for some time headed the Jewish Agency’s Department for the Development of Jerusalem and in 1951 the Department for Torah Education and Culture. In that capacity Gold did much for the establishment of schools and other educational institutions in various parts of the Diaspora – in North Africa in particular. He worked on the plans for a training institute for rabbis, teachers, youth leaders, etc. for the Diaspora, which after his death came into being as the Z. Gold Institute for Jewish Studies and Teachers’ Seminary. A volume of his sermons, articles etc. was published in 1949 (Nivéi Zahavy), and a memorial volume of sermons in 1963 (Ziyyon min ha-Torah, ed. Z. Tabori).

GOLDBERG, ABRAHAM (1881–1933), Yiddish and Hebrew journalist.Born in Brest-Litovsk into a maskilic family, the eldest brother of the Yiddish poet Menahem *Boraisha, his antagonist of Polish Zionism, exercising great influence on the Jewish masses. Goldberg consistently maintained that it was
the duty of the press not only to provide information, but also to serve as an instrument for the amelioration of the condition of the Jewish people. He convinced Russian émigrés to protest the Mendel *Beilis trial in Kiev. Goldberg played a leading role in the Zionist Organization of Poland and was a delegate to a number of Zionist congresses. Although he wrote mainly in Yiddish, he supported the weekly *Ba-Derekh, published by *Haynt, the last Hebrew newspaper in Poland.

**GOLDBERG, ALEXANDER** (1906–1985), Israeli chemical engineer. Goldberg, who was born in Vilna, went to England in 1914. He graduated in mining engineering and chemical engineering at the Royal School of Mines, London. He was a pioneer in the development of techniques of crop preservation, and subsequently worked with the raw-material group of the Hawker-Siddeley organization. During World War II he was responsible for producing metallic magnesium from seawater, and later for the production of the aluminum used in Britain's postwar prefabricated houses. In 1948 he went to Israel and headed Chemicals and Phosphates Ltd. thereby becoming a key figure in Israel's developing chemical industry. In 1965 he became president of the Haifa Technion.

Samuel Aaron Miller

**GOLDBERG, ARTHUR JOSEPH** (1908–1990), U.S. labor lawyer, secretary of labor, Supreme Court justice, and ambassador to the United Nations. Goldberg, who was born in Chicago, was the youngest of 11 children. After graduating from Northwestern University Law School (1929) at the head of his class, Goldberg began practicing law in Chicago. He soon developed a national reputation in labor law, a field then rapidly expanding in the wake of the intensive labor strife and legislation of the depression years and Roosevelt's New Deal. During World War II, he was appointed head of the labor division of the U.S. Office of Strategic Services (OSS), for which he helped to establish intricate clandestine operations with anti-Fascist trade union leaders behind Nazi lines. In 1948 Goldberg was appointed general counsel of the Congress of Industrial Organizations (CIO). In this capacity he played a crucial role in the prolonged negotiations between the CIO and its warring rival the AFL (American Federation of Labor) and was instrumental in drafting the merger agreement between them in 1955, after which he returned to private practice. His book *AFL-CIO: Labor United* was published the following year.

An early supporter of the presidential aspirations of John F. Kennedy, Goldberg was appointed to the cabinet as secretary of labor upon Kennedy's inauguration in 1961. Unlike his immediate predecessor, Goldberg took an activist view of the office. He vigorously strove to raise the national minimum wage and to increase federal unemployment benefits, while at the same time seeking to arbitrate a wide range of labor-management conflicts in order to implement Kennedy's anti-inflationary program by discouraging excessive wage hikes. His activities in this area alienated many of his old labor colleagues, causing the magazine *New Republic* to summarize his two years as labor secretary by remarking, “His contribution to the Kennedy administration has been notable for his forthright disregard of old ties with organized labor in shaping a new doctrine of the national interest in labor-management disputes.”

In 1962 Goldberg was chosen by President Kennedy to replace the retiring Felix Frankfurter as a justice on the United States Supreme Court. During his term on the Court, Goldberg consistently voted with its liberal majority and wrote several key decisions protecting the rights of naturalized American citizens. The most significant decision written by him, however, was in the famous Escobedo Case of 1964, in which the Court ruled by a 5–4 majority that every accused prisoner had the constitutional right to be advised by a lawyer during police interrogation, thereby working a revolution in American criminal law.

In 1965 Goldberg resigned from the Court to become United States permanent representative to the United Nations. The high point of his UN career came during the Arab-Israel war of 1967, when throughout the six days of fighting he repeatedly and successfully argued the American position calling for a cease-fire without previous Israel withdrawal. He thereby earned the enmity of the Arab nations, who accused him of influencing American foreign policy on behalf of Jewish interests. Goldberg was also said to have had a major hand in the drafting of the November 1967 Security Council resolution which served as a basis for the Jarring Mission to the Middle East. In 1968 he resigned from his position, reportedly dissatisfied with President Johnson's “hawkish” policies in Vietnam and his own inability to moderate them. Leaving Washington, he settled in New York City, where he opened a law practice while taking an active behind-the-scenes role in local and statewide Democratic Party politics. In 1970 he ran unsuccessfully for the office of governor of New York State. Goldberg, who was active in Zionist and Jewish affairs, was president of the American Jewish Committee (1968–69) and chairman of the Jewish Theological Seminary's board of overseers (1963–69). In July 1978 Goldberg was awarded the Presidential Medal of Freedom by President Carter for his efforts in the “Middle East and for human rights.”

Arnold Beichman

**GOLDBERG, BAER (Dov) BEN ALEXANDER** (known by his acronym *Bag*: 1800–1884), Polish scholar. Goldberg was born in Chlodna, near Lomza, Poland, and was orphaned at an early age. He studied Torah in dire poverty, but earned a reputation as a prodigy. Having tried his hand at business and
teaching, in 1830 Goldberg became a private tutor for the family of the wealthy and learned Gershon Litinski in one of the villages of Suwalki district. When after some time the entire Litinski family converted to Christianity, he was slandered as having influenced them.

In 1843 he went to Berlin, where he was favorably received by the maskilim. However, lacking a formal education, he could not find employment there, and in 1847 went to England, where he managed with great difficulty to earn a living copying and publishing Hebrew manuscripts from the Oxford libraries. In 1853 he settled in Paris, earning his living there by copying and publishing Hebrew and Arabic manuscripts from the National Library. Altogether, Goldberg published 17 books and pamphlets and hundreds of articles in Hebrew periodicals, writing primarily under the name "Divrei Bag" ("Words of Bag") and "Gam Elleh Divrei Bag" ("These also are the words of Bag"). His writings exemplified all the virtues and weaknesses of one who is self-taught: diligence and an abundance of detail but written in ornate language and lacking organization.

Goldberg's main contribution to scholarship was the editing of such medieval works as 

Hefes Matmonim (1845), a collection of medieval texts; Isaac Israel's Yesod Olam (1848); Ibn Jana'i's Sefer ha-Rikmah in Judah ibn Tibbon's translation (1857); Iggeret Sherira Ga'on (1873); Risalat R. Judah b. Koraish (1867); and Abraham b. Moses b. Maimon's Birkat Avraham (1860, repr. 1960).

GOLDBERG, BEN ZION (Benjamin Waife; 1895–1972), Yiddish journalist. Born in Golszany (Lithuania), a descendant of prominent rabbinical families, Goldberg studied at the Lida and Volozhin yeshivot before immigrating to the U.S. in 1907. In 1917 he married the youngest daughter of *Sholom Aleichem. He studied psychology at Columbia University and wrote articles on that subject and on foreign policy for the daily Der Tog, of which he became managing editor (1924–40). He helped to organize the U.S. branch of YIVO. As a daily columnist for more than 40 years, he was influential and controversial, particularly with his pro-Soviet orientation – which ended with the purges that extinguished Soviet Jewish leaders. His books in English include Sacred Fire: The Story of Sex in Religion (1930), and The Jewish Problem in the Soviet Union (1961).

He believed that the modern rectilinear style of architecture had been superseded by the new structural shapes made possible through the recent development in reinforced concrete. To that end, he created circular designs in concrete shell structures, which he believed would serve activity better and help create community. He also maintained that circular buildings provide more efficient wind resistance, more direct mechanical distribution, and more usable footage. Over the years, he developed a theory of kinetic space based on non-parallel walls that set a space in motion. Goldberg introduced several shapes to skyscraper architecture, many of which can be recognized by their rounded lobes and oval windows.

Among his chief works in Chicago are the Astor Tower (1962); Marina City (1963), featuring round, 60-story residential towers; the Raymond Hilliard Homes (1966); the Pren- tice-Stone Pavilion (1975); St. Joseph's Hospital (1975); SUNY Hospital and SUNY Basic Science and Clinical Science Towers (1976); and River City (1986).

Goldberg was elected to the College of Fellows of the American Institute of Architects in 1966 and was awarded the Officer de l'Ordre des Arts et des Lettres from the French government in 1985.

In 2002, Goldberg's family donated his entire architectural archive to the Art Institute of Chicago. It includes his architectural plans, drawings, photos, and models, as well as lectures, articles, and construction photos.

GOLDBERG, BORIS (1865–1922), economist and Zionist. Born in Shaki (Sakiai), Lithuania, Goldberg studied at Hanover, where he graduated in 1891 as a chemical engineer. In 1898 he moved to Vilna. He joined the Hibbat Zion movement at an early age, and when the Zionist Organization was founded, joined it at once. Goldberg was an ardent supporter of practical settlement work in Erez Israel. He contributed articles to all existing Jewish periodicals in Russia, was a member of the editorial board of Razsvet and Ha-Olam, and published studies on the demographic and social composition of Russian Jewry. Goldberg was a member of the Central Office of the Zionist Organization in Vilna, and, together with his brother I.L. *Goldberg, he headed the illegal Zionist activities in the Vilna region, for which he was imprisoned on several occasions. In 1906 he took part in the work of the League for Equal Rights for Russian Jews, and in 1917 he was a member of the National Council of Russian Jews. He left Russia in 1919 as a representative of Russian Jews to the Comité des Délégations Juives, which represented the Jewish people at the Versailles Peace Conference. He helped to transfer the capital of Russian Jews to Palestine and was one of the founders of the Ha-Boneh Company and the Silikat building materials factory.
in Tel Aviv. He was wounded during the Arab riots of 1921 and died a year later in Tel Aviv.

[Michael Denman (2nd ed.)]

**GOLDBERG, EMMANUEL** (1881–1970), photographic scientist. Goldberg was born in Moscow and graduated from Moscow University before moving to Leipzig, where he obtained his doctorate in photochemistry (1906). After appointments at the University of Leipzig and the Military Academy of Berlin, he moved to Dresden (1917), where he became managing director of the Zeiss Ikon optical company and professor at the Technical University. He was kidnapped by the Nazis but his employers recognized his inventive genius and arranged his release into exile in Paris (1933), where he worked in their subsidiary company. He immigrated to Palestine (1937), where he established a laboratory for precision instruments which became the basis of the optical industry in Israel. Goldberg was a pioneer in many photographic and related fields, notably high-resolution microfilms, microdot technology, hand-held movie cameras, sound movies, television, and electronic systems for document storing and retrieval. He worked on military applications of his inventions for the Allied governments in World War II and for the Haganah and the Israeli government. Goldberg’s original contributions were recognized by the award of the Peligot Medal by the French Photographic Society (1931) but were subsequently obscured by the Nazis and Communists for political reasons and by later inventors anxious to establish their own priority. He was awarded the Israel Prize for exact sciences (1968).

[Michael Denman (2nd ed.)]

**GOLDBERG, HARVEY E.** (1939– ), U.S. anthropologist. Born in New York City, Goldberg received his bachelor’s degree from Columbia University in 1961 and his doctorate from Harvard in 1967. He taught at the University of Iowa from 1966 as an assistant professor, then from 1969 to 1972 as associate professor. He was a research fellow at Columbia University in 1968 and 1969, and a visiting scholar at Cambridge and at the University of Texas. From 1972 he was a member of the faculty of the Hebrew University of Jerusalem, where he was named the Sarah Allen Shaine Professor of Sociology and Anthropology. Goldberg was also a fellow of the American Anthropological Association and a member of the New York Academy of Sciences and the Middle East Studies Association of North America.

A leading anthropologist of Jewish culture, Goldberg wrote numerous works that center on Jewish life in the Middle East, both in Israel and elsewhere. His books include *Cave Dwellers and Citrus Growers: A Jewish Community in Libya and Israel* (1972), *Greentown’s Youth: Disadvantaged Youth in a Development Town in Israel* (1984), *Jewish Life in Muslim Libya* (1990), *Sephardi and Middle Eastern Jewries* (as editor, 1996), *Life of Judaism* (as editor, 2001), and *Jewish Passages: Cycles of Jewish Life* (2003).

*Jewish Passages* has been well received by a wide audience. In this work, Goldberg examines both individual practice and collective identity as he considers the ways in which Jews from many traditions celebrate the cycles of life. The work includes an exploration of Sephardi and Ashkenazi traditions; it examines ritual, custom, and a range of events, from circumcision to identity-seeking tourism.

Goldberg wrote numerous articles for academic journals, including the *Jewish Journal of Sociology*. *Hagar: International Social Science Review, and Jerusalem Studies in Jewish Folklore*. He also contributed to various texts and reference works, including the *Oxford Handbook of Jewish Studies* (2002), *Global Religions* (2003), and *Key Texts in American Jewish Culture* (2003). Goldberg’s subsequent research focused on the Jews of Libya and Ethiopia, seeking to integrate historical and sociological perspectives in understanding cultural diversity within Israeli society.

[Dorothy Bauhoff (2nd ed.)]

**GOLDBERG, ISAAC LEIB** (1860–1935), Zionist leader and political figure. Born in Vilna, where he joined his uncle’s business. One of the first members of the *Hibbat Zion movement* (1882), he founded the Ohavei Zion society in Vilna. At the *Hovevei Zion* meeting in Druzgenik in 1887, he sought to effect a compromise between the views of the Orthodox and the *maskilim*. He represented the Hovevei Zion committee in Vilna and was a member of *Benei Moshe*. His home in Vilna became the center of Zionist and Jewish national activities. His wife, Rachel, was among the founders of Yehudiyyah Hebrew Girls School.

Goldberg was a delegate to the First Zionist Congress, representing the *Hovevei Zion* of Vilna; in 1900 he was appointed representative of the *Zionist Organization* in the Vilna district. He took part in the establishment of the Geulah Company, whose aim it was to acquire land in Erez Israel for private ownership, and of the Carmel Company for the marketing of wine produced in the Jewish settlements in Erez.
Israel. In 1908 he established a farm at Hartuv and purchased the first plot of land on Mount Scopus in Jerusalem for the future *Hebrew University. In 1906 he became a member of the Zionist Central Committee in Russia, and its office was located in his home. He lent his support to the Zionist periodicals in Vilna *Ha-Olam and *Dos Yidishe Folk. During World War I the Russian authorities forced him to live in Moscow, where he continued his Zionist activities. In 1919 he settled in Palestine, engaged in growing oranges, and made important contributions to improving the packing and marketing of citrus products. He was one of the founders of the *Haaretz daily newspaper, which he supported financially. Goldberg was also a supporter of the Hebrew Language Committee. He left half his estate for the establishment of a fund for the Promotion of Hebrew Literature and Hebrew Culture in Erez Israel, which was eventually handed over to the *Jewish National Fund, which devoted the income to Hebrew cultural projects.

**GOLDBERG, J.B.** (1884–1946), Soviet army commander. In 1919, Lenin personally entrusted him with the command of the reserves and with the task of setting up a corps of reserves for the whole of the Red Army fighting on the Eastern front. Within two years Goldberg created a force of half a million men. In 1922 he was appointed deputy head of the air force.

**GOLDBERG, JEANNETTE MIRIAM** (1868–1935), U.S. Jewish educator. Goldberg, a charismatic organizer, was the first field secretary of the National Council of Jewish Women (NCJW) and the longtime executive secretary of the Jewish Chautauqua Society (JCS). For three decades, she guided the Chautauqua Society, which popularizes Judaic learning among English-speaking Jews and non-Jews.

A native Texan whose parents had emigrated from Russia to Louisiana in 1860 and then to Texas after the Civil War and whose father, Louis, was among the founders in 1873 of Jefferson’s Hebrew Sinai Congregation, Goldberg enrolled in Vassar College’s preparatory division in 1883. She received an A.B. from New York’s Rutgers Female Institute, where she was class valedictorian. Goldberg taught literature at women’s finishing schools in Birmingham, Ala. and Dallas, Waco, and Sherman, Tex. She worked as a Sabbath School superintendent in Houston and Jefferson.

In 1896, she attended the Council of Jewish Women’s first triennial in New York. Appointed vice president for Texas, she helped organize her state’s first Council chapters in Tyler, Dallas, Waco, Beaumont, and Fort Worth. In 1902, she was elected a national director of the council and served as field secretary. In that capacity, she traveled cross-country organizing chapters and motivating co-religionists who had grown indifferent toward Judaism. “We have had enough lullaby and slumber in religious life,” she exhorted. “[W]e now need wakefulness and spirit, to revivify the dry bones of American Judaism.”

In 1905, the Jewish Chautauqua Society, headquartered in Philadelphia, hired Goldberg as its field secretary, a position similar to her volunteer role with the NCJW. When the Chautauqua’s home secretary retired in 1910, the two positions merged, with Goldberg shouldering both roles. Under Goldberg’s leadership, the JCS launched study circles, assemblies, and a national correspondence school to train Sabbath School teachers. In her travels throughout the U.S., Goldberg helped organize congregations and recruit rabbis to lead them. The JCS opened religious schools in the Dakotas and in the south New Jersey farm colonies started with Baron de *Hirsch* funds. The Chautauqua Society also initiated a university lecture circuit — still in operation in the 21st century – featuring rabbis speaking to non-Jewish audiences about Judaism.

Rabbi Julian *Feibelman, who became acquainted with Goldberg when he was a Mississippi boy enrolled in Chautauqua correspondence classes, maintained that she “kept her hand on the pulse of virtually every congregation” in the nation. She was “instrumental in helping many rabbis [including himself] to advancement in pulpits.” He lauded Goldberg as “one of the two Jewish women in America capable of addressing an audience on Jewish subjects – the other was Sadie *American* (the first executive secretary of the NCJW). When Goldberg died on February 28, 1935, she was eulogized in the *Philadelphia Exponent* as “a modern Miriam” and a “high priestess” of Judaism. Unmarried, she outlived her siblings and had no survivors.

[Hollace Ava Weiner (2nd ed.)]

**GOLDBERG, LEA** (1911–1970), Hebrew poet and critic. Born in Koenigsberg, Eastern Prussia, she spent the early years of her childhood in Russia but after the Revolution her family returned to their home in Kovno, Lithuania. While still a schoolgirl, Lea Goldberg began to write Hebrew verse and her first poem was published in *Hed Lita* in 1926. She attended the universities of Kovno, Berlin, and Bonn. Arriving in Tel Aviv in 1935, she joined the circle of modernist authors, whose mentor was Avraham *Shlonsky*, and began publishing her poetry in *Turim*, the literary forum of the group. Shlonsky helped her compile her first volume of poetry *Tabbeot Ashan* (“Smoke Rings,” 1935). After a career as a schoolteacher, she joined the editorial staffs of *Davar* and later *Mishmar* in the capacity of theater critic and eventually became editor of
Al ha-Mishmar’s literary supplement. She also served on the staff of Davar li-Yladim, a popular children’s magazine, was the children’s book editor of Sifriyyat Po’alim, and the literary adviser to *Habimah, Israel’s national theater. In 1952 she was invited to organize the Department of Comparative Literature at the Hebrew University of Jerusalem, holding the chair until her death. As Goldberg was a prolific and versatile writer, her literary talent found expression in many genres. Primarily a poet, she was also a literary critic, wrote a number of children’s works, was a copious translator, and the author of a novel and a play.

Poetry
All of Goldberg’s poetry is written in the modern mode set by the school of younger poets that developed in Erez Israel during the Mandate period. Influenced by the Russian Acmeist poets (a literary trend which rejected symbolism, aiming at concrete imagery and a clear unadorned style), she used traditional verse forms, expressing her modernism through a conversational style which eschewed the ornate rhetoric of many of her predecessors and the bombastic expressionism of her contemporaries. Her language though symbolic is simple and familiar, in which ordinary words, images, rhythms, and rhymes have an astonishing freshness. The later verse is stripped of all “literary” pretensions; the poet thus strove to evolve a style of direct and unencumbered statement of the poetic experience. Goldberg’s tendency toward aesthetic intellectualism is modified by a lyrical delicacy. She refused to write ideological verse and unlike her contemporaries she rarely touched upon Jewish themes. Only in the aftermath of the Holocaust did she express her feelings in a Jewish framework (*Mi-Beiti ha-Yashan, “From My Old Home,” 1944). Universal in her approach, she wrote on childhood, nature, love (especially unfulfilled love), the quest for aesthetic expression, aging, and death. In her later years her central themes were resignation to the tragedy of existence and finding solace in the poetry unexpectedly discovered in ordinary phenomena. Among her outstanding poems are “Mi-Shirei ha-Nahal” (“The Songs of the Stream,” in *Al ha-Perihah, 1948) in which she employed natural symbols such as river, stone, tree, moon, and blade of grass to serve as a vehicle for the poetic presentation of aesthetic problems of the creative artists; “Be-Harei Yerushalayim” (“In the Hills of Jerusalem,” in *Barak ba-Boker, 1956), one of her best landscape poems, set in Jerusalem, the city in which she resided for many years; and “Ahavatah shel Teresa di Mon” (“The Love of Therese du Meun,” in *Barak ba-Boker), a series of sonnets purportedly written in the 17th century by an aging aristocrat on her unconfessed love for her children’s young tutor.

Criticism
An avid reader, Goldberg was at home in the literature of all the major European languages. She was most familiar with Russian literature and wrote *Abdut ha-Adam ve-ha-Yekum bi-Yzirat Tolstoy (“The Unity of World and Man in Tolstoy’s Works,” 1959), as well as a collection of essays on Pushkin, Lermontov, Gogol, Turgenev, Herzen, and Chekhov entitled *Ha-Sifrut ha-Rusit ha-Meha’t ha-Tesha-Esreh (1968). The latter was to have been part of a general history of the literature of the period, but she abandoned the project. Goldberg was also well versed in Italian literature and wrote an introduction to Dante’s Divine Comedy (*Mavo la-Komedyah ha-Elohit, mimeograph, 1958) and a preface to her translation of selected poems by Petrarch (1957). In *Hamishah Perakim bi-Ysodot ha-Shirah (“Five Chapters in the Elements of Poetry,” 1957), a more systematic attempt at studying the problems of poetry, she discusses poetic theory, meter, rhyme, and symbol. Each chapter begins with a close reading of a Hebrew poem which is used to illustrate the specific hypothesis she has posited. In contrast to her generalizations about poetry, which reflect accepted literary criteria, the interpretations of specific works show an original and creative poetic mind. The same can be said about her study *Ommanut ha-Sippur (“The Art of the Short Story,” 1963).

Children’s Literature
Goldberg was one of Israel’s most successful children’s writers. She was able to enter the world of children, communicate with them, and establish a bond of friendship with all children not only through the written word but by live contact. She wrote about 20 works for children. A whole generation of Israelis grew up on her stories and poems (see *Children’s Literature).

Prose Works
*Mikhtavim mi-Nesi’ah Medummah (“Letters from an Imaginary Journey,” 1937) and *Ve-Ha ha-Or (“He Is the Light,” 1946), the two major prose works of Goldberg, are mainly autobiographical. The latter is set in Lithuania and describes the struggle of a young and sensitive girl student for identity, despite insecurities rooted in a background of mental illness in her immediate family. The earlier work, *Mikhtavim mi-Nesi’ah Medummah, hardly a novel because of its weak structure, refers to a later period in the author’s life and gives an insight into her basically aristocratic view of the arts. The struggle between leftist politics and art is the theme of her single play *Ba’alat ha-Armon (“Lady of the Manor,” 1956) which is set in postwar Europe. The play (in English translation) was staged in New York but was not a critical success. Goldberg’s diaries were published in 2005.

Translations
Among the many European classics that Goldberg translated into Hebrew are: Tolstoy’s *War and Peace (1958), Chekhov’s *Stories (1943), Gorki’s *Childhood (1943), several plays and poems by Shakespeare (1957), selected poems by Petrarch (1957), Ibsen’s *Peer Gynt (1958), and *Aucassin et Nicolette (1966). Together with Shlonsky she edited an anthology of Russian poetry (1942). Goldberg started to paint in her later years and she illustrated several of her own books (*Aucassin et Nicolette, for example).

Goldberg’s poems have been translated into various languages. Poems in English translation are included in T. Carmi...
GOLDBERG, OSCAR (1885–1952), scholar and author, born in Berlin. Goldberg first studied medicine, but on the basis of personal parapsychological experiments he turned to esoteric mysticism. After Hitler’s rise to power he emigrated to France and subsequently to the United States. He later returned to France and died in Nice. His first work, Die eunuch Buecher Mosis, ein Zahlengebaeude (1908) is an attempt to prove (in accordance with kabbalistic opinion) that the entire Torah is based on the letters of the Tetragrammaton. His basic theories are expressed in the works: Die Wirklichkeit der Hebraer (vol. 1, 1925; no more were published); Maimonides (1935); and articles on Greek mythology in the monthly Mass und Wert (1937). Goldberg assumed that there were “metaphysical” peoples whose biological center was their “god” as opposed to peoples or groups who had lost their metaphysical power and were merely biological groups. Die Wirklichkeit der Hebraer (“The Reality of the Hebrews”) shows the Hebrews to be the outstanding example of a metaphysical people, which activates the vital link between it and its “center,” i.e., its god, via the magical power of ritual and makes its god dwell within the world. The metaphysical reality of the genuine Hebrews consisted in the activation of the laws and statutes of the Torah (which must be understood in its most literal and exact interpretation). Later Judaism, beginning with “the religion of the prophets,” was based on the deterioration of the magical powers of the Hebrews and the loss of the basic tools for the activation of their magical reality: the Tabernacle and the Ark of the Covenant. Every metaphysical people has a national god, and among these gods, which had perfect reality, the God of Israel is but the strongest. As the real magical power of metaphysics was weakened, there begins the process of the transformation of the ritual which possessed formal and material precision into an abstract universal “religion.” The histories of religions constitute decline and not progress. The decline of true Hebraism, which worked miracles not according to circumstance but by order and fixed ritual, began during the reigns of David and Solomon. It reached its nadir in the “religiösis” of the Psalms. The transition from worship in the Temple to that in the synagogue typifies the decline of the metaphysical power to nothingness.

Goldberg accepted only the Pentateuch as a divine document in all its details and signs, and interpreted it magically, not “theologically.” The Revelation of God is not an act of free grace to His creatures, but springs from the need of God Himself to find a dwelling place (mishkan) on earth. Goldberg views the system of Maimonides as the final expression of complete alienation from the true mission of the Hebraic existence, and as an intended blurring and abolition of the realistic principle which is the power to work miracles in favor.
of moralistic and abstract prattle. According to this system, Goldberg interpreted all details of other mythologies. He advocated the organization of the remnants of magical power which remained here and there, in order to find a way for the renewal of divine revelation. He stated his magical views in a clearly rationalistic way and linked them with modern biological philosophy. The kabbalistic origins of his thought are conspicuous and Goldberg himself recognized this despite his attempts to define specific differences between the spheres of the Torah and that of Kabbalah. Goldberg was hostile to Zionism, which he viewed as a secular renewal of a Jewish people without a metaphysical basis according to his definition.

For many years Goldberg led a small group which propagated his views in writing and orally. His most important disciple in philosophy was Erich Unger (d. 1951 in London). For some time his works and thoughts had considerable influence on circles of both Jewish and gentile intellectuals, scholars and writers such as the paleontologist E. Dacque, and the writer Thomas Mann. The latter depicted Goldberg in his novel Doctor Faustus (1947) as the character Dr. Chaim Breisacher.

[Gershom Scholem]

GOLDBERG, RUBE (1883–1970), U.S. cartoonist. Reuben Lucius Goldberg, satirist of American folkways and creator of improbable and outlandish devices and inventions, was born in San Francisco, Calif. His father insisted he go to college to become an engineer. After graduating from the University of California at Berkeley, Goldberg went to work for the San Francisco Water and Sewers Department. After six months, Goldberg joined the sports department of a San Francisco newspaper and kept submitting drawings and cartoons to its editor, until he was finally published. He moved to New York, drawing daily cartoons for The Evening Mail. At first he was a sports cartoonist and sportswriter, but one day, with a little space left over from his cartoon, he filled it with "Foolish Question No. 1," which showed a man who had fallen from the Flatiron Building being asked if he was hurt. "No, I jump off this building every day to limber up for business," he replied. The Foolish Question caught on, and Goldberg wound up doing dozens of them. Many of his ideas came from readers, fascinated with the nearly probable. As comic strips grew in popularity, Goldberg conceived the character Boob McNutt, a simple-looking fellow who was in love with a beautiful girl named Pearl. Their blunder-filled courtship went on from 1916 to 1933. Goldberg also created the strip Lala Palooza, about a woman of ample girth. His most enduring creation was Professor Lucifer Gorgonzola Butts, the inventor of marvelously complicated contraptions designed to accomplish fairly simple ends. An exhibition of these nonexistent and zany gadgets opened at the National Museum of History and Technology of the Smithsonian Institution in Washington in 1970. The Goldberg's of yesterday were catalogued under the title "Do It the Hard Way: Rube Goldberg and Modern Times." There were cartoons, comic strips, and oddly ingenious doodads that might have been invented by Goldberg himself. The cartoonist's ludicrous inventions became so widely known that Webster's Third International Dictionary listed the adjective "rube goldberg" and defined it as "accomplishing by extremely complex roundabout means what actually or seemingly could be done simply."

In the middle 1930s, comic strips declined in popularity and at the age of 55 Goldberg embarked on a career as an editorial cartoonist for The New York Sun and later the New York Journal-American, for which he drew 5,000 cartoons. One of his cartoons, "Peace Today," warning of the perils of atomic weapons, which appeared in The Sun, won a Pulitzer Prize in 1948.

[Stewart Kampel (2nd ed.)]

GOLDBERG, SZYMON (1909–1993), violinist and conductor of Polish birth. He studied with Mihailowicz in Warsaw, and with Flesch in Berlin. After his debut in Warsaw (1921), he appeared with the Berlin PO (1924) and was leader of the Dresden Philharmonic (1925–1929). From 1932 to 1934 he formed a string trio with Hindemith and "Feuermann and was appointed concertmaster of the Berlin Philharmonic. He then toured as soloist and as sonata partner with Lili "Kraus. While on a tour of Asia, Goldberg was interned in Java by the Japanese (1942–1945). After the war he resumed his career and played in Australia, South Africa, the Americas, and Israel. He became an American citizen (1953) and taught at the Aspen Music School (1951–1965) where he formed the Festival Quartet, which achieved wide recognition in concerts and on records. Goldberg played trios with Casals and R. *Serkin during the Prades Festival (1954) and became permanent conductor and musical director of the Netherlands Chamber Orchestra (1955), which he led with notable distinction for 22 years. From 1969 he lived in London, conducted the Manchester Camerata (1977–1982), taught at Yale University, the Juilliard School, the Curtis Institute of Music, and the Manhattan School of Music. From 1990 until his death he conducted the New Japan Philharmonic in Tokyo. He was an officer of the Order of Oranje Nassau. A masterly violinist Goldberg's tone was warm and pure, his interpretations stressed refinement, intimacy and a noble intensity. His recordings include a distinguished set of the Brandenburg Concertos and, with Radu Lupu, 16 Mozart sonatas. He was also a sensitive performer of Bartók, Berg, and Hindemith.

[Gena Hamot (2nd ed.)]

GOLDBERGER, IZIDOR (1876–1944), Hungarian rabbi and scholar. Goldberger, who was born in Bátorkeszi, Hungary, held appointments in Sátoraljaujhely (1903–1914) and Tata
(1912–1944). He wrote on the history of Hungarian Jewry, especially on that of the Jews in Zemplén County (1910), and in the city of Tata (1914). He also wrote on the emancipation of Hungarian Jewry. Goldberger translated into Hungarian excerpts from the Mishnah (1905) and from the Midrash (1907).

**BIBLIOGRAPHY:** Dr. Goldberger Izidor tatai rabbi irodalmi működése, 1904–1914 (1915); Magyar Zsidó Lexikon (1929), 318; Wininger, Biog, 2 (1927), 441; 7 (1936), 14.

[Jeno Zsoldos]

**GOLDBERGER, JOSEPH** (1874–1929), U.S. physician and public health specialist. Goldberger, who was born in Giralt, Hungary, immigrated to the U.S. at an early age. From 1899 until his death he served in the U.S. Public Health Service in Washington, D.C. Goldberger's greatest contribution was his discovery of the etiology and therapy of pellagra and his introduction of nicotinic acid as a means of preventing the disease. He also made significant contributions in the study of infectious diseases and public health, particularly in the field of welfare of the poor.

[Suesmann Muntner]

**GOLDBLUM, Jeff**

Renowned for his pioneering work in children's health, **ALTON GOLDBLUM** (1890–1968) was a founder of the Canadian Pediatric Society. During his career, he was a professor (emeritus) of pediatrics at McGill University and physician-in-chief at the Montreal Children's Hospital. His many publications include his autobiography, *Small Patients* (1959), and *The Care of the Child* (1928).

The elder son, **VICTOR CHARLES** (1923– ), graduated from McGill University and worked as a pediatrician. In 1966, he was elected to the National Assembly of Quebec, and after re-election in 1970, he became the first Jewish member of a provincial cabinet in Quebec. Remaining in the National Assembly until 1979, he served as minister of the environment as well as minister of municipal affairs. He later worked as the executive director of the Canadian Council of Christians and Jews and several other ecumenical and intercultural organizations. From 1991 to 1999, he served as official languages commissioner of Canada. Among his many distinctions, he was named a Companion of the Order of Canada and an Officer of the Order of the Canadian Jews and several other ecumenical and intercultural organizations. From 1991 to 1999, he served as official languages commissioner of Canada. Among his many distinctions, he was named a Companion of the Order of Canada and an Officer of the Order of the

His brother, **RICHARD GOLDBLUM** (1924– ) graduated from McGill University, taught pediatric medicine at Dalhousie University in Halifax, Nova Scotia, and was appointed chancellor of the University in 2001. He published over 200 articles and books, including a textbook, *Pediatric Clinical Skills*. In recognition of his dedication to both general and Jewish community organizations, as well as his university and medical career, he was named Officer of the Order of Canada in 1987. His wife, **RUTH MIRIAM SCHWARTZ**, a graduate of McGill, among other public and benevolent appointments served to coordinate the renovations to Pier 21 in Halifax. She was named Officer of the Order of Canada in 2000.

[Steven Lapidus (2nd ed.)]

**GOLDBLUM, Jacob KoppeL** (1872–1961), Zionist leader. Born in Kletsk, then Poland, Goldblum went to London in 1892, joined the Hovevei Zion and, after meeting Herzl, began to found Zionist societies in Whitechapel. He introduced the "Ivrit be-ivrit" method of Hebrew teaching and taught many thousands of youngsters who enrolled in his "Redman's Road Talmud Torah" over the decades. From 1901 onward Goldblum attended almost every Zionist Congress and was a member of the Zionist General Council. In 1935 he became chairman of the European executive of the Confederation of General Zionists. He served Herzl, Wolfsohn, Otto Warburg, Weizmann, Sokolow, and Nahum Goldmann with loyalty and devotion. Goldblum was one of the architects of the British Zionist Federation and of its Synagogue Council. He wrote a utopian work in Hebrew entitled *Hag ha-Bikkurim be-Erez Yisrael bi-Shenet 2016* ("Festival of the First Harvest in Erez Israel in the Year 2016," 1920). In 1963 his remains were buried in Jerusalem.

[Josef Fraenkel]

**GOLDBLUM, Israel Isser** (Isidore; 1864–1925), Polish Hebrew writer and bibliographer. Goldblum was born in Vilna and studied in an East European yeshivot. He devoted himself to the study and publication of Hebrew manuscripts in Berlin, Paris, London, Oxford, and Rome. The result of his research he published under the pseudonym Yafag mainly in the periodical *Ha-Maggid*. He corresponded with the leading Jewish scholars of his time and published a collection of these letters (*Kevuzaat Mikhtavim*, 1895). He also published *Mi-Ginzei Yisrael be-Paris* (1894) on the Paris Hebrew manuscripts and *Ma'amor Bikkoret Sefarim* (1891). Some of his writings and letters exist in manuscript form at the Jewish Theological Seminary of America.

**BIBLIOGRAPHY:** Kressel, Leksikon, 1 (1965), 409–10.

[Jonathan Licht]

GOLDBLUM, NATAN (1920–2001), Israeli virologist. Born in Poland, Goldblum immigrated to Palestine in 1938 as a student at the Hebrew University, where later he became professor of virology. His early work on malaria and West Nile fever was accompanied by his own efforts to eradicate these diseases in the Huleh Valley in Galilee, Israel. With the establishment of the Israeli Defense Forces in 1948, he joined the medical corps and took part in the medical treatment of Yemenite immigrants. His activity was largely responsible for preventing the dangerous spread of malaria, among other diseases. He served in the beginning of the 1950s as head of the Department of Epidemiology of Hemed, the Military Research Institute, and subsequently became director of the Virus Laboratories of the Ministry of Health. He studied the preparation of polio vaccine with Jonas *Salk and Albert *Sabin in 1942 to 1969. He was much admired by American liberals for his witty and courageous stand in favor of black integration, for 2¢ Plain pharmacy, but left the university without completing his degree. During the “Roaring Twenties” he was sentenced to five years imprisonment for running a Wall Street gambling den. On his release he moved south, changing his name to Golden and becoming a successful journalist. Golden is best known for his one-man newspaper, The Carolina Israelite, which he published from 1942 to 1969. He was much admired by American liberals for his witty and courageous stand in favor of black integration, attacking race hatred as absurd rather than criminal. His bestselling books Only in America (1958), For 2¢ Plain (1959), and Enjoy (1960) were drawn from some of his editorials. Much of their charm lies in his folkloristic description of Jewish immigrant life. His other works include Mr. Kennedy and the Negroes (1964); So What Else Is New (1964); and an autobiography, The Right Time (1969). In 1965 he published A Little Girl Is Dead about the Leo *Frank case.

GOLDEN, HARRY LEWIS (Herschel Goldhurst; 1902–1981), U.S. author, editor, and publisher. One of five children of immigrants from Austria-Hungary, Golden was born on New York’s Lower East Side. His father was an editor of the Jewish Daily Forward. Golden studied English literature, but left the university without completing his degree. During the “Roaring Twenties” he was sentenced to five years imprisonment for running a Wall Street gambling den. On his release he moved south, changing his name to Golden and becoming a successful journalist. Golden is best known for his one-man newspaper, The Carolina Israelite, which he published from 1942 to 1969. He was much admired by American liberals for his witty and courageous stand in favor of black integration, attacking race hatred as absurd rather than criminal. His bestselling books Only in America (1958), For 2¢ Plain (1959), and Enjoy (1960) were drawn from some of his editorials. Much of their charm lies in his folkloristic description of Jewish immigrant life. His other works include Mr. Kennedy and the Negroes (1964); So What Else Is New (1964); and an autobiography, The Right Time (1969). In 1965 he published A Little Girl Is Dead about the Leo *Frank case.

GOLDEN, JOHN (1874–1955), U.S. songwriter and theatrical producer. Born in New York City, Golden was educated at New York University. He began songwriting in collaboration with
Irving Berlin, Oscar Hammerstein, and Douglas Fairbanks. The songs that brought him the most fame and money were "Poor Butterfly" and "Goodbye Girls, I'm Through." In 1914 he and Winchell Smith went into partnership as play producers, made a hit with Turn to the Right (1916) and again with Lightnin', which ran for 1291 performances on Broadway. He was a charter member of ascap (American Society of Composers, Authors, and Publishers) and its director in 1914–15, as well as the organization's first treasurer.

Golden subsequently produced more than a hundred plays. Some of his Broadway productions included Susan and God, Turn to the Right, Three Wise Fools, The First Year, Seventh Heaven, Counselor-at-Law, When Ladies Meet, As Husbands Go, Let Us Be Gay, Claudia, Skylark, The Male Animal, and They Knew What They Wanted. As a composer, he wrote the scores for the Broadway shows The Candy Shop; Over the River; Hip, Hip, Hooray; The Big Show; Cheer Up; and Everything.

In 1943 he conducted a play competition in the U.S. Army and presented the five winners as "The Army Play by Play." He was also the founder of the Stage Door Canteen and the Stage Relief Fund. The U.S. Army gave him the highest civilian decoration for distinguished service. His will established a fund for the advancement of playwriting. The John Golden Fund Inc. The intimate, 80-seat John Golden Theater on Broadway was named in his honor.

[Ruth Beloff (2nd ed.)]

GOLDENBERG, BAERISH (1825–1898), Hebrew scholar, teacher, and poet. Born in Vishnevets (Volhynia), he studied in Tarnopol in the school established by Joseph *Perl, and in 1850 opened his own school there. The rest of his life was devoted to teaching, mainly in Tarnopol, but also for some time in other towns in Galicia and Romania. He published many linguistic studies in the Hebrew journals of his time, articles and books (in German) on ancient Jewish history, and Hebrew poetry. His two major Hebrew books are Ohol Yosef (a biography of Joseph Perl and a history of his Tarnopol school, 1860) and Or Hadas (biblical commentaries and linguistic studies, 10 vols., 1889–97). He also edited the journal Nogah ha-Yare'ah (1872–80).

[Getzel Kressel]

GOLDENBERG, CHARLES ROBERT ("Buckets"; 1911–1986), U.S. football player; helped lead the Green Bay Packers to three NFL championships. Born in Odessa, Ukraine, Goldenberg grew up in Milwaukee, where he was a star as a tackle and tailback at North Division High School, and then an outstanding back at the University of Wisconsin from 1930 to 1933. He received a Knute Rockne All-America honorable mention and Knute Rockne All-Western in 1930, and AP All-Western Conference second team in 1932. After graduating in 1933, Goldenberg played fullback, blocking back, guard, linebacker, and defensive back from 1933 to 1945 with the Green Bay Packers, which won the championship in 1936, 1939, and 1944 and the Western Conference title in 1938. Goldenberg was named All-Pro guard in 1939, 1940, and 1942, and was named to the NFL's All-1930s Team. Goldenberg holds the oldest record in Packers history with five touchdowns as a rookie, set in 1933, and his 13 seasons is tied for fifth-longest tenure in team history.

[Ellie Wohlgelelnter (2nd ed.)]

GOLDENBERG, SAMUEL LEIB (1807–1846), Hebrew journalist. Born in Bolechow (Bolekhov) into a wealthy family, he was one of the pioneers of the Haskalah in Galicia. In 1833 Goldenberg launched the periodical Kerem Hemed which was almost entirely devoted to scholarly articles (in the form of letters) and marked a development in Hebrew periodical literature. The leading modern Jewish scholars of the first half of the 19th century contributed to it.

[Getzel Kressel]

GOLDENBERG-GETROITMAN, LAZAR (1846–1916), Russian revolutionary and one of the first Jewish socialists in Russia. Goldenberg was born in the Kherson district. He joined the revolutionary movement as a young man, when he was studying at the Technological Institute in Petersburg. He was arrested for incitement of the farmers not to pay taxes. He escaped to Switzerland where he became secretary of the Slavic department of the International League of Socialist Revolutionaries. After he was expelled from Switzerland he went to London in 1876 and established the Agudat ha-Sozialistim ha-Ivrim (the Jewish Socialist Organization) with Aaron *Lieberman, which was probably the first of its kind in the world. On a visit to Romania in 1881, Goldenberg was seized and handed over to the Russian authorities but managed to escape a second time. He tried to live in Paris but was expelled for his revolutionary activities. He lived for ten years in New York, where he organized the Russian revolutionary activities abroad and for many years afterward managed a publishing house in London which produced books on socialist subjects in Russian, among them Khaim Zhitlovskis' "Jews to Jews." From 1891 to 1900 Goldenberg published an English monthly Free Russia. His memoirs appeared posthumously (1924) in Russian in the Moscow periodical Katorga i sylka (nos. 3, 4, 5, 6).

GOLDENBURG, SAMUEL (Sholem Goldstein; 1886–1945), Yiddish actor. Son of a lumber merchant in Russia, Goldenburg joined a Yiddish company and at 20 toured with Sigmund Feinman in Europe. In 1917 he acted with Thomashefsky in New York, but later joined Maurice Schwartz's Jewish Art Theater, playing the lead in L. Feuchtwanger's Jew Suess and I.I. Singer's Di Brider Ashkenazi (The Brothers Ashkenazi, 1936). With Celia *Adler he did a 32-week season at the Am-

GOLDEN CALF

The Dybbuk

The narrative of the golden calf cannot be understood without relating it to the erection of two golden calves in the temples of *Beth-El and *Dan by *Jeroboam I of Israel (1 Kings 12:26ff.). Not only are the general features of the story similar in both accounts, but the explanatory formula in Exodus 32:4b, 8b – “These are your gods, O Israel, who brought you up out of the land of Egypt” – is virtually identical to the one in 1 Kings 12:28b. Scholars are divided on the question of the chronological relationship of the two accounts. The traditional view is that the Jeroboam incident is dependent on the Exodus story (see Cassuto, loc. cit.). Other scholars, however, hold the view that Exodus 32 presupposes 1 Kings 12.

The bull had an important role in the art and religious texts of the ancient Near East. The storm-god *Hadad is frequently represented standing on a bull. Taking these facts into account it is generally assumed (after H. Th. Obbrick) that Jeroboam’s calves corresponded to the *cherubim of Solomon’s Temple, i.e., they were regarded as seats or pedestals upon which the Lord was thought to stand invisible to human eyes. M. Haran remarks that if Jeroboam’s calves were considered pedestals, then they were not meant to be an exact replica of cherubim connected with the *Ark of the Covenant because the Ark and its cherubim were kept in the publicly inaccessible Holy of Holies while the calves were placed in the courts of the Temple, where the people could see and kiss them (cf. Hos. 13:2). It is also possible that the calves were, from the beginning, meant to represent the Lord like the images in the sanctuaries of Micah and Dan (Judg. 17:4; 18:14, 15–31; cf. M. Haran, in B. Zvieli (ed.), Sihot ba-Mikra, 1 (1968), 214; idem, in Biblica, 50 (1969), 264).

In any case Jeroboam’s initiative must have had some basis in an old tradition, otherwise he could not have succeeded in his enterprise. Jeroboam’s bulls, contrary to the Ark symbolism, were meant to be accessible to worshipers in the temples (cf. 1 Kings 12:27); and thus they developed from symbols of the Lord to fetishes in their own right (cf. e.g., 11 Kings 17:16; Hos. 8:5–6; 10:5; 13:2).

In the Aggadah

The rabbinc tradition toward the episode of the golden calf is guided by the need to explain how the Children of Israel could demand an idol so soon after hearing the Ten Commandments and giving liberally to the erection of the Sanctuary and how Aaron could agree to the construction of the calf and still not forfeit his future role as high priest. The initiative in demanding the idol is attributed by some rabbis to the mixed multitude who joined the Israelites at the time of the Exodus (Ex. 12:38). Forty thousand of them, accompanied by two Egyptian magicians, *Jannes and Mambres, came to Aaron and claimed that it already was the sixth hour of the 40th day since Moses had left, the hour which he previously had designated for his return. They claimed that since he had not yet appeared he would never come. Satan added to the state of helplessness of the people by showing them a vision of Moses’ bier which
convinced them that he had died. Only then did they demand that Aaron produce a god for them (Shab. 89a; Tanh. B., Ex. 112–3). The error of the people consisted in including in their calculation the day of the ascent, whereas Moses had excluded it (Rashi, Shab. 89a). God was also blamed since He enslaved them in Egypt where they were exposed to the most idolatrous of ancient civilizations (Ex. R. 43:7) and for giving them an abundance of gold and silver when they left Egypt (Ber. 32a). *Hur, who is regarded as the son of Miriam and Caleb, attempted to dissuade the people from the sin and was put to death by them. Aaron feared that he would share the same fate (Lev. R. 10:3; Tanh. B., Ex. 112–3) and in accordance with his passion for the pursuit of peace (Avot 1:12; see “Aaron in the aggadah”), felt it better to acquiesce than to permit the people to commit the unpardonable sin of slaying two leaders on the same day (Sanh. 7a). Hoping to gain time, he ordered them to bring the golden ornaments of their wives, relying on their known piety to refuse. The men thereupon donated their own jewelry (pâre 45). Aaron then threw the gold into the fire, still hoping that Moses would return. Instantly, however, a calf appeared, alive and skipping, the result of a splinter which was thrown into the fire by the wicked Micah. This splinter, containing the words שור הבעל (aleh shor, “Come up, Ox”; Joseph being compared to an ox; cf. Deut. 33:17), had previously been thrown into the Nile by Moses when he desired that Joseph’s coffin rise to the surface so that he could transport his remains to Erez Israel (Tanh. Ki Tissa, 19). According to another version, the Egyptian magicians made the calf move as if it were alive (Song R. 1:9, no. 3). Aaron then postponed the celebration to the next day again to gain time. Since God knew that Aaron was motivated by good intentions the high priesthood was not withheld from him (Lev. R. 10:3; Ex. R. 37:2). Nevertheless, he still was severely punished in that the subsequent death of two of his sons was attributed to his role in this incident (Lev. R. 10:5).

The tribe of Levi (Yoma 66b) and its 12 heads (pâre 45) did not join the worship of the calf. The remaining Israelites were severely punished. Whoever sacrificed and burned incense died by the sword; whoever embraced and kissed the calf died by the plague; and whoever rejoiced in his heart died of dropsy (Yoma 66b). “There is not a misfortune that Israel has suffered which is not partly a retribution for the sin of the calf” (Sanh. 102a).

In Christianity

During the Roman period and long after, the golden calf episode was a source of embarrassment to the Jews in their relations with the increasingly aggressive Church, which fully exploited the story in its polemics with the Synagogue. Even Josephus, who was concerned only with pagan antisemiti- sm, was evidently afraid that the biblical account might be employed by Alexandrian antissemites to lend credence to their allegation that the Jews worshiped an ass’s head in the Temple (cf. Apion 2:80, 114, 120; Tacitus, Histories 5:4). Josephus accordingly omits the entire golden calf episode from his account of the Israelite migrations in the desert. Instead, he graphically depicts the deep anxiety of the Israelites concerning Moses and their joy when at last he came down from Mount Sinai (Ant. 3:95–99). Not only did Moses not break the tablets, but he actually displayed them to the rejoicing people (3:101–2). Josephus also omits any reference to Aaron, and the same is true of Philo who does not, however, completely suppress the golden calf narrative (Mos. 2:161–74, 271).

As early as the immediate post-crucifixion era, Stephen, the first Christian martyr, sharply denounced the Jews (but not Aaron who was held in veneration by the Church) for having made the golden calf, which became the fountainhead of Jewish crimes throughout their history, culminating in the crucifixion of Jesus (Acts 7:41–52). For the Church the golden calf episode served as proof that the divine covenant with Israel had never been consummated, so that the Jewish claim to a special relationship with the Almighty was unacceptable (see Smolar in bibl., p. 91). By worshiping the golden calf, the Jews had revealed their foolish, stubborn, unrepentant, and immoral character (ibid., 100). Augustine also associated the calf cult with the worship of the devil, and the Jews who had drunk the water into which the powder of the golden calf had been cast with the body of the devil (ibid., 100–1). The medieval identification of the Jew with the devil was no doubt influenced by this extreme patristic interpretation (ibid., 101, n. 12).

While the rabbinic reaction to such violent attacks by the Church was bound to be militant, as has been seen, some of the criticism was frankly accepted, and the seriousness of the offense was by no means played down: Israel was compared to “a shameless bride who plays the harlot within her bridal canopy” (Shab. 88b).

**ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7**
GOLDENSON, SAMUEL HARRY (1878–1962), U.S. Reform rabbi. Goldenson was born in Kalvarija, Poland, and was taken to the United States in 1890. He was ordained at the Hebrew Union College in 1904, then led congregations in Lexington, Kentucky (1904–06), and Albany, New York (1906–18). In 1918 Goldenson moved to Temple Rodef Shalom, Pittsburgh, where he established his reputation nationally. In 1934 he was appointed senior rabbi of Temple Emanu-El, New York, also serving as president of the Central Conference of American Rabbis (1933–35). Becoming rabbi emeritus in 1947, he devoted the last years of his career to preaching in small communities under the auspices of the Union of American Hebrew Congregations. Goldenson adhered to the older standpoint in American Reform Judaism, emphasizing the universal message of the prophets and showing little sympathy for Jewish nationalism and the revised interest in ceremonial matters. He was a lifelong advocate of social justice and was active in campaigns for civic betterment.

[ Abram Vossen Goodman ]

GOLDENTHAL, JACOB (1815–1868), Austrian Orientalist. Goldenthal was born in Brody and became principal of the Jewish school in Kishinev, Russia, in 1843; in 1846 he settled in Vienna and taught Oriental languages, rabbinics, and literature at the University of Vienna from 1848 until his death. Beside his regular teachings he offered a theological program for rabbinical candidates.

Goldenthal published several articles on medieval Jewish literature in Kokhevei Yizhak (5, 1846; 24, 1858). He edited the following medieval texts: Abraham ibn Ḥasdai’s Hebrew translation of al-Ghazālī’s Arabic Mīzān al-ʿAmal, Sefer Mose-nei Zedek (1939); Averroes’ commentary on Aristotle’s Rhetoric, translated into Hebrew as Beʿur Ibn Rushd le-Sefer ha-Halazah le-Aristo (1842); Mesharet Moshe (1845), an exposition of Maimonides’ teaching on the concept of providence; Nissim b. Jacob’s Maftaḥah shel Manu利 ha-Talmud (1847), dealing with Talmud methodology; Moses Rieti’s poem Mikdash Meit (1851), on ancient philosophy and the history of Jewish literature; and Moses Narboni’s commentary on Maimonides’ Guide, Beʿur le-Sefer Moreh Nevukhim (1852). Goldenthal tried to revive Jost and Creizenach’s periodical Zion, but only one issue, Neue Zion (1845), appeared. His correspondence with S.D. *Luzzatto was published in Kokhevei Yizhak. He also published the first Hebrew textbook for the study of Arabic, Sefer Maspiḳ li-Yidḥak Lashon Arvi (1857), and a textbook for the study of Turkish (1865); he compiled a catalog of forty Hebrew manuscripts at the National Library of Vienna (1851). Some of his works were published in the Denkschriften of the Vienna Academy of Sciences.

[Sol Liptzin / Leonard Prager (2nd ed.)]

GOLDENWEISER, ALEXANDER ALEXANDROVICH (1880–1936), U.S. anthropologist. Born in Kiev, Russia, the son of Alexander Solomonovich *Goldenweiser, Goldenweiser studied anthropology under Franz *Boas, and later taught anthropology and other social sciences at various institutions including Columbia University, the New School for Social Research, and the University of Oregon in Portland. He followed Boas in his attacks on certain intellectual positions then prevalent, such as unilinear evolutionism, geographical and biological determinism, and extreme diffusionism. Described by a contemporary as “the most philosophical of American anthropologists,” Goldenweiser did little field work except for several brief trips to the Grand River Iroquois Reservation in Ontario. His main contributions were to anthropological and social theory, as in his article “The Principle of Limited Possibilities in the Development of Culture” in the Journal of American Folklore, 26 (1913), in which he sought to explain convergences among traits of different cultures as the result of a natural limitation on the number of possible forms. In addition, he contributed to the elucidation of such basic concepts as culture, culture patterns, and especially, totemism, the subject of his best-known monograph in which he rejected Durkheim’s theory of the totemic origin of religion. He concerned himself too with various themes in the history of thought and helped organize the Encyclopedia of Social Science, for which he wrote a number of articles.

[Ephraim Fischhoff]

GOLDENWEISER, EMANUEL ALEXANDROVICH (1883–1953), U.S. economist. Goldenweiser was born in Kiev, immigrated to the United States in 1902, studied at Columbia and Cornell Universities, and, in 1907, joined the U.S. government service as an economist and statistician. He first served with the Immigration Commission and then with the Census Bureau and the Department of Agriculture. In 1919 he began working for the Federal Reserve Board, and from 1927 until his retirement was its director of research. He developed the Board’s statistical services, frequently represented the Federal Reserve System nationally, and served on the government’s principal technical committees on economics and finance.
was, moreover, one of the main U.S. designers of the International Monetary Fund and the World Bank. His many publications include: *Immigrants in Cities* (1909), *Farm Tenancy in the United States* (1924), *The Federal Reserve System in Operation* (1925), and *Monetary Management* (1949).

[Joachim O. Ronall]

**GOLDFADEN, ABRAHAM** (Avrom Goldfaden; 1840–1908), Yiddish poet, dramatist, and composer, founder of the modern Yiddish theater (see *Theater, Yiddish*). Born into a watchmaker's family in Staro Konstantinov, Ukraine, he received not only a thorough Hebrew education but also acquired a knowledge of Russian, German, and secular subjects. To avoid the draft, Goldfaden was sent to a government school at 15 and there came under the influence of Abraham Baer *Gottlober, maskil* and his brother and author of Hebrew and Yiddish satires, including the scathing anti-hasidic comedy *Der Dektukh, Oder Tseyv Khpunes in Eyn Nakht* (*The Bridal Veil, or Two Weddings in One Night*), which exerted a strong influence on Goldfaden's early comedies. Upon graduation in 1857, Goldfaden entered the rabbinical seminary at Zhitomir, which trained rabbis, teachers, and Jewish officials for government service. Under the guidance there of maskilic leaders such as E.Z. Zweifel, H.S. Slonimsky, and Gottlober, he composed Hebrew lyrics, the first of which were published in *Ha-Meliz* (1862). A year later his first Yiddish poems appeared in *Kol Mevaser*. In 1865 he published a Hebrew collection, *Zitzim u-Ferahim* (*Buds and Flowers*), and upon his graduation, his first Yiddish collection, *Dos Yudele* (*The Little Jew*; 1866), offering rich material for *badhanim* and folksingers. It was followed by a supplementary volume, *Di Yidene* (*The Jewish Woman*; 1869), which included his first efforts at writing drama: a short two-character sketch, and the full-length comedy *Di Mume Sosye* (*Aunt Sosya*), closely modeled on Shloyme Ettinger's comedy *Serkele*. Goldfaden knew the latter play intimately, having played the title (female) role in the seminary's all-male production, which was the toast of Zhitomir.

In 1875 he joined his former classmate Isaac Joel *Linetzki* *Linetzki* in founding and editing in Lemberg a short-lived humorous magazine, *Der Alter Yisrolik*. Goldfaden then moved to Romania, where, in Jassy, he came in contact with the *Broder Singers*, who were singing and acting out Yiddish songs, including his own, in wine cellars and restaurant gardens. He then conceived the idea that the dramatic effect of the songs and impersonations could be heightened if combined with prose dialogues and woven into an interesting plot. The first performances, at Shimen Mark's Pomul Verde cafe in October 1876, starring the veteran performer Israel Grodner and his young co-star, Sokher Goldstein, launched the professional Yiddish theater. Encouraged by the enthusiastic reception accorded his performances in Jassy, Goldfaden engaged wandering minstrels and cantors' assistants as additional actors, toured other Romanian cities, including Bucharest, and then went to Odessa. By 1880 his troupe was giving performances throughout Russia, and his phenomenal success was encouraging theatrical ventures by other enterprising actors and librettists. Of Goldfaden's early plays, the most successful were the musical comedies *Shmendrik* (1877), a satire whose titular anti-hero became a synonym for a foolish person; *Di Kishelmafrerin* (*The Sorceress*; 1879), which includes many of Goldfaden's most popular songs; and *Der Fanatik oder di Tseyv Kuni Leml* (*The Fanatic, or the Two Kuni Lemls*, 1880), the apothecosis of the maskilic farces Goldfaden had been writing for the previous few years. All three of these plays retained uninterrupted stage popularity for decades in both their original forms and in a variety of adaptations. Though not a trained musician, Goldfaden had been writing songs for most of his life, and the music in his plays is a combination of original composition and artful selection of pre-existing music. He drew upon varied sources — synagogue chants and Jewish folksong, the non-Jewish folk and popular music of Eastern Europe, and Italian and French operatic arias. Many of his songs became enormously popular among Yiddish speakers. Among other types of songs, Goldfaden composed popular lullabies (*Ro-zhinkes mit Mandlen* / *Raisins and Almonds*), occasional songs (like *Tsu Dayn Geburtstog*, the Yiddish "Happy Birthday"), allegories of God's relationship with the Jewish people (*A Pastekhl* / *A Shepherd*), and songs that poignantly captured a sense of aspiration for self-fulfillment on both individual and national levels (*Faryomert, Farklogt* / *Lamented, Mourned*; *Shabes, Yontev, un Rosh Khoydesh* / *Sabbath, Festival, and New Moon*).

The Russian pogroms of the early 1880s prompted Goldfaden, like many other Jewish writers, to reassess Jewish life and politics, and a more serious tone becomes evident in his work beginning at this point. The romantic operetta *Shulamis* (1888) tells an epic story set in late antiquity and following the fortunes of a shepherdess and the soldier who falls in love with, abandons, and ultimately returns to her. In *Doktor Almosado* (1882), Goldfaden reacted to the pogroms of 1881, and even though he transposed the scene of the dramatic action to 14th-century Palermo, his audience sensed its timeliness and its veiled references to their sad plight. In *Bar Kokhba* (1883), a historical opera depicting the last desperate revolt of the Jews against their Roman oppressors, Goldfaden — an adherent of the Hovevei Zion movement — tried to stir his people with visions of ancient national grandeur and heroism.

The Yiddish theater expanded and flourished in Eastern Europe until 1883, when the Russian government, fearing this new mass medium, banned performances in Yiddish. This action compelled many authors, actors, and producers to migrate to other lands, though some remained in Russia and found various ways to sidestep the ban. Those who left helped establish Yiddish theaters in Warsaw, Paris, London, and New York, among other places. In 1887 Goldfaden was invited by some of his actors who had moved to New York to join them, but when he arrived he encountered severe competition from producers who had preceded him and from playwrights like Joseph Lateiner and Moyshe Hurwitz, who were even more prolific than he. During this American sojourn, he composed
his successful biblical dramas *Akeydes Yitskhok* ("The Binding of Isaac," 1887) and *Kenig Akhashveyreish* ("King Ahasuerus," 1887), but professional disappointments drove him back to Europe. He led a troupe at the Princess Club Theatre in London for several months during 1889, but soon moved to Paris and then on to Lemberg (Lvov), where he remained for most of the 1890s.

As he grew older, Goldfaden's commitment to Zionism became increasingly prominent in his life and work. In 1900, he served as Paris delegate to the World Zionist Congress in London. Many of his plays and poems reflect his political views. The epic play *Meshiekh Tsaytn!* ("The Messianic Era!"), 1891, for example, takes the characters on spiritual and physical journeys resulting from pogroms and ultimately concludes that the Land of Israel is the only suitable home for the Jews. His last play, *Ben Ami* (1907), reaches a similar conclusion. To a large extent an adaptation of George Eliot's novel *Daniel Deronda*, *Ben Ami* transposes the action to pogrom-ridden Odessa, and the philo-Semitic English aristocrat becomes a Russian baron. The play ends with the pogrom victims and their noble savior experiencing regeneration as pioneers of Jewish national redemption on the soil of Zion.

In spite of the enormous popularity and influence of his plays, Goldfaden and his wife, Paulina, perpetually struggled to stay out of poverty. His final years brought continued wandering and declining health, ultimately bringing him to his deathbed as *Ben Ami* was running in New York theaters during the closing weeks of 1907; he died there on January 9, 1908. The following day, 100,000 mourners were said to have greeted his funeral procession to Washington Cemetery. His death ended one era and inaugurated another – that of the reinterpretation of his works by other artists. Avant-garde productions of his plays were mounted by notable companies like the Moscow State Yiddish Theater, which offered a groundbreaking, Sovietized reinvention of *Di Kishefnakherin* in 1922; the Yiddish Art Theater in New York, which produced three ambitious revivals of Goldfaden plays in the mid-1920s; and Warsaw's Yung Teater, with *Troupe Tanentsap* ("The Tanentsap Troupe," 1933), a play-within-a-play revolving around a fictional production of *Di Tsvey Kuni-Leml* during the early years of the professional Yiddish theatre. Other prominent playwrights who would take up the challenge of adapting Goldfaden's plays included Shmuel *Halkin* (*Shulamis* and *Bar Kokhba*) and Itsik *Manger* (*Hotsmakh-shpil* / "Hotsmakh Play," 1947), an original work based on characters from *Di Kishefnakherin*.

**Music**

Goldfaden himself furnished the tunes to his plays, although he was unable to write music and played no instrument. He drew upon the most varied sources – synagogue chants and Jewish folksong, the non-Jewish folk and popular music of Eastern Europe, and Italian and French operatic arias. Many of the songs from his plays have remained popular: some were folksongs initially (such as the cradle song *Rozhinkes mit Mandlen* which he adapted and put into *Shulamis*, from where it achieved its fame), and others became folksongs. Goldfaden described his musical activity with engaging frankness in his short autobiography; A.Z. *Idelsohn's analysis of the melodies in *Shulamis* and *Bar Kokhba*, and his conclusions, are a fair appraisal both of Goldfaden's musical shortcomings and his merits. For the performance of *Di Kishefnakherin* ("The Witch") by the Jewish Chamber Theater of Petrograd in 1922, the music was rearranged by Josef *Achron*. In 1943, "The Witch" was staged in Tel Aviv in Hebrew by the *Ohel Theater, on the 70th anniversary of its first performance. The text was adapted by Abraham Levinson as a play within a play – bringing Goldfaden himself and his contemporary audience on the stage – and the music was arranged by Marc *Lavry.*

**GOLDFARB, ISRAEL** (1879–1967). Polish-born American rabbi, cantor, and influential composer. Born in Sieniewa, Galicia, Poland, Goldfarb came to New York at the age of 14 and within a decade graduated from Columbia University. He was ordained by the Jewish Theological Seminary in New York (1902). Receiving musical training at the Institute for Musical Arts, the forerunner of the famed Juilliard School, Goldfarb then began his service, his dual calling as rabbi and cantor of the Kane Street synagogue, which was founded in 1856 and is the oldest continuously operating synagogue in Brooklyn. Goldfarb served the congregation for more than half a century (1904–56) and was rabbi emeritus until his death. He died knowing that his grandson Henry Michelman was to be named his successor. When he came to the congregation it had just completed a merger and was moving to new quarters in a converted church on Kane Street. His music united divergent parts of the congregation and eased the many transitions. The congregation became known as mother congregation of Brooklyn and led to the formation of other Brooklyn synagogues such as Union Temple, East Midwood Jewish Center, and Flatbush Jewish Center. Goldfarb became known as the father of congregational singing.

He tested his compositions in his synagogue and at his Sabbath table where many of his compositions were first sung. From there they spread throughout the Jewish world. He formed a youth choir of boys and girls, which was rare in...
those days and served a social as well as a spiritual function. Many of his compositions, especially his high holiday melodies, have been so widely chanted that they have come to be regarded as traditional.

Goldfarb was also among the founders of the Cantor’s Institute at the Jewish Theological Seminary, where he taught for decades. He is best known for his compilation of Jewish music for schoolchildren, The Jewish Songster, and for composing the melodies to “Shalom Aleichem” (1918) and to “Magen Avot,” which are sung in nearly every Ashkenazi synagogue in North America. His work continues to be performed in concerts and recorded by musicians, including Celtic guitarist Tony McManus and Jewish violinist Itzhak Perlman. Goldfarb’s work can be heard in many homes and synagogues by people who acknowledge the mastery of his composition without knowing the master who composed it. At his funeral, his son-in-law Rabbi Irving Lehman said that Goldfarb’s most beautiful melody was the song of his life.

[Henry Michaelman (2nd ed.)]

GOLDFEDER, FISHEL (1912–1981), U.S. Conservative rabbi. Goldfeder was born in Pittsburgh, educated at Orthodox yeshivot in Brooklyn and Lithuania, and ordained at the Jewish Theological Seminary in 1944, the same year he earned a B.A. from New York University. After acting as substitute rabbi at Kadimah Synagogue in Springfield, Mass., while the permanent rabbi was serving as a chaplain during World War II, Goldfeder became assistant rabbi at the “conservadox” Congregation Adath Israel in Cincinnati in 1945. In 1949, Goldfeder – whose philosophy was “the life of a rabbi’s is the life of his people” – became senior rabbi, remaining in that post until his retirement 31 years later. In the 1950s, the congregation became embroiled in a very public dispute over whether the synagogue – which followed many Orthodox practices, but was affiliated with United Synagogue and was gradually adopting Conservative innovations – should move from separate seating to mixed seating; the case even reached the secular courts, and monopolized an entire issue (Fall, 1956) of Conservative Judaism. Goldfeder articulated his opinion that one of the raisons d’être of the Conservative movement was precisely to provide houses of worship for Jews who wanted less strict interpretations of halakkah. His view ultimately prevailed: the disgruntled Orthodox minority departed and Goldfeder steered Adath Israel firmly into the Conservative mainstream.

By the time Goldfeder was elected rabbi emeritus in 1980, the congregation had grown to 1,000 members, making it one of the largest in Cincinnati – a city whose Jewish community Goldfeder had served in many realms. He was instrumental in founding Yavneh Day School, Chofetz Chaim Day School, Jewish Culture and Art Series, and the first city-wide Jewish Youth Council. He served as president of the Board of Rabbis and of the Zionist Federation; chairman of the Soviet Jewish Committee and of the Southern Ohio Region of Israel Bonds; and co-chairman of the Jewish Welfare Fund. On a national level, he served on the Executive Committee of the Jewish Community Relations Council; the National Advisory Council of the United Jewish Appeal; the Israel Bonds National Rabbinic Cabinet; and the Executive Committee of the Rabbinical Assembly, as well as the a’a’s Committee on Jewish Law and Standards. Goldfeder passed away in Jerusalem less than a year after his retirement.

[Bezalel Gordon (2nd ed.)]

GOLDFLAM, ARNOŠT (1946– ), Czech playwright, writer, director, screenwriter, and actor. Born to Holocaust survivors in Brno (Moravia), Goldflam studied theater directing at the Janáček Academy of Music Arts. He worked in various theaters until 1992, when he began freelancing. He was involved in many performances at home and abroad. Goldflam is the author of more than 25 plays, such as Horror (1981); Biletárka (“The Ticket Girl,” 1983); Útržky z nedokončeného románu (“Scraps of an Unfinished Novel,” 1985); Agathománia (“Agathomania,” 1987); Pisek (“The Sand,” 1987); and Smolova (“The Contract,” 1999). Goldflam’s plays oscillate between the tragic and the comic, the realistic and the dreamlike, between a dramatic construction and real life, often combined with the absurd.

He is influenced by his Jewish heritage. One of his plays, Sladký Theresienstadi (“Sweet Theresienstadt,” 1996), is based on a diary from the Terezín concentration camp. In his work, Goldflam is also drawn to Jewish authors. His dramatic adaptations comprise works by Franz *Kafka, Franz *Werfel, Joseph *Roth, and Karel *Poláček. He was active as a theater and film actor, wrote stories and fairytales, and taught at the Faculty of Drama in Brno.

[Milos Pojar (2nd ed.)]

GOLDFLAM- SAHAWI, LEO (later Aryeh; 1884–1949), leader of the Zionist Organization in Austria, author, and journalist. Born in Mihaileni, Romania, Goldflam moved to Vienna in 1902 and became an adherent of Herzl. He devoted himself primarily to statistical-economic studies of the Jews, particularly those of Austria. He established and edited the early Zionist periodicals in Vienna, Die Stimme and Die Hoffnung. In 1907 he moved back to Romania, returning to Vienna after World War 1. Goldflam was president of the Zionist Organization of Austria for many years. He took part, with B. *Borochov, in founding the World Union of *Po‘alei Zion. He continued his Zionist activities until after the Nazi invasion of Austria (1938), finally settling in Haifa in 1939 and taking an active part in municipal affairs and the Aliyah Hadashah.

ENCYLOPAEDIA JUDAICA, Second Edition, Volume 7
Party. Among his books are *Kleiner Fuehrer durch die Palästina-Literatur* (1919), *Die Juden Wiens* (1927); a monograph on the Jews of Vienna in volume 1 of *Arim ve-Immahot be-Yisrael* (1946); and *Leopold Pluschkes – Zwei Generationen österreichischen Judentums* (1943).

**BIBLIOGRAPHY:** MB (Aug. 5, 1949). [Getzel Kressel]

GOLDHAR, PINCHAS (1901–1947), Australian writer of Yiddish fiction. Born in Lodz, Goldhar migrated to Melbourne, Australia, in 1928. His early death (of heart disease) was said to have been aggravated by hard physical work in his father’s dye factory. Goldhar wrote many short stories, chiefly in Yiddish, which are regarded as among the best ever written by a Jewish writer in Australia. They focus on the loneliness (as was the case at the time, before the arrival of large numbers of Yiddish-speaking Holocaust survivors) of East European Jews in remote Australia, and the relative lack of culture in that country. Goldhar also edited Yiddish supplements in Australian Jewish newspapers and a collection of short stories, *Dertseylungen fun Oystrele*, in 1939. In recent years there has been a considerable revival of interest in his work.

GOLDIN, DANIEL SAUL (1940– ), U.S. space administrator. New York-born and Bronx-bred, Goldin earned a bachelor of science degree in mechanical engineering from the City College of New York in 1962. Inspired in his freshman physics class by a professor’s blackboard reminder (“*Sputnik is watching you!*”) as the Russians orbited the world’s first artificial satellite, Goldin directed his attention to space. After graduation, he applied to the National Aeronautics and Space Administration, newly created amid the East-West space race. He joined NASA’s Lewis Research Center in Cleveland, Ohio, because, he said, “they were working on electric propulsion for going to Mars.” His work led to a major discovery. The ion engine he was working on for space propulsion could be converted to a radio transmitter powerful enough to beam television signals from a satellite to Earth, speeding them across thousands of miles of space. His advancement of that idea eventually won a United States patent and helped give birth to direct-broadcast satellites, which increasingly circle the Earth.

In 1967 Goldin was hired by the conglomerate TRW, a maker of military and civilian spacecraft. He moved to its California divisions and stayed there for 25 years, rising through the ranks to become vice president and general manager. He led projects that conceptualized and produced advanced communication spacecraft, space technologies, and scientific instruments. Between 1976 and 1983 he managed several top-secret programs involving such projects as spy satellites. During that period, TRW was the prime contractor on photographic spy satellites, then the nation’s most powerful. The company also developed a satellite known as Magnum, which, instead of using a camera, unfurls a giant antenna in space to monitor missile tests, radio, telephone, radar, and other military and diplomatic communications. Under his stewardship, TRW also built early warning and communications satellites as well as scientific probes like NASA’s Gamma Ray Observatory.

Goldin was selected by President George H.W. Bush in 1992 to become the ninth head of NASA. His appointment was seen as a way to shake up an agency that the administration found unresponsive to its direction. Goldin arrived when NASA had been in a tailspin since the 1986 *Challenger* disaster, which killed seven astronauts, including a high school teacher. Its wobbly state became apparent two months after his nomination when ballyhoo hardware aboard the space shuttle *Endeavor* forced three astronauts to reach out with nothing but their gloved hands to snare a wayward satellite in space. After that Goldin ordered a study to see if added rehearsals and training were needed for the agency’s greatest impending challenge, repair of the $1.6 billion Hubble Space Telescope. Eventually, shuttle astronauts conducted a record three preparatory space walks. In December 1993, with Bill Clinton as president, the repair went with surprising ease, giving the agency a major boost in confidence. Goldin’s tenure at NASA lasted through nine months of the administration of President George W. Bush, to November 2001; he was its longest-serving administrator.

Over the nine years of his administration, with lower budgets, Goldin initiated a “faster, better, cheaper” approach that included aggressive management reforms. The human space flight funding was reduced from 48 percent of the agency’s budget to 38 percent and funds for science and aerospace technology were increased from 31 to 43 percent. The civil service workforce was reduced by about a third, while the headquarters civil service and contractor workforce was reduced by more than half, all without forced layoffs. In space exploration, he initiated the Origins Program, to understand how the universe has evolved, to learn how life began, and to see if life exists elsewhere. He was a vigorous proponent for increased exploration of Mars and established a series of robotic missions to visit the planet every two years over a decade. The missions, designed to determine if life and water may have existed on Mars, featured planetary rovers, penetrators, and sample returns. Goldin also played a pivotal role in redesigning the International Space Station. Starting with the Space Shuttle program, Goldin established a goal to transfer day-to-day space operations to the private sector. He was also instrumental in promoting cooperative endeavors with the Russian Space Agency to the point where Russia became a full partner in the International Space Station program.

After leaving NASA in 2001, Goldin engaged in robotics research at the Neurosciences Institute in La Jolla, Calif. In November 2003, Goldin was selected by Boston University, the fourth largest private university in the United States,
to succeed its longtime president and chancellor, John Silber. However, shortly before his inauguration, the university trustees withdrew its contract offer, which called for a salary of $600,000 for five years and had other provisions. Goldin threatened to sue. The university settled with Goldin for a reported payment of $1.8 million.

[Stewart Kampel (2nd ed.)]

GOLDIN, EZRA (1868–1915), Hebrew and Yiddish author. Born in Luna, Grodno district, Goldin lived in Warsaw from 1886 to 1893 and then moved to Lodz. His first publication was a collection of poems, Shirai Noar ("Poems of Youth," 1887). Subsequently he turned to writing fiction, and his stories appeared in Hebrew and Yiddish literary journals, including Ha-Zefira and Ha-Melitz. Several of his stories were published as separate books. In 1896 he published Ha-Zeman, a literary anthology to which many leading Hebrew writers of the day contributed. At the beginning of the century he abandoned his literary activity, took up commerce, and became a prosperous merchant. During World War I he fled from the approaching German army and spent his last days in Riga. Goldin's short stories idealized the traditional Jewish way of life, particularly its devotion to Torah. In his view the secularized Judaism of the new nationalism had yet to prove its legitimacy as a replacement for the old faith.

GOLDIN, HYMAN ELIAS (1881–1971), U.S. rabbi, educator, and author. Goldin was born in Lithuania and studied at the Yeshivah of Vilna where he was ordained as a rabbi in 1900. He immigrated to the United States in the following year. In a chance visit to a study group in a synagogue, the destitute scholar so impressed those present with his erudition that they immediately established a fund to aid him in his studies. He graduated from the New York University Law School in 1909.

Goldin served successively as principal of the Machzike Talmud Torah, the Hebrew Academy of Boro Park, both in Brooklyn, N.Y., and the Glens Falls Hebrew Academy. Passionately devoted to education, he established summer camps for children and later a camp for adults at Blue Sky.

From 1932 to 1947 Goldin served as chaplain of the Great Meadow Prison in Comstock, N.Y., and his experience there served as the basis for his unique volume The Dictionary of American Underworld Lingo. His main literary activity, however, was devoted to spreading Jewish knowledge and combating antisemitism. His The Case of the Nazarene Re-Open (1948), which he regarded as his magnum opus, was the fruit of research in the New Testament, on which he became an acknowledged expert.

Among his other publications were Universal History of Israel (4 vols., 1935), Hebrew Criminal Law (1952), and a translation of Ganzfried's Kizzur Shulhan Arukh. He also wrote introductory books for Hebrew. Goldin published no fewer than 80 books for children based on rabbinic and medieval Jewish literature.

[Irwin Mirkin]

GOLDIN, JUDAH (1914–1998), U.S. scholar and teacher. Goldin was born in New York City. He received his B.S.S. from the City College of New York and his B.H.L. from the Seminary College of Jewish Studies at the Jewish Theological Seminary of America (1934). He received his M.A. in English literature from Columbia University and an M.H.L. and D.H.L. from the Jewish Theological Seminary. Ordained by the rts in 1939, he was also dean and professor of aggadah.

He then taught religion, Jewish literature, and history at several institutions. He held faculty positions at Duke University and the University of Iowa before moving on in 1958 to a 15-year stint at Yale University, teaching classical Judaica. Then, for an even longer period, he was professor of post-biblical Hebrew literature at the University of Pennsylvania. Upon his retirement in 1985, he became professor emeritus there.

Goldin was a fellow of the American Academy for Jewish Research and chairman of the Yale Judaica Research Committee. He was also a Guggenheim Fellow and a Fulbright Research Scholar and served as a consultant on Judaica to the Encyclopedia Britannica.

Goldin's particular scholarly concern was rabbinic Judaism, and he was a skillful and graceful translator. For many years he served as editor of the Yale Judaica Series and he edited The Jewish Expression (1970) and Shira: The Song at the Sea Midrash (1971), among other books. In 1988 the Jewish Publication Society inaugurated its Scholars of Distinction series with Goldin's book of collected essays, Judah Goldin: Studies in Midrash and Related Literature. In 1996 he received the National Foundation for Jewish Culture's Jewish Cultural Achievement Award for Textual Scholarship.

Among Goldin's works are The Fathers According to Rabbi Nathan (1955), an annotated translation; The Living Talmud (1957), a compendium of medieval commentaries on Pirkei Avot; and "The Period of the Talmud" (in L. Finkelstein (ed.), The Jews..., 1 (1960), 115–215).

[Jack Reimer / Ruth Beloff (2nd ed.)]

GOLDIN, NAN (1953– ), U.S. photographer. Shortly after she was born in Washington, D.C., Goldin and her family moved to a suburb of Boston, where Goldin spent several primarily unhappy years before moving away from her family. In 1965 her older sister, Barbara Holly Goldin, committed suicide. It had a profound effect on her life and she sought comfort in her friends. Deciding that conventional family life and traditional schooling did not suit her, Goldin moved in with a series of foster families and began studies at an alternative school called Satya Community School. There, in Lincoln, Mass., she met two people, David Armstrong and Suzanne Fletcher, who were to become influential throughout her early career. To capture
memories of the past, she began to photograph friends documenting their lives and her own. With Armstrong and Fletcher, she used photography to reinvent herself and those around her, particularly by photographing her companions dressing up for one another in gender-bending attire. This early experimentation on the line separating the genders shaped her lifelong fascination with the underground subculture.

In the early 1970s she photographed drag queens and became friends with many transvestites. She depicted her subjects in a nonjudgmental way; she saw drag as a way to reinvent oneself. During this period, she enrolled at the Boston School of Fine Arts and her photographic style changed from black and white, primarily from available light, to color, which became an integral part of her style. She illuminated her subjects with careful use of flash, achieving bright deep hues. She moved to the Bowery in New York City in 1978 and her career and personal life underwent a significant change. Her images of the time reflected her lifestyle: excessive drug and alcohol use and abusive relationships. Goldin documented everything in this demi-monde: drunken parties, beatings, sex. In 1979 Goldin put together a slide show of her photographs, added music and showed them at punk rock clubs for her friends and photographic subjects to see. The show, later called “The Ballad of Sexual Dependency,” was made up of color photographs lit with flash and ran for 45 minutes. To some, the 800-image “ballad,” a sweeping, diaristic and critical account of life within the photographer’s milieu, reflected the same dissatisfaction with contemporary life evident in Robert *Frank’s *The Americans of the 1950s. Over the years, the format remained the same, but the show grew in size and artistic ambition as Goldin continued to photograph her surroundings. In 1985 the show was included in the Whitney Biennial, a major exhibition of avant-garde work.

By 1988 Goldin’s drug and alcohol abuse took a toll on her life and work, and she entered a detoxification clinic. There she created many images of herself, including “My Bedroom at the Lodge,” “Self-Portrait in Front of Clinic” and “Self-Portrait With Milagro.” She even showed herself battered by her boyfriend, her face bruised and swollen, her eyes filled with blood (“Nan After Being Battered”). During this time many of her close friends were dying of AIDS. One of her closest friends, Cookie Mueller, a writer and dancer whom she had known since 1976, when she started her career, was stricken. Goldin’s series, “The Cookie Portfolio,” consists of 15 portraits, from those taken at parties in their youth to her funeral in 1989. A critic said Goldin’s work did not glamorize her sensationalist subjects but tried to humanize them. In 1996 the Whitney Museum of American Art held a retrospective of her work called “I’ll Be Your Mirror.” It was composed of photographs from every period of her career, which included a series with her own parents, landscapes, couples, friends’ children, formal and informal. She produced several books, including one based on her “ballad” with 130 photographs, and *The Devil’s Playground* in 2003.

**GOLDING, LOUIS** (1895–1958), English novelist. Born in Manchester and educated at Oxford, Golding joined an ambulance unit during World War I and served in Macedonia and France. *Sorrow of War* (1919), a book of poems, was followed by his first novel, *Forward from Babylon* (1920). During the 1920s Golding traveled widely and the many books reflecting his experiences include *Sicilian Noon* (1925); *Those Ancient Lands: Being a Journey to Palestine* (1928); *In the Steps of Moses the Lawgiver* (1937); *In the Steps of Moses the Conqueror* (1938); and a late work, *Good-bye to Ithaca* (1955). Golding made his reputation, however, with *Magnolia Street* (1931), the first of a cycle of novels about Anglo-Jewish life. *Magnolia Street*, which was an international best-seller and was adapted for the stage, was based on his memories of Manchester, which in his books became “Doomington.” The novel portrayed the tensions and sympathies governing the relations between Jewish and non-Jewish inhabitants of one particular street between 1910 and 1930. Golding projected himself into the book through his alter ego, the emancipated painter Max Emmanuel, whose brother (like the novelist’s) died while on active service in France in World War I. The second of the Doomington novels, *Five Silver Daughters* (1934), was set against the background of the Bolshevik Revolution and postwar Germany. Golding’s ideal of racial harmony was personified by the eponymous hero of Mr. Emmanuel (1939), which was later made into a film of the same name (1945), while *The Glory of Elsie Silver* (1945) reflected his response to Nazism and his sympathy for Zionism. These he had already revealed in two studies: *The Jewish Problem* (1938) and *Hitler Through the Ages* (1939).

Not all Golding’s novels were concerned with Jewish themes: *The Camberwell Beauty* (1935) dealt with black magic and the Maffia in Sicily; and *The Loving Brothers* (1952) told the story of two pairs of brothers, one of each pair being brilliant and the other criminal. Golding also wrote radio plays and books on sport. His other works include the novel *Day of Atonement* (1925); *James Joyce* (1933), a study; and *To the Quayside* (1954). He also wrote an autobiography, *The World I Knew* (1958).

**ADD. BIBLIOGRAPHY:** *ODNB* online.

**GOLDMAN,** family of U.S. investment bankers descended from Bavarian-born Marcus Goldman (1821–1904) and Joseph Sachs, both of whom arrived in the United States in 1848. Goldman was a peddler in Pennsylvania and a clothing merchant in Philadelphia before he began his financial career in New York in 1869. Later he was joined by his son, Henry Goldman (1857–1937), and by Joseph Sachs’s sons, Samuel Sachs, who married Marcus Goldman’s daughter Louise, and Harry Sachs. They formed the banking firm of Goldman, Sachs & Co., which cooperated with the London bankers Kleinwort and Japhet in channeling European capital into U.S. investments.

[Hanns G. Reissner]

**GOLDMAN, AHARON HALEVI** (1854–1932), rabbi of the Jewish agricultural colony Moisesville, Argentina. Goldman was born in Podolia, Russia. When he was 18 years old he was ordained and worked as a shohet. Goldman accepted the role of spiritual leader of the first organized group of 120 families that planned to establish themselves in Argentina as farmers. The group arrived in Buenos Aires on board the *Wesser* on August 14, 1889. Goldman immigrated with his wife and five children. The group established an agricultural colony in Palacios, province of Santa Fe; in 1890 they moved to a new home, close to the railway, which Aharon Goldman called Kiyrat Moshe or Moises-Ville, referring to Moshe Rabbeinu, who liberated the Israelites from slavery in Egypt, as a symbol of the liberation of the settlers from the oppressive situation that they had suffered in Russia.

In his role as rabbi in Moisesville Goldman tried to maintain observance, especially kashrut and the Sabbath. He succeeded in obtaining the recognition by the authorities of the Sabbath as the weekly day of rest and Sunday as a weekday. Goldman was also gabbai zedakah in charge of the collection of money for the local needy and for the yeshivot in Erez Israel and the Diaspora. He studied 18 hours a day. A large part of his responsa was dedicated to the various problems facing the Jews in a new social and geographical environment. He solved halakhic problems with respect to the different seasons in the southern part of the globe, as well as the different fauna not mentioned in the Torah with respect to the dietary laws. His responsa were published posthumously by his grandson Dr. David Goldman, in *Divrei Aharon* (Jerusalem, 1981). Goldman maintained a wide correspondence with prominent rabbis of his generation: Isaac Elhanan *Spektor, Samuel *Salant, *Ha'ez Hayyim, Abraham Isaac ha-Kohen *Kook, and Samuel *Mohilever. His rabbinical authority was recognized throughout Argentina and was accepted also by Shaul Sethson Dabbah, rabbi of the Aleppo community of Buenos Aires.

One of his sons, MORDECHAI GOLDMAN, was shohet in Moisesville and died in 1981 in Jerusalem.

[Efraim Zadoff (2nd ed.)]

**GOLDMAN, BERNARD** (1841–1901), Polish patriot and militant supporter of assimilation. Goldman was born in Warsaw, where his father was a Hebrew maskil and owned a printing press; his grandfather Jacob was a rabbi in Amsterdam. Goldman played an active role in the Polish revolutionary movements against czarist rule. After the demonstration held in Warsaw in 1861, he was exiled to Siberia, but escaped and returned to Warsaw to take part in the uprising of 1863. After its suppression he went abroad, traveled through Germany, and reached Paris, where he contributed to the cause of the Polish émigrés. He went to Vienna in 1867 and completed his law studies. In 1870 he settled in Lemberg where he initiated an extensive program for promoting education among the Jewish masses in Galicia. He organized cultural activities, including courses and libraries for spreading Polish culture and combating the pro-Austrian centralist movement. In opposition to the aspirations of the Shomer Yisrael society of German orientation, he founded the rival Doreshei Shalom and published a newspaper *Zgoda*. This resulted in the establishment of the *Agudat Ahim*, which later became the most prominent center of assimilationist activity in Poland.

In 1876 Goldman took his seat in the national Sejm (parliament) of Galicia as the delegate for Lemberg and in 1883 he was elected to the Lemberg municipal council. Goldman was also active within the framework of the community administration, founding an organization of artisans, Yad Ha'aruzim. In particular he promoted the development of a school network, which was named after him. This network provided a Polish-oriented education combined with the teaching of religious observance.

[Moshe Landau]

**GOLDMAN, EDWIN FRANKO** (1878–1950), U.S. bandmaster, brother of Mayer Clarence *Goldman. Goldman was born in Louisville, Kentucky, and studied music at the National Conservatory, New York, where Anton Dvořák taught him composition. He began his career as solo cornetist in the Metropolitan Opera orchestra, and in 1911 formed his own band, which from 1918 gave outdoor concerts on university campuses and in New York public parks. The band toured the U.S. and in 1945 performed for the U.S. armed forces in the Philippines and Japan. It had a high standard of performance and an unusually extensive repertoire, and hence exerted a great influence on bands throughout the U.S. Goldman was a founder and first president of the American Bandmasters’ Association. He was assisted by his son and associate conductor RICHARD FRANKO GOLDMAN (1910–1980).

**GOLDMAN, ELIEZER** (1918–2002), Israeli philosopher. Born in Brooklyn, New York, Goldman pursued his undergraduate education at Yeshiva University and was a student
of Rabbi M. *Soloveitchik and his son Rabbi J.B. *Soloveitchik, with whom he studied both Talmud and philosophy. His wide-ranging interests included halakhah, philosophy, Jewish thought, mathematics, physics, literature, economics, and music. His grounding in Talmud would serve him, in later life, for his interest in philosophy of halakhah. In the late 1930s Goldman immigrated to what was then Palestine and became a member of kibbutz Sedeh Eliyahu in the Bet Shean Valley. In his own words, his aliyah resulted less from Zionism in the political sense than from his search to fulfill Jewish religious socialism and establish a socialist Jewish society based on traditional Jewish sources. Only later in life was he able to complete his graduate studies at Bar-Ilan University, where he taught for many years and became professor of philosophy. Many of his writings are only now being prepared for posthumous publication in three volumes: the first volume deals with his research into classical Jewish thought; the second on Rav Kook; and the third on social, economic, and cultural thought. Goldman was, however, no ivory tower academic. Many of his writings relate to the social, economic, and cultural life of the religious kibbutz.

Goldman's thought is characterized by a continual dialogue with his teacher J.B. Soloveitchik, and with his friend Yeshayahu *Leibowitz; he agreed with them regarding the centrality of the halakhah to understanding the Jewish world of life (lebenswelt). Together with Soloveitchik and Leibowitz, Goldman contributed to a dramatic shift in contemporary Jewish thought, away from theological-metaphysical theory to halakhic practice. Unlike the other two, however, who employed general philosophy to analyze the halakhah, and who wrote about the halakhah from a philosophical point of view, Goldman sought to overcome the problem of imposing a foreign perspective onto the Jewish tradition itself, preferring what may be called a phenomenological methodology, based on precise examination of the sources themselves. His philosophical work was an attempt to describe carefully and critically the Jewish tradition as it reveals itself, and not as it can be imagined from an external theoretical perspective. Goldman was thus the founder of a new field, philosophy of the halakhah, in which philosophy is used to analyze the halakhah itself. Goldman's collected essays, Expositions and Inquiries: Jewish Thought in Past and Present (1996), was edited by Avi Sagi and Daniel Statman.

Goldman was both an academic scholar and a constructive thinker, who (together with Soloveitchik and Leibowitz) had a seminal impact on Orthodox thought's response to modernity. His research interests focused especially on Saadiah Gaon and Maimonides, but he went beyond neutral research in also seeking existential relevance in their thought. For example, in his view, Maimonides' philosophic positions did not outlive their time, but his method is still largely useful in working out the relationship between philosophy and science, and the sources of religion. In contrast with Soloveitchik and Leibowitz, for whom there is always a fundamental tension between Jewish sources and the external world, Goldman's thought is shaped by the Maimonidean harmony of the Torah and philosophy, and rejects the distinction between "internal" and "external"; each person, including the religious person, reflects his or her socio-cultural environment in his or her understanding of tradition.

Goldman also distanced himself from Soloveitchik's view, especially in his later writings, concerning the feeling of alienation of the individual from nature and society, a feeling of alienation Goldman did not share. In contrast with both Soloveitchik and Leibowitz, Goldman's thought emphasized the multi-cultural and multi-contextual situation of human life. A person does not establish a religious world or halakhic commitment autonomously, independently of the other contexts in which he or she lives.

A consistent theme in Goldman's thought over the years was the problem of the relationship between the Torah and the conditions of life. For Goldman, this is not an ideological question, but an existential one: what do we expect of the halakhah, and how can we interpret it so that it accords real conditions? How does the halakhah actually function, and how can it harmonize its norms with external realities? Goldman's approach thus sharply contrasts with that of Leibowitz, for whom the halakhah is a closed system, which functions autonomously and independently of external conditions, focusing exclusively on the service of God. Leibowitz's approach leads to a split personality in the believer: he or she can either be a believer serving God, or a person committed to political, social, and moral values and conceptions. In the framework of Leibowitz's thought, the believer can never unite these two separate worlds. Goldman, by contrast, proposed a more complex model based on his analysis of the halakhah itself. In 1958 he proposed a new category, "meta-halakhic norms." These norms are not behavioral, but are principles for interpreting and implementing the halakhah itself. The existence of these meta-halakhic norms also undermines the prevalent tendency to describe the halakhah in closed, formal categories of jurisprudence, without any reference to external considerations. Such tendencies, Goldman argued, are contradicted by great halakhic decisors over the ages, who responded to real, practical needs, referring to such concepts as "what most of the community cannot sustain" in making their decisions. Goldman maintained that the contemporary tendency in haredi (ultra-Orthodox) ideology, which reduces a halakhic decision to formal, theoretical truth, results in an abject failure to relate to the needs of the time. Another sociological factor in the problem of the halakhah in our day is the status attached to the yeshivot, which emphasize theoretical study of the halakhah, at the expense of involvement in public life and practical halakhic study. The halakhah thus becomes a theoretical construct rather than a real phenomenon.

The problem, then, is that the halakhah, like any other system of thought, cannot incorporate within itself all the principles required for it to operate, and can only function when we apply meta-halakhic principles. In a series of articles on "Ethics, Religion and Halakhah," Goldman attempted,
accordingly, to derive these meta-halakhic principles guiding great halakhic decisions from the halakhic literature itself, in particular from the vast responsa literature. In his view, these meta-halakhic principles mediate between the halakhah and human existence.

This approach also led Goldman to criticize Leibowitz’s reductionism regarding the religious “paradox” underlying the halakhah and the dichotomy Leibowitz posited between the halakhah and existence. On the one hand, the halakhah represents utter heteronomy – the acceptance of the divine will as expressed in the written and oral Torah. On the other hand, since the halakhah no longer relies on prophetic instruction, the moment one attempts to realize and implement the Torah in concrete life situations, one is forced to employ autonomous human reason. The halakhah, which is thus founded on heteronomous authority, operates by means of autonomous human reason. It does not originate in human culture, but is directed towards human culture, which it endows with religious significance, and can only be implemented within a cultural context. In this way, the Torah is a product not only of divine revelation, but also, and not less, of its being transmitted to real people in a concrete social-cultural situation, which in many respects precedes the ‘Torah and guides its interpretation. The Torah thus does not exist independently of the community which lives according to its teachings, but also lives according to values reflecting its concrete human situation. The sources of meta-halakhic principles are, therefore, not necessarily the divine will, i.e., the halakhic system itself, but human value judgments based on social and cultural reality, a reality the halakhah both reflects and is intended to order.

In these ways Goldman advocated what he called “Judaism without illusions,” in which religious propositions reflect the believer’s own insights and not transcendent being. This, in turn, forms a basis for a pluralistic religious outlook.

[Avi Sagi (2nd ed.])

**GOLDMAN, EMMA** (1869–1940), U.S. anarchist writer and lecturer, leading advocate of anarchism in the United States. Goldman, born in Kovno, Lithuania, grew up there and in Koenigsberg and St. Petersburg, immigrating to the United States in 1885. Her independent spirit emerged early, and disputes with teachers and her father cut short her formal education. For the most part she was self-educated, particularly in anarchist thought. Her long and close association with Alexander Berkman was the most significant influence on her thought and deed. Unlike many anarchists, she moved beyond the small radical immigrant community, and her lectures and her journal Mother Earth (1906–18) aimed to illuminate the injustice and immorality of American society.

Goldman became an open advocate of birth control in the years before World War 1, which led to considerable notoriety. However, it was her vigorous opposition to conscription during the war that finally led the United States government to imprison her and ban Mother Earth from the mails. Goldman had long been considered dangerous, and the combination of a technical weakness in her citizenship status and legislation that broadened the grounds for action against undesirable aliens led to her deportation to the Soviet Union in 1919. By 1921 she fled that country, repelled by the suppression of the individual, which seemed as complete under Bolshevism as under capitalism.

While she continued to write and lecture, her active political career was ended except for vigorous efforts on behalf of the Catalan anarchists in the Spanish Civil War. Her life was one of commitment to anarchism in theory, and to personal independence and radical political action in practice.

Goldman continuously focused on the basic contention that the state was a coercive force that destroyed the differences among individuals and eliminated genuine freedom in defense of the conformity required by society. She stressed the freedom of the individual, responsive to self-developed standards of love and justice. Her demand for individual freedom never wavered, and she detested capitalism because of its inherent inequalities, which doomed the majority of persons to a toilsome and regimented life focused on material matters. She favored communism as the ultimate form of economic emancipation to break the link between work and income that enslaved men in Western capitalist states. To Goldman, anarchism conformed to man’s basic nature, and it would prove to be a workable and orderly system.

Goldman’s writings include Anarchism and Other Essays (1910), The Social Significance of the Modern Drama (1914), The Psychology of Political Violence (1917), My Disillusionment in Russia (1923), My Further Disillusionment in Russia (1924), Living My Life (2 vols., 1931), and The Traffic in Women and Other Essays on Feminism (1971).

**GOLDMAN, ERIC FREDERICK** (1915–1989), U.S. historian. Goldman was born in Washington, D.C. He was professor of history at Princeton where he taught from 1940. Goldman served as president of the Society of American Historians from 1962 to 1969. He was a member of the academic council of the American Friends of the Hebrew University. Goldman’s field of specialization was American history of the 20th century. His best-known books are: Rendezvous With Destiny: A History of Modern American Reform (1952) and Crucial Decade, America 1945–1955 (1956), revised as Crucial Decade – and After, America 1945–1960 (1961). In 1964 President

[Oscar Isaiah Janowsky]

**GOLDMAN, HETTY** (1881–1972), U.S. archaeologist. Born in New York, Goldman studied at Bryn Mawr College (1903) and at Radcliffe (1910), where she received her M.A. and later (1916) her Ph.D. Her excavation of the necropolis of Halae, in the ancient Greek district of Boeotia, was followed by excavations at the Ionian city of Colophon in Asia Minor and at Eutresis, a Bronze Age settlement in Boeotia. These were interrupted by the Greco-Turkish war in 1922. The peak of her career was her excavation at the south Anatolian city of Tar-sus, birthplace of the apostle Paul, which had been a flourishing site in the Bronze and Iron Ages as well as during Hellenistic and Roman times. Hetty Goldman’s main interest was the relationship between the Oriental cultures of the Eastern Mediterranean and the culture of the Greek world. She was one of the first members of the Institute for Advanced Study, Princeton, New Jersey. Her published works include *Excavations at Eutresis in Boeotia (1931)* and *The Acropolis of Halae* (in Hesperia, 9 (1940), 381–514). She edited *Excavations at Gözlü Kule, Tarsus*, 3 vols. (1950–63).

[Penuel P. Kahane / Shimon Gibson (2nd ed.)]

**GOLDMAN, ISRAEL** (1904–1979), U.S. Conservative rabbi. Born in Poland, Goldman immigrated to the United States with his parents and earned his B.A. at the City College of New York (1924) and was ordained by the Jewish Theological Seminary in 1926 where he later earned his D.H.L. (1937). While still at the Seminary, he served Temple Emmanu-El in Providence, Rhode Island, for the High Holidays and then was brought back as its full-time rabbi. He introduced many of the innovations common to the Conservative Movement of his generation, late Friday evening services and the bat mitzvah, but his primary interest was in Jewish education, at all levels. He organized a Sunday school, a PTA, and an innovative adult education program that enrolled 350 students in 1941 alone. His local success with adult Jewish education brought him national attention and he proposed and directed the National Academy for Adult Jewish Studies, created under the auspices of the Seminary. It published books and created adult institutes called Kallot. Goldman was president of the *Rabbinical Assembly* from 1946 to 1948 where he tried to create a regional structure for the rabbinc organization and also for its international expansion. He also pushed the Rabbinical Assembly into social action by forming the Social Justice Commission. “Going national” was not without its tensions with his Providence congregation. Goldman resolved them by leaving in 1948 and moving to Baltimore, where he took Chizuk Amuno congregation and moved it to the nearby suburb of Pikesville. With suburbanization came a threefold growth in membership. Goldman was a leader in the civil rights movement and served as vice chairman of the Maryland Commission on Interracial Relations. He received significant support for his civil rights efforts from his congregation. In 1961 he was arrested in a protest against segregation, a mark of honor in his career.

[Michael Berenbaum (2nd ed.)]

**GOLDMAN, MARTIN JACOB** (Mordechai; 1917–1991), rabbi, Jewish educator. In his youth Goldman was known as the Yerushalmi Ilui (prodigy in Talmud) in the Hebron Yeshivah. At the age of 18 he was tested by the greatest rabbis in Jerusalem – Ezekiel Sarna, R. Isaac Herzog, R. Issur Zalman Meltzer, R. Eliyahu Rom, R. Katz, and R. Moshe Mordecai Epstein – who gave him the ordination of “Yore Yore, Yadin Yadin.”

When he followed his family to New York and realized that he would need a broader education, he taught Talmud to some of the faculty at the Jewish Theological Seminary in return for rooms at the dorm so he could study for his bachelor’s degree at New York University. He earned his M.A. and Ph.D. (1963) at Harvard, working under Harry Wolfson.

After teaching at the Hebrew Teachers’ College in Boston for 20 years, he became the Maxwell Abell Professor of Talmud in Chicago and the Dean of the College of Jewish Studies there, which soon became Spertus College.

Realizing that there were no departments of Jewish studies in the Chicago academic scene, he instituted a consortium of seven Chicago area universities and colleges with Spertus College serving as their department of Jewish studies. Joint degrees were awarded to students who could study Jewish subjects on the same level as their other subjects.

The most popular of his courses at Spertus was “The Talmud in Contemporary Society.” Some of the subjects covered in this course were psychology, marriage, civil law, business, sex, medicine, and government, and it was frequented by lawyers, judges, and physicians in the Chicago community.

He wrote on many burning contemporary medical issues, such as his work “Abortion in Jewish Law” and articles on transplants and the time of death. He was called upon frequently to represent the authentic Jewish voice in Interfaith Conferences and was routinely consulted by other rabbis on talmudic questions.

[Celia Goldman (2nd ed.)]
GOLDMAN, MAYER CLARENCE (1874–1939), U.S. lawyer, born in New Orleans. Goldman became convinced that achievement of the American ideal of equality before the law required the state to provide qualified legal counsel for poor defendants. He vigorously advocated establishment of the office of public defender by state and local governments. He gave speeches and wrote for legal periodicals in support of this cause. He wrote a book, The Public Defender (1917), and was coauthor of a movie script on the subject. Goldman chaired the public defender committees of the American Lawyers Guild, the American Institute of Criminal Law and Criminology, and the New York State Bar Association. He initiated the public defender movement in New York and drafted public defender bills introduced in the state legislature from 1915 to 1931.

[Barton G. Lee]

GOLDMAN, MOISES (1902–1997), physician and Jewish community leader in Argentina. Goldman was born in Palačios, province of Santa Fe. His grandfather was Rabbi Aharon *Goldman of Moisesville. He graduated as a pharmacist and then as a surgeon from the University of Córdoba, Argentina. Goldman headed many central Jewish community organizations in Argentina and Latin America: *DAIA – Delegación de Asociaciones Israelitas Argentinas (the central representative organization of Argentine Jewishry) for two consecutive terms – under the military government (1943–46) and during the first presidency of Juan D. Perón; *AMIA – Asociación Mutual Israeletita Argentina (Ashkenazi Community of Buenos Aires); the Va’ad ha-Kehilot (federative central organization of all the communities) from its foundation in 1952; Maccabi Sports Organization; Latin American Jewish Congress; Instituto de Intercambio Cultural Argantino-Israelí. He also was a honorary vice president of the World Jewish Congress. Goldman participated in many national and international conferences in his profession as well as in public affairs promoting the eradication of discrimination and antisemitism and the strengthening of democracy.

[Efraim Zadoff (2nd ed.])

GOLDMAN, MOSES HA-KOHEN (1863–1918), U.S. Hebrew teacher and journalist. A native of Pinsk, he studied at the Volozhin yeshivah and then under R. Isaac Hirsch Weiss, in Vienna. Later he journeyed to London and, in 1890, settled in the United States where he became a teacher, a printer, and, finally, a journalist. He founded the short-lived Hebrew journal Ha-Moreh in 1894 and then edited (1901–02), first together with Nahum Meir *Schaikewitz, then by himself Ha-Le'om, which began as a Hebrew-Yiddish monthly and then appeared only in Hebrew. In 1909 he edited the first American Hebrew daily Ha-Yom which ceased publication after 90 days but reappeared briefly in 1913, The Proverbs of the Sages which he first published in Ha-Le'om with translations in English was republished in a separate book in New York (1916).

[Eisig Silberschlag]

GOLDMAN, PAUL L. (1904–1973), U.S. Labor Zionist leader. Goldman was born in Poland and even in his youth was involved in Zionist-Socialist work, influenced by the ideology of Dov Ber *Borochov. In 1920, he immigrated to America, where he worked in a shop and, at the same time, attended high school at night, later studying law and graduating from St. John’s Law School in 1928. He became identified with Aḥdut ha-Avodah and Pala’ei Zion, and for 40 years played a leading role in Zionist and associated agencies. For many years he was general secretary of Aḥdut ha-Avodah-Pala’ei Zion and served as editor or associate editor of the party organ, Unzer Tsayt. Goldman helped bring the movement into the United Labor Zionist Organization of America and later into the Labor Zionist Alliance. He was a member of the presidium of the World Zionist Organization and of the commission to reorganize that body. One of the founders and leaders of the Jewish Labor Committee, he was actively identified with the Workmen’s Circle (Arbeiter Ring) and was one of the founders of the American Zionist Federation in 1970. Goldman was highly regarded for his qualities of leadership and his lifelong devotion to Zionist causes and the furtherance of Jewish culture.

[Milton Ridvas Konvitz (2nd ed.)]

GOLDMAN, SOLOMON (1893–1953), U.S. Conservative rabbi. Goldman, who was born in Volhynia, Russia, was taken to the U.S. in 1902. He studied at the Rabbi Isaac Elchanan Yeshivah and at the Jewish Theological Seminary where he was ordained (1918) and later received his D.H.L. (1936). After serving in Brooklyn, he moved to the Cleveland Bnai Jesher Congregation, which he could not convince to become a synagogue center so he moved to the Cleveland Jewish Center, which had been refashioned as a synagogue center with excellent sports facilities and auditorium. He was a wonderful orator and an innovative organizer who worked to establish a large school and a serious adult education program. He moved the synagogue from its Orthodox origins toward the Conservative tradition, meeting with serious opposition and a legal suit in which the change was upheld by the court. But after seven years, he left to go to Chicago where he became rabbi of the Anshe Emet Synagogue of Chicago (1929) and held that position until his death. He became widely known as an orator, communal leader, and scholar who popularized the cause of Zionism. Among the positions of leadership he held were the presidency of the Histadrut Ivrit (1936–38), presidency of the Zionist Organization of America (1938–40), and cochairmanship of the United Jewish Appeal. He was a founder of National Hillel and served on the board of the Jewish Theological Seminary. Goldman edited a series of texts in modern Hebrew literature and wrote Romance of a People, a pageant performed at the Chicago World’s Fair in 1933. Among his
books are A Rabbi Takes Stock (1931), The Jew and the Universe (1936), Crisis and Decision (1938), and Undefeated (1940), all dealing with the Jewish people in modern times. In his last years he began the publication of a study of the Bible and its influence on world literature, of which three volumes were completed: The Book of Books (1948), In the Beginning (1949), and From Slavery to Freedom (1958).

[Jack Reimer / Michael Berenbaum (2nd ed.)]

GOLDMAN, WILLIAM (1931– ), U.S. novelist-screenwriter. Born to businessman Maurice Clarence and Marion Goldman (née Weil) in Chicago, Illinois, Goldman grew up in suburban Highland Park, spending his time at the Alcyon Theater watching films. He studied writing at Oberlin College. After receiving his bachelor’s degree in 1952, he did a two-year stint in the U.S. Army. Following his discharge as a corporal in 1954, he did graduate work in English at Columbia University, graduating in 1956. During the summer he wrote the novel The Temple of Gold in 10 days. Accepted by Alfred A. Knopf, it was published in 1957. He went on to write Your Turn to Curtsey, My Turn to Bow (1958), and Soldier in the Rain (1960). Goldman followed those first novels with No Way to Treat a Lady (1964) and Boys and Girls Together (1964). Goldman was hired to adapt the novel The Moving Target, which became the Paul Newman film Harper (1966), but continued to focus on novels. In 1961, Goldman began the screenplay for Butch Cassidy and the Sundance Kid; released in 1969, the film earned Goldman an Oscar for best original screenplay. His next two works were adaptations, The Stepford Wives (1975) and All the President’s Men (1976), which earned him another Oscar. He continued to write novels during this time, including Marathon Man (1975) and Magic (1976), both of which were adapted for film. His screenplays for The Princess Bride (based on his 1973 novel) and his adaptation of Stephen King’s Misery (1990), both for director Rob Reiner, received critical acclaim. Goldman had also had success with his script for the Clint Eastwood film Absolute Power (1997). More recent produced work includes The General’s Daughter (1999), Hearts in Atlantis (2001), and Dreamcatcher (2003). Goldman also established himself as an authority on the ways of Hollywood with his books Adventures in the Screen Trade (1983) and What Lie Did I Tell? (2000).

[Adam Wills (2nd ed.)]

GOLDMAN, YAAKOV BEN ASHER (1856–1931), Hebrew journalist. Goldman was born in Jerusalem where he studied at the Ez Hayyim yeshivah. Influenced by the Haskalah at an early age, he contributed articles to the Hebrew press, including Yehudah vi-Yrushlayim, Ha-Zefrah, Ha-Asif, Ha-Maggid, Ha-Meliz, and Havazzelet. In 1890 he moved to Jaffa, where he was among the leading figures in the Ashkenazi Jewish community and one of the founders of the Neveh Zedek quarter. For a time he served as chief Palestine correspondent for Ha-Zefrah and acting editor of Havazzelet. His articles include detailed historical accounts of modern Jewish settlement in Erez Israel. At the turn of the century, Goldman became extremely religious. He abandoned his secular writing and devoted himself to biblical research. Late in life, he published two books on various topics (talmudic, religious, etc.).

BIBLIOGRAPHY: Kressel, Leksikon, 1 (1965), 419.

GOLDMANN, LUCIEN (1913–1970), literary and philosophical writer. Born in Bucharest, Romania, Goldmann settled in Paris, where he became director of studies at the Ecole Pratique des Hautes Etudes in 1958. His major work, Le Dieu caché (1955), deals with the tragic vision of life underlying the writings of *Pascal and Racine. He also wrote Sciences humaines et philosophie (1952), Jean Racine dramaturge (1956), Recherches dialectiques (1959), and Pour une sociologie du roman (1964).

GOLDMANN, NAHUM (1895–1982), statesman and Zionist leader, born in Visznice, Lithuania. When Goldmann was five years old his family moved to Germany – first to Koenigsberg and from there to Frankfurt. His father, Solomon Zevi Goldmann, was a writer and Hebrew teacher, and young Goldmann grew up in an atmosphere suffused with the spirit of Judaism. At the age of 15 he published an anonymous article attacking Solomon *Reinach, the vice president of *Alliance Israélite Universelle, that contributed to Reinach’s resignation from his post. In 1913 Goldmann spent several months in Erez Israel and reported his impressions in Eretz Israel, Reisebriefe aus Palästina, published in 1914. During World War I he joined the staff of the Jewish section of the German Foreign Ministry. At that time Goldmann supported a pro-German orientation of the Zionist movement and sought means of gaining the Kaiser’s support for the Zionist cause. After the war, Goldmann joined with Jacob *Klatzkin in publishing Freie Zionistische Blätter, a Zionist periodical (1921–22). At this time the two men also conceived the idea of publishing a German-language Jewish encyclopedia, and in 1925 they founded a publishing house, “Eshkol,” for this purpose. Three years later the first volume of the Encyclopaedia Judaica appeared. Hitler’s rise to power prevented the completion of the venture, and when publication of the encyclopedia had to be interrupted, a total of ten volumes in German and two in Hebrew had been issued. (In the 1960s, Goldmann took the initiative in inaugurating the English-language Encyclopaedia Judaica.)

In the early 1920s Goldmann joined Ha-Po‘el ha-Za‘ir, but later left the party and became a member of the Zionist “radical” faction and in 1926 was elected its representative on the Zionist Actions Committee. He was critical of Weizmann’s plan to coopt non-Zionists to the *Jewish Agency. He also denounced the Zionist leadership for its lack of interest in the political and cultural problems of Jewish masses in the
Diaspora. As Erez Israel would not be capable of absorbing the entire Jewish people; it should serve as an inspiration to the Jewish people and be a symbol and the principal instrument of its renascence.

Goldmann was the chairman of the Political Committee at the 17th Zionist Congress (1931) and played a decisive role in forging a majority to oppose the reelection of Weizmann as president of the Zionist Organization. Two years later, however, when the Radical faction was disbanded, Goldmann began to lean toward Weizmann and eventually to cooperate with him. In the same year, Goldmann was forced to leave Germany, and in 1933 he was deprived of German citizenship and became a citizen of Honduras. At the end of 1933, upon the death of Leo *Motzkin, he was elected chairman of the Comité des Délégations Juives, and in 1935 he became the representative of the Jewish Agency at the League of Nations. Together with Stephen *Wise, he organized the *World Jewish Congress and at the first conference of the Congress, in 1936, was appointed chairman of its executive board. Shortly after the outbreak of World War II, he moved to New York where he established the Zionist Emergency Council for political work and represented for years the Executive of the Jewish Agency, later becoming the chairman of the American Section upon its establishment.

During the Mandatory period Goldmann supported the idea of establishing a Jewish State. In 1931, during the debate on the "final goal" of Zionism and in 1935, as the head of the *General Zionist faction, he declared that the principal task of the Zionist Movement was to create among the Jewish people the momentum for the establishment of a Jewish State in Erez Israel. In 1937, he was among the most ardent supporters of the Partition Plan, preferring sovereignty to territory. This attitude also prompted him to support *Ben-Gurion at the *Biltmore Conference. Henceforth, until May 1948, he took an active and sometimes decisive part in the diplomatic and public relations activities designed to bring about the immediate establishment of a Jewish state. When the State of Israel came into being, Goldmann was elected one of the two chairmen of the Executive of the Zionist Organization (Berl Locker was the other), and in 1956 he was elected president of the organization. Upon the death of Stephen Wise, he was also elected president of the World Jewish Congress. He held that position until 1977, when he relinquished it and was named founder-president.

Goldmann was largely responsible for initiating negotiations with the Federal Republic of Germany on the payment of reparations to Israel and indemnification for Nazi victims. It was primarily Goldmann who arranged for the secret preliminary contact with German statesmen, mainly with Chancellor Konrad *Adenauer, before the official negotiations took place. It was also mostly at his initiative that the Claims Conference, which became the most comprehensive and representative world Jewish body, was established. He was elected president of the Conference and led its delegation in the negotiations with Germany. Goldmann subsequently conducted similar negotiations with Austria. As a result of the work done by the Claims Conference, a Memorial Foundation for Jewish Culture was established in 1965, with Goldmann as its president. He initiated the creation of the Conference of Jewish Organizations (COJO) and became its president, founded the World Council of Jewish Education, took an active part in organizing the Conference of Presidents of Major American Jewish Organizations for Israel, was the chairman of the first international conference for Soviet Jewry (Paris, 1960), etc.

In the field of Zionist affairs, Goldmann participated in the formulation of the Jerusalem Program (1951; see *Basle Program) and conducted the negotiations with the Israel government that preceded the enactment of the law on the status of the World Zionist Organization and the signing of a covenant between the State of Israel and the Zionist Organization. He supported the concept of the centrality of the State of Israel in the life of the Jewish people, but opposed any attitude that negated the Diaspora (while at the same time refusing to accept the view held by many American Zionists that the American Diaspora was no longer to be regarded as an exile). Goldmann regarded the continued existence of the Jewish people in the Diaspora as threatened not by anti-Semitism, but by assimilation as a result of full emancipation and by the unparalleled prosperity of the Jews in most countries since World War II. He believed that the struggle of the Jewish people should now be directed to uphold the right of the Jews to be different from other peoples and preserve their uniqueness. This task, primarily an educational one, should be the main concern of the Jewish people and its leaders.

In 1961 Goldmann left the United States and became a citizen of Israel. He did not, however, take an active part in the internal political life of the country. He subsequently spent part of his time in Israel and part in Europe. In 1968 Goldmann took on Swiss citizenship but continued to be active throughout the Jewish world.

Goldmann frequently voiced criticism of Israel's leadership, which he accused of narrow-mindedness, overestimating the power of the state and its military forces, lacking the proper attitude toward the Jewish people in the Diaspora, and of pursuing an inflexible policy. He advocated a more elastic and moderate policy toward the Arab states and also recommended that Israel moderate her criticism of Soviet policy vis-à-vis the Middle East and Jews living in the U.S.S.R. Declarations made by Goldmann in this vein periodically caused friction between him and leading Israeli personalities; furthermore, the various offices held by Goldmann also raised the question of whether his criticism represented the view of the Zionist Organization, the World Jewish Congress, some other Jewish body, or only his personal opinion. Relations between Goldmann and Israel leaders took a further turn for the worse after the *Six-Day War, when the impression was created that Goldmann's identification with the State of Israel was rather less than that of many other Jewish leaders. It was against this background that several Zionist parties began to oppose his continuance in office as president of the organization, and at
the 27th Zionist Congress (1968), Goldmann did not put forward his candidacy for the presidency. The Autobiography of Nahum Goldmann appeared in 1969. In 1970, a controversy was aroused by Goldmann's approach to the Israel prime minister in connection with a possible meeting between himself and *Nasser. When the Israel government expressed its disapproval, the matter was dropped. Selections of Goldmann's articles and speeches have been published in two volumes: Dor shel Hurban u-Ge'ullah (1968) and Be-Darkhei Ammi (1968).

Goldmann relinquished the presidency of the World Jewish Congress in November 1977, but despite his age continued to be a controversial figure, and in 1978 was severely criticized because of his support of Egypt's attitude in the peace negotiations. A number of such actions indicated his growing disassociation from Zionism and the State of Israel. In 1978 Foreign Relations of the U.S. 1950, Vol. 5, The Near East, South Asia and Africa was published, consisting of nearly 2,000 previously top-secret documents of the U.S. State Department. The publication revealed that in 1950 Goldmann – then president of the WJC – told the State Department that he would use his influence to prevent American Jews from exerting pressure on the U.S. government with regard to its policy toward Israel.

**GOLDMANN, SIDNEY** (1903–1983), U.S. jurist and Jewish civic leader. When he died, an editorial in the local (Trenton) newspaper said that Goldmann was a respected historian, a community leader of tremendous stature, and a brilliant judge. Born in Trenton, New Jersey, of immigrant parents, Goldmann graduated from Harvard College with a brilliant record as a mathematician. After graduating from Harvard Law School in 1927, he practiced law in Trenton, where he was appointed city attorney and acting city manager. From 1942 to 1944 he was executive secretary to Governor Charles Edison. He resigned this position to become New Jersey State Librarian, and after three years he became head of the New Jersey State Archives and History Bureau. In 1947, when work began on a new constitution for the State of New Jersey, he became librarian and archivist for the State Constitutional Convention and chairman of the Governor's Commission for Preparatory Research for the Constitutional Convention, and at the same time he became a member of the New Jersey Commission of Revision of Statutes. At the end of the convention, he edited its proceedings in five volumes. His contributions to the new constitution of the State of New Jersey were inestimable.

In 1949 Goldmann started a new career. He was appointed Standing Master of the New Jersey Supreme Court, and two years later he was named a judge of the state's Superior Court, and in 1951 he was assigned to its Appellate Division. From 1954 to 1971 he served as presiding judge of the court, and for two years he was also the court's administrative judge. He retired in 1971, at age 68. He then became a member of the Supreme Court Committee on opinions and chairman of the State Election Law Enforcement Commission. He served frequently as special hearing commissioner in important public-interest cases. He edited 116 volumes of court cases and 43 volumes of New Jersey Equity Reports. When he retired from the bench in 1971, he estimated that he had written over 2,000 judicial opinions.

Goldmann was known as a progressive judge. While giving due weight to judicial precedents, he was not timid about striking out along a new path, and at least one of his opinions was cited with approval several times by the United States Supreme Court.

Goldmann was active in Trenton's public affairs as a trustee of the Public Library, head of the city's Council of Social Agencies, president of the Trenton Council of Human Relations, cofounder of the Trenton Symphony Orchestra, co-author of a history of the city – indeed, he was identified with almost every aspect of the civic life of his community.

At the same time he was Trenton's leading Jewish citizen. He served as president of the Jewish Community Center, the Jewish Federation, Jewish Family Service, and the home for the aged. He was active in the American Jewish Committee and was a life member of its Board of Governors.

A measure of the esteem in which he was held may be seen in the fact that when he retired from the bench, three former governors spoke at the dinner in his honor.

**GOLDMARK, Viennese and U.S. family.** JOSEPH GOLDMARK (1819–1881), Austrian revolutionary leader and U.S. physician and chemist, was born in the province of Warsaw. He studied at Vienna University (1838), entered medical school in 1840, and took a research post in chemistry in 1845. When revolution broke out in Vienna in 1848 Goldmark was a hospital intern. He enlisted in the Academic Legion, became president of the Students Union, and was elected to the Reichstag. Accused of complicity in the murder of Minister of War Latour (for which he was later sentenced to death in absentia), Goldmark fled the country, and in 1850 left France for New York. In 1868 he was acquitted after voluntarily returning to Austria to stand trial on the murder charge. Goldmark first practiced as a physician in New York but achieved greater prominence through the practical application of his knowledge of chemistry. In 1857 he took out a patent for manufacturing mercury compound, and in 1859 he established a highly successful factory for making percussion caps and cartridges. Of his ten children, one married Louis D. *Brandeis and another Felix *Adler. A third daughter, PAULINE GOLDMARK (1874–1962), was a well-known social worker and served as secretary of the national and New York consumer leagues. A son, HENRY GOLDMARK (1857–1941), was a civil engineer engaged in railroad construction, and was the designer of the locks for the Panama Canal. The composer KARL *GOLDMARK was a half brother of Joseph Goldmark. RUBIN GOLDMARK (1872–1936),
U.S. musician, nephew of Karl Goldmark, was born in New York. Moving to Colorado for reasons of health, he directed the Conservatory of Music at Colorado College from 1895 to 1901. From 1902 he lived in New York, teaching piano and harmony and giving numerous lecture recitals throughout the United States and Canada. In 1911 he became director of the department of theory of the New York College of Music, and in 1924 head of the department of composition of the Juilliard Graduate School. While Goldmark was known in his day as a composer (in 1910 his piano quartet won the Paderewski Chamber Music Prize), his influence as a teacher was more considerable. His pupils included Aaron Copland, George Gershwin, and Efrem Zimbalist, and he was highly respected for his intellectual honesty, artistic integrity, and broad general culture. In 1956 City College, New York, named its music building in his honor.

GOLDMARK, KARL (1830–1915), composer. Goldmark, the son of a cantor in the small town of Keszthely, was sent to study in Vienna. He was financed by his half-brother Joseph, who, however, was involved in the revolutionary activities of 1848 and had to leave the country. Karl himself was led out to be shot as a rebel, but was saved by the intervention of a friend. He settled in Vienna as a teacher, conductor, and composer, and displayed his great talent for orchestration in the overture Sakuntala (1865) and his Laendliche Hochzeit (1876) symphony. His opera Die Koenigin von Saba (1875) with a libretto by S.H. Mosenthal, on which he worked for ten years, was an immediate success in Vienna and many other cities. Goldmark wrote other operas that had limited success, violin concertos, chamber music, choral music and songs. For a short time he was the teacher of Sibelius, and did much to encourage the performance of Wagner in Austria. His autobiography, Erinnerungen aus meinem Leben (1922), was translated into English in 1927 as Notes from the Life of a Viennese Composer.

BIBLIOGRAPHY: O. Keller, Karl Goldmark (Ger., 1901); MGG; Riemann-Gurlitt; Groove, Dict; Baker, Biog Dict.

GOLDMARK, PETER CARL (1906–1977), U.S. television engineer. Born in Hungary, Goldmark went to the U.S. in 1933 and joined CBS as chief TV engineer in 1936, becoming president of its laboratories division in 1954. He developed systems of color television, one of which was adopted for a time in New York in 1951.

GOLDSCHEID, RUDOLF (1870–1932), Austrian sociologist and pacifist. Born in Vienna, where he lived throughout his life, Goldscheid was representative of a strongly ethically oriented group whose interest was in the problems of sociology and social philosophy. A cofounder of the German Sociological Society (“Deutsche Gesellschaft fuer Soziologie,” 1909), he sided with the approach of the “Kathedersozialisten” (academic social reformers) against Max Weber’s emphasis on a strictly objective, “value-free” orientation in the social sciences. As editor of the Friedenswarte, he was one of the most influential European pacifists. He was also editor of the Annalen fuer Natur-und Kulturphilosophie. His publications include Zur Ethik des Gesamtwillens (1902), Veredelungs-oder Meliorationstheorie (1906), Monismus und Politik (1912), Hoeherentwicklung und Menschenoekonomie (1911), Frauenfrage und Menschenoekonomie (1913), and Staatssozialismus und Staatskapitalismus (1917).

[Werner J. Cahnman]

GOLDSCHMIDT, ERNST DANIEL (1895–1972), librarian and scholar of Jewish liturgy. Goldschmidt was born in Koenigshuette (now Chorzow, Poland), where his father was rabbi. He served from 1926 to 1935 as librarian in the Prussian State Library, Berlin. Immigration to Palestine in 1936, he joined the staff of the Jewish National and University Library (1936–62). Goldschmidt prepared critical editions of various liturgical texts. His various Passover Haggadot (with German translation, introduction, and notes, 1936, 1937; Hebrew, 1947, 1960) became very popular; the Haggadah by N.N. Glatter (Eng., 1953, 1969) is based on Goldschmidt’s work. In 1959 his edition of Maimonides’ prayer text appeared; it was followed by Siddur Tefillat Yisrael (two rites) in 1964; Selihot according to both the Lithuanian and Polish rites in 1965; Kinot (liturgy for the Ninth of Av, Polish rite) in 1968; S.D. Luzzatto’s introduction to his edition of the Mahzor Roma was reissued by Goldschmidt (1966) with notes and an essay on the Roman rite. His edition of the High Holiday mahzor (1970), which is a compendium of all the Ashkenazi rites, is of particular importance.

[Alexander Carlebach]

GOLDSCHMIDT, GUIDO (1850–1915), Austrian organic chemist. Goldschmidt was born in Trieste. From 1874 to 1891 he worked at the University of Vienna, becoming professor there in 1890. In 1891 he became professor of chemistry at the German University of Prague. In 1907 he was elected rector of the university, but declined to accept the position, partly because he thought that it might precipitate antisemitic manifestations. He returned to the University of Vienna in 1911. He was one of the earliest organic chemists to elucidate the structure of an alkaloid, in his case papaverine; later he worked on other alkaloids, on polynuclear hydrocarbons (fluoranthene and others), on aldehyde condensations, etc.

[Samuel Aaron Miller]
GOLDSCHMIDT, HANS (1861–1923), German industrial chemist. He was born in Berlin, and was awarded his doctorate at Heidelberg in 1886. He became a partner with his brother in the firm of tin smelters and metallurgists founded by his father in Essen. In 1894 he invented the “Thermit” process, still used for welding heavy sections of iron and steel. Although industrial chemists were not really welcome in German learned societies, he became chairman of the Bundessgesellschaft fuer Angewandte Physikalische Chemie and of the Liebig Stipendien Verein.

[Samuel Aaron Miller]

GOLDSCHMIDT, HEINRICH JACOB (1857–1937), chemist. Born in Prague, Goldschmidt became professor at Heidelberg in 1896 and was appointed professor of chemistry at Oslo University in 1900. In 1929 he was back in Gottingen, but returned to Oslo when the Nazis came to power. He was the first Jew to receive the Norwegian Order of St. Olaf. His research centered on organic and physical chemistry, his best-known work being the constitution of aromatic compounds and the kinetics of reactions in organic chemistry.

GOLDSCHMIDT (née Benas), HENRIETTE (1825–1920), German suffragette and educator; wife of Rabbi Abraham Meir Goldschmidt of Leipzig. She was one of the founders of the German Women’s League (Allgemeiner Deutscher Frauenverein) in 1865, organized petitions on behalf of women’s rights to higher education and entry in professions (1867), and was a signatory to a petition to the Reichstag for protecting children born out of wedlock. In 1871 she founded the Society for Family Education and for People’s Welfare (Ver ein fuer Familienerziehung und Vollkwohl) in Leipzig, and was instrumental in the establishment of a municipal educational institution which eventually comprised kindergartens, a seminary for kindergarten teachers, and a vocational school for girls with teachers’ training courses. In 1911 she founded the Darmstadt School for kindergarten teachers with teachers’ training courses. In 1911 she founded the first institution of higher education for girls in Germany. Henriette Goldschmidt wrote Die Frauenfrage, eine Kulturfrage (1870), as well as on education, publicizing the ideas of Froebel. Her works include Was ich von Froebel lernte und lehrte (1909).

[Otto Immanuel Spear]

GOLDSCHMIDT, HERMANN (1802–1866), French astronomer and artist. Born in Frankfurt, Goldschmidt studied painting in Munich and in 1836 settled in Paris where he became eminent as a vivid painter of historical events and portraits. In spite of his great artistic activity, astronomy became his hobby and love. An enthusiastic observer of the sky, Goldschmidt worked with simple devices and modest optical instruments. In the nine years between 1852 and 1861 he discovered 14 asteroids (or minor planets as these were then called). He also observed variable stars, double stars, comets, nebulae, and in 1860, in Spain, a total solar eclipse; his report was accompanied by three impressive oil paintings. In 1857 he received the Cross of the Legion of Honor and in 1861 the Royal Astronomical Society in London awarded him its Gold Medal.

[Arthur Beer]

GOLDSCHMIDT, HUGO (1859–1920), musicologist. Born in Breslau, Goldschmidt was co-director of the Scharwenka-Klindworth Conservatory in Berlin and subsequently professor at this conservatory until he retired because of ill health. Goldschmidt was an authority on the art of singing and on early operatic history. His writings include Die italienische Gesangsmethode des 17. Jahrhunderts (1890), Handbuch der deutschen Gesangspaedagogik (1896), Die Musikaesthetik des 18. Jahrhunderts und ihre Beziehungen zu seinem Kunstschaffen (1915), and Studien zur Geschichte der italienischen Oper im 17. Jahrhundert (2 vols., 1901–04), which has remained a basic reference work.

GOLDSCHMIDT, JAKOB (1882–1955), banker, born in Eldagsen, Hanover. His parents Marcus and Lina Bachrach Goldschmidt could not afford to send him to university, and he became an apprentice at the Hanover banking house of H. Oppenheimer. Thanks to his exceptional talents, he was able to work his way up and make a fortune in the banking business. In 1910 he formed his own brokerage firm, Schwartz, Goldschmidt & Company, and became one of Germany’s leading bankers. In 1918 he became managing director of the Nationalbank fuer Deutschland which later merged with the Deutsche Nationalbank and the Darmstaedter Bank to form the Darmstaedter und Nationalbank (Danatbank). Owing to his position at the bank, which played an important role as a financier of industry, he sat on the boards of a wide range of companies that included shipping, steel, power, mining, insurance, and aviation. Although regarded as an upstart and speculator by his more traditional banking colleagues, he nevertheless exercised great influence in Weimar economic affairs. He was also a major art collector, and also was devoted to Jewish causes, rescuing the Encyclopedia Judaica from financial collapse in 1926. In July 1931 the Danatbank fell prey to the fraudulent actions of the Lahusen brothers, who ran one of its main customers, the North German Wool Company. The Danat was forced to close its doors after the other one of its main customers, the North German Wool Company. The Danat was forced to close its doors after the other great banks abandoned it, while the Reichsbank would not grant it support either. Having become a major target of Nazi attacks, Goldschmidt left Germany in 1933 and settled in the United States in 1936, where he had a successful if more modest career in business. He once again became an art collector, and supported many philanthropies and cultural institutions,

[Joachim O. Ronall / Gerald Feldman (2nd ed.)]

GOLDSCHMIDT, JOHANNA SCHWABE (1806–1884), author and social activist. Goldschmidt was born in Hamburg. Her father, Marcus Herz Schwabe, was one of the founders of the Hamburg Reform Temple in 1817 and Johanna attended its first confirmation class. Johanna married Moritz Goldschmidt in 1827. The couple had eight children and their care effectively kept Johanna from any outside activity for 20 years. In 1847 she launched a career as a writer and social activist with her first book, Rebekka and Amalia, written as a series of letters between a young Jew, Rebekka, and a Christian aristocrat named Amalia. The general topic of the work was the problem of Jewish conversion and assimilation, but in one of its chapters, Goldschmidt focused on a plan for an organization in which rich women would help poorer women to improve themselves by means of lectures and instruction. Within one year of the publication of Rebekka and Amalia, Johanna Goldschmidt, together with her friend Amalie Wettelarp, founded the Women’s Association to Combat and Reduce Religious Prejudice, an organization that promoted the early, non-sectarian education of children. Goldschmidt’s second book, Mothers’ Worries and Mothers’ Joys (1849), led to more social activism and the founding of a seminary to train teachers in the new methods pioneered by educator Friedrich Froebel. In this project she worked closely with liberal Christian women. Goldschmidt remained active in both the Women’s Association and the seminary and also continued writing sporadically. Her play, “A Look at the Family,” opened in Hamburg in 1864.

[Emily Taitz (2nd ed.)]

GOLDSCHMIDT, LAZARUS (1871–1950), scholar, bibliophile, and translator of the Talmud into German. Goldschmidt, who was born in Plongian, Lithuania, studied first at the Slobodka yeshivah at Kaunas (Kovno) and later at the universities of Berlin and Strasbourg. His early studies were devoted to Ethiopian language and its literature. He published the Ethiopic version of the Book of Enoch (1 Enoch) with Hebrew translation (1892) and Biblioteca Ethiopica (1895). Goldschmidt published an edition of the Sefer Yezirah (1894), a Hebrew translation of the Koran (1916), and prepared a new edition of Jacob Levy’s Woerterbuch zum Talmud und Midrash (1924). On the rise of Hitler to power in 1933 Goldschmidt left Germany for England and lived in London. His bibliographical works include Hebrew Incunables (1948), and the Earliest Editions of the Hebrew Bible (1950). Some of his works were published under the pseudonym Arselaj bar Bargelaj.

Goldschmidt’s major contribution was his translation of the entire Babylonian Talmud into German. It appeared in two editions, a nine-volume work containing the original text and variant readings (1897–1935) and a 12-volume edition without the original text (1929–36). This translation, which was severely criticized by David Zvi *Hoffman (ZHB 1, 1896), was nevertheless considered to be an important and standard work in talmudic studies. Goldschmidt also prepared a subject concordance to the Babylonian Talmud which was published posthumously (1959). He also published a facsimile edition of the Hamburg manuscript of the order Nezikin of the Babylonian Talmud (1913). A controversial figure who engaged in sharp personal polemics against leading scholars of his time (Immanuel Loew, David Hoffman, and others), he published a number of pamphlets attacking his adversaries. In his youth, he published as a practical joke an Aramaic text entitled Baraita de-Maâish Bereshit (1894), which he claimed to be an old Midrash. Later he admitted that this was a parody. Goldschmidt was a collector of rare books. Because of his forced emigration to London in 1933 the Royal Library in Copenhagen bought his collection, which is known as the Goldschmidt Collection.

GOLDSCHMIDT, MEIR ARON (1819–1887), Danish novelist, political writer, and journalist. Born in Vordingborg, Zealand, Goldschmidt was sent to Copenhagen for a year as a child and was impressed by the Jewish life of the capital. Although he matriculated in 1836, religious prejudice prevented him from studying medicine. He accordingly turned to journalism and in 1837 founded a liberal provincial weekly, Nestved Úgeblad (later renamed Sjællandsposten), whose policy brought him a heavy fine and a year’s censorship. He later moved to Copenhagen and in 1840 founded Corsaren, a successful satirical weekly with a radical outlook. The paper attacked Denmark’s conservative establishment, especially the absolute monarchy and the powerful civil service. Goldschmidt began his literary career with the novel En Jøde (1845; The Jews of Denmark, 1852). This told the story of a Danish Jew whose break with traditional Orthodoxy provokes his father’s curse. His romance with a Christian girl ends unhappily and the hero ultimately becomes a moneylender. En Jøde contains some picturesque descriptions of Jewish customs and festivals, as does the story Aron of Esther in the collection Fortællinger (“Tales,” 1846). During the years 1847–59 Goldschmidt published the periodical Nord og Syd, which largely consisted of his own articles on literature, theater, art, and politics. After the failure of the magazine Hjemme og Ude, which appeared briefly in 1861, he moved to England, but returned to Denmark in 1863, resolved to abandon his political involvements. The central figure of his long novel Hjemløs (1853–57), which he himself adapted into English as Homeless, or a Poet’s Inner Life (1861), is a Danish gentile, but Goldschmidt introduces a cultured English Jew who teaches the hero that happiness...
and misery are balanced in each person's life and that men's sins must be atoned for on earth. The novelist called this ethical system "Nemesis," and it dominates his later works. These include two novels, Arvingen (Eng., The Heir, both 1865), and Ravenen ("The Raven," 1867); three Jewish short stories, "Maser" (1885), "Avrohmche Nattergal" (1871; English version in Denmark's Best Stories, 1928), and "Levi og Ibald" (1883); and Livserindringer og Resultater ("Memoirs and Results," 2 vols., 1877). He was an outstanding storyteller and the worldly yet pious and decent hero of his stories, Simon Levy, is one of the outstanding figures of Danish fiction.

[Frederik Julius Billeskov-Jansen]

**GOLDSCHMIDT, NEIL EDWARD** (1941- ). U.S. politician. Goldschmidt was born in Eugene, Oregon, and graduated from the University of Oregon in 1963 and from the University of California at Berkeley Law School in 1967. Entering political life at an early age, in his twenties he became a city commissioner of Portland, Oregon (1971–73). In 1973, at age 32, he became mayor of Portland, the youngest mayor of a major U.S. city, serving until 1979. He was referred to by Richard Corner, mayor of Peoria, Illinois, then president of the United States Conference of Mayors, as "one of the best of a new breed." In July 1979 he was appointed secretary of transportation by President Carter and served until the end of the Carter administration. Goldschmidt returned to Oregon in 1981, where he served as international vice president of Nike until 1985. In 1986–87 he was president of the running shoe company's Canadian subsidiary, Nike Canada.

Goldschmidt served as governor of Oregon from 1987 to 1991. He helped create in 1991 the Oregon Children's Foundation, and SMART (Start Making a Reader Today), which places 10,000 volunteers in Oregon schools to read to children. He also established the law and consulting firm Neil Goldschmidt, Inc. in Portland, specializing in international business. Goldschmidt was an active member of the local Reform congregation.

In 2004 he resigned from his positions with the Oregon Board of Higher Education, the Oregon Electric Utility Company, and the state bar. His resignation was prompted by an eminent newspaper article that was to reveal his sexual misconduct while he was mayor of Portland. On May 6, 2004, Goldschmidt announced and apologized publicly that in 1975 he had engaged in a nine-month sexual relationship with a 14-year-old girl. In his statement he said, "For almost thirty years, I have lived with enormous guilt and shame about this relationship.... I have sat in my place of worship each year at Yom Kippur ... searching for personal peace."

Goldschmidt wrote The Oregon Book of Juvenile Issues (with G. Johnson, 1989).

[Ruth Beloff (2nd ed.)]

**GOLDSCHMIDT, RICHARD BENEDICT** (1878–1958), German geneticist. Goldschmidt, who was born in Frankfurt, became a lecturer at Munich University in 1903. In 1913 he was selected to head a genetics department at the newly organized Kaiser Wilhelm Institute for Experimental Biology in Berlin. Before assuming his duties he went to Japan to obtain material for his studies on sex determination in the gypsy moth. World War I broke out while he was on his way home; as a result he spent three of the war years as a visiting professor at Yale University and the fourth interned as an enemy alien. Returning to Berlin after the war, he worked at the Kaiser Wilhelm Institute from 1919 to 1936, except for two years as a visiting professor at the University of Tokyo (1924–26). In 1936, as a result of the Nazi persecution, he emigrated to the United States. He was professor of zoology at the University of California in Berkeley until his retirement in 1948. In the course of his studies on the gypsy moth Goldschmidt discovered that sex is determined by a balance between genetic factors for maleness and femaleness present in all individuals. He found that the strength of these factors differed in different geographic races, and he was able to produce predictable degrees of intersexuality by appropriate interracial hybridizations. These findings led him to conclude that the genes are responsible for determining the rate of physiological processes. He rejected the concept of linearly linked unitary genes; instead he regarded the chromosome as a single giant molecule. Mutations, in his view, were caused by breakages and rearrangements of the chromosomal material ("position effects"). Goldschmidt's views on evolution were also unorthodox; he maintained that new types evolved not through the selection and accumulation of small genetic differences but rather by major, single-step mutations ("hopeful monsters") that produced drastic changes in development. Although he stood almost alone as a dissenter, he was widely respected as a brilliant critic and eloquent polemicist. Goldschmidt's scientific works include Mechanismus und Physiologie der Geschlechtsbestimmung (1920; The Mechanism and Physiology of Sex Determination, 1923); Physiologische Theorie der Vererbung (1927; Physiological Genetics, 1938); The Material Basis of Evolution (1940); Theoretical Genetics (1955); and a number of textbooks, among them Ascaris (Ger., 1922; Ascaris, The Biologist's Story of Life, 1937). He also wrote Portraits from Memory: Recollections of a Zoologist (1956) and the autobiographical In and Out of the Ivory Tower (1960).

[Mordecai I. Gabriel]

**GOLDSCHMIDT, RICHARD HELLMUTH** (1883–1968), German psychologist. Born in Muenster, Goldschmidt became professor of psychology at Muenster in 1919. Just before World War II he managed to leave for England, where he was a fellow of Oxford University's Institute of Psychology from 1939 to 1945. He returned to the university at Muenster in 1949, remaining for the rest of his career. His early research dealt with the psychology of visual perception with regard to color.
schemes. He published *Postulat der Farbwandelspiele* (1928), and later wrote *Ahnung und Einsicht* (1967). Other areas of Goldschmidt's scientific interest were the psychology of religion and aesthetics.

**GOLDSCHMIDT, VICTOR** (1853–1933), German crystallographer and inventor. Goldschmidt, who was born in Mainz, was appointed teacher at Heidelberg University in 1888, and professor in 1893. Among his publications were *Index der Krystallformen der Mineralien* (3 vols., 1887–91), a catalog of the forms on the crystals of minerals, and *Krystallographische Winkeltabellen* (1897), a collection of tables of angles in crystal formation. His chief work, however, was his *Atlas der Krystallformen* (1913–23), a compilation of all published figures of crystals of minerals, in nine volumes. His researches into number series appearing in crystal symbols resulted in his formulation of a theory of number and harmony involving a consideration of musical and color harmonies. Goldschmidt was the inventor of the bicircular goniometer, used in measuring angles. He was baptized.

**GOLDSCHMIDT, VICTOR MORITZ** (1888–1947), Norwegian mineralogist, crystallographer, and geochemist. Goldschmidt was born in Zurich, son of Heinrich Jacob Goldschmidt (1857–1937) who became professor of chemistry at Oslo University in 1901. In 1914 Victor Goldschmidt was appointed professor of crystallography, mineralogy, and petrography at Oslo University. In 1929 he was appointed director of the mineralogical-petrographical institute at Göttingen, but in 1935 left Nazi Germany to return to Oslo. He was chairman of the Norwegian Friends of the Hebrew University in 1937. After the invasion of Norway in 1940, Goldschmidt was hunted by the Nazis and was arrested on several occasions. The underground succeeded in smuggling him to Sweden in December 1942 and from there he was flown to England, where he devoted himself to work connected with atomic energy. He returned to Oslo in 1946. Goldschmidt was one of the great mineralogists and crystallographers of his generation and is recognized as the founder of the new science of geochemistry. Already in his doctoral thesis in 1911 on the "Phenomena of Metamorphosis" he established a basis for classifying the metamorphic minerals according to general physico-chemical laws, proposed the concept of "stability limits" of minerals, and developed the idea of mineral facies that became the central idea in mineralogy-petrography. Later he developed the notion of type relationships of rocks and laid the foundations of genetic classification of magnetic rocks. Besides these main fields of work, he also explained the distribution of chemical elements in the earth's crust and defined the laws of distribution that result from the natural factors in elements themselves. Goldschmidt was also interested in problems of practical research including the formation of mineral pigments, the production of aluminum from silicates, the use of biotite as a fertilizer, and the use of olivine as a raw material for the production of materials resistant to chemical and heat reactions. Goldschmidt's main works were *Die Kontaktmetamorphose im Kristianiagebiet* (1911); *Geologisch-petrographische Studien...* (5 vols. 1912–21); *Geochemische Verteilungsgesetze der Elemente* (9 parts, 1923–38).

[Yakov K. Bentor]

**GOLDSMID, English family, descended from AARON GOLDSMID (d. 1782), who settled in London in the second quarter of the 18th century and was active in the affairs of the Great Synagogue. BENJAMIN GOLDSMID (1755–1808) and ABRAHAM GOLDSMID (1756–1810), sons of Aaron, became prominent financiers in the City of London during the French revolutionary wars, when their competition with the old-established non-Jewish bankers resulted in the issue of treasury loans on terms much more favorable to the government, and thereby initiated a new era in public finance. The brothers were active in the affairs of the Jewish community and in general philanthropy. They served in all the offices of the Great Synagogue and were associated with the establishment of both the Jews' Hospital and the Royal Naval Asylum. Their close familiarity with the sons of George III did much to break down social prejudice against Jews in England and to pave the way for emancipation. They were considered by Lord Nelson among his closest friends. Both of the brothers committed suicide. Their activity marked the displacement of the Sephardi element in London from their former hegemony. ALBERT GOLDSMID (1793–1861), Benjamin's son, entered the army in 1811. He fought in the Peninsular War at Waterloo, and reached the rank of major general. SIR ISAAC LYON GOLDSMID (1778–1859), son of Aaron Goldsmid's second son Asher, made a large fortune, partly by financing railway construction. He was made a baronet in 1841, being the first professing Jew to receive an English hereditary title. He was prominent in the struggle for Jewish emancipation in England and was one of the founders of the nonsectarian University College, London. He took a leading part in the establishment of the Reform synagogue. In 1846 he was named Barón de Palmeira by the king of Portugal. SIR FRANCIS HENRY GOLDSMID (1808–1878), the eldest son of Isaac Lyon, was the first Jewish barrister in England and for many years a member of Parliament, as was his brother FREDERICK DAVID GOLDSMID (1812–1866). SIR JULIAN GOLDSMID (1888–1896), the son of Frederick David, succeeded to the title and was for many years a member of Parliament and at one time deputy speaker. Like his father, he was also active in communal affairs as chairman of the Reform synagogue, of the 'Anglo-Jewish Association, and others. On his death, the baronetcy was transferred to his cousin, Sir
Osmond *D'Avigdor. ANNA MARIA GOLDSMID (1805–1889), daughter of Isaac Lyon, made a name as philanthropist and poet. SIR FREDERICK JOHN GOLDSMID (1818–1908), who belonged to the baptized branch of the family, was a distinguished Orientalist, a major general in the army, constructed the first telegraph lines in Persia, and established the administrative system in the Congo (see also *D'Avigdor family).

[Cecil Roth]

GOLDSMID, ALBERT EDWARD WILLIAMSON (1846–1904), English soldier. Born at Poona, India, Goldsmid entered the British Army in 1866, reached the rank of colonel in 1894, and served with distinction in the Boer War. Born of a long-assimilated family connected with the illustrious *Goldsmit family by marriage (though he was not descended from it), he became attracted to Judaism in maturity and was henceforth active in the life of Anglo-Jewry. In 1892 he went temporarily to the Argentine to supervise the *Jewish Colonization Association (ICA) colonies established there by Baron de *Hirsch. He was one of the founders of the *Maccabears and of the Jewish Lads Brigade (see *Scouting) in London. A prominent member of the English Hovevei Zion (see *Hibbat Zion ) movement as early as 1891 he advocated the revival of Hebrew as a spoken language, welcomed Herzl's proposals with enthusiasm, became an ardent Zionist, and was a member of the *El-Arish Commission in 1903. Herzl was deeply impressed by him and thought of him as occupying a high office in the Jewish State when it was established. Goldsmid is said to have been the model for George *Eliot's character Daniel Deronda.

[Cecil Roth]

GOLDSMID-Stern-SALOMONS, SIR DAVID LIONEL (1851–1925), British innovator in electronics and automobiles. He was born in London, the son of Philip Salomons (1796–1867) and the nephew of Sir David *Salomons; his mother was the daughter of Jacob *Montefiore. He was educated at Cambridge and, in 1873, succeeded his uncles as second baronet. Salomons was a barrister and a local government official, serving as mayor of Tunbridge Wells in 1895, but was wealthy enough to pursue full time his passion for mechanical and scientific research. This he did at his large private laboratory at his estate at Broomhill, Kent. Salomons took out numerous patents in the electrical field and was the author of *Electric Light Installations*, a textbook which went through many editions. He also served as vice president of the Institute of Electrical Engineers. He is best remembered, however, for his role as a pioneer of automobiles in England. In October 1895 he imported the second gasoline-driven car to appear in Britain, and he was responsible for removing many of the legal restrictions on the use of the motor car in England. He was also one of the founders of the Royal Automobile Club, the oldest British motoring body. He gained his triple surname in 1899 when he inherited a legacy from the relatives of his wife, a daughter of Hermann, Baron de *Stern, and added “Goldsmid-Stern” to his name.

[William D. Rubinstein (2nd ed.)]

GOLDSMITH, HORACE WARD (1894–1980), U.S. businessman and philanthropist. Goldsmith was born in Chicago, but moved to New York as a youth and in 1927 he bought a seat on the New York Stock Exchange and founded the brokerage firm of H.W. Goldsmith and Company. He held the Stock Exchange seat for half a century until his retirement in 1977 to Phoenix, Arizona, where he died. Goldsmith was a generous benefactor of many Jewish institutions in the United States and Israel. Appointed a member of the international board of governors of the Technion, the Israel Institute of Technology, Haifa, he established the Goldsmith Institute of Industrial Microbiology there. Other benefactions in Israel included the Jerusalem Great Synagogue, the Hebrew University of Jerusalem, and the Grace Goldsmith Physical Education Center at Boys’ Town Jerusalem. His benefactions in the United States included the Goldsmith Hall at the Jewish Theological Seminary, the New York Stock Exchange seat for half a century until his retirement in 1977 to Phoenix, Arizona, where he died.

Goldsmith was a generous benefactor of many Jewish institutions in the United States and Israel. Appointed a member of the international board of governors of the Technion, the Israel Institute of Technology, Haifa, he established the Goldsmith Institute of Industrial Microbiology there. Other benefactions in Israel included the Jerusalem Great Synagogue, the Hebrew University of Jerusalem, and the Grace Goldsmith Physical Education Center at Boys’ Town Jerusalem. His benefactions in the United States included the Goldsmith Hall at the Jewish Theological Seminary, the Horace Goldsmith Mathematics Building at Brandeis University, and contributions to the Scholarship Foundation of NYU. He is said to have contributed at least $250,000 annually for the last 40 years of his life and in his will made provisions for further generous bequests.

GOLDSMITH, LEWIS (c. 1763–1846), English political journalist. Goldsmith, who was born in London of Portuguese Jewish descent, was never associated with Judaism and was probably baptized as a young man. His *The Crimes of Cabinets* (1805) censured the attempts to suppress the French Revolution. Later he took refuge in Paris where he established *The Argus*, an anti-English journal. The journal was suspended when he refused to attack the English royal family. Returning to England in 1809, he was tried for high treason but was acquitted. He then started the violently patriotic *Anti-Gallican* (subsequently *The British Monitor*), advocating the assassination of Napoleon. On the restoration of Louis xviii, he returned to Paris where he became interpreter to the Tribunal of Commerce. Goldsmith published his *Statistics of France* in 1832. His daughter Georgiana (1807–1901) became the second
wife of Baron Lyndhurst, Lord Chancellor of England, and a noted political hostess.

**GOLDSMITH, RAYMOND WILLIAM** (1904–1988), U.S. economist. Born in Brussels, Belgium, Goldsmith received a Ph.D. from the University of Berlin (1927) and then studied at the London School of Economics and Political Science. He lived in the U.S. from 1930 and during the years 1934–48 he served with the U.S. Securities and Exchange Commission, the War Production Board, and the National Bureau of Economic Research. He was U.S. adviser on the 1946 German currency reform and on the 1947–48 Austrian treaty negotiations. Goldsmith became professor of economics, first at New York University (1958–59) and later at Yale (from 1960). Money and banking were his major interests. In an effort to find the means by which to measure wealth, he devised such methods as balance sheets, which tracked the flow of capital among various segments of the economy.

[Joachim O. Ronall / Ruth Beloff (2nd ed. ]

**GOLDSMITH, SAMUEL ABRAHAM** (1893–1987), U.S. social worker. Goldsmith was born in New York. Following service as a field worker for the YMHA and the Jewish Welfare Board in New York City, Goldsmith served for ten years as executive director of the Bureau of Jewish Social Research. In this capacity he conducted detailed surveys of Jewish social services in many American cities. Their findings and recommendations profoundly affected the direction of American Jewish social and communal work. In 1930 Goldsmith was appointed executive director of the Jewish Federation and Jewish Welfare Fund of Chicago, a position he held until his retirement. Shortly after accepting that position, he helped organize the Community Fund of Chicago, a forerunner of the United Way. He served as president of the National Conference on Jewish Social Welfare (1928–29). During the 1930s he was a charter member of the Joint Emergency Relief Fund and chairman of the Health Division of the Council of Social Agencies. In 1936 he helped establish and served as executive director of the Jewish Welfare Fund of Chicago, which raised funds for European Jews during the Holocaust. The jwf merged with other organizations, becoming in 1950 the Jewish Federation of Metropolitan Chicago. Goldsmith served as its executive vice president. An active leader and speaker within the American Jewish community, Goldsmith encouraged American Jewry to support the needs of Jews abroad and the development of a modern State of Israel.

[Kenneth D. Roseman / Ruth Beloff (2nd ed.)]

**GOLDSMITHS AND SILVERSMITHS.** The two closely related professions of refining, casting, beating, and filigreeing silver and gold have occupied Jewish craftsmen uninterruptedly from biblical times to the present. The highly skilled nature of the work, the relatively constant value of the two precious metals and the universal demand for artifacts made of them, their ready transportability, and not least, their use throughout the ages in Jewish ritual and ceremonial objects, all help account for the fact that Jewish goldsmiths and silversmiths can be found in almost every period of Jewish history wherever Jewish communities existed. However, because their creations were so often melted down or plundered for their metallic worth, no identifiable work of any Jewish craftsman has survived from before late medieval times, except for the artifacts and cult objects that have been excavated.

**Antiquity**

Apart from archaeological finds – ear and finger rings, anklets, pendants, beads, eating and drinking utensils, and figures of gods and goddesses such as those uncovered at Beth-Shean, Tell al-Ajjul, and Tell al-Farah – there is ample literary evidence from the Bible that both silver and gold were worked by Israelite craftsmen from the earliest times; indeed, according to the biblical narrative, the first two Jewish goldsmiths and silversmiths were the builders of the Tabernacle, *Bezalel* and *Oholiab*. The many biblical injunctions against making silver and gold idols point in themselves to the widespread manufacture of such objects from the time of the Israelite conquest on, as borne out also by stories like that of Micah and his idol of silver (Judg. 17) or Jeroboam’s golden calves (1 Kings 12). Numerous passages in the Bible refer to silver and gold artifacts of all kinds and to the many silver and gold utensils in the Temple. Though neither of these metals was ever mined in Palestine, both were available throughout the ancient Near East; the Bible speaks of *Ophir* and *Tarshish* as sources, and this has been partly corroborated by a recently found eighth-century B.C.E. ostracon on which appear the words “gold from Ophir.” Israelite craftsmen most probably learned to work both gold and silver directly from the Canaanites among whom they settled. In the time of Ezra and Nehemiah, to judge by two verses in the Book of Nehemiah (3:8, 31–32), they were organized into guilds. Such societies undoubtedly persisted later in the Second Temple period, and it is known that in the years preceding the destruction of the Temple goldsmiths occupied their own quarters in Jerusalem. The Mishnah (Mtd. 3:8) and Josephus (Ant., 15:395) write of a golden vine with grape clusters “a marvel of size and artistry” adorning the Herodian Temple. Several references to Jewish goldsmiths and silversmiths occur in the Mishnah and Talmud. Rabbi...
Eliezer, a tanna living in the first half of the second century, ruled that Jewish craftsmen could not make ornaments for idols but could supply gentle customers with "necklaces, earrings, and finger rings" – a clear indication that such artisans competed for the non-Jewish trade as well. The Talmud (Sot. 49b; Shab. 59a) twice refers to a specific piece of gold jewelry, the "city of Jerusalem" (Jerushalayim shel zahav) or "city of gold," apparently a pendant, engraved with an illustration of a wall encircling a city, that was customarily given to young brides. The first record of Jewish gold- and silversmiths active outside Palestine comes from the description in Suk. 51b of the great synagogue of Alexandria. It is stated that various groups of artisans, among them silversmiths and goldsmiths, sat each in their own pews, "so that when a poor man [i.e., artisan] entered there, he recognized the members of his own craft and turned to them to find means for the maintenance of himself and his family." This presumably refers to organized guilds. That Alexandria continued to harbor many Jewish gold- and silversmiths as late as the eve of the Muslim conquest, by which time the Jewish population of the city had greatly dwindled, is known from the writings of the sixth-century monk and geographer Cosmas Indicopleustes, who also mentions an even greater concentration of such Jewish craftsmen in Medina, where, he writes, 300 Jewish gold- and silversmiths lived in one quarter of the city. Presumably this records the beginnings of a tradition of Jewish gold and silver work in the southern Arabian peninsula.

### Middle Ages and Modern Times

Like the practice of crafts in general by Jews in the Middle Ages, the intricate craft of the goldsmith and silversmith continued to be a widespread Jewish occupation south of the Pyrenees and in the Mediterranean lands, while there was little activity among Jews in this profession north of this demarcation line. The specific combination of skills and financial acumen needed for the goldsmiths' trade is evidenced in the information that has been preserved about the plying of this craft by Jews in Muslim countries. The records of the Geniza of Cairo show that goldsmithing was a common, lucrative, and highly specialized profession of Jews in Egypt and the surrounding area as far as Aden in the 11th and 12th centuries. In Iraq, Persia, Yemen, and the Maghreb many of the goldsmiths were Jews. That this was a widespread Jewish occupation in Muslim countries may be explained by the contempt in which such artisans were held by the Arabs. In pre-Islamic Arabia there was a tribe of Jewish goldsmiths, the Zuaynuga, who were defeated and forced to accept Islam by Muhammad. The preponderance of Jews in goldsmithing and silversmithing, particularly in the manufacture of jewelry, continued well into the modern period. In Baghdad, in 1844, 250 of 1,607 Jewish families employed in industry and trade were goldsmiths by profession. In Yemen in particular, the Jewish artisans attained a high standard of skill and artistry. Jews there even believed that the few Muslim goldsmiths were descendants of Jews who had been forcibly converted. The mass immigration to Israel after 1948 of the Jews of Yemen and other Arab countries helped to develop a local jewelry industry.

Jewish goldsmiths are among the first Jews mentioned in Muslim Spain, and are repeatedly referred to there in the following centuries. In Christian Spain Jewish goldsmiths were to be found in practically every sizable town; they were employed by the royal households and occupied their own row of shops in large cities like Tudela and Pamplona. The Augustinian eremites of Barcelona in 1399 commissioned a Jewish artisan to make them a silver reliquary. Jews manufactured Christian religious artifacts in violation of Jewish law and the antipope Benedict XI in 1414 had to forbid Spanish Jews to produce such objects as goblets and crucifixes. Jewish silversmithing was expressly permitted in the 15th century: in Aragon in 1401 and in Castile in 1419. A magnificent pair of silver *rimmonim*, decorated with semiprecious stones and executed by a Spanish Jewish artist in Camarata (Sicily) in the 15th century, still survives in the Cathedral treasury in Palma de Mallorca. Delicate filigree work surrounds the horseshoe arched repoussé areas and the Hebrew inscriptions. The expulsion from Spain in 1492 left many *Marranos in the Iberian peninsula and Balearic islands who now engaged freely in silversmithing and goldsmithing. Numbers of the exiles from Spain and Portugal entered these crafts in the Ottoman Empire. This was recognizable particularly in Walachia where Jews sometimes even headed the silversmith guilds. In Ereẓ Israel, in particular in Safed, goldsmithing was considered one of the profitable crafts for Jews in the 16th century. In Italy the refugees from Spain met local well-established Jews in the craft. An apostate of Ferrara, Ercole dei Fideli (before baptism, Solomon de Sessa), was celebrated in this renaissance environment for the ornamental daggers and other works he produced (1465–1519). The gold- and silversmith Abraham b. Moses Zoref ("goldsmith") is mentioned in Venice in the early 16th century. Jewish goldsmiths are found in Rome in 1726. In Bohemia-Moravia gold- and silversmithing developed as a flourishing craft among Jews from the 16th century. Emperor Rudolf II appointed Isaac Goldscheider ("gold refiner") elder of Bohemian Jewry in 1560. He was followed in the craft by his son Jacob. The profession became widespread there, as attested by the frequent appearance of the name Zoref on Prague tombstones until 1740. In the 18th century Jewish goldsmithing was combined with the Jewish trade in precious stones and metals centered in Amsterdam and Hamburg. The craft continued to develop. There were eight goldsmiths among the Jews who returned to Prague in 1749. Several families practiced the craft for successive generations. The program of "enlightenment" and "productivization" of the Jews, animating the legislation of Emperor *Joseph II, encouraged practice of the craft among Jews; a separate Jewish guild came into existence in 1805 and continued until the abolition of the guilds in 1859. There were 29 Jewish apprentices recorded in Prague in 1804 and in 1830 there were 55 goldsmiths. In Germany, Jews did not begin to enter the craft until the middle of the 19th century when, however, the general developments in Jewish society were tending to deflect...
them from occupation in crafts. Silesia was an exception, for Jewish goldsmiths and silversmiths were working there in the second half of the 18th century. In Poland-Lithuania Jews entered this craft as they entered others, as a result of the weakness of the guilds and the activities of Jews in the private towns of the nobility. In 1664 Hirsch Jelenowicz was officially called "goldsmith to His Majesty" in Poland. With the mass emigration of Jews from Eastern Europe to Western Europe and the Americas, Jewish goldsmiths—now combining the profession with watchmaking—joined the few Sephardi goldsmiths who had arrived there earlier. The most noted of early Jewish goldsmiths in the United States was Myer *Myers. Between 1725 and 1837, 50 Jewish goldsmiths are recorded in England. Thus in modern times Jewish goldsmiths in Northern and Central Europe severed the old connection with moneylending and pawnbroking and the trade became allied with formal banking, on the one hand, and with the making of delicate instruments and the watch trade, on the other. Jewish *art, in particular, the ornamentation of Torah scrolls, mezuzot, and similar cult objects, was influenced by the Christian artisans who did the work for Jews, especially in Northern, Central, and Eastern Europe in the early Middle Ages. Family names like Goldschmidt, Goldsmith, Goldsmid, Zoref or Soref, and Oreifice (Italian) generally indicate that at some stage in its history the family derived its livelihood from goldsmithing.

[Henry Wasserman]

Many Jewish goldsmiths and silversmiths became celebrated during the 19th century: best known was Israel Roukhomovsky, who worked in a small townlet near Odessa (Russia) at the turn of the century. In 1896 he was asked by a friend to make a golden tiara decorated with scenes from the Iliad, scenes in the daily life of the Scythians, and inscriptions referring to the gift of a tiara to King Saitaphornes by the people of Olbia. In 1898 this work was sold to the Louvre as an archaeological find by a Viennese merchant. When in 1903 Roukhomovsky was invited to Paris, and there produced a similar work with his primitive tools, he managed to convince a team of archaeologists headed by Clermont-Ganneau that he was the craftsman who made the alleged Saitaphornes tiara.

In Palestine the *Bezalel School of Arts and Crafts, established by Boris *Schatz in 1906, created a style of its own by adapting the traditional artistry of the Yemenites to western forms and tastes. This "Bezalel style" continued to be produced in Israel, especially in the manufacture of ritual objects as well as jewelry. Among modern goldsmiths and silversmiths in Israel and the U.S.A. were many important artists; most renowned in the production of ritual objects, both in Jerusalem and New York, were Wolpert and Gumbel.

[Bezalel Narkiss]

Contemporary Developments

The narrowing of the gap between the well-designed manufactured product and the handmade craft or art continued into the 1980s. In those fields where artistic expression is of particular importance, there are signs that a new type of patron is emerging who will consider commissioning a delicate piece of jewelry, silver for a special occasion, or a contemporary piece of Judaica for the synagogue, and studios with an emphasis on individual design and originality are being set up in many parts of the world.

In August 1977 the first international conference dedicated to Jewish art, under the auspices of the Oxford Centre for Postgraduate Hebrew Studies, in conjunction with the Tarbuth Foundation of America, organized by Isaiah Shachar, who died tragically a month later, entitled "The Visual Dimension—Aspects of Jewish Art," took place in Oxford. There emerged from this conference a tremendous worldwide interest in Jewish art, a desire to record the past, and an interest in encouraging a high standard of contemporary Judaica.

Museums and academic institutions devoted to Jewish art in general and ritual objects in particular have proliferated in many parts of the world, such as the Jewish Museum, New York, which encourages a contemporary approach to Judaica through its own workshops. A new dimension is already apparent in the work of some contemporary gold- and silversmiths.

In May 1978 an Anglo-Jewish Silver Exhibition was organized by the Victoria & Albert Museum of London, under the auspices of the Jewish Historical Society of England. The exhibition aimed at exhibiting the various types of Jewish ritual plates produced, principally by English silversmiths for synagogue and domestic worship, following the resettlement of the Jews in England in 1856. Also included were the fine cups and salvers dating from the reign of William III to that of George III presented as tributes to various Lord Mayors of London by members of the Spanish and Portuguese community. An unusual Victorian table centerpiece by J.S. Hunt, which was presented to Sir Moses Montefiore in 1841, created considerable interest.

There was also an important modern section, and among the silversmiths were represented two famous non-Jews: Prof. Gerald Benney (1930– ), professor of silversmithing and jewelry at the Royal College of Art since 1974, and Leslie Durbin (1913– ). Benney, who has developed his own technique of texturing and enameling, holds Royal Warrants of Appointment to the Royal Family, is a member of the Government Craft Advisory Committee, and was elected to the Faculty of Royal Designers for Industry. Benney has created some beautiful examples of Jewish ritual art.

In 1978 the department of goldsmithing, silversmithing, and jewelry of the Bezalel Academy of Arts and Design, Jerusalem, exhibited the works of 29 students and the head of their department, Professor Arie *Ofir. It consisted of 100 items of jewelry and 20 items of gold- and silversmithing, some in Judaica. The works showed originality, not only in the use of traditional materials, but with combinations of leather, rope, wood, and acrylics. The exhibition was first shown at the unique Pforzheim Museum of Jewelry in Germany in March 1978 and subsequently at the Deutsches Goldschmiedehaus in Hanau. It then moved to the Diamond Museum in Antwerp,
the Electrum Gallery in London, the Arnolfini Gallery in Bristol and, finally, to several centers in the United States.  

[Amia Raphael]

GOLDSTEIN, ABRAHAM SAMUEL (1925– ), U.S. lawyer and educator. Goldstein, who was born in New York City, received his LL.B. from Yale University in 1949 and was admitted to the Washington, D.C., bar. After two years as a law clerk to U.S. Circuit Court Judge David *Bazelon* (1949–51), he practiced privately with a Washington law firm from 1951 to 1956. In the latter year, he was appointed a member of the Yale Law School faculty. Goldstein, an expert in U.S. criminal law and procedure, became a professor in 1961. He served as dean of Yale Law School from 1970 to 1975. From 1975 he served as Sterling Professor at Yale, teaching criminal law and criminal procedure. He served as a consultant to the President’s Commission on Law Enforcement (1966–67), was a member of the Connecticut State Board of Parole (1967–69), and a member of the Governor’s Planning Commission on Criminal Administration (1967–71).

Active in Jewish affairs, Goldstein was a member of the board of directors of the New Haven Jewish Community Council. In 1978 he was appointed provost of Yale University, the second highest post in the university. He was the first Jew to attain this position, which is that of chief academic and administrative officer after the president. He was a visiting professor at the Hebrew University of Jerusalem in 1975 and at Tel Aviv University in 1986. He was senior vice president of the American Jewish Congress (1978–84) and served on its governing council from 1976 to 1994. He was also a member of the Executive Committee of the National Jewish Community Relations Advisory Council (1985–89). From 1990 he served on the board of directors of Hillel at Yale.

[Getzel Kressel]

GOLDSTEIN, ALEXANDER (1884–1949), Russian Zionist leader. Born in Minsk, Goldstein studied law at the University of St. Petersburg and took an active part in Zionist student circles. In 1903 he published his first article (in Russian) and eventually became one of the outstanding writers on Zionist affairs, contributing to the Zionist monthly, *Yevreyskaya Zhizn*, and primarily to *Razsvet*, when this weekly was founded in 1907. He also traveled throughout Russia in order to promote the Zionist idea. He was one of the originators of the Helsingfors Program which sought to incorporate Diaspora activities into the Zionist program. At the Seventh Convention of Russian Zionists, held in Petrograd in 1917, Goldstein submitted a proposal to hold a national “referendum,” which would demand equal rights for the Jews in the Diaspora as well as a national home for the Jews in Ereẓ Israel. In 1919 he left Russia, and, when Keren Hayesod was established, he entered its service and traveled extensively on its behalf. In 1933 he settled in Palestine, where he continued his work for Keren Hayesod.

[Yehuda Gera]  

GOLDSTEIN, ANGELO (1889–1947), politician and Zionist leader in Czechoslovakia. The son of a rabbi in Bohemia, he graduated in law. He was wounded during his service in the Austro-Hungarian army in World War I and after the war he practiced as an advocate in Prague. An active Zionist from his student days, he was among the founders of the Jewish party. At the death of Ludwig *Singer* (1931) he took his place in parliament, and was reelected in 1935. An outstanding orator, he fought all attempts at discrimination against Jews. Goldstein was bitterly opposed by assimilationists and extreme Orthodox Jews. He acted as counsel in libel actions brought against the Jewish party (e.g., as counsel of Emil *Margulies in the Hirschler-Weber case in 1928*). Goldstein was one of the main propagandists of Zionism in the Czech language. He served on the Zionist General Council (1931–35) on behalf of the Progressive General Zionist faction. In 1939 he left for Palestine where he practiced as a lawyer.

[Getzel Kressel]

GOLDSTEIN, ELYSE (1955– ), rabbi, educator, feminist activist. Born in Scranton, Pennsylvania, to Terry and Abe Goldstein, Elyse Goldstein earned a B.A. from Brandeis University in 1978 and an M.A. from Hebrew Union College in 1981. She was ordained at Hebrew Union College-Jewish Institute of Religion in 1983 and from 1991 served as the founding director of Kolel: The Adult Centre for Liberal Jewish Learning in Toronto, Ontario.
Goldstein's first rabbinic position was as assistant rabbi at Holy Blossom Temple in Toronto between 1985 and 1986. One of the first female rabbis in Canada, she was also an outspoken feminist committed to Reform Judaism. From 1986 to 1991, she served as rabbi of Temple Beth David of Canton, Massachusetts, before returning to Toronto to become the primary architect of the Kolel, first Reform institute for advanced adult learning. Through her pioneering educational work at Kolel, Rabbi Goldstein made a unique contribution to Liberal Judaism in North America by enabling Jews of diverse backgrounds and affiliations to study Judaism as adults in a yeshiva-like environment that is not Orthodox. Goldstein is the author of Re-Visions: Seeing Torah through a Feminist Lens (1998), and edited The Women's Torah Commentary (2000) and The Women's Haftarah Commentary (2003). She also published a study guide on women and Judaism, Seek Her Out: A Textual Approach to the Study of Women and Judaism (2004). She is one of seven women featured in the groundbreaking 1989 National Film Board of Canada documentary Half the Kingdom.

Elise Goldstein received many honor and awards, including the 2005 Covenant Award and the 2004 UJA Rabbinic Achievement Award. In 2001 she was named ORT Woman of the Year.

[Norma Baumel Joseph (2nd ed.)]

GOLDSTEIN, EUGEN (1850–1931), German physicist. Goldstein was born at Gleiwitz in Upper Silesia and became a student of the German scientist Herman von Helmholtz (1821–1894). Most of Goldstein’s research was devoted to radiant emissions, first at the University of Berlin and later at the Potsdam Observatory. He is best remembered for his studies of high-vacuum cathode ray tubes, leading to his discovery of “Kanalstrahlen,” known in English as “canal rays.” He found that these rays travel in the opposite direction from normal cathode rays. This was highly significant for the understanding of radiation in general, as it was shown later that such rays consist of positively charged particles and this in turn led Rutherford to prove that these particles, called protons, must exist alongside uncharged neutrons to make up the nucleus of every atom.

[J. Edwin Holmstrom]

GOLDSTEIN, FANNY (1888–1961), U.S. librarian. Born in Kamenets-Podolsk, Russia, Fanny Goldstein was taken to the United States at an early age. She entered the Boston public library system in 1913 and served as librarian of the West End branch from 1922 until her retirement in 1957, developing there a notable Judaica collection later housed in the main library. In 1954 she was appointed curator of Judaica, the first woman in America to receive this title.

Throughout her career she was active in promoting interest in Jewish books and writers among Jews and non-Jews alike. In 1925 she introduced the celebration of Jewish Book Week in Boston; it was subsequently made a national event. In 1940 she became the first chairman of the National Committee for Jewish Book Week and in 1941 was made honorary president of its successor organization, the Jewish Book Council of America. She was well known for her listings of Judaica published by the Boston Public Library, and those which appeared in the American Jewish Year Book (43 (1941–42), 499–517) and the Jewish Book Annual (5 (1946–47), 84–100; also vols. 11–16, 1952–59). In 1958 she presented her own large collection of Judaica to the Boston Public Library, where it is now maintained as the Fanny Goldstein Collection.

[Harry J. Alderman]

GOLDSTEIN, HERBERT S. (1890–1970), U.S. rabbi. Goldstein was born and educated in New York City, receiving his B.A. (1911) and M.A. (1912) degrees from Columbia University. He graduated from the *Jewish Theological Seminary in 1914, when such ordination did not necessarily mark one as a Conservative rabbi and was also ordained by Rabbi Shalom Jaffe, vice president of the *Union of Orthodox Rabbis. While still a seminary student, he assisted Rabbi Moses Z. Margolis at the prestigious Kehilath Jeshurun Congregation in New York on the Upper East Side where he succeeded Mordecai *Kaplan. Like Kaplan, he believed that an English-speaking, secularly educated rabbinate was essential to the survival of Judaism and that the synagogue must remain the center of Jewish life. Unlike Kaplan, who moved to the left, Goldstein remained firmly within the Orthodox camp. After graduation, he pioneered a new synagogue in Harlem, which was then populated by first-generation Jewish immigrants. To attract their American-born children, Goldstein organized a youth minyan and gradually evolved the congregation into a new form: an institutional synagogue which comprised social, educational, and sports activities in addition to religious services. After Harlem became a totally black neighborhood in the 1930s, he transferred his activities to the West Side (1937), where he had previously established a branch known as the West Side Institutional Synagogue. It was a combination of a synagogue, *talmud torah, and *ymha. Although a Seminary graduate, Goldstein also served as professor of homiletics at the Rabbi Isaac Elchanan Theological Seminary of *Yeshiva University, and was president of the *Synagogue Council of America, *Rabbinical Council of America, and the *Union of Orthodox Jewish Congregations. He was also active in the *Agudat Israel movement, and continually visited Eretz Israel to aid the activities of the Harry Fischel Institute for Research in Jewish Law and the Rabbi Herzog World Academy of Jewish Studies. Both these projects were supported by the phil-
anthropic foundation established by his father-in-law, Harry Fischel. He also wrote several books, including a commentary to the 613 commandments, and edited his father-in-law’s autobiography. Despite the fact that he was a graduate of the Jewish Theological Seminary, Goldstein was a strictly Orthodox rabbi, belonging to the right wing of the English-speaking Orthodox rabbinate, and in this respect was unique.

GOLDSTEIN, ISRAEL (1896–1986), U.S. Conservative rabbi and Zionist. He was born in Philadelphia, received his Jewish education at Yeshiva Mishkan Israel and Gratz College, studying for a time at a heder in Riga. He was a graduate of the University of Pennsylvania (1914) and ordained by the Jewish Theological Seminary in 1918. He received his D.H.L. from the Seminary as well (1927). In that year he was appointed rabbi of the prominent Congregation B’nai Jeshurun in New York, where he served until 1961. Begun in 1825, B’nai Jeshurun was one of the oldest congregations in New York and badly in need of revitalization. Goldstein instituted late Friday evening services, expanded its school and educational outreach, and began the community center directed by Louis Levitsky. During his four decades of leadership, he established B’nai Jeshurun as a respected and progressive congregation. An ardent Zionist, Goldstein was president of the Jewish National Fund of America (1933–43), and vice president (1934–43) and president (1943–45) of the Zionist Organization of America, and enjoyed the reputation of an outstanding orator and administrator.

A member and officer of several Jewish, interfaith, and public organizations and commissions, he was a founder of the National Conference of Christians and Jews (1928) and of Brandeis College (1946). Elected first president of the World Confederation of General Zionists (1946), he served as chairman of both the United Jewish and Palestine Appeals (1947–48), treasurer of the Jewish Agency (1948–49) while on Sabbatical from his congregation, and first president of Amidar, the Israel national housing company (1948–49). During Goldstein’s tenure as president of the American Jewish Congress (1951–58) that organization vigorously opposed McCarthyism and the restrictive McCarran-Walter Immigration Act, supported equal rights for American blacks, and attempted to counter Arab anti-Israel propaganda. In 1961 Goldstein moved to Jerusalem and became world chairman of the Keren Hayehudim-United Israel Appeal, serving in that capacity until 1971, when he also retired from the co-presidency of the World Confederation of General Zionists, of which he was appointed honorary president. His books include a history of his congregation *Century of Judaism in New York* (1930); sermons and essays, *Towards a Solution* (1940) and *American Jewry Comes of Age* (1955); and *Transition Years, New York–Jerusalem, 1960–1962* (1962); *Israel at Home and Abroad* (1973); *Jewish Justice and Conciliation: History of the Jewish Conciliation Board of America, 1930–1968* (1981); and a two-volume autobiography, *My World as a Jew* (2 vols., 1984); and *Jewish Perspectives: Selected Addresses, Sermons, Broadcasts and Articles, 1915–1984*, edited by Gabriel A. Sivan (1985). He was also honorary president of the American Jewish Congress, the JNF of America, and the Israel Interfaith Committee. His wife Bertha (1895–1996) was national president of the “Pioneer Women Organization (1947 to 1951) and was active in many women’s organizations.

With his wife Israel Goldstein instituted the Bert and Israel Goldstein Jerusalem Prize for Good Citizenship. Both Goldsteins were yeikirei Yerushalayim (Distinguished Citizens of Jerusalem).

GOLDSTEIN, JENNIE (1886–1960), U.S. actress. Born in New York, Jennie Goldstein appeared in *Khanele di Nayterin* at the age of six. At 15 she performed with David Kessler in *Dos Yidische Harts* and played the leading role in Jacob Gordin’s *Di Yoseyme*. At 16 she married the actor-playwright Max Gabel, who wrote plays for the two of them. After their divorce in 1930, she toured in vaudeville. She appeared on the English-language stage in George Abbott’s *The Number* (1951) and in Tennessee Williams’ *Camino Real* (1953).

GOLDSTEIN, JOSEF (1837–1899), hazzan and composer. Goldstein was born and brought up in Hungary. His father, known as “Schmelke Hazzan,” was hazzan of the town of Neutra, and Josef sang in his choir at the age of six. His father died when Josef was 10, and when he was 13, though still at school, he was made hazzan of the community. During the next five years, he conducted services in many Hungarian towns and at the Polish synagogue in Vienna, studied music in Prague, Florence, and Padua, and sang in concerts in Budapest and elsewhere. At the age of 18 he was appointed chief hazzan of the Leopoldstadt Synagogue in Vienna, and served there for over 40 years. He introduced the Polish-Jewish style of singing, which he also used for the songs in his book *Schire Jeschurun* (3 vols., 1862). The work contains melodies for all the services of the synagogue and settings of psalms for choir with organ accompaniment.

[Joshua Leib Neéman]

GOLDSTEIN, JOSEPH LEONARD (1940– ), U.S. medical geneticist and Nobel laureate. Goldstein was born in Sumter, South Carolina, and graduated with a B.S. in chemistry from Washington and Lee University in Lexington, Virginia (1962), and an M.D. from the University of Texas Southwestern Medical School at Dallas (1966). After medical training at Massachusetts General Hospital, Boston (1966–68), where he
met his long-term collaborator Michael *Brown, he began his research career at the National Institutes of Health, Bethesda (1968–70). He worked in the laboratory of Marshall Nirenberg and with Donald Fredrickson, clinical director of the National Heart Institute (1968–70) whose patients with lipid disorders stimulated his interest in cholesterol metabolism. His genetic studies with Arno Motulsky at the University of Washington, Seattle (1970–72) clarified the link between inherited abnormalities of lipid metabolism, especially high blood cholesterol levels, and susceptibility to heart disease. He also learned techniques for culturing readily accessible cells called fibroblasts which he subsequently used to study normal and abnormal lipid metabolism. In 1972 he joined the faculty of the Southwestern Medical School, Dallas, initially as head of the division of medical genetics, progressing to professor (1974) and Paul J. Thomas Professor of Medicine and Genetics, chairman of the department of medical genetics from 1977, and regent professor of the University of Texas (1985). He continued his collaboration with Michael Brown throughout this period in Dallas, and they shared the Nobel Prize for physiology or medicine (1985) for the research which identified the receptors on cell surfaces which normally regulate blood levels of low-density lipoproteins. They further showed that low density lipoproteins within cells control the enzyme coenzyme A reductase which governs cholesterol synthesis, especially by the liver. They characterized the genetic defects in these receptors which lead to high blood levels of low-density lipoproteins and cholesterol. This results in excessive lipid deposition in blood vessel walls predisposing to disease, especially in coronary arteries. These observations led to a greater understanding of the regulatory role of receptors in general. They also underlie the modern clinical practice of reducing abnormally high cholesterol levels by dietary means or drugs. His subsequent collaborative work with Michael Brown identified other metabolic defects resulting in high blood lipoprotein levels dependent upon high blood insulin levels and insulin resistance. His many honors include election to the U.S. National Academy of Sciences (1980), the Gairdner Award (1981), presidency of the American Society for Clinical Investigation (1985–86), and the Lasker Award in Basic Medical Science (1985).

[Michael Denman (2nd ed.)]

GOLDSTEIN, JUDAH JAMISON (1886–1967), U.S. judge and civic leader. Goldstein, who was born in Ontario, Canada, went with his family to New York’s Lower East Side when a child. He began practicing law in 1907 and in 1911 became secretary to Alfred E. Smith, then majority leader of the New York State Assembly. In the wake of the Seabury probe of municipal corruption, Goldstein assisted in the investigation of New York City’s magistrate courts and was then appointed to this court by Mayor Walker. In 1916 he received an interim appointment to the General Sessions Court and in 1919, despite the opposition of Tammany Hall, won a full term on that court. Defeated as the Republican-Liberal-Fusion candidate for mayor in 1945, he was reelected to the court in 1953. On the bench, Goldstein was a socially conscious and innovative justice who advocated more understanding and lenient treatment for youthful offenders. Prominent in Jewish community, welfare, and philanthropic activities, Goldstein was an active Zionist, a trustee of the Federation of Jewish Philanthropies, a member of the board of the Joint Distribution Committee, and a founder with Lillian *Wald of the East Side Neighborhood Association. He was president (for 32 years) of the well-known Grand Street Boys, the philanthropic organization composed of members who rose from slum childhoods to positions of power and prominence in New York City life. Goldstein wrote The Family in Court (1934), dealing with the requirements of the Family Court.

[Richard Skolnik]

GOLDSTEIN, JULIUS (1873–1929), German philosopher. Born in Hamburg, he taught at the Technische Hochschule in Darmstadt from 1901. He edited the literary journal Der Morgen, which dealt with Jewish topics, from 1923 until his death. Philosophically he was close to William James, whose A Pluralistic Universe he translated (1914). He wrote a great deal on contemporary civilization and culture. Goldstein’s major works are Untersuchungen zum Kulturproblem der Gegenwart (1899); Die empiristische Geschichtsauffassung David Humes... (1902); Wandlungen in der Philosophie der Gegenwart... (1911) on James, Bergson and Eucken; Die Technik (1912); Rasse und Politik (1921), dealing with the Jewish question; Aus dem Vermaechtnis des neunzehnten Jahrhunderts... (1922); and Deutsche Volks-Idee und deutsch-voelkische Idee (1927).

BIBLIOGRAPHY: Der Morgen, 5 (1929), no. 4.

[Richard H. Popkin]

GOLDSTEIN, KURT (1878–1965), neurologist and psychiatrist; coformulator of a test which measures the impairment of function in the case of brain injury in regard to abstract and concrete thinking, known as the Goldstein-Scheerer test. Goldstein, who was born in Katowice, Poland, was educated and worked in Germany. During World War I, he headed a special hospital for treating brain injuries. After the war, he was appointed professor at Frankfurt University and in 1931 at Berlin University. With the coming of the Nazis, he was dismissed from his post, imprisoned, and then released. He then emigrated to the U.S. He headed a research laboratory at the Montefiore Hospital, New York from 1936 to 1940. Then he taught for five years at Tufts Medical College in Boston, and from 1946 was professor of psychology at the City College of New York. Through his medical work on patients with brain damage, Goldstein formed a holistic approach and questioned the idea that the brain was an assembly of mechanisms that performed particular functions. He conceived the brain as a single unit in whose every function, the whole personality is reflected. His many investigations covered problems of localization in the brain, the methods of adaption of an organism to injuries, and the behavior of patients with brain damage.
His findings were collected in his books: Psychologische Analysen hirnpathologischer Faelle, written in collaboration with A. Gelb (1920), and Der Aufbau des Organismus (1934, The Organism, written in collaboration with A. Gelb, 1965), which have become classic works in neurology. From his own wide and varied experience with speech disorders, resulting from central defects and lesions, he published Ueber Aphasie (1927), The Organism (1939), Human Nature in the Light of Psycho-pathology (1940), After-effects of Brain Injuries in War (1942), and Language Disturbances (1948).

[Lipman Halpern]

GOLDSTEIN, MORITZ (Egon Distel, Michael Osten, Inquit; 1880–1977), German journalist and writer. Following his studies in German literature in Berlin, Goldstein, born into an assimilated family, intended to become a writer. Following the advice of Gustav Karpeles, he wrote in 1898–1900 the play Alexander in Jerusalem (published 1921) and from then on continued writing plays, stories, and novels, of which only a few were published (e.g., Die zerbrochene Erde, 1927; Katastrope, 1927). Whereas Goldstein remained without any success as an author, he was widely known for spurring the debate about the role of Jews in German culture with the publication of his essay “Deutsch-juedischer Parnass” (1912) in Der Kunstwart (hence known as the “Kunstwart debate”). As early as 1906 Goldstein published the essay “Geistige Organisation des Judentums,” where he followed the cultural-Zionist demand for a new Hebrew culture. In his Kunstwart essay, however, he moved away from a clear Zionist position. He still emphasized the need for the Jews to rebuild their own culture set against the politics of assimilation. Nevertheless, he doubted the possibility of a renaissance of Hebrew language and literature and instead proposed a new Jewish national literature in the German language. This compromise was controversial: Assimilated Jews (e.g., Ernst “Lissauer) and Zionists (e.g., Ludwig Strauss) both criticized Goldstein, demanding a radical either/or answer – either to become German or Jewish. Goldstein, surprised by the strong reaction to his essay, defended his position in Begriff und Programm einer juedischen Nationalliteratur (1913). After the World War I Goldstein continued working as a journalist, mainly for the Vossische Zeitung. In 1933 he fled to Italy, where he worked on a political-philosophical analysis of power (only the second part was published under the title Fuehrers Must Fall: A Study of the Phenomenon of Power from Caesar to Hitler, 1942) and on a historical analysis of the Jews, Die Sache der Juden (unpublished). In 1938 Goldstein fled to America. Until his death in 1977, he lived in New York, never feeling at home, as he described it in the autobiographical novel Die Goetter von Manhattan (written 1954, unpublished).

[Andreas Kilcher (2nd ed.)]

GOLDSTEIN, RAYMOND (1953–), Israeli composer, arranger, and conductor. Born in Capetown, where he completed his musical studies. Goldstein was on the faculty of the Rubin Academy of Music from 1978, specializing, among other subjects, in opera. He also holds the post of arranger/composer (associate conductor) in the Jerusalem Great Synagogue Choir, where he has over 550 works to his credit.

In 1991 he was appointed senior teacher at the Tel Aviv Cantorial Institute.

As musical director/accompanist, he frequently appears on stage, radio, and television in Israel and has made concert tours in Australia, the U.S., and Western Europe. He has made professional recordings with international cantors and singers, and as accompanist and/or arranger, his name appears on more than 150 CDs, cassette tapes, and videos. His compositions include a chamber opera, two cantatas, a concert Kabbalat Shabbat Service, orchestrations, works for chamber ensemble, and numerous arrangements (more than 1,500 in all), sacred and secular.

[Amnon Shiloah (2nd ed.)]

GOLDSTEIN, REBECCA (1950–), U.S. philosopher and novelist, Goldstein was born in White Plains, New York. Her father was the cantor at the Hebrew Institute of White Plains. After going to public school, Goldstein wanted to go to a yeshivah, and thought of “plunging … into religiosity.” She went to the Esther Schoenfeld High School on the Lower East Side of New York City, and recollected that it cured her of her “religious phase.” She graduated from Barnard College in 1972 and received her doctorate in philosophy from Princeton (1997). Her dissertation, supervised by Thomas Nagel, is titled Reduction, Realism and the Mind. Her fictional works usually have as their protagonists gifted and spirited women who are often forced to explore their commitments (for example to Judaism, to the possibilities of love, to family) against the claims of philosophical schools (for instance, to Spinoza, to Plato). Her novels are graceful and lucid explanations of what these relations mean to her protagonists, and how such characters envision themselves within such traditions. The Mind-Body Problem appeared in 1983, followed by The Late-Summer Passion of a Woman of Mind (1989); The Dark Sister (1991); a volume of stories titled Strange Attractors (1993); Mazel (1995), which received the National Jewish Book Award, as well as the Edgar Lewis Wallant Award; and Properties of Light (2000). Her Incompleteness: The Proof and Paradox of Kurt Godel was published in 2005. She is a MacArthur Foundation Fellow and a fellow of the American Academy of Arts and Sciences.

[Lewis Fried (2nd ed.)]

GOLDSTEIN, RICHARD FRANK (1904–1966), British organic chemist and chemical engineer, born in London. Goldstein worked for Imperial Chemical Industries (1927–46), first in dyestuffs division and then on development studies in petrochemicals. His Petroleum Chemicals Industry (1949) became
a standard. He joined the British Oxygen Company (1946) and became its managing director (1965).

GOLDSTEIN, RUBY (Reuven, “The Jewel of the Ghetto”; 1907–1984), U.S. boxing referee, one-time fighter, member of the International Boxing Hall of Fame and World Boxing Hall of Fame. Born and raised by his widowed mother – his father had died when he was 10 days old – on the Lower East Side of New York City, the 5′4¼″ Goldstein began boxing as an amateur at the Educational Alliance Building, fighting his first professional fight on December 30, 1924, and winning his first 23 fights, 13 by knockout. A hard puncher with a glass jaw, the welterweight fought his last fight on August 10, 1937, and retired with a 56–6–0 record, including 39kos. Goldstein began refereeing while in the Army in World War II and went on to a 21-year career that included officiating 39 world championship fights in all divisions – more than any other referee in history. They included the 1946 Zony Zale vs. Rocky Graziano classic; the first Joe Louis-Jersey Joe Walcott bout in 1947; Louis’ last fight, against Rocky Marciano, in 1951; the Sugar Ray Robinson-Joey Maxim light heavyweight fight in 1952, when Goldstein collapsed in the 104-degree heat after the 10th round and could not finish the fight; and the first Floyd Patterson-Ingemar Johansson world heavyweight fight in 1957. Goldstein is perhaps famous for being third man in the ring in the controversial championship fight between Benny “Kid” Paret and Emile Griffith on March 26, 1962. In that nationally televised encounter, Griffith pinned Paret in a corner in the 12th round and delivered a six-second barrage of 18 unanswered punches. When Goldstein finally intervened, Paret slumped to the canvas, unconscious, and died 10 days later. It was the first ring death seen by millions on American national television. While Goldstein was blamed for not stopping the fight, interviews years later with Paret’s widow and son show that the family did not blame Goldstein for the death, but rather Paret’s manager. Goldstein wrote an autobiography, Third Man in the Ring (1959).

[Yehuda Slutsky]

GOLDSTEIN, SIDNEY (1903–1989), mathematician and aerodynamicist. Goldstein, who was born in Hull, England, was lecturer in mathematics at Manchester University, and then a fellow of St. John’s College, Cambridge (1931–45). Goldstein became a fellow of the Royal Society in 1937. He was chairman of the Aeronautical Research Council (1946–49), and professor of applied mathematics at Manchester University 1945–50. Goldstein went to Israel in 1950, as vice president of the Technion in Haifa and dean of the department of aeronautical engineering. In 1955 he became professor of applied mathematics at Harvard University in the U.S. Goldstein wrote numerous papers on applied mathematics (most dealing with aeronautics), and he was editor and coauthor of Modern Developments in Fluid Dynamics (1938) and Lectures in Fluid Mechanics (1960).

[Samuel Aaron Miller]

GOLDSTEIN, SIDNEY EMANUEL (1879–1955), U.S. Reform rabbi. Goldstein, who was born in Marshall, Texas, was ordained at the Hebrew Union College in 1905. From 1905 to 1907 he held the position of assistant superintendent at New York’s Mount Sinai Hospital. When the Free Synagogue was founded by Stephen S. Wise in 1907, Goldstein became associate rabbi and established and directed its Social Service department. The services instituted by Goldstein included a child-placement service and a program for assisting former mental patients to readjust to life outside the institution. Goldstein was a vigorous supporter of the labor, woman’s suffrage, and civil rights movements, regarding the rabbi as a pioneer in social and community reform and the synagogue as the instrument for implementing them. A founder of the Jewish Institute of Religion, Goldstein was professor of social service at the Institute from 1922. Long interested in the field of marriage counseling, Goldstein served as chairman of both the New York State Conference on Marriage and the Family from 1936 to 1947 and the Jewish Institute on Marriage and the Family from 1937. His numerous public activities included: chairman of the Central Conference of American Rabbis’ Commission on Social Justice (1934–36); chairman of the executive committee of the War Resisters League of America (1930–40); chairman of the Joint Committee on Unemployment (1930–44); and executive committee member of the State of New York Committee on Discrimination in Employment (1941–44). His book, The Synagogue and Social Welfare (1955), studied the meaning of the synagogue and its relation to American life.

GOLDSTONE, RICHARD JOSEPH (1918– ), South African judge and international war crimes prosecutor. Born in Boksburg, South Africa, Goldstone was appointed judge of the Transvaal Supreme Court in 1980 and judge of the Appellate Division of the Supreme Court in 1989. In July, he was appointed to the newly established Constitutional Court...
of South Africa, a position he held until 2003. From 1991 to 1994, he served as chairperson of the Commission of Inquiry regarding Public Violence and Intimidation, which came to be known as the Goldstone Commission. This led to his appointment as chief prosecutor of the United Nations International Criminal Tribunals for the former Yugoslavia and Rwanda (1994–96). He was chairman of the committee that drafted a Declaration of Human Duties and Responsibilities for the director general of UNESCO (the Valencia Declaration) in 1998 and afterwards was chairman of the International Independent Inquiry on Kosovo (1999–2001). In April 2004, he was appointed by the secretary-general of the United Nations to the Independent International Committee to investigate the Iraq Oil for Food program. In December that year, he was appointed as co-chairman of the council for the International Bar Association’s Human Rights Institute. Goldstone was further involved in many areas of public life, in both the Jewish and general community. He was a governor of the Hebrew University of Jerusalem and from 1997 to 2004 served as president of World ORT, an international Jewish education and training charity. His autobiography, For Humanity: Reflections of a War Crimes Investigator, appeared in 2000.

[David Saks (2nd ed.)]

GOLDSTUECKER, EDUARD (1913–2000), Czech literary historian and critic, author, and diplomat. Goldstuecker was born in Podbiel, Slovakia. In his youth he was active in the Ha-Shomer ha-Za’ir movement in Slovakia but later became a Communist. Following the Nazi occupation of Czechoslovakia in 1938, Goldstuecker fled to England, where he studied at Oxford. In 1945 he returned to Prague, joined his country’s diplomatic service, and, after a tour of duty in London, was appointed Czechoslovakia’s first minister to Israel (1949–51). Goldstuecker later figured in the “Slánský trial and in 1952 was sentenced to life imprisonment for “anti-state” activities. Released after four years, he was appointed professor of the history of German literature at Charles University in Prague in 1956 (vice rector 1968–69). An outspoken critic of the Party’s interference in cultural affairs, Goldstuecker published a collection of studies on Franz *Kafka, Na témě Franz Kafka (On Franz Kafka, 1964). He organized two international conferences on Kafka and on Prague’s German literature in Liblice in 1963 and 1965. As a result of his efforts Kafka, who until then was taboo in the Communist world, was “rehabilitated” in Czechoslovakia and some other states of the Communist bloc. After the liberalization of the Czechoslovak regime in January 1968, Goldstuecker was elected president of the Czechoslovak Writers’ Union and a member of the Czech National Council. After the Soviet invasion of Czechoslovakia in August 1968, Goldstuecker was a major target of criticism by the anti-liberal elements. He left the country and accepted a visiting professorship at the University of Sussex (1969–78) and the University of Brighton (1978–90), England. In 1970 Goldstuecker was one of several Czechoslovak public figures accused of being agents of “Zionism and Imperialism” and tried in absentia. Goldstuecker for his part maintained that his Jewish origin was a major reason for his persecution by “Stalinist ruling circles” in Czechoslovakia. He returned to Prague in 1991.

[Avigdor Dagan / Milos Pojar (2nd ed.)]

GOLDWASSER, ISRAEL EDWIN (1878–1974), U.S. educator, financier, and philanthropist. Goldwasser was born in New York City, and began public school teaching in 1897. He eventually became a principal and the youngest district superintendent of schools in New York City (1914–17), publishing several educational works, including Method and Methods in Teaching English (1912) and Yiddish English Lessons (with Joseph Jablonower, 1914). In 1920 Goldwasser entered business as a factor, becoming president of an investment firm during the 1930s, and retired in 1954 after nearly 15 years with the Commercial Factors Corporation. Subsequently he served as an economic consultant and took a special interest in economic projects in Israel. Goldwasser was a leading figure in many Jewish communal organizations, such as the Federation of Jewish Philanthropies, of which he was the first executive director (1917–20). His son, Edwin L. Goldwasser (1919– ), was co-director of the National Accelerator Laboratory in Westen, Illinois, the world’s largest atom smasher. Professor emeritus of physics at the University of Illinois at Urbana-Champaign, he also served as vice chancellor for academic affairs. He is a fellow of the American Association for the Advancement of Science; the American Physical Society; and the J.S. Guggenheim Foundation. He wrote Optics, Waves, Atoms, and Nuclei: An Introduction (1965).

GOLDWATER, family of early settlers in Arizona and the American West. Originally named “Goldwater,” the first of the family to reach America were the brothers MICHAEL and JOSEPH, who were born in Konin, Poland, in the 1820s. They immigrated first to Germany, then to England, where they worked as cap makers, and in 1852, along with Michael’s young wife, to the United States. Attracted by the gold rush,
they went West, selling whiskey and hardware to the miners and then settling in Los Angeles, where they operated a combined general store and saloon. In 1862 Michael Goldwater led a mule train to the gold-rush settlement of La Paz, Arizona, along the Colorado River. He remained in the area and later founded the town of Ehrenburg, which he named after a friend who had been killed by Indians. Subsequently he was joined by his brother Joseph and the two opened a large store in Phoenix and another in Prescott. Michael retired in 1883 and died in 1903, leaving the business, Goldwater Inc., to his sons Morris and Baron. Baron married an Episcopalian. Their son, Barry M. Goldwater (1909–1998), served as U.S. senator from Arizona from 1952 to 1964 and again from 1968, and was the unsuccessful presidential candidate of the Republican Party in 1964. In 1968 he won back his seat in the Senate. After serving three more terms as one of the Senate’s most respected members, he retired in 1987. Goldwater wrote The Coming Breakpoint (1976) and his autobiography, With No Apologies (1979).

**BIBLIOGRAPHY:** O. Jensen, in: American Heritage (June 1964).

GOLDFLOWER, JOHN L. (1916–1999), U.S. comic-book artist. An orphan from East Harlem, N.Y., Goldwater hitchhiked west in the Depression and invented prototypical teenage America in the comics. His creations – Archie Andrews, Jughead, Betty, and Veronica – were always 16 years old, going on 17. Millions worldwide came to chuckle over Archie’s misadventures at school with his spinster teacher and fussy principal; his intractable romantic triangle with the sweet Betty and spoiled, rich Veronica; a hamburger obsession of the nerdy Jughead, and rivalry with the handsome, conceited Reggie. “He’s basically a square,” Goldwater said of Archie, “but in my opinion the squares are the backbone of America. If we didn’t have squares we wouldn’t have strong families.” The comic strip ran in 750 newspapers and comic book sales sometimes reached 50 million a year.

In the 1940s and 1950s, Goldwater catapulted to the pinnacle of the comics world, with a publishing empire, Archie Comics Publications, one of the industry’s big three, and radio and television shows and a movie.

Goldwater dreamed up Archie, a hapless teenage Everyman, in 1941, placing him in the mythical and idyllic town of Riverdale. He found a young artist, Bob Mantana, who provided what became indelible faces. He went to a magazine publisher and offered to buy his outdated issues at a penny each. Then he shipped them abroad to an avid market. The business prospered and Goldwater soon joined forces with a pulp magazine publisher, Louis Silberkleit, to found a magazine publishing business in 1941, just as the war was restricting paper supplies. Their Archie venture began as a four-page insert in another comic but proved an immediate hit and Archie and friends got their own comic.

In 1954, with national critics decrying brutality, vulgarity, and sex in comics, Goldwater helped found the Comics Magazine Association of America, whose Comics Code Authority persuaded magazines to voluntarily weed out offensive material as well as ads for guns, knives, and war weapons. Goldwater served as president for 25 years.

In 1973 Goldwater licensed Archie for evangelical Christian messages. Although Jewish, Goldwater said the sentiments were in line with his wholesome family message.

[Stewart Kampel (2nd ed.)]

GOLDFLOYN (Goldfish), SAMUEL (1882–1974), U.S. motion-picture producer. Born in Warsaw, Poland, he immigrated to the U.S. at the age of 13. He worked in a glove factory, and at the age of 30 owned a successful glove company. In 1913 Goldwyn joined Edgar and Archibald Selwyn to form the Goldwyn Pictures Corporation (using the first syllable of Goldfish and the last of Selwyn), adopting the name as his own. In 1922 Goldwyn was fired from the company, which later merged with Metro Pictures and Louis B. Mayer Productions to become Metro-Goldwyn-Mayer. Goldwyn became an independent producer, acquiring a reputation that none of his competitors could match. He endowed his films with talent and imagination, leaving his own distinctive mark on them. He introduced and produced many popular actors and hired distinguished writers, including Maurice Maeterlinck, Robert Sherwood, and Lillian *Hellman. His stars included Ronald Colman, Vilma Banky, Eddie *Cantor, Gary Cooper, David Niven, and Danny *Kaye.

Goldwyn became a legend in the film industry, and many malapropisms were attributed to him, such as “Include me out” and “a verbal contract isn’t worth the paper it’s written on.” Between 1917 and 1959, Goldwyn produced more than 100 films. Some of his productions include Arrowsmith (1931), The Kid from Spain (1932), Wuthering Heights (1939), The Little Foxes (1941), The Pride of the Yankees (1942), The Best Years...

Goldwyn was nominated for seven Academy Awards. In 1946 he won the Oscar for The Best Years of Our Lives and received the Irving G. Thalberg Memorial Award. In 1957 he was honored with the Academy’s Jean Hersholt Humanitarian Award and in 1973 he won the Golden Globe’s Cecil B. DeMille Award for outstanding contribution to the entertainment field. Goldwyn wrote Behind the Screen (1923). He assigned his film profits to the Samuel Goldwyn Foundation for assisting scholars and philanthropic causes.

[Jo Ranson / Ruth Beloff (2nd ed.)]

**GOLDZIHER, IGNAZ (Isaac Judah; 1850–1921), Hungarian scholar, one of the founders of modern Islamic scholarship. Goldziher, born in Szekesfehervar (Stuhlweissenburg), studied Arabic manuscripts at Leyden and Vienna, and traveled in Egypt, Palestine, and Syria before becoming a lecturer at the University of Budapest in 1872. As his university teaching was unpaid until he became a professor in 1904, he earned his living as secretary of the Budapest Neolog Jewish community for 30 years. In 1900 he succeeded D. *Kaufmann as professor of religious philosophy at the Budapest Rabbinical Seminary. Goldziher was elected a member of the Hungarian Academy of Sciences long before his appointment to a professorship in the university. He was respected by Muslim scholars and received queries from them; he was invited to lecture at Fuad University in Cairo but did not accept the position. When the Jewish National Home was established in Palestine after World War 1, it was hoped that Goldziher would use his influence in the Muslim world to help bring about a rapprochement between Jews and Arabs, but he was far from being a Zionist, and refused to act on this matter. Goldziher was the first to describe critically and comprehensively the history of Islamic oral tradition (‘hadith) and the various Islamic sects; he published many studies, still valuable, on pre-Islamic and Islamic culture, the religious and legal history of the Arabs, and their ancient and modern poetry. He was one of the initiators of the Enzyklopaedie des Islam (4 vols., 1913–36), and was among its contributors. Goldziher’s principal works in this field are Beiträge zur Literaturgeschichte der Schûa und der sunnitschen Polemik (1874), Die Zählriten… (1884), Muhammedanische Studien (2 vols., 1889–90), Eng. tr. Muslim Studies, ed. by S.M. Stern (1967), Abhandlungen zur arabischen Philologie (2 vols., 1896–99), Vorlesungen über den Islam (1910, 1925), and Die Richtungen der islamischen Koranauslegung (1920). Goldziher also made valuable contributions to Jewish scholarship. At the age of 12 he published Si‘ah Yâzhak, an essay on the Jewish prayers. His doctoral dissertation was devoted to the 13th-century Arab-Jewish philologist and Bible commentator *Tanhum Yerushalmi. He wrote for Hungarian and German Jewish periodicals and in various Festschriften on problems of Jewish scholarship, in particular about the relations between Islam and Judaism, and on Muslim criticism of the Pentateuch, the Talmud, and the “people of the book” in general. Goldziher’s Islamic and Jewish studies complemented each other; he was able to draw many parallels between the two religions, pointing out their differences as well.

Among his major publications in Jewish studies are Der Mythos bei den Hebräern… (1876; Mythology among the Hebrews…, 1877), “Mélanges judéo-arabes” (in REJ, vols. 43–60, 1901–10), and “Islamische und juedische Philosophie des Mittelalters” and “Religion des Islams,” in Die Kultur der Gegenwart (vol. 1 pt. 3, 1906). With W. Wundt and H. Oldenberg he edited Allgemeine Geschichte der Philosophie (1908). Goldziher reviewed critically various editions of the Arabic originals of important medieval philosophical and halakhic texts and he himself edited pseudo-Bahya’s Kitâb Ma‘âni al-Nafs (1907). He also wrote on modern Hebrew poetry (in IRJ, 14 [1902], 719–36). His general views on Judaism were presented in A zsidőság lényege és fejlődése (‘Essence and Evolution of Judaism,” 2 vols., 1923–24), and in a lecture delivered in Stockholm (‘Tradition und Dogma” in AZDJ, 78 (1914), 6–8, 22–23, 33–35; Eng. tr. in Reform Advocate, 47 (1914), 39–42). Goldziher served on the editorial board of the Jewish Encyclopedia (1901–06), to which he contributed many articles. An Ignace Goldziher Memorial Volume was published in two parts (1948–58) by S. Loewinger, J. Somogyi, and A. Scheiber. A collection of his writings was edited in three volumes by J. Somogyi as Gesammelte Schriften (1967–69), and a bibliography of his works was published by B. Heller, Bibliographie des oeuvres… (1927) and of his Hebrew writings was compiled by S.D. Goitein (in KS, 23 (1946/47), 251–7). His memoirs, covering the years 1890–1919, were edited by A. Scheiber and published as Tagebuch in 1978. After his death, Goldziher’s valuable library and his extensive scholarly correspondence were acquired by the National and University Library in Jerusalem.

[Martin Meir Plessner]

**GOLEM (Heb. גolem), a creature, particularly a human being, made in an artificial way by virtue of a magic act, through the use of holy names. The idea that it is possible to create living beings in this manner is widespread in the magic of many peoples. Especially well known are the idols and images to which the ancients claimed to have given the power of speech.
Among the Greeks and the Arabs these activities are sometimes connected with astrological speculations related to the possibility of "drawing the spirituality of the stars" to lower beings (see "Astrology"). The development of the idea of the golem in Judaism, however, is remote from astrology: it is connected, rather, with the magical exegesis of the Sefer Yeẓirah ("Book of Creation") and with the ideas of the creative power of speech and of the letters.

The word "golem" appears only once in the Bible (Ps. 139:16), and from it originated the talmudic usage of the term – something unformed and imperfect. In philosophic usage it is matter without form. Adam is called "golem," meaning body without soul, in a talmudic legend concerning the first 12 hours of his existence (Sanh. 38b). However, even in this state, he was accorded a vision of all the generations to come (Gen. R. 24:2), as if there were in the golem a hidden power to grasp or see, bound up with the element of earth from which he was taken. The motif of the golem as it appears in medieval legends originates in the talmudic legend (Sanh. 65b): "Rava created a man and sent him to R. Zera. The latter spoke to him but he did not answer. He asked, 'Are you one of the companions? Return to your dust.'" It is similarly told that two amora'im busied themselves on the eve of every Sabbath with the Sefer Yeẓirah (or in another version Hilkhot Yeẓirah) and made a call for themselves and ate it. These legends are brought as evidence that "If the righteous wished, they could create a world." They are connected, apparently, with the belief in the creative power of the letters of the Name of God and the letters of the Torah in general (Ber. 55a; Mid. Ps. 3). There is disagreement as to whether the Sefer Yeẓirah or Hilkhot Yeẓirah, mentioned in the Talmud, is the same book called by these two titles which we now possess. Most of this book is of a speculative nature, but its affinity to the magical ideas concerning creation by means of letters is obvious. What is said in the main part of the book about God's act during creation is attributed at the end of the book to *Abraham the Patriarch. The various transformations and combinations of the letters constitute a mysterious knowledge of the inwardsness of creation. During the Middle Ages, Sefer Yeẓirah was interpreted in some circles in France and Germany as a guide to magical usage. Later legends in this direction were first found at the end of the commentary on the Sefer Yeẓirah by *Judah b. Barzillai (beginning of the 12th century). There the legends of the Talmud were interpreted in a new way: at the conclusion of profound study of the mysteries of Sefer Yeẓirah on the construction of the cosmos, the sages (as did Abraham the Patriarch) acquired the power to create living beings, but the purpose of such creation was purely symbolic and contemplative, and when the sages wanted to eat the calf which was created by the power of their "contemplation" of the book, they forgot all they had learned. From these late legends there developed among the Hasidim Ashkenaz in the 12th and 13th centuries the idea of the creation of the golem as a mystical ritual, which was used, apparently, to symbolize the level of their achievement at the conclusion of their studies. In this circle, the term "golem" has, for the first time, the fixed meaning indicating such a creature.

In none of the early sources is there any mention of any practical benefit to be derived from a golem of this sort. In the opinion of the mystics, the creation of the golem had not a real, but only a symbolic, meaning; that is to say, it was an ecstatic experience which followed a festive rite. Those who took part in the "act of creation" took earth from virgin soil and made a golem out of it (or, according to another source, they buried that golem in the soil), and walked around the golem "as in a dance," combining the alphabetical letters and the secret Name of God in accordance with detailed sets of instructions (several of which have been preserved). As a result of this act of combination, the golem arose and lived, and when they walked in the opposite direction and said the same combination of letters in reverse order, the vitality of the golem was nullified and he sank or fell. According to other legends, the word emet ("truth"); "the seal of the Holy One," Shab. 55a; Sanh. 64b) was written on his forehead, and when the letter alef was erased there remained the word met ("dead"). There are legends concerning the creation of such a golem by the prophet *Jeremiah and his so-called "son" *Ben Sira, and also by the disciples of R. *Ishmael, the central figure of the Heikhalot literature. The technical instructions about the manner of uttering the combinations, and everything involved in the rite, proves that the creation of the golem is connected here with ecstatic spiritual experiences (end of commentary on Sefer Yeẓirah by *Eleazar of Worms; the chapter Shalashu'ei ha-Melekh in N. Bachrach's Emek ha-Melekh (Amsterdam, 1648), and in the commentary on Sefer Yeẓirah (Zolkiew, 1744–45) attributed to *Saadia b. Joseph Gaon). In the legends about the golem of Ben Sira there is also a parallel to the legends on images used in idol worship which are given life by means of a name; the golem expresses a warning about it (idol worship) and demands his own death. It is said in several sources that the golem has no intellectual soul, and therefore he lacks the power of speech, but opposite opinions are also found which attribute this power to him. The opinions of the kabbalists concerning the nature of the creation of the golem vary. Moses *Cordovero thought that man has the power to give "vitality" alone to the golem but not life (neshfah), spirit (ru'ah), or soul proper (neshamah).

In the popular legend which adorned the figures of the leaders of the Ashkenazi hasidic movement with a crown of wonders, the golem became an actual creature who served his creators and fulfilled tasks laid upon him. Legends such as these began to make their appearance among German Jews in the 15th century and spread widely, so that by the 17th century they were "told by all" (according to Joseph Solomon *Delmedigo). In the development of the later legend of the golem there are three outstanding points:

(1) The legend is connected with earlier tales of the resurrection of the dead by putting the name of God in their mouths or on their arm, and by removing the parchment containing the name in reverse and thus causing their death.
Such legends were widespread in Italy from the tenth century (in Megillat "Ahihaimz").

(2) It is related to ideas current in non-Jewish circles concerning the creation of an alchemical man (the "homunculus" of Paracelsus).

(3) The golem, who is the servant of his creator, develops dangerous natural powers; he grows from day to day, and in order to keep him from overpowering the members of the household he must be restored to his dust by removing or erasing the alef from his forehead.

Here, the idea of the golem is joined by the new motive of the unrestrained power of the elements which can bring about destruction and havoc. Legends of this sort appeared first in connection with Elijah, rabbi of Chelm (d. 1583). Zevi Hirsch "Ashkenazi and his son Jacob Emden, who were among his descendants, discussed in their response whether or not it is permitted to include a golem of this sort in a minyan (they prohibited it). Elijah Gaon of Vilna told his disciple Hayyim b. Isaac of "Volozhin that as a boy he too had undertaken to make a golem, but he saw a vision which caused him to desist from his preparations.

The latest and best-known form of the popular legend is connected with "Judah Loew b. Bezalel of Prague. This legend has no historical basis in the life of Loew or in the era close to his lifetime. It was transferred from R. Elijah of Chelm to R. Loew only at a very late date, apparently during the second half of the 18th century. As a local legend of Prague, it is connected with the Alteuschul synagogue and with an explanation of special practices in the prayers of the congregation of Prague. According to these legends, R. Loew created the golem so that he would serve him, but was forced to restore him to his dust when the golem began to run amok and endanger people's lives.

[Gershom Scholem]

Descriptions of creations of artificial anthropoids quite reminiscent of the medieval Jewish golem are found in Arabic magic predating Ḥasidah Ashkenaz and were available to some Jewish authors. In the Ḥasidah Ashkenaz and in the Jewish French esoterica, there are a variety of recipes for and views of the golem, which point to earlier traditions. In Kabbalah the golem legend has been interpreted in different ways, either as an entity created by astro-magic, or as a figure to be visualized in different colors, or even a symbol of the divine sphere. In Italian Renaissance, an interest in the subject of the golem is evident both in Jewish and Christian sources.

[Moshe Idel (2nd ed.)]

In the Arts

The legends concerning the golem, especially in their later forms, served as a favorite literary subject, at first in German literature – of both Jews and non-Jews – in the 19th century, and afterward in modern Hebrew and Yiddish literature. To the domain of belles lettres also belongs the book Niflaḥot Maḥaral "im ha-Golem" ("The Miraculous Deeds of Rabbi Loew with the Golem," 1909), which was published by Judah Rosen-berg as an early manuscript but actually was not written until after the "blood libels of the 1890s. The connection between the golem and the struggle against ritual murder accusations is entirely a modern literary invention. In this literature questions are discussed which had no place in the popular legends (e.g., the golem's love for a woman), or symbolic interpretations of the meaning of the golem were raised (the unredeemed, unfomed man; the Jewish people; the working class aspiring for its liberation).

Interest in the golem legend among writers, artists, and musicians became evident in the early 20th century. The golem was almost invariably the benevolent robot of the later Prague tradition and captured the imagination of writers active in Austria, Czechoslovakia, and Germany. Two early works on the subject were the Austrian playwright Rudolf "Lothar's volume of stories entitled Der Golem, Phantasien und Historien (1900, 1904) and the German novelist Arthur "Holitscher's three-act drama Der Golem (1908). The Prague German-language poet Hugo "Salus published verse on "Der hohe Rabbi Loew" and by World War I the theme had gained widespread popularity. The outstanding work about the golem was the novel entitled Der Golem (1915; Eng., 1928) by the Bavarian writer Gustav Meyrink (1868–1932), who spent many years in Prague. Meyrink's book, notable for its detailed description and nightmare atmosphere, was a terrifying allegory about man's reduction to an automaton by the pressures of modern society. Other works on the subject include Johannes Hess' Der Rabbiner von Prag (Reb Loeb)… (1914), a four-act "kabbalistic drama"; Chayim Bloch's Der Prager Golem: von seiner Geburt bis zu seinem Tod (1917; The Golem. Legends of the Ghetto of Prague, 1925); and Ha-Golem (1909), a story by the Hebrew writer David *Frischmann which later appeared in his collection Ba-Midbar (1923). The Yiddish dramatist H. *Leivick's Der Golem (1921; Eng., 1928) was first staged in Moscow in Hebrew by the Habimah Theater. Artistic and musical interpretations of the theme were dependent on the major literary works. Hugo Steiner-Prag produced lithographs to accompany Meyrink's novel (Der Golem; Prager Phantasien, 1915), the book itself inspiring a classic German silent film directed by Paul Wegener and Henrik Galeen (1920), and a later French remake by Julien Duvivier (1936). The screenplay for a post-World War II Czech film about the golem was written by Arnost "Lustig. Music for Leivick's drama was written by Moses "Milner; and Eugen d'Albert's opera Der Golem, with libretto by F. Lion, had its première at Frankfurt in 1926, but has not survived in the operatic repertory. A more lasting work was Joseph "Achron's Golem Suite for orchestra (1932), composed under the influence of the Habimah production. The last piece of this suite was written as the first movement's exact musical image in reverse to symbolize the disintegration of the homunculus. Der Golem, a ballet by Francis Burt with choreography by Erika Hanka, was produced in Vienna in 1962.

BIBLIOGRAPHY: Ch. Bloch, The Golem (1953); H.L. Held, Das Gespenst des Golems (1927); B. Rosenfeld, Die Golemsage und ihre Verwertung in der deutschen Literatur (1934); G. Scholem, On
Goliath was related to his vanquisher David, being descended from Orpah, Ruth’s sister-in-law (Sot. 42b). Orpah was a woman of low character and morals, but as a reward for the 40 steps which she took in following Naomi before leaving for Moab, Goliath was permitted to flaunt his strength for 40 days before his downfall (Ruth R. 2:20). Goliath appeared “morning and evening,” when the Shema was to be recited, to make Israel omit this affirmation of faith (Sot. 42b). The name Goliath is interpreted allegorically as a reflection of the frontony (gillu pa’nim) in profaning the name of God. He is described as “ish ha-beinayim” (“champion”) because he was built like a bynyn (“building”); ibid.). “When David looked at Goliath and saw that he was a mighty man armed with all kinds of weapons, he said, ‘Who can prevail against such as he?’ But when David saw him reviling and blaspheming, he said: ‘Now I shall prevail against him, for there is no fear of God in him’” (Mid. Ps., 36:2). David cast upon him the evil eye and he was struck with leprosy which rooted him to the ground (Lev. R. 21:2). When he fell, an angel pressed his face into the ground, choking the mouth which had blasphemed God (ibid. 107).

In Islam

In connection with the war of *Saul, who is known as Tālūt in the Koran, Muhammad relates that a number of the people of Israel doubted whether they could overcome Jālūt (Goliath) and his army. Allah however granted them courage and strength, and Da‘ūd (see *David) killed Goliath (Sura 2:250–2). The details of the duel between David and Goliath are retold in the post-Koranic literature as they are stated in the Bible. Muslim legend relates that Jālūt was one of the kings of Canaan; this is linked to the legend that he came from the Amalekites-Berbers. Goliath is briefly mentioned in the Qaṣīda, which is attributed to al-Samaw’al ibn ‘Adiyā: “and on the misfortune of Ifrīs when he rebelled against God and on Goliath when his fate caught up with him.” According to J.W. (H.Z.) Hirschberg, the name Ifrīs is similar in form to Idrīs-Iblīs (Satan), which is a strange change of the Philistine name. However, it is possible that this is an allusion to the agгадah tracing Goliath’s descent from Orpah (see above). According to Horowitz
GOLINKIN, DAVID (1955– ), Conservative rabbi, leader, and posek (halakhic authority), was born and raised in Arlington, Virginia. After moving to Israel in 1972, he earned a B.A. in Jewish History and two teaching certificates from Hebrew University in Jerusalem. He then received an M.A., rabbinical ordination, and a Ph.D. in Talmud from the *Jewish Theological Seminary (JTS) in New York where he taught Talmud from 1980–82.

Upon returning to Israel in 1982, he taught Talmud and Jewish Law at Neve Schechter, the Jerusalem branch of JTS, until 1990. In 1987, he began to teach Jewish Law at the Seminary of Judaic Studies (later renamed the *Schechter Institute of Jewish Studies) which was founded in 1984 in order to train Israeli Conservative/Masorti rabbis. After serving as assistant dean and then dean of the Schechter Institute beginning in 1990, he was chosen as president in 2000.

Golinkin played a large part in the growth of the Schechter Institute during those years, as it grew rapidly from a small rabbinical school into four *amidot (non-profits): the Schechter Institute of Jewish Studies, an accredited Israeli graduate school; the Schechter Rabbinical Seminary for Israelis and for visiting Conservative rabbinical students from JTS, the *University of Judaism, and the *Seminarion Latinoamericano; the TALI Education Fund which provides enriched Jewish education to 25,000 Israeli children in 140 TALI schools and pre-schools; and Midreshet Yerushalayim which teaches Jewish studies to Russian immigrants in Israel and to Jews in Ukraine and Hungary. Golinkin stated that his dream is to provide every Israeli and Eastern European Jew with a Jewish education.

Golinkin has published widely in various fields of Jewish studies. He is the author or editor of 31 books and almost 200 articles including Rediscovering the Art of Jewish Prayer (1997); Ginzei Rosh Hashanah: Manuscripts of Barli Rosh Hashanah from the Cairo Genizah (2000); Megillat Hashoah, a liturgy for Yom Hashoah (2003); Insight: The View from Schechter (2003); and works by Theodore *Friedman, Gershon *Levi, and Hayyim *Kieval.

Golinkin, however, is known primarily as one of the leading posekim in the worldwide Conservative/Masorti movement. He served on the Va’ad Halakhah (Law Committee) of the Rabbinical Assembly of Israel from its inception in 1985 and has served as its chair for most of those years. Golinkin authored many of the responsa published by the Va’ad and edited volumes 4–6.

Golinkin also authored a column entitled “Responsa” which appeared in Moment magazine from 1990–96. Those responsa were collected in Responsa in a Moment (2000).

Golinkin felt that it was very important to publish or republish Conservative responsa. To that end, he published An Index of Conservative Responsa and Practical Halakhic Studies 1917–1990 (1992); The Responsa of Professor Louis Ginzberg (1996); Proceedings of the Committee on Jewish Law and Standards of the Conservative Movement 1927–1970 (1997); and Responsa and Halakhic Studies by Rabbi Isaac Klein (2005). He also founded the Institute of Applied Halakhah at the Schechter Institute in 1996 in order to publish a library of halakhic works in various languages for the worldwide Conservative/Masorti movement.

Golinkin viewed the status of women in Jewish law as one of the main halakhic challenges of our time. He therefore devoted many responsa to this topic and helped found the Center for Women in Jewish Law at the Schechter Institute in 1999. In that capacity, Golinkin authored The Status of Women in Jewish Law: Responsa (2001) and edited The Jewish Law Watch (2000), To Learn and To Teach (2004), and Za’akat Dalot: Halakhic Solutions for the Agunot of our Time (2006), all of which were published by the Center.

Golinkin’s responsa and halakhic studies are known for their thoroughness, examining all sides of every issue using a wide range of talmudic, medieval, and modern sources. In Halakhah For Our Time: A Conservative Approach to Jewish Law (1991), Golinkin maintains that there are six characteristics of Conservative responsa, including preference for a kula (tenacity) over a humra (stringency), the use of a historic-scientific approach, and an emphasis on the ethical component in Jewish law. Golinkin is firmly committed to the halakhic tradition but allows for change and flexibility in Jewish law, provided that such change is well-grounded in talmudic and halakhic sources.

in the Ukrainian province of Kherson and as a boy sang in the choir of Phinehas *Minkowsky. In 1918 he became conductor at the Maryinsky Opera Theater in Petrograd. He conceived the idea of establishing an Opera in Palestine and gave a concert with the singer Chalapin to raise funds for the project on which he published a pamphlet in 1920. In 1923 Golinkin immigrated to Palestine and in July of that year staged a performance in Hebrew of *La Traviata, with local and guest singers, in Tel Aviv. His company, the Palestine Opera, gave intermittent opera performances until 1948, when he became conductor of the Israel Opera, a post he held until 1953. Golinkin's writings include *The Temple of Art (1927; Hebrew and English), a volume of memoirs *Me-Heikhalei Yefet le-Oholei Shem ("From the Palaces of Japheth to the Tents of Shem," 1947), and *Ha-Historyah ba-Opera ("History in the Opera," 1961).

[David Golinkin (2nd ed.)]

GOLINKIN, MORDECHAI YA’AKOV (1884–1974). Orthodox rabbi, religious Zionist, *av bet din. Born in the Kherson district of Ukraine and orphaned at a young age, Golinkin studied in the Lithuanian yeshivot of Lomza, Tiktin, and Lida, where he was called "the Khersoner Ilui" (prodigy). He was ordained in 1904 by Rabbi Mordechai (Slonimer) Oshiner and Rabbi Binyamin Ze'ev Zakhheim of Yekaterinoslav.

In 1913 he published a book of sermons (*Derashot Harim, Jerusalem, 2001*). He then became the *av bet vin* and *de facto* chief rabbi of Zhitomir, capital of the Volyn (Volhynia) district of Ukraine where he developed a youth organization called Tiferet Bakhurim for 1,200 young men. Golinkin developed a good relationship with the governor of Volyn. As a result, Golinkin persuaded him to exempt from the Russian draft the yeshivah students of Novaredok who had fled to Zhitomir and he also prevented a blood libel in Zhitomir at the time of the *Beilos* blood libel in Kiev in the fall of 1913.

After the February Revolution of 1917, Golinkin and Rabbi Solomon *Aronson* of Kiev (later of Tel Aviv) and Rabbi Judah Leib *Zirelson* of Kishinev formed Ah Shem, "1947), and *Toledot Anshei Shem* ("History of the Orthodox Rabbinical Court of Justice of the Associated Synagogues of Massachusetts for over two decades, presiding over cases of national prominence. In 1969–1970, the Boston *bet din* spent 10 months studying the subject of civil disobedience and conscientious objection in light of the Vietnam War. In January 1970, it issued a 54-page responsum to the seven major questions. The Boston *bet din* showed that a rabbinic court could function as an activist court, which could go way beyond the domain of family matters.

Golinkin's son Rabbi Noah *Golinkin, a Conservative rabbi, was an activist during the Holocaust and a prominent Hebrew educator in North America.

[David Golinkin (2nd ed.)]

GOLINKIN, NOAH (1914–2003). U.S. rabbi. After studying at various yeshivot and earning a law degree in Vilna, Noah Golinkin emigrated from his native Poland to the United States in 1938. He earned a master's degree in American history at Clark University before enrolling as a rabbinical student at the Jewish Theological Seminary in New York City.

In late 1942, Golinkin and fellow JTS students Jerome Lipnick and Moshe "Buddy" Sachs, Golinkin established the "European Committee of the Student Body of the Jewish Theological Seminary," to publicize the plight of Europe's Jews. Their first public program was a Jewish-Christian inter-seminary conference on European Jewry, in February 1943. Several hundred students and faculty, including representatives of eleven Christian seminars, attended the sessions, which alternated between JTS and the nearby Union Theological Seminary. Speakers included prominent Jewish and Christian leaders and relief experts.

In a series of letters and articles in the spring of 1943, Golinkin and his colleagues took American Jewry to task for not actively pressing the Roosevelt administration to rescue Jews from Hitler. Their words of rebuke made a strong impression on the Synagogue Council of America, the national umbrella group for Orthodox, Conservative, and Reform synagogues. Shortly after meeting with Golinkin, Lipnick, and Sachs, the Synagogue Council established an emergency committee to raise Jewish and Christian awareness of the Nazi genocide and urge Allied intervention.

Closely following suggestions made by the students, the Synagogue Council undertook a nationwide campaign to coincide with the traditional seven weeks of semi-mourning between Passover and Shavuot. Numerous synagogues adopted the proposals to recite special prayers for European Jewry, limit "occasions of amusement," observe partial fast days and moments of silence, write letters to political officials and
Christian religious leaders, hold memorial rallies, and wear black armbands.

The rallies, held around the country on May 2, 1943, in many instances were jointly sponsored by Reform, Conservative, and Orthodox rabbis. The Federal Council of Churches organized memorial assemblies at churches in a number of cities on the same day, although Christian participation overall was modest. The gatherings received significant media coverage and increased public awareness of the Nazi slaughter of European Jewry.

After the war, Golinkin held pulpits in Virginia, Maryland, and elsewhere, and was the founding director of the Board of Jewish Education of Greater Washington, D.C. Fearing that the Hebrew language would become as little known to American Jews as Latin is to most Catholics, Golinkin created the Hebrew Literacy Campaign in 1963. In twelve weeks, every adult in the synagogue could read the prayer book, and the synagogue won the Solomon Schechter Award. He later expanded his efforts and convinced the National Federation of Jewish Men’s Clubs to adopt the program. Golinkin’s textbook *Shalom Aleichem* (1978) has sold over 100,000 copies, and the 1981 sequel, *Ein Keloheinu*, which teaches the Shabbat morning service, has been translated into Russian and Hungarian.

His 1987 book, *While Standing on One Foot*, used in conjunction with a program he called the Hebrew Reading Marathon, teaches adults how to read Hebrew in one day. This book has been used by over 700 synagogues in 45 states, Canada, and Australia. It is estimated that more than 150,000 Jewish adults have learned how to read Hebrew in the two Golinkin programs since the 1960s.

Golinkin was also the originator, in 1989, of the custom, observed by a number of synagogues and Jewish organizations, to plant yellow tulips on Holocaust Remembrance Day as a reminder of the yellow star that Jews were forced by the Nazis to wear on their clothing.

**GOLITSYN, COUNT NIKOLAI NIKOLAYEVICH** (1836–1893), Russian author and government official. While holding governmental positions in the *Pale of Settlement*, and as editor of the semiofficial newspaper *Varshavskiy Drevenik*, Golitsyn undertook an inquiry into the Jewish problem in Russia. He wrote studies and articles on the subject with an anti-Jewish approach during the 1870s, achieving the reputation among upper government circles of being an expert on the Jewish problem, and in 1883 was appointed by the ministry of the interior a member of the “High Commission for the Revision of the Current Laws Concerning the Jews” (the Von Pahlen Commission). In this connection, Golitsyn prepared a series of studies and memoranda, the most important of which was *Istoriya russkogo zakonodatelstva o yevreyakh 1649–1825* gg. ("History of Russian Legislation Concerning the Jews 1649–1825"). The book, of 1,116 pages, provides an abundance of documents drawn from archives and is therefore of value. It was published in 1886 in 300 copies. Despite his anti-Jewish outlook, Golitsyn agreed with the conclusions of the Commission which recommended the gradual abolition of the restrictions against the Jews (1888).

**BIBLIOGRAPHY:** YE, 6 (c. 1910), 623; Dubnow, Hist Russ, 1 (1916), 392ff.; 2 (1918), 74ff.; I. Levitats, *Jewish Community in Russia, 1772–1844* (1943), 91, 102–4.

[Yehuda Slutsky]

**GOLL, CLAIRE** (1891–1977), German writer, journalist, and translator. Goll was born Clarisse Liliane Aischmann in Nuremberg into a strict family. In 1911, after the suicide of her brother and because of the mental disorder of her mother, she left her family and married the publisher Heinrich Studer. Her first publications, *Mittelt* (1918), an anthology of poems, and her narratives *Die Frauen erwachen* (1918), were influenced by her family tragedies and focused on the suffering and mortified human being. Her texts are also committed to pacifism and can be classed as expressionistic. In the late 1920s Goll studied philosophy at the University of Geneva, broke up with her husband, and had a love affair with Rainer Maria Rilke. The correspondence between Rilke and Goll was published under the title *Ich sehe mich sehr sehr nach deinen blauen Briefen* (2000). This exchange of letters contains seven poems in French from Rilke that were published as *Verges* in the journal *Nouvelle Revue Française* and the forgotten manuscript *Gefuehle* from Claire Goll.

In 1921 Goll married Yvan *Goll*. With him she participated in the Dadaist meetings in Zurich and later invited Surrealists to their apartment in Paris. In 1927 Goll published *Eine Deutsche in Paris* (1927), which deals with the life and failure of a woman in Paris in the late 1920s. Her novel *Arsenk* (1932) also emphasizes the life of a woman around this period of time caught between love, failure, jealousy, and murder. Her own life with Yvan Goll was marked by a volatile relationship which both worked through in their *Poèmes d’amours* (1925), *Poèmes de la jalousie* (1926), and *Poèmes de la vie et de la mort* (1926). Most of Goll’s texts had been written originally in French and translated by Goll herself. In 1939 Goll immigrated to the United States, returning in 1947 to Paris, where Yvan Goll died. After his death Goll became a disputatious editor of her husband’s works and published her autobiography, *Ich verzeihe keinem: Eine literarische Chronique scandalouse unserer Zeit* (1976). In 1953 she confronted Paul *Celan with the accusation of plagiarism, claiming that Celan had copied from Yvan Goll’s *Traumkraut*. Her own novels *Der gestohlene Himmel* (1962) and *Traumtänzerin* (1971) went unnoticed. They link up with her early writings narrating her childhood and youth.

**BIBLIOGRAPHY:** C. Pleiner, *Du uebtest mit mir das feuер-
the decay of European culture and modernity per se. Especially *Sodome et Berlin* (1929) is a sharply etched caricature of civil society in Berlin.

Jewish themes constantly recur in the rich and complex work of this cosmopolitan poet. Prominent among them are loneliness, eternal wandering between two worlds and three languages, the haunting presence of poverty, war, and death, and the search for salvation in occult and kabbalistic speculation. The figures of Job and of the ‘Wandering Jew’ merge with the homeless poet himself in a major verse collection La Chanson de Jean sans Terre (3 vols., 1936–39), where the only certainty in a foundering universe is total annihilation. In 1939 Goll and his wife fled to the U.S. While they were living in New York he published the literary magazine, *Hémisphères*, and a volume of English poems, *Fruit from Saturn* (1946), as a literary response to the dropping of the atomic bomb on Hiroshima. In 1947 Goll and his wife returned to Paris, where he struggled with leukemia. On his sickbed Goll reverted to writing in German. Two volumes of poetry appeared after his death: *Traumkraut* (1951), a collection of poems dealing with his experience of illness and death, and *Neila* (1954). Two other posthumous works were *Abendgesang* (1954) and a play, *Melusine* (1956). Other late works of Yvan Goll are *Le Char Triomphal de l’Antimoine* (1949), *Les Géorgiques parisiennes* (1951), and *Les Cercles magiques* (1951). His scattered publications were collected by his widow in *Dichtungen: Lyrik, Prosa, Drama* (1960) and also in a collection of poems in *Yvan Goll: 100 Gedichte* (2003).

**GOLLANZ, SIR HERMANN** (1852–1930), rabbi and teacher. Gollancz was born in Bremen and was the brother of Sir Israel *Gollancz. He officiated at the Bayswater Synagogue (1892–1923) and taught Hebrew at University College, London (1902–24). In 1897, when he received the rabbinic diploma on the Continent from three Galician rabbis, he became the center of a controversy over whether the rabbinic title should be a recognized qualification for the Anglo-Jewish clergy with the ultimate result that the title was so recognized. Gollancz published a number of critical editions and translations from Hebrew, Aramaic, and Syriac, including a Hebrew and English edition of *Sefer Mafte’ah Shelomo* (1914) and also of Joseph Kimhi’s *Shelak ha-Kodesh* (1919). Hermann was the first English rabbi to receive a knighthood (1923).

GOLLANCZ, SIR ISRAEL (1864–1930), English literary scholar. Gollancz, son of the Rev. Samuel Marcus Gollancz, minister of the Hambro Synagogue in London and a brother of Rabbi Sir Hermann *Gollancz, was lecturer in English at University College, London (1892–95), and then at Cambridge. In 1903 he was appointed professor of English at King’s College, London. An outstanding Shakespearean scholar, Gollancz also made important contributions to the study of early English literature and philology. His works include an edition and translation of the 14th-century alliterative poem, *Pearl* (1891), an edition of Marlowe’s *Dr. Faustus* (1897), *The Sources of Hamlet* (1926), and *The Caedmon ms of Anglo-Saxon Biblical Poetry...* (1927). He was also general editor of the Temple Classics and of the highly successful Temple Shakespeare. Gollancz did not confine his activities to the area of English literature. In 1902 he helped to found the British Academy, of which he remained secretary until his death. In this capacity he was instrumental in establishing the British School of Archaeology in Jerusalem in 1920. He was knighted in 1919. He took an interest in Jewish affairs, especially in the training of rabbis. He also served on the council of Jews’ College, London, for some years.

[Harold Harel Fisch]

GOLLANCZ, SIR VICTOR (1893–1967), English publisher and author. The grandson of a *hazzan* and nephew of Rabbi Sir Hermann *Gollancz and Sir Israel *Gollancz, Victor Gollancz early rejected his family’s religious Orthodoxy and all middle-class conservatism. Appalled by poverty and suffering, he sought to combat these ills through socialism and, later, pacifism. While an undergraduate at Oxford, he took a brief interest in Liberal Judaism, but was increasingly drawn to Christianity, although he never formally converted. After a period as a classics teacher, Gollancz entered publishing, and in 1928 founded his own publishing house. In 1936, together with John Strachey and Harold *Laski, he established the Left Book Club, whose aim was to expose Nazism and to “halt Hitler with war.” Their success in providing informative books at low cost was a remarkable feat of political publishing. The club, which became a nationwide social and political movement, had some 60,000 members at its peak, but did not survive the Nazi-Soviet pact of 1939, which for Gollancz was an intolerable betrayal.

During World War II Gollancz was one of the founders and leading members of the National Committee for Rescue from Nazi Terror, an organization which tried to save some of Hitler’s victims, and was one of the first people in Britain to understand and internalize the horrors of the Holocaust. Later he sponsored other humanitarian causes, such as the “Save Europe Now” campaign to alleviate starvation in Germany in the post-World War II period, the Association for World Peace (later known as “War on Want”), and the British campaign against capital punishment. Although from 1945 onward he fought the Palestine policy of British foreign secretary Ernest Bevin and endeavored to secure the admission of Jewish refugees to Palestine, Gollancz behaved characteristically when he headed an organization for relief work for the Arabs during Israel’s War of Independence and later for Arab refugees in the Gaza Strip. He advocated reconciliation between Jews and Germans and between Jews and Arabs. At the same time he was on the board of governors of the Hebrew University in Jerusalem from 1952 to 1964.

A bon vivant with mystical longings, a successful businessman who opposed capitalism, an idealist tortured by a guilt complex, Gollancz wrote on many subjects. His books include *The Brown Book of the Hitler Terror* (1933); a translation (1943) of *Why I Am A Jew* by Edmond *Fleg; two autobiographical works addressed to his grandson, *My Dear Timothy* (1952) and *More for Timothy* (1953); *The Case of Adolf Eichmann* (1961), which expressed his total opposition to the trial of the Nazi criminal; and several religious anthologies and essays on music. He was knighted in 1965. Some of his views were considered bizarre by many Jews.

[Renee Winegarten]

GOLLER, IZAK (1891–1939), English author and rabbi. Born in Lithuania, Goller was taken to England as a child. He served congregations in Manchester, London, and finally the Hope Place Synagogue in Liverpool, where his advanced social views and outspoken addresses led to his dismissal in 1926. With characteristic defiance, Goller subsequently reestablished himself in the Young Israel (Zionist) Synagogue in Liverpool. His verse collection, *The Passionate Jew and Cobbles of the God-Road* (1923), violently denounced the atrocities committed against the Jews of Eastern Europe after World War I. It was followed by *A Jew Speaks!* (1926), a book of poetry and prose which, like many of Goller’s subsequent publications, was illustrated with the author’s original “cartoons.” Goller’s novel, *The Five Books of Mr. Moses* (1929), was dramatized as *Cohen and Son* (1937), a Jewish mystery play in “three acts, ten scenes, and a melody,” and first performed in London in 1932. Other plays on Jewish themes were *Judah and Tamar, Modin Women*, and *A Purim Night’s Dream* (all in 1931), and *The Scroll of Lot’s Wife* (1937). A statement of his faith as a Jew was contained in *First Chapter – A Summary of the History of My People from Abraham of Ur to Herzl of Budapest* (1936).

**BIBLIOGRAPHY:** *Temkin, in: 1C* (June 30, 1939); G.E. Silverman, in: *Liverpool Jewish Gazette* (June 24, 1960); idem, in: *Niv ha-Midrashiyyah* (Spring 1970), 74–8, English section.

[Godfrey Edmond Silverman]

GOLLUF, ELEAZAR (d. 1889), courtier and agent of the royal family of Aragon; member of a prominent Saragossa family. In 1376 he was permitted to carry arms and exempted from wearing the Jewish “badge. From 1383 he served as agent of
the infante John, son of Pedro II of Aragon, and of his wife Violante. After John ascended the throne in 1387 Golluf served as "chief agent of the queen" – in fact her chief treasurer – a position that had not been held by a Jew in Aragon for a century. His ledgers are not preserved, and may have been intentionally destroyed even before the end of the Middle Ages. A devoted Jew, Golluf’s activities in Jewish affairs extended beyond his own community. After Golluf’s death, his son Isaac converted to Christianity, first obtaining the king’s promise that he should nevertheless inherit his father’s property. His name as a Christian was Juan Sánchez de Calatayud. He was the grandfather of Gabriel Sánchez, a leading official during the reign of Ferdinand and Isabella and a supporter of Christopher Columbus.

GOLOBOFF, GERARDO MARIO (1939– ), writer and literary critic. Born in Carlos Casares, one of the agricultural colonies established by the Jewish Colonization Association in Argentina, Goloboff was formally trained as a lawyer but dedicated his life to literature. He wrote books on renowned Argentine authors such as Roberto Arlt, Jorge Luis Borges, and Julio Cortázar. He taught literature for almost 20 years in France. He later resided in Argentina.

Goloboff’s first book was Entre la diáspora y octubre (1966), a collection of poetry. It was followed by the novel Caballos por el fondo de los ojos (1976), published the same year that the military coup d'état occurred. He is best known for his trilogy of novels that takes place in the fictional town of Algarrobos: El criador de palomas (1988), La luna que cae (1989), and El soñador de Smith (1990). Together the novels recreate, to a certain extent, the author’s own experience growing up in the countryside. Goloboff manages to insert Jewish specificity into a long tradition of literary myth-making begun in the 19th century that arises from the Pampa, mainly in the form of gauchesque literature. The novels have been widely praised for the author’s lyrical style of storytelling that combines biblical imagery with the allegorical representation of Argentine socio-historical reality, while at the same time weaving a mystery for the main character, El Pibe, to unravel in an attempt to uncover his past. Although most his recent novel, Comuna Verdad (1995), also takes place in Algarrobos it is not part of the aforementioned trilogy. This fifth novel is based more strictly on historical circumstances and events, namely the formation of an agricultural commune by an anarchist group of primarily immigrant origins. Nevertheless, all four of these last titles are gathered together in English translation under the title The Algarrobos Quartet (2002).

[Darrell B. Lockhart (2nd ed.)]

GOLODNY, MIKHAIL (Mikhail Semyonovich Epshtein; 1903–1949), Russian poet. Golodny was first inspired by the heroism of the civil war and wrote verse distinguished for its simplicity and song-like quality. His World War II collections include Pesni i ballady Otechestvennogo voyny ("Songs and Ballads of...War," 1942) and Stikhi ob Ukraine ("Poems about the Ukraine," 1942). Golodny’s Stikhi, ballady, pesni ("Poems, Ballads, Songs") appeared in 1952.

GOLOBOFF, GERARDO MARIO (1888–1982), Yiddish writer and educator. Born in Lithuania, Golomb studied at yeshivot and at the University of Kiev. In 1921–31 he directed the Yiddish Teachers’ Seminary in Vilna. He settled as a teacher in Palestine (1932), before moving to Winnipeg, Manitoba, Canada, (1938) to become the principal of the Peretz School, to Mexico City (1944) to head Yiddish schools there, and finally to Los Angeles (1964–82). In his hundreds of articles and many books he expounded his ideology of “Integral Jewishness,” which includes the language, festivals, religious observances, family relationships, and ideals of the Jews, which collective experience he deemed essential for the continued existence of the Jewish people. Like Simon Dubnow and ʿAbd ʿAl-Ham, Golomb stressed the need for retaining Jewish distinctiveness in the Diaspora, holding that this will remain a continuing fact of Jewish historic life, no matter how much the Jewish center in Israel grows. Golomb called for maximum efforts to retain both Yiddish and Hebrew as national languages of the Jewish people. Diaspora communities which were giving up Yiddish were becoming fossilized and fragmented into the scattered dying remnants of a people. He advocated the canonization of the finest works of Yiddish literature, as had been done with earlier holy works in Hebrew. Golomb enriched the Yiddish vocabulary of science and psychology and supplemented his theoretical discourses with practical classroom texts. His selected works Geklibene Shriftn ("Selected Works") appeared in six volumes (1945–48).

[Sol Liptzin / Gennady Estraike (2nd ed.)]

GOLOMB, ELIYAHU (1893–1945), leader of Jewish defense in Palestine and main architect of the ʿHaganah. Born in Volkovysk, Belorussia, Golomb went to Erez Israel in 1909 and was a pupil in the Herzlia High School’s first graduating class of 1913. He organized his fellow graduates into the Histadrut Mezumzet (approximately “The Inner Circle”) for agricultural training, service in Jewish settlements, and the realization of Zionist ideals, and himself went to train at ʿDeganyah. At the outbreak of World War I he opposed the enlistment of young Jews as officers in the Turkish Army and insisted on the formation of an independent Jewish defense force. In 1918 Golomb was a founder and leading member of the movement to encourage volunteers for the ʿHaganah, in which he served as a corporal. He hoped that the Legion would form the basis for a permanent official Jewish militia. While serv-
ing in the army, he became friendly with Berl *Katznelson and joined the *Aḥдут ha-Avodah Party upon its foundation in 1919. After his demobilization he became a member of the committee to organize the Haganah and was active in dispatching aid to the defenders of *Tel Ḥai (1920).

In contrast to the *Ha-Shomer policy, Golomb realized that Jewish defense was a matter for the Jewish population at large, and not the concern of an elite of fighters. He successfully propagated this idea among the leaders of the yishuv. From 1921 Golomb was a member of the Haganah Committee of the *Histadrut and, in 1922, was sent abroad to purchase arms; he was arrested by the Vienna police in July of that year. He purchased arms and organized pioneering youth in Europe until 1924. In 1931 he was one of the three representatives of the Histadrut in the Milkadah ha-Arẓit, the parity National Command of the Haganah.

Golomb regarded the Haganah as the arm of the nation and of the Zionist Movement and thus brought it under the auspices of the national institutions, although these were unable to express their opinions on defense matters openly. In consequence, he was violently opposed to the dissident armed organizations, *Irgun Zeva’i Le’ummi and *Lohamei Herut Israel (Lehi), but tried to avoid futile hatred and attempted to find ways of reuniting them with the main body. In 1939 and 1940 he and Berl Katznelson tried to reach an agreement with Vladimir *Jabotinsky and the Revisionists over the reunification of the Zionist movement and the formation of a single defense command.

During the Arab riots of 1936–39 Golomb was one of the initiators of the “field units” (pelagot sadeh) that went out to confront Arab terrorists in combat. He thus supported active defense and the punishment of terrorists; but, for both moral and tactical reasons, he opposed indiscriminate reprisals against the Arab population. Golomb supported all forms of cooperation with the British authorities that permitted secret stockpiling of weapons and military training, but never forgot the fundamental conflict existing between the alien regime and the clandestine Haganah. He always opposed giving information to the British concerning the strength and equipment of the Haganah. Golomb was among those who supported the enlistment of volunteers into the British Army during World War II and proposed the parachuting of Jews into occupied Europe. He was one of the founders and builders of the *Palmah and prepared the Haganah for the future struggle of the Jewish people in Palestine. He inspired and educated many commanders of the Haganah and future officers of the Israel Defense Forces.

Golomb was active in Ereẓ Israel public life. He was a leader of Aḥдут ha-Avodah (later of *Mapai), and of the Histadrut, a member of the Va‘ad Le’ummi as well as a delegate to Zionist congresses. His articles appeared in the Hebrew labor press, and a number of them were collected into two volumes, Ḥevyōn Oẓ (1950–54), which also included memoirs and reminiscences by his friends. His home in Tel Aviv was turned into a Haganah museum.

[William D. Rubinstein (2nd ed.)]

**GOLOMBOEK, HARRY** (1911–1995), British writer on chess and grandmaster. Born in London to recent immigrants from Poland, Golombek became British chess champion five times and served as a senior official at many World Championship matches. He was best known, however, as a chess writer and journalist, the author of more than 30 books on chess, and the chess correspondent of the London Times newspaper from 1945 until 1989. In these decades he was almost certainly the best-known chess writer in Britain, although he made less of an impact in the United States. He was known for his excellent writing style and conscientious annotations and commentary.

**BIBLIOGRAPHY:** online.

[William D. Rubinstein (2nd ed.)]

**GOLOVANEVṢK, town in Odessa district, Ukraine. Jews settled there in the middle of the 18th century and numbered 456 in 1790. Their number rose to 1,974 in 1847, and 4,320 (53% of the total population) in 1897. In 1910 a Jewish school for boys opened. During the civil war of 1918–19 the community formed a strong *self-defense organization which deterred the peasants of the surrounding region from pogroms, and 2,000 refugees from neighboring localities found refuge in Golovanevsk. At the end of 1919, however, armed bands of peasants led by the hetman Sokolowski broke into the town, overcame the self-defense units, and carried out pogroms in which over 200 Jews lost their lives. There were 3,474 Jews (86% of the population) living in Golovanevsk in 1926. Many Jewish families were occupied in farming. A Yiddish school operated there. By 1939 the number of Jews had dropped to 1,393. Golovanevsk was occupied on August 1, 1941, by the Germans, who soon executed 100 Jews. In September the Germans with help of the Ukrainian police murdered 776 Jews, raping young girls and hurling infants alive into the burial pits. On January 3, 1942, they murdered 36 children from a nearby children’s home and in February 1942 they killed another 168 Jews, including 49 children.

[Yaḥuda Slutsky / Shmuel Spector (2nd ed.)]

**GOLSCHMANN, VLADIMIR** (1893–1972), conductor. Born in Paris to Russian parents, Golschmann founded the Concerts Golschmann in 1919, which gave many important first performances. In 1920, he conducted performances for Diaghilev’s Ballet Russe, as he was later to do for Pavlova. He made guest appearances with leading French orchestras in New York (1924) and Glasgow (from 1928). From 1931, he was principal conductor of the St. Louis Symphony Orchestra, a
post he held for more than 25 years until his resignation in 1958. From 1964 until his retirement in 1970, he was conductor of the Denver Symphony Orchestra. Goluchowski was awarded the Ordre des Arts et des Lettres and became an Officer de la Legion d’Honneur.

[Max Loppert (2nd ed.)]

GOLUB, LEON (1922–2004), U.S. painter and printmaker. Chicago-born Golub received a B.A. in art history from the University of Chicago (1942) and a BFA (1949) and MFA (1950) from the Art Institute of Chicago. Although he did not experience combat, his experience in the army during World War II as a cartographer of reconnaissance maps influenced his art during the postwar years, which frequently focused on the abuse of power and victimization. Based on newspaper photographs of Holocaust victims, the expressionistic lithograph Charnel House (1946) shows a mass of anguished figures twisting helplessly in ambiguous space. Similarly, Damaged Man (1955, private collection) from the Burnt Man series (1954–55; 1960–61) references the Holocaust; the painting presents a single flayed human figure isolated at the center of the canvas. Finding the United States inhospitable to his figurative, socially conscious work, Golub and his artist-wife Nancy *Spero moved to Paris in 1959, where they remained until 1964 when they took up permanent residence in New York City.

War and man’s inhumanity to man remained a constant theme for his entire career. His style and subject work together; since 1951, Golub frequently scraped down and re-worked his heavily applied paint, often brutalizing the surface of his large canvases as deeply as the oppressed figures he painted. Golub based his figures on classical art, such as the Hellenistic Altar of Pergamon, and from around 1956–57 he added contemporary news photographs to his source material. He often employed several photographs for single figures, amalgamating data to create the most effective composite of gestures, postures, and expressions to convey a theme. In 1970 Golub ceased placing his canvases on stretchers, instead nailing the unstretched canvas on a wall of his studio. At this time he also began cutting out portions of the canvas to draw attention to aspects of the composition.

He typically produced cycles of paintings on a theme, including the Combat (1962–65), Vietnam (1972–73), and Interrogation (1980–81) series, all of which explored the condition of victims and tyrants through the successive wars and struggles of his era. From 1976 to 1979, Golub made several hundred portraits of powerful figures such as Henry Kissinger and Fidel Castro, often in several versions.

GOLUCHOWSKI, AGENOR SEN., COUNT (1812–1875), Austrian politician, minister of the interior, and three times governor of Galicia. A conservative and a fervent Polish patriot, he was an opponent of Jewish emancipation. Claiming to “discover” conflicts among the Jews, he aspired to lead the “enlightened” Jews against the Orthodox. However, in parliament, he was leader of those conservatives who, while masking their antisemitism, fought against any changes in the condition of the Jews. When the Lvov municipality had twice rejected the right of the Jews to quit the ghetto (1846, 1855), the problem came before Goluchowski as minister of interior; he gave the casting vote against the Jews. In 1857 he forbade Jews to employ Christian servants. While he introduced a project granting Jews the right to acquire real property in 1865, when his project was passed to a commission he made no attempt to defend it and it never became law.

GOMBEN, MOSES (1866–1947), U.S. organic chemist, born in Yelizavetgrad (now Kirovograd), Russia. In 1884 his father was accused of anti-czarist activities and fled with his family to Chicago, U.S.A. In spite of financial hardship, Moses graduated at the University of Michigan. In 1896–97 he went to Germany to work with Baeyer at Munich and Victor Meyer at Heidelberg. He subsequently returned to the University of Michigan where he became professor of chemistry. During World War I, he undertook the (to him abhorrent) task of working out commercial production of mustard gas, and as a major in the ordinance department advised on the manufacture of smokeless powder and high explosives. Of his various activities in organic chemistry – including the diazo reaction that bears his name – he is best known for his work on free radicals and his demonstration that carbon can exhibit a valency of three instead of the normal four. He was president of the American Chemical Society in 1931.

GOMBINER, ABRAHAM ABELE BEN HAYYIM HALEVI (c. 1637–1683), Polish rabbi. After the death of his parents during the Chmielnicki massacres of 1648, Abraham left his birthplace, Gombin. In 1655 he went to Lithuania, and there studied with his relative, Jacob Isaac Gombiner. Later he went to Kalisz, where he was appointed head of the yeshivah and dayyan of the bet din. Abraham is best known for his Magen Avraham (Dyhernfurth, 1692), a commentary on the Shulhan Arukh Orah Hayyim, highly esteemed throughout Poland and Germany by scholars who followed it in their halakhic decisions, at times against the opinions of other codifiers. In
his work Abraham reveals his acumen, depth of insight, and comprehensive knowledge of the entire halakhic literature. Abraham's main purpose was to reach a compromise between the decisions of Joseph *Caro and the glosses of Moses *Isserles, but he upholds the latter where no compromise can be arrived at. He regarded all Jewish customs as sacred and endeavored to justify them even where they were at variance with the views of the codifiers. He also thought highly of the Zohar and of the kabbalists Isaac Luria and R. Isaiah Horowitz, occasionally accepting their decision against that of the codifiers. *Magen Avraham is written in a terse style, which scholars were at times hard put to understand until the appearance of R. Samuel ha-Levi *Kolin's extensive commentary, Mahazit ha-Shekel.

Abraham is also the author of *Zayit Ra'anan (Dessau, 1704), a commentary on the *Yalkut Shimoni, published together with some of his homilies on Genesis, Shemen Sason. *Zayit Ra'anan was also published in abridged form in the margins of the *Yalkut, in the 1876 edition and in all subsequent editions. His short commentary on the *Tosefta of *Nezikin was published by his grandson under the title *Magen Avraham at the end of the *Lehem ha-Panim (Amsterdam, 1732) of his son-in-law, Moses Jekuthiel Kaufmann. A commentary to Job, Proverbs, and Ecclesiastes was attributed in error to him, having in fact been taken from the *Beit Avraham of Abraham b. Samuel *Gedaliah.

[Shmuel Ashkenazi]

**GOMBRICH, SIR ERNST HANS** (1909–2001), British historian of art. Probably the best-known historian of art in modern Britain, Gombrich was born into a cultured Jewish household in Vienna – Freud and Mahler were family friends – where he studied and worked as a museum curator. He was also a member of the famous Vienna Circle of philosophers. Gombrich immigrated to Britain in 1936. He spent virtually all of his professional life at the Warburg Institute in London, serving as its director from 1959 to 1976, and was professor of the history of art at London University. His best-known works include *The Story of Art* (1950), which has been translated into 20 languages; *Art and Illusion* (1960); and *Meditations on a Hobby Horse* (1965). A collection of his writings, *The Essential Gombrich*, edited by Richard Woodfield, appeared in 1996. Gombrich was knighted in 1972 and appointed to the Order of Merit (O.M.) in 1988.

[William D. Rubinstein (2nd ed.)]

**GOMEL** (Homel; in Jewish sources, Homiyyah), district capital in Belarus. The beginning of Jewish settlement is apparenently connected with the annexation of the town to Lithuania in 1537. The community of Belitsa (which became a suburb of Gomel in 1854) is mentioned in 1639 as one of the Lithuanian communities. During the *Chmielnicki massacres in 1648 many refugees from the Ukraine fled to Gomel, but the Cossack armies reached the city and massacred about 2,000 Jews there. Many saved their lives by converting to Christianity, but returned to Judaism when the Poles returned in 1666 and the Jewish community was renewed. By 1765 there were 658 Jews living in the city. *Habad Hasidism won many converts there, and in the mid-19th century one of its leaders, Isaac b. Mordecai *Epstein, served as rabbi.*

The city was given the status of district capital in 1852, its geographical situation and position as a railroad junction making it an important commercial center. The annual fair attracted many Jewish merchants. The community increased from 2,373 in 1847, with an additional 1,552 in Belitsa, to 20,385 in 1897 (56.4% of the total population). It had 30 synagogues, including the great synagogue built by Count Rumyantsev in the middle of the 19th century; only two remained by 1941. While a few wealthy Jews in Gomel traded in forest products or were government contractors, many thousands of poor families lived in the “Rov,” the valley described by J.H. *Brenner in his Me-Emek Akhor (1900). Toward the end of the 19th century a Jewish revolutionary movement, centered on the Bund, developed in Gomel. Zionism also gained many adherents there and several Hebrew schools were established. Zionists from Gomel settled in Ereẓ Israel and participated in the building of Haderah; many were pioneers of the Second and Third Aliyah. In the summer of 1903 there was a pogrom in Gomel in which eight Jews were killed, many wounded, and much Jewish property looted. A “self-defense group was organized under the command of Yeḥezkel Henkin in which the Jewish political parties participated. Subsequently, 36 of its members were prosecuted by the authorities, in company with the perpetrators of the pogroms, and charged with committing pogroms against the Russian population. During World War I, thousands of refugees from the war zone took refuge in Gomel and several yeshivot moved there from Poland and Lithuania. In the 1917–1926 period many Zionist groups were active. They ran two Hebrew kindergartens and a Hebrew high school.

After the consolidation of the Soviet regime, Jewish religious and nationalist elements struggled against the Communist campaign to win over the masses. Nevertheless, the hadarim were closed down, beautiful synagogues were converted to secular purposes, and Jewish communal life came to an end. The rabbi of Gomel, R. Borishanski, was arrested for opposing the Communist suppression of the Jewish religion. The community decreased from 47,505 in 1910 (55%) to 17,745 in 1926 (43.7%). Most of the city’s artisans were Jews. Among the Jewish working population in 1926, 3,482 were factory hands, 4,057 white-collar workers, 3,235 artisans, and 5,046 worked the land. In 1930 there were eight Jewish kolkhozes near the city, where 1,889 Jews (400 families) farmed 21,000...
acres of land. In the 1920s six Yiddish schools, and two kindergartens were in operation. There was also a Yiddish teachers college, but it was moved to Smolensk in 1929. In 1939 the Jewish population in Gomel was 40,880 (29% of the total). In the beginning of the German-Soviet war, many Jews succeeded in escaping into the Soviet interior. The Germans entered the city on August 19, 1941. The Jews were concentrated to four ghettos, under conditions of overcrowding, starvation, and disease. Three labor camps housing 1,500 Jews were set up in the city. In October 1941, 2,365 Jews were murdered. By December 1941, 4,000 had been killed. Women and children were gassed in vans. In the following months the Germans proceeded to murder the remaining Jews.

The Jewish population of the entire district numbered 45,000 in 1959; the number of Jews in Gomel was estimated at about 20,000 in 1970, of which only a few thousand remained in the early 21st century after the mass emigration of the 1990s. There is no synagogue in the city. (In 1963 a minyan was interrupted by the police, who dispersed those at prayer and took away two Torah scrolls and all religious articles.) There is a separate Jewish cemetery. A monument was erected in the vicinity of the city to the memory of local Jews massacred by the Nazis.

[Yaehuda Slutsky / Shmuel Spector (2nd ed.)]

GOMEL, BLESSING OF (Heb. גומל, ברכה הגומל, i.e., “He who bestows”), a thanksgiving benediction recited by those who have been saved from acute danger to life. Those who have crossed the sea or a wilderness, have recovered from illness, or been released from prison are especially obligated to pronounce this blessing (Ber. 54b). The Talmud (ibid.) derives the duty to recite the Gomel from the verses: “Let them give thanks unto the Lord for His mercy, And for His wonderful works to the children of men!” (Ps. 107:8, 15, 21, 31); and “Let them exalt Him of the elders” (Ps. 107:32). The blessing should preferably be said in the presence of ten men (an “assembly of the people”), two of whom should be rabbis (recited at the “seat of the elders”; Sh. Ar., Orh 219:3), and should be pronounced within three days after the person has been delivered from danger. It has become customary to recite this blessing after being called to the Reading of the Law in the synagogue on Mondays, Thursdays, or Sabbaths. In many communities it is recited by women after childbirth in front of the Ark after the service. The wording suggested by the Talmud is: “Blessed is He who bestows lovingkindness” (Ber. 54b). The accepted text for the benediction is “Blessed art Thou... Who doest good unto the undeserving, and Who hast dealt kindly with me” (Yad, Berakhot 10:8). The congregation responds “He who hath shown thee kindness, may He deal kindly with thee for ever” (Hertz, Prayer, 487). A Gomel benediction can be recited by an entire community. In Israel, this benediction is also recited by military reservists after a stretch of active service.

GOMELSKY, ALEXANDER YAKOVLEVICH (1928–2005), Russian basketball coach. Born in Kronstadt, Gomelsky graduated from the trainers’ college attached to the Lesgaft Institute for Physical Education in Leningrad (1945–48) and from the Military Institute of Physical Culture (1949–52). His first coaching job was with Leningrad’s Spartak (1949–52). In 1953–66 he was head coach of SKA Riga, where he won U.S.S.R. championships five times and the European Cup in 1957, 1958, and 1959. In 1966–88 Gomelsky was head coach of the CSKA armed forces basketball team, another U.S.S.R. powerhouse. Gomelsky also coached the Soviet national team in the 1962–88 period, with a break in 1970–76, winning an Olympic gold medal in 1988 as well as eight European and two world championships (1967, 1982). Outspoken as a Jew, he was kept from going to Munich for the 1972 Olympic Games by the KGB, which feared he would defect to Israel, and thus denied his rightful place as coach in the historic and controversial victory of the U.S.S.R. over the U.S. for the gold.

In 1991–92 Gomelsky was president of the Russian Basketball Federation and in 1997 became president of the CSKA basketball club. He created a sports dynasty of sorts. His brother EVGENY (1938– ) coached the Russian women’s basketball team that won the 1992 Olympic championship and then became coach of Israel’s national women’s team. Three of Gomelsky’s sons are also active in sports. Gomelsky was a popular sports commentator on TV and the author of a series of books on basketball. In 1995 he was inducted into the Basketball Hall of Fame.

[Gafti Prat (2nd ed.)]

GOMER (Heb. גומר), the firstborn son of *Japheth; the father of Ashkenaz, Riphath, and Togarmah (Gen. 10:2–3; 1 Chron. 1:5–6); and the name of a nation (Ezek. 38:6). Gomer is nowadays identified with the Gimirrau of Assyrian sources who are the Knympos of the Greek sources. This migratory people, who made their first historical appearance in Eastern Asia at the end of the eighth century B.C.E., shook Asia Minor with campaigns of conquest in the seventh century.

On Gomer, daughter of Diblaim, see *Hosea.

GOMEZ, family of prominent early U.S. merchants. LEWIS MOSES (c. 1660–1740), who was the founder of this New York family, was probably born a Marrano in Madrid, and lived in France and England before settling in New York about 1703. Three years later he was made a freeman of New York City, where he prospered in the import and export trade. Together
with his sons he purchased considerable real estate in the city and in Ulster and Orange counties. Of Gomez' six sons, one died at sea in 1722; the other five, all merchants, figured prominently in community affairs. Mordecai (1688–1750) was made a freeman in 1715 and was appointed interpreter to the Admiralty Court. Daniel (1695–1780) became a freeman in New York in 1727; he died in Philadelphia. David (1697–1769) carried on a considerable fur trade with the Indians and became a naturalized British subject in 1740. Isaac (1705–1770) bought a distillery in the Montgomerie Ward in the city in 1763, together with Benjamin (1711–1772), who lived in Charleston for a time. In 1729 Gomez and his sons, except Benjamin, purchased land which included the site of what was to be the Shearith Israel cemetery off Chatham Square. They posted a bond that the land would be a "burying place" for the use of the "Jewish nation." The family was among the original founders of Congregation Shearith Israel. The elder Gomez was one of the trustees who purchased land for the Mill Street Synagogue and was president of the congregation in 1730, when the synagogue was dedicated. Benjamin Gomez served as "parnas" four times, and during the period between 1730 and the Revolution, seven members of the Gomez family served as president.

GÓMEZ DE SOSSA, ISAAC (late 17th century), *Marrano literary figure. Gómez de Sossa lived and worked in Amsterdam and, according to Miguel de *Barrios, was a Latin poet and an imitator of Virgil. He composed poems in praise of the works of other writers, and was responsible for a Spanish translation of Saul Levi *Morteira's Hebrew work on the divine origin of the Law. He was a member of the Academia de los Sitibundos, a literary society founded in 1676 by Manuel de Belmonte, and was one of the judges of its poetry contests. His younger brother, Benito Gómez de Sossa, was a minor writer in Amsterdam. Their father, Abraham Gómez de Sossa, had once served as physician-in-ordinary to the infante Fernando, the son of Philip III of Spain and governor of the Netherlands in 1632. Abraham Gómez de Sossa died in Amsterdam in 1667, and Isaac composed a Latin epitaph for his tombstone.

[Kenneth R. Scholberg]

GOMPERS, SAMUEL (1850–1924), U.S. trade unionist. Gompers was born in London and after a few years of primary school was apprenticed in the cigar-making trade. When Gompers' family immigrated to America in 1863, settling on the Lower East Side of New York City, he joined a local of the Cigar Makers' National Union. From this point Gompers' life centered on trade union activities. He became a leader of the cigar makers' union in the 1870s, playing a major role in its reorganization (1879) through increased dues, sickness and death benefits, and substantial control of locals by the national officers. Gompers helped to establish the American Federation of Labor in 1886, and became its president. He also edited the official journal of the Federation from 1894 until his death. Most of Gompers' public activities were related to his position in the American Federation of Labor. From 1900 he served as a vice president of the National Civic Federation, which sought to promote stable labor relations through collective bargaining and personal contact between labor leaders, industrialists, and bankers. Gompers received considerable criticism from labor sources because of these associations. He also played a prominent role in winning strong support from American trade unions for President Woodrow Wilson's war policies in 1917 and 1918; and he did much to protect organized labor's interests during World War I.

Gompers was a formative influence upon the American labor movement, as well as a spokesman for it. Although he would have preferred the former role, the decentralized American labor movement did not permit any one individual to exercise much influence over the constituent trade unions. Gompers often had to rely upon his reputation and influence in order to be effective, and he often had to accept the role of spokesman even when his own views differed. Thus, for instance, despite his personal belief in organizing black workers, Gompers acquiesced in the refusal of the AFL to attempt to enforce an anti-discrimination policy upon its affiliates. However, in most matters, his views became almost synonymous with those of the leading unions in the Federation.

Gompers argued that the improvement of workers' wages, hours, and employment conditions could only be accomplished through the formation of strong trade unions to exert direct economic pressure on the employer. The resulting collective bargaining agreements protected the basic interests of the worker. Such labor organizations must be independent of control by politicians, intellectuals, or any non-labor source. This viewpoint in effect acknowledged that organized labor lacked the political power to achieve its objectives through legislation, and that the climate of opinion in the United States was usually hostile to trade unions so that apparent victories might be reversed quickly. Moreover, Gompers believed that men view economic and social questions in terms of their material interests, which meant that the worker could not expect continuing support from the middle class, since their objectives would inevitably conflict. Workers must therefore avoid dependence on legislation or political action.

Gompers maintained a vitriolic hostility to socialism almost throughout his presidency of the AFL. The socialists called for industrial unionism and political action, as opposed to Gompers' belief in craft unionism dedicated to the immediate interests of a relatively homogenous membership. The socialists viewed the labor organization as only the first step
in the workers' struggle for social justice. Ultimately, Gompers accepted capitalism, providing it could guarantee an adequate standard of living for the worker, and he had little patience with claims that the entire economic system had to be reordered to accomplish this.

Despite his immigrant background, Gompers demanded the restriction of immigration in order to protect the competitive position of workers in America. Although he called for the unionization of all workers, he basically accepted the decision of the AFL to concentrate on the skilled and retain the craft basis for organizing, which maintained the position of the existing trade unions. Clearly, Gompers was an effective leader for organized workers, but for the greatest part of the labor force his program had little validity since these workers were unorganized and likely to remain so. Gompers' career was thus marked by the paradox that he was an able trade unionist but a largely ineffective labor leader.

Gompers wrote American Labor and the War (1919), Labor and the Common Welfare (1919), Labor and the Employer (1920), and Party of the Third Part: The Story of the Kansas Industrial Relations Court (with H. Allen, 1921). His autobiography, Seventy Years of Life and Labor (2 vols.), was published posthumously in 1925.

[Irwin Yellowitz]

GOMPERTZ, English family, closely associated with the Hambro Congregation in London and known in the synagogue as Emmerich, after the family's place of origin. JOSEPH GOMPERTZ (1731–1810) was an early member of the *Board of Deputies of British Jews. The sons of his brother SOLOMON BARENT GOMPERTZ (1729–1807) attained distinction in different spheres. BENJAMIN GOMPERTZ (1779–1865) was a mathematician of genius, Fellow of the Royal Society, and writer on astronomy. When he was refused the post of actuary to the Guardian Insurance Office because of his faith, his brother-in-law N.M. *Rothschild established the Alliance Insurance Company (1824) in which he filled that position until 1848. He developed a mathematical law of human mortality which is still used in actuarial calculations. He proposed a plan for the amalgamation and reorganization of the Jewish charities in London. His brother EPHRAIM GOMPERTZ (1776–1876) wrote Theoretic Discourse on the Nature and Property of Money (London, 1820), a pioneering work in the field of economics. ISAAC GOMPERTZ (1774–1856) was among the earliest Anglo-Jewish poets and was compared in his day to Dryden and Pope. His works include Time or Light and Shade (London, 1815), The Modern Antique or, the Muse in the Costume of Queen Anne (London, 1815), and Devon, a Poem (Teignmouth, 1825). He spent his last years in Devonshire and is buried in the Jewish cemetery of Exeter. LEWIS GOMPERTZ (1784–1861), the youngest of the Gompertz brothers, was an inventor who devoted himself to the cause of the humane treatment of animals. His Moral Enquiries on the Situation of Men and Brutes (London, 1824) led to the foundation of the Society (later Royal Society) for the Prevention of Cruelty to Animals, which he served devotedly as secretary. However, when it was reorganized on Christian sectarian lines in 1832, he resigned and then founded the Animals' Friend Society, with its influential periodical, The Animals' Friend, which he managed successfully until 1846, when his health failed and the society was disbanded. Gompertz was responsible for a number of patented inventions, many designed to lessen the sufferings of animals. His expanding chulk is still widely used in industry. In more recent times, the Gompertz family, no longer attached to Judaism, produced many army officers and the violinist RICHARD GOMPERTZ (1859–1911).

[Cecl Roth]

GOMPERZ, name of a family widely dispersed throughout Central Europe. In records of the 14th century the old-German form of the name "Gundbert" began appearing as a surname for persons with the name Ephraim or Mordecai. Occurring in variant spellings as Guempert, Gunpermert, Gompertz, Gumpel, etc., it became associated with a specific family prominent in the late 15th century, in the duchy of Juelich-Cleves, when SOLOMON BEN MORDECAI GUMPEL received the right of residence in Emmerich. His immediate descendants settled in nearby Cleves, Wesel, and Nijmegen; branches of the family were eventually found in England, Amsterdam, Berlin, Frankfurt on the Main, Prague, and the United States (Samuel *Gompertz). David *Kaufmann, who married into the Budapest branch, traced, in cooperation with Max Freudenthal, the genealogy of the family (see bibliography).

Solomon's grandson ELIJAH (d. 1689) founded the family banking business in Wesel (Cleves) which soon became one of the largest in Prussia. His son REUBEN ELIAS assisted in the rapid expansion of business. After moving to Berlin he became the first Jew to serve as a government official in Brandenburg; he subsequently became the chief inspector of taxes payable by the Jews in the duchies of Mark and Cleves (about 1700). He also acted as supplier to the army and to the court, and through these transactions came into contact with all the important Jewish court suppliers of his time, including Samuel *Oppenheimer, Leffmann *Behrends, and Behrend *Lehmann. Falsely accused of the attempted murder of Samson *Wertheimer, he was arrested by order of Frederick I and released a year later after payment of 20,000 talers.

Two members of the third generation of Court Jews in this family, MOSES LEVI and ELIJAH, established a bank-
ing and business house in Berlin at the beginning of the 18th century. In Prussia, members of the Gomperz family served as court purveyors to six rulers in the course of five generations. To Frederick I (1688–1713), the luxury-loving first king of Prussia, they supplied jewels, and to the soldier-king, Frederick William I (1713–1740), “tall fellows” for his guard. At the time of Frederick the Great (1740–1786), they changed their activities to minting. In conjunction with the Court Jew Daniel *Itzig they rented the minting monopoly. In Berlin, AARON ELIAS GOMPERZ, physician, writer, and teacher of Moses Mendelssohn, became celebrated. Members of the Gomperz family also served as *Landesrabbiner (Cleves and Silesia) and *Oberrabbiner (Ansbach). Many created influential positions for themselves, aided by their family relations with other Court Jews.

In Bohemia-Moravia a noteworthy member of the family was SALOMON (SALMAN) EMMERICH (1662–1728), who studied medicine at Leiden and practiced in Metz and Soest before establishing himself in Prague. He was the first Prague Jew to be freed by imperial order from wearing the obligatory neck-frill. His son MOSES SALOMON GOMPERZ (d. 1742) was permitted to practice medicine by Prague University after passing an examination, and was the first Jew to graduate from a German university, in Frankfurt on the Oder, in 1721.

The Brnu (Brno) branch of the Gomperz family was founded by LOEB BEN BENEDICT (LEOPOLD BENEDICT) NEUMEGEN, from Nijmegen, Holland. His son PHILIP GOMPERZ founded a successful bank. Three of his sons became celebrated: Theodor *Gomperz (1832–1912), classical philologist and historian of Greek philosophy; MAX VON GOMPERZ (1822–1913), industrialist, financier, and politician; JULIUS VON GOMPERZ (1823–1909), president of the Jewish communities organization and was active on behalf of the Jewish communities in Parliament. A hereditary title was conferred on him in 1879. Theodor’s son HEINRICH GOMPERZ (1873–1942) was also a classical philologist.

**Bibliography:** D. Kaufmann and M. Freudenthal, Familie Gompertz (1907); S. Stern, *The Court Jew* (1950), index; idem, Der
GOMPERZ, THEODOR (1832–1912), Austrian classical philologist and historian of ancient philosophy. He was born in Brunn, Moravia. From 1873 to 1901 Gomperz was professor of classical philology at the University of Vienna, and in 1882 was elected to the Academy of Sciences. His Griechische Denker, 3 vols. (1896–1909), is a monumental work which sets Greek philosophy, from its beginnings until after Aristotle, within the context of a history of science and of the general development of ancient civilization. This work has been translated into many languages and is considered one of the basic works in its field. The author’s empiricist-positivist bias is evident throughout. Gomperz, also active in public affairs and politics, served as a Liberal member of the Austrian upper house. In Jewish affairs, he took an extreme assimilationist stand and was violently opposed to Herzl and Zionism. His biography, letters, and notes were published by his son Heinrich as Briefe und Aufzeichnungen (1936). Heinrich (1873–1942) was also a philosopher. He was baptized and was a professor in Vienna until 1934 when he was compelled to retire because of his refusal to join Dolfuss’ Fatherland Front. In 1938 he emigrated to the U.S. In addition to the biography of his father, he published a new edition of his father’s Griechische Denker (1922–31). He published a comprehensive study of Greek philosophy, Die Lebensaufassung der griechischen Philosophen und das Ideal der inneren Freiheit (1904), and Philosophical Studies (1953, edited by D.S. Robinson), which is a psychoanalytical study of Parmenides and Socrates.

GÖNDÖR, FERENC (1928– ), Holocaust survivor and memoirist. Göndör waited 30 years before committing the story of his early life to paper in A 6171; Ett judiskt levnadssöde ("A 6171: The Story of a Jew," 1984). In it he describes his idyllic childhood in a small town in Hungary and his internment as a 16-year-old in Auschwitz. The book was later made into a film. In 1986 he was awarded the coveted Torgny Segerstedt prize and in 1993 the Liberal Immigrant Association’s culture prize. In 1994 he received a special grant from the Linköping municipality for his work in publicizing the horrors of the Holocaust and making an entire generation of schoolchildren aware of the dangers of the Nazi evil and its implications for the present. Like many other survivors in Sweden, Göndör spends much time visiting schools and talking about the Holocaust. For many years he also worked as a sound engineer for Swedish Radio.

GOOD AND EVIL.

In the Bible

A major corollary of the Jewish belief in the One God is that, seen in its totality, life is good. Viewing the cosmos as it emerged from chaos, God said, “It is good” (Gen. 1:10). In a monotheistic world view, a persistent problem is to account for the existence of evil in its many forms – natural catastrophes, pain and anguish in human life, moral evil, and sin. These facts must be fitted somehow within the design of the Creator as it is realized in the course of human history.

The problem of the existence of evil in the world was not given great prominence in the earlier books of the Bible, which are mainly concerned with positing general ethical-religious norms. In the later books, however, when the status of the individual vis-à-vis God gains in importance, it becomes necessary to account for the existence of evil in a world governed by a benevolent and omnipotent God. Jeremiah asks the perennial question concerning the prosperity of the wicked and the adversity of the righteous. This problem appears also in the Books of Isaiah, Job, and the Psalms. Various answers were given, which were later elaborated by the talmudists and the philosophers, but it should be noted that the idea of a heavenly reward is never mentioned in the biblical writings as a possible solution.

In Talmudic Literature

For the rabbis of the talmudic period the existence of evil in a world created by a merciful and loving God posed a number of theological problems, which they attempted to solve in a variety of ways. Although these solutions do not add up to a coherent theodicy, some of the more representative discussions indicate the general lines of rabbinic thought on the matter. First there is the issue of the existence of evil itself. The rabbis insisted that as good derives from God so, ultimately, does evil. This insistence was intended to discount any implications of duality, the idea of a separate deity from whom evil springs being complete anathema to the rabbis, who even say, “Man should bless God for the evil which occurs in the same way that he blesses Him for the good” (Ber. 33b). The same antidualistic motif is contained in the verse, “I am the Lord, there is none else; I form the light, and create darkness; I make peace, and create evil” (Isa. 45:6–7). (In the liturgy this is changed to “makes peace and creates all that exists,” implying that evil itself is perhaps not a positive phenomenon at all, but mainly the absence of good.) Another vexing problem is why there is no just distribution of good and evil to the righteous and wicked respectively. This problem is dealt with in a number of different ways. On the one hand one finds the view that the issue is beyond the grasp of man’s intellect, in sup-
port of which the verse, “I will be gracious to whom I will be gracious, and will show mercy on whom I will show mercy” (Ex. 33:19) is quoted (cf. Ber. 7a). On the other hand, a series of more partial solutions is proffered: the righteous man who suffers in this world is not wholly righteous, and the wicked man who prospers is not wholly wicked; or alternately the former is perhaps a descendant of righteous ancestors, while the latter prospers because of the merit of his fathers (Ber. 7a); or evil is blamed on Satan and various malicious demons who are at the root of the trouble caused to the righteous (Ber. 6a; Gen. R. 843).

Perhaps the most widespread explanation of suffering in this world is that what the righteous undergo is punishment for every small sin they may have committed so that they will enjoy their full reward in paradise, while the wicked are rewarded in this world for any small amount of good they have to their credit so that in the world to come they will reap the full measure of the punishment they deserve (Ber. 4a; Eruv. 19a; Ta`an. 11a; Kid. 39b; Avot 2:16; Gen. R. 33:1; Yal., Eccles. 978). The sufferings of the righteous are also seen as a form of trial, “afflictions of love,” enabling them to develop virtues such as patience and faith (Ber. 5a; BM 85a; Gen. R. 9:8; Tanma de-`Ve Eliyahu Zuta 11). Support for this view is found in biblical verses such as “Happy is the man whom Thou disciplineth, O Lord, And teacheth out of Thy Law” (Ps. 94:12) and “It is good for me that I have been afflicted, in order that I might learn Thy statutes” (ibid. 119:71).

Another aspect concerning the evil caused by man himself is dealt with by viewing evil as the product of, if not identical with, the evil inclination (Hag. 16a). The evil inclination is a necessary factor in the continued existence of the world, for without it no man would build a house, marry, raise a family, or engage in trade (Gen. R. 9:9). Nevertheless, it is within man’s grasp to control his evil inclination, against whose power the Torah was seen as an antidote (Kid. 30b). This control enables man to serve God with both his good and evil urges (Ber. 95); the one enabling him to continue in this-worldly pursuits and the other helping him to grow in holiness. Despite an acute awareness of the extent of evil and suffering, both in the natural world and in the world of interpersonal relations, and notwithstanding the limitations of the explanations they were able to offer by way of theodicy, the rabbis continually reaffirm the ultimate goodness of God and of His creation. This affirmation is even contained in the burial service, in a series of refrains emphasizing the perfection of God’s world (Hertz, Prayer, 1074). The rabbis advise man to accustom himself to Prayer, 1074). The rabbis advise man to accustom himself to

In Medieval Jewish Philosophy
The answers given by *Philo to the problem of evil correspond, in certain respects, to those of the rabbis. If some righteous men suffer, he states, it is because they are not really perfect in their righteousness. Furthermore, the good which befalls the wicked is not a real good. Also, the suffering of the righteous may come from God as a trial or test, or because of the sins of their ancestors.

The need to account for the existence of evil in the world became even more acute with the manifestation of dualistic movements. Saadiah Gaon strongly rejects these dualist doctrines and affirms God’s unity. Steeped as he was in the *Kalām tradition, he states that God conducts the world with infinite justice and wisdom. God, according to Saadiah, would not have created evil because evil does not have a separate existence sui generis but is nothing more than the absence of good. The sufferings of the righteous are either a requital for the few sins which they have committed, or they serve as an instrument of chastisement or trial, for which reward will be given in the afterlife. Saadiah thus upholds the doctrine of “afflictions of love.”

The answer of Joseph al-*Basi, the 11th-century Karaite, is that the infliction of pain may, under certain circumstances, be a good instead of an evil, for it may ultimately result in a greater advantage. Thus, disease and suffering are either punishment for offenses committed, or are imposed with a view to later reward. Similarly, *Abraham b. Hiyya expresses the view that the righteous suffer in this world in order to try them and to increase their ultimate reward (Meditatio of the Sad Soul (1969), 117ff.). Joseph ibn *Zaddik sees the evil which happens to the righteous as often being a natural occurrence without reference to reward and punishment. Sometimes, too, this evil is inflicted upon the good man for his sins, but ultimate reward and punishment are in the future life. Abraham *Ibn Ezra sees the whole world as good. From God, he states, comes only good. Evil is due to the defect of the object receiving higher influence. To argue that because of a small part of evil the whole world, which is good, should not have been created, is foolish. Abraham *Ibn Daud argues that it is impossible either according to reason or according to the Bible and tradition that evil or defect should come from God. If both good and evil come from God, He would have to be a composite. Besides, the majority of evils are negations, and cannot have been produced by any agent.

* Maimonides also views evil as a nonexistence, namely the absence of good, which could not have been produced by God. He distinguishes between three different kinds of evil. The first category is that of natural evils which befall man, such as landslides, earthquakes, and floods, or his having been born with certain deformities. The cause of this type of evil is the fact that man has a body which is subject to corruption and destruction. This is in accordance with natural law and is necessary for the continuance and permanence of the species. The second kind of evil is within the social realm, such as wars. This type of evil, Maimonides says, occurs infrequently and, of course, being wholly within the control of man, could not have been caused by God. Though difficult, its remedy is within the hands of man. The third class of evil, the larg-
est and most frequent class, is the evil which the individual brings upon himself through his vices and excessive desires. Again the remedy is within man's power. Maimonides rejects the notion of "afflictions of love," holding instead that even the minutest pain is a punishment for some previous transgression. He explains that the tests mentioned in the Bible, such as God's request to Abraham to offer up his son, have a didactic purpose, to teach the truth of God's commandments and how far one must go in obeying them.

Joseph *Albo holds that perfect saints may have to endure agonies in order to atone for their people or for the entire world.

In Modern Jewish Philosophy
For Hermann *Cohen suffering stirs man's conscience and prods him to ethical action. Israel's election by God is tied up with the idea of Israel as the "suffering servant," i.e., the eternal prod of mankind's conscience. Evil in a metaphysical sense did not interest Cohen. He castigated metaphysical speculation about evil as an attempt to cover the existence of evil in society and as perverting the intent of suffering which should be to arouse sympathy in men.

The problem of evil played an important role in the philosophy of Martin *Buber. For Buber the source of evil was the failure to enter into relation, and conversely evil can be redeemed by the reestablishment of relations. "Good and evil, then, cannot be a pair of opposites like right and left or above and beneath, 'good' is the movement in the direction of home, 'evil' is the aimless whirl of human potentialities without which nothing can be achieved and by which, if they take no direction but remain trapped in themselves, everything goes awry" (*Between Man and Man* (1966), 103). Man is not evil by nature, but his misuse of his nature generates evil. Some men can carry evil so far as to give it a kind of independent quality. However, evil is never an independent entity but such men crystalize it into a perverse resistance to the individual's self-fulfillment in relation. After World War II Buber did question the possibility of addressing God as "kind and merciful" in the light of what had happened to the Jews in Europe, but he nevertheless maintained the possibility of man redeeming evil. He denied the gnostic dualistic approach and maintained that man had it in his power to sanctify the world.

Abraham J. *Heschel, referring to a midrash about Abraham seeing a castle in flames (Gen. R. 39:1), asks: "The world is in flames, consumed by evil. Is it possible that there is no one who cares?" (*God in Search of Man* (1961), 367). After considering the horrors of Auschwitz he questions: "What have we done to make such crimes possible? What are we doing to make such crimes impossible?" (ibid., 369). According to him nothing in the world is wholly good or wholly evil, everything is a mixture. Man's nature, his ego, and the relative rewards of evil in this world help evil to prevail. Fortunately, God is concerned about man's separating the good from the evil. God commands man and gives him the *mitzvot*, which are the tools by which man can overcome evil. "Evil is not man's ultimate problem. Man's ultimate problem is his relation to God.... The biblical answer to evil is not the good but the holy. It is an attempt to raise man to a higher level of existence, where man is not alone when confronted with evil" (ibid., 376).

For Mordecai *Kaplan God is identical with certain principles in the universe whose analogues in human society lead to salvation, i.e., the achievement of the good for all mankind. The existence of evil in the world is due to the failure of man to act in accord with God, i.e., those principles. "When the conscience operates simultaneously through creativity, responsibility, honesty, and loyalty or love, it is the source of Divine Revelation.... The function of conscience is not to philosophize or theologize concerning the problem of evil in the world. Conscience is the pain of the human spirit. The function of spiritual pain is not to have us speculate about it but to eliminate the cause... it is rather to impel us to make a religion of combating the man-made evils that mar human life..." (M.M. Kaplan, in *The Reconstructionist*, May 1963).

GOODBLAT, MORRIS (1901–1978), Conservative rabbi and educator. Born in Mlawa, Poland, he came to the United States in 1912. He was educated at the Rabbi Jacob Joseph School and the Mizrahi Teachers Institute. He received his B.A. from City College of New York (1924) and was ordained at the Jewish Theological Seminary of America (1927). He earned his D.H.L. there in 1944.

For more than four decades, he served as a rabbi at Congregation Beth Am Israel in Philadelphia, where he focused on Jewish education. His congregation produced many young men who entered the rabbinate and many more who were educated Conservative Jews. He was president of the Jewish National Fund and the Board of Rabbis of Greater Philadelphia and regional president of the Rabbinical Assembly for the Greater Philadelphia area.

In 1960 he established the Academy of Judaism to tutor perspective students for conversion; thus, establishing a regional program for what had until then been the individual responsibility of the local rabbi. He served as dean and director of the academy. The model of a regional program has been adopted in many communities throughout the U.S. as it is an excellent use of resources and an important way of imposing and enforcing standards.

Goodblat co-chaired the United Synagogue Commission on Jewish Education, which tried to standardize congregational curricula and published and developed material

754  ENCyclopaedia judaica, Second Edition, Volume 7
for the afternoon Hebrew school, which was instrumental in Jewish education. He headed its publication committee and helped hire Abraham Millgram as the Commission’s educational director.

He was chairman of the Rabbinical Assembly’s special Committee on Ritual Surveys, which compiled a detailed picture of the way in which Conservative Judaism was being practiced in the synagogue and in the major ceremonies from Bar and Bat-Mitzvah and Confirmation to funeral practices. He also chaired the membership committee of the Rabbinical Assembly that opened membership to non-seminary graduates, which facilitated the transformation of some Orthodox congregations and their rabbis to the then rapidly growing Conservative movement. He also served on the prestigious Committee on Jewish Law and Standards for the Rabbinical Assembly.

As a scholar, he wrote *Jewish Life in Turkey in the XVI Century as Reflected in the Legal Writings of Samuel De Medina* in 1952, about the immediate post-expulsion period in which Jews fleeing from Spain found a haven in Turkey.

*GOODENOUGH, ERWIN RAMSDELL* (1893–1965), U.S. scholar who specialized in the study of Judaism in the Hellenistic period. Goodenough was born in Brooklyn, New York, and was raised in a family with Methodist fundamentalist beliefs. Following studies at the Garrett Biblical Institute, he studied at Harvard for three years under the influential historian of religion, George F. Moore, receiving his Ph.D. in Oxford in 1923, and then began teaching history at Yale University. Throughout his life Goodenough was active in many scholarly organizations, and edited the *Journal of Biblical Literature* from 1934 to 1942. While preparing his doctoral thesis, published as *The Theology of Justin Martyr* (1933), Goodenough came to the conclusion that many Hellenistic elements of early Christianity were derived not from the pagan world directly but from the already hellenized Judaism through which Christianity was first disseminated. Most of his later work was devoted to the study of this hellenized Judaism, especially *The Jurisprudence of the Jewish Courts in Egypt* (1929), *By Light, Light: The Mystic Gospel of Hellenistic Judaism* (1935), *The Politics of Philo Judaeus* (1938), *An Introduction to Philo Judaeus* (1940), and *Jewish Symbols in the Greco-Roman Period* (13 vols., 1953–68). Goodenough’s reconstruction of Hellenistic Judaism from literary sources was often speculative. His account of the teachings of Philo, in particular, must be corrected in the light of H.A. *Wolfson’s analysis of Philo’s philosophy and demonstration of its many similarities to rabbinic teaching. But Jewish Symbols in the Greco-Roman Period, by its collection of Greco-Roman archaeological remains and its confrontation of these with pagan parallels, revealed an entire world of Judaism that previously had been known only in fragments and generally neglected. Consequently, this work began a new epoch in the study of ancient Judaism – this in spite of the fact that Goodenough’s interpretation of the material has been questioned (Avi-Yonah, Smith, and others). One of Goodenough’s supporters, J. *Neusner, wrote (in 1988) that “Goodenough asks when a symbol is symbolic. He wants to know how visual symbols speak beyond words and despite words. We find ourselves surrounded by messages that reach us without words, that speak to and even for us beyond verbal explanation. Goodenough studied ancient Jewish symbols because he wanted to explain how that happens and what we learn about the human imagination from the power of symbols. It is difficult to point to a more engaging and critical problem in the study of humanity than the one Goodenough took for himself. That is why, twenty years after the conclusion of his research, a new generation will find fresh and important the research and reflection of this extraordinary man.”

*GOODHART, ARTHUR LEHMAN* (1891–1978), U.S. jurist. Born in New York, Goodhart studied in America and Britain and was an officer in the United States Army during World War I. In 1919 he became a lecturer in law at Cambridge University and was editor of the *Cambridge Law Journal* from 1921 to 1925. In 1931 Goodhart was appointed professor of jurisprudence at Oxford University. In this position he exercised considerable influence both as a lecturer and writer, and his lucid exposition of legal problems, particularly in the field of contracts and torts, earned him a reputation as an outstanding jurist. He also served on several government legal committees, including the Royal Commission on the Police, the Monopolies Commission, and the Law Revision Committee.

In 1951 Goodhart was appointed master of University College, Oxford, the first Jew and the first American citizen to become master of an Oxford college. He was also the recipient of many other honors. He was made a king’s counsel in 1943 and awarded a knighthood (honorary by virtue of his American citizenship). He was chairman of the International Law Association. His writings include *Essays in Jurisprudence and the Common Law* (1931); *Precedent in English and Continental Law* (1934); *The Government of Great Britain* (1946); and *Five Jewish Lawyers of the Common Law* (1950). He was also editor of the *Law Quarterly Review*, one of the most authoritative legal magazines in the world.

Goodhart took an interest in Jewish affairs and was a strong supporter of Israel. After the *Six-Day War* he wrote several articles justifying the Israeli position in international law. His son Philip J. Goodhart (1925–49) was a Conserv-
GOODMAN, ALLEGRA

GOODMAN, ALLEGRA (1913–1995), American short story writer. Goodman, the daughter of academics, was born in Brooklyn, raised in Hawaii, and educated at Harvard and Stanford. She has written works that are at ease with Jews who are urban as well as urbane. Her focus is invariably on the nature of community and its ability to transmit a Judaism that can maintain the allegiance—both ritualistically as well as personally—of her characters. She has pointed out that George Eliot’s Middlemarch, with its treatment of a “whole community” containing individuals that are “so alive, so real,” was an inspiration. Goodman’s works often do just that. Total Immersion (1989), a widely praised collection of stories, was followed by Family Markowitz (1996), a series of related stories about a family’s adjustment to the ruptures as well as blandishments of modern life. Her Kaaterskill Falls (1998) deals with the political and religious conflicts of an Orthodox Jewish community whose characters must not only accept a new leadership but also adjust their ambitions to a regulated life. Paradise Park (2001), with its pathos and humor, offers readers the God-seeking but all-too-human Sharon Spiegelman, seeking revelation in her travels, beginning in Hawaii. In 2006 she published Intuition, set in a Cambridge, Mass., research institution.

GOODMAN, ANDREW (1907–1993), U.S. merchant. Bergdorf Goodman was already one of New York City’s most elegant fashion emporiums when Andrew Goodman inherited it. But it was he who transformed it from a store that catered to the carriage trade into one that expanded its appeal to “people who have more taste than money and are on the way up.” Goodman’s father, Edwin, founded the store early in the 20th century. He came to New York City in 1899 and went into business with a tailor named Herman Bergdorf. After buying out Bergdorf in 1906—but keeping his name as part of the business—the elder Goodman moved the shop from lower Fifth Avenue further uptown, branching out as a furrier and dressmaker. In 1926, Andrew Goodman, who had spent an uneventful year and a half at the University of Michigan, was summoned home by his father and sent to Paris to apprentice at the house of couturier Jean Patou. Goodman came back to the U.S. a year later and joined the family business, which was beginning to undergo an important transition. Instead of limiting itself to custom-made clothing, Bergdorf Goodman began offering clothing off the rack. The concept was a hit and by 1928 annual volume was $5 million. Ready to expand, Bergdorf’s moved into a new marble and sandstone building on Fifth Avenue and 57th Street. Inside, the store looked like the genteel home of a moneyed family. Its fashions were from top U.S. and European designers, its clients were the wealthy and well known, and its saleswomen often exuded a snobbishness that could be terrifying. After service in the U.S. Navy during World War II, Goodman returned to the store, becoming president in 1951. When his father died, in 1953, Goodman inherited the store and the title of chairman. He also began reaching out to women who might have been put off by Bergdorf’s intimidating image. In 1955, Goodman opened the Miss Bergdorf Shop, which featured more moderately priced merchandise. It quickly became highly popular. He also added antiques, a beauty salon, and an art gallery presided over by his wife, Nena. Bergdorf’s kept expanding, eventually doubling in size to 120,000 square feet. By 1969, it was the nation’s only large high-quality specialty store that was independently owned, but in 1972, Goodman sold the business to Broadway Hale Stores. He retained the real estate as well as the 16-room penthouse above the store, where his family lived, and he remained as president until 1975. Active in philanthropic and civic affairs, Goodman was a chairman of the Fifth Avenue Association and the Better Business Bureau of New York. He was vice president of the American Jewish Committee and served on the boards of various other Jewish organizations.

GOODMAN, ARNOLD ABRAHAM, LORD (1913–1995), British lawyer and legal advisor. Goodman was born in London to middle-class, middle-of-the-road Orthodox parents and had a brilliant career at Cambridge and in his law studies. He was created a Life Peer in 1965. Lord Goodman was personal legal advisor to many leaders of Britain’s three political parties—in itself a unique position. He first came to public prominence in 1967 when the Labour government called on him to arbitrate and settle a serious strike of television workers. He was successful, and from that point forward, both the Labour and subsequent Conservative administrations used his services as unofficial envoy in a number of industrial disputes as well as in Britain’s constitutional dispute with Rhodesia. He was so successful in gaining the confidence of the workers in the newspaper industry that the powerful Newspaper Proprietors’ Association made him its chairman. He held many other public and semipublic offices, the most important of which was chairman of the unofficial Arts Council (1965–72), which encourages all the arts, including literature, and disburses official funds to theaters, etc. He was also a member of a number of royal commissions and committees of enquiry, and prochancellor of Warwick University. Until 1986, he was Master, University College, Oxford. He also spoke on behalf of Jewish charities and without being a formal Zionist showed active sympathy toward Israel. In 1973, he was appointed chairman of the Housing Corporation and the National Building...

Goodman was one of the most famous eminences grise in postwar Britain. Like all men credited with backstairs influence, his powers were often exaggerated. Nevertheless, Goodman met, on a weekly, confidential basis, with Harold Wilson during his 1964–70 term as prime minister, sharing many secrets with him. Wilson greatly valued Goodman’s advice, and used him as a sounding board for proposed actions. From 1993, Goodman’s life was overshadowed by a lawsuit brought against him by the Portman family, London landowners, who claimed that he had siphoned off funds from their family trust. After Goodman’s death, his law firm paid the Portmans £500,000 without any admission of guilt.

[Michael Wallach / William D. Rubinstein (2nd ed.)]

GOODMAN, BENNY (Benjamin David; 1909–1986), U.S. clarinetist and band leader. He learned to play the clarinet as a child in Chicago in a music instruction program fostered by a local synagogue. When he turned professional, he played in various well-known bands until he organized his own orchestra in 1933. Goodman became one of the founders of the “swing” style prevalent in the 1930s, and was called the “King of Swing.” His was the first jazz ensemble in which both white and black musicians played together. At the same time he developed a technical mastery that led to his appearances with symphonic orchestras and chamber ensembles. Bartok dedicated his clarinet trio “Contrasts” to him in 1938, and Hindemith (1947) and *Copland (1948) each wrote a clarinet concerto for him. He wrote an autobiography, The Kingdom of Swing (1961), and authorized Benny Goodman’s Own Clarinet Method (1941), edited by Charles Hathaway.

GOODMAN, MARTIN DAVID (1953– ), British professor of Jewish Studies. Educated at Oxford, Goodman is a major, much-respected historian of ancient Jewry and the ancient world in the Roman era. He is the author of many works, including The Ruling Class of Judea (1987), Mission and Conversion: Prostelytizing in the Religious History of the Roman World (1994), and the editor of Jews in a Graeco-Roman World (1998), which often aims to place the history of Roman-era Judea in a wider context. He is also the editor of the comprehensive Oxford Handbook of Jewish Studies (2002). Goodman is professor of Jewish Studies at Oxford University, a fellow of Wolfson College, Oxford. He was president of the British Association for Jewish Studies. [William D. Rubinstein (2nd ed.)]

GOODMAN, NELSON (1906–1998), U.S. philosopher. Born in Somerville, Massachusetts, Goodman received his B.S. magna cum laude (1928) and his Ph.D. (1941) from Harvard University. From 1929 to 1941 he ran the Walker-Goodman Art Gallery in Boston, and remained an avid collector of ancient and modern art. He served in the U.S. Army from 1942 to 1945.

He taught at Tufts College (1945–46), the University of Pennsylvania (1946–64), and Brandeis University (1964–67). In 1968 he was named professor of philosophy at Harvard. His philosophical studies ranged over many areas, including logic, epistemology, and aesthetics.

Two of Goodman’s important early works are The Structure of Appearance (1951) and Fact, Fiction and Forecast (1955). In the late 1950s he turned his attention to the theory of simplicity, which was the main theme of his many contributions to philosophical journals. In attempting to eliminate superfluous entities in any complete description of the world, Goodman’s work shows the influence of Bertrand Russell and W. Van Orman Quine.

In 1967, as a research associate at Harvard’s Graduate School of Education, Goodman founded Project Zero. The program’s purpose was to understand and enhance learning, thinking, and creativity in the arts, as well as humanistic and scientific disciplines, at both the individual and institutional level. He served as the project’s director until 1971, engaging in basic research into education and the arts, while also producing a number of programs in film, dance, music, theater, and poetry. For example, Goodman created Hockey Seen in collaboration with choreographer Martha Gray, composer John Adams, and artist Katharine Sturgis – Goodman’s wife. It was performed at Harvard in 1972 and was filmed there in 1984.

Articles about Goodman and his work frequently appeared in the European press, such as Le Monde, Frankfurter Allgemeine, and other leading international newspapers. Among his many awards and honors, Goodman received the Guggenheim Award in 1946 and 1947. Other books by Goodman include Problems and Projects (1972), Ways of Worldmaking (1978), Of Mind and Other Matters (1984), Reconceptions in Philosophy and Other Arts and Sciences (with C. Elgin, 1988), and The Languages of Art (1997).

[Avrum Stroll / Ruth Beloff (2nd ed.)]
GOODMAN, PAUL

GOODMAN, PAUL (1911–1972), U.S. author, psychotherapist, and educator. The youngest of three children deserted by their father, Goodman was born and educated in New York City. At City College he was most influenced by the philosopher Morris Raphael *Cohen and by his reading of the Russian revolutionary author Kropotkin. A versatile writer, Goodman published verse collections such as *Stop-Light* (1942), *The Lordly Hudson* (1953), and *Hawkweed* (1967); novels including *The Empire City* (1959); plays (notably *Faustina*, 1949); short stories (*The Facts of Life*, 1946); and criticism. An account of life in New York over the previous three decades, *The Empire City*, was notable for its mingled comedy and sadness. From his earliest years Goodman's intelligence and experimental attitude toward literature gave him a place in the radical avant-garde, but it was only with the publication of *Growing Up Absurd* in 1960 that he became known to the wider public. The book is an indictment of the American "rat race" and a defense of those young people who do not choose to enter it. Between 1936 and 1979 Goodman designed over 50 synagogues and religious buildings. These included the Fifth Avenue Synagogue in New York, Shaarey Zedek in Detroit, the B’nai Israel Synagogue in Millburn, New Jersey, and Temple Beth-El in Springfield, Massachusetts. In addition, he designed many houses, schools, and public buildings, including Public School 92 on West 134th Street in Manhattan (1935) and the Queensborough Community College administration building (1977).

An urban theorist who believed that rational planning could produce better cities, he criticized the planning efforts of his home city New York as timid and short-sighted. Named a fellow by the American Institute of Architects, he nonetheless argued that the institute was irrelevant since it failed to take up moral or political positions.

GOODMAN, TOBIAS (d. 1824), English scholar. Goodman, who was born in Bohemia, went to England at the close

*Weizmann and Nahum Sokolow, before the *Balfour Declaration was issued. Together with Arthur D. Lewis he edited the volume *Zionism: Problems and Views* (1916), was editor of the *Zionist Review* (1920–26 and 1934–38), and was a contributor to various Jewish encyclopedias and Zionist periodicals. Among his works are *The Synagogue and the Church* (1908), *History of the Jews* (1911), *Moses Montefiore* (1925), *Zionism in England* (1930), and *The Jewish National Home* (1943). He also edited *Chaim Weizmann: A Tribute on His Seventieth Birthday* (1945). A memorial tribute to him, entitled *The Rebirth of Israel* (1952), was published by the Zionist Federation of Great Britain.

[Josef Fraenkel]

GOODMAN, PERCIVAL (1904–1989), U.S. architect. Goodman was born in New York; he studied there, and after receiving the Society of Beaux-Arts Architects Paris Prize, he enrolled in the Ecole des Beaux Arts in Paris, in France. He was a versatile architect, an expert on city planning, and a professor of architecture at Columbia University, a position he held from 1946 to 1971. Goodman designed furniture for mass production, wrote a book (*Communitas*, 1947), and illustrated the *Golden Ass* of Apuleius (1932). In 1977 he published his work *The Double E*, on the relationship of ecology to city planning. He had no previous religious background when he embarked on his fruitful career as a builder of synagogues. He said that the Nazi atrocities together with his readings of Martin Buber gave him the need for concrete expression of kinship, describing himself as "an agnostic who was converted by Hitler."

Goodman’s synagogues are brightly lit and tend to be small and intimate, as Goodman felt this encouraged a feeling of unity in the congregation and a sense of participation in the service. He humanized his design with the use of warm materials such as wood. He regarded the artist as an indispensable collaborator, and gave him an important place in his projects. In this respect he acted as a pioneer and helped to bring into being a flourishing modern synagogal art in the United States.

Between 1936 and 1979 Goodman designed over 50 synagogues and religious buildings. These included the Fifth Avenue Synagogue in New York, Shaarey Zedek in Detroit, the B’nai Israel Synagogue in Millburn, New Jersey, and Temple Beth-El in Springfield, Massachusetts. In addition, he designed many houses, schools, and public buildings, including Public School 92 on West 134th Street in Manhattan (1935) and the Queensborough Community College administration building (1977).

An urban theorist who believed that rational planning could produce better cities, he criticized the planning efforts of his home city New York as timid and short-sighted. Named a fellow by the American Institute of Architects, he nonetheless argued that the institute was irrelevant since it failed to take up moral or political positions.

Goodman’s brother was the writer Paul *Goodman.

of the 18th century. In 1806 he was a schoolmaster in *Liverpool, where he is said to have preached the earliest synagogue sermons delivered in English. He was subsequently associated with the Westminster Synagogue in London, where he delivered various addresses, the earliest both delivered and published in English, on the death of the Princess Charlotte (1817) and of King George I (1820). Goodman published Jeddeah Penini's *Behinit Olam with an English translation (1806). He was an active religious controversialist.

**GOOSE**

**GOODRICH, FRANCES (1890–1984) and HACKETT, ALBERT (1900–1995), U.S. writers. Born in Belleville, New Jersey, Goodrich attended Passaic High School. She graduated from Vassar College in 1912, and then spent a year at the New York School of Social Work. She first appeared on stage in Massachusetts in 1913, and her first Broadway show was *Come Out of the Kitchen* (1916). Hackett was born to professional actors Maurice Hackett and Florence (née Spreen) in New York. He first took to the stage at the age of six. The couple met while performing together in Denver, Colorado, in 1927. Goodrich and Hackett began writing plays together; their first hit, *Up Pops the Devil*, was adapted into a film in 1931. The couple married in 1931; the marriage was the third for Goodrich, the first for Hackett. After a string of less than successful screenplays for MGM, Goodrich and Hackett enjoyed their first box-office success adapting Dashiell Hammett's *The Thin Man* (1934), which earned them their first of four career Oscar nominations. Goodrich and Hackett followed up with two more *Thin Man* films — *After the Thin Man* (1936) and *Another Thin Man* (1939). In 1941, the couple returned to Broadway with the long-running *Mr. and Mrs. North*. After the play's run, the couple returned to Hollywood to work for Paramount adapting *Lady in the Dark* (1944). Goodrich and Hackett were known for sophisticated comedy, but also worked on Frank Capra's classic *It's a Wonderful Life* (1946). After *The Pirate* (1948), *Easter Parade* (1948), *Father of the Bride* (1950) and *Seven Brides for Seven Brothers* (1954), the couple once again took an uncharacteristic turn to drama with a stage production of *The Diary of Anne Frank* (1956), which won the Pulitzer Prize for drama and two Tony Awards, and which was adapted to film in 1959. Goodrich and Hackett's final collaboration was *Five Finger Exercise* (1962).

[Adam Wills (2nd ed.)]

**GOOR (Grasovski), YEHUDAH (1862–1950), educator and lexicographer. Born in Pohost, Belorussia, he studied at the yeshivah of Volozhin and in 1887 immigrated to Ereẓ Israel. At first he worked as an agricultural laborer and watchman in Rishon-le-Zion and, after a year, as a clerk in Jaffa. He later became secretary of the *Benei Moshe society, participated in editing its publication Ha-Mikhtavim me-Erez Yisrael, and then a teacher. With D. Idolovitch he founded the first Histadrut ha-Morim ha-Ilivrim (Hebrew Teachers' Association) in Ereẓ Israel. Goor was one of the pioneers of the Ivrit be-Ivrit method whereby Hebrew is taught without using any other language. He wrote several manuals on the study of Hebrew, Jewish history, natural sciences, the geography of Ereẓ Israel, and translated into Hebrew several of Hans Christian Andersen's tales, Daniel Defoe's *Robinson Crusoe*, and stories by Mark Twain, Dickens, and Jules Verne. In 1893, together with Eliezer Ben-Yehuda and D. Idolovitch, he edited a newspaper for children, *Olam Katan* ("Small World"). From 1906 to 1929, he worked for the Anglo-Palestine Company, at first in Beirut (until 1911), and then in Jaffa-Tel Aviv. His activities with this institution included the purchase of lands for the *yishuv* in Tel Aviv and Haifa. While in Beirut, he helped to open a Hebrew kindergarten. During World War I, he and his family were exiled to Damascus, where he engaged in many beneficial activities for refugees in Palestine.

Goor is best known for his work in Hebrew lexicography. Already in 1903, he prepared (together with Y. Klausner) a "pocket dictionary" and later several other small dictionaries (Hebrew–Hebrew, Hebrew–English, etc.). In 1920, he and *D. Yellin published an illustrated Hebrew dictionary, and from 1937 he was occupied with his major work, the *Millon ha-Safah ha-Ivrit* ("Dictionary of the Hebrew Language", published in an enlarged edition in 1947). In 1939, he prepared a *Leksikon le-Millim Zarat* ("Lexicon of Foreign Words"). Goor's was the first Hebrew dictionary in which Hebrew words were traced to the period in which they originated.

[Irene Garbell]

**GOOSE.** The *barburim avusim* (*AV, JPS* "fatted fowl") included among the daily provision for Solomon's table (1 Kings 5:3) have been identified with the goose, the word *barbur* being explained as derived from *bar* ("pure," "white"), and *avus* ("fattened"). Some, however, identify *barburim* ("swans" in modern Heb.) with hens (BM 86b) or with a variety of fowl that came from Barbaria, that is North Africa (Eccl. R. 2:7). The breeding of geese in Ereẓ Israel is extremely old, a picture of them being fattened having been preserved on a ninth-century b.c.e. ivory tablet found in excavations at Megiddo. In ancient Egypt geese were extensively bred and fattened. The Mishnah mentions goose breeding (Shab. 24:3; Hul. 12:1), and a distinction was made between the wild and the domesticated goose (*TB, BK 5:10, 5a: TB, BK 55a*). According to folklore, "if a man sees a goose in a dream, he may hope for wisdom" (Ber. 57a).

[Jehuda Feliks]
GOPHNA, RAM (1928– ), Israeli archaeologist, who made a major contribution to the study of the proto-history of Israel, with a special interest in spatial archaeology and environmental history. Gophna was born in Tel Aviv and was educated at the Hadash High School during 1943–46. In 1946, before the War of Independence, he joined the “Palmah. As one of the first students of the Department of Archaeology of the Hebrew University in Jerusalem, Gophna’s teachers were B. *Mazar, N. *Avigad, M. *Avi-Yonah, and M. *Stekelis. He completed his B.A. in 1954 and his M.A. in 1956. Following his studies Gophna worked for the Israel Department of Antiquities from 1958 to 1974 as a district archaeologist for the southern region, the Negev, and the southern coastal plain. In 1968 Gophna was one of the team leaders during the survey of the hills of Ephraim and Manasseh in the West Bank. Gophna eventually joined the staff of the Department of Archaeology of Tel Aviv University in 1971 in parallel with his work as district archaeologist. In 1974 he completed his Ph.D. dissertation, supervised by Yohanan *Aharoni, entitled “The Settlements of the Coastal Plain of Eretz-Israel During the Early Bronze Age.” Gophna conducted a great number of archaeological surveys and excavations in Israel, with his most important and pioneering work carried out at En Besor between 1970 and 1983, which laid the foundations for a new discipline of research, namely the study of the interrelationship between Egypt’s Dynasties 0 and I and Canaan in the Early Bronze Age I. As a professor of archaeology (since 1981) at Tel Aviv University, where he taught for nearly 20 years, Gophna was an influential mentor for a large number of undergraduate and graduate students. Gophna has more than 100 research articles to his credit, with his first article appearing in 1963. Key articles include “The Rural Aspect of the Settlement Patterns of the Coastal Plain in the Middle Bronze Age II” (Tel Aviv, 8 (1981), with P. Beck); “The Settlement Landscape of Palestine During the Early Bronze II–III and Middle Bronze Age II” (IEJ, 34 (1984)); “Man’s Impact on the Natural Vegetation of the Central Coastal Plain of Israel During the Chalcolithic and the Bronze Age” (Tel Aviv, 13–14 (1987), with N. Liphshitz and S. Lev-Yadun). He was also the editor of two important monographs on his excavations at En Besor and Tel Dalit. In 2002 a collection of studies (see Bibliography, below), many by his students, was presented to Gophna on the occasion of his retirement from Tel Aviv University.

Shimon Gibson (2nd ed.)

GORA KALWARIA (Yid. Ger; Heb. Gur), town 19 mi. (30 km.) S.E. of Warsaw, Poland. The town, known popularly as Nowy Jeruzalem, obtained a charter in 1670 which included a clause prohibiting the settlement of Jews there. Jews were first permitted to settle in the town after it passed to Prussian rule in 1795. Subsequently Gora Kalwaria became celebrated as the seat of the hasidic Gur dynasty, founded by Isaac Meir Alter and headed by his successors (see below). The community numbered 2,919 in 1897 (55.1% of the total population) and 2,691 in 1921 (48.9%).

Holocaust Period
On the eve of World War II there were approximately 3,500 Jews living in Gora Kalwaria. When the German Army entered on Sept. 8, 1939, a reign of terror began for the Jewish population. During April and May 1940 several hundred Jews from Lodz and nearby Pabianice and Aleksandrow were deported to Gora Kalwaria. In January 1941 all the Jewish inhabitants of the small localities around Gora Kalwaria, numbering approximately 300, were also concentrated there. On Feb. 25–26, 1941, all the Jews in the town were transferred to the Warsaw ghetto where they shared the fate of Warsaw Jewry, hundreds dying of disease and starvation and the rest deported to the death camps in August 1942. The Jewish community was not reconstituted after the war.

Gur Dynasty
The Gur (Yid. Ger) hasidic dynasty, one of the most celebrated of the dynasties, existed in Poland from 1859 to 1939; subsequently the center moved to Erez Israel, under the Gur rabbi residing in Jerusalem.

Gur Hasidism is based primarily on the trend in Hasidism developed by *Jacob Isaac of Przysucha (Peshishka) and *Menahem Mendel of Kotsk (Kock) but has taken an individual direction. It also derives ideologically from the philosophy of *Judah Loew b. Bezalel of Prague (the Maharal).

The founder of the dynasty was ISAAC MEIR ROTHEMBERG ALTER (1789–1866), whose father R. Israel was a disciple of *Levi Isaac of Berdichev and rabbi of Gur. Isaac Meir grew up under the tutelage of Israel Hofstein, the maggid of *Kozienie, who influenced Isaac considerably. At an early age he distinguished himself in Torah study, showing originality and intellectual acumen. He subsequently studied under Aryeh Leib Zinz, rabbi of Polotsk, and won a reputation as a brilliant young scholar.

After the death of the maggid of Kozienie, and a short period with the latter’s son and successor Moses, Isaac Meir left him to become a disciple of *Simḥa Bunem of Przysucha, and after his death, of Menahem Mendel of Kotsk. He continued to give unreserved support to Menahem Mendel throughout the stormy controversy which divided Kotsk Hasidism and during the period when Menahem Mendel was in isolation, enabling Kotsk Hasidism to survive its acute internal crisis. After Mendel’s death in 1859 Isaac Meir was acknowledged as their rabbi by the majority of the Kotsk Hasidim. His work entitled Hiddushei ha-Rim (Warsaw, 1875), novellae on Talmud tractates and the Shulḥan Arukh, became basic texts for study in the yeshivot and are still acknowledged as classic works on the pilpul (dialectical) method of exposition. Isaac Meir is frequently referred to by the name of his work as “Hiddushei ha-Rim.” Isaac Meir displayed a ready awareness of public needs and was well acquainted with Jewish problems in Poland. He
fought uncompromisingly to preserve the traditional Jewish way of life and headed opposition to the regulations imposing changes in dress issued by the government and upheld in Jewish circles by the maskilim, refusing to make concessions even when imprisoned by the authorities. During the Polish uprising of 1830 he was suspected of sympathizing with the Polish loyalists. He changed his name from Rothenberg to Alter. In his private life he experienced considerable suffering, losing his 13 children during his lifetime.

Although Isaac Meir derived the principal part of his teaching from the Przysucha-Kotsk school of Hasidism, in practice it revealed radical divergences. Instead of withdrawing from contact with the masses he tried to win them over, and interested himself in day-to-day problems. He made himself available to all who sought him out, receiving them kindly. However, like the Kotsk school he placed Torah study at the center of spiritual life. As one of the most eminent scholars in Poland of his day he developed among his followers enthusiasm for Torah learning. He also followed the Kotsk method in emphasizing profundity of thought in the search after truth and the inner promptings of the heart, and in continuous striving after self-perfection.

The period of his leadership, which lasted only seven years, had a formative influence on the development of Hasidism in Poland. Gur Hasidism became a powerful element in Orthodox Polish Jewry, and retained a leading position until the Holocaust.

Judah Aryeh Leib Alter (1847–1905) son of Abraham Mordecai (the eldest son of Isaac Meir), was orphaned as a child and brought up and educated largely by his grandfather. In 1870, after the death of *Hanokh of Aleksandrow, the successor of Isaac Meir as Gur rabbi, Judah Aryeh Leib became the head (admor) of Gur. In this position he wielded a wide influence and established the leadership of Gur Hasidism in Congress Poland. A distinguished scholar, modest in behavior, Judah Aryeh Leib won the confidence of rabbis and communal leaders throughout Jewry. Like his grandfather he also played a role in public affairs, concerning himself with contemporary Polish Jewish problems. Through his influence Hasidism in Poland dissociated itself from Zionism. Judah Aryeh Leib devoted much energy promoting Torah study and attracted many of the youth. His writings are collected under the title Sefat Emet (2 vols., 1905–08), after which he is also known. The five sections on the Pentateuch include addresses on Sabbaths and festivals, distinguished by the profundity of their ideas and clarity of exposition, and reflect the marked influence of Judah Loew b. Bezalel (the Maharal) of Prague. The sections on the Talmud, on tractates Middot and Kiddushin, evidence his wide Jewish scholarship and ability to penetrate to the intended meaning and provide a lucid exposition of the problem, in contrast to the dialectical pilpul method followed by his grandfather.

Judah Leib was succeeded by his eldest son, Abraham Mordecai Alter (1866–1948), the last of the dynasty in Poland. Under his leadership Gur Hasidism reached the height of its influence. He restored the recitation of morning prayer to the regular time and enjoined a break during the Sabbath service for public study. A lover of order and precision, he gave Gur Hasidim an organized framework.

In the period preceding the Holocaust Abraham Mordecai was the most prominent figure in European Orthodox Jewry and one of the founders of *Agudat Israel. Particularly sympathetic toward young people and concerned with their needs, he was instrumental in establishing schools and youth organizations. As well as being a scholar, he was an ardent bibliophile. He visited Erez Israel many times and acquired property there. On the outbreak of World War II he escaped from Gur to Warsaw, and finally to Erez Israel in 1940. During and after the Holocaust he was active in rescue work and in the material and spiritual rehabilitation of refugees. He died on Shavuot at the height of the siege of Jerusalem in 1948 and was buried in the precincts of Yeshivah Sefat Emet which he had founded.

Abraham Mordecai’s son, Israel Alter (1892–1977), succeeded him as Gur rabbi. A noted scholar of great personal charm, he had an influence far beyond the immediate circle of his followers. As head of the various Gur institutions and yeshivot he did much to enhance the reputation and influence of Gur Hasidism. Thousands of visitors traveled to his court in Jerusalem each year to see him and receive his blessing.

Two sons of Abraham Mordecai, Simhah Bunem (1898–1992) and Pinhas Menahem (1926–1996), took over after the death of Israel Alter, and were in turn succeeded by Yaakov Arvay (1936—), eldest son of Simhah Bunem. In the early 21st century, in addition to Israel, Gur Hasidim were concentrated in the Boro Park section of Brooklyn, New York.

[Bibl. : B. Goldrath]

GORCEY, LEO (1917–1969), U.S. actor. Bowery Boy Leo Gorcey was born in New York to an Irish mother, Josephine Condon, and a Russian-born Jewish father, Bernard (1886–1955), an actor who played Papa Cohen in Abe’s Irish Rose on Broadway. Gorcey dropped out of school to apprentice in his uncle’s plumbing shop. However, in 1935 his father encouraged Leo and his brother David (1921–1984) to try out for the Broadway drama Dead End; both were cast as New York street toughs. Gorcey was later tapped for the role of “Spit” in the 1937 feature film adaptation that starred Humphrey Bogart and Joel McCrea. The Dead End Kids would appear in a slate of dramas, including Angels with Dirty Faces starring James Cagney, which spoke to such issues as social injustice. In
In a story of 1991, "My Father Leaves Home," a Jew (seemingly largely based on the history of her own father, a Lithuanian immigrant) is stigmatized on racial grounds and becomes himself a racist. Perhaps this illustrates her awareness of one facet of the fractured identity of some South African Jews. She continued to chronicle South African life after apartheid. She has been the subject of deep admiration and scrutiny from leading critics and has been translated into several languages, including Hebrew. The intense focus of her vision of the complex and troubled situation of a country beset by seemingly insoluble racial and political problems and gradually undergoing transformation is universally valued. Some detractors see her apparent detachment and coldness as a fault. None, however, deny her immaculate craftsmanship or underestimate her incomparable contribution to South African letters.

**GORDMER, NADINE** (1923–), South African novelist, Nobel Prize laureate. Gordimer occupied a preeminent position in South African letters, was internationally acclaimed, and was the first South African writer to receive a Nobel Prize (1991). She was born in Springs, near Johannesburg, and published her first volume of short stories, *Face to Face*, in 1949. During her long writing career she published over 200 short stories, among the finest in South African writing, and 14 novels. *The Lying Days* (1953), her first novel, established her as a realist, a genre in which she is best known. Her unerring eye for detail is apparent in all her work, but her realism also charts an inner landscape and constitutes a mirror of the intensity of feeling, suffering, and conflict during the troubled situation under apartheid. Together with her fiction, her numerous essays and studies on culture and politics contribute a general social critique, and all her writing reflects her own commitment to the liberation movement and to social transformation. She has been hailed as a courageous and authoritative voice of conscience during the years of silence and repression, her work sometimes being banned in her own country. *A Guest of Honour* (1970) won the James Tait Black Memorial Prize in 1973. *The Conservationist* (1974) won the Booker Prize for Fiction. Her numerous other awards include the Modern Language Association Award, the Commonwealth Prize for distinguished service to literature, and the Royal Society of Literature Medal. She insisted that she did not regard herself as a feminist but as a "white African." Many readers and critics are either unaware of her Jewish background or disregard it. She herself asserts that she had no sense of identity with the Jewish community, and that being Jewish has not influenced her thinking or writing in any way. The central character of *A Sport of Nature* (1987) is a Jewish girl who marries two black revolutionaries, but generally there are few Jewish characters in her work and those are presented in stereotypical fashion. Her vigorous anti-racial stance is not always clearly evident in the presentation of Jewish storekeepers on the mines in her early work.

1940 the name of the gang was changed to the East Side Kids, and Monogram Studios decided to play the kids for laughs, upping the slapstick in several low-budget hour-long films in which Gorcey played "Muggs McGinnis" and his brother played "Pee wee." The group was renamed a second time as the Bowery Boys in 1946, with Gorcey playing roughneck leader "Terence ‘Slip’ Mahoney," his brother "Chuck," and his father "Louie," the sweet shop owner. Gorcey, his brother, and father often shot four to five Bowery movies a year until 1956, when Bernard died after a car accident in Los Angeles in 1955. Gorcey, upset by the death of his father, retired from films and moved to a ranch near Red Bluff, Calif. He married five times between 1939 and 1968, and had three children. Gorcey died in Oakland, Calif., two years after writing his autobiography, *An Original Dead End Kid Presents: Dead End Yells, Wedding Bells, Cockle Shells, and Dizzy Spells.*

**BIBLIOGRAPHY:** LYNL, 2 (1958), 139–40.

[Meolah Ravitch / Leonard Prager (2nd ed.)]
GORDIN, JACOB (1853–1909), Yiddish playwright and journalist. Born in Mirgorod, Ukraine, Gordin was writing for the Russian press at 17. Though tutored in secular subjects at home, he was essentially self-educated. He tried his hand at business but failed and became in turn a farm laborer, a stevedore, and an actor in a Russian itinerant troupe, all the while writing for the Russian press and deeply involved in utopian political movements. He finally settled in Yelizavetgrad (Kirovograd) as a teacher in the local “russified” Jewish school. Gordin’s first political ideal was nurtured in a circle devoted to Ukrainian independence. Later, influenced by Tolstoy and by the dissident Stundists (a non-Orthodox Christian Evangelical sect in Russia), as well as by Russian populist and Jewish enlightenment currents, he founded his own sect, the Dukhovno-Bibliiskoe Braitstvo (“The Spiritual Biblical Brotherhood”), in 1880. He and his followers rejected post-biblical Judaism, claimed the Bible as the source for their rationalist ethics, repudiated commerce, and saw in agriculture the sole healthy and virtuous occupation. Gordin’s obsession with occupational reform led him to write an article which grossly offended the Jewish community. Soon after the April 1881 pogroms, he published in the Russian press an open letter “To My Jewish Brethren” in which he argued that Jewish usury, love of money, and middleman occupations were to blame for Russian antisemitism. The “Brotherhood” was ineffec tual: its efforts to build a communal colony failed. In 1891, the czarist police decided to disband the group, and Gordin, forewarned, fled to the U.S. Shortly after arriving in New York, which was to become his permanent home, Gordin applied to the Baron de Hirsch “Fund for aid in establishing a communal farm and was refused. Family obligations, a pregnant wife, and eight (eventually 14) children to support, made Gordin turn to journalism; he soon began writing for the New York daily Di Arbeter Tsaytung. When that work proved insufficient to support his growing family, he turned to playwriting. Prior to his arrival in America, at the age of 38, Gordin had never written in Yiddish nor even written a play.

His first drama, Sibiry a (“Siberia,” 1891), though an apprentice piece, reveals many of those qualities for which Gordin was to earn the title “Reformer of the Yiddish Stage.” The Yiddish theater, as Gordin found it, was one of vulgar burlesque and of absurd and garish “historical operettas.” In Sibiry a, as in all of Gordin’s plays, the characters speak colloquial Yiddish rather than the affected Germanized Yiddish favored by the bombastic style of the day. Gordin disciplined the ad-libbing comic actors and banned, or at least modified, the rhymed-couplet, song-and-dance routine. He built suspense into his plays and made spectacle secondary to dramatic action. Sibiry a, however, also heralds Gordin’s characteristic tendentiousness, stereotyping, moralizing, and excessive pathos. Yet the gentle judge in Sibiry a is presented as a human being rather than as a caricature, something of an innovation, and indicative of the way in which Gordin’s earnest view of the theater as school and temple yielded aesthetic fruit. But his melodramatic plays never ceased to be vehicles for his soci al gospel; he valued his art mainly for what it might teach. Gordin’s first great popular success, Der Yidisher Kenig Lir (“The Yiddish King Lear,” 1892), made his reputation. It also added further luster to the acting career of Jacob P. Adler in the title role, and it was Adler’s star power and popularity with the audience that helped them accept a play that dispensed with or modified many of the norms of Yiddish drama up to that point. Henceforth, Gordin was to write many plays for virtuosos. He created the lead roles in Der Vilder Mentsh (“The Wild Man,” 1893) and Elshah ben Abuye (1906) for Adler; those in Mirele Efros (1898), Di Sakhkhit (“The Slaughter,” 1899), and Khasye di Yesoyme (“Khasye the Orphan Girl,” 1903) for Keni Liptzin; and those in Safo (“Sappho,” 1899) and Kraytser Sonata (“Kreutzer Sonata,” 1902) for Bertha “Kalishe. Great actors respected Gordin, and he in turn wrote great roles for them. His use of borrowed plots was to become typical, and despite his open avowal of his sources, he was plagued with accusations of plagiarism. He adopted plots from Hugo, Hauptmann, Schiller, Gogol, Gorki, Sudermann, Grillparzer, Ibsen, Lessing, Gutzkow, Ostrovski, and others. From Shakespeare he took the skeletal plot of King Lear for his Yidisher Kenig Lir – the title itself acknowledging the debt. The latter is essentially a Jewish play, a didactic melodrama which probes the problem of conflict between generations. The impulse behind its female analogue, Mirele Efros, one of the most popular dramas in the Yiddish repertoire, came from Gordin’s own Lear play rather than from Shakespeare. The world of Mirele Efros is a Jewish world, yet the play was performed successfully in nine languages. Gordin was frequently attacked for introducing alien matter into the Yiddish theater; some critics denied he was a Jewish writer at all. Among his other popular plays may be mentioned Got, Mensh un Tayvil (“God, Man, and Devil,” 1900), Di Shvve (“The Oath,” 1900), and On a Heym (“Homeless,” 1907). Only about a quarter of his plays have been printed, some in pirated editions, while many survive only in manuscript or have been lost. Gordin also wrote a score of one-act plays, largely to encourage amateur performers, as well as serious essays on the theater. He also wrote widely for the press. His stories and sketches are invariably characterized by socialist moralizing.

In his stormy 18 years in America, Gordin wrote more than 100 plays for the Yiddish stage, most of which have been forgotten. Yet he must be reckoned the most important formative influence, after “Goldfaden, in the history of the modern Yiddish theater. Gordin came to love Yiddish but denied it the status of “national tongue.” He viewed with pessimism the future of the American Yiddish theater whose temporary decline he lived to witness. His dying words were “finita la commedia.” A quarter of a million Jews attended his funeral in New York City. His works have not been well edited. The four basic collections are Yankev Gordin’s Ertseylungen (“J.G.’s Stories,” 1908); Ale Shrift (“Works,” 4 vols., 1910); Yankev Gordin’s Dramen (“J.G.’s Dramas,” 2 vols., 1911); Yankev Gordin’s Eynakters (“J.G.’s One Act Plays,” 1917).
GORDIN, JACOB

[Leonard Prager / Joel Berkowitz (2nd ed.)]

GORDIN, JACOB (1896–1947), religious philosopher. Gordin was born in Dvinsk, Latvia, and received his general and Jewish education in St. Petersburg. During the Russian Revolution and civil war, he wandered from one village to the next and took the opportunity to increase the depth of his knowledge of Jewish mysticism by becoming acquainted with Ukrainian Jewish kabbalists.

In 1923 he settled in Germany where he became part of the Akademie der Wissenschaft des Judenstums. It was in Berlin that he published his major work on general philosophy, Untersuchungen zur Theorie des unendlichen Urteils. During the same period he published several important entries on Jewish philosophy for the Encyclopedia Judaica of Berlin, including those on Crescas, J. Kaspi, Kant, Hermann Cohen, and God in Jewish Religious Philosophy, which was republished later in the Encyclopaedia Hebraica.

Gordin immigrated to France in 1933 after the advent of the Nazis and became librarian of the Alliance Israélite Universelle. His significant articles on Spinoza, Maimonides, and others were then published in French in the Cahiers Juifs of Alexandria. After the Nazi occupation of France, the Eclaireurs Israélites (Jewish Scouting Movement) of France opened educational training centers for its leaders and children’s homes in the Vichy “free zone.” They called upon Gordin to organize the Jewish training of their educators and he thereby reaffirmed the Jewish consciousness of a significant number of members of the Jewish Resistance. It is from this time that he began to influence Leon Poliakov.

He returned to Paris after the Liberation of France and for three years – until his death at age 50 – played an increasingly important role in Jewish education at the highest level of the young intellectuals who were searching for their roots after the terrible years of the war. Gordin gave up writing in order to dedicate himself entirely to oral instruction, as master to disciple following an ancient Jewish tradition. Among his best-known disciples were Robert Gamzon (Castor), Léon Ashkenazi (Manitou), and Renée Neher-Bernheim. He introduced them to a knowledge of Jewish mysticism in its most exalted philosophical aspects. After he became seriously ill, his students came to his home to study, fascinated by the extent of his knowledge and the depth of his thinking. Long after his death his disciples have continued to disseminate the teachings of their master in France and in Israel.

[Leon Poliakov / Renee Neher-Bernheim]

GORDIS, ROBERT (1908–1992), U.S. Bible scholar, author, and rabbi. Gordis was born in New York City. He wrote his Ph.D. dissertation on Masoretic qere and ketib at Dropsie College, where his primary teacher was the renowned textual critic Max Margolis. With prospects of academic employment curtailed by the Great Depression, Gordis decided to become a Conservative rabbi and was ordained at the Jewish Theological Seminary in 1932. He served as rabbi of Temple Beth El of Rockaway Park, N.Y., from 1931 until his retirement in 1968, and while there established the first Conservative day school in the United States. Gordis did not abandon academic life. Invited in 1937 as an annual lecturer to the Seminary, Gordis served as professor of Bible beginning in 1940. Gordis also taught at Columbia University (1948–57), the (Protestant) Union Theological Seminary (1960), and Temple University. He served as editor of the periodical Judaism, president of the Rabbinical Assembly and of the Synagogue Council of America, and consultant to the Center for the Study of Democratic Institutions.

Gordis’ biblical scholarship has been in three major areas: Wisdom literature with special emphasis on the Books of Ecclesiastes and Job, to both of which he composed book-length commentaries; the forms of rhetoric and biblical poetry; and aspects of the masorah and the preservation of the biblical text. Gordis employed his considerable knowledge of rabbinic literature as a tool in biblical lexicography. Within the Conservative movement he was a spokesman for the centrist position, advocating change within the framework of the law. He also wrote on the relationship of Judaism to contemporary problems, on the pertinent insights of the Jewish tradition to the issues facing Western civilization, and on the status of Judaism in the modern age. Among his books are Koheleth: the Man and His World (1951), Judaism for the Modern Age (1955), Root and the Branch (1962), and Judaism in a Christian World (1966).

[Jack Reimer / S. David Sperling (2nd ed.)]

GORDON, ABRAHAM (1874–1944?), socialist, active in Vilna. From a poor family, Gordon became an engraver, from which profession he derived his Russian pseudonym “Rezchik.” He took an active part in the Jewish workers’ circles in Vilna and was influenced by populism. In the early 1890s Gordon led the opposition against the shift in aims of the workers’ circles – from spreading general education and explaining socialist ideology in the Russian language to conducting propaganda in Yiddish on economic problems and the organization of strikes. Gordon fought the influence of the Social-
Democrat intelligentsia (who later founded the *Bund) on the workers’ movement. Even without supporters, he continued to advocate his ideas for many years, and published a number of pamphlets. He was last reported in Vilna in 1940. The circumstances of his death are unknown.

[Moshe Mishkinsky]

**GORDON, AHARON DAVID** (1856–1922), Hebrew writer and spiritual mentor of that wing of the Zionist labor movement which emphasized self-realization through settlement on the land (the *halutzim*); born in Troyanov, Russia. Gordon’s grandfather was a noted scholar, and his father worked as a clerk for his famous relative, Baron Joseph *Guenzburg. Gordon studied Talmud, Bible, and Hebrew grammar with private tutors, as well as Russian and secular subjects on his own. As he was the only survivor of five children, his parents were anxious to have him exempted from military service, but he insisted on presenting himself for examination. When he was found medically unfit, he married and was given a responsible post in the financial management of Baron Guenzburg’s estate, which he held, with interruptions, for 23 years. He was respected by the workers and junior officials, whose interests he tried to protect, often at the expense of his own. During this period he was active in educational and cultural work, especially among the youth. At first he was antagonistic to the modern Hebrew literature of his time, especially because of the hostility of many writers to Jewish religious tradition. In 1903, the village in which Gordon worked was sold to a new owner, and he had to find other employment. In this crisis, he decided, despite the opposition of his parents and his wife’s family, to settle in Erez Israel, and in 1904 he set out alone, bringing his wife and daughter over only five years later.

**In Erez Israel**

Although he was now 48 and had never done physical work, he insisted on tilling the soil with his own hands. He worked as a manual laborer in the vineyards and orange groves of *Petah Tikvah and *Rishon le-Zion and, after 1912, in various villages in Galilee, suffering all the tribulations of the pioneers: malaria, unemployment, hunger, and insecurity. From 1909 he wrote numerous articles, most of them published in *Ha-Po’el ha-Za‘ir*, embodying his original outlook on labor, Zionism, and the Jewish destiny, which became widely known as “the religion of labor,” though he did not use the term. He spent his last years in *Deganyah, where he died in 1922.

Although Gordon was a delegate to the Eleventh Zionist Congress in 1913 and the Ha-Po’el ha-Za‘ir conference in Prague in 1920, he was never interested in political affairs as such. He believed that salvation for the Jewish people could come about only through the efforts of the individual to change himself. Thus, he was not enthusiastic about the *Balfour Declaration* and the World War I *Jewish Legion*. He op-

posed *Po’alei Zion and *Ahдут ha-Avodah because of their ties with international socialism, believing that the Jewish workers in Erez Israel must find their own way to a just, productive society through a life of labor. Although he held no official position, Gordon exercised a profound influence on the Jewish labor movement the world over through his writings and, even more, through his personal example. The *Gordon* youth movement, founded in 1925, was named after him and based largely on his ideas.

**Gordon’s Philosophy**

Gordon’s world view is rooted in the conviction that the cosmos has unity, that nature and man are one, and that all men are organic parts of the cosmos. Man is molded by the cosmos in two different ways: through his knowledge of the world and through his intuitive perception of the world, which can never be consciously known, yet can be lived. What we know is merely a fragment of what we are. A man becomes an individual by the way in which he opens himself to the immediacy of the experience of life. The human soul is related to a hidden part of the cosmos. It is in this “hidden” life that each man’s individuality is rooted.

Gordon was conscious of the fact that his theory sets up a dichotomy between rational “knowledge” and “life.” He compared their dualism with the relationship between the flame and the oil in a burning lamp. Consciousness and knowledge are the flame; life itself is the oil which nourishes it. The intellect achieves clarity by concentrating its light on a single sector of reality. However, the intellect pays a price for this clarity: it cuts off the living relationship between the sector which it investigates and the totality of the cosmos. The more a man penetrates nature with his knowledge, the less he can live it with his whole being. Yet the ultimate source of our deepest certainties is not the knowledge we may accumulate, but life itself. Living intuition speaks where our intellect fails us. The intellect is an important weapon in the struggle for survival. At the same time, however, it tends to isolate and alienate man from the cosmos as a whole.

In this tension Gordon discovers the source of religion. Through religion man begins to feel once again that he is an organic part of creation. God cannot be approached through the intellect, but man can reach God in an immediate living relationship. With the psalmist, Gordon says, “My soul thirsteth for God, the living God.” A mystery to the intellect, God cannot be known, but He can be experienced and lived.

Gordon’s friends found it difficult to accept his religious notions. For them religion had become ossified, irrelevant, a thing of the past. He attempts to meet their objections by making a distinction between form and content in religion. He concedes that as far as form is concerned, religion has lost much of its vitality. The content of religion originates in the religious individual; it is the expression of his sense of cosmic unity and purpose. But men tend to sanctify religious forms at the expense of religious content. Gordon claims that, though present-day religious thinking may be dead, God Himself can
never die. He is a hidden mystery, yet we encounter Him in all we experience. Religion will not die so long as men live and think and feel. Its time has not passed – its time has not yet even come. True religion is of the future.

Man cut himself off from this source of rejuvenation when he left the soil and moved to the city. Nature is no longer the source of his inner renewal; he has reduced nature to a quantity of corn, or grain, or wood, which he buys or sells. Man’s relationship with other men, things, and nature have become purely utilitarian. Authentic religion cannot live in such an atmosphere. If man is to rediscover religion, the proper balance between the two powers of the human soul – intellect and intuition – must be restored. The task of the intellect is to be the servant – the shammash – of intuition, not to overpower it. The proper balance between master and servant can be restored only by man’s return to a direct relationship with nature.

“Our road leads to nature through the medium of physiological labor.” The return to nature through labor will enable man to rediscover religion and to regain a sense of cosmic unity and holiness. Gordon’s religion has been defined as a “religion of labor.” Gordon was strongly influenced by Tolstoy, who preached a similar return to nature; but unlike Tolstoy, Gordon attempted to practice what he preached.

Gordon opposed socialism in its Marxist form. He regarded Marxism as merely another creation of the intellect, a product of a technological and capitalistic civilization. The aim of Marxism is the reorganization of the social order, not the renewal of the human spirit. It seeks to change man by changing the regime, instead of seeking to change the regime by changing man. All attempts to transform human life through the introduction of a new social order are doomed to failure if they do not begin with what must come first: the living human being. A genuine inner renewal of society can be achieved not by an accidentally related mass, but only by an organically united community – the people. Nature has created the people as the connecting link between the cosmos and the individual. Mankind represents the unity not of states but of peoples. A people is a natural community embodying a living cosmic relationship.

For this reason cosmopolitanism must be replaced by what Gordon calls cosmo-nationalism. Cosmopolitanism is based on the assumption that the individual can be a citizen of mankind directly, without being a member of a specific historic people. This assumption is an illusion. Such an individual and such a mankind are mere abstractions. There are only men who are Russians, Germans, Frenchmen.

Gordon uses the phrase [am-adam (“people-humanity,” “people-incarnating humanity”) to express his thinking on the role of the people in the fulfillment of man’s destiny. Man was created in the image of God, and Gordon adds that the people has to be created in the image of God too. This “people-incarnating humanity” is the new ideal which Israel, returning to its land, is to exemplify in the eyes of all mankind. Gordon’s cosmo-nationalism has genuine universalistic implications. No people must ever be permitted to place itself above morality. A people incarnates humanity only to the extent to which it obeys the moral law.

Here Gordon saw the challenge which the Jew faced in Erez Israel. The recreation of such a nation – its realization – was to be the contribution of the reborn Jewish people to mankind. The creation of a nation which, at the same time, would be an integral part of humanity, is an extension of the original act of creation:

“We were the first to proclaim that man is created in the image of God. We must go farther and say: the nation must be created in the image of God. Not because we are better than others, but because we have borne upon our shoulders and suffered all which calls for this. It is by paying the price of torments the like of which the world has never known that we have won the right to be the first in this work of creation.”

He saw the crucial test in the attitude of the Jews toward the Arabs:

“Our attitude toward them must be one of humanity, of moral courage which remains on the highest plane, even if the behavior of the other side is not all that is desired. Indeed their hostility is all the more a reason for our humanity.”

Gordon’s writings, entitled Ketavim (1951–54), appeared in three volumes, including a bibliography. There is also a selection of his writings in English entitled Selected Essays (1937).

GORDON, ALBERT I. (1903–1968), U.S. rabbi and sociologist. Gordon, who was born in Cleveland, Ohio, earned his B.A. from New York University (1927), was ordained by the Jewish Theological Seminary (1929), and received a Ph.D. from the University of Minnesota (1949). He served as a rabbi in Temple Israel in Washington Heights, New York, and then in Congregation Kneset Israel-Beth Shalom in Kansas City before he moved to Adath Jeshurun Synagogue, Minneapolis, Minnesota (1930–46), a congregation in transition between generations. He modernized the services and attracted new members, increasing the congregation more than fourfold to 400 families. He was also active in the community, serving the War Labor Board and conducting a weekly radio broadcast. He left the congregation to serve as executive director of the United Synagogue of America (1946–50), where he expanded lay involvement and helped found the first Camp Ramah in Wisconsin under the initiative of the Chicago Council of United Synagogue. He left after considerable success and significant expansion but also in great frustration and returned to the pulpit as rabbi of Temple Emanuel, Newton, Massachusetts (1950–68). Under his leadership, which coincided
with the suburbanization of American Jews, the school there expanded more than threefold to 1,000 students who studied four days a week. The synagogue expanded its building and classroom facilities. He was a member of the faculty of neighboring Andover Newton Theological School and taught sociology at Boston University, and held many positions in the Jewish community. He wrote four sociological studies, which constitute a substantial contribution to the study of American Jewry: Jews in Transition (1949); Jews in Suburbia (1959); Intermarriage: Interfaith, Interethnic and Interracial (1964); and The Nature of Conversion (1967). He also wrote a series of booklets on marriage.

[Jack Reimer / Michael Berenbaum (2nd ed.)]

**GORDON, CYRUS HERZL** (1908–2001), U.S. Semitic scholar. Gordon was born into a Zionist family in Philadelphia, hence the middle name Herzl. He worked as a field-archaeologist in Jerusalem and Baghdad from 1931 to 1935, after which he taught Semitics at Johns Hopkins University (1935–38), Bible at Smith College (1938–41), at Princeton (1939–42) Assyriology and Egyptology at Dropsie College (1946–56). From 1956 to 1973 Gordon was at Brandeis, where he taught Mediterranean Studies, an area that reflected his conception that the Aegean had to be included in the study of the ancient Near East. His final academic appointment was at New York University where he taught biblical and Semitic studies from 1973 to 1990.

His *Ugaritic Grammar* (1940) and *Ugaritic Handbook* (1947) which revised the grammar and provided transliterated texts and glossaries were pioneer works in the field, as were his *Ugaritic Literature* (1949) and later his *Ugaritic Manual* (1955; revised as *Ugaritic Textbook*, 1965). Other significant contributions to Semitics were his work on the Akkadian of Nuzi, the Aramaic magic bowls, and the language of “Ebla in Syria first recovered in the 1970s.

Gordon’s other major contribution was in “Helleno-Semitic,” the comparison of Eastern and Western civilizations, mainly through the study of early Greece and the ancient Near East. His works on this subject include *Before the Bible* (1962; revised as *The Common Background of Greek and Hebrew Civilizations*, 1965), in which Gordon examined ancient Greek mythology in comparison to the biblical stories. In *Homer and the Bible* (1967) he tried to show the common background of all the East Mediterranean cultures.

These interests led him to regard the undeciphered Minoan tablets of Crete (Linear A) as possibly written in a language of Semitic origin. He suggested a translation of the Phaestos Disk of Crete and of Eteocretan inscriptions on the basis of Semitic linguistics. In 1966 he published these studies in *Ugarit and Minoan Crete and Evidence for the Minoan Language*. Other works on Semitics and archaeology include *Nouns in the Nuzi Tablets* (1936); *Numerals in the Nuzi Tablets* (1938); *The Living Past* (1941), a summary of his studies on important excavations in the Middle East; and *Lands of the Cross and Crescent* (1948). He also wrote *The Relationship between Modern and Biblical Hebrew* (1951); *Smith College Tablets* (1952), in which he published 110 cuneiform texts from the college collection; *Introduction to the Old Testament Times* (1953, revised as *The World of the Old Testament*, 1958); *Hammurabi’s Code* (1957); *Adventures in the Nearest East* (1957), a popular description of important discoveries in the Middle East from the Dead Sea Scrolls to Ugaritic; *New Horizons in Old Testament Literature* (1960); *Ancient Near East* (1965); *Mediterranean Literature* (1967); and *Forgotten Scripts* (1968).

In 1968 Gordon declared that new knowledge about Phoenician word usage had made it likely that a previously rejected Phoenician tablet (found in 1872) was genuine and that the Phoenicians had gone to America from Ezion-geber in the 19th year of Hiram, king of Tyre. Given the vastly broad nature of his interests it was inevitable that some of Gordon’s work was considered overly speculative but could never be ignored.

**GORDON, DAVID** (1831–1886), Hebrew journalist and editor, one of the early supporters of Hibbat Zion. Born in Podmerek near Vilna, he studied in a yeshivah and later turned to Haskalah and took up secular studies. In 1849 he settled in Serbei (Serbej), earning a meager livelihood as a teacher. In the mid-1850s he moved to England, where he remained until 1858, teaching Hebrew and German. In 1858 Gordon moved to Lyck where Eliezer Lipmann Silbermann invited him to become assistant editor of the first Hebrew weekly, *Ha-Maggid*. In 1860 he officially became the editor of *Ha-Maggid*, a position he had long occupied unofficially. From 1879 to 1881 he published a weekly literary and scientific supplement to *Ha-Maggid*, called *Maggid Mishneh*. He also edited a German paper, *Lycker Anzeiger*, and wrote for the *Times* and *Jewish Chronicle*. His articles in *Ha-Maggid* calling for Jewish national revival in Palestine were the first of their kind in Hebrew. When the Hibbat Zion movement was established in the early 1880s, he became one of its leading members and under his editorship *Ha-Maggid* became the Hebrew voice of the movement. Gordon also published several books and contributed to various Hebrew and Yiddish journals.

[Getzel Kressel]

**GORDON, ELIEZER** (1840–1910), rabbinical scholar. Gordon was born in the district of Minsk, and while still a young man was invited by R. Israel *Salanter to succeed him in Kovno as teacher of the younger pupils. Appointed in 1874 as
rabbi of Kelme and head of its yeshivah, which now attracted many students, he became renowned as one of Lithuania’s greatest and most pious rabbinical scholars. In 1884 he was appointed rabbi of Telz (“Telsiai”) and head of its yeshivah, which, after the closing of the yeshivah of Volozhin, in 1859, became the spiritual center of Lithuanian Jewry. Gordon was one of the first to adopt what was known in Lithuanian yeshivah circles as “the method of logical comprehension,” his lectures being distinguished for their penetrating analysis and their original and logical interpretations. He was also one of the first heads of a Lithuanian yeshivah to introduce the study of *musar* (ethics) into the curriculum, and he appointed adherents of the “Musar movement as *mashgihim* (student “supervisors”). Gordon took a special interest in the financial upkeep of the institution and was personally attentive to the needs of each of his students. So deep an attachment existed between them that even those of his students who later became estranged from his outlook and way of life continued to hold him in great personal esteem. As rabbi of Telz Gordon displayed great dedication and resoluteness. At times he would forgo his salary; he interceded with the authorities to protect the rights of Russian Jewry; and he played an active part in internal Jewish matters. At every assembly of Russian rabbis Gordon was one of the principal speakers. In Vilna, in 1904, seeking to establish an organization that would embrace all of Orthodox Jewry, he helped found the Kneset Israel organization, regarded by some as the forerunner of “Agudat Israel. In 1910 the Telz yeshivah was destroyed by fire, and Gordon died in the same year, while on a visit to London, where he had gone to raise funds for its rebuilding, and was buried there. His only published work is *Teshuvot Rabbi Eli‘ezer* (2 vols., 1912, 1940).

[Zvi Kaplan]

**GORDON, GEORGE, LORD** (1757–1793), English proselyte. A younger son of the third duke of Gordon, he entered Parliament in 1774 but attracted little notice until 1779 when he became president of the United Protestant League which opposed measures in relief of Catholic disabilities (1779). After the violent London “No-Popery” Riots (1780), Gordon was tried for high treason but was acquitted. He again appeared as Protestant champion in 1784 in the quarrel between the Dutch and Joseph II. He subsequently developed an interest in Judaism. Although rebuffed by the London rabbinical authorities, he was circumcised in 1787, either in Holland or in Birmingham (where he lived for a time), assuming the name of Israel b. Abraham. He became scrupulous in religious observance, growing a long beard and rebuking those who were not as devout as himself. He was tried for libels on the British government and Marie Antoinette of France and sentenced in 1788 to imprisonment in Newgate, London. Here he surrounded himself with foreign Jews, ate only specially prepared food, refused to see any Jew who was not bearded, and held regular services with a *minyan* in his apartment. He died in prison, but was buried not in the Jewish cemetery but in his family’s burial plot. Paradoxically, Gordon was one of the best-known British Jews of his time.

[Cecil Roth]

**GORDON, HAROLD** (1907–1979), U.S. rabbi and administrator. Gordon, who was born in Minneapolis, Minn., was ordained in Palestine. During World War II, he was chaplain in the North Atlantic Division of the Air Transport Command, flying over 250,000 miles to military bases in North America and Europe. Gordon was elected general secretary and chaplaincy coordinator of the New York Board of Rabbis, the metropolitan organization of Orthodox, Conservative, and Reform rabbis, in 1946 and executive vice-president in 1956. As such, he directed a network of chaplains in hospitals, prisons, and other institutions, and coordinated the work of one of the largest rabbinic bodies in the world. He initiated the establishment of the International Synagogue at Kennedy Airport, the Brit Milah School, and the Brit Milah Board of New York.

[Jack Reimer]

**GORDON, JACOB** (1877–1934), Canadian rabbi. Gordon was born in Dunilovitch (Dunilowicze), Vilna (Vilnius) district, Belarus. He apparently attended Volozhin yeshivah toward the end of 1895 or early in 1896 for several months, then relocated to Minsk and later to Kovno (Kaunas) in order to pursue his religious studies. During the 1880s or 1890s, Gordon’s parents moved to Smorgon and in the summer of 1904 Gordon immigrated to America together with his wife and first daughter, serving initially as a fund-raiser for an East European yeshivah. In February 1905, Gordon arrived in Toronto, where he stayed until his death.

A few months later, Gordon was appointed as rabbi of the Lithuanian-oriented congregation Goel Tzedec, and served also at congregation Chevra Tehillim (Beth Hamidrash Hagadol as of 1905). Over the following years, Gordon served additional congregations such as Knesseth Israel, Anshei Lida, and Yavneh Zion. Gordon gained a central position in the local Orthodox community due to his ongoing communal involvement and activities in Jewish education, the Free Burial Society, the Associated Hebrew Charities, the *Misrahi* movement, and *Va‘ad Harabanim*. In addition, Gordon developed various connections with non-Orthodox local organizations such as the Ladies’ Garment Workers’ Union of Toronto, as well nationwide Canadian Jewish organizations such as the Central Division of the Canadian Jewish Congress.

Gordon was a supervisor in the kosher meat industry, and was part of several disputes, some of which involved le-
gal action. Gordon also supervised other food products, such as vegetable oil and salad oil manufactured by various companies.

In addition to articles in the Jewish press and several entries he contributed to the *Hebrew Encyclopedia* and the *Ozar Yisrael Encyclopedia*, Gordon published a book of sermons in Hebrew, entitled *Minhat Yavo* (Safed, 1914). He presumably wrote another book, *Dovev Siftei Yeshenim*, and an essay on vegetarianism entitled *Nezirut min ha-Basar* that remained unpublished.

[Kimmy Kaplan (2nd ed.)]

GORDON, JACOB (1902–1943), philosopher. Gordon was born in Vilna. After graduating from the Jewish gymnasium founded by the Society for the Promotion of Culture among Jews, he studied philosophy, history, and psychology at the University of Hamburg (1920–24). His doctoral thesis, a comparative study of Kant’s and Hermann *Cohen’s philosophies, was published in 1926 with the aid of the Hermann Cohen Fund of the Akademie fuer die Wissenschaft des Judentums and Albert Einstein. Gordon returned to Vilna, where he worked in the *Yivo Institute of Jewish Research and on scholarly journals in Yiddish. In World War I, during the Nazi occupation, he was employed by the Vilna Judenrat, during which time he continued his philosophical studies. In January 1943 he addressed a letter in Yiddish to the Writers’ and Artists’ Committee of the Vilna Ghetto in which he outlined his plan to write a study on the “a priori foundations of history” and on “Kant and Schopenhauer,” but pointed out that nobody “could concentrate on a priori idealist matters while living under empirical, realistic conditions where getting money to buy a piece of bread assumes the weight and somberness of a fateful event.” In September, a month before the liquidation of the ghetto, Gordon was deported to the Vaivara camp in Estonia, where he died as a result of malnutrition.

Apart from his doctoral thesis, all of Gordon’s works were written in Yiddish. He edited the academic journals *Etyuden* and *Kultur un Problemen* and published a Yiddish translation of Kant’s *Prolegomena*. During the ghetto years he wrote an essay on the “Specificity of History.” Most of his collected writings were published in Israel in Hebrew in 1961 under the title *Yahid ve-Hevrah ba-Historyah* (“Individual and Society in History”), with an introduction by S.H. Bergman.

Bergman.

**Childhood and Education**

Gordon was born in Vilna. His father was “a cultured and erudite man” who engaged as Judah Leib’s first teacher Rabbi Lipa, the pupil of a disciple of the Gaon of Vilna. The boy was taught according to the Gaon’s method which involved first the study of the Bible and Hebrew grammar, and then the study of Talmud (an unusual procedure in traditional Jewish education at that time). At 14, he already had the reputation of a prodigy. He was permitted to study without the guidance of a teacher and would be one of the leaders of the Israelite army in the apocalyptic wars. Gordon returned to Eastern Europe after Luzzatto had ceased his activities in Padua, but he probably continued to preach Luzzatto’s teachings.

[Joseph Dan]
Shavli (1860–65) where he taught French and other secular subjects in the higher grades of the government secondary school; and in Telz (1865–72).

First Steps in Literature (Ponevezh and Shavli Periods)
Mikhel Gordon introduced Judah Leib to the Vilna circle of Hebrew maskilim whose leading members were Abraham Dov *Lebensohn, the outstanding Hebrew poet of the generation, and his son, the poet Micah Joseph *Lebensohn (Michal), Gordon's contemporary and friend. Both of them influenced his early literary efforts. At the behest of A.D. Lebensohn, Gordon transcribed Micah Joseph Lebensohn's manuscript poems, making minor editorial emendations, and when the latter died in 1852 at the age of 24, Gordon composed a eulogy to his memory, "Hoi Ah" ("O, Brother").

Gordon's first poems, Shirei Higgayon and Shirei Ailah (1851), were written under the influence of A.D. Lebensohn and his son. His first major work, Ahavat David u-Mikhail ("The Love of David and Michail," 1857), an epic, he dedicated to the "high priest," Lebensohn, who proofread and corrected it. Lebensohn also wrote a haskamah (a laudatory introduction) in verse to Gordon's book Mishlei Yehudah ("Judaah's Parables," Vilna, 1859) which contains mostly translations and adaptations of works by Aesop, Phaedrus, La Fontaine, Lessing, and Krylov, as well as a few fables whose themes, while derived from the Bible, the aggadah, and the Midrash, are original in their rendering. The work became very popular and its reputation extended beyond the Hebrew reading public of Russia. Some of the fables were included in Karaita children's collections (in the Crimea and the Caucasus), and a chrestomathy compiled by M. *Steinschneider (Berlin, 1886) for D. Sassoon's Jewish school in Bombay includes many of Gordon's fables.

At this time, Gordon, besides composing poetry, already wrote polemic essays. In an article in the Hebrew periodical "Ha-Maggid (signed "Dan Gabriel"), he advocated the translation of general literary works of universal human interest into Hebrew and denounced the opponents of such projects, accusing them of wishing "to drive out our Hebrew language from the lands of the living...." Gordon also reproached the German Jewish scholars, who published their Jewish studies in German, for their indifference to the Hebrew language. Thus already in the 1850s Gordon used the Hebrew language as a cudgel with which to rap Jewish society, especially the maskilim who failed to see in the revival of Hebrew a renaissance of the people itself.

Besides Ha-Maggid, Gordon published in Ha-Karmel, in L. Philippson's Allgemeine Zeitung des Judenthums, and in Russian-Jewish periodicals (e.g., Raszet, Den). His articles in the non-Hebrew press were mostly on Hebrew literature. During the blood libel case in Shavli in which two Jews were accused of the murder of a little peasant girl (1861), he strongly denounced prejudice in the Jewish and in the general press, writing especially for Golos, a liberal Russian paper which came out for the rights of Jews, and on whose staff Gordon was employed.

Later Haskalah Activity
In 1865 Gordon became the principal of the Hebrew public school of Telz and later established a girls' school in that city. He gave up teaching in 1872 and moved to St. Petersburg where he was secretary of the Jewish community and director of the "Society for the Promotion of Culture among the Jews. He held these offices simultaneously from 1872 to 1879 when he was incarcerated for purported anti-czardist activities. While imprisoned, and in banishment in Pudozh in the province of Olonets, he wrote Zidkiyyahu be-Veit ha-Pekuddot ("King Ze-dekiah in Prison," 1879), a historical biblical poem which reflects his prison experiences. Exonerated in 1880, he returned to St. Petersburg but was not reappointed to his former position. The passiveness with which the Jewish community leaders of St. Petersburg reacted to his imprisonment, with their failure to reinstate him after his release, was a blow to Gordon. Lacking any other income, he accepted A. *Zederbaum's invitation to become editor of the Hebrew daily "Ha-Meliz.

Gordon was a prolific and versatile writer and editor. Besides editing, he wrote editorials and various columns ("Halikhot Olam" and "Be-Mishkenot Yaakov be-Hug la-Arez") anonymously, and published stories, feuilletons, and book reviews under diverse pseudonyms. He turned the Hebrew feuilleton into an effective vehicle of expression. His poetry imitates the form of the biblical verse, but his prose style (stories and feuilletons) is a synthesis of biblical, talmudic, midrashic, and later Hebrew literature. Characterized by typical Hebrew scholarly humor, the style contains many puns and Gordon's literary and conceptual associations range over the whole body of Hebrew literature.

Gordon was also the science editor and literary critic of the Russian Jewish monthly Voskhod (1881–82), writing under the pseudonym "Mevakker" (Hebrew for "critic"). In "The History of Jewish Settlement in St. Petersburg," and "Attempts at Reforming the Jewish Religion," two articles published in Voskhod, he denounced basic reforms in the Jewish religion and the negative attitude to the Talmud taken by some. At the same time, however, he advocated moderate changes. Following a disagreement with his publisher, Gordon resigned from Ha-Meliz in May 1883 and began editing a collection of his poems which was published by the Jubilee Committee (4 vols., 1884), established in 1881 to honor the 25th anniversary of his writing career. He also worked on the staff of the 82-volume Russian encyclopedic dictionary, published by F. Brockhaus and I. *Efron, to which he contributed articles on Jewish history and Hebrew literature. Gordon's poetry of this period, which he published in the annual Ha-Asif, was mostly satirical and included some biting verse against Zederbaum, the publisher of Ha-Meliz. This, however, did not stop the latter from recalling Gordon to the editorship of his paper. Gordon returned in December 1885 and, having meanwhile been completely cleared by the Russian secret police, his name now appeared on the masthead. He continued as editor for two years (December 1885–88), during which time Ha-Meliz became a daily.
Literary Periods in Gordon's Work

Gordon's work falls into three periods: (1) the romantic period; (2) the realistic period; (3) the period of national awakening.

The Romantic Period. Influenced by the Haskalah and its exponents, he wrote long epics on biblical themes during this period, e.g., Ahavat David u-Mikhali (Vilna, 1857), “David u-Varzillow” (written between 1851 and 1856), and “Asenat Bat Potifera” (publ. in 1868). They are imbued with the Haskalah spirit and are of allegorical tenor, yet echo yearnings for a distant and enchanting biblical past.

The Realistic Period. In his poetry as well as in his polemical articles, Gordon was the foremost combatant against the ills of Jewish society and the intransient religious conservatism of its leaders who, in his view, disregarded the reality of the modern age. He fearlessly chided the people and their leaders. In one of his letters he called himself “the national prosecutor.” He became an advocate of the common people, the poor, and the oppressed. Among those whose cause he championed was the Jewish woman whom he saw deprived of rights and subordinate to the male. The heroine of the poem “Koço Shel Yod” (”The Point on Top of the Yod,” completed in 1876) is the beautiful Bat-Shu’a (Gen. 38:12) who, after much suffering and hardships, succeeds in obtaining a divorce from her husband Hillel, a nēr-do-well who had gone abroad to seek his fortune and had deserted her and their two children. An educated young man, a government employee, wants to marry Bat-Shu’a, but “Rav Vafi ha-Kuzari” (the name being an anagram of the letters of the then well-known Rabbi Joseph Zechariah [Stern]) invalidates the divorce bill because the husband’s name “Hillel” had not been signed in plene, lacking the letter yod. Bat-Shu’a therefore remains an agunah and poor. The poem is an outcry against the lot of the Jewish woman who, because of the “point of a yod,” is denied happiness. In fighting for the rights of Jewish women, Gordon was influenced by the powerful Russian women’s liberation movement of the 1860–70s. “Koço Shel Yod” became a catchword quoted by the fighters for women’s rights: “Hebrew woman, who knows your life? / In darkness you came and in darkness shall go; / Your sorrow, your joy, your misfortune, your desires / In you are born, in you they die.”

The Period of National Awakening. Gordon, like the maskilim of his generation, at first believed that isolation was at the root of all the troubles that plagued the Jews. “Be a Jew in your home and a man in the street,” a line from his poem Hakizalah Ammi (“My People Awake”), became the motto for a whole generation of maskilim. The source of the evil was the rabbis whom he considered intransigent and rigid adherents to the halakhah and to old customs and tradition. The only solution for Russian Jewry was to leave its narrow, confined existence and to adapt itself to the wider environment. He urged Jews to stop speaking Yiddish, which he regarded as a jargon, and to adopt Russian. He advocated universal general education, reform of religious customs, and prompted Jews to engage in more productive occupations, such as crafts, industry, and agriculture. Caught up in the liberal spirit that swept Russia at the time, Gordon firmly believed in Russian liberalism, especially after serfdom was abolished in 1861 and the Jews were granted some rights. He thought that adaptation to the non-Jewish environment would lead to a relationship of friendship and brotherhood between Jews and the people among whom they lived.

Gordon was to become disillusioned in Russian liberalism and in his whole conception of the viability of Jewish life in the Diaspora. This led him to reexamine his ideas and values in the light of everyday reality. With the growth of the antisemitic movement in Russia and in light of the ineptness of Russian liberalism, Gordon despaired of the Russian Jewish community ever integrating within the Russian environment and cultural milieu. He was also disappointed in the Jewish maskilim, particularly the young, who were carried away by the assimilationist trend, rejecting indiscriminately and forsaking Jewish values and the Hebrew language which Gordon loved and championed without reservation. In his poem “Le-Mi Ani Amel” (“For Whom Do I Labor?”) he cries out in despair: “My enlightened brothers have learned science. / They mock the old mother who holds the distaff / Forsake it [Hebrew] and let us each follow the language of his country.” He concludes on an ominous note of dejection: “Oh, who can tell the future, who can tell me? / Perhaps I am the last of Zion’s poets / And you, the last readers.” Thus he protested against the assimilationist trend as well as against his adversaries who accused him of preaching russification.

The 1881 pogroms in southern Russia (instigated with the knowledge and perhaps the support of the government) completely crushed Gordon’s spirit. He began to look upon emigration to Western countries as the only salvation for Russian Jewry. Gordon did not believe that the Erez Israel of his time, under the yoke of a degenerate and cruel Turkish rule which closed the country to Jewish immigration, could absorb all the Jews who would want to settle there. He therefore advocated immigration to Western countries, particularly to the United States. In his powerful poem “Ahoti Ruhmah” (“Ruhmah, My Sister”), written in 1882 after the Russian pogroms, he pleaded for “the honor of Jacob’s daughter whom the son of Hamor had violated.” The use of biblical names – Dinah, daughter of Jacob, and Shechem, son of Hamor – enabled the poet to evade Russian censorship and to publish his poem of wrath against the Russian rioters in Migdanot, a literary supplement to Ha-Meliz. Gordon thunders in his wrath: “Abel’s blood marks Cain’s forehead! / And your blood too all shall behold / A mark of Cain, disgrace and eternal shame / On the forehead of the murderous villains.”

He ends his poem: “Come, let’s go, my sister Ruhmah!” In “Bi-Nerainu u-vi-Zekeneinu Nelekhi” (“We Shall Go, Young and Old”), a poem also written in the aftermath of the Russian atrocities, he calls out to the Jewish people: “Fear not, Jacob, be not dejected, / Thousands slaughtered will not de-
ter! / Our God’s voice calls from the storm / ’Let’s go, young and old’.

Gordon’s changed attitude is manifest in his articles and feuilletons written when he returned as editor of Ha-Meliz which had become the organ of the Horbat Zion movement. He was sharply attacked by ‘Ha-Zefirah and ‘Ha-Yom, rival Hebrew newspapers. They accused him of disavowing the views he had preached all his life and of submitting, for material reasons, to the dictates of the owner of Ha-Meliz. Gordon, however, never actually joined the Horbat Zion movement and did not explicitly endorse emigration to ‘Turkish’ Erez Israel as a solution for Russian Jewry. Settlement in Erez Israel, without the renaissance of the nation, in his view, would be inefficacious, and such a revival depended on religious and cultural modifications: “Our redemption can come about only after our spiritual deliverance” (Ha-Meliz, 18 (1882), 209–16).

His writings, in which he fervently urged the revival of Hebrew and which express his great love for the Jews as a people, undoubtedly influenced the movement for national revival and later the Zionist movement. In his introduction to Al Parashat Derakhim (“At the Crossroads,” 1895), Ahad Ha-Am, father of spiritual Zionism, notes his indebtedness to Gordon. Gordon’s call, “O House of Jacob, come ye, and let us walk” (Isa. 2:5), in his article in Ha-Karmel (1886), in which he advocated enlightenment and rapprochement to Europe, eventually became the motto of the first “Bili pioneers who turned their back on Europe and its enlightenment and immigrated to Erez Israel (1882) to rebuild its wilderness. Gordon, while not committing himself formally, actively upheld the Zionist cause. Thus his criticism (in Hebrew and Russian) of L. Pinsker’s Autoemancipation (1882) was favorable, as was his view on Britain’s occupation of Egypt in 1882. Realizing that the occupation would increase Palestine’s importance “as a corridor to Egypt and a center for Asian trade and that the British rule would attract many of our brethren throughout the Diaspora to Palestine to till the soil, build railways, and introduce new life in trade, property, and arts and crafts,” he proposed the founding of “the society for those going to Palestine” in his article in Ha-Meliz (1882).

Gordon’s place in Jewish literature as the poet of the Haskalah is undisputed. The aesthetic value of his writings, however, was questioned soon after his death and is still being contended. The dispute grew out of a literary atmosphere which had reexamined the values of the past. The last decade of the 19th century had witnessed cultural changes in society in general, and the Jewish community in particular, that affected literature and modified aesthetic taste. It was debated whether Gordon was a poet or merely a versifier. Strong views were voiced by both his admirers and his detractors but the former always prevailed.

There was no conflict between Gordon, the poet and visionary, and the Gordon who attempted to forge a new style, had mastered several languages, both classical and modern, and was a gifted translator. Among his translations are Byron’s Hebrew Melodies (Zemirot Tisrael, 1884), the Pentateuch (from Hebrew into Russian, 1875), and classical fables which he translated from Russian into Hebrew (Mishlei Mofet). Gordon also wrote in Russian and German on Judaism and Hebrew literature. His light, humorous poems in Yiddish, a language he had always disparaged, were published in Kol Mevasser, a Yiddish weekly supplement (1862–72) to Ha-Meliz. At the request of friends, the poems were collected in a book and published under the title Sihat Hallim (“Small Talk,” 1887, 1889). At home in all of Jewish literature, Gordon was able to draw on its sources with remarkable versatility and ease. He invested obsoleto expressions and idioms with fresh meaning and created new syntactical units. Bialik called him one of the greatest wizards in Hebrew of all times—a title his prodigious mastery and control of the language have deservedly earned.

[Aharon Zeev Ben-Yishay]

GORDON, MAX (Mechel Salpeter: 1892–1978), U.S. theatrical manager and producer. In his early years Gordon was linked with Sam Harris in productions of Welcome Stranger, The Jazz Singer, and Rain. From 1930 he produced upward of 30 plays, among them Design for Living (1933), Dodsworth (1934), Pride and Prejudice (1935), The Women (1936), Othello (1937), My Sister Eileen (1940), Junior Miss (1941), and Born Yesterday (1946). His final Broadway presentation was The
Solid Gold Cadillac (1953). Gordon also produced the films A Trip to Paris (1938), Abe Lincoln in Illinois (1940), and My Sister Eileen (1942). His autobiography, Max Gordon Presents, was published in 1963 (with Lewis Funke).

GORDON, MICHAEL (1909–1993), U.S. director. Born in Baltimore, Gordon began directing feature films in 1942 and was highly successful critically and commercially with films such as The Web (1947); Another Part of the Forest (1948); An Act of Murder (1948); Woman in Hiding (1950); and his adaptation of Rostand’s Cyrano de Bergerac (1950). Gordon was blacklisted because of the House Un-American Activities Committee hearings. Away from Hollywood for a decade, he returned with an unrecognizable but successful style, directing slick, glossy films, such as I Can Get It for You Wholesale (1951); The Secret of Convict Lake (1951); Pillow Talk (1959); Portrait in Black (1960); Boy’s Night Out (1962); For Love or Money (1963); Move Over, Darling (1963); A Very Special Favor (1965); Texas across the River (1966); The Impossible Years (1968); and How Do I Love Thee? (1970). He was also one of the directors of the television series Decoy (1957) and Anna and the King (1972). [Jonathan Licht / Ruth Beloff (2nd ed.)]

GORDON, MIKHIL (1823–1890), Hebrew and Yiddish poet and essayist. Born in Vilna, he early came under the influence of the Hasidah circle of A.D. *Lebensohn. He began his literary career in 1847 with a Hebrew elegy on the death of Mordecai Aaron *Guenzburg, a member of this circle, and continued with Hebrew articles in various periodicals and the publication of two books in Hebrew. He rose to fame with his Yiddish songs which circulated in manuscript in the 1850s and 1860s and for which he also composed melodies. He published some of these Yiddish songs in Di Bord… un andre… Yidishe Lider (“The Beard … and other … Yiddish Songs,” 1868), issued anonymously so as not to endanger his reputation as a Hebrew poet. His song “Shitey of Mayn Folk” (“Arise My People”) was composed in 1869 and has generally been regarded as the classical poetic expression in Yiddish of the spirit of Jewish enlightenment in Russia. That year he also published a history of Russia in Yiddish. His late, pessimistic mood, intensified by his poverty and loneliness, is reflected in his final poems, published in 1889. His wife was the sister of the Hebrew and Yiddish poet J.L. *Gordon.

GORDON (Goldberg), MILTON M. (1918– ), U.S. sociologist. Born in Gardiner, Maine, Gordon taught at the University of Pennsylvania, Drew University, and Haverford and Wellesley Colleges before being appointed professor of sociology at the University of Massachusetts in 1959. In 1986 he became professor emeritus of sociology.

A specialist in the fields of social stratification and inter-group relations, he became widely known through his books Social Class in American Sociology (1958) and Assimilation in American Life (1964). The latter, which analyzes the role of race, religion, and national origin in American social organization, is remarkable for its differentiation between cultural and structural pluralism and the formulation of the concept of the “ethclass,” referring to social ranking within an ethnic group.

GORDON, NATHAN (1882–1938), rabbi, lawyer, community activist. Gordon was born in New Orleans. He was educated in the public schools there but his secondary and post-secondary education was in Cincinnati. In 1906 he earned both a B.A. from the University of Cincinnati and his rabbinical ordination from the Hebrew Union College. Several months after graduation he became the spiritual leader of Montreal’s Reform Temple Emanu-El. He strongly supported the Reform ideal of social activism and became an active voice against corruption in Montreal’s governance and the attendant neglect to social services. He also participated in the creation of the Mount Sinai Sanatorium in Ste. Agathe in 1913, and helped in its subsequent maintenance. Unlike most of his American colleagues, and his predecessors in Montreal, Gordon was both a Reform Jew and a Zionist, and spoke for Zionist groups in Jewish communities in Ontario and Quebec.

In 1916, Gordon earned a law degree from Laval University in Montreal (now the Université de Montréal) and left the pulpit. He first practiced with the well-known Jewish lawyer Peter Bercovitch; in 1919, however, he became the prosecuting attorney of the city of Montreal, a position he held until 1931 when he returned to private practice. Gordon remained concerned about the social welfare of Montrealers and was a member of the Non-Catholic Juvenile Court Committee. He also stayed active in Temple Emanu-El, and served as its president for a number of years. In the 1930s he took part in the reorganization of the Canadian Jewish Congress and served as president of its Eastern Division.
Gordon had an interest in academic Jewish studies. He earned an M.A. in 1909 at McGill, writing on capital punishment in biblical and rabbinic texts. In 1913 he earned a Ph.D., with his thesis titled "Prolegomena to the Social Customs of Mishna." In 1909 he was appointed lecturer in the Department of Oriental Languages and Literature at McGill.

[Richard Menkis (2nd ed.)]

**GORDON, SAMUEL** (1871–1927), English novelist. Gordon began his literary career while secretary of the London Great Synagogue. His * Sons of the Covenant: A Tale of London Jewry* (1900) saw the best solution to the "ghetto" problem in a combination of religious Orthodoxy and social and educational advancement. Gordon also wrote stories of Jewish life in Russia: * The New Galatea* (1901), and * The Lost Kingdom; or, the Passing of the Khazars* (1926), a historical romance.

**GORDON, SAMUEL LEIB** (1865–1933), Hebrew writer and Bible scholar. Born in Lithuania, he immigrated to Palestine in 1898 and taught at the Jaffa Boys School. When the school was taken over by the * Alliance Israélite Universelle* he left for Warsaw (1901) where he established a Hebrew school for boys. In 1924, he returned to Palestine and devoted the latter years of his life to the composition of an extensive commentary on the Bible. Gordon contributed poems, articles, and translations to the Hebrew periodicals of the late 19th century, and also wrote extensively for children. His books include *Kinnor Yeshurun* (3 vols., 1891–93); *Torat ha-Sifrut* (2 vols., 1900), which was reprinted many times; and a revised edition of his poems, *Shirim u-Føëmot* (with foreword by S. Halkin), which was published in 1935. He translated three books by I. "Zangwill, *La Fontaine's Fables*, and Shakespeare's *King Lear*. Gordon's textbooks played a vital role in Hebrew education in the Diaspora at the turn of the century; * Ha-Lashon* (3 vols., 1910–19) was one of his most popular works. He also edited several journals for the young: * Olam Katan* (1901–05), * Ha-Ne'urim* (1904–05), as well as * Ha-Pedagog* (1903–04), a journal of education to which the best writers of his generation contributed.

[Getzel Kressel]

From 1907 he worked on a vocalized Bible commentary which was to provide a "new scientific pedagogical interpretation for advanced students and teachers, edited in the accepted traditional spirit." Known as *Shalag* after the initials of his name, it was largely based on German Bible criticism. Gordon explained words and subject matter simply and fully enough for school pupils and teachers without elaborating on the religious significance of the Bible. His introduction to the prophetic and hagiographic books deal with the literary aspect as well as with personalities and events. Gordon's commentary is still used extensively in the secondary schools in Israel, with the exception of those which are religiously oriented.

[ Jacob S. Levinger]

**GORDON, SHMUEL** (1909–1998). Soviet Yiddish prose writer. Gordon was born in Lithuania to a family related to the Hebrew poet Judah Leib *Gordon, but grew up in Jewish orphanages in the Ukraine. In 1928 he was a student of the Yiddish department at the Second Moscow State University. A tyro poet, he showed some of his works to Aaron *Kushnir, who advised him to send the poems to the Warsaw *Literarishe Bletter*, where they appeared on December 28, 1928, and provoked a scandal in the Soviet press, signaling the complete isolation of the Stalinist Yiddish literary world. Following Gordon's letters of repentance, he was allowed to graduate two years later from the Moscow Teachers Training Institute. For a couple of years he worked as a teacher before becoming a Yiddish journalist and writer. His first story was published in 1930 (under the pseudonym Sh. Dongar) by the Kharkov journal *Di Royte Velt*. During World War II, Gordon served in the army and worked for the Jewish 'Anti-Fascist Committee. In 1944 he was accepted as a member of the Writers' Union. Some of his stories written during the war were included in his 1946 book *Milkome-tsayt* ("War Time"). He was imprisoned in 1949 and was sent to the Gulag as a Jewish nationalist. After Stalin's death he returned to literary activities, became a leading contributor to *Sovetish Heymland* and the author of a score of volumes. His prose represented an attempt to register the last sparks of traditional Jewish life in the Soviet Union. In 1988 he began to write his last novel, *Yizker* ("Commemorating the Dead"), which is matchless for a background understanding of the persecution of Soviet Yiddish literati in the 1940s and 1950s. Initially serialized in *Sovetish Heymland*, it was published in Israel in 2003 thanks to the endeavors of Gershon Winer's Foundation for the Advancement of Yiddish Studies.

[Gennady Estrakh (2nd ed.)]

**GORDON, SID** (1917–1975). U.S. baseball player. Gordon was born in the Brownsville section of Brooklyn to Rose (Meyer) and Morris, who emigrated from Russia and became a plumber and a coal dealer in the United States. After moving to Flatbush, Gordon attended Samuel Tilden High School, where he was a star baseball player. Gordon played his first game for the New York Giants on September 11, 1941, and ten days later on September 21, just hours before Rosh Hashanah, he was one of four Jewish players to appear in the Giants' lineup, an unprecedented occasion: Gordon and Mor-
GORDONIA, pioneering Zionist youth movement that was founded at the end of 1923 in Galicia from small cells and grew into a world movement. The first groups of Gordonia were created under the influence of *Hitahdut, on the one hand, and by members who had left *Ha-Shomer ha-Za'ir, on the other. The official name of the movement was chosen at the first world conference in Danzig (November 1928) as Histadrut ha-No'ar ha-Amamit ha-Ḥalutzit Gordonia (the People’s Pioneering Association of Youth – Gordonia). The principles of the movement, which were set down at the same conference, were the "building up of the homeland, education of members in humanistic values, the creation of a working nation, the renaissance of Hebrew culture, and self-labor (avodah azmīt)."

From its beginnings, the movement developed around two ideological bases. It aimed at reaching the lower classes of Jewish society (artisans, farmers and villagers, poor people, which constituted a large percentage of Galician Jewry), in contrast to Ha-Shomer ha-Za'ir, which was composed principally of students; and it wished to mold these youth in the spirit of A.D. *Gordon's personality and teachings. Although Gordon, as a historical figure, was recognized by all the pioneering youth movements, Gordonia regarded his philosophy as its principal ideological source and adopted his world view. In contrast to the dogmatic attachment of Marxist movements to Marx, the relationship of Gordonia to Gordon was characterized by its lack of dogmatism, as reflected in Gordon's personality itself. Gordon's ideological image was not distinguished from his personality, and the combination of both was viewed as expressing free humanistic creativity (influenced by both the world at large and the Jewish world) that perpetuates independent, original thought which is always related to all facets of life. This philosophy was particularly attractive to those who had been disappointed by Marxism and did not believe that it was relevant to a youth movement wishing to build its future in Ereẓ Israel on the basis of labor. The Danzig Conference established 13 standards for the behavior of the individual in his personal life and in the movement, and in his relationship to the Jewish people, Ereẓ Israel, labor, socialism, etc. Although it had taken much from other youth movements, especially German ones, Gordonia meticulously maintained its unique character as a Jewish, Zionist, and Ereẓ Israel-oriented movement.

From Galicia Gordonia spread to the rest of Poland, Romania, and the United States and, by World War II, had close to 40,000 members. At all its conferences, it stressed its identification with the Ereẓ Israel labor movement and its fundamental principle – personal fulfillment through aliyah and settlement within the framework of collective living and labor. The first Gordonia groups began to settle in Ereẓ Israel shortly after the riots of 1929, first in Ḥaderah and later in other places.
These groups laid the foundation for kevuzot of Gordonia in the rebuilt *Huldah, which became the movement's center in Erez Israel and contains the central archive of Gordonia, and in Kefar ha-Horesh, Massadah, Ma‘aleh ha-Hamishah, Nir Am, Hjantah, and elsewhere. These groups, which first merged into Iggud Gordonia, joined Hever ha-Kevuzot in 1933 and also provided new members for established kevuzot (such as Deganyah ALef and Bet, Geva, Ginnegar).

Later followed the merger of Gordonia with Maccabi ha-Za‘ir, which developed as a Jewish scouting movement in Germany and Czecho-slovakia and whose members began to settle in Erez Israel in 1932–33. Maccabi ha-Za‘ir set up its first settlements (Kefar ha-Maccabi, Ma‘yan Zevi) in the framework of Hever ha-Kevuzot in 1941, integrated with Gordonia, and thereafter the two movements served as a single framework for pioneering Jewish youth from Eastern and Western Europe. In 1937 a Gordonia movement came into being among Jewish youth in Palestine, and in 1945 it united with part of Mahanot ha-Olim and founded Ha-Tenu‘ah ha-Me’uhadar (full name, Ha-Tenu‘ah ha-Kelalit shel ha-No‘ar ha-Lomed). After the Holocaust, attempts were also made abroad to unite pioneering youth movements with aims similar to those of Gordonia, and finally, when the *Ihud ha-Kevuzot ve-ha-Kibbutzim was created (in 1951), and after a series of mergers with Gordonia, *Ihud Habonim was founded.

Gordonia played a heroic role in Nazi-occupied Poland during World War II. In Warsaw, under the leadership of Israel Zeltzer and Eliezer Geller, a secret center of the movement was established on 23 Nalewki Street, which organized a considerable network of underground educational activities among its members of all age groups. The center, mainly through Geller’s visits in the ghettos of Czestochowa, Opoczno, Będzin, Szosnowiec, Opatow, and other towns, contributed greatly to the resistance movement and also to the preparations for active revolts, particularly in Warsaw in 1943. Gordonia’s Polish-language underground paper in Warsaw, Słowo Młodych, was published in Hebrew translation in 1966 by the archives of Gordonia-Maccabi ha-Za‘ir. From its foundation, the movement published newspapers and literature in a number of languages. Pinhas *Lavon (Lubianiker) was the head of the movement from its foundation throughout its existence. He served as Israel’s minister of defense from 1953 to 1955.

---

**GORELIK, SHEMARYA** (1877–1943). Yiddish, German, and Hebrew journalist and essayist. Born in Lokhvitsa, Ukraine, he came to Vilna in 1890 and engaged in literary activities in the Russian press. For several years he sympathized with the “Bund, but in 1905 he joined the Zionist movement, and in 1906 he started publishing articles and essays in the Yiddish Zionist weekly Dos Yidisher Folk. In 1908 he joined S. *Niger and A. Veiter in founding and editing Literarishe Monatschriftn, a Vilna literary monthly which attracted writers of diverse ideologies, and in the following years contributed numerous feuilletons and essays about modern literature to various Yiddish publications in Poland and the U.S. During World War I, Gorelik lived in Switzerland, participated in pacifist publications, and was sentenced to prison for six months. He later described his experiences during these years in Fünf Jahre im Lande Neutralien (1919). After the war, he lived in Germany, except for one year spent in New York, and contributed to German Jewish periodicals, until forced to leave in 1933. He then settled in Palestine and wrote for the Hebrew press. His literary sketches first appeared in book form in 1912. His Yiddish essays which offered interesting insights into the work of most prominent European writers were collected in four further volumes. A posthumous selection, with an introduction by his brother, M. Horelik, appeared in Los Angeles in 1947. A Hebrew translation of Gorelik’s essays by A. *Shlonsky, was published in Tel Aviv (Massot, 1937).

**GOREN, CHARLES HENRY** (1901–1991). U.S. bridge expert. Goren, who was born in Philadelphia into a Russian immigrant family, earned an L.L.B. in 1922 and a master’s degree in 1923 at McGill University in Montreal. He was admitted to the Pennsylvania bar in 1923 and practiced law in Philadelphia. He had taken up bridge during his student days and eventually achieved master status, abandoning the law in order to play and write about bridge. Goren won the National Bridge Championship of America 34 times. His many books and newspaper columns earned him widespread recognition. Goren’s bridge methods are known for their simplicity and teachability. He cleverly synthesized the “honor trick” strategy of Culbertson with the “point-count” invented by Milton Work. Known as “Mr. Bridge,” Goren was a popular teacher and author who traveled extensively as a professional, a lecturer, and a TV personality. He was a regular contributor to McCall’s and Sports Illustrated, had a syndicated newspaper column, led bridge cruises, and appeared on his own TV show, *Bridge with Charles Goren* (1959–64). Before his retirement from active competition in 1966, he had captured virtually every major bridge trophy in U.S. tournament play. As his health and eyesight began to fail, he settled into a quiet life in Southern California. Goren established a charitable trust during his lifetime. After his death, it became the Charles Goren Foundation.

GOREN, SHLOMO (1917–1994), Israel rabbi. Born in Zambrów, Poland, he was taken in 1925 to Palestine where his father was one of the founders of Kefar Hasidim. At the age of 12, Goren entered the Hebron Yeshivah in Jerusalem where he soon became famous as a prodigy. He published his first work, Feyvush, in 1901, several other novels, and two collections of essays on modern Hebrew writers, Mevakkerim be-Sifrutenu (“Critics in Our Literature,” 1944), and Demuyyot be-Sifrutenu (“Figures in Our Literature,” 1953).

Goren, shlomo

Goren (Gruenblatt), NATAN (1887–1956), Hebrew author, journalist, and critic. Born in Vidzy, in the Kovno district of Lithuania, he moved to Vilna in 1903. He became active in Jewish revolutionary circles and was imprisoned several times during 1906–08. In 1910 he moved to Odessa, joining the prominent group of Hebrew and Yiddish writers who lived there. Subsequently he lived in Moscow, where he worked for the Stybel publishing house and for the journal Ha-Am. In 1921 he returned to Lithuania, taking up a leading position in Jewish education and in Hebrew and Yiddish letters. In 1935 he settled in Tel Aviv, where he taught in secondary schools, was active in the Writers’ Association, and continued his literary work.

His articles, stories, and poems appeared, beginning in 1911, in numerous Hebrew and Yiddish journals in Europe, Palestine, and the United States. He published his first novel, Feyvush, in 1901, several other novels, and two collections of essays on modern Hebrew writers, Mevakkerim be-Sifrutenu (“Critics in Our Literature,” 1944), and Demuyyot be-Sifrutenu (“Figures in Our Literature,” 1953).

[Getzel Kressel]
the Six-Day War in 1967. At that time, he also ascended the Temple Mount and is reported suggesting to Central Command Head General, Uzi Narkiss, that the IDF blow up the Dome of the Rock, thereby establishing Israeli/Jewish sovereignty on the Temple Mount (Haaretz, December 31, 1997). In the months following the Six-Day War, Goren called for the destruction of the mosques on the Temple Mount and the building of the third Temple. This was in direct opposition to the majority of the rabbis on the Chief Rabbinate Council and the chief rabbis, Unterman and Nissim, themselves, who were of the halakhic opinion that the Temple Mount was to be placed off-limits to Jews. Just after the Six-Day War, Goren held seminars for IDF reservists on the Mount, as well as full religious services on Tisha B’Av. Over time, Goren modified his views and privately encouraged scholars and others to ascend to the Temple Mount, but refrained from issuing a public decree permitting Jews to ascend. During his tenure as chief rabbi, he did approach then prime minister, Menahem Begin, to ease the government’s stance restricting the access of Jews to the Temple Mount. Goren’s extensive research into the Temple Mount and the exact placement of the Temple, Har ha-Bayit, was finally published in 1992, almost 20 years after he finished his research because of the controversial nature of the subject and his opinions.

"GORGIAS. Seleucid general in the war against the forces of *Judah Maccabee. Together with two other generals, *Ptolemy Macron and *Nicantor, Gorgias was sent against the Jews in 165 B.C.E. with a force of 40,000 foot soldiers and 7,000 cavalry. Gorgias set out from his camp near Emmaus with 6,000 soldiers, hoping to surprise Judah by night. Judah, however, succeeded in evading the Greek army and destroyed its main camp at Emmaus, after which Gorgias retreated in disorder. When, two years later, Judah and his brother *Simeon set out to Gilead and Galilee in order to protect the hard-pressed Jewish settlements there, they left the armies of Judea under the inexperienced command of *Joseph and Azariah, sons of Zechariah. Hoping to acquire a reputation for valor, the two commanders attacked the armies of Gorgias, who was at that time in command at Jamnia, but suffered a disastrous defeat.

GORIN, BERNARD (pseudonym of Isaac Goido; 1868–1925), Yiddish playwright, translator, editor, and drama critic. Born in Lida (Lithuania), Gorin published his first story, "Zikhroyynes fun Khveyder" ("Memoirs From the Heder," 1889), in Mordecai Spektor’s Hoyzfraynd, followed by "Shakhne un Shrage" ("Shakhne and Shrage," 1890), in I.L. Peretz’s Yidishe Bibliotek. He edited a Yiddish series entitled Kleyne Ertsynungen, which included works by I.L. Peretz and David Pinsker (1893) and translated Dickens’s David Copperfield (1894), leaving that same year for New York, where he became active in the literary and theatrical world, contributing to both the Yiddish and English language press. In 1908 he began reviewing plays for the Morgn-Zhurnal. In addition to writing original plays, Gorin adapted numerous foreign language works for the Yiddish stage. He is best known as a historian of the Yiddish theater, his most important work being Di Gesikhakte fun Yidishn Teater ("History of the Yiddish Theater," 2 vols., 1918) which lists 2,000 plays produced on the Yiddish stage. In 1927 Gorin’s stories were collected and published in three volumes.

GORIZIA, city in Friuli, N.E. Italy. Gorizia was part of the Austrian empire until 1918 though for centuries its culture had been Italian. Jews were first mentioned in the county in the years 1299–1363. Only in 1548, however, did Jews sign the first charter with the local authorities. In 1624 the first Jew from Gorizia, Joel Pincherle, obtained from Emperor Ferdinand II the title of Hoffaktor. In 1696 Emperor Leopold I legislated the erection of the ghetto, activated in 1698. The community followed the Ashkenazi rite. Until the 18th century the Jews of Gorizia were mostly moneylenders. The most important banking families were that of Pincherle, Gentili, and Morpurgo. In the 18th century Jews engaged in the manufacture of silk and wax (the latter by a certain Aron and the Morpurgo brothers), which dominated the city’s economy. In 1756 the synagogue in the Via Ascoli was consecrated. After they had been expelled from the smaller Venetian towns in 1777, more Jews moved to Gorizia. The 1781 Toleranzpatent of Joseph II allowed the Jews to be even more integrated in civic life. In 1788 the town’s Jewish population numbered 270.

The intellectual life of Gorizia Jews at the end of the 18th century and at the beginning of the 19th was dominated by the figures of two rabbis, Isaaco Samuele Reggio and his son Abram Vita Reggio.
During the 19th century the community slowly developed. In 1846 there were 266 Jews living in Gorizia. In 1900 there were already 865 living there.

[Attilio Milano / Samuele Rocca (2nd ed.)]

Holocaust Period
In 1938, there were 183 Jews in Gorizia, mostly engaged in business, commerce, and services. Of these, 109 were Italians and 76 were foreigners, primarily from Central and Eastern Europe. Since the beginning of the century, the population of Gorizian Jews had decreased, that of foreign Jews had significantly increased, and assimilation had grown. A strong demographic decline occurred soon after the appearance of the racial laws of 1938, caused especially by the exodus of the foreign Jews and by conversions or withdrawal from the community. After the German occupation in September 1943, Jews most aware of the danger moved elsewhere or went into hiding, while the old, the sick, and those without adequate means remained at home and were arrested and deported. The first arrests and imprisonments occurred in September 1943. There followed the roundup of November 23, in which 22 people were arrested, imprisoned at Coroneo in Trieste, and deported to Auschwitz on December 7. In the following months, other Gorizian Jews who had gone into hiding there or in other Italian towns and cities, such as Ferrara, Florence, Genova, and San Cesario sul Panaro, were caught. In all, 47 Jews from Gorizia were deported, of whom only two, Iris Steinmann and Giacomo Jacoboni, returned. Because of the drastic decrease in the number of Jews in Gorizia after the war, the historic local Jewish nucleus of the Isonzo area was incorporated into the Jewish community of Trieste in 1969.

[Adonella Cedarmas (2nd ed.)]

GORKI (until 1932 and again from 1992 Nizhni Novgorod), city on the Volga River, Belorussia. It served as an entrepôt for the merchants of Russia and Russian Central Asia from the early 19th century. From 1835 Jewish merchants were permitted to attend its celebrated fairs where they were allowed to purchase goods and, with the exception of imported articles, sell them wholesale. A permanent Jewish community was founded by soldiers discharged from the army of Nicholas I (see "Cantonists", and in 1873 received permission to maintain a house of worship. On June 7, 1884, pogroms resulting in murder and looting broke out in Kanavino, a suburb of the city. The Jewish community of Gorki numbered 2,377 in 1897 (2.5% of the total population). It increased during World War I when refugees from the war zone arrived there, and in 1926 numbered 9,328 (5.2% of the total). In 1939 there were 14,319 Jews in Gorki (2.2%). According to the census of 1959 the Jewish population of Gorki district was 17,827; the majority apparently lived in the capital. In 1970 the Jewish population was estimated at about 30,000. Most left for Israel and the West during the mass emigration of the 1990s. There was a Jewish cemetery, but no synagogue.

[Yehuda Slutsky]

"GORKI, MAXIM (pseudonym of Aleksey Maksimovich Peshkov; 1868–1936), Russian author. Gorki was the outstanding pre-Revolutionary Russian writer who sided with Lenin and the Bolsheviks, but he also distinguished himself as a vigorous champion of the oppressed Jewish people in Russia. Raised in a primitive environment, where the Jews were seen through a strange accumulation of folklore, fantasy, and superstition, Gorki was intellectually at odds with such notions, although emotionally and artistically he sometimes could not help expressing them. His early revolutionary position – which despite periods of dissent and opposition to the Bolsheviks and even voluntary exile, eventually made him a supporter of the Soviet regime – was closely linked with his deep revulsion against Jew-baiting and pogroms, and his warm friendship for many Jewish writers and intellectuals. His story Pogrom (1918), inspired by the Kishinev outrages of 1903, was no isolated example of Gorki’s preoccupation with the Jewish fate in Russia; and in Detstvo (1914; My Childhood, 1915), the first part of his autobiography, Gorki movingly recalled a Jewish boy encountered in his youth. In 1916 Gorki coedited Schit, an anthology of statements in defense of the Jews drawn from Russian literature, in which he made it clear that he saw in the question of Jewish rights the whole issue of injustice under the Czarist system.

Gorki also showed sympathy for the Hebrew renascence and for Zionist aspirations in Ereẓ Israel. Most of Gorki’s impassioned denunciations of antisemitism were omitted from the 30-volume Soviet edition of his works (1949–55). Most of these omissions have been cataloged (B. Suvarin, in Dissent, winter 1965; B.D. Wolfe, The Bridge and the Abyss (1967), 162–3n.). Works not published in this edition include an article on the Hebrew poet *Bialik; another on the Kishinev pogrom; and an appeal to save the "Habimah theater, then still in the U.S.S.R.

His wife, Ekaterina Peshkova (née Volzhina, 1876–1936), was, after the October Revolution, for many years a kind of guardian angel of the political prisoners in the U.S.S.R. in her capacity as chairman of the "Political Red Cross. She was warmly remembered by many Jews, particularly Zionists, whom she helped in various ways during their imprisonment, sometimes obtaining for them the permission to emigrate to Palestine.

GORLICE

[Irwin Weil]

GORLICE, town in S.E. Poland. In the early period of Polish rule Gorlice belonged to the district of Nowy Sacz where all the towns had been granted the privilege of excluding Jews (de non tolerandis Judaeis), excepting Nowy Sacz itself, where a Jewish community existed. A few Jewish families were living in Gorlice in 1765 and 1784. Jews settled there in the 19th century, living in an area near the marketplace. By 1880 the Jewish population formed half of the total of 5,000, and by 1900 their number had grown to 3,297 (51.2%). They dealt mainly in wine and corn. The town suffered severely during World War I. In 1921 there were 2,300 Jews (41%) living in Gorlice.

Holocaust Period

At the outbreak of World War II the Jewish population numbered between 4,500 and 5,000. Most of them fled to the Soviet-occupied part of Poland before the Germans entered on Sept. 6, 1939. The Germans immediately took hostages among Jews and Poles and detained them for a long time in prison. On the eve of Rosh Ha-Shanah, the Germans ordered that all Jews between 18 and 35 years old should appear daily at the magistrate’s office for work. On the eve of the Day of Atonement, the Germans destroyed the interior of the main synagogue and later converted it into a stable. Religious Jews were singled out for particular persecution: Jews caught praying in small minyanim were killed; the shohet, who continued to slaughter poultry in secret, was shot with his family.

During the German occupation, a Judenrat consisting of seven members was set up in Gorlice. Its first president, Henryk Arnold, a man of integrity, was harassed by the Gestapo and finally killed in the Judenrat office for disobedience to German orders. The Jewish police in Gorlice were honest and helpful in protecting the population. A Jewish labor office was established to supply the Germans regularly with manpower. After the outbreak of the German-Soviet war (1941) a ghetto was established. An influx of refugees from larger towns, such as Cracow, caused an acute housing shortage. Disease spread, but there was no Jewish doctor available until a physician arrived from Cracow some time later. The Judenrat established a primitive hospital. A Jewish elementary school functioned, possibly also in the ghetto, where Hebrew was taught clandestinely.

In the spring of 1942 about 70 members of Zionist organizations were executed in Gorlice and the neighboring town of Biecz. In June 1942 a large fire was levied on the community, and houses were searched in order to confiscate valuables. In the summer increased numbers of young men were sent to distant labor camps in *Plaszow, Pustchow, and Frystak. In early August, Jews from nearby Bobowa and Biecz were brought to Gorlice. On Aug. 12, 1942, another heavy fire, of 250,000 zlotys, was imposed for immediate payment. On the night of Aug. 13–14, 1942, the ghetto was surrounded by German and Ukrainian units. In the morning the Gestapo selected about 700 old and infirm people and others. They were taken to Garbic, where a mass grave was prepared. They were ordered to undress and were shot at the edge of the grave together with children. The majority of the remaining Jews were sent to the death camp at Belzec. Many Jews managed to escape during the Aktion to fields, woods, or villages in the vicinity: encountering no help, most of them returned and were executed on the spot or included in the transport.

After this, about 700 able-bodied Jews remained in Gorlice. In the period to mid-September two further “selections” were made and most of the remaining Jews were sent to Belzec; after Sept. 14, 1942, there remained only the factory workers who lived in the factory buildings, and on Jan. 6, 1943, they were sent to the labor camps of Muszyna and Rzeszow.

After the war approximately 30 Jewish families returned to Gorlice. They found that their property had been looted, and that tombstones from the cemetery had been taken to construct pavements. An attempt was made at rehabilitation, and goods sent by the Landsmannschaft in the United States were distributed by a committee. However, antisemitism among the local population caused them to leave shortly afterward.

GORLIN, ALEXANDER (1955— ), U.S. architect. Gorlin is a graduate of the Yale School of Architecture and Cooper Union School of Architecture. The firm Alex Gorlin, Architects was founded in 1987. Gorlin taught at the Yale School of Architecture as a critic from 1980 to 1990. His early work was influenced by Classicism but he gradually became influenced by Modernism. Gorlin is now known for his Urban Modernism. With unusual versatility, he has designed projects in New York, Santa Fe, New Mexico, Denver, Colorado, and Palm Beach, Florida. He was awarded the Rome Prize Fellowship in 1983–84, the Cooper Union Distinguished Alumni Award in 1998, and the Chicago Athenaeum Architecture Award for the Yale University Boathouse. He served as a member of the board of directors of CityArts, New York City, and held a summer internship at Cooper Union in New York in 1994. In January 2002, Architectural Digest named Gorlin one of the Top 100 designers and architects in the U.S. The Ruskin Place townhouse in Seaside, Florida, won the 1996 New York State AIA Award for Excellence in Design. Chosen for his knowledge of Jewish tradition and expertise in synagogue design, Gorlin planned the one million dollar remodeling of the United Synagogue of Hoboken, New Jersey, and also the North Shore Synagogue in Long Island, New York. Gorlin was the architect for the North Shore Hebrew Academy, King’s Point, New York, and a synagogue for the Young Israel of Plainview, New York. Always imaginative, he once designed a tree house, and created plans for a city apartment for architect Daniel *Libeskind in the Tribeca district of Manhattan. In Denver, Colorado, Gorlin designed a 10,000 square foot
house built as a cross between an Irish barn and an Indian stone dwelling. Gorlin said his inspiration came in part from Dante’s “Inferno.” By contrast, on tiny Allison Island off the shore of South Beach, Miami, Florida, Gorlin built for the AQUA planned community a midrise building which is an example of the new “Tropical Urbanism” that is part of the “New Urbanism.” One of the features of this trend spreads the highrise building out horizontally. Gorlin’s building is 11 stories high with ample space around it, wide areas of window glass, and spacious balconies. According to Vincent Scully, noted architectural historian, “Gorlin’s work is simple openhearted appreciation and wonder, an excitement that enlivens everything.”

[Betty R. Rubenstein (2nd ed.)]

**GORNI** (pl. *Grana*), term used for the Jewish immigrants from Leghorn (Livorno), who began to settle in North Africa, especially in Tunisia, from the 17th century on. Livorno was called Leghorn (*a*) in Jewish sources (e.g., David Reuveni), as well as by English sailors, and Jews and Arabs in the Maghreb. The first syllable *Le* was used as an article, making *al-Ghorn(a); from this came the appellative (al-)Gorni. The Grana were essentially merchants; their commercial activity was strictly connected with the Jews of Livorno. They were 400 or 500 in 1821, their number rose to 2,500 or 3,000 in 1893 and to about 5,000 in 1938. Until the 1940s the Gorni constituted separate congregations in Tunis and in other towns of Tunisia, with their own administration, *bet din*, and communal institutions. At all times, the Grana considered themselves as belonging to the European culture (besides Arabic, they spoke Spanish, Italian, and French) and felt separate from the “Tuans,” i.e., the old Jewish residents of Tunisia.

[Haim Zeev Hirschberg / Alessandro Guetta (2nd ed.)]

**GORNICK, VIVIAN** (1935– ), U.S. author. A product of New York City’s vibrant, multi-ethnic, and often socialist urban environment, Gornick attended City College and received her master’s degree from New York University. A veteran journalist, she has written for the *Village Voice*, the *Atlantic Monthly*, the *Washington Post*, *The Nation, MS* magazine, the *New York Times Book Review* and *Sunday Magazine*, *The Three Penny Review*, and *The New Yorker*. She also taught at the University of Colorado and Pennsylvania State University.

In 1989, she became a tenured professor at the University of Arizona. She was also a literary critic and writer of memoirs. In her research, she explored the interrelationship of feminism, psychoanalysis, and literature.

In the early 2000s, in conjunction with a group of New York artists and activists, Gornick helped found *Thea*, the House of Elder Artists. *Thea* was planned as a not-for-profit senior residence in Manhattan for men and women in the arts who continue to engage in a working relationship with New York City, thereby enriching its cultural life. The 100-unit apartment building was designed to enable residents to give public readings, performances, and master classes based on the wealth of knowledge and the expertise they had accumulated over a lifetime.

[Sylvia Barack Fishman / Ruth Beloff (2nd ed.)]

**GORODENKA** (Pol. *Horodenka*), city in Stanislaw district, Ukraine. Jews first settled there under Polish rule during the middle of the 17th century, but an organized community was only formed in the beginning of the 18th century. In 1743 the Polish landowner granted them by a privilege the right to live in the town and to engage in commerce (excluding trade in Christian religious appurtenances) and crafts. The community received land for building a synagogue and for a cemetery. Jews of Gorodenka were dealers in grain, timber, and salt, wine makers, distillers of brandy, beer brewers, tavern keepers, and lessees and managers of estates. According to the census of 1765, 863 Jews lived in Gorodenka and 133 in 14 villages in the vicinity, affiliated to the Gorodenka community. In the middle of the 18th century there was a group of Shabbateans and Frankists in the town. During the 1760s most of the Jews in Gorodenka joined the hasidic movement, among them *Nahman of Horodenka, one of the closest disciples of* *Israel b. Eliezer Baal Shem Tov*.

The city passed to Austria in 1772. In 1794, 30 Jews in Gorodenka (12 families) joined to found *Thea*, a House of Elder Artists. *Thea* was planned as a not-for-profit senior residence in Manhattan for men and women in the arts who continue to engage in a working relationship with New York City, thereby enriching its cultural life. The 100-unit apartment building was designed to enable residents to give public readings, performances, and master classes based on the wealth of knowledge and the expertise they had accumulated over a lifetime.

[Sylvia Barack Fishman / Ruth Beloff (2nd ed.)]
bginning of the 20th century, the community had a great synagogue and a number of bet midrash and hasidic prayer houses. In World War I the Jews in Gorodenka suffered severely under the Russian occupation. In 1916 Jewish houses were set on fire and nine local Jews were hanged on a charge of espionage.

Gorodenka was within Poland between the two world wars. The Jewish population was 3,048 (out of 9,907) in 1921 and 3,256 in 1931. World War I left in its wake 200 widows and 220 orphans, and postwar competition with the Poles and Ukrainians was a cause of economic hardship for the Gorodenka Jews. Subsequently, many emigrated to the United States, Canada, and South America, and hundreds of others to Erez Israel.

[Arthur Cygielman]

Holocaust Period

Within a few days of the outbreak of war between Germany and the U.S.S.R., Gorodenka was occupied by Hungarian troops. The local Ukrainian populace immediately attacked the Jewish inhabitants, murdering and robbing them. Subsequently, Jews from Carpatho-Ruthenia (which had been annexed by Hungary) arrived in Gorodenka, having been driven from their homes. A local Jewish committee was set up to deal with the situation. Aid was extended to the local Jews and refugees. When the city came under German administration in September 1941 conditions deteriorated. Anti-Jewish measures were enacted, including restriction on free movement on the streets, compulsory wearing of the yellow *badge, and the institution of slave labor. In November the Jews were concentrated in a ghetto. On Dec. 4, 1941, they were assembled, allegedly to receive immunization against typhus, but were guarded by the Germans and their Ukrainian collaborators in the great synagogue. The following day they underwent a “Selektion,” and those classed as “nonproductive” – 2,500 Jews – were taken to mass graves dug between the villages of Michalczew and Simakowce, and murdered. On April 13, 1942, a second Aktion was carried out in which 1,500 were sent to the death camp of Belzec and murdered there. In May and June hundreds of Jews were taken from Gorodenka to Kolomyya, where they shared the fate of the Jews there. Some of the inmates fled to Tlusta, where they found temporary refuge. The liquidation of the ghetto started in July and was completed on Sept. 6, 1942. The last Jews were sent to the Janowska labor camp in Lvov. During the Aktionen, some Jews escaped; some joined partisan groups, and 40 succeeded to flee to Romania. A few families joined the partisans and 40 succeeded to flee to Romania. On March 24, 1944, Soviet forces returned to Gorodenka, but by then only a few Jews were left. They subsequently left for Poland in transit to Palestine.

GORODOK (Pol. Gródek Jagielloński, Yid. Greiding), city in Lvov district, Ukraine, within Poland until 1772 and between the two world wars. The earliest information on the presence of Jews there dates from 1444. Jews were responsible for collection of customs and taxes in Gorodok for short periods. In 1550 King Sigismund I Augustus granted the town the privilege to exclude Jews (de non tolerandis Judaeis), but probably those already there remained. In 1662, after Gorodok had been devastated during the Crimean Tartars’ invasions, the local governor (starosta) encouraged Jews to settle in the town and rehabilitate it; because of the objections of the townspeople, he assigned them a special quarter, “the Gnīn.” King John III Sobieski confirmed their right of residence in 1684. According to the census of 1765, there were 788 Jews living in the “Jewish town of Gnīn” and 251 in neighboring villages. As a result of the difficult economic situation, the debts of the community increased, amounting to 3,212 zlotys in 1784. Gorodok had a beautiful synagogue and a famous collection of books as well as bet midrash and yeshivah. Belz ḥasidim dominated, opposing Haskalah and Zionism.

The community numbered 2,952 in 1880 (29% of the total population), and 3,610 in 1900, with an additional 3,478 living in villages in the district. In World War I the Jews of Gorodok and its surroundings suffered severely during the fighting between the Russian and Austrian armies in 1915, and subsequently in 1918–19 during the struggle between the Poles and Ukrainians. There were 2,545 Jews living in the city itself (24% of the population) and 1,414 in the villages in 1921, and 3,281 in 1931. Between the two world wars most of them were occupied in crafts, hawking, and trade in agricultural products.

[Arthur Cygielman]

Holocaust Period

With the German invasion of Poland on Sept. 1, 1939, many Jewish refugees from western Poland arrived in the city, and by 1941 the Jewish population numbered over 5,000. From October 1939 until the outbreak of the German-Soviet war in June 1941 the city was occupied by the Soviets. On June 29, 1941 the Germans captured Gorodok, and neighboring farmers, mainly Ukrainians, attacked the Jews there, and looted their property. Conscription into forced labor camps in Jaktorów and Winniki continued through the autumn of 1941 and 1942. On May 7, 1942, several hundred Jews were deported to Janowska camp in Lvov. On August 13, half the Jews were deported to the extermination camp in Belzec. On December 26, 1942, 1,300 Jews were murdered outside the town and on January 27, 1943, the ghetto was finally liquidated, in an Aktion that lasted three days. A labor camp was established in March 1943, but it was liquidated in May 1943. The last Jews of Gorodok were shot and buried in mass graves near Artyszczow.

GORODOK, town in Vitebsk district, Belarus, The Jewish community was founded during the 18th century. In 1772, when Belorussia was annexed by Russia after the first partition of Poland, the town had 400 Jews, the majority of the population. In 1897 there were 3,413 Jews in Gorodok (68% of the total population), and in 1926, 2,660 (48.3%), most of whom were Chabad hasidim. Jews were petty traders and artisans. In the Soviet period a Yiddish school was in operation. In 1939 the Jews numbered 1,584 (21.7% of the total population). Gorodok was occupied by the Germans on July 9, 1941. The Jews were herded into open fields outside the town, joined by others from the vicinity In August 1941, 2,000 were murdered; the rest on October 14.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

GORODOK (Pol. Grodek Wilenski), town in *Molodechno district, Belarus. Jews started to settle there in the beginning of the 19th century. In 1897, they numbered 1,230, constituting 75% of the population. They owned most of the stores and many had auxiliary farms. Between the two world wars the town belonged to Poland. In 1921 the Jews numbered 990. Most of the children attended the Tarbut Hebrew school. Gorodok was occupied in June 1941. The approximately 1,500 Jews were imprisoned in a ghetto on March 13, 1942. Two hundred were sent to the Krasne labor camp and 400 followed on July 11, when the remaining 900 were murdered. The Krasne camp was liquidated in March 1943. Fugitives from the ghetto played an active role in the local partisan movement.

GOROKHOVSKAYA, MARIA (1921– ), Soviet gymnast, winner of seven medals at the 1952 Olympics. Born in Yevpatoria, Ukraine, Gorokhovskaya volunteered for military service in World War II, serving in hospitals in Leningrad (now St. Petersburg) during the Nazi siege of the city. She was decorated with the Order of the Great Patriotic War, as well as other honorable citations.

Gorokhovskaya won her first U.S.S.R. gymnastic title on the balance beam in 1948. Four years later the Soviet Union made its debut at the 1952 Olympics in Helsinki, and Gorokhovskaya’s gold medals were the first ever won by the Soviet Union. Altogether Gorokhovskaya – at the advanced age of 30 – won gold medals in the individual and team all-around events, and silver medals in the vault, parallel bars, balance beam, floor exercise, and team hand apparatus. Her seven medals are the most ever won by one woman at one Olympic Games.

At the 1954 World Championships, Gorokhovskaya finished third in the floor exercise, fourth in the vault, and seventh in the all-around, and helped the Soviet Union capture the gold medal in the team event. It was her final international competition.

Gorokhovskaya was the world’s top-ranked female gymnast in 1952 and 1953, No. 3 in 1954, and No. 2 in 1955. The Soviet Union awarded her its highest sports honor, the Order of Red Banner, and the Honorary Master of Sport.

Gorokhovskaya immigrated to Israel in 1990, and only then was it revealed that she was Jewish – she had kept her identity a lifelong secret in the Soviet Union so as not to hurt her gymnastic career.

GORSHMAN, SHIRA (Shirke, née Grigorevna; 1906–2001), Soviet Yiddish prose writer. Born in Lithuania, Gorshman immigrated to Palestine in 1924. In 1929, she went to the Soviet Union with a group of disillusioned members of the Gedud ha-Avodah ("Labor Brigade"). Led by Mendl Elkind, they established the commune of Vojo Nova ("New Way" in Esperanto) in the Crimea. Gorshman soon met and married the artist Mendl (Mikhail) Gorshman (1902–1972), whose Moscow circle of friends included Yiddish writers such as Leib "Kvitko, who encouraged Gorshman to become a Yiddish writer. Her stories began to appear in Soviet Yiddish periodicals. Her first collection of works, Der Kayeikh fun Lebn ("The Power of Life"), appeared in 1948, when the Kremlin supported Israel, which enabled the volume to include stories set in both the Crimea and Palestine. Her second book, 33 Noveln ("33 Stories," 1961), was published in Warsaw. In the 1960s–1990s, Sovetish Heymland regularly published her works and translations from Russian into Yiddish. Her 1974 collection of stories, Lebn un Likht ("Life and Light"), represents her output of the 1940s–1960s. In 1990, she again immigrated to Israel, where she published edited versions of her works, most notably her autobiographic novel Khanes Shof un Rinder ("Hannah’s Sheep and Cattle," 1993), and wrote documentary stories about her life in Palestinian and Crimean communes. Volumes of her stories in Russian translation appeared in 1965, 1979, and 1983.

GÓRSKA (Endelman), HALINA (1898–1942), Polish novelist and social worker. Active in the League for the Defense of the Rights of Man, Halina Górska fought antisemitism and helped to found the Socialist periodical Sygnyły. Her four major novels were Nad czarną wodą ("Over the Black Water," 1931), Chłopcy z ulic miasta ("Boys from the Streets," 1934), Druga brama ("The Other Gate," 1935), and, the two-part Barak płonie ("The Burning Hut," 1937–39). She was arrested and shot by the Gestapo.

GORZOW WIELKOPOLSKI (Ger. Landsberg an der Warthe), town in Poland, before 1945 in Brandenburg. A
Jewish quarter and synagogue are first mentioned in 1557, though the community probably originated in the 14th century. It ceased to exist in 1573 when Jews were expelled from the whole of Brandenburg. Toward the middle of the 17th century, Jews attended the Landsberg fairs and soon after renewed their permanent settlement in the city. In 1662 Solomon Kajem Kaddish was rabbi of the city and in 1672 his authority was extended to include all Brandenburg. He was succeeded by Benjamin Wolff Liebmann. In 1690, 21 Jewish families lived in the city; their number had increased to 417 persons by 1717. In that year, however, all Jews without right of domicile were banished and only 96 remained. They were active in the wool trade and the leather industry. A synagogue was built in 1755 and was used until 1854. The community grew from 304 in 1817 to 730 in 1871 but declined to 435 in 1933. Six charitable organizations, a school, and a cemetery were maintained in 1932 as well as an old-age home which had been opened in 1928. The community diminished during the Nazi era to 180 in 1936 and 95 in 1939; eight of the community were deported to Czechoslovakia on Aug. 27, 1942.

For a Jew the stages of life are accompanied by various rituals and ceremonies, from birth through education and bar/bat mitzvah to marriage and family to death. Items may relate to an individual, such as birth amulets, tefillin bags, and dowries, or to the community, such as the hevra kaddisha (burial society) appurtenances. The locale of each community influenced the materials and styles reflected in the various objects and events shown here.
A funeral in Prague. Lowering the body into the grave—from a series of oil paintings commissioned by the Prague ġevra kaddisha. Jewish Museum, Prague.
Copy of reliefs on tombstones in the Jewish cemetery in Curaçao, Netherlands Antilles, 1980. Generally, the decoration related to the name of the person buried. For example, the decoration on the tombstone of Eliu Namias De Orasto, center, represents the name Elijah—a chariot of fire ascending to heaven. On the right, the motif of the felled tree indicates a man who died in his prime. The portrayal of ships shows that the man was a sailor or was engaged in commerce. Photo: Micha Bar-Am, Israel.
